It should now be in place to take up the position of Muḥammed as developed in the traditions. But to attempt to find in them anything that can be assigned to him with historic certainty is a perfectly hopeless task. A large element, it is quite plain, cannot be due to him; and what nucleus really came from his lips we probably never shall know. Goldziher has taught us that the traditions are really a record of the first centuries of dogmatic strife, that therein is their true historical value. But that record is so confused, misdated, indirect, misleading, that it can be used only to illustrate and supplement other more direct sources. Any consideration, therefore, of the traditions, either with reference to the views of Muḥammed or to those of the early Muslim Church, must now be brief. Even where the traditions have points of similarity with the Ḳor'ān, these are deceptive. Thus, in the Ḳor'ān Muḥammed develops quite naively two separate views of Allāh's working, one rigidly predestinarian and the other leaving scope for free-will. This was due to a real confusion in his own mind. But the similar phenomenon in the traditions had a different origin. There it was due to the contradictory traditions having originated in opposing schools, who freely forged and fathered them on the Prophet in support, each, of their own views. There are traditions which state very clearly that Muḥammed objected to all such discussions, while there are others, in which he enters on the subject at length. But the first of these are equally suspicious with the second, they are probably due to that party which objected for long to the use of reason (*'aḳl*) in theology, and contented itself with repeating the formulae which tradition brought to them (*naḳl*). In the traditions, then, come the following expansions and differences. There is a marked mythological increase. The figure of Allāh becomes more picturesque, and his relations to the angels and devils more detailed. The doctrine of the latter is more developed, and the simplicity of Allāh's working obscured (frequent in al-Bukhārī's *Ṣaḥīḥ*, see specially *Kitāb al-tawḥīd* and *Bad' al-khalḳ*). The Face of Allāh recurs, and also his throne (*'arsh*); the cosmography of the heavens and the earth is worked out. He descends to the lowest heaven (*al-samā' al-dunyā*) and cries: "Is there a suppliant? Is there a seeker of forgiveness"? (*Kitāb al-tawḥīd* in *Ṣaḥīḥ* of al-Bukhārī, ed. Cairo, 1312, iv. 179). Then there is the story of the man who will be last in Paradise, and of how he will make Allāh laugh (*ib.*, iv. 172, 173). At last, Allāh will take the earth on one of his fingers and the heavens on another, and cry aloud: "I am the King, where are the kings of the earth"? (*ib.* iv. 167, 181). He will press his foot down in hell, so as to make room there (iv. 167, 175). His eyes, mentioned in the singular and the plural in the Ḳor'ān (sing. in xx. 40), are opposed to the one eye of al-Dadjdjāl (*ib.*, iv. 169). Secondly, His qualities become still more flatly contradictory. A saying recurs frequently: "My mercy overcomes or precedes my wrath" (e. g. *ib.* iv. 169, 175), and, on the other hand, there is the monstrous tradition: "These to heaven, and I care not; these to hell, and I care not" (comp. *Iḥyā'* of al-Ghazālī, edit. with comm. of Saiyid Murtaḍā, vol. vii. p. 308). It is significant that it is precisely on such questions of salvation that the most glaring contradictions appear. At one point, the recital of the first half of the creed and a minimum of works is judged enough, and at another, 999 men out of 1000 shall go to the Fire. It is true that this is turned to a jest; the 999 are to be made up out of the people of Yādjūdj and Mādjūdj (*ib.* iii. 143). Evidently, we have here echoes of later controversy. Still clearer is this when it is said that the saved remnant of the people will be in Syria (*ib.* iv. 176), an unmistakable reference to the Umaiyads. Again, there is the absurd explanation of the uncovering of the leg at the Last Day (Ḳor'ān, lxviii. 42), an explanation that Muḥammed would never have dreamt of, but which has become fixed in Muslim exegesis (*Ṣaḥīḥ*, p. 173; comp. *Durra* of al-Ghazālī, edit. Gauthier, p. 69). A similar attempt is made to exegete the strange name of Allāh, *al-salām* (al-Bukhārī, *loc. cit.*, iv. 167). There are long traditions, too, on free-will etc. (p. 176);

on the doctrine of intercession (pp. 169, 181); others of Murdji'ite tendency (pp. 175, 180); that Allāh can be called a "thing" (*shai'*; p. 170); that Allāh was and there was nothing before him (*kāna Allāh wa-lam yakun shai' ḳablahu*, p. 170). With the last, we fairly reach Mu'tazilite metaphysics. The traditions, plainly, are no historic stage by themselves.

III. *The doctrine of the person of Allāh as developed in the Muslim Church.* The theocentric nature of Muḥammed's religious ideas and the influences which were active in the later development, especially that of the theology of the Greek Church, with its great emphasis on the person of God — as opposed to the Latin Church with its doctrine of sin, and the Reformed Churches with their doctrine of Scripture — made this doctrine (*al-tawḥīd*, "the unifying") cover the greater part of the field of Muslim theological thought. Similarly, the expressions of Muḥammed, partly concretely poetical and partly crudely metaphysical, went to condition future controversies. With only a little ingenuity in one-sidedness an absolutely anthropomorphic deity could be put together, or a practically pantheistic, or a coldly and aloofly rationalistic. The only impossibility, as the Mu'tazilites found in the end, was a *fainéant* God, a stripped, abstract idea.

It is obviously impossible within the limits of an article to trace this development *quo* development. The most that can be attempted is to give the different tendencies, with the influences bearing upon them and the results to which they came. For details and a more precise working out of historical relationships, the present writer ventures to refer to his *Development of Muslim Theology*, etc., p. 119—287.

The first steps towards resolving Muḥammed's brilliant contradictions seem to have been forced by the early civil wars. Men were compelled to ask themselves what really constituted a Muslim — what was of faith as to Islām. What view of Allāh must be held; of man's responsibility and of Allāh's supreme control? Naturally, some would damn all who did not hold and profess in every particular with themselves, while political necessities would lead others to some simple external test, leaving the rest to Allāh, who alone knew the hearts of men. So the Murdji'ite sect arose with its doctrine of *irdjā'*, postponing such questions to the Last Day. Similarly on free-will, the usual extremists appeared with the usual attempts at mediation. Such and such political opponents could or could not help what they did. So the Ḳadarites and Djabrites arose.

But very soon other clarifying, if complicating, influences came to bear from without. The elaborate doctrine of God in the Greek Church, especially as formulated by John of Damascus, led men on from the simple Names of Allāh to questionings as to his Qualities (*ṣifāt*). Muḥammed could call him this and that, but what was meant thereby? they were forced to ask. They found that some explained the persons in the Christian Trinity as hypostatized qualities. Evidently they must run no risk of nine and ninety persons in Allāh. Yet the very nominality in Muḥammed's statement of these qualities raised dangers. There was growing, also, a belief that one of Allāh's qualities — although not expressed in a Name — must be Speech (*kalām*). This, especially, must be guarded against hypostatising into a Logos. At all points there was need of careful definition.

Another influence was Greek philosophy. The students of it in Islām were going to the roots of all things, and, with it as guide, they attacked the problems of the nature of Allāh. Unity (*tawḥīd*), religiously and philosophically, they had to preserve; but, in preserving it, the nature of Allāh himself was gradually reduced to a bare, undefinable something, described in negatives. For example, Allāh for Muḥammed was the Knower (*al-ʿalīm*). Therefore, he must have the quality *ʿilm*, "knowledge". But of what was his knowledge, of something within himself or without? If the first, there was a duality in himself; if the second, his knowledge depended upon something outside of himself and was not absolute; therefore he himself, the possessor of this quality, was not absolute. Evidently, if Allāh's unity and independence were to be preserved, he could not be given any positive description.

In this development three tendencies persistently appear. There is traditionalism (*naḳl*), the acceptance of a doctrine because it was accepted and taught in the past. Its followers were called the people of tradition (*Ahl al-ḥadīth*); they followed proofs which they had heard (*adilla samʿīya*), derived from the Ḳor'ān, the Sunna (Usage of the Prophet as expressed in *ḥadīths*) and the Agreement (*idjmāʿ*) of the Muslim people. For them reason must not be applied either to criticise or to expand; the statement must be taken just as it stands. For example, in the Ḳor'ān we read that Allāh has settled himself firmly upon his throne (e. g. Ḳor'ān xx. 4). That must be believed; we must not argue about it; we must not ask how he so sits; we must not go on to compare his sitting with that of a man; we must stay by the recorded word. This has developed into the phrase *bi-lā kaifa wa-lā tashbīh*, "without enquiring how and without making comparison". But it is obvious that this is not a permanent position. And so, two further steps were taken, one by the general body of Muslims, the other by certain more rigidly logical. There developed the doctrine of *mukhālafa*, "difference"; everything in Allāh is different from the similarly named thing in men; we must not think of it as like. This is also called *tanzīh*, "removing", that is removing Allāh from any danger of confusion or association with his creatures. In general, this process stopped at a point where it was still possible to form a conception of Allāh. He was different, it was conceded; but still, Allāh must be thinkable, and these names and phrases gave a thought of him not essentially wrong; we could not get from them what he was, but something like what he was. Others, however, went further and argued that from these expressions we could gain no conception of Allāh's real nature. That nature must always be a mystery to us, and we need not think that even the Names gave any light. The Ḳor'ān calls Allāh "the Most Merciful of them that show mercy" (vii. 150; xii. 64, 92; xxi. 83); but that cannot mean for us that he has the human quality of mercy, or of anything in any way similar. The course of things in the world disproves that. He has only given himself that Name, and what the Name means we cannot know and should not enquire. The great division here lies in admitting or rejecting the possibility of any discover-

ing of the nature of Allāh other than purely negative — he is not this, he is not that. But, naturally, there have been many subdivisions, varying from simple exhortation to hold the faith of the Fathers (*al-salaf*) and not enquire too closely into the sacred mysteries to a sweeping application of the thesis that the absolute is the unknowable. Only, in Islām the latter position does not lead to agnosticism, but back to a dependence on authority. The main tendency now seems to be towards that latter position, and though the work of earlier theologians is accepted because of familiarity and antiquity, formal theology at the present day is more and more *tanzīh*. In Cairo, at present, the rhyme is current: *Kull^u mā khatar bi-bālik, fa-huwa hālik, wa'llāh bi-khilāf dhālik*, "Everything that comes into your mind is perishing, and Allāh is different from that". That is, Allāh is different from any thought we can possibly have, for our thoughts are of transitory things.

The second tendency is rationalism. All would recognize the necessity of the use of reason (*ʿaḳl*), but would differ as to its being a normal source of theological truth. We have already seen the beginnings of this in the study of Greek philosophy. The Muʿtazilites [q. v.] continued that development, and frankly reasoned out their religious position, creating their theology by means of reason. On the doctrine of Allāh, they, as we have seen, especially objected to his qualities. These were contrary to his unity; at least they must be described as being his essence, not as in his essence. But they tended to reject them altogether, and to reduce Allāh to a vague unity. They further objected to absolute predestinarianism as contrary to Allah's justice (*ʿadl*). Their rejection of the possibility of the Beatific Vision of Allāh in Paradise was part of their jealousy for his spirituality. These three points, then, unity, justice, spirituality, are their position in brief, which they founded on and maintained by dialectic. This, of course, drove in time the traditional party to similar weapons. But with them dialectic was purely defensive; the doctrines were already given and accepted. Yet reconstruction could not fail to go on, if only in form of statement.

It was in the early part of the fourth century of the Hidjra, and especially at the hands of al-Ashʿarī [q. v.] that the use of dialectic (*kalām*) was finally and fully accepted by orthodox Islām. Thereafter, only extreme traditionalists objected to it; scholastic theology was founded. The final system of al-Ashʿarī himself followed strictly orthodox lines. It was simply the phrase: "without enquiring how, and without making comparison". The first element was directed against the Muʿtazilites, and the second against anthropomorphism (*tashbīh*). On free-will, he took a middle course and taught a doctrine, the puzzle of Islām ever since. It is that there is in the creature a certain power of "acquiring" (*iktisāb*) his actions, which, though they are strictly produced by Allāh, makes them also his own.

The school of al-Ashʿarī followed him closely in its creed; but developed his metaphysical ideas into a system which was finally formulated by al-Bāḳillānī [q. v.] (d. 403 = 1012—1013) and thereafter won its way to being the ultimate Muslim conception of the nature and relationship of Allāh and his world. It has been stated thus (Macdonald, *Development of Muslim Theology*, pp. 201 *et seq.*):

"First, as to ontology. The object of the Ashʿarites was that of Kant, to fix the relation of knowledge to the thing in itself. Thus, al-Bāḳillānī defined knowledge (*ʿilm*) as cognition (*maʿrifa*) of a thing as it is in itself. But in reaching that "thing in itself" they were much more thorough than Kant. Only two of the Aristotelian categories survived their attack, substance and quality. The others, quantity, place, time and the rest, were only relationships (*iʿtibārāt*) existing subjectively in the mind of the knower, and not things. But a relationship, they argued, if real, must exist in something and a quality cannot exist in another quality, only in a substance. Yet it could not exist in either of the two things which it brought together; for example, in the cause or the effect. It must be in a third thing. But to bring this third thing and the first two together, other relationships would be needed and other things for these relationships to exist in. Thus we would be led back in an infinite sequence, and they had taken over from Aristotle the position that such an infinite series backwards (*tasalsul*) is inadmissible. Relationships, then, had no real existence but were mere phantoms, subjective non-entities. Further, the Aristotelian view of matter was now impossible for them. All the categories had gone except substance and quality; and among them, passion. Matter, then, could not have the possibility of suffering the impress of form. A possibility is neither an entity, nor a non-entity, but a subjectivity purely. But with the suffering matter, the active form and all causes must also go. They, too, are mere subjectivities. Again, qualities, for these thinkers, became mere accidents. The fleeting character of appearances drove them to the conclusion that there was no such thing as a quality planted in the nature of a thing; that the idea "nature" did not exist. Then this drove them further. Substances exist only with qualities, i. e. accidents. These qualities may be positive or they may be negative; the ascription of negative qualities to things is one of their most fruitful conceptions. When, then, the qualities fall out of existence, the substances themselves must also cease to exist. Substance as well as quality is fleeting, has only a moment's duration.

"But when they rejected the Aristotelian view of matter as the possibility of receiving form, their path, of necessity, led them straight to the atomists. So atomists they became, and, as always, after their own fashion. Their atoms were not of space only, but also of time. The basis of all the manifestation, mental and physical, of the world in place and time, is a multitude of monads. Each has certain qualities; but has extension neither in space nor time. They have simply position, not bulk, and do not touch one another. Between them is absolute void. Similarly as to time. The time-atoms, if the expression may be permitted, are equally unextended and have, also, absolute void — of time — between them. Just as space is only in a series of atoms, so time is only in a succession of untouching moments, and leaps across the void from one to the other with the jerk of the hand of a clock. Time, in this view, is in grains, and can exist only in connection with change. The monads differ from

those of Leibnitz in having no nature in themselves, no possibility of development along certain lines. The Muslim monads are, and again are not; all change and action in the world are produced by their entering into existence and dropping out again, not by any change in themselves.

„But this most simple view of the world left its holders in precisely the same difficulty, only in a far higher degree, as that of Leibnitz. He was compelled to fall back on a pre-established harmony to bring his monads into orderly relations with each other; the Muslim theologians, on their side, fell back upon God and found in His will the ground of all things.

"We here pass from their ontology to their theology; and as they were thorough-going metaphysicians, so now they are thorough-going theologians. Being was all in the one case; now it is God that is all. In truth, their philosophy is in its essence a scepticism which destroys the possibility of a philosophy, in order to drive men back to God and His revelations and compel them to see in Him the one grand fact of the universe. From their ontology they derived an argument for the necessity of a God. That their monads came so and not otherwise must have a cause; without it there could be no harmony nor connection between them. And this cause must be one, with no cause behind it; otherwise we would have the endless chain. This cause, then, they found in the absolutely free will of God, working without any matter beside it and unaffected by any laws or necessities. It creates and annihilates the atoms and their qualities and, by that means, brings to pass all the motion and change of the world. These, in our sense, do not exist. When a thing seems to us to be moved, that really means that God has annihilated — or permitted to drop out of existence, by not continuing to uphold, as another view held — the atoms making up that thing in its original position, and has created them again and again along the line over which it moves. Similarly of what we regard as cause and effect. A man writes with a pen and a piece of paper. God creates in his mind the will to write; at the same moment he gives him the power to write and brings about the apparent motion of the hand, of the pen and the appearance on the paper. No one of these is the cause of the other. God has brought about, by creation and annihilation of atoms, the requisite combination to produce these appearances. Thus we see that free-will, for the Muslim scholastics, is simply the presence, in the mind of man, of this choice created there by God. Further, it will be observed, how completely this annihilates the machinery of the universe. There is no such thing as law, and the world is sustained by a constant, ever-repeated miracle. Miracles and what we regard as the ordinary operations of nature are on the same level. The world and the things in it could have been quite different. The only limitation upon God is that He cannot produce a contradiction. A thing cannot be and not be at the same time. There is no such thing as a secondary cause; when there is the appearance of such, it is only illusional. God is producing it, as well as the ultimate appearance of effect. There is no nature belonging to things. Fire does not burn and a knife does not cut. God creates in a substance a being burned when fire touches it and a being cut when the knife approaches it.

„In this scheme there are, certainly, great difficulties, philosophical and ethical. It establishes a relationship between God and the atoms. But we have already seen that relationships are subjective illusions. That, however, was in the case of things of the world, perceived by the senses — contingent being, as they would put it. It does not hold of necessary being. God possesses a quality called Difference from originated things (*al-mukhālafa li'l-ḥawādith*). He is not a natural cause, but a free cause; and the existence of a free cause they were compelled by their principles to admit. The ethical difficulty is perhaps greater. If there is no order of nature and no certainty, or nexus, as to causes and effects, if there is no regular development in the life, mental, moral and physical, of a man — only a series of isolated moments, how can there be any responsibility, any moral claim or duty? This difficulty seems to have been recognized more clearly than the philosophical one. It was met, formally, by the assertion of a certain order and regularity in the will of God. He sees to it that a man's life is a unity, and as for details, that the will to act and the action always coincide". See further in Heinrich Ritter's paper, *Über unsere Kenntniss der arabischen Philosophie*, Göttingen, 1844.

But all this was strictly defensive of positions already taken up; and such a scheme as this, while it took in a way the place of the study of philosophy in Islām, was concealed from the masses, and was viewed with more or less dislike by the pious. The study of it was permitted only in defense of the Faith against heretics and unbelievers. Therein was the difference between the orthodox theologians and the Mu'tazilites. The latter had believed that by reason they could reach ultimate truth; Islām assured itself that reason could never grasp the nature of Allāh, he is unknowable to human powers, and we must accept and believe what we are taught by him.

And so the third tendency is mysticism (*kashf*, unveiling; *taṣawwuf*, Ṣūfīsm, *q. v.*). There must be a supernatural basis for our own knowledge of Allāh, and, therefore, Islām early came to the position that in the individual human soul there resided a power of reaching and knowing God directly, a personal supplementation of the truth taught to mankind by his messengers, the prophets. That this was in the mind of Muhammed himself, jealous as he was of the prophetic office, seems clear, and it has appeared through the whole history of his Church, in degrees and forms varying from simple, devout meditation to high ecstasy, union with God and essential pantheism. In the earlier centuries of Islām, this doctrine struggled as a private opinion, held generally by the great majority, approved explicitly by many outstanding theologians, leading from time to time to extreme antinomian and pantheistic positions, denounced by some few authorities because of these wanderings; but still unassimilated to the general body of Muslim truth. In its forms it was partly ascetic and partly speculative; it sought Allāh by exercises of devotion or by flights of devout imagination, assisted by plain hypnotism, auto and otherwise. In its development it was affected by Neoplatonism, by Christian

mysticism, by Buddhism and by the primitive monism, which is the basis of all oriental thought. Its ultimate tendency, therefore, however denounced and avoided, was to find in Allāh the One Existent (*wāḥid al-wudjūd*) rather than the Necessarily Existent (*wādjib al-wudjūd*).

It was the work of al-Ghazālī (d. 505 = 1111-1112) to construct a mystical system, in which this pantheistic element was restrained if not destroyed and to weave into the fabric of the theology of Islām the thread of the unveiling of the Ṣūfī, beside those of tradition and reason. Reason he used to destroy itself and to demonstrate that with it we can reach no absolute knowledge. Tradition he used to discipline, guide and restrain the devout imagination of the mystic. On the facts of the religious consciousness, so given, developed and guided, he built his theology.

Yet, in his view of Allāh, he followed closely the conception of Muḥammed. For him, Allāh was Will; he saw everywhere around him the touch and working of Allāh. And man was kin to Allāh, especially in this fact of Will. There he passed beyond the *tanzīh* of the ordinary theologian. *Volo ergo sum* was the basis of al-Ghazālī's psychology. Allāh had breathed into man of his spirit (Ḳor'ān xv. 29; xxxviii. 72). The soul of man, therefore, is different from everything else in the world; is a *djauhar rūḥānī*, a spiritual substance; created but unshaped; not subject to dimension or locality. From its exile here, it seeks the divine, and, therefore, our souls yearn back to Allāh. In a tradition, too, it is recorded that Allāh created Adam in his own form (*ṣūra*). That, for al-Ghazālī, meant that there is a likeness between the spirit of man and that of Allāh in essence, quality and actions. So, just as man rules his body, Allāh rules the world (*al-Maḍnūn al-ṣaghīr*, pp. 2 *et seq.*).

In spite of all pantheistic dangers in these views, there is no question that they are very close to the mind of Muḥammed. And so, for the Church of Islām, al-Ghazālī soon became and still remains her greatest doctor, with the standing of Augustine or Aquinas in Christendom. When a Muslim theologian now disagrees with him, he prefers to describe the rejected doctrine as a misunderstanding of al-Ghazālī's true position. In consequence, alongside of the ossified system of the traditionalists, al-Ghazālī's *Iḥyā'* is earnestly studied; and in that study, without doubt, is the hope for the future in Islām.

As, then, these three tendencies ran together in al-Ghazālī, and as any statement by him of Muslim faith is received with respect, at the present day, by all Muslims except such extreme traditionalists and anthropomorphists as the Wahhābites and the followers of Ibn Taimīya [q. v.], one should consult his *Risāla ḳudsīya*, written at Jerusalem and thereafter incorporated in his *Iḥyā'* (ii. 86 *et seq.* of the Cairo edition with commentary by the Saiyid Murtaḍā 'l-Ḥusainī). It states very fairly the orthodox Muslim position on the person of Allāh. Unfortunately this *Risāla* has not yet been translated and space does not permit the insertion of a translation here. Reference, therefore, can only be made to a very full analysis of it in Asín Palacios' *Algazel* (Saragossa 1901) i. 233—282, and to a shorter statement in de Vaux' *Gazali* (Paris, 1902), pp. 97 *et seq.* Reference may be made, also, to translations of several other creeds in the present writer's *Development of Muslim Theology etc.*, pp. 293—351.

The statement given in the *Risāla ḳudsīya* is specifically Ash'arite. But al-Ash'arī's close contemporary, al-Māturīdī (d. 333 = 935) founded also a school, still existent and regarded as equally orthodox. It followed the line of thought of Abū Ḥanīfa (d. 150 = 767), and it is, in consequence, often called Ḥanafite. It is followed largely by Turks, and in the present writer's *Development of Muslim Theology*, pp. 308 *et seq.*, will be found a Māturīdite creed in full, that of al-Nasafī. None of the points of difference between al-Māturīdī and al-Ash'arī are regarded as involving either unbelief (*kufr*) or heresy (*bid'a*, innovation) and those bearing on the nature of Allāh can be summed up as follows:

1. To the eternal qualities of Allāh al-Māturīdī added "Making to be" (*takwīn*). Other names for this quality are Creating (*khalḳ*), Bringing to Life (*iḥyā'*), Sustaining (*razḳ*), Bringing to Death (*imāta*). These are called active qualities (*ṣifāt al-af'āl*) and are originated according to the Ash'arites; but — because the same as *takwīn* — eternal according to the Māturīdites. This is evidently an attempt to surmount the barrier between the unchanging Allāh and the changing world. 2. Instead of al-Ash'arī's *kasb* — which appears to be nothing but an attempt to explain how we feel that we are free; that is, God creates in us that feeling — al-Māturīdī simply says that we have "actions of choice" (*ikhtiyār*) for which we are rewarded or punished, and leaves the question there. 3. Yet all actions are by the will of Allāh; only, good actions are by his good pleasure (*riḍā*) as well; and bad actions are not by his good pleasure. 4. When Allāh requires anything of a creature, he gives him the ability (*istiṭā'a*) thereto; that is the basis of the validity of the imposition of the task. 5. Allāh's qualities are unchanging; but changes come in creatures of happiness to misery and *vice versa*. This is by change in happiness and misery, and not by change in making-happy or making-miserable. Again, the unchanging Allāh and the changing world. 6. A Māturīdite remarked that there was nothing logically in the Ash'arite position to prevent all the believers being eternally in the Fire, and all the unbelievers eternally in the Garden; but that what we were taught was distinctly the opposite. So while the Mu'tazilites held that it was incumbent upon Allāh to reward and punish according to justice, the Māturīdites only said that Allāh is exalted in and through himself from any injustice, for it would be unbecoming to his wisdom.

Of the differences between al-Ghazālī's statement and the views of the Mu'tazilites, it is unnecessary to say more. Al-Ghazālī in this *Risāla* is writing specifically against them; and makes clear their positions which consisted in negating the Qualities, in asserting incumbency upon Allāh, especially that he must do what is most advantageous to his creatures and in denying his Speech and the Vision of him in paradise. His argument that the world is created, and must, therefore, have a creator is directed against the Aristotelian-Neoplatonic philosophers, who taught the eternity of the world. He himself did not regard that argument as valid. That the world was created he knew, because he, personally and immediately, knew Allāh, the Creator.

See his description of his religious experiences, in his *Munkidh*. His treatment of the anthropomorphists is more gentle. Yet he marvels once at the mystery of Allāh's so keeping some of his creatures in the dark that they cannot understand the difference, even, between relative and absolute priority (Section on Allāh's Speech). Thrice, he comments caustically upon their insisting on a wrong use of words, although their ideas were correct enough. The Karrāmites [q. v.] used "substance" (*djawhar*) of Allāh, thinking that substance meant "an existing being not in a place", but "existing in itself". The Ḥanbalites [q. v.], and Karrāmites both used "body" (*djism*) of Allāh, in the sense simply of "an existing being", or "one existing in himself". The anthropomorphists, generally, clung to the expression that Allāh had direction, as indeed their exegesis of his *istiwā'* on his throne required. But, finally, in Base I, Source VI, there is a most absolute statement that any resemblance is impossible between Creator and creature, which is hard to bring into agreement with the later sections of his book, where the mystical basis of faith is taught and with his exegesis of the Ḳor'ānic passage, where Allāh breathes into man of his Spirit (*rūḥ*, xv. 29; xxxviii. 72) and of the tradition that Allāh created Adam in his own form (*ṣūra*). See reference above to the *Maḍnūn al-ṣaghīr*, pp. 2 *et seq.* But in the same book he takes up this very problem. Do not such views, it is asked, with regard to the soul of man destroy Allāh's "difference", and constitute *tashbīh*, making a resemblance? Al-Ghazālī replies (*loc. cit.*, p. 9) that *tashbīh* applies only to Allāh's most peculiar quality (*akhaṣṣ waṣfihi*), that he is *ḳaiyūm* (self-subsisting), subsisting in himself, while everything else subsists in him, not through its own essence. Nay, things through their own essence have nothing but non-existence, and existence comes to them only from something else, by way of loan. But the existence of Allāh is essential, unborrowed. This reality of self-subsistence belongs to Allāh alone".

This, then, is the esoteric explanation of the prohibition of *tashbīh*. It rules out the materialistic *tashbīh* of the anthropomorphists; but practically leaves free scope on the mystical and spiritualising side. In another of his books (*Iljām al-'awāmm 'an 'ilm al-kalām*, pp. 47 *et seq.*) al-Ghazālī discusses the double danger of, on the one hand, too much *tanzīh* in describing Allāh leading the masses to atheism and on the other, the use of ambiguous and pictorial terms leading them to *tashbīh*. The danger from *tanzīh* he considers much the greater, and advises that the people should be addressed in language and figures that they can understand. An economy of teaching should also be exercised; which does not mean that they should be taught anything positively that is not so; only that certain subjects need not be considered with them.

We have, then, to regard what is given in his statement of the Ash'arite position as one side only. It is complete from the point of view of the dogmatic theologian, and it is as a dogmatic theologian that he here writes. Yet it cannot but excite surprise that so de-humanized a system should have obtained such a control that a man like al-Ghazālī had to cast his dogmatics into its mould. He, certainly, believed greatly in the fear of Allāh, and the thought of the Fire had been a powerful influence in his own conversion; but it is plain from his writings elsewhere that his own Allāh was by no means the unattractive Force here depicted. To produce this personification of the irresponsible, non-moral and uncontrollable working of nature, the Muslim theologians must have passed through a stage of defending their faith by showing its agreement with the facts of life and thus made Allāh so emphatically the God of things as they are. With this object, they took from Muḥammed's representation the elements which suited them.

In consequence, the already narrow character of the Allāh of the Ḳor'ān is still further impoverished. Another weighty influence in the same direction was the dialectic necessity of representing Allāh as unconditioned Being. They had, therefore, to eliminate from him, so far as possible, the elements entailing relationship and all human attributes.

For al-Ghazālī, therefore, as a mystic, it became necessary to supplement this system; and so he gave it its essential basis in the subsequent chapters of his work, especially where he deals with "the secrets of the heart", and describes how the heart sees and knows God. "He who knows his own heart, knows his Lord", says the tradition; and on that teaching the mystical life is founded. But here we pass from theology to religion, and from the doctrine of the person of Allāh to the psychology of belief, and the present writer would refer to his Haskell Lectures on *The religious attitude and life in Islām*. For the doctrine itself it may be said broadly that it is still unchanged, and that there exist the same different aspects of *tanzīh*, *tashbīh* and the mystical vision in varying proportions in the faith of every Muslim of the present day. The use of reason has gone, except to demonstrate the possibility of a doctrine; tradition has become the tradition of the later systematizers, rather than the words of Muḥammed and the Fathers; mysticism has heired the dead Aristotelian-Neoplatonic philosophy, and so far as a Muslim, now, is a thinker he is a mystic. For the later plainly pantheistic development in Persian and Turkish Ṣūfism, see ṢŪFISM. The views of the philosophers do not come within the scope of this article; but reference may be made to the essays of Averroes on what may be called the theology of an educated man, which were published at Munich by M. J. Müller, in Arabic in 1859, and in a German translation, after Müller's death, in 1875. They are an attempt to render it possible for a thinking man to remain in connection with the Muslim Church, are largely directed against al-Ghazālī; and, as they have been reprinted in the East, may be of importance for the future development of the doctrine of Allāh. A Muslim who did not know Averroes' real philosophical position could study them, agree with them and still remain in his Faith.

ALLĀH AKBAR. [See TAKBĪR.]

ALLĀHĀBĀD (ILĀHĀBĀD), the present capital of the United Provinces of British India, which has also given its name to the district and the division, is situated on the left bank of the Djamna river just where this flows into the Ganges. In the year 1901 the town had 172 032 inhabitants among whom 50 274 Muhammedans, the district 1 489 358 inhabitants with 13°/₀ Muhammedans. From the Muh. period there still remain the citadel built by Akbar in 1575 (with Asoka's pillar and its famous inscription) and the Khusrawbāgh, grounds laid out as a garden not far from the railway station, with the tombs of prince Khosraw, his mother and his sister.

History. The present town together with the citadel was founded by Akbar, but from early times the Indians had regarded the spot where it is situated as a holy place and had founded there a town called Prayāg (Prag). The Muhammedans took possession of it in 1194 under Shihāb al-Dīn, the Ghōride; afterwards it belonged to the realm of the Great Mogul till the Mahrattas conquered it in 1736. After 1750 it changed hands several times till the English garrisoned the citadel in 1798 and in 1801 the town as well.

Bibliography: Imperial Gazetteer; District Gazetteer of the United Provinces, xlviii.

ALLĀHUMMA is an old Arabic formula of invocation: "Allāh!", for which also Lāhumma is found (cf. Nöldeke, Zur Grammatik d. class. Arab. p. 6). Whether, as Wellhausen supposes in his Reste arabischen Heidentums (2nd ed.) p. 224, it was originally meant for the god Allāh, higher than and different from the old Arabian gods, is rather doubtful, because every god might be invoked as "the God" (just as "the Lord"). It was used in praying, offering, concluding a treaty and blessing or cursing (see Goldziher, Abhandlungen z. arab. Philol. i. 55 et seq.; cf. also the expression allāhumma khair = much good may it do you, al-Akhṭal 28, 5, 7). The phrase bismika 'llāhumma, said to have been introduced by Umaiya b. Abī 'l-Ṣalt (according to a statement in Aghānī iii. 187) and used as an introduction in written treaties, has been replaced by others by Muḥammed as being a heathen expression (Ibn Hishām i. 747; Wellhausen, Skizzen u. Vorarb. iv. 104, 128). The simple Allāhumma (Lāhumma), on the other hand, was retained as inoffensive (e. g. Ḳor'ān iii. 25; xxxix 47: subḥānaka 'llāhumma x. 10), and in the same way allāhumma na'am = "certainly!", being in fact the answer on being conjured to tell the truth (Ṭabarī i. 1723, ...). For the peculiar formula allāhumma minka wa-ilaika (or laka) used at the family-offering, cf. Goldziher in the Zeitschr. d. Deutsch. Morgenl. Gesellsch., xlviii. 95 et seq. (FR. BUHL.)

ALLĀHWERDĪ (T.) is the name of a Turkoman tribe in Fārs [v. ii.87]. — Also a common proper name, e. g. the name of a general of the Persian sovereign 'Abbās I (Allāhwerdi Khān). — Another Allāhwerdi Khān was Mahābat Djang, the son of a Turkoman of the name of Mīrzā Muḥammed 'Alī, Nawāb of Bengal, Bihār and Orissa (1153—1169 = 1740—1756). He obtained this dignity after he had slain the rightful possessor, 'Alī al-Dawla Sarfarāz Khān, and left it to his grandson, Sirādj al-Dawla Mīrzā Maḥmūd. [See MURSHIDĀBĀD.]

AL-**ALLĀḲĪ** is the name of a wādī (dry riverbed) in Nubia on the east bank of the Nile in the vicinity of the present village Ḳubbān, known through its goldmines, which were already in olden times, as well as later, advantageously exploited by the Arabs. For the classical period cf. Diodorus iii. 11; Chabas, Les inscriptions des mines d'or.

Among the Arabian geographers it is Ya'ḳūbī (ed. de Goeje, p. 334 et seq.) and Idrīsī (ed. Dozy and de Goeje, p. 26 et seq.), who give the most detailed information about these mines and their working in the middle ages. The exact place of the mines has been found back in Umm Gharayāt (Wādī Khawārib). Their exploitation is now succesfully carried on by the Nile Valley Cy.

Bibliography: Besides the already mentioned writings: Wallis Budge, The Egyptian Sudan ii. 329 et seq.

'ALLĀM (A.), an intensive form of 'ālim, 'alīm [q. v.] = knowing, occurs in the Ḳor'ān always in the compound 'allām al-ghuyūb, "he who knows secrets" (God). An intensive form of 'allām is 'allāma "very learned", a predicate given to many scholars. [See ḤASAN B. YŪSUF.]

'ALLĀMĪ. [See ABU 'L-FAḌL.]

ALLĀN, name of the well-known Iranian tribe of the Alans, is generally regarded in Arabic manuscripts as a foreign word with the Arabic article (al-Lān) as many other proper names (cf. al-Rān for Arrān etc.); sometimes it is written al-'Allān (in Yāḳūt; also in Abu 'l-Fidā', Taḳwīm al-buldān, ed. Reinaud and Mac Guckin de Slane, p. 203). By the Muḥammedan period all knowledge of the original domicile of the people and its immigration from Central Asia had been lost; the Arab geographers only know the territory of the Allān on the north slope of the Caucasus, in the vicinity of the important pass through the glen of Daryal on the Kazbek.

Whether, as J. Marquart asserts (*Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, p. 167) the other name of the same nation, Ās, was already known in 9th century as well, can hardly be proved; there are proofs, however, that it does not appear until the time of the Mongols (when it is also written al-Ās), but is used in oriental writings only; in the communications of European missionaries and travellers the people are called only Alani even in the later middle ages. The form Ās is the base of the name of the Ossets, descending from the Alans (russ. Osetini, derived from the Georgian form of the name of the country, Owsethi).

Converted by Byzantine missionaries, the Alans are said by Mas'ūdī (*Murūdj*, Paris ii. 43) to have apostatised from Christianity in 320 (932) and to have expelled their bishops and priests; according to Ibn Rosteh (*Bibl. Geogr. Arab.*, ed. de Goeje, vii. 148) only the chief of the Allān was a Christian. In the 13th century, however, the Alans are mentioned as Greek Christians by all authorities. Their settlements extended at that time much farther east than formerly; at the time of the first invasion of the Mongols the territory immediately to the North of Derbend and even the country on the estuary of the Volga was in the possession of the Alans, probably in consequence of the downfall of the Khazar-empire. Conquered and subjugated by the Mongols, a part of Alans were moved to different districts in the Mongol empire; a colony of Christian Alans is mentioned by the Roman Catholic missionaries in China; the Persian authorities of this time also know the Ās as Christians at the court of the Mongol sovereigns. The Ās in Saray on the Volga are called Muhammedans by Ibn Baṭūṭa (ed. Defrémery and Sanguinetti ii. 448). At the present day among the Ossets only traces are left of Christianity as well as traces of Islām.

Cf. the Arab accounts in J. Marquart, *op. cit.* esp. p. 164 *et seq.* (where the original sources are quoted); for the wars with the Mongols, Ibn al-Athīr (ed. Tornb.) xii. 232 and F. M. Schmidt, *Über Rubruk's Reisen* (Berlin, 1885) p. 84; for the Ās in Mongolia, d'Ohsson, *Histoire des Mongols* ii. 235; for the Alans in China, *Moshemii Historia Tartarorum ecclesiastica* (Helmstadi, 1741), app. (W. BARTHOLD.)

ALMA, a small river in the Crimea, south of Simferopol, is only known through the battle of September 20/8., 1854 (victory of the allied armies of the French, English and Turks over the Russians under Menshikow). (W. BARTHOLD).

ALMA-DAGH is a name often used at present for the entire mountain-chain of northernmost Syria, which mountains were known to the classical authors as Amanus (in cuneiform writing Khamanu). The Alma Dagh (Amanus), a branch of the Taurus-system of Asia Minor, breaks off in the neighbourhood of Mar'ash to the south of the river Djaihān (Pyramus) from the dolomite massif of the Karadede Dagh, runs parallel to the Taurus and Antitaurus-ranges from N. E. to S. W., surrounds with another ridge, branching off to the east, the whole bay of Iskandarūn (Alexandretta) and ends abruptly in the sea to the south of Ra's al-Khanzīr (i. e. pig's head, 5100 ft.) with the Djabal Mūsā (Mount of Moses) or, as it is also called, Djabal Aḥmar (i. e. the Red Mountain, 5750 ft.) part of the Djabal Ara'a. The deep transverse valley of the Orontes and the morasses of al-'Amk separate the Alma-Dagh from the Lebanon-chains, which differ also in their geological formation (mostly lime-stone) from that of the Taurus system. With its off-shoots the Alma-Dagh cuts off Cilicia entirely from Syria and the Mesopotamian Hinterland; apart from a few passes that are mere mule-tracks, the pass of Bailān [q. v.] is the only connection between Asia Minor and Syria and has always been much frequented. The heights of the several mountains are not yet accurately known, the average height is said to be 3650 ft., and some peaks reach 7300 ft. or more; as the highest point Dornmyer gives the Mrahut, 7450 ft. In the northern part jagged, steep peaks prevail, in the south more rounded outlines. The Alma-Dagh with its fresh verdure is an attractive sight, for its sides are thickly grown with trees out of which the bare dolomite peaks project. The ridge of the Alma-Dagh north of Iskandarūn forms together with the sides sloping to East and West an administrative unit, the Sandjak Djabal Bereket; cf. Sachau in the *Sitzungsberichte der Berliner Akademie*, 1892, p. 314.

Locally no one common name is used for the whole of the Amanus; in the reports of European travellers and in the maps based on these, this fact has caused considerable confusion as to the nomenclature, because the same name is sometimes used for a part, sometimes for the whole. For the northern part of the Amanus we find the name G'awr-Dagh or Djawur-Dagh, i. e. the Mountains of the infidels; H. Kiepert in his Carte générale de l'empire Ottoman (Berlin 1892) makes the Alma-Dagh reach about as far as Iṣlāḥiye (Nicopolis, 37° n. l.); the continuation of this mountain-chain as far as the neighbourhood of Mar'ash he takes as G'awr-Dagh; cf. also H. Kiepert's map for Sachau's *Reise in Syrien und Mesopotamien* (Leipzig 1883). In R. Kiepert's map for von Oppenheim's *Vom Mittelmeer zum persischen Golf* (Berlin 1900) Alma-Dagh only appears as the name of one single mountain massif to the north of Bailān; the name G'awr-Dagh does not appear at all on it, in its stead we find Sur-Dagh, Adje-Dagh, Göldje-Dagh as names of single peaks between Mar'ash and Iṣlāḥiye. The northern G'awr-Dagh is connected according to E. Reclus with the southern mountains by a mountain plateau in the depth of which is situated the G'awr-Göl (i. e. the lake of the infidels). The name of G'awr-Dagh is occasionally extended to the whole of the Amanus (e. g. on the map of Favre and Mandrot). Reclus does not call the southern Amanus Alma-Dagh but, in accordance with a number of travellers, Akma-Dagh. Benzinger is evidently mistaken in calling the southern part of the Amanus G'awr-Dagh and the northern part Akma-Dagh. Czernik seems to stand quite alone in calling the Amanus Kara-Dagh; this name is evidently the Turkish translation of Djabal al-Lukkām (also al-Ukkām), the "black mountains" (*ukkām* Arabicised from the Syrian *ukkāmā* = "black") of the Arab geographers of the Middle Ages, the μαῦρον ὄρος of the Byzantines; for the name al-Lukkām designating nearly the same as Amanus, cf. Sachau, *l. c.*, 1892, p. 325. By a misnomer the Alma- or Akma-Dagh in its more limited sense (north of Bailān) is also often called Nawlu-Dagh by travellers, which name according to Kotschy (cf. also the map by R. Kie-

pert, mentioned above) belongs only to the north-east part of the Djabal Arsūs (south of Beilān).

ALMADA. [See ALMADÉN.]

ALMADÉN, Arabic *al-ma'din*, mine, and generally speaking a spot where something is found in abundance, e.g. also a (pearl-) fishing place, is especially the name of the ancient large quicksilver-mine in the centre of the Pyrenean peninsula, in the South West of the province now called Ciudad Real, the old Sisapon, Arabic *al-Ma'din* or *Ma'din al-Zāwūk* (pron. zauuk in Spain) = *Almadén de Azogue* (quicksilver-mine). To the east of it, at the northern foot of the Sierra de la Alcudia, is still found the mine Almadenejos; to the northwest Shillōn = Chillón mentioned by 'Abd al-Wāḥid al-Marrākushī (p. 264). — Also the Portuguese ALMADA to the south of Lisbon is in Arabic *Ḥiṣn al-Ma'din*, "fort d'Alma'dan (Almada), ainsi nommé parcequ'en effet la mer jette des paillettes d'or sur le rivage" (Idrīsī, *Description de l'Afrique et de l'Espagne* p. 184 = transl. p. 223); cf. the aurifer Tagus of the ancients and the aurifero Tejo of Camoens (Lusiads). (C. F. SEYBOLD.)

ALMADIA, Arabic *al-ma'diya*, means in Spanish "raft". In Arabic it means moreover a (large or small) ferry-boat; in literature referring to India it is used for a "small boat" in general.

Bibliography: Dozy and Engelmann, *Glossaire*; Maḳrīzī, *Histoire des Sultans Mamlouks* (transl. by Quatremère) II.a, 156, note 4; Yule and Burnell, *Hobson-Jobson*, s. v.

ALMAGEST, more correctly *al-Madjisṭī* (also *al-Midjisṭī*) or *Kitāb al-Madjisṭī*, was to the Arab astronomers the name of the great astronomic work by Ptolemy μεγάλη σύνταξις (the great compilation). It has been supposed that the Greeks or the Arab translators in their admiration for the great work, turned μεγάλη into μεγίστη, hence the book was simply called *al-Madjisṭī* by the Arabs. In a way this is already early corroborated by Arab writers: al-Ya'ḳūbī says in his historical work (written in 278 = 891; edid. M. Th. Houtsma, Leiden 1883), p. 151: "The book *al-Madjisṭī* treats of the science of the stars and their movements; the meaning of *al-Madjisṭī* is "the greatest book". In this same way but not accurately either does Ḥādjdjī Khalīfa (v. 385) express himself; he says quite rightly that *megisti* is the feminine of *megistos*, but as the meaning of the word he gives "the greatest construction". The correct explanation that *al-Madjisṭī* simply means "the greatest", he quotes farther down (p. 388) from an occidental writer, the Augustine monk Ambrosio Calepino, author of a large lexicon, who died in 1511 at Bergamo. — M. Koppe (*Die Behandlung der Logarithmen und der Sinus im Unterricht, Wissenschaftliche Beilage zum Programm des Andreas-Realgymnasiums zu Berlin*, 1893, p. 34) with whom J. Ruska (*Das Quadrivium aus Severus bar Šakkū's Buch der Dialoge*, Leipzig 1896, p. 77, n⁰. 3) agrees, doubts this derivation: he believes that *al-madjisṭī* comes from a corrupt form of μεγάλη σύνταξις, viz. *megasiti* to be found in a translation of the Almagest from the Arabic into Latin. We consider Koppe to be mistaken: on the contrary *megasiti* has been formed by the Latin translators in the Middle Ages from the unvocalised Arabic *mdjsṭy* by a false reading. For the present we adhere to the first explanation. — For Arabic translations of the Almagest and emendations of them cf. Ḥādjdjī Khalīfa v. 385 *et seq.* and Steinschneider, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* l. 200 *et seq.* (H. SUTER.)

ALMAGRA, Spanish: ochre of iron, from Arab. *al-Maghra*.

ALMALIK. [See ḲULDJA.]

ALMANZOR. [See AL-MANṢŪR.]

ALMĀS — frequently regarded as a determined noun (*al-mās*; correctly *al-Almās* according to Ibn al-Athīr, in *Lisān* viii. 97, the *'l* belongs to the root as in *Ilyās*), a corrupt form from the Greek ἀδάμας (*i. e.* "*wa-laisat bi-'arabiya*"), — the diamond. According to the pseudo-Aristotelian *Kitāb al-aḥdjār* which — on the basis of cognate Greek sources, — agrees in the main with the statements of Pliny, the diamond cuts every solid except lead, by which it is itself destroyed. On the frontier of Khorāsān is a deep valley in which the diamonds lie guarded by poisonous snakes whose looks alone are enough to kill one. Alexander the Great procured some of them by a trick: he had mirrors made in which the snakes saw themselves and died; then he had the flesh of sheep thrown down into the ravine so that the diamonds stuck to it and were brought up by vultures who seized the pieces of flesh. This story, already found in Epiphanius *de XII gemmis*, is generally known in the East (*Arabian Nights*). — Tīfāshī and Ḳazwīnī relate that the pieces obtained through smashing the stone are all trigonal (observation of the octagonal scissure?), the former also says that the diamond attracts little feathers. — It is generally mentioned as being used for cutting and piercing other stones. Aristotle is said to have used it for destroying stones in the bladder. The powder of it must not touch the teeth; applied externally it is a good cure for colic and stomach-ache.

Baas*, 1908; here also p. 122 of the text of the *Kitāb al-aḥdjār* after the Ar. ms. 2772 of the Bibl. Nat.; *al-Machriq* vi. 865-866.

(J. RUSKA.)

ALMÉE. [See 'ALIMA.]

ALMERIA, the capital (situated close to the site of the old Urci) of the most eastern province

of old Andalusia and the former kingdom of Granada, — in Arabic al-Meriya or *Meriyat Bedjdjāna*, i. e. "the watch-tower of Bedjāna" (= Pechina, the old capital of the province, farther inland), had an important arsenal and harbour from the time of ʿAbd al-Raḥmān I (756-788). After the fall of the Umaiyads it was independent under the Slav Khairān till 1028, then under Zohair till 1038, subsequently under ʿAbd al-ʿAzīz al-Manṣūr of Valencia, next under the Banū Ṣumādiḥ (cf. Dozy, *Recherches*, 3rd ed., i. 211—281): Abu ʾl-Aḥwaṣ Maʿn 1041—1051, Muḥammed al-Muʿtaṣim 1051—1091 and ʿIzz al-Dawla 1091, after which it was conquered by the Almoravides. In 1147 it was taken by Alfonso VII of Castile and Leon, but was again in 1157 the spoil of the Almohades, and after 1288 it was taken by the Nasrids of Granada (vainly besieged by the Christians 1309-1310). Not till 1489 was it finally conquered by Ferdinand V of Aragon. It is now the capital of the Spanish province Almeria.

ALMICANTARAT. [See MUḲANṬARĀT.]

ALMODOVAR, Arabic *al-Mudawwar* "round", is the name of several towns in Spain and Portugal, as well as of a small river in the province of Cadiz, flowing from the South East into the Laguna de la Janda; A. del Rio below Cordova; A. del Campo (sc. de Calatrava), southwest of Ciudad Real; A. del Pinar in the province Cuenca; A. west of Mértola in South Portugal.

(C. F. Seybold.)

ALMOGAWAR (Castilian and Portuguese almogávar, Arabic *al-mughāwir* "corredor que roba el campo" [P. de Alcala], Dozy and Engelmann, *Glossaire* p. 172; Eguilaz, *Glossario* p. 233; Barbier de Meynard in the *Journal As.* 9th series, xx. 168), Catalan vagrants among whom were also found people from Navarre, Castile and of Bas-Languedoc, who after having fought against the Saracens in Spain entered the service of the Palaeologi in the beginning of the 14th century, and murdered Isḥāḳ, the chief of the Turcopols at the court of the emperor Andronicus at the moment when he intended to embark for Asia with Constantine, the baptised brother of the Seldjūḳ Sultan Ghiyāth al-Dīn Masʿūd II, son of ʿIzz al-Dīn Kai Khosraw II, whom he wished to put on the throne of Ḳonya instead of his brother (about 682 = 1283). Under the leadership of Royer de Flor, a former Knight-Templar, expelled from the order on account of his misdoings and made Megadux by Andronicus, they were victorious over the Seldjuḳs at Aulax and before Philadelphia (Ala Shehir); next, after having made themselves hated because of their turbulence and their plunderings, they went on to Greece and there founded the dukedom of Athens (711 = 1311). As in Spain they were already known as *almughavares*, the derivation from *al-Maghāriba* is false.

ALMOHADES name of a Muslim dynasty. — The founding of the Almohade empire in Africa, generally traced back to 515 (1121) — at which date the branches of the great Berber tribe of the Maṣmūda swore the oath of loyalty to Ibn Tūmart — is the result of the religious movement excited in the Maghrib by Ibn Tūmart. To understand the success of this movement we must take into consideration the religious condition of the Maghrib at the time when Ibn Tūmart came to preach his doctrines. For valuable details on this subject see the remarkable study of Goldziher, *Mohammed Ibn Toumert et la théologie de l'Islam dans le nord de l'Afrique au XIe siècle* p. 22 *et seq.*

It was about 440 (1048-1049), the time when Ifriḳiya shook off the yoke of the Fāṭimids, that the doctrines of the school of Mālik were definitely adopted in the Maghrib. The triumph of these doctrines caused the abandonment of all efforts to seek an allegorical interpretation for those verses of the Ḳorʾān for which there was no satisfactory literal interpretation. Had not Mālik b. Anas for instance said "we know that Allāh is seated on his throne, but not how this word is to be understood. To believe it is a duty; asking questions about it is heresy"! (Cf. Goldziher, *Die Zahiriten* p. 133).

Reasonings like these had caused the study of the Ḳorʾān to be entirely neglected; similarly the study of the ḥadīth, was neglected as being altogether useless, and the words spoken by Aṣbagh b. Khalīl on this point are well-known: "I would rather, he said, have in my box a swine's head than the *Musnad* of Ibn Abī Shaiba" (Cf. Goldziher, *Mohammed Ibn Toumert*, etc., p. 25).

The whole of *fiḳh* had become fixed in the unalterable form which the founder of this *madhhab* had given it; men had to confine themselves to this and study nothing but the works of *furūʿ* of the founders of the orthodox Schools. The *idjtihād* or the individual effort to explain the law according to the original sources, had been banished from the Islām of the Maghrib and of Spain. The Almoravid sovereigns showed themselves protectors of these doctrines and encouraged the *fuḳahāʾ* in this way by bestowing their favours only on those who applied themselves exclusively to the study of the Mālikite treatises of *furūʿ*.

From that time all knowledge was based upon the Mālikite *fiḳh* and the discussions of the pseudo-scholars of the period were nothing but "casuistic prating indulged in by people, who in their canonical disputes and their juridical subtleties, pretended to be dealing with the science of religion" (Goldziher, l. c. p. 28).

Al-Ghazālī in the chapter entitled *Kitāb al-ʿilm* of his *Iḥyāʾ ʿulūm al-dīn* had exposed these pretensions to learning among the Mālikites of the East and had pointed out the error into which they had fallen. He had also points out the remedy: the return to the Ḳorʾān and to the Sunna.

So the campaign carried out so arduously by the great Imām in the East had to be begun over again in the West.

The *fuḳahāʾ* in the Maghrib and in Spain had condemned the books of al-Ghazālī which so powerfully and so cleverly branded the folly to which they had come. According to their advice the Almoravid sovereigns had these books burnt because they were dangerous as being contrary to the true faith.

This is the picture presented to the eyes of the youthful Berber student of the great tribe of the Maṣmūda: Ibn Tūmart. In the East, where he travelled for a long time as a student, he had not only had the opportunity of becoming acquainted with into the theories of al-Ghazālī but he had also studied the science of the *uṣūl al-fiḳh* which had been completely abandoned in the West. Moreover he familiarised himself with the theological principles of the Ash'arite School and seems to have known well the writings of the great Spanish Ẓāhirite Ibn Ḥazm under whose influence he came. Ibn Tūmart's works show us in fact that if he holds aloof from the Ẓāhirite theories in matters of dogma and replaces them by those of the Ash'arite School, he at least adopts their principles in the matter of legislation.

Ibn Tūmart goes farther than al-Ghazālī; he absolutely condemns the study of the *furū'*, while al-Ghazālī, frankly refusing to this study the name of religious science, still owns that it has some value from the point of view of civil law and of ritual observances; again he differs from the great Imām in adressing himself with his abstract theories on the *ta'wīl* to the whole of the uncultured Berber nation, while al-Ghazālī is anything but partial to giving the common people a teaching and theories above their comprehension and capacities. Al-Ghazālī only addressed himself to the intellectual élite, like Erasmus in the Reformation of the Christian Church; Ibn Tūmart, like Luther, addressed himself to the masses.

The foundations on which Ibn Tūmart has grounded his new juridical doctrine have been described at length in his "*Werke*". 'Abd al-Wāḥid al-Marrākushī has shown us in his *History of the Almohades* how the theories were applied by the first sovereigns of this empire. The character of Ibn Tūmart's doctrine cannot be better described than in the words of Goldziher: "It is evident from his discussion at Aghmāt with the *fuḳahā'* that the essential element of his doctrine on the foundations of the law may be summed up in this axiom: *al-'aṣl laisa lahu fī 'l-shar' madkhal*, i. e. "the smallest possible place must not be left to reasoning in the laws of religion". It is the objective, material sources which must be regarded as the basis of legislation, that is to say: the Ḳor'ān, tradition transmitted by authentic means and the *consensus* of the *umma*, founded on the traditions that have been supported for generations together by numerous authorities, forming one uninterrupted chain (*tawātur*). The subjective, personal element is thus absolutely excluded, what he calls the *ẓann*, hypothesis, opinion, which we must add has under the form of the *consensus* of the *umma* necessarily formed a part of the regular sources of the law from the very beginning of juridical speculations in Islām (cp. Goldziher, *l. c.*, p. 44).

As for the traditions (all of which he approves of) Ibn Tūmart yet prefers those of the Medinites and he says: "All that the scholars of Medina have handed down and all that has guided their actions, that is the straight path. Islām, the laws, the Prophet and his companions existed in Medina at a time when in no other part of the earth was there found either religion, or prayer, or call to prayer or a trace of the law. In this epoch the true religion existed neither in 'Irāḳ nor in the other countries. So the people of Medina can justly serve us as proofs against all others. But if someone comes forward, saying: Yet we have received from the Companions some sayings by the Prophet which do not agree with the Medinite practice; why then have the Medinites gone astray from these traditions in the application of the laws? If anyone puts this question we may answer him thus: this contradiction can be explained in three different ways: 1. either the Medinites have shown with regard to these traditions a conscious and intentional opposition; 2. or they have acted in ignorance (i. e. involuntarily); 3. or, lastly, they have been led to it by lawful reasons. To suppose the first would be an absurdity for that would mean that the people of Medina are just the opposite of what God has declared them to be, viz. the adepts of the Prophet walking in the straight path. It is just as impossible to accept the second explanation, for we know how zealous the Medinites have shown themselves for religion; moreover they all were in the company of the Prophet (and must therefore have known his wishes). — There remains only the third explanation. There may be a lawful reason for opposition, either when the contents of the tradition under consideration have been legally abrogated, or when the traditions in question are suspected of being false or interpolated or do not excite sufficient confidence. Without any doubt the practices of the Medinites give enough arguments against everything opposed to them" (cf. *Oeuvres d'Ibn Toumert*, Goldziher, *l. c.*, pp. 48-49).

In short, Ibn Tūmart excludes from his legislation the *ra'y*, formally condemns the *taḳlīd* and does not admit the speculative use of analogy (*ḳiyās 'aḳlī*) as a source of the law. For him the only sources from which one may draw are the Ḳor'ān, the Sunna and the concord of the Companions of the Prophet (*idjmā' aṣ-ṣaḥāba*). In theology he follows the strict dogmatism of the most uncompromising of the Ash'arite schools. A very strict follower of *kalām*, Ibn Tūmart was brought to look upon the religious opinions of his compatriots of the Maghrib as *kufr*. Whoever follows, he said, the literal interpretation of the Ḳor'ān, must inevitably come to *tadjsīm* or anthropomorphism, to the materialistic conception of God ascribing to him material attributes; that person certainly is a *kāfir* and because of this fact should be under the ban of religion and be expelled from Muslim society. This was the case with the inhabitants of Spain and the Maghrib under the reign of the Almoravids.

Ibn Tūmart, apostle of the *tawḥīd*, according to the mu'tazilite definition of the essence of God and His attributes, makes the sovereign responsible for the faults of the people and declares the *djihād fī sabīl Allāh* against the Almoravids.

"The difference existing between Ibn Tūmart and other theologians who had already tried before him to combat anthropomorphism by the allegorical interpretation, called *ta'wīl*, was that he lifted his doctrinal difference with the anthropomorphists to the height of a casus belli. He regarded anthropomorphism as infidelity (*kufr*) and as infidelity favoured by the highest authority in the country (the Almoravids): he was of opinion that this was a sufficient reason for fighting this authority in the name of religion and for overthrowing it. The holy war against the

Almoravids was just as much a religious obligation (*farḍ*) as a war against any other infidels. Therefore the word *mudjassim* is the habitual denomination of the Almoravids on the lips of Ibn Tūmart and the Almohades . . .

Anthropomorphists and Christians (*Rūm*) are the enemies whom the Almohades were bound to fight equally. The war against Christendom they waged in common with the whole of Islām of that period as well as with their political predecessors, but the struggle against *tadjsīm* and its partisans was their special domain, in which no other dynasty had gone before them with such means as war with fire and sword. As it is their particular property it remains throughout the whole of the Almohade dynasty the point most firmly fixed in their traditions" (cf. Goldziher, in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xli. pp. 67-68; quoted by Alfred Bel, *Les Benou Ghânya* pp. 34-35.

Before he openly declared war on the Almoravids, Ibn Tūmart posed as a censor of public morality = *Amr bi 'l-ma'rūf wa-'l-nahy 'an al-munkar*; he breaks the wine-jars and musical instruments wherever he finds them; he openly blames established authority. One day in Marrākush he violently admonishes the princess Ṣūra, sister to the reigning sovereign, because he met her in the town with face uncovered. At the same time he publicly teaches his theological theories to whoever wishes to hear them. He is everywhere expelled, especially from Bougie, Tlemcen, Fez, Marrākush and Aghmāt and takes refuge with his tribe the Maṣmūda to whom he teaches the Ḳor'ān and the principles of the true faith. The author of the *Ḳirṭās* represents him as using each of the words forming the first chapter of the Ḳorān as a name for each one of his pupils in a branch of the Maṣmūda, in order to make them learn it by heart. It was in these mountains of the Maṣmūda in 515 (1121-1122), after having received the homage of the principal Berber chiefs, that he took the title of *Mahdī*, i. e. he who is called by the divine will to stop injustice and put an end to error, that order, justice and the true faith may reign. As Mahdī he arrogated to himself the right to use violent means in order to establish the reign of pure orthodoxy. From this moment Ibn Tūmart's political rôle really begins; from this year, 515, the Almohade empire is said to date, although the Almoravid capital was not taken till about twenty-five years later.

The first of the companions to whom Ibn Tūmart gave his confidence after his return from the East was 'Abd al-Mu'min, the same who had to take upon himself the direction of the Almohade affairs after the death of the founder of the empire. Owing to this he must be mentioned here. 'Abd al-Mu'min, a Berber of the tribe of the Kūmiya, was the son of a potter of Nedroma but he had distinguished himself as a student at Tlemcen. The meeting between him and Ibn Tūmart, which came about accidentally according to some, intentionally according to others, took place without doubt somewhere near Bougie from which town the young Maṣmūdī preacher had been compelled to flee just before in order to save his life.

Having become Ibn Tūmart's intimate companion, 'Abd al-Mu'min received the teaching of this master, who laid before him the details of his doctrines, the purpose of his preachings and perhaps his future plans.

When Ibn Tūmart took the title of Mahdī he is said to have already succeeded in grouping round him numerous Berbers whose chiefs were his companions and disciples. To these he gave the name of *Ṭolba* (students seeking the true knowledge); to others, i. e. to the people who regarded him as their spiritual and temporal leader, the name of *Mu'aḥḥidūn* (followers the doctrine of *Tawḥīd*; whence Almohades).

Thence forward his policy was to win over followers enough that he might begin open war, against the Almoravid sovereigns in order to overthrow their authority in the name of religion and to substitute his own.

On the Berber mountaineers he had already made a great impression by his reputation or wisdom and by the austere life he led, but he had to convince these gross and uncultured people by facts more palpable than theological theories which they ill grasped or abstractions which they could not understand at all. In a country where maraboutism has been a success at all times and under all forms, Ibn Tūmart posed as a performer of miracles; he succeeded by these means in convincing the masses of the superior and supernatural power he could command.

While he unceasingly criticised the Almoravid administration he showed the Berbers round him how much exposed they were to the vexations of the Government, in particular of its tax-collectors, and how easily they could resist the armies of the sovereign of Marrākush in their almost inaccessible mountains.

The result of the Mahdī's exhortations was that several tribes committed acts of hostility against the Almoravids; they refused to pay taxes and and ill-treated or put to death the agents charged with collecting them.

The Almoravid governor of Sūs who meant to march against the Harghas and chastise them, was beaten by them and shamefully fled with the poor remains of his army. This first victory gave the Berbers confidence and the number of tribes rallying round the Mahdī increased rapidly. Then Ibn Tūmart settled definitely in the country of the Tīnmāl, which was very difficult for the enemy to enter; there he built a house and a mosque near the source of the river Nafīs where he fixed his residence. This was the beginning of the town of Tīnmāl, the first capital of the Almohades; on this very spot were also buried the Mahdī and the Almohade sovereigns. (The mosque of Tīnmāl and the ruins of the town have been discovered by Edmond Doutté during his exploration of 1901 in Morocco. Cf. *Journ. As.*, 9th series, XIX. 158 *et seq.*).

After 517 (1123-1124) the Mahdī, thinking that he was strong enough not to be always on the defensive, decided to come forth with a strong armed force against Marrākush. But his army, commanded by 'Abd al-Mu'min, who then took for the first time the title of *Amīr al-Mu'minīn* — according to 'Abd al-Wāḥid al-Marrākushī — was completely routed by the Almoravid army that marched against it. Then Ibn Tūmart proclaimed, just like the Prophet after the defeat of Oḥod, that all his partisans killed in this battle had died the deaths of martyrs; he succeeded by his clever proclamations in counter-

acting the dismay which such a calamity might have aroused.

The contradictory dates given by the authors make it difficult to state accurately the several periods of the struggle between the Mahdi and the Almoravids up to the death of Ibn Tūmart. Even the date of his death varies in the different works mentioning it. According to Ibn Khaldūn the Mahdī died in 522 (1128), according to others — and they are in the majority — in 534 (1130). These divergences may partly be explained by the fact that Ibn Tūmart's death was kept a secret for a long time by his intimate companions. The Mahdi himself, feeling that the end was near, is said to have recommended secrecy until the Berbers should be prepared for receiving this important intelligence calmly and proclaim as leader the man chosen by the Community. It was ʿAbd al-Muʾmin whom the Almohades recognised as Imām of the Community under the title of *Khalīfa* or of *Amīr al-Muʾminīn*. The new chief of the Almohades had a glorious reign [see ʿABD AL-MUʾMIN]: he realised beyond expectation the ambitious projects of the Mahdi, destroying the Almoravid empire and introducing by main force into the whole of North Africa and into Spain the doctrines so ardently preached by Ibn Tūmart.

The politico-religious organisation of the Almohades established by the Mahdi was as follows: 1st The people of the Almohades formed the Community, the members of which were regarded as the only true Believers; except themselves all other men were infidels against whom they had to wage war without mercy. 2nd At the head of the Community was the infallible Imām, first the Mahdi, subsequently the Caliphs, his successors. It was in the name of this leader of the Community that the public prayer had to be said. 3rd The Mahdi was surrounded by 10 counsellors, chosen from among his oldest disciples. This counsel was usually designated by the name *al-djamāʿa*, the assembly. It was the Great Council of the Government and the members of this assembly besides having a voice in the important matters of State, could take the Mahdi's place at the head of the army or for instance preside in his stead at the Friday prayers. 4th Another council composed of 50 members represented the Berber branches forming part of the Almohade Community. This was the council of 50 called *Ahl Khamsīn* by Ibn Khaldūn.

This organisation was modified by ʿAbd al-Muʾmin and the two assemblies seem to have been fused into one.

When the Mahdi died his successor as chief of the Community, ʿAbd al-Muʾmin, was first agreed upon or chosen by the council of Ten, next this choice was ratified by the council of Fifty and finally by the People.

From this epoch the sovereign power always remained in the family of ʿAbd al-Muʾmin. Until the conquest of Marrākush by the Marīnids in 668 (1269), eleven descendants of ʿAbd al-Muʾmin's succeeded one another on the Almohade throne.

The numerous provinces of this vast Almohade empire were always held by members of the reigning family and by descendants of the famous shaikh Abū Ḥafṣ ʿOmar. In order to understand this favour enjoyed by the latter we must observe that Abū Ḥafṣ ʿOmar, chief of the Hintāta, one of the most powerful branches of the Maṣmūda in the Mahdi's time, had been one of the first to embrace Ibn Tūmart's cause. By thus giving the founder of the Almohade empire the valuable support of his tribe, he had rendered him a considerable service. He rendered ʿAbd al-Muʾmin and the Almohade cause an even greater one at the Mahdi's death. The latter having clearly shown his preference for ʿAbd al-Muʾmin, the shaikh Abū Ḥafṣ not only evinced no jealousy, but according to Ibn Khaldūn it was he who had Ibn Tūmart's death kept a secret in order to have time for himself preparing the Maṣmūda for the acceptance of ʿAbd al-Muʾmin as *Khalīfa*, because the fact that the latter was a stranger to the tribe would not have failed to excite protest. For the same reason ʿAbd al-Muʾmin always treated Abū Ḥafṣ absolutely as his equal.

When Abū Ḥafṣ died (571 = 1175-1176), his children and grand-children were always treated as considerately and with the same honour as the descendants of ʿAbd al-Muʾmin himself.

Al-Tidjānī reports that the fourth Almohade Caliph al-Nāṣir, wishing to leave the province of Ifrīḳiya in the hands of a trustworthy governor, did not choose him from among his own family; he sent to shaikh Abū Muḥammed, son of shaikh Abū Ḥafṣ, to say that he regarded him as his equal and if he did not choose to remain in authority over Ifrīḳiya then it would be he himself, al-Nāṣir, who would take that place, but then he would call upon him to go to Marrākush and reign there in his stead. Abū Muḥammed remained in Ifrīḳiya and afterwards his successors made themselves independent at the decline of the Almohade dynasty, reigning in Tunis under the name of Ḥafṣids.

It must be observed that the princes of the house of ʿAbd al-Muʾmin are called Saiyids while those of the house of Abū Ḥafṣ are called shaikh which makes it easy to distinguish them in the history of the Almohade empire even if they have the same names.

The Almohade empire was the first state since the establishment of Islām in the West, uniting under one single authority the whole of North Africa from the gulf of Gabes to the Atlantic Ocean together with Muslim Spain.

The break-up of this immense empire began, however, less than a century and a half after its foundation. In 633 (1235-1236) Yaghmurāsan b. Zaiyān rose at Tlemcen against the Almohade authority and founded the ʿAbd-al-wādid kingdom of central Maghrib. In 634 Abū Zakariyāʾ, the Almohade governor of Ifrīḳiya had himself publicly proclaimed as an independent sovereign and took Tunis as his capital.

CHRONOLOGICAL TABLE OF THE ALMOHADE SOVEREIGNS.

1. Muḥammed b. Tūmart, *al-Mahdī* . . . 515 (1121-1122) to 522 or 524 (1128 or 1130).
2. ʿAbd al-Muʾmin, *Emīr al-Muʾminīn* . . . . 522 (1128) to 558 (1163).
3. Abū Yaʿḳūb Yūsuf, *Emīr al-Muʾminīn* . . . . 558 (1163) to 580 (1184).
4. Abū Yūsuf Yaʿḳūb al-Manṣūr, *Emīr al-Muʾminīn* . . . . 580 (1184) to 595 (1198-1199).
5. Muḥammed al-Nāṣir, *Emīr al-Muʾminīn* . . . . . 595 (1198-1199) to 610 (1213-1214).

6. Yūsuf al-Mustanṣir, *Emir al-Mu'minin*	. . . .	611 (1214) to 620 (1224).
7. 'Abd al-Wāḥid al-Makhlū',	"	620 (1224) to 621 (1224).
8. Al-'Ādil, *Emir al-Mu'minin*	. . . .	621 (1224) to 624 (1227).
9. Al-Ma'mūn,	"	624 (1227) to 629 or 630 (1232).
10. Al-Rashīd,	"	630 (1232) to 640 (1242).
11. Al-Sa'īd,	"	640 (1242) to 646 (1248).
12. Al-Murtaḍā,	"	646 (1248) to 665 (1266).
13. Abu 'l-'Ulā Abū Dabbūs, *Emir al-Mu'minin*	. . . .	665 (1266) to 668 (1269).

(The taking of Marrākush by the Banū Marīn took place in muḥarram 668 = sept. 1269).

Bibliography: Of the many works on the political and religious history of the Maghrib as well as those of biographers, geographers and encyclopaedic writers, only the following can be given here as the most important: al-Marrākushī, *al-Mu'djib* (ed. Dozy); French transl. by Fagnan (*Revue africaine* xxxv.—xxxvii.; also separately printed at Algiers 1893); Ibn al-Athīr (ed. Tornb.); French transl. of the parts referring to the Maghrib and to Spain by Fagnan (*Revue africaine*); al-Tidjānī, *Riḥla* (cf. A. Bel, *Benou Ghânya* pp. 187—231); Ibn Abī Zar', *al-Kirṭās*; *al-Ḥulal al-mawshiyya* (anon.; see R. Basset, *Notice sommaire des mss. orientaux de la biblioth. de Lisbonne*, 1894, pp. 11 *et seq.*); Ibn Khaldūn, *'Ibar*; al-Zarkashī, *Ta'rīkh al-dawlatain* (Tunis 1289); French transl. by Fagnan in the *Bull. de la Soc. de Géogr. de Constantine*, sep. printed under the title: *Chronique des Almohades et des Hafçides attribuée à Zerkechi* (1895); Ibn Abī Dīnār al-Ḳairawānī, *al-Mu'nis* (Tunis 1283); French transl. by Pellissier and Remusat, in *Exploration scientifique de l'Algérie* (Paris 1845) vii.; Makkarī (ed. Cairo 1279 and ed. Leyden 1855—1861); (cf. Gayangos, *The history of the Mohammedan dynasties in Spain*); Aḥmed b. Khālid, *Kitāb al-istiḳṣā'*; Ibn al-Khaṭīb, *Kitāb raḳm al-ḥulal* (Tunis 1316); Dozy, *Recherches sur l'hist. et la littér. de l'Espagne*; Mercier, *Hist. de l'Afrique sept.* ii.; Goldziher, *Mohammed ibn Toumert et la théologie de l'Islam dans le nord de l'Afrique au XIe siècle* (serving as a preface to the edition of Luciani, *Le livre d'Ibn Toumert*, Algiers 1903, which is the standard work on the religious doctrine of the Almohades); *Materialien zur Kenntnis der Almohadenbewegung in Nordafrica* (in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xli. 30—140); Codera, *Decadencia y desaparicion de los Almoravides en España* (Saragossa 1899); A. Bel, *Les Benou Ghânya* (Paris 1903). (A. Bel.)

ALMORAVIDS is the name of a Muslim dynasty. This word has been derived from the Arabic *al-Murābiṭūn*, a sort of warrior-monks inhabiting a *ribāṭ* or convent more or less fortified (see E. Doutté, *Les Marabouts*, extr. from the *Revue de l'Hist. des Religions* xl. and xli. p. 29 *et seq.*).

Under the name of Almoravids we understand especially the royal dynasty founded by several branches of the large Sahara-tribe of the Ṣanhādja, which, grouped under the authority of a religious leader, invaded and conquered the Maghrib in the first half of the 5th (i. e. the middle of the 11th) century, afterwards breaking into Andalusia and mastering that as well.

In the first centuries of Islām the tribes forming the great group of the Ṣanhādja (cp. on this tribe A. Bel, *Les Benou Ghânya*, Paris 1903, p. v, note 2), wearers of the *lithām* (a veil covering the face below the eyes; hence also the name *mulaththamūn* sometimes given to the Almoravids) inhabited the vast wastes of the Sahara as far as the Sūdān; they lived there as nomads, as their descendants, the Touaregs, do to the present time.

Muslim writers, who do not always agree as to the dates of events of which we here give a résumé, are unanimous in tracing the origin of the Almoravid empire as follows:

In the first half of the 5th century of the Hidjra a chief of the Ṣanhādja, Yaḥyā b. Ibrāhīm, of the branch of the Djuddāla (or Gaddāla) made the pilgrimage accompanied by men of distinction in his tribe. On his way back he met at Ḳairawān in Ifrīḳiya the professor of malikite law 'Abū 'Imrān al-Fāsī. Yaḥyā b. Ibrāhīm desirous of bringing among his uncultured compatriots a man able to direct them in true Muslim doctrine, asked the professor to entrust him with one of his disciples for this purpose. Not being able to find the man of letters he wanted at Ḳairawān, Yaḥyā b. Ibrāhīm discovered him, on the recommendation of the professor Abū 'Imrān, in the town of Nefīs (now belonging to Morocco) among the followers of the professor Waggāg, a disciple of Abū 'Imrān, in the person of 'Abd Allāh b. Yāsīn [q. v.].

After having settled among the Ṣanhādja, Ibn Yāsīn, followed by seven or eight companions among whom were the two chiefs of the Lamtūna (a branch of the Ṣanhādja), Yaḥyā b. 'Omar and his brother Abū Bekr b. 'Omar, constructed a hermitage for his companions and himself on an island in the Niger (or in the Senegal). This convent was a *ribāṭ* and Ibn Yāsīn himself called his followers *Murābiṭūn* (Almoravids). Soon the reputation of the sanctity of this spot and its pious inhabitants spread and a vast number of neophytes came to apply for admittance into this religious brotherhood. Ibn Yāsīn having gathered in his *ribāṭ* about a thousand monks who were absolutely devoted to him and had all been recruited from among the warriors and the chiefs of the Lamtūna and of the Massūfa, now thought of taking up a more active line. He sent forth his partisans, in the name of the true faith, against the different tribes of the Ṣanhādja, which had to submit one after the other. The victories and the booty soon persuaded those who had hesitated and the number of Almoravid warriors increased rapidly.

Ibn Yāsīn, keeping for himself the supreme direction of affairs and the political and financial administration of the brotherhood, entrusted his faithful disciple Yaḥyā b. 'Omar with the leadership of the Almoravid army. After having brought the Saharan tribes under their authority Yaḥyā b. 'Omar and Ibn Yāsīn advanced as far as the Wādī Dar'a where they made important raids. The sovereign of Sidjilmāsa, Mas'ūd b. Wānūdīn al-Maghrawī, offering opposition to the conquest

of his kingdom, perished in a battle and his capital was taken (447 = 1055-1056).

On the death of Yaḥyā b. ʿOmar which took place at about 447 or 448 (1055—1057), his brother Abū Bekr became commander in chief and marching northward continued the conquests begun in the south of the extreme Maghrib. The countries of Sūs and their capital Tārūdant were subjugated; next Aghmāt and its province submitted to the power of the Almoravid conquerors. Abū Bekr married the widow of the king of Aghmāt, the beautiful Zainab, of the tribe of the Nafzāwa, who was destined to play a certain part in the establishment of the Almoravid empire.

Subsequently Abū Bekr and Ibn Yāsīn attacked the Berghwāṭa Berbers, whose territories extended as far as the Atlantic Ocean. The Berghwāṭa professed the subversive doctrines of their prophet Ṣāliḥ; it would be a good work to bring them to Islām. But these Berbers energetically resisted the attack of the Almoravids and Ibn Yāsīn, taking an active part in the military operations, found his death in a battle (451 = 1059). Perhaps Ibn Yāsīn appointed a spiritual leader to take his place at the head of the Almoravids; Ibn Khaldūn mentions as such Ibn ʿAddū who, if he did exist at all, played a very subordinate part compared with Abū Bekr b. ʿOmar. The latter appears as the real chief of the Almoravids and had coins struck in his name; he continued the war against the Berghwāṭa and subjugated them (452 = 1060). Shortly afterwards he was informed that Bulugīn, lord of the Ḳalʿa of the Banū Ḥammād, was marching with a large force against the countries of the extreme Maghrib, and at the same time that those portions of the Ṣanhādja who had remained in the desert were carrying on war with one another. He took advantage of the latter fact to leave the Maghrib for the time being and go back to the desert in order to re-establish peace among the Almoravids. Before leaving, Abū Bekr gave the command over the troops in the Maghrib and the direction of affairs to Yūsuf b. Tāshfīn [q. v.]; he also abandoned to him, after divorcing her, his wife Zainab, who thus became the wife of Yūsuf b. Tāshfīn (453 = 1061). This woman of remarkable intelligence, rare energy and great beauty acquired considerable ascendancy over her new husband's mind and had a happy influence on the fate fo the young empire. Yūsuf b. Tāshfīn continued the conquests in the extreme and in the central Maghrib. Abū Bekr, after having re-established order in the desert and having received the news of his lieutenant's success, returned to the North to take again command over the Almoravids. But following Zainab's advice Yūsuf b. Tāshfīn loaded him with presents and made him understand clearly that he was not at all disposed to give up the supreme authority. Abū Bekr judged it wise not to insist; he retired to the Sahara and to the Sūdān where he died in 480 (1087-1088).

In his quality of supreme chief of the Almoravids Yūsuf b. Tāshfīn founded Marrākush which became his capital and that of his successors; then he went on with his conquests in the extreme and in the central Maghrib as far as Algiers. In 475 (1082-1083) he came back to Marrākush after having left Almoravid officers in the conquered countries as governors.

Urged by the Muslim princes of Andalusia (*reyes de Taifas*), and in particular by al-Muʿtamid b. ʿAbbād, king of Sevilla, Yūsuf decided to cross to Spain with a strong army in order to make war against the Christians under Alfonso VI, king of Leon and Castile; he gained over the Christian armies the great victory of Zallāḳa (12 Radjab 479 = October 23, 1086) which was for the Almoravides the prelude to the conquest of Spain. Certain authors maintain that from this day Yūsuf took the title of *Amīr al-Muʾminīn*. This assertion is doubtful, at least it does not appear that the great Almoravid conqueror long retained this title denoting temporal and spiritual authority at the same time. We even know as a fact beyond dispute that the Almoravid sovereigns, while reserving for themselves temporal authority with the title of *Amīr al-Muslimīn*, attributed supreme authority and suzerainty in matters spiritual to the ʿAbbāsids of the East with the title of *Amīr al-Muʾminīn*, given to the Caliph.

The petty Muslim kings of Andalusia, al-Muʿtamid included, soon found out that the risks, their authority and their riches ran through the Almoravid chief, were much more formidable than those they feared from the Christians. They were soon robbed of their dignities and banished by Yūsuf b. Tāshfīn, who left in Spain Almoravid troops and governors, chosen from among his relatives.

When Yūsuf b. Tāshfīn died in 500 (1106-1107) he bequeathed to his son ʿAlī a vast empire, comprising the countries of the Maghrib, a part of Ifrīḳiya and Muslim Spain (extending to the north as far as Fraga). His descendants succeeded each other on the throne of Marrākush for less than half a century and the Almoravid dynasty was destroyed in Africa when the Almohades, led by ʿAbd al-Muʾmin, conquered Marrākush (541 = 1146-1147) and killed the last Almoravid king of the house of Yūsuf, called Isḥāḳ b. ʿAlī b. Yūsuf. Soon after the Almohades conquered Spain with the help of the Andalusian Muslims, who had been tired of the cruel Almoravid yoke for a long time. Since 539 (1144-1145) Almohade armies had crossed over to Spain and at the death of the Almoravid governor of Spain, Yaḥyā b. Ghāniya (543 = 1148-1149), the authority of the Almoravids in the peninsula was at an end. [See ʿALĪ B. GHĀNIYA].

In short, if one does not count the resistance of the last representatives of the Almoravids in Spain and on the Balearic Isles nor the rebellion of the Banū Ghāniya — what is properly called the Almoravid empire had become extinct at the death of the last king of the house of Yūsuf b. Tāshfīn in 541 (1146-1147). The rough Ṣanhādja used to the privations and the fatigues of desert-life and suddenly transported by the whims of fortune to the fertile regions of the Tell and Andalusia, were bound soon to become effeminate through contact with these riches, this life of luxury that they had not known until then. They came to Spain at a period when literature, poetry and intellectual pleasures had long since replaced the love of war and the thirst for conquests. Doubtless this state of things facilitated their settling in the country but it was the cause of their ruin as well. The sudden contact with a civilisation so refined, for which they were in no wise prepared, ruined them just as it had ruined, some eight centuries before, the

Vandals their predecessors in this same North Africa". Cf. A. Bel, *Les Benou Ghânya* vii.

Such are the true causes of the sudden downfall of this empire which made such rapid conquests and lasted less than a century.

CHRONOLOGICAL TABLE OF THE ALMORAVIDE SOVEREIGNS.

1. Yaḥyā b. Ibrāhīm al-Djuddālī		Successive chiefs of the Ṣanhādja in the Sahara, recognising the spiritual authority of ʿAbd Allāh b. Yāsīn (d. 451 = 1059).
2. Yaḥyā b. ʿOmar (d. 447 or 448 = 1055—1057)		
3. Abū Bekr b. ʿOmar (d. 480 = 1087-1088 in the Sudan)		
4. Yūsuf b. Tāshfīn, *Amīr al-Muslimīn*	453—500 = 1061—1107.	
5. ʿAlī b. Yūsuf "	500—537 = 1107—1143.	
6. Tāshfīn b. ʿAlī "	537—539 or 541 = 1143—1145 or 1147.	
7. Ibrāhīm b. Tāshfīn "	soon dethroned.	
8. Isḥāḳ b. ʿAlī "	killed at the taking of Marrākush (541 = 1146-1147).

ALMUNĔCAR, Arabic *al-Munakkab*, a little town in Spain to the south of Granada on the Mediterranean, is known through the landing of ʿAbd al-Raḥmān I (756) with 1000 Berber horsemen; in 1489 it surrendered to the Catholic kings. (C. F. SEYBOLD.)

ALP (A.), hero. Frequently found in Turkish proper names.

ALP ARSLAN MUḤAMMED b. DĀWŪD (ČAGHARBEG) ʿAḌUD AL-DAWLA with the kunya Abū Shudjāʿ, a famous Seldjūḳ sovereign (455—465 = 1063—1072). Born on Muḥarram 1, 420 (Jan. 20, 1026), according to others 424, he showed himself already in his father's lifetime a brave and clever military leader, taking part in several successful expeditions, so that his father made him his successor in the province of Khorāsān. The date of his mounting the throne cannot be fixed accurately because our informants give as the year of his father's death 450 (1058) or 451 and even 452 (1060); but it appears to be almost certain that even in the last years of his father's lifetime he was the real sovereign. When afterwards his uncle Toghrulbeg had died (455 = in the beginning of Sept. 1063) without leaving any heirs, his wezīr al-Kundurī [q. v.] called a brother of Alp Arslan's, Sulaimān, to the throne, who was said to have been named by Toghrulbeg himself as his successor, but some influential Turkish emīrs did not approve of this and paid their homage to Alp Arslan, who was soon afterwards recognised by the wezīr al-Kundurī and was proclaimed sultan in a solemn meeting on 7 Djumādā I, 456 (April 27, 1064) by the Caliph al-Ḳāʾim bi-Amr Allāh. In the meantime Alp Arslan still had to overcome the opposition of some of his nearest relatives and of the most powerful emīrs who would not submit to him or even claimed the dignity of Sulṭān for themselves. Alp Arslan's military abilities, however, his quick and energetic behaviour soon put an end to this, although one of these relations, Ḳutulmish [q. v.] at first threatened to become a dangerous opponent. The moment this adversary had breathed his last after a fatal encounter in the neighbourhood of al-Rai, Alp Arslan and his troops took the road to the Byzantine frontier (1 Rabīʿ I 456 = at the end of Febr. 1064). On their way many emīrs and princes joined them so that the leader could first raid the territory of the Georgians with a powerful army, conquer several towns and make the king of the Georgians his tributary and could next master Ḳars and Ānī [q. v.]. He was hindered from going on any further through the news that his brother Ḳawurd (the progenitor of the Seldjūḳs of Kermān) showed himself refractory. Immediately Alp Arslan marched rapidly by way of Iṣpahān to Kermān where Ḳawurd wholly taken by surprise came to meet him and pay him homage. Next he went to Merw and confirmed his authority by marrying his sons Malikshāh and Arslanshāh to princesses from the houses of the Ghaznawids and of the Khāḳān of the Turks. The next year 457 (1065) he crossed the Oxus to make war on the chiefs there, afterwards he returned to Merw, made his son Malikshāh his successor and divided the different provinces among the Seldjūḳ princes, after which he undertook another expedition (459) against the princes of Kermān who had once more risen against him. We are not accurately informed of the activities of the sultan in the years that immediately followed; in 463 (1070) he brought the town of Aleppo under his sway. Afterwards, while he was in Ādharbaidjān, the news reached him that the Byzantine Emperor Romanus Diogenes was approaching the Muslim dominions with a large force. He immediately marched against him with the few troops he had with him, and the two armies met in the neighbourhood of Malāzgerd. It was here that the famous conflict took place on August 26 1071, which ended in the complete victory of the sultan and the capture of the Emperor. The imperial prisoner was generously treated and after a short imprisonment was brought back to Asia Minor under safe custody, but the treaty that had been concluded proved unavailing, since Romanus found the Byzantine throne held by Michael VII. Alp Arslan did not continue the war against Byzantium in person, but went in 1072 to Transoxania, where he was mortally wounded by the captured commander of a fort, so that a few days later, at the end of November 1072, he died at the age of 40 (or 45). Alp Arslan was distinguished for his great energy and personal courage; he was moreover, as his con-

duct towards the Greek Emperor and his own brother Ḳawurd shows, a man of noble and lofty character. For the rest he was uneducated and probably illiterate; yet he was wise enough to leave the affairs of government to his Wezīr Niẓām al-Mulk [q. v.], and to disregard the accusations made against him.

Schefer), Suppl., pp. 95—102; Weil, *Gesch. d. Chalifen*, iii. 85 *et seq.*; Müller, *Der Islam im Morgen- und Abendland*, ii. 86 *et seq.*; Barthold, *Turkestan w epokhu mongolsk. nashestw.*, part II, 324 *et seq.*; von Rosen, in *Zapiski wostol. otd. imper. russk. arkheol. obshl.*, i. 19, 189, 248.

ALP-TEGIN was the founder of the dominion of the Ghaznawides. Like most of the praetorians of his time, he was enrolled as a purchased Turkish slave in the bodyguard of the Sāmānides and gradually rose to the dignity of "Ḥādjib of the Ḥādjibs" (the chief-officer of the bodyguard). It was in this position that he appeared as the real ruler during the reign of the youthful 'Abd al-Malik I [q. v.]; through his influence Abū 'Alī al-Bal'amī was appointed Wezīr and was not permitted to do anything "without his knowledge and his counsel". In order to remove him from the capital, the ruler was compelled to raise him to the highest military rank in the empire, that of governor of Khorāsān (Dhu 'l-Ḥidjdja 349 = Jan.-Feb. 961). Deprived of this office by Manṣūr b. Nūḥ, of whose succession to the throne he had disapproved, Alp-Tegin retreated to Balkh, defeated in Rabī' I 351 (April-May 962) an army sent out against him by the Sāmānide, went to Ghazna and there founded for himself an independent realm by the overthrow of the native dynasty. The year of his death is differently stated; according to some he died as early as 352 (963). His learned son Abū Isḥāḳ Ibrāhīm (cf. Ibn Ḥawḳal on him, ed. de Goeje, pp. 13 and 14) was only able to maintain himself against an uprising of the former ruler by the help of the Sāmānides, on which account the principality of Ghazna remained at first merely a vassal state of the Sāmānides.

Bibliography: Gardīzī, *Zain al-Akhbār* (Excerpts in Barthold, *Turkestan w epokhu mongolsk. nashestw.*, part I, pp. 10-11); Djūzdjānī, *Tabaḳāt-i Nāṣirī* and the observations thereon in the translation of Raverty; Elliot, *History of India*, ii. 178 *et seq.* (according to 'Awfī), 267 (according to Djūzdjānī); Oliver, in *Journ. As. Soc. Beng.*, lv. part 1, 1886 (quoted by St. Lane-Poole, *The Muhammedan Dynasties*, Westminster 1894). The account in the *Siyāsat-Nāme* of Niẓām al-Mulk (ed. Schefer, pp. 95 *et seq.*), which strongly takes the part of Alp-Tegin, and which changes facts very capriciously, probably arises from a later Ghaznawid source.

(W. Barthold.)

ALPHABET. [See abdjad.]

ALPHARABIUS. [See al-fārābī.]

ALPHARAS (Alpherat). [See faras.]

ALPUENTE, a small Spanish town in the north-west of the present province of Valencia, on the eastern slopes of the Guadalaviar-Turia valley, in Arabic al-Bunt, al-Bont, al-Font; after the fall of the Umaiyads of Cordova it had a dynasty of its own, the Banū Ḳāsim: 'Abd Allāh b. Ḳāsim al-Fihrī Niẓām al-Dawla till 1030, his son Muḥammad Yumn al-Dawla and his grandson Aḥmed 'Aḍud al-Dawla till 1048-1049, and his brother 'Abd Allāh II. Djanāḥ al-Dawla 1048-1049 till 1092; then it fell to the Almoravids and Almohades with rebellions of short duration. In 1236 it fell to Don Jaime of Aragon through the efforts of Don Guillen Bishop of Segorbe.

(C. F. Seybold.)

ALPUJARRAS — probably from the Arabic al-Basharāt (Idrīsī: al-Basharāt), pastures, „sierras de yerba y de pastos" — is properly the whole of the mountainous foreland in the south of the Sierra Nevada as far as the Mediterranean from Motril to Adra and Almeria. But this name specially designates the numerous, fruitful valleys of Padul — Bérnar — Lanjarón — Orgiva — Cádiar and Ugijar — Alcolea — Laujar — Canjayar — Rágol — Gador. The warlike inhabitants of the numerous villages of these valleys and cross-valleys, the Alpujarreños, were as early as the time of the Arabs of a turbulent nature and since 1491 there have been many uprisings, notably the great rebellion of 1568—1570, which was suppressed by the Marqués de Mondéjar and Don Juan d'Austria by the slaughter of the Moriscos (under King Aben Humeya and 'Abd Allāh Aben Abo).

ALRUCCABA. [See rukba.]

ALTAI, a mountain system in the region where the Ob and the Irtish take their source. The oldest Turkish name for the southern Altai is Altin-Yish ("gold-mountains"; so in the Orchon inscriptions), in Chinese Kin-shan; the same mountain-chain is occasionally denoted in scientific geography by the name of Ektag (evidently Ak-Tagh "white mountain") which arose from Greek traveller's reports in the 6th century A. D., but according to later investigations the mountain-range mentioned by the Greeks must be sought not in the Altai, but in the Thien-shan (E. Chavannes, *Documents sur les Tou-kiue occidentaux*, pp. 236 *et seq.*; the error arose through the incorrect Greek rendering χρυσοῦν ὄρος). If the present name likewise originates in a word for "gold", then it can only be the Mongol *altan oola*; the name seems, moreover, not to have appeared until the time of the Kalmuck dominion. The present Turkish population are ignorant of this meaning of the name. In a story containing a popular derivation of the word Altai it is divided into *alti ai* ("6 months"); it is used as a common noun in the sense of ("high mountains").

(W. Barthold.)

ALTAI (Turkish Altai-kishi), is the name of a Turkish tribe in the Altai, also called "Mountain-kalmucks" by the Russians; the latter name evidently dates from the time of the Kalmuck dominion, as also does the princely title Zaisan (the whole people is divided into nine Zaisanships). The dialect of the Altai is described by Radloff as a uniform Turkish dialect of very primitive character. The Altai have been far removed from Islām and its civilization; yet many words in their language (*Kudai*, God; *Shaitan*, the Devil) shew the influence of this civilization,

though perhaps the influence was not a direct one. The people are still given up to Shamanism; only a portion of them have embraced the Christianity preached by Russian missionaries cp. W. Radloff, *Aus Sibirien*, i. 250 *et seq.*; A. Vambéry, *Das Türkenvolk in seinen ethnologischen und ethnographischen Verhältnissen*, pp. 97 *et seq.*; Altai texts in Radloff, *Proben der Volkslitteratur der türkischen Stämme Süd-Sibiriens*, part I. — Many linguists of to-day use the terms "Altai" and "Altaic", in the same sense as formerly "Uralaltai" and "Uralaltaic", i. e. as a common denomination for five families of languages (Tungusic, Mongol, Turkish, Finnish and Samojedic).

(W. Barthold.)

ALTAIR or Atair, is the former name of the star α of the constellation of the Eagle; from the Arabic *al-Ṭā'ir* ("the flyer"); cp. Ideler, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen*, pp. 105 *et seq.*

ALTAMISH. [See iltutmish.]

'ALTH (or al-'Alth), a locality on the northern frontier of the Sawād or 'Irāk (somewhat corresponding to the old Babylonia), to the south-east of al-Kādisiya (south of Sāmarrā). Al-Mukaddasī describes it as a large and populous town. The place known to Ptolemy as Altha (v. 20), still exists; in H. Kiepert's map of the ruins of Babylon (*Zeitschr. der Gesellsch. f. Erdkunde zu Berlin*, 1883) it is to be found on the authority of the survey of J. F. Jones a little to the north of Lat. N. 34, near the bend of the Tigris. Yet to-day the position of 'Alth appears to be so far altered that it now lies to the west of the Tigris, whereas according to the accounts of mediaeval Arabic authors it stood on the east bank of the river. Therefore an alteration of the course of the Tigris for which there is other evidence must be assumed to have occurred in the interval. Close to 'Alth stood a Dair al-'Adhārā (convent) that is frequently referred to, and which is also called Dair al-'Alth after the name of the town.

Geographen* (Leiden, 1901), ii. 224 *et seq.*; G. le Strange, *The lands of the eastern Caliphate* (Cambridge, 1905), p. 50; M. Wagner, in *Nachrichten der Göttinger Gesellsch. der Wissensch., philol.-hist. Kl.*, 1902, p. 256.

(M. Streck.)

ALTI-SHEHR or Alta-Shehr (the word "six" is always written *alta* in Chinese Turkistān), properly "six towns", is a name for part of Chinese Turkestān in which are the towns of Kuča, Aksu, Uč-Turfan (or Ush-Turfan), Kāshghar, Yārkand and Khotan. It appears to have been first used in the 18th century (cp. M. Hartmann, *Der islamische Orient*, vol. I, p. 226, n. 1, p. 278, n. 3). Jangi-Hiṣār between Kāshghar and Yārkand is now added as the seventh — and is also frequently mentioned as one of the six towns; in this case either Kuča or Uč Turfan is omitted; — on this account the country is often called Djiti (or Jiti) Shehr ("seven towns") in modern sources (as in the latest historical work *Ta'rīkh-i Amanīye*, written in 1321 = 1903, printed by N. Pantusow in Kazan in 1905). The best collection of historical accounts of Alti-Shehr is contained in Grigorjew, *Ost-Turkistān*, part II, St. Petersburg 1873 (Russian); Bellew, *Kashmir and Kashgar* 1875 is much less reliable.

(W. Barthold.)

ALTILIK (t.), is the name of a six-piaster piece.

ALTIN or Altun (t.), Gold, also used of gold coins. The word is often met with in Turkish proper names of persons and places, e. g. Altin Köprü, Altīntash (Altuntash).

ALTIN(altun)-KÖPRÜ, is a town to the south of Irbil (Arbela) on the lesser or lower Zāb, which here receives the Hadjır Čai, coming from the north, at 40° 5' Long. E., 35° 50' Lat. N. (Greenwich). Lying as it does 280 metres above the level of the sea, built on a large conglomerate island in the middle of the Zāb, it appears from within narrow and inconsiderable, but from without it presents one of the most picturesque sights in Further Asia. Two stone bridges on arches connect it with the main-land; the one connected with the East bank has a remarkably bold arch, which rises so high over a deep ravine that the whole town can be seen spread out below while the other bridge is below the level of the town. As Altin-Köprü is the only place which by its bridge affords a convenient means of crossing the lower Zāb, the caravans are compelled to pass through this town. Through it runs the principal road from Baghdād to Mosul, which at all times has been travelled over by European travellers. The inhabitants of the town, chiefly Turkoman (estimated at 2000 souls by Czernik in 1874), live principally on the proceeds of the carrying trade which, apart from the flourishing caravan trade, is also carried on by water by means of leather rafts (kelleks). The Turkish name Altin-Köprü ("gold bridge") can scarcely have originated in the tolls that were certainly considerable in former times, as has been conjectured, but probably in Altin-Su, the actual name of the upper course of the lesser Zāb; cf. concerning Altin-Su: G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer* (1880), pp. 258, 263. Altin-Köprü in this case would be an abbreviation of Altin-Su-Köprü, i. e. the "bridge of the gold-river".

(M. Streck.)

ALTIN TASH (pronounced locally Altin Dash), a village of Asia Minor, on the Pursak-Čai between Kutahya and Afyūn Kara Hiṣār; it contains a modern mosque built from ancient remains. It is the chief town of a nahiya administratively attached to the kaza and sandjak of Kutahya (province Khudāwendigār = Broussa); it comprises 43 villages (*Sālnāme*, 1325, p. 709), 1569 houses, 8470 inhabitants, all Musulmans.

Bibliography: Cl. Huart, *Konia, la ville des derviches tourneurs* (Paris, 1897), pp. 81, 254; 'Alī Djawād, *Mamālik-i 'othmānīyanin ta'rīkh we-djoghrāfiyā lughāti*, p. 26.

(Cl. Huart.)

ALTŪNTĀSH al-Ḥādjib (Abū Sa'īd; his alleged second name Hārūn is only mentioned in one passage by Ibn al-Athīr (ed. Tornb., ix. 294), probably as the result of an oversight of the

author or of a copyist), was a Turkish slave, later general to the Ghaznawid Sebuk-Tegin and to his two successors. Even while under Sebuk-Tegin he attained the highest rank in the body-guard of his sovereign, that of a "Great Ḥādjib"; under Maḥmūd he commanded the right wing in the great battle against the Karakhānids (22 Rabī' II 398 = 4 Jan. 1008); in 401 (1010-1011) he is mentioned as Governor of Herāt. After the conquest of Khwārizm in 408 (1017) he was appointed Governor of this province with the title of Khwārizmshāh and maintained himself in this office until his death in 423 (1032). Altūntāsh seems to have administered the advanced border-province with energy and foresight and to have effectively guarded it against the neighbouring Turkish tribes; yet by this means he secured his own rule rather than that of his sultans, for which reason his measures were always regarded with suspicion by Maḥmūd as by Mas'ūd; both rulers made attempts, it is said, to remove the troublesome Governor by treachery. In the spring of 423 (1032) Altūntāsh by order of sultan Mas'ūd undertook a campaign against 'Alī-Tegin [q. v.] and received a mortal wound at the battle of Dabūsiya; his son Hārūn succeeded him as Governor, although Mas'ūd retained for his own son Sa'īd the title of Khwārizmshāh, and only entrusted the administration of the country to Hārūn as the Prince's representative. In Ramaḍān 425 (Aug. 1034) Hārūn proclaimed himself independent, but in the very next year he was killed at the instigation of the Ghaznawids; his brother and successor Isma'īl Khandān ruled the land till 432 (1041), when he was supplanted by Shāh Malik, the Prince of Djand, by order of the Ghaznawids. Thus ended the dynasty founded by Altūntāsh.

Bibliography: 'Otbī, *Ta'rīkh Yamīnī*; Gardīzī, *Zain al-Akhbār* (Excerpts in Barthold, *Turkestan w epokhu mongolsk. nashestw.*, part I, 15—15) and particularly Baihaķī (ed. Morley, pp. 59 *et seq.*, 91 *et seq.*, 389 *et seq.*, 419 *et seq.*, 499 *et seq.*, 834 *et seq.*); the dates in Ibn al-Athīr are to be rectified by these sources. Cp. also the anecdotes which are probably taken from the lost portions of Baihaķī's great work in Niẓām al-Mulk (*Siyāsat Nāma*, ed. Schefer, p. 206) and 'Awfī (in Barthold, *Turkestan* etc., part I, p. 89). (W. BARTHOLD.)

ALUDEL (from Arabic *al-Uthāl*; *al-Athāl* is also found. It is the Greek αἰθάλη, which came to the Arabs through Syriac), an apparatus for the sublimation of quicksilver, sulphur etc. It was composed of glass or clay and had the shape of a basket with a lid and a tube. It was an ell long and a span broad.

'ALŪḲ (A.), a kind of demon [See AL-DJINN.]

ĀLŪSĪ(-ZĀDE), is the name of a learned family of Baghdād, whose chief representative Maḥmūd b. 'Abd Allāh Shihāb al-Dīn Abu 'l-Thanā' al-Ḥasanī al-Ḥusainī al-Baghdādī, was born in 1218 (1803); he was a prolific writer, who in his clerical career rose to the post of Muftī of Baghdād. In this position, however, he came into conflict with the Pasha of this town and was deprived of his office. In order to plead his cause in person in the capital, he set out in Djumādā 1267 (March 1851), passed through Mosul and Diyār-Bekr to Ṣamsūn, and there embarked for Constantinople. But he did not find the reception he expected from the Grand Wezir and was compelled to return home without having fulfilled his intentions, and died at Baghdād in 1270 (1853). He wrote an account of his journey for his son in Constantinople 'Abd Allāh Efendi entitled *Nashwat al-Mudām fi 'l-'Aud ilā Madīnat al-Salām*, mss. in London (Ch. Rieu, *Supplement to the Catalogue of Arab. Mss. in the British Museum*, London, 1894, nº. 613) and Cairo (*Fihrist al-Kutub al-'arabīya al-maḥfūẓa fi 'l-Kutubkhāna al-Khedīwīya*, v. 168). His principal work is a commentary on the Ḳor'ān *Rūḥ al-Ma'ānī*, composed in the years 1252—1267 (1836—1850), printed in 8 parts, Būlāḳ 1301—1310 (1883—1892). In his youth (1237 = 1822) he also wrote *Maḳāmāt*, which he published shortly before his death in 1270 (1853), and which appeared (lith.) in Baghdād in 1273 (1856). 'Abd al-Bāḳī Efendi edited a *Ḳaṣīdat Madḥ al-Bāz al-ashhab* with a commentary *al-Ṭirāz al-Mudhahhab*, Cairo 1313 (1895). Finally he also wrote a commentary to Ibn Sīnā's poem on the soul, entitled *Sharḥ al-Kharīda al-ghaibiya fi 'l-Ḳaṣīda al-'ainīya*, lith. Cairo 1270 (1853), and a commentary on a Ḳaṣīda of Muḥammed al-Djawād on the death of Abu 'l-Bahā' Khālid al-Umawī al-Naḳshbandī. (ob. 1242 = 1827), lith. Cairo 1278 (1861), printed 1287 (1870).

A relative of his, No'mān Khair al-Dīn al-Ālūsī, also resident in Baghdād, wrote an apology for Ibn Taimīya, entitled *Djalā' al-'Ainain fi Muḥākamat al-Aḥmadain*, Būlāḳ 1298, which caused great sensation especially in Ḥidjāz, on account of the relations between the Wahhābīs and Ibn Taimīya (see Goldziher, *Die Ẓāhiriten*, pp. 188, 190; *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lii. 156).

A third member of this family, Maḥmūd Ālūsī Zāde Shukrī Efendi, competed with an essay on the civilization of the pre-islamic Arabs for the prize offered by King Oskar of Sweden on the occasion of the Congress of Orientalists at Stockholm in 1899; his attempt appeared under the title *Bulūgh al-Arab fi Ma'rifat Aḥwāl al-'Arab*, Baghdād 1314 (1896); whence *al-Maisir 'inda 'l-'Arab* in *Machriq*, i. 1066—1071.

Bibliography: Brockelmann, *Gesch. d. Arab. Litter.*, ii. 498. (BROCKELMANN.)

ALWĀḤ. [See LAWḤ.]

ALWAND-KŌH (ELVEND), is an isolated mountain-group lying to the west and south-west of Hamadhān in al-Djibāl (Media), rising to a height of 3746 metres according to the latest calculations of Stahl. For the rest the accounts of travellers and maps differ considerably in the statement of the actual height (3400, 3270 metres, and so on). To the north and north-east the Alwand-Kōh steeply descends to the plain by some rocky spurs and more rounded foot-hills; to the north-west it is united to the Kalagar, a mountain-mass of equal height, which is joined to the Almagulu or Almabulag by lower mountain-chains. The latter forms the north-western extremity of the entire Alwand system. The core of the real Alwand consists of granite, judging from the geological formation; only at the base is there to be found

isolated red clay of salt formation. Wild rocky precipices, bare cliffs and gorges alternate with fertile mountain pasturages; but no single tree now grows there. The Alwand-Kōh is noted for its abundant water-supply. Mustawfī observes in his geography, written in 740 (1340), the *Nuzhat al-Ḳulūb* (Bombay 1311 = 1894), p. 152, that in addition to the spring which rises on the highest peak, no fewer than 42 streams flow from this central portion of the mountain chain, some of which are tributaries of the Tigris, others turning eastwards, flow to the interior of Īrān. As the result of the plentiful irrigation by the Alwand streams the plain of Hamadhān has always been considered as the most highly favoured region of Īrān. Hamadhān itself, the old Ekbatana, which is built in terraces along the foot of the mountain was a favourite summer residence for the Achaemenid kings on account of its cool, lofty position (1860 metres). Two cuneiform inscriptions dating from Darius I and Xerxes I still remain as vestiges of ancient Persian times at a place named Gandj-Nāmah (= treasure-house) on the slope of the Alwand-Kōh. Olivier was the first European to climb the summit which is covered with snow for eight months of the year; this feat was accomplished in 1796.

Oriental writers relate many legends but few facts concerning the Alwand-Kōh. Ḳazwīnī (ob. 682 = 1283) gives the best account; he names it Kōh Arwand. Yāḳūt also uses the form Arwand, whereas other Arabic writers employ the later term Alwand (Mustawfī: Alwand Kōh). The Old Persian name Arvanda (Avesta and Pāzend: Arwand) appears in Greek writers (Polybius, Ptolemy, Diodorus) in the form Ὀρόντης. In Old Armenian the word is found as the name of persons in the form Erwand (Arwand); cp. H. Hübschmann, *Armenische Grammatik*, Leipzig 1897, i. 40, and in the *Indogermanische Forschungen*, xvi. (Strassburg, 1904), p. 426. The "white mountains" mentioned in the cuneiform inscriptions are probably to be identified with the Alwand-Kōh; cp. Streck in the *Zeitschrift für Assyriologie*, xv. (1900), p. 371. Perhaps moreover, the "cedar-mountain" of the Old Babylonian Gilgamesh epic refers to the Alwand-Kōh, as Jensen has conjectured in Schrader's *Keilinschriftl. Bibliothek*, vol. VI, part 1 (Berlin 1900), p. 573.

Mitteilungen*, 1907, p. 205 (geological observations) and also 1909, p. 6. (M. STRECK.)

ALWAR (ULWUR according to English orthography), is a native state in British East India (Radjputāna) founded in 1771 and named after the capital Alwar. The state (314 159 sq. miles) contains 828 000 inhabitants (about one fourth are Muḥammedans), the town 58 000. Among the Muḥammedan buildings the mausoleums of Bakhtawar Singh and Fateh Djang are worthy of mention (see Fergusson, *Indian Architecture*); in the Palace of the Mahārādja there are splendid collections of books, precious stones, armour etc.

Bibliography: *Imperial Gazetteer*, *Rajputana Gazetteer*.

AMA [A.], female slave, maid. [cp. ʿABD.]

ʿAMĀDIYA, a town in Kurdistān, 18 hours north of Mosul (Mawṣil) on the slope of the Tiyārī mountains [q. v.], Lat. 37° N. and Long. about 43½° E. (Greenwich). European travellers use the forms ʿAmadiya, Amadie, Amadia and Amadiye. Although there is good authority for the form al-ʿImādiya in Arabic writers (cp. e. g. Yāḳūt s. v.) the pronunciation ʿAmādiya, ʿAmēdiya seems now to prevail. According to Mustawfī ʿImādiya takes its name from the Dailamitic prince ʿImād al-Dawla (ob. 338 = 949); others, e. g. Yāḳūt ascribe the foundation or restoration to ʿImād al-Dīn Zengī, who is said to have built the town in the year 537 (1142) on the site of a ruined Kurdish fort named Āshib. The town is situated on a hill, and is dominated by the citadel, built on a steep rock and long held to be impregnable. The water-supply of the citadel is furnished by cisterns hewn in the rock. In spite of its high, exposed position, the climate of ʿAmādiya is proverbially unhealthy, in summer the air is so hot, that the inhabitants are accustomed to leave the town in this season and take up their abode on the mountain-heights at a distance of 2—2½ hours, where even in summer snow still lies. The principal valley of ʿAmādiya is connected with the valley of Rawāndiz (Rowandus). As the result of its favourable geographical situation, near the watershed between the basin of the Khābūr and that of the greater Zāb, ʿAmādiya was for long a commercial centre and the rendez-vous of the mountain Kurds for barter with the merchants of Mesopotamia. A Jewish colony of 1000 souls recalls this commercial period. The majority of the 5000 inhabitants are Kurds of the tribe of the Hakkārī (Hakkārī), which has its head quarters here. The administration of the town was formerly in the hands of hereditary princes who traced their descent to the ʿAbbāsids; at present it belongs to the Turks, who maintain there a strong garrison, for ʿAmādiya possesses a strategic importance as the key of Kurdistān. The Turkish administration has attached the Ḳaẓa ʿAmādiya which belongs to the Liwā Hakkārī, sometimes to the Wilāyet Wān, sometimes to the Wilāyet Mosul in the last few decades.

(STRECK.)

AMAL (A.; plural *a'māl*), action, administration, district, tax-list; hence *'amaldār*, tax-collector; *'amalnāme*, warrant, patent etc. In Grammar *'amal* denotes rection, the influence of one word on another. Cp. dictionaries, especially Dozy, *Supplément*.

'AMĀLIḲ (or 'AMĀLIḲA) the Amalekites of the Bible. Muslim historians differ as to the genealogy of 'Amālīḳ; according to some he was descended from Lūd, according to others from Arpachsad, while others consider him a Hamite. The 'Amālīḳ are generally considered to be the remains of one of the most ancient Arab tribes, of the same descent as Ṭasm, Djadīs and Thamūd. The Arabs say that after the confusion of tongues, God Himself taught the 'Amālīḳ the Arabic language. The great antiquity attributed to them has led the Arabs to identify them with other biblical peoples. According to them, the Canaanites and the Philistines, (hence also Goliath, or Djālūt), were 'Amālīḳ, as were also the Pharaohs of Egypt; Ḥidjāz was moreover inhabited by this people, and it was against the 'Amālīḳ of Yathrib that Moses sent a body of Israelites with the orders to exterminate them (cp. Exodus, XVII, 8 *et seq.*

Bibliography: Ṭabarī, i. 213 *et seq.*, 717, 1131; Mas'ūdī, *Murūdj* (Paris), iii. 273—275; *Aghānī*, 1st ed., iii. 12; xiii. 109; xix. 94; Nöldeke, *Über die Amalekiter*, in *Orient und Occident*, ii. 614 *et seq.* (separately printed Goettingen, 1864) (M. SELIGSOHN.)

AMĀN (A.), security, protection, inviolability. Infidels in the dominions of Islām have a legal claim to the protection of the Muslim authorities, if they are either recognized as Dhimmī [q. v.] or if a Muslim has granted them the amān. According to the religious law every Muslim, not only freemen but even slaves and women, is entitled to offer security to an infidel. The Prophet has said: "All Muslims are bound to protect an infidel if security has been expressly guaranteed to him (though it were by the lowest of the Muslims). According to the Mālikites and Ḥanbalites, even minors are authorised to grant the amān if they have attained years of discretion.

Wensinck, *Mohammed en de Joden te Medina*, pp. 87—89. (TH. W. JUYNBOLL.)

AMĀRA, the capital of the sandjaḳ of Amāra (wilāyet of Baṣra); it is a modern town on the left bank of the Tigris, and was only founded in the second half of the 19th century; it has 9500 inhabitants.

Bibliography: Cuinet, *La Turquie d'Asie*, iii. 279.

AL-**A'MASH** (Sulaimān b. Mihrān Abū Muḥammed), an Arabic traditionist, born in 60 (679), or according to others on 'Ashūrā Day 61 (Oct. 10, 680), the day of Ḥusain's death. He was the son of an Iranian of Ṭabaristān (according to others of Dunbāwend); heard traditions in Ḥidjāz from the lips of al-Zuhrī and Anas b. Mālik; lived as a client of the Banū Kāhil b. Asad in the quarter of the Banū 'Awf, a sept of the Banū Sa'd, at Kūfa. There he died in Rabī' I 148 (May 765, according to others 147 or 149). — He was a great admirer of 'Alī and furnished the poet al-Saiyid al-Ḥimyarī with the materials for his panegyrics on 'Alī.

Bibliography: Ṭabarī (app.), iii. 2509; Ibn Khallikān (Būlāḳ, 1299), i. 267, nº 257; *Aghānī*, 1st ed. vii. 15; 2nd ed. vii. 14. (BROCKELMANN.)

AMASIA, a very ancient town, the capital of the sandjaḳ of the same name in the wilāyet Sīwās; it lies on the Yeshil Irmaḳ, was known by the name Amasia already in antiquity, and contains 30 000 inhabitants (about one third of whom are Armenians. The ruins of the citadel (Acropolis) built on a rock, the old walls which surround the town and the so-called Royal Tombs, date from antiquity. The mosques, 'imārets and medresas, which were erected by 'Alā' al-Dīn Kaiḳobād and are still partly preserved, belong to the Middle Ages. The most beautiful mosque in the town is that founded by Bāyazīd II, after the town had been incorporated in the Ottoman dominions under Bāyazīd I. The modern town owes many improvements to the famous Ziya Pasha [q. v.] and is renowned for its orchards and excellent fruit.

Bibliography: K. Ritter, *Erdkunde*, vol. ix, part i, pp. 154 *et seq.*; Cuinet *La Turquie d'Asie*, i, 741 *et seq.*

AMAZIGH, Berber tribal name meaning free man (pl. *Imazighen*) and used in this sense in the Rīf, in Shilha, in Shāwiya, at Demnat, in the Ḳṣūr of South Oranais, at Ghdāmes and in the Djebel Nefūsa. The feminine (*Tamazight*) denotes the Berber language in the same dialects. In accordance with the rules of the permutation of consonants, the *z* is represented by an *h* in most of the Tuareg dialects (hence *Amahagh*, pl. *Imohagh* in Ahaggar), or by a *sh* or a *zh*. These distinctions can be traced in antiquity: in the name of Mashuasha, a Berber tribe which invaded Egypt under the 19th dynasty, we recognise the present Imoshagh, which is the name borne by the Awellimmiden and the southern tribes. The Mazik, who ravaged the borders of Egypt at the time of the late Empire, before the Arab conquest, are related to the tribes which are today called Amazigh. (R. BASSET.)

AMBĀLA (UMBALLA), the capital of the district of the same name in the Division of Ambāla, Punjāb Province, British India. The town was founded in the 14th century, and has 79 000 inhabitants, of whom 32 149 are Muhammedans.

Bibliography: *Imperial Gazetteer*.

AMBRA. [See 'ANBAR.]

AMEDDJI (T.), the title of the Grand Referendary and Chief of the Cabinet of the Sultan, who directs the correspondence with the Sublime Porte.

ĀMID. [See DIYĀRBEKR.]

ʿAMĪD (A.), signifies Chief, and is often used in titles, e. g. ʿAmīd al-Dawla [see e. g. IBN DJAHĪR, AL-KUNDURĪ etc.], ʿAmīd al-Dīn [see AL-ABZARĪ], ʿAmīd al-Djuyūsh [see AL-ḤASAN B. USTĀDH HORMUZ].

AL-**ĀMIDĪ** (ʿAlī b. Abī ʿAlī b. Muḥammed al-Thaʿlabī Saif al-Dīn), an Arab theologian, born at Āmid in 551 (1156); he was first a Ḥanbalite, but in Baghdād he turned Shāfiʿite. After studying philosophy in Syria he became a tutor at the Madrasa al-Karāfa al-Ṣughrā, and in 592 (1195) at the Ẓāfirī mosque in Cairo. His philosophical knowledge brought upon him the accusation of heresy and he was compelled to flee to Ḥamāt. Later he was called to the Madrasa al-ʿAzīzīya at Damascus, but was shortly afterwards dismissed, because he had entered into correspondence with the Prince of Āmid, whom al-Malik al-Kāmil had deposed in 631 (1233), with a view to the acceptance of a judicial appointment. He died in 631 (1233).

He wrote a philosophical work on dogma, *Kitāb Abkār al-Afkār* (mss. at Berlin, see Ahlwardt, *Verzeichnis der arab. Hss. der Kgl. Bibliothek*, nº. 1741, and Constantinople, Aya Sophia nº. 2163—2168) in 612 (1215); and a *Kitāb Iḥkām al-Ḥukkām fī Uṣūl al-Aḥkām*, dedicated to al-Malik al-Muʿaẓẓam of Damascus 615—624 (1218—1227) — mss. at Paris, de Slane, *Catalogue des mss. ar. de la bibliothèque nationale*, nº. 791, at Constantinople, Jeni mosque, nº. 303 and Cairo, *Fihrist al-Kutub al-ʿarabīya fi 'l-Kutubkhāne al-khedīwīya*, iii. 235).

Bibliography: Ibn Khallikān (Būlāk, 1299), i. 415, nº. 405; Ibn Abī Uṣaibiʿa (ed. A. Müller), ii. 174; Ibn al-Ḳifṭī (ed. Lippert), pp. 240 *et seq.*; 241; Brockelmann, *Gesch. d. arab. Litter.*, i. 393. (BROCKELMANN.)

AL-**ĀMIDĪ** (al-Ḥasan b. Bishr Abu 'l-Ḳāsim), an Arabic philologist, a pupil of al-Zadjdjādj and of Ibn Duraid, whose work was principally devoted to the critical study of Arabic poetry; he died in 371 (981).

His principal work is *Kitāb al-Muwāzana baina 'l-Ṭāʾiyain Abī Tammām wa 'l-Buḥturī fi 'l-Shiʿr*, Constantinople (Djawāʾib), 1287 (1870); Turkish translation by Muḥammed Weled (Constantinople, 1311). It compares the merits of the two most important imitators of the Ancients. His *Kitāb al-Muʾtalif wa 'l-Mukhtalif* was the principal source of Suyūṭī for fixing doubtful names of poets in his *Sharḥ Shawāhid al-Mughnī* (Cairo 1322, pp. 47, 51 etc.); it is preserved in two Cambridge mss. (see E. G. Browne, *A Handlist of the Muhammadan Mss. of C.*, nº. 1127, 1128). His *Amālī* is quoted by Ḥarīrī, *Durrat al-Ghawwāṣ* (ed. Thorbecke), pp. 64, 69, and his commentary on the Dīwān of al-Musaiyab b. ʿAlas by al-Suyūṭī in *Sharḥ Shawāhid al-Mughnī*, p. 41, 14.

Bibliography: Flügel, *Die grammatischen Schulen der Araber*, p. 100; Brockelmann, *Gesch. d. arab. Litter.*, i. 111. (BROCKELMANN.)

AL-ʿ**AMĪDĪ** (Muḥammed b. Muḥammed Abū Ḥāmid Rukn al-Dīn al-Samarkandī), a Ḥanafite jurist and Ṣūfī, died on the 9th Djumādā II, 615 (Sept. 3 1218) at Bukhārā.

As a scholar his chief merits are in the sphere of dialectics in which he especially cultivated the branch denoted by the Persian word *Djust* (i. e. research). His principal work on this art is his *Kitāb al-Irshād* (H. Derenbourg, *Les mss. arabes de l'Escurial*, nº. 650, 2). His *al-Ṭarīḳa al-ʿamīdīya fi 'l-Khilāf wa 'l-Djadal* is preserved in Cairo (*Fihrist al-Kutub al-ʿarabīya fi 'l-Kutubkhāne al-khedīwīya*, iv. 79).

His Ṣūfic work *Kitāb Mirʾāt (Ḥayāt) al-Maʿānī fī Idrāk al-ʿĀlam al-insānī* is of greater interest to us; it deals with the dependance of the microcosm on the macrocosm and is an adaptation of a Persian translation of the Indian work *Amṛtakuṇḍa* of Bahulara (?) Brahman Yogi, cp. de Guignes, *Mém. de l'académie des inscriptions*, xxvi. 791; Gildemeister, *Scriptor. ar. de rebus indicis*, p. 115; W. Pertsch in *Festgruss an Roth* (1893), pp. 208—212; Ibn ʿArabī issued a new recension of this work correcting it according to the original with the assistance of a Yogi (mss. see Brockelmann, *Gesch. d. arab. Litter.*, i. 446, nº. 100). Finally we possess another of his works, a philosophic-talismanic treatise, *Ḥawḍ al-Ḥayāt*, at Paris (de Slane, *Catalogue des mss. ar. de la bibliothèque nationale*, nº. 773, 2.

Bibliography: Ibn Khallikān (Būlāk, 1299), i. 604, nº. 575; Ibn Ḳuṭlūbughā, *Tādj al-Tarādjim fī Ṭabaḳāt al-Ḥanafīya* (ed. Flügel), nº. 171; Brockelmann, *Gesch. d. arab. Litter.*, i. 439. (BROCKELMANN.)

ʿĀMIL (A.) signifies tax-collector, agent, prefect.

ʿĀMIL (A.; pl. *ʿawāmil*), derived from *ʿamila fī* (= to act upon), signifies as a grammatical term a regens, or to express it in the way of the Arabic grammarians a word, which, by the syntactical influence which it exercises on a word that follows, causes a grammatical alteration of the last syllable of the latter, i. e. a change of of case or mood. Two kinds of regentia are distinguished, one which can be recognized externally (*lafẓī*) and one which is only to be supposed logically, but which is not expressed (*maʿnawī*).

The *ʿāmil lafẓī* again is of two kinds, 1º the case where it concerns a whole series of mutually dependant words, which can be treated analogously according to the same rule (as for example in the *iḍāfa* construction), 2º the case in which each regens requires special treatment (e. g. *bi*, *law*); these two sub-divisions are named *ʿāmil ḳiyāsī* and *ʿāmil samāʿī* respectively. It makes no difference whether the regens is expressed as in *Ḳāma Zaid*, or whether it must be supplied grammatically from the sentence as a form of the verb, as in *Zaid fi 'l-dār*. Indeed the absence of a regens is a very frequent occurrence in Arabic grammar (cp. *Zamakhsharī*, *al-Mufaṣṣal*, index s. v. *Iḍmār ʿĀmil . . .*). This case must be distinguished from the complete absence of the regens in the case of the *ʿāmil maʿnawī*, for in this second kind it is impossible to supply the *ʿāmil* grammatically, although it can be done logically; grammarians usually cite as an example the subject of the nominal sentence, whose *ʿāmil* cannot possibly be supplied.

Bibliography: Sprenger, *Dict. of techn. terms*: p. 1045; ʿAlī al-Djurdjānī, *Kitāb al-taʿrīfāt* (ed. Flügel), p. 150; ʿAbd al-Ḳāhir al-Djurdjānī, *Kitāb al-ʿawāmil al-miʾa* (ed. Erpenius). (WEIL.)

ʿĀMILA, an Arab tribe belonging to the Yemenite or South Arabian group. The eponyme ʿĀmila is considered by some *nassābūn* as masculine, but by most as feminine (*Aghānī*, viii. 179; *Ibid.* ii. 86; Ṭabarī, i. 225); the latter hy-

pothesis is the more plausible. The Banû 'Âmila are said to have formed part of the tribes settled at Ḥîra and also of the subjects of the legendary Zabbâ-Zenobia (Ṭabarî, i. 685; *Aghânî*, xi. 161; xvi. 73; Mas'ûdî, *Murûdj*, iii. 189). At the time of the Muslim invasion we find them settled S. E. of the Dead Sea; they are mentioned among the Syro-Arabian tribes which joined Heraclius (Balâdhorî, ed. de Goeje, p. 59; Ṭabarî, i. 2347); but do not appear again in the history of the conquest. Shortly afterwards we find them established in Upper Galilee, which is named after them Djebel 'Âmila (Ya'kûbî, ed. de Goeje, p. 162; Hamdânî, pp. 129, 132). They play a very unimportant part and are almost completely absorbed by the Banû Djudhâm. 'Adî b. al-Riḳâ', the poet of al-Walîd I, was their chief pride; he celebrated the Djudhâmite Rawḥ b. Zinbâ', as the saiyid of his tribe (*Aghânî*, viii, 179, 182); and thereby gives a further proof of their small importance. Ibn Duraid (*Ishtiḳâḳ*, pp. 224-225; cp. *'Iḳd*, l. c.) finds few notable men among them; satire rarely deals with them (e. g. Ḥuṭai'a, Ix). After the 11th century A. D. the 'Âmila seem to have spread S. of the Lebanon, in the present district of Bilâd al-Shaḳîf which is still called Djebel 'Âmila (Abu 'l-Fidâ', p. 228; Dimishḳî, p. 221).

According to Yâḳût (*Mu'djam*, iv. 291), they also occupied a part of the country of the Ismâ'îlîs, a day's journey to the S. of Aleppo, which he says was named after them 'Âmila Mountain. This isolated reference (cp. *Journ. As.* 1855, i. 48) is the more surprising in that the corresponding text of the *Marâṣid* gives 'Âmira instead of 'Âmila. To avoid the difficulty, G. le Strange (*Palestine*, p. 75) supposes an emigration towards the N. during the crusades, but without giving references. The Arabic historians of this period are ignorant of this change of place, and continue to use the synonymy 'Âmila-Djalîl (*Recueil des historiens des croisades*, *Hist. or.*, ii. 88 for *Khalîl* read *Djalîl*, iii. 491, 543). The application to the 'Âmila of the passage from the Korân, lxxxviii, 3, by the poet Djarîr is only a sneer of the Tamîmite who was jealous of the favours enjoyed by Ibn al-Riḳâ'. (H. Lammens.)

AL-'ÂMILÎ Muhammed b. Ḥusain Bahâ' al-Dîn with the *takhalluṣ* Bahâ'î, the author of a number of writings both in Arabic and in Persian on different subjects. Born in 953 (1547), he died in 1030 (1621). He was a native of Djebel 'Âmila in Syria, travelled to Persia and finally obtained an honourable post at the court of Shâh 'Abbâs. He is best known for his Anthology *al-Kashkûl* ("the beggar's bowl"), which has often been printed in the East; in addition he wrote a work on Shî'a dogmatics (in Persian) entitled *Djâmi'-i 'Abbâsî* and several mathematical and astronomical treatises. He acquired a reputation as a Persian poet by his *Methnewî* entitled *Nân u-Ḥalwâ*, which according to Ethé forms a kind of introduction to the *Methnewî* of Djalâl al-Dîn Rûmî. His second *Methnewî* entitled *Shîr u-Shakar* is not so well known.

Bibliography: Muḥibbî, *Khulâṣat al-Athar*, iii. 440 *et seq.*; Goldziher, in *Sitzungsber. d. Kaiserl. Akademie der Wissensch. in Wien, phil.-hist. Cl.*, lxxviii. 458 *et seq.*; Brockelmann, *Gesch. d. arab. Litter.*, ii. 414; Ethé, in *Grundriss der iran. Philologie*, p. 301.

ÂMÎN (A.), signifies "*amen*". cp. Goldziher, *Arabische Amen-Formeln* in *Rivista degli studi orientali*, i.

AMÎN (A.; pl. *umanâ'*), trustworthy; whence al-Amîn with the article as an epithet of Muḥammed in his youth. As a noun it means: he to whom something is confided, administrator, overseer; e. g. *Amîn al-Waḥy*, he who is entrusted with the revelation, *i. e.* the angel Gabriel. The word also frequently occurs in titles, e. g. Amîn al-Dawla [see IBN AL-TILMÎDH and other names], Amîn al-Dîn [see YÂḲÛT], Amîn al-Mulk, Amîn al-Salṭana.

AL-AMÎN (Muḥammed b. Hârûn al-Rashîd), a Caliph. His mother was the famous Zubaida bint Dja'far b. al-Manṣûr, and he was born shortly after Hârûn's accession to the throne. By reason of his illustrious origin he was preferred to his brother 'Abd Allâh, who was born a few months earlier as the son of a Persian slave-girl, and as early as 173 (789-790) or 175 (791—792), Hârûn ordered homage to be paid to him as crown Prince under the name of al-Amîn. A few years later 'Abd Allâh was appointed successor to al-Amîn, under the name of *al-Ma'mûn*. In addition Hârûn handed over to Ma'mûn the administration of the eastern provinces from Hamadhân to the Indus, and in 186 (802) his third son al-Ḳâsim obtained Mesopotamia and the border fortresses belonging thereto. In order to avoid uncertainty the Caliph drew up two documents in one of which Amîn was expressly excluded from the throne if he should contest the rights of al-Ma'mûn, while the other contained a solemn promise on the part of al-Ma'mûn to remain faithful to his brother. The empire was thus virtually divided by these fateful measures and al-Amîn's power was reduced to the sway of 'Irâḳ and Syria, together with Arabia and Africa. The ill effects soon appeared, and after the death of Hârûn at Ṭûs, in 193 (809) a violent struggle began between the new Caliph and the Governor of Khorâsân. The two brothers were very unlike, Amîn frivolous and pleasure-loving, the other cold and calculating. In addition there was the wide contrast both in religion and in nationality between the Sunnite Arabs and the Shî'ite Persians to the latter of whom al-Ma'mûn was drawn by the mere fact of his Persian descent. First of all al-Amîn recalled to Baghdâd the troops, which had set out at the command of Hârûn. al-Ma'mûn whom Hârûn had sent in advance, retreated in haste to Merw at the news of his father's death, but took the oath of allegiance to his brother, without creating any difficulties. Then al-Amîn deprived his other brother, al-Ḳâsim, of the governorship of Mesopotamia which had been conferred on him and only confirmed him as Governor of Ḳinnasrîn and the border-fortresses. The weak Amîn who too willingly allowed himself to be led by others was being more and more instigated against his brother by the Wezîr al-Faḍl b. al-Rabî' and in 194 (809-810) he ordered that his son Mûsâ should be mentioned together with al-Ma'mûn in the Friday prayer, thus signifying his intention of appointing him his brother's successor. Al-Ma'mûn now broke off all communication with the capital; at the beginning of the year 195 (810), however, al-Amîn definitely deposed him, and shortly afterwards sent out an army to the East under 'Alî b. 'Îsâ. They encountered al-

Ma'mūn's army under Ṭāhir b. al-Ḥusain at al-Raiy: 'Alī was slain, and his troops took to flight. A new army despatched by al-Amīn against Ṭāhir was likewise defeated, and when the Caliph in 196 (811—812) ordered his troops to take the field for the third time to bar the further advance of the Khorāsānians, the spies of Ṭāhir succeeded in sowing dissatisfaction in the camp at Khāniḳīn, and the whole army returned to Baghdād without having accomplished anything. In addition there arose dangerous disturbances and disorders in Syria. In the capital itself Ḥusain, son of the 'Alī who had fallen at al-Raiy succeeded in setting on foot a conspiracy against the Caliph in Radjab 196 (March 812) and captured him in person together with his mother and although al-Amīn was soon afterwards set at liberty by his partisans, his situation was becoming more and more dangerous. In the meantime the troops of Ṭāhir were approaching nearer and nearer. Shortly afterwards both the holy cities of Mecca and Medina paid homage to Ma'mūn, to whom the whole of Eastern Arabia had already yielded, and finally the capital alone remained. It was invested by Ṭāhir and Harthama b. A'yan. al-Amīn's best generals deserted to the enemy, and one quarter of the city after another was stormed. When the Caliph at last was compelled to submit to negotiations as to the capitulation, it was agreed that he should be taken away from his palace at night in a boat by Harthama, and that the insignia of his office should be handed over to Ṭāhir. The boat however was attacked by Ṭāhir's men. Harthama and al-Amīn escaped by swimming but on reaching the land the Caliph was captured and put to death the same night, at the end of Muḥarram 198 (September 813).

Chalifen*, ii. 163 *et seq.*; Müller, *Der Islam im Morgen- und Abendland*, i. 498 *et seq.*; Muir, *The Caliphate, its rise, decline, and fall* (3rd ed.), p. 477 *et seq.*

AMĪN B. ḤASAN ḤALAWĀNĪ AL-MADANĪ an Arab traveller; he was first Mudarris in the mosque of the Prophet in his native town of Medina. It was here that he published in 1292 (1875) a pamphlet against the veneration of relics, especially the hair of the Prophet. Afterwards he travelled in the Muslim East and in Europe as a bookseller. In 1883 he even came to Amsterdam and Leiden, where he sold an important collection of manuscripts to the Leiden Library. Later we find him in Bombay (where he died), engaged in literary work. Among other works he wrote a history of Dāwūd Pasha, *Maṭāli' al-su'ūd bi-ṭīb akhbār al-wālī Dāwūd*, 1304 (1887) and pamphlets against Djirdjī Zaidān [q. v.], entitled *Naḳd al-Hadhayān min Ta'rīkh Djirdjī Zaidān*, Bombay, 1307 (1890) and against the Rifā'ī Saiyid Aḥmed As'ad entitled *al-Suyūf al-mughriḳa 'ala 'l-zanādiḳ al-mubriḳa*, 1312 (1895), the last-named under the pseudonym 'Abd al-Bāsiṭ al-Manūfī.

ĀMINA, Muḥammed's mother. According to the genealogies she was the daughter of Wahb b. 'Abd Manāf of the family of Zuhra and of his wife Barra of the family of 'Abd al-Dār, both families of Mecca. The expression of the poet Ḥassān b. Thābit of Medina: "we have brought him (Muḥammed) forth" (Nöldeke, *Delectus*, p. 74, 6) would, according to ordinary usage, signify that his mother was of Medina; but according to the traditions of the Arabs this is not possible, and this expression as also the allusions to Muḥammed's maternal uncles as living at Medina (Ibn Hishām, ed. Wüstenf., i. 107; Ṭabarī, i. 980; Ibn Sa'd, iii. 91, 17) can only refer to the wife of his grandfather 'Abd al-Muṭṭalib [q. v.]. The mention of Āmina as a woman of high rank (Ṭab., i. 1078) is due to the later legends which embellish the facts (the expression in the poem in Ibn Hishām, i. 39, 9 is probably a mere term of politeness, if indeed the poem is authentic). For her marriage with 'Abd Allāh b. 'Abd al-Muṭṭalib, see the latter. The accounts of her visions during her pregnancy (Ibn Sa'd, I[1], 60 *et seq.*; Ṭab., I. 968, 979) are legendary traits and should not be made use of, as Sprenger does, to give pathological explanations of the neurastic disposition of her son. She died, when Muḥammed was 6 years old, at Abwā' [q. v.], after taking her son on a visit to Medina (Ibn Hishām, i. 107; Ibn Sa'd, i. 73; Ṭab., i. 980).

(FR. BUHL.)

'ĀMIR, the name of a South Arabian tribe [see ṢA'DA.]

'ĀMIR I. (al-Malik al-Ẓāfir Ṣalāḥ al-Dīn) founded in Yemen the dynasty of the Banū Ṭāhir, after the fall of that of the Rasūlids about the year 855 (1451) in conjunction with his brother 'Alī (al-Malik al-Mudjāhid Shams al-Dīn). He lost his life during an unsuccessful attempt to capture the town of Ṣan'ā' (870 = 1466), cp. Johannsen, *Historia Jemanae*, p. 186 *et seq.* and the art. ṬĀHIRIDS.

'ĀMIR II. (b. 'Abd al-Wahhāb, al-Malik al-Ẓāfir Ṣalāḥ al-Dīn), was the last prince of the house of the Ṭāhirids; he ruled in Yemen 894—923 (1488—1517). Already in 922 (1516), the Egyptian admiral Ḥusain occupied the capital of Yemen, Zabīd, because 'Āmir refused to supply the fleet sent out against the Portuguese with provisions. Ḥusain left his brother Barsbai behind in the city; and in the following year 'Āmir who had taken flight together with his brother 'Abd al-Malik fell in a combat with Barsbai. As in the interval the Mamlūk dynasty had been overthrown by Selīm, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

Bibliography: Ḳuṭb al-Dīn, in *Notices et Extraits*, iv. 421; Johannsen, *Historia Jemanae*, pp. 229 *et seq.*; Weil, *Gesch. d. Chalifen*, v. 398 *et seq.*

AL-ĀMIR BI-AḤKĀM ALLĀH ABŪ 'ALĪ AL-MANṢŪR, the tenth Fāṭimid, was born the 13th of Muḥarram 490 (Dec. 31, 1096). As a mere child of five he was proclaimed caliph on the 14th of Ṣafar 495 (Dec. 8, 1101) by his father al-Musta'lī's

vizier al-Afḍal. This one straightway assumed control of the government and was all but in name king of Egypt for the next twenty years. His rule was a mild and just one, and to it, as much as to his energy and firm control, the country owed the internal quiet and prosperity it enjoyed during his viziership. It was during this time, indeed, that strife with the crusaders in Palestine raged fiercely. In 489 (1096), the first crusade began its march; in 491 (1098), Edessa, Antioch, and many fortresses were taken: and in 492 (1099), Jerusalem itself fell into the hands of the Christians. Though al-Afḍal unremittingly waged war against the invaders at various times dispatching forces under Saʿd al-Dawla, al-Tawāshī, Sharaf al-Maʿālī his son, Tādj al-ʿAdjam b. Ḳadūs, Djamāl al-Mulk with whom the Atābeg Tugtakin made common cause and Sanā al-Mulk al-Ḥusain, and later Masʿūd and al-Aʿazz b. al-Labbān, by the year 518 (1124), the greater part of Palestine and of the coast of Syria, Tortosa, ʿAkkā, Tripolis, Sidon, and Tyre fell into the hands of the crusaders. Egypt itself, indeed, was invaded in 511 (1117), by Baldwin, part of Faramā being burnt. Arrived at Tinnis, however, he was forced to retreat because of his illness. The Egyptians attempted no reprisals and henceforth until the end of the Fāṭimide dynasty, defensive diplomacy was the prevailing policy of their viziers. In the meantime the wise rule of al-Afḍal had come to an end. Al-Āmir no longer wishing to be restrained and to be a mere figurehead, had the great vizier assassinated in the street at the close of 515 (1121). To his successor Ibn al-Baṭāʾiḥī al-Maʾmūn fell the task of repelling the Bawāṭu who invaded Egypt in 517 (1123). His tenure of office soon came to an end. Though a capable financier and tolerant, he could not keep his place. Al-Āmir had him imprisoned in 519 (1125) and afterwards crucified. The caliph hereupon acted as his own vizier, aided by the monk Abū Nadjāḥ b. Kannā as general collector of revenue. Displeased at the airs of his assistant, he had him flogged to death. Oppression of every kind and wanton executions were carried out by the caliph, until he was finally assassinated as he rode back from al-Hawdadj on the 2nd of Dhu 'l-Ḳaʿda 524 (Oct. 8, 1130).

ʿĀMIR B. ṢAʿṢAʿA, Arab tribe (in Pliny it appears, though apparently further in the South, as Hamirei or Hamiroei, Hamirinoei, Hamiriani, Amiroei, Amironei). The name occurs comparatively rarely in a recognizable form as the name of a separate tribe; generally it is a collective name for a small number of tribes belonging to the great Hawāzin group. The artificial genealogical scheme is ʿĀmir b. Ṣaʿṣaʿa b. Muʿāwiya b. Bakr b. Hawāzin. With Ṣaʿṣaʿa are classified for example, the ʿAwf, Djaḥāh, Djusham, Naṣr, and others; with ʿĀmir the Murra, Ghāḍira, Māzin, Wāʾila, Salūl and a number of others. In the ʿĀmiritic group the Hilāl, Kilāb, Numair, Ḳushair, Rabīʿa, Suwāʾa, ʿUḳail etc. are more or less loosely united.

In the North the ʿĀmirites were the neighbours of other Hawāzin tribes and of the Sulaim, in the East of the Sulaim (the well Maʿūna already belonged to the latter), but they also appear in the Yamāma; in the South they were the neighbours of the Thaḳīf and can be traced as far as the district of Tathlīth, even as far as Nadjrān. In the West ʿĀmirites were settled as far as the coast of the Red Sea.

Localities are frequently denoted as ʿĀmirite without an indication to which of the ʿĀmirite tribes they belong; only such localities are mentioned in the following list.

ʿĀmirite mountains: ʿArim, Alʿās, Djabala (between the region of the Numair [s. above] and that of the Kilāb [s. above], renowned on account of the battle that took place there [see below]), Kibāl, al-Midhnab (in the Yamāma), Tīl, Wāsiṭ. The wide sandy region of Djarrāḥ also lay in ʿĀmirite dominions. ʿĀmirite wadis: Bādī, Dāsā, Rukba. ʿĀmirite waters: al-Djufī, Immara, al-Nisār. ʿĀmirite places: Akhrab or Akhrub (battle between ʿĀmir and Nahd), Baḳar, Bintā Haida (a double mountain), Bustān, Butrān, Darʿā, Ḥandjara, (near Ḳinnesrīn), al-Ḥawmān, Ḥudhba, Ḥuwaiy, Maṣāma, (in the South, near Tathlīth), al-Likāk, Nibādj, al-Raḳāḳ, Ramā, al-Ranḳāʾ, Rawḍat al-Aʿrāf, Ruhāt, al-Radjlāʾ, Saʿnaba, al-Sī (5 days' journey from Medina; successful attack by the Muḥammedans on heathen ʿĀmirites), al-Sullaiy, Unais, Waḳf, Zuwail.

History. Here also we must take into consideration the fact that the sources often speak of the ʿĀmirites, where only one portion of a tribe is meant. In heathen and in Muḥammedan times feuds tooks place with various Arab tribes, which, for the most part, cannot be arranged chronologically; namely with the ʿAbs, Asad, Ḍabba (battle at al-Sallān), Dhubyān (victory of the latter at Murawwit), Ḥanīfa (battle at Faladj), Yamanites (battle at al-Nashnāsh), Khathʿam (battle at Kurdā), Madhḥidj (battle at Faif al-Rīḥ), Nahd (battle at Akhrab or Akhrub), Ṭaiy (battle at al-Maḍīḳ), Tamīm (victory at Raḥrāḥ mountain not far from ʿUkāẓ. Defeat in the night battle at al-Waḳīṭ. Victory at Mount Djabala one of the most famous battles of the heathen times, which happened, it is said, 17 years before Muḥammed's birth; a year later victory of the Tamīm at Nadjab), Thaḳīf (march of the ʿĀmirites against al-Ṭāʾif), Thaʿlaba b. Saʿd. In addition a battle of Khunān is mentioned. In heathen times the ʿĀmirites had belonged to the tribes which observed the rites of the Ḥumsites. Among the tribes which accepted Islām in the "year of the embassies", ʿĀmirites are mentioned. During the general revolt under Abū Bakr they remained

quiet at the approach of the Muḥammedan army. In the battle on the meadow of Râhiṭ they fought for Ibn al-Zubair together with other Ḳaisites and also took part in the subsequent feuds. In the 4th (10th) century "ʿÂmirites" appeared in the Ḳarmaṭe wars. (Reckendorf.)

ʿÂMIR b. al-Ṭufail, leader of the Banû ʿÂmir b. Ṣaʿṣaʿa, was born in 555 on the day of the battle of Djabala, and died towards the year 11 = 632; he is especially known for his enmity against Muḥammed, whose envoys he put to death at the well Maʿûna. An abscess in the throat brought upon him by Muḥammed's curse is given as the cause of his death; the affliction fell upon him when he met the prophet in person and persisted on refusal to accept Islâm. — ʿÂmir, a cousin of the poet Labîd [q.v.], also enjoyed the fame of a poet; but large poems of his do not survive: fragments are to be found in the *Ḥamâsa* of Abû Tammâm and in that of al-Buḥturî as also in Ibn Ḳotaiba's *Kitâb al-Shiʿr*, pp. 191 *et seq.*

(A. Haffner.)

AMÎR (a., pl. *Umarâʾ*), Emîr, leader, commander; in Greek transcription: Ἀμήρ, ἀμῆς or ἀμιρᾶς; Latin *Amiratus Amiralius* (whence the word Admiral) etc. In Persian pronunciation often abbreviated to *Mîr* [q.v.]. During the rule of the Seldjuks there was a chief Amîr who bore the title of *Amîr Amîrân* or *Malik al-Umarâʾ*. The commonest combinations are as follows.

AMÎR ÂKHÔR, Persian *Mîr Âkhôr*, High Equerry, one of the highest officials in the court of Oriental princes. Among the Egyptian Mamlûks he held the fifth place. Cp. *al-Amîr al-Kabîr*.

AMÎR DÂD, Emîr of Justice, Minister of Justice during the dominion of the Seldjuks, especially in Asia Minor; at other periods certain Emîrs bore this title permanently. Cp. Ibn al-Athîr (ed. Tornb.), Index s. v.

AMÎR al-ḤADJDJ, Leader of the caravan of pilgrims to Mekka. The first to bear this title in Islâm was Abû Bekr (in 9 = 630). Under the later Caliphs princes of the ruling dynasty were charged with this function of honour, in cases where the caliph did not undertake it himself (a custom which soon fell out of use). The duties of the office did not merely consist in conducting the caravan to and from Mekka, but they also included the moral and penal police supervision of the pilgrims during the journey, the leading of the ceremonies at Mekka, ʿArafa and the other holy places. During the troubled times of the second civil war it happened that four leaders of the ḥadjdj planted their banners at ʿArafa, because there were that number of claimants to the throne, so in the year 68 (688): Muḥammed b. al-Ḥanafiya, Ibn al-Zubair, Nadjda b. ʿÂmir and Marwân, the Umaiyad. After the fall of the caliphate the most powerful Muḥammedan princes, e.g. the Mamlûks of Egypt and the Ottoman Sulṭans, each appointed an Amîr al-ḥadjdj, who had to conduct the caravans of pilgrims from Cairo and Constantinople (via Damascus) to Mekka. For the festivities which take place nowadays at the departure of these caravans, see Artt. maḥmal and surre. According to Burton, *A pilgrimage to el-Medinah* etc., i. 402 note, the office of Amîr al-ḥadjdj was not only honorable, but also profitable, because those who held it, legally inherited the possessions of pilgrims who died on the way (the right of escheat, droit d'aubaine).

Bibliography: A. von Kremer, *Culturgeschichte*, i. 452.

al-**AMÎR** al-**KABÎR** was originally the title of the oldest Emîr at the Mamlûk court, later, after Shaikhûn al-ʿOmarî had borne it (752 = 1352), it was the denomination of that Emîr who stood nearest to the Sulṭan. After the Amîr al-Kabîr there came (cp. Khalîl al-Ẓâhirî, ed. Ravaisse, p. 114): 2. the *Amîr Silâḥ*, 3. the *Amîr Madjlis*, 4. the *Great-Dawâdâr*, 5. the *Great-Amîr-Âkhôr*, 6. the *Amîr Nawbat al-Nuwab*, 7. the *Amîr Ḥadjib al-Ḥudjdjâb*, 8. the *Great-Khâzindâr*, 9. the *Amîr al-Ḥâdjdj*. The bearers of this title were always chosen from among the leaders of 1000 (*Muḳaddam al-Ulûf*), cp. Maḳrîzî, *Histoire des sultans Mamlouks* (transl. by Quatremère), i, 3.

AMÎR KHÂN, was the first Nawâb of Tonk, of Afghân origin, and was born in Rohilkand in 1182 (1768—1769). In his twentieth year he began an adventurous life as leader of a band of brigands, entered the service of the rulers of Malwa, Bhopal, Indore and Djapur and caused great mischief in Central India by his ravages and plundering. Finally driven into a corner by the English, he concluded a treaty with them in 1817, binding himself to disband his troops, in return for which he was confirmed in possession of the territory which Rao Holkar of Indore had allotted him; thus the state of Tonk was founded, in which his successors have since ruled. He died in 1834; and his life has been written by one of his officials Baswân Lâl of Bilgram.

Prinsep, *History of the political and military transactions in India during the administration of the Marquess of Hastings* (London, 1825).

(J. Horovitz.)

AMÎR MADJLIS (or al-Madjlis), Master of Audiences or Ceremonies, one of the highest dignitaries at the court of the Seldjuks of Asia Minor. Under the Egyptian Mamlûks he held the third place among the Great-Emîrs [see al-amîr al-kabîr] and had the supervision of surgeons and physicians. In Egypt he has formerly been named *Amîr Mashwar*, cp. Maḳrîzî, *Histoire des sultans Mamlouks* (transl. by Quatremère, 11a, 97; M. van Berchem, *Matériaux pour un corpus inscript. arabic.*, pp. 274, 585.

AMÎR al-**MUʾMINÎN**, i. e. lord of the faithful. ʿOmar was the first to bear this title. In the East the Umaiyad and ʿAbbâsid caliphs followed his example, as did those of their opponents who thought themselves entitled to claim the Caliphate (ʿAlids, Karmaṭes, Fâṭimids). It was not till the fall of Baghdâd (656 = 1258)

that the smaller rulers in the East also styled themselves Amîr al-Mu'minîn.

In the West the title occurs more frequently: it was borne by the Rostemids, Aghlabids, Zîrids, Ḥammâdids, the Umaiyads after 316 (928) and some of the petty Spanish kings. On the other hand those dynasties which recognized the supremacy of the 'Abbâsids contented themselves with the title *Amîr al-Muslimîn* [q. v.], e. g. the Almoravids. Their opponents, the Almohades, founded again the independent African Caliphate and called themselves "lords of the faithful", as also in part the Ḥafṣids, Marînids and Zaiyânids. At present the Sherîfs of Morocco and the Sultans of Turkey are still styled Amîr al-Mu'minîn. — It may be added that as early as the year 2 of the Hidjra 'Abd Allâh b. Djaḥsh bore this title during the expedition to Nakhla.

Bibliography: M. van Berchem, *Titres califiens d'Occident* (*Journ. As.* Series 10, xi. 245—335), where complete bibliographical references are given. (A. J. Wensinck.)

AMÎR al-MUSLIMÎN, i. e. lord of the Muslims, a title which the Almoravids first assumed, in contra-distinction to *Amîr al-Mu'minîn* [q. v.]. The latter title was born by the independant dynasties; the Almoravids, however, recognized the supremacy of the 'Abbâsids and did not wish to arrogate to themselves this title of the Caliphs. So they established a kind of sub-caliphate with a title of their own. Afterwards the African and Spanish princes bore either the one or the other of these titles, according as they sought after the independent caliphate or recognised any supremacy.

Bibliography: M. van Berchem, *Titres califiens d'Occident* (*Journ. As.*, series 10, ix. 245—335). (A. J. Wensinck.)

AMÎR SILÂḤ the title of one of the highest dignitaries at the court of the Egyptian Mamlûks, who supervised the royal arsenal (*Silâḥ-khâne*) and the armed men (*Silâḥdâr*). He occupied the second place among the Great-Emirs (cp. al-amîr al-kabîr).

AMÎR al-UMARÂ, chief Emir, commander-in-chief of the army. As the name shews this dignity was originally confined to the military command. But the pretorians continued to become more powerful, and already the first bearer of the title, the eunuch Mûnis, soon became the real ruler, for it was to him that the weak and incapable Caliph al-Muḳtadir owed his rescue on the occasion of the conspiracy on behalf of 'Abd Allâh b. al-Mu'tazz in 296 (908). After the appointment of Muḥammed b. Râ'iḳ the governor of Wâsiṭ in 324 (Nov. 936) as Amîr al-Umarâ' by the Caliph al-Râḍî, this desperate ruler could not but hand over to him the entire civil authority, and his name was even mentioned in the public prayers together with that of the Caliph. So the Emîrs became in reality virtual rulers, while the Caliphs sank more and more to mere shadows of their former power.

AMÎRGHANÎYA. [See al-mîrghanî.]

'ÂMIRIDS, the descendants (and successors; also clients and freedmen) of the great regent of the last Umaiyads in Spain, al-Manṣûr b. Abî 'Âmir (= Almanzor, q. v.; died in 392 = 1002) of the Yemenite family of 'Abd al-Malik al-Ma'âfirî, who had come to Spain with Ṭâriḳ: firstly Almanzor's sons 'Abd al-Malik and 'Abd al-Raḥmân (Sanchol) b. al-Manṣûr [q. v.]. 'Abd al-'Azîz al-Manṣûr [q. v.], the son of the last-mentioned was the founder of the dynasty of the 'Âmirids in Valencia, where he ruled, 412—453 (1021—1061). He was succeeded by his son 'Abd al-Malik al-Muẓaffar [q. v.] 453—457 (1061—1065). After the ten year's interregnum of al-Ma'mûn (of Toledo), 'Abd al-Malik's brother Abû Bekr b. 'Abd al-'Azîz ruled in Valencia, 468—478 (1075—1085). In this year the city was wrested from Abû Bekr's son, the Ḳâḍî 'Othmân b. Abî Bekr and fell into the power of al-Ḳâdir who had been dethroned at Toledo. — Among the former clients of the house the slave Mudjâhid al-'Âmirî, who raised himself to be ruler of Denia and the Balearic Isles may be mentioned. (C. F. Seybold.)

'AMḲ (or al-'Amḳ) a vast plain of northern Syria, surrounded on all sides by mountains and situated at an elevation of 111 m. above the level of the sea. It is bounded on the west by the Amanus (Alma-Dagh, q. v.), and on the east by the most southerly spurs of the Kurd-Dagh ("Kurd mountains"). Numerous water-courses, belonging to the basin of the 'Afrîn ('Ifrîn, Ufrenos) and to that of the Ḳara-Ṣu ("black stream"), drain this plain, which is one of the most dismal and desolate districts in Syria and infected with malaria. Volcanic phenomena of all kinds make the 'Amḳ noteworthy; geologically it represents, according to Schaffer, a depression which stretches in the continuation of the Orontes valley as far as the mountain-range of the Taurus. A layer of blue clay, marl and sand covers the surface of the plain to a depth of 60 m. According to Sachau (*Reise in Syrien und Mesopotamien*, p. 460), the soil has not the appearance of a swamp but the character of a meadow, such as is sometimes found on the banks of rivers, where the surface of the ground consists of a thin layer of turf of little firmness so that it is possible to sink in and under certain conditions to disappear entirely. Towards the edges of the plain the ground becomes firmer and there are a few villages. Here and there isolated groups of basalt columns rise up from among the reeds and the green marshes; and on them the wretched dwellings are perched like storks' nests. The inhabitants are Arabs and live on their buffaloes which lead a contemplative existence in the morass. Besides the 'Amḳ serves as pasture land to nomadic Bedouins, Kurds and Turkomans. In the midst of the low-lying country stretches the smooth surface of a lake called by the Arabs Buḥairat Anṭâkiya (the "lake of Antioch") or simply al-Buḥaira, by the Turks Aḳ Deñiz (the "white lake"). Until the 19th century the name "lake of Yaghrâ" was also in use after a locality of that name situated to the north of the lake (Yaghrâ signifies in Aramaic "hill"). With this name Arabic writers of the Middle Ages were already familiar (cp. for example Yâḳût, *Mu'djam*, i. 516); they also use the name Buḥairat al-Salawwar or Sallûr ("eel lake"). The Ḳara-Ṣû and the Murâd Pasha which proceeds from the Balyḳ-Göl ("fish

lake") unite before they enter the lake. The swamps that stretch to the north and east of the latter are only to be attributed to the want of an outlet for the water that enters it. The lake (caused by seismic crevasses?) may only have come into existence shortly before the time of Malalas (900 A. D.), who is the first writer to mention it as the "lake of Antioch". By deepening the channel of the Orontes, into which the lake discharges its waters, the whole district might be reclaimed without great expense, and fruitful land be obtained. Under present conditions the plain threatens to become nothing but an enormous swamp. The numerous ancient colonies of the 'Amk now appear mere mounds of earth. All the sand and the boulders that the different water-courses bring with them or the rain washes down from the sides of the surrounding mountains are deposited in the 'Amk, and cause the level of the ground to rise; hence at present the foundations of the old settlements lie deep beneath the surface, and the latter themselves appear as Tell's, while the storms, sweeping along with great violence, have heaped up rubbish, sand and boulders round the ruins.

The Semitic name 'Amk (in European travellers also: 'Omk, 'Umk) signifies "depth, hollow". In the Assyrian cuneiform inscriptions it occurs in the form of Unki as early as the 9th century B. C., and almost contemporaneously in the Old Aramaic inscription of King z—k—r, as '—m—k. In Polybius we meet with *Ἀμύκης πέδιον* (in the Byzantine Malalas: *Ἀμύκη*), in Strabo *Ἀντιοχέων πέδιον*. Syriac authors write 'Umkā de Antiokia or shortly 'Umkā.

According to the administrative geography of the Turkish Empire, the greater part of the 'Amk belongs to the Wilāyet of Aleppo, a smaller portion tot that of Adana.

'AMMĀN, the old capital of the Ammonites, in the Old Testament Rabbat Benē 'Ammōn or Rabba, later Rabbatamana, Amman, Ammana or called by the hellenistic name Philadelphia. This city, which at the time of the Romans was of great importance, was taken by Yazīd b. Abī Sufyān after the capture of Damascus (14 = 635). It became the capital of the fruitful region of al-Balkā' with a trade in corn, sheep and honey. The inhabitants were, at the time of al-Muḳaddasī, principally Shī'as. The magnificent ruins date back to Roman times, with the exception of an Arab building on the castle hill (the castle of Djālūt with the tomb of Uriah).

(FR. BUHL.)

AMMĀN (Mīr Ammān) better AMAN, with the *Takhalluṣ* Lutf, an Indian writer, famous for his Urdū translation of the story of the four Dervishes entitled *Bāgh u-Bahār* and of the well-known ethical treatise *Akhlāḳi Muḥsini* of Ḥusain Wā'iẓ Kāshifī under the title *Gandj-i khūbī*. Both translations have been repeatedly printed in India, and that of the story of the four Dervishes has been translated into English by L. F. Smith (*The Tale of the four Durwesh*, translated from the oordoo tongue; Calcutta, 1813) cp. Garcin de Tassy, *Hist. de la littér. hindouie et hindoustani* (2nd ed.), i. 208 *et seq.*, who mentions other translations — by Duncan Forbes, Hollings and Eastwick; id., *Bag o Bahar, Le jardin et le printemps. Poème hindoustani trad. en français* (Paris, 1878). — Ammān was stimulated to the above mentioned translations by Dr. Gilchrist, he wrote the *Bāgh u-Bahār* in 1217 (1802).

'AMMĀR is in Munadjdjim Bāshī ii. 595, the name of a dynasty which ruled in Tripoli, 724—803 (1324—1400). It is true that the Ḥafṣids of Tunis were not in a position to assert their supremacy over Tripoli during these years, and it was virtually in the hands of independant rulers, but neither their names nor their relationships are sufficiently known. One of them was a certain Muḥammed b. Thābit Abū Bekr; during his rule the Genoese surprised and plundered the city (1355). Finally the Ḥafṣid Abū Fāris 'Abd al-'Azīz (1394—1432) brought the dominion of these city kings to an end.

'AMMĀR, one of the most famous and certainly the most original of Arab oculists, Abu 'l-Ḳāsim 'Ammār b. 'Alī al-Mawṣilī lived first in 'Irāḳ, then in Egypt. He travelled widely, as he himself informs us in his works, and on his travels which took him to Khorāsān in one direction, and to Palestine and Egypt in the other, he practised and performed operations. In Egypt, in the days of Sulṭān Ḥākim he composed his work on ophthalmology. As the rule of this potentate falls between the years 996 and 1020 A. D., 'Ammār was a contemporary of the more famous but less original oculist 'Alī b. 'Īsā (q. v.). If the 'Promptuary' of this author became for the Arabs the standard work on ophthalmology and overshadowed 'Ammār's work, the reason lies in the greater completeness of 'Alī's work. 'Ammār's book, with its strictly logical arrangement is extremely succinct, as even the title shows, (*Kitāb al-Muntakhab fī 'Ilādj al-'Ain* = *book of Selection on the treatment of the eye*). After a preface on the story of its composition, it deals first with the anatomy of the eye, then with diseases of the eyelid, of the corner of the

eye, the conjunctiva, cornea, the pupil, the albumen and the visual nerve. The descriptions of diseases and of their treatment are in general very clear, often, of dramatic vividness especially when he describes operations that he performed himself. That is especially the case in the six cases of operation for cataract which 'Ammār describes. His principal significance lies in the radical operation for soft cataract by suction through a hollow metal tube invented by him. Ṣalāḥ al-Dīn of Ḥamāt (end of the 7th = 13th century) has borrowed the part on this subject almost verbatim in his *Nūr al-'Uyūn*. At an earlier date al-Ghāfiḳī (7th = 12th century had made considerable use of 'Ammār's book in his medical work *al-Murshid*.

Of the Arabic original the first two thirds are preserved in ms. 889 at the Escurial (Casiri, i p. 317). The manuscript is mutilated, and breaks off in the middle of a sentence. The last third is almost completely preserved in the third part of the Ms. denoted by Casiri as "anonymous" — Cod. Esc. ms. 894. The Hebrew translation of the work is completely preserved; the work of Nathan ha-Meāthī, who lived at Rome in the 13th century A. D. and who also translated the Ḳānūn of Ibn Sīnā (Avicenna) into Hebrew. This translation of Nathan's is excellently done; it is much more intelligible than the barbarous mediaeval translations of Arabic medical works into Latin. Some short chapters and sentences, which occur only in the Hebrew translation shew that Nathans arabic copy represents a later recension of the text than the Arabic mss. which survive.

The Latin *tractatus de oculis Canamusali* of David Hermenus or David Armenicus (printed Venice 1497, 1499, 1500; newly edited by Pansier, Paris 1904) pretends to go back to 'Ammār al-Mawṣilī (first recognized by Steinschneider, *Die Hebräischen Übersetzungen des Mittelalters*, p. 667). But it is a crude forgery, has nothing to do with the original of 'Ammār and is therefore of no value for forming a judgment of the merits of his work.

The German version of 'Ammār's *Muntakhab* is in vol. ii. of the work *Die arabischen Augenärzte nach den Quellen bearbeitet* by J. Hirschberg, J. Lippert and E. Mittwoch (Leipzig, 1905).

Bibliography: cp. Introduction of the latter work and Ibn Abī Uṣaibi'a (ed. A. Müller), ii. 89. (E. MITTWOCH.)

'AMMĀR B. YĀSIR B. 'ĀMIR B. MĀLIK of the Madhḥidjite tribe 'Ans, a partisan of 'Alī. His kunya is Abu 'l-Yaḳẓān; he is also called Ibn Sumaiya [s. below]. His father came to Mecca in the 6th century A. D. with two brothers, in order to seek another brother of his and he there came under the protection of the Makhzūmite Abū Hudhaifa, who gave him one of his female slaves named Sumaiya to wife. She was then manumitted, but the family remained with Abū Hudhaifa till his death. They accepted Islām rather early, 'Ammār, it appears, in Arḳam's house. Father, mother and son are said to have been put to the torture for religion's sake, the mother, the first female martyr of Islām is even said to have been stabbed. (She is occasionally confounded with a less virtuous Sumaiya, the mother of the famous Ziyād "b. Abī Sufyān", commonly known as Ibn Abīhi). 'Ammār is reckoned among those who denied their faith under torture, but received pardon from Muḥammed. He was one of the emigrants to Abyssinia and took part in the Hidjra. At Medina he acquired merit at the building of the first mosque, took part in the very first campaigns, e. g. in the notorious expedition to Nakhla, then in the battles of Bedr, Ohod and in almost all of Muḥammeds expeditions. When Muḥammed established the bond of brotherhood between the men of Mekka and Medina, he entered into that relation with Hudhaifa b. al-Yamān. Under Abū Bekr he fought bravely on the day of Yamāma, when he lost an ear ("thou hast railed against my better ear", he is reported to have once remarked to some one who called him "one-eared"). In 21 'Omar appointed him successor of Sa'd b. Abī Waḳḳāṣ to the governorship of Kūfa, and he was given a share in the command at the conquest of Khūzistān; the battle of Nahāwend took place at this period. As the people of Kūfa were as little satisfied with him as they had been with his predecessors, he was replaced by al-Mughīra b. Shu'ba after a year or two. He energetically opposed the election of 'Othmān, then during the rule of this Caliph, he belonged to the opposition, offered the Egyptian party his moral assistance at Medina, and during the open rebellion against 'Othmān he played at least an ambiguous part. He had from the outset declared for 'Alī and according to tradition, withheld (together with others) from paying homage to Abū Bekr, for this reason; and after 'Alī's election to the caliphate (35 = 659) he was an ardent partisan of his cause and enjoyed his special confidence. When the war with Ṭalḥa and al-Zubair had become inevitable, 'Alī sent him to accompany his son al-Ḥasan to Kūfa, there to carry on his propaganda among the inhabitants, and the decision of Kūfa for 'Alī is principally to be attributed to his efforts. In the 'Battle of the Camel' (36 = 656) he was among those who dragged 'Ā'isha from her litter, after her camel had been brought to the ground, and brought her as a prisoner to Baṣra. In the battle of Ṣiffīn (37 = 657) the old man of 93 or 94 fought like a youth for 'Alī against Mu'āwiya and died a hero's death at the head of the infantry of Kūfa (their cavalry was commanded by al-Ashtar). Centuries later his tomb was still pointed out at Ṣiffīn. 'Alī lost in him "one of his two right hands" (the other was al-Ashtar who shortly afterwards was poisoned).

'Ammār passed as one who possessed accurate knowledge of the traditions concerning the Prophet, and owed the esteem in which he was held principally to his great piety, trustworthiness and devotion to the cause. The 'Abbāsid historians, however, did not fail to glorify the memory of the bitter enemy of the older Umaiyads, who lost his life in fighting against them, with legendary touches, inventing utterances of Muḥammad concerning him, and discovering allusions to him in the Ḳor'ān, in order to exhibit his energy, discernment etc. in the brightest colours. The following passages in the Ḳor'ān are referred to him, mostly on account of his persecution by the heathen: 2, 207; 3, 62; 6, 52, 122; 16, 43, 108, 111; 28, 4, 61; 29, 1; 39, 12. The Prophet is said to have declared that if ever internal wars were to break out, the truth would be on 'Ammār's side, and the like. The legends deal at length with his

strenuous co-operation in the erection of the first mosque at Medina and the remarks made by Muḥammed on this occasion. The Prophet even wrought a miracle for him on one occasion: when he was being tortured in the fire by the heathen, at Muḥammed's command the flames were changed into a refreshing coolness, as in the case of Abraham. Moreover an exact prophecy is attributed to the Prophet concerning 'Ammār's death by the "rebellious mob", whom he consigned to hell, and al-Zubair is said to have become uncertain as to the righteousness of his own sake, when he heard that 'Ammār was in the camp of the enemy. The news of his death is said to have produced a most gloomy impression in Mu'āwiya's camp, e. g. on 'Amr b. al-'Āṣī. Many pious sayings are attributed to him, which were uttered, as we are told, on the day of his death.

'Ammār had a son Muḥammed, who also passed as an authority for traditions, and a daughter Umm al-Ḥakam. (H. Reckendorf.)

'AMMĀRĪYA, an order of Derwishes in Algeria, which takes its name from 'Ammār Bū Senna, born about the year 1717. 'Ammār's tomb is at Bū Ḥammān in the province of Constantine, where also is the head quarters (the *Zāwiya*) of the order. The order was really founded (in 1822) by al-Ḥadjdj Embārek al-Maghribī al-Bukhārī. According to Depont and Coppolani, *Les confréries religieuses musulmanes* (Algiers, 1897), p.p. 356 *et seq.* the order numbers in Algeria 26 *Zāwiyas* and 6435 members. — Rinn does not mention it.

AMORIUM, according to Arabic pronunciation, 'Ammūriya, a well-known Byzantine city in Ancient Phrygia, on the great road from Constantinople to Cilicia. Its exact situation had for long been unknown, until Hamilton discovered it in Assar Ḳal'a (½ an hour from the present village of Ḥādjdjī Ḥamza). Amorium was repeatedly besieged by Arab military leaders (among others by Maslama in 189 = 805) and in 223 (838) it was captured by the Caliph al-Mu'taṣim after a siege of 55 days and levelled to the ground. Complete accounts are given in Arabic historians, especially al-Ṭabarī (ed. de Goeje), iii. 1236 *et seq.*

Bibliography: Hamilton, Researches in Asia Minor, i, 451 *et seq.*

AMR (A.), signifies command; affair. Al-amr wa 'l-nahy means unlimited authority. — In Grammar Amr denotes the Imperative.

'AMR b. al-Ahtam al-Tamīmī al-Minkarī, a member of a poetically gifted family; and himself fond of using metre and rhyme. He must have been born shortly before the Hidjra; for in the year 9 (630) when he came to Medina with the embassy of his tribe, he is said to have been a youth. In the year 11 (632) he followed the prophetess Saidjāḥ, but was later converted to Islām and took part in the wars of conquest. He informed 'Omar in verse of the capture of Rīshahr. — Little of his poetry is preserved; according to a contemporary judgment they had more outward adornment than depth of ideas. He was famous on account of his physical beauty, which won him the surname al-Mukaḥḥal ("the painted").

(A. J. Wensinck.)

'AMR b. al-'Āṣ (al-'Āṣī) al-Sahmī, a contemporary of Muḥammed of Kuraishite birth. The part which he played in islāmic history begins with his conversion in the year 8 (629/630). At that time he must already have been of middle age, for at his death which took place circa 42 = 663 he was over ninety years old. He passed for one of the most wily politicians of his time, and we must endorse this verdict. The more clear-sighted inhabitants of Mekka already foresaw shortly after the unsuccessful siege of Medina that this fact was the turning-point in Muḥammed's career. It is not strange therefore that men like Khālid b. al-Walīd, 'Othmān b. Ṭalḥa and 'Amr b. al-'Āṣ went over to Islām even before the capture of Mekka. Not much importance is to be attached to the story of their conversion. That of 'Amr is said to have taken place in Abyssinia under the influence of the Christian Negus! — Muḥammed at once made use of his newly-gained assistance: after a few small expeditions he sent 'Amr to 'Omān, where he entered into negotiations with the two brothers who ruled there, Djaifar and 'Abbād b. Djulanda, and they accepted Islām. He was not to see the Prophet again. The news of the latter's death reached him in 'Omān, and occasioned his return to Medina. But he did not remain there long. Probably in the year 12 (633) Abū Bekr sent him with an army into Palestine. The accounts of the conquest of this country [q.v.] are known to be somewhat confused (cp. also Caetani, *Annali dell' Islām*, A. H. 12); but this is certain, that in this undertaking 'Amr played a most prominent part. The subjection of the country west of the Jordan especially was his achievement, and he was also present at the battles of Adjnādain and the Yarmūk as at the capture of Damascus.

Yet his real fame is due to his conquest of Egypt. According to some sources he betook himself there with his troops on his own responsibility. It is more probable, however, that 'Omar was informed of the matter (cp. Wellhausen, *Skizzen und Vorarbeiten*, vi. p. 93) or even that it was undertaken under his orders. It is certain that re-inforcements were soon sent out to him, under al-Zubair. For the history of the conquest cp. the article egypt; only the following need be mentioned here: In the summer of 19 (640) the Greeks were defeated at Heliopolis. In 20 (641) Babylon was occupied by the Arabs, in 21 (642) Alexandria lay in their power (see arts. egypt and muḳawḳis). But not only the conquest of Egypt wast the work of the genius of 'Amr; he also regulated the government of the country, administration of justice and the imposition of taxes. He founded Fusṭāṭ, which was later called Miṣr and in the 4th (10th) century al-Ḳāhira.

We can understand, that 'Amr felt himself wronged, when the Caliph 'Othmān recalled him in favour of 'Abd Allāh b. Sa'd, shortly after his accession to the throne. He retired in disgust from active life, occasionally giving utterance to his mortification. When circumstances became threa-

tening for ʿOthmān, ʿAmr was wise enough not to commit himself as a partisan of his enemies; but he secretly incited ʿAlī, Ṭalḥa and al-Zubair against him. From his estates of al-Sabʿ (Beer-Sheba') and ʿAdjlān he awaited the development of events with the greatest anxiety. Yet it was not till after the Battle of the Camel, when only the two opponents ʿAlī and Muʿāwiya survived, that he once more came to the front, associating himself with Muʿāwiya. At the battle of Ṣiffīn he commanded the Syrian cavalry. When the battle turned in favour of ʿAlī, he conceived the clever device of placing leaves of the Ḳurʾān on the lances. The ruse was successful and the battle remained undecided. A court of arbitration was agreed upon, which was to consist of Abū Mūsa 'l-Ashʿarī and ʿAmr b. al-ʿĀṣ. Before the day appointed came, ʿAmr rendered Muʿāwiya the important service of occupying Egypt for him. It was an easy task to dispose of the youthful ʿAlid governor, Muḥammed b. Abī Bekr: he defeated him (early in 38 = 658) and put him to death.

In the same year (*Shaʿbān*) ʿAmr proceeded to Adhroḥ [q. v.] to the court of arbitration (according to al-Wāḳidī's chronology in Ṭabarī, i. 3407). Here again he gave a brilliant proof of his political talent. He succeeded in conducting matters so far that Abū Mūsa declared both ʿAlī and Muʿāwiya unworthy of the highest office. ʿAlī lost thereby his title of Caliph, Muʿāwiya however, who had only fought for "ʿOthmān's blood", lost nothing. Until his death [see above] ʿAmr remained Governor of Egypt. On the 15th Ramaḍān 40 (January 22 661) he escaped by mere chance assassination at the hands of Zādawaih, one of the three Khāridjites, who had chosen out the three leaders of Islām: ʿAlī, Muʿāwiya and ʿAmr as the victims of their fanaticism. ʿAmr felt unwell on that day and left the leadership of the *Salāt* to Khāridja b. Ḥudhāfa. So the latter was mortally wounded. "I meant ʿAmr, but God meant Khāridja", the assassin is reported to have said after accomplishing his deed.

ʿAMR b. Hind, son of the Lakhmid prince al-Mundhir and of Hind, a woman of the tribe of Kinda. After his father's death he became "king" at al-Ḥīra (554—570 A. D.). He was a warlike ruler and, like his house, very cruel. It is well-known how he sent the poets al-Mutalammis and Ṭarafa to his governor in Baḥrain, with letters ordering their death. By reason of his harsh character, he bore the surname of Muḍarriṭ al-Ḥidjāra ("he who makes stones crack"). He was also called Muḥarriḳ ("burning"). As an explanation of this name the Arabs relate that, in order to revenge a brother's murder, he seized 100 Ḥanẓalites and ordered them to be burned. Several Lakhmids however were called Muḥarriḳ, which seems to be the old name of a divinity (see Rothstein, *Die Dynastie der Lakhmiden* etc., pp. 46 *et seq.*). He was killed at a meal by the poet ʿAmr b. Kulthūm [q. v.], because the latter's mother had been wronged by his mother.

(A. J. Wensinck.)

ʿAMR b. Kulthūm, the head of the Taghlib, and so famous as a poet, that his principal work was included in the *Muʿallaḳāt* collection. He lived in the 6th century A. D., hence before Islām. His mother was Lailā, the daughter of the Taghlibite poet al-Muhalhil. We are told that on account of an insult intended for his mother he slew the Lakhmid prince ʿAmr b. Hind [q. v.] in 570. Exact dates of his life are not known, but it is related that he lived to the age of 150 years.

(A. Haffner.)

ʿAMR b. al-Laith al-Ṣaffār, the Ṣaffārid; he is said to have been in his youth first a mule-driver, then later a mason, and later to have attached himself to his brother Yaʿḳūb. Proclaimed commander at his death by the latter's army (265 = 879), ʿAmr submitted to the Caliph and was invested with the provinces of Khorāsān, Fārs, Iṣpahān, Sīstān, Karmān and Sind. He only obtained unquestioned mastery of Khorāsān after strenuous struggles with his opponents Aḥmad b. ʿAbd Allāh al-Khudjistānī, Rāfiʿ b. Harthama and Ḥusain b. Ṭāhir; during these battles he was twice (271 = 885 and 276 = 890) deposed by the Caliph, and the first time also cursed from the pulpits; his final confirmation as governor took place in 279 (892), but not till 283 (896) did he succeed in removing his last enemy Rāfiʿ b. Harthama. Like the earlier governors of Khorāsān he also wished to combine the rule of Transoxania with this governorship and demanded from the Caliph to be invested with this province; his desire was granted in Muḥarram 285 (Feb. 898) and the Sāmānid Ismāʿīl b. Aḥmed was declared deposed. Ismāʿīl however forestalled his enemy: in 286 (899) ʿAmr's general, Muḥammed b. Bashīr, was defeated and slain, in the following spring (287 = 900) ʿAmr himself was taken prisoner at Balkh and shortly afterwards (288 = 901) brought to Baghdād; in 289 (902) the dying Caliph al-Muʿtaḍid caused him to be assassinated.

ʿAmr is said to have ruled his empire and his army with a strong hand; there had not been

such good order in Khorāsān for a long time as there was under his government. As under Yaʿḳūb, so under ʿAmr the equality of all subjects under the power of a military despot was effectively established; the great were rigourously supervised by specially appointed spies and were not even allowed to ill-treat their slaves. In the original sources ʿAmr is frequently depicted as an avaricious, miserly and therefore hated ruler, yet both in his residence at Nīsābūr and in his own country Sīstān the erection of many buildings of public utility is attributed to him.

Bibliography: Ibn Khallikān (ed. Wüstenf.), Nº. 838 (chiefly from Sallāmī, *Taʾrīkh Wulāt Khorāsān*); Gardīzī, *Zain al-Akhbār* (from the same source; cp. the excerpts in Barthold, *Turkestan v epokhu mongolsk nashestw*, i. 4 *et seq.*); Ṭabarī (ed. de Goeje), iii. 1931—2208; Masʿūdī, *Murūdj* (Paris), viii. 46, 125, 144, 180, 193, 200 *et seq.*, 208 *et seq.* — cp. Nöldeke, *Orientalische Skizzen* (Berlin, 1992), pp. 187—217. (W. BARTHOLD.)

ʿAMR B. LUḤAIY, legendary chieftain of the Banū Khuzāʿa, who, according to Muslim historians, held the sovereign power at Mekka. ʿAmr is accused of having corrupted the religion of Abraham (*al-ḥanīfiya*) by introducing idolatry into Mekka. He is said to have filled the Kaʿba with idols, among which was the famous Hubal, which some historians declare him to have received from Maʾāb (Moab) as a present from the ʿAmālīḳ, or according to al-Azraḳī (Wüstenf., *Die Chroniken der Stadt Mekka*, i. 133), from Mesopotamia. Historians also attribute to ʿAmr the introduction of certain superstitious customs relating to animals, which under certain circumstances became sacred. al-Shahrastānī (ed. Cureton, ii. 430 *et seq.*) asserts that ʿAmr b. Luḥaiy brought Hubal to Mekka at the time of Sābūr Dhu'l-Aktāf, i. e. in the first half of the third century A. D. As however according to the same authority (*loc. cit.*, p. 59) ʿAmr and his descendants reigned for 500 years, and according to Masʿūdī, ʿAmr himself lived 345 years, it would be difficult, to determine the precise date at which this event was supposed to have taken place.

Bibliography: Ibn Hishām (ed. Wüstenf.), i. 50 *et seq.*; Wüstenfeld, *Die Chroniken der Stadt Mekka*, i. 56, 58, 72, 74, 132, 402; ii. 6; *Aghānī* 1st ed. xiii. 109; Masʿūdī, *Murūdj* (Paris), iii. 114-115, 118; iv. 46; Caussin de Perceval, *Essai sur l'hist. des Arabes*, i. 215 *et seq.* (M. SELIGSOHN.)

ʿAMR B. MAʿDĪKARIB (Abū Thawr b. ʿAbd Allāh), chief of an Arab tribe and poet, said to have been born about 500 A. D., and died about 21 (643). He was descended from a noble family of the Banū Zubaid in Yemen; he is described as a man of quite exceptional bodily strength, and is said to have distinguished himself in the battle of Ḳādisīya, although he must have been over a hundred years old at that time. He had accepted Islām after a personal interview with Muḥammed. No long poems of his are extant.

Bibliography: *Aghānī*, 1st ed. xiv. 25—41; Ibn Hishām (ed. Wüstenf.), i. 951 f. (A. HAFFNER.)

ʿAMR B. SAʿĪD AL-ASHDAḲ, governor of Mekka at the time of Yazīd b. Muʿāwiya's accession to the throne in the year 60 (680). In the same year he was also appointed governor of Medīna, and at the command of Yazīd sent an army to Mekka against ʿAbdallāh b. al-Zubair, the rival caliph. He entrusted the command of this expedition to a brother of ʿAbdallāh, ʿAmr b. al-Zubair, who was taken prisoner and, with the consent of his brother, flogged to death at Mekka by his personal enemies. ʿAmr b. Saʿīd was deposed at the end of the following year. Later he accompanied the caliph Marwān on his expedition to Egypt, and when Muṣʿab b. al-Zubair attempted to regain Syria during the absence of the caliph and invaded Palestine, ʿAmr was sent by Marwān to oppose him and forced him to retire. Already after the death of Yazīd, when the question of the succession was under discussion, ʿAmr had been mentioned as a possible successor to Marwān. He was very popular in Syria, being a nephew of the caliph on the mother's side and, as a member of the Umayyad family, also related to him on the father's side. Under these circumstances he might easily have become dangerous, but when Marwān had established his authority, he designated his two sons ʿAbd al-Malik and ʿAbd al-ʿAzīz as heirs to the throne, and the oath of allegiance was taken to them. In spite of this fact ʿAbd al-Malik was afraid of ʿAmr even after his accession to the throne and, as events showed, noth without reason. For when the caliph undertook an expedition to ʿIrāḳ in 69 (689), ʿAmr made use of the opportunity to put forward his old claims to the caliphate, and stirred up a dangerous insurrection at Damascus. ʿAbd al-Malik was forced to return, and by the promise of life and liberty caused his rebellious cousin to submit. Very soon after, however, the caliph resolved to rid himself for ever of this danger; in the year 70 (689/90) he summoned ʿAmr to the palace, and according to the ordinary tradition, killed him with his own hands.

Bibliography: Ibn Saʿd, v. 176 *et seq.*; Yaʿḳūbī, (ed. Houtsma), ii. 81 *et seq.*; Ṭabarī, i. 1779 *et seq.*; Ibn al-Athīr (ed. Tornberg), ii. 318 *et seq.*; Weil, *Geschichte der Chalifen*, i. 303 *et seq.*; Müller, *der Islam im Morgen- und Abendland*, i. 359 *et seq.*; Muir, *The caliphate, its rise, decline and fall*, 3rd ed., p. 341 *et seq.* (K. V. ZETTERSTÉEN.)

ʿAMR B. ʿUBAID ABŪ ʿOTHMĀN, one of the earliest Muʿtazilites. Originally a follower of the ascetic school of Hasan al-Baṣrī, he adopted the opinion of Wāṣil b. ʿAṭāʾ on the question as to the status of the Muslim who has fallen into sin. We have no information about his literary activity, but it is known that he was distinguished among his contemporaries through moral earnestness and piety. It is in keeping with this character that he joined the party of Yazīd III, who claimed the throne as a rival of the frivolous Walīd II. Later on ʿAmr was on very friendly terms with the ʿAbbāsid caliph al-Manṣūr. He died in 145 (762) at Marrān on his return from the pilgrimage to Mekka.

Bibliography: Ibn Ḳotaiba, *Maʿārif* (ed. Wüstenf.), p. 244; Ibn Khallikān (ed. Wüstenf.), Nº. 514; Arnold, *al-Muʿtazilah*, p. 22 *et seq.*; Masʿūdī, *Murūdj* (Paris), vi. 212; Houtsma, *De strijd over het dogma*, p. 51 *et seq.*

ʿAMRA (ḲUṢAIR ʿAMRA, the little castle of ʿA.) an old Umaiyad castle, situated in the country east of the Jordan, about 36° 31′ E. of Greenwich and 31° 50′ N. Lat., due east of the nor-

thern edge of the Dead Sea and beyond the water-shed of that depression. Ḳuṣair 'Amra was discovered in June 1898 by Alois Musil, who revisited it in 1900 and 1901 accompanied by the painter A. L. Mielich and under the auspices of the Vienna Imperial Academy of Sciences, and made a complete survey.

It is a building of moderate size, the rooms of which are arranged in the following manner: coming from the North the visitor first enters the westernmost hall of rectangular shape, which is divided into three aisles by two semi-circular wall-ribs which support three longitudinal barrel-vaults. The centre aisle ends in a spacious recess which, although ending in a right angle, resembles an apse and is roofed with a barrel-vault. From this recess two small doors lead into two apse-like cells situated in the continuation of the side-aisles. From the east wall of the large hall a door gives access to three small rooms; the first two of these communicate with one another and occupy together the same depth as the large hall; the third adjoins the second on the East. The first of these rooms is rectangular and has a barrel-vaulted roof; there are benches along the south and east walls, and beneath the bench on the south is a hole in the ground for the discharge of water. The adjoining room is square with a groined vaulting, and is enlarged by a rectangular niche with a small window. It has this characteristic feature: about six feet above the floor, the upper parts of the wall jut out about 4 inches, and beneath this projection there are four clay water-pipes measuring about 2$^1/_2$ inches in diameter. The water was conducted along the roof in cemented channels. In the pediments of the groined vaulting there are four clay pipes which served to ventilate the room. The third room, of great architectural perfection, is also square but roofed with a cupola resting on pendentives. A stone entablature decorated with a strip of zigzag ornament, forms the cornice of the cupola, in which there are four small semi-circular windows. In the north and south walls of the room there are deep recesses of semi-circular shape with ledges which resemble benches. Another ledge consisting of two steps and resembling a seat, leans against the plain east wall. In this room also the upper part of the walls juts out over four water-pipes. Another room adjoins these three in the East, though now no longer communicating with them by any door; it is a narrow vaulted chamber, as wide as the east wall of the third room, and opens out with its whole width on a larger rectangular room. The roof of this apartment, which no longer survives, was obviously flat. Here was a tank for water and apparently a heating apparatus. — As for the decoration, the large hall and the three rooms have marble floors, which in room 2 and 3 are hollow after the fashion of the ancient hypocausts. The two cells south of the large hall have mosaic floors. The lower surface of the walls of the large hall and the three rooms was faced with slabs of marble; the two small rooms adjoining the large hall are plastered. The surfaces of the upper parts of the walls and of the vaults are without architectural decoration, but covered entirely with paintings.

No comparison with similar buildings in the neighbourhood, such as Ḳubbat al-Bi'r, is needed to show that Ḳuṣair 'Amra is a bath-house. Oriental baths, as is well known, can be traced back to the ancient thermae; here we see clearly that the first room with its two benches, without water-pipes, but furnished only with an outlet for water represents the apodyterium; the second room is shown to be the tepidarium by its water-pipes, and the hollow heated flooring, while the third and most richly decorated apartment situated near the heating apparatus is the caldarium. The arrangement is similar to that at Ḳubbat al-Bi'r, where the entrance hall represents the apodyterium and the fourth and last room the caldarium; but while it is easy to fix the purpose of these two rooms it is uncertain whether the two intervening apartments served as frigidarium and tepidarium respectively, or were both tepidaria. At Ḳuṣair 'Amra the large hall served as entrance to the bath and may also, with its two closets, have been used for some domestic purpose. Musil thinks that a door communicating between the third of the smaller rooms and its eastern annex was the original entrance, but that it was subsequently closed; he founds this theory on the style of vaulting in the different rooms as compared e. g. with that of Ḳubbat al-Bi'r, the first (3) having a cupola, the second (2) groined vaulting. But this hypothesis does not accord with several facts: the survey gives no cause for assuming that any such re-building has ever taken place, and makes it even less probable that the door leading from the large hall into the first small room should have been added at a later stage. Nor do other parts of the building show any traces of different periods of construction. It seems moreover that the arrangement of the bath, which necessarily begins with the apodyterium and ends with the caldarium, excludes the possibility of such an alteration and I am convinced that the entrance to the bath was always through the large hall.

The outward architecture of the building is a mere reproduction of the structure of the interior, the extrados of the vaults showing on the bare rubble-walls. This feature of the construction finds its explanation in the climate of the country, and as similar climatic conditions are frequently found in the East but hardly ever in the West, the complete harmony between the structure of the interior and the outward appearance gives the building a typically Oriental character. The technical construction of the walls is as follows: they are about 2$^1/_2$ feet thick, and built of large blocks of lime-stone of double cleaving-grain, except for the doorlintels and window casements which are fashioned blocks of black basalt. The colour of these materials is very vivid. The masonwork is not very solid, but a compact mortar has given it a stability enabling it to last more than a thousand years without suffering serious injury. For the roof and the water conduits cement has been used.

A distinguishing feature of Ḳuṣair 'Amra, in which it excels all similar monuments of the neighbouring country and of the more distant regions of Inner Syria, is its rich pictorial decoration; nowhere else have pictures been preserved in such perfect condition; another interesting feature, (of very rare occurrence elsewhere) is the presence of inscriptions which enable us to fix the date of this building and, by means of comparison of several other monuments as well. Frescoes are found in all the rooms, the large

hall and the bath itself, being absent only from the east chamber. Their state of preservation corresponds to their age: dust, dirt, the smoke of fires and sgraffiti have done considerable damage. In printing the pictures, the colours were laid broadly in flat tones on the white smooth surface without much care in the treatment of the half tones; these were partly added in a way similar to that found in the encaustic mummy-portraits of late Egyptian art. The careful finish of the details and of the drawing betrays an unusual certainty of touch and considerable skill in the use of colour. The white surface is frequently used as local colour, but coats of white paint are also laid on. No part of the paintings is drawn by rule and compass, but they are all sketched on the wall with a free and sure touch; yet the work on the vaults was very laborious. This freedom of treatment is clear evidence of a long-established practice, and the painters of these pictures followed an old tradition. Besides black and white their colours include blue, dark-brown, red, light-brown, pale yellow and sometimes green. — The blue is natural ultra marine; the red oxide of iron; the dark brown is red covered with a thin coat of ultramarine; the light brown is ochre; the yellow this same ochre mixed with chalk; the green ochre with a coat of ultramarine.

The subjects of the pictures are bathing-scenes, gymnastic exercises, hunting of all sorts of game, with packs of hounds, or nets, or from boats; rows of pictures represent trades, there are also some symbolic figures, such as the Ages of Man, History, Philosophy, Poetry, a caliph on his throne represented as Pantocrator, the enemies of Islām and a rich zodiac. Of a more decorative nature are the numerous female figures in the niches, heads in medallions surrounded by foliage, figures of men and animals in lozenges. The ornament consists of draperies, foliage growing out of vases, vines, laurel, palm-trees with clusters of fruit, and borders with birds of the desert. — Some detached parts of these frescoes, viz. a nude female figure with a rich head-dress intertwined with pearls, and the fragment of an inscription, are now in the Kaiser Friedrich Museum at Berlin. — The pictures are arranged in rectangular borders, or in lozenges, circles and in niches, as in a picture-book; the composition is of an epic-narrative character; and both in form and contents the syro-hellenistic tradition is predominant. Certain features, especially the epic style and perhaps the type of some of the female figures, seem to be derived from old oriental art, while the aquatic scenes and the chase with nets remind us of the art of the Sāsānid period. Other elements, such as the architecture of the back-grounds and niches with their spiral columns, give a definitely Byzantine impression; while the laurel-garlands and draperies recall western classical art; some features, finally, such as the birds of the desert and the palm-trees are copied directly from surrounding nature. The mere architecture too corresponds to the style of the pictures: the groined vaulting seems to be of western origin, while the vaulting of the large hall and the shape of the cupola in the caldarium appear to be of the Syrian type: the general character of the building as a whole is hellenistic, and the outward appearance typically oriental.

It would therefore have been very difficult to date the monument by the aid of criteria furnished by the history of art. The building presented an altogether new type, and it is not surprising, that the pictures were at first taken for classical works of the iv. or at most the v. century A.D., and that the Ghassānid kings were thought of as builders. The case of the other famous Umaiyad castle, al-Mshatta, was similar: it was thought to be of post-classical, Ghassānid or Sāsānid origin. In the case of Ḳuṣair 'Amra two pictures in the large hall, which bear inscriptions, definitely fix the date: these are the picture of the enthroned caliph and that of the enemies of Islām. The first has a long Arabic inscription, unfortunately so damaged that it has not been possible hitherto to decipher it; in the second the figures have bilingual inscriptions in Greek and Arabic; in the third place there are Greek inscriptions on the allegorical pictures representing History, Poetry and Philosophy (σκέψις). The fact that the inscriptions are bilingual as well as the shape of the cursive Arabic letters indicated from the outset that they belonged to the end of the I. or the beginning of the II. century of the Hidjra; the interpretation of the picture representing the enemies of Islām, which was worked out successfully by C. H. Becker with the assistance of Th. Nöldeke and E. Littmann, fixed this date with conclusive certainty. (Musil had already arrived at the true date by means of detailed historical arguments and by a correct appreciation of the inscriptions and pictures; but he was unable to put forward the reasons for his view in the great book published by the Vienna Imperial Academy, because the historical part of the work had been entrusted to other hands.) The important picture in question represents, besides two uncertain figures, the emperor of Byzantium, Roderick the visigoth, the Sāsānid Yezdegerd III. and the Negus of Abyssinia, with the following bilingual inscriptions:

[ΚΑΙ]CΑΡ ΡΟΔΟΡΙΚΟC ΧΟCΔΡΟΙC ΟΝΑΓ...

النجاشى كسرا رذريق قيصر

(The underligned letters are considerably damaged).

Ḳuṣair 'Amra was built therefore in the first half of the viii. century, between the year 711, when the Arabs fought against the last king of the Goths, and 750, the date of the fall of the Umaiyad dynasty. Within these limits the fact that direct relations existed between Roderick and Walīd I speaks for this caliph, while the historical accounts, collected by Musil, which speak of Walīd II's passion for building and of his residence in the district of Ḳuṣair 'Amra favour the claim of the latter.

Some new and important suggestions are found in a recently published study by M. Max van Berchem. Starting from the fact that the six figures of the picture representing the enemies of Islām are arranged in two groups, he points out 1. that the figures in the first group are those of the sovereigns of great empires, while the second group contains mere kings; 2. that the arrangement of the three figures in each group from left to right corresponds to their geographical situation from West to East. Hence it follows that the third figure of the first group must represent some great Asiatic sovereign dwelling to the East of Persia, while the third figure of the second group must stand for a monarch of the second

rank to the East of Abyssinia. Van Berchem draws attention to the fact that the death of Roderick coincides in point of time with the following events: in the year 712 Ḳotaiba was victorious over a son of the Khāḳān under the walls of Samarḳand; five years earlier the Arab general had won a battle against the Eastern Turks between Merw and Bukhārā. It is possible that in both battles the Turkish armies were led by Kultegin who is mentioned in the Orkhon inscriptions as nephew of Metshuo, supreme chief of the Eastern Turks. Van Berchem asks whether the third figure of the first group may not represent Kultegin or Metshuo, or perhaps the emperor of China himself. The last figure of the second group may then stand either for one of the Turkish chiefs involved in Ḳotaiba's wars, or for one of the Hindū kings, who at that time were crushed by the general Muḥammed on the Indus near Multān, e.g. the king Dāhir who was killed in Sind in 712. By combining all the historical data supplied by this picture and by the whole building, van Berchem arrives at the very plausible conclusion, that so far as the date of Ḳuṣair 'Amra is concerned, probability is in favour of Walīd I and the years 712—715.

AMRAM. [see 'IMRĀN.]

AMRITSAR, capital of the division of the Pandjāb (Panjab), which bears the same name. Population: 162 429 in 1901, of whom 77 795 were Muḥammedans, and 17 860 Sikhs. It owes its foundation to Rām Dās, the fourth guru of the Sikhs (1574), whose successor Arjun (Ardjun) completed the 'golden temple' (Darbār Ṣāḥib) of the Sikhs, which stands on an island in the 'sacred tank' (Amrita saras), whence the name of the town is probably derived. The successors of Arjun were obliged to leave the town; and the last guru did not return to it until 1708. The golden temple was blown up by Nādir Shāh in 1762, but was restored when Nādir left India, and Amritsar became the capital of the independent Sikh state. It passed under British rule in 1849, together with the rest of the Pandjāb, and is now important for its carpet and silk industry.

'AMS (pronounced *'amas*, Bākūra p. 23) cabbalistic word used by the Nuṣairīs; it is formed from the initials of the three names 'Alī, Muḥammed and Salmān al-Fārisī, and symbolizes the manifestation of the trinity of *ma'nā*, *ism* and *bāb*, in the seventh and last era, the era of Muḥammed; 'Alī is the incarnation of *ma'nā*, Muḥammed of *ism*, and Salmān that of *bāb*. It is called the 'principle of right and justice' by the Shaikh Khalīl Nuṣailī, and plays a great part in the ceremony of initiation; it is called the mystery (*sirr*) of *'ams*, and its meaning is revealed to the novice only by degrees.

AMTHĀL (A.), plural of *Mathal* [q.v.].

'AMŪD (A.), pillar, club; in mathematics technical term for the vertical line.

ĀMŪ-DARYĀ, one of the two principal rivers of Russian Turkestān. The old name Oxus (Ὦξος) is derived from an Iranian form Wakhshu. As late as the v. (xi.) century (al-Bīrūnī) Wakhsh is mentioned as 'the genius (*malak*) of water in general and of the Oxus in particular'; on modern maps the name Wakhsh (in medieval geographers Wakhshāb) is confined to a tributary rising on the Alai, which is also called Surkhāb and Ḳizil-Ṣu; the natives are said to apply it also to the Pandj and other head-waters. Other names are: Pehlewi Wehrōdh; Chinese Kui-shui, Wu-hu, Po-tsu and Fu-tsu; Arabic and Mod. Persian Djaiḥūn (a word used in Persian sources — by Gardīzī as early as the v. = xi. century — to denote large rivers in general.) The modern name is derived from the name of the town of Āmul (which like Āmul in Ṭabaristān has been traced back to the pre-aryan people of the Amardi; cp. J. Marquart, *Untersuchungen zur Geschichte von Ērān*, ii. 57) later Āmū and Āmūya (the modern Čardjūī), hence Āb-i Āmūya or Daryā-i Āmūya (the river of Ā.). Owing to its situation on the chief route from Khorāsān to Mā warā' al-Nahr A. was a town of such importance, that it could give its name to the whole river.

Modern geography regards as the principal head-water the Aḳ-Ṣu rising on the Lesser Pāmir; the natives (as well as the medieval geographers) suppose it to be the Pandj (medieval name Djaryāb) which rises on the Greater Pāmir and in its upper course bears the name Wakhkhāb; Pandjāb was originally the name of the place where the Wakhsh joins the other streams and the 'five' head-waters become a single river, (thus mentioned in the beginning of the vii = xiii century). Iṣṭakhrī (ed. de Goeje, p. 296) mentions as head-waters besides the Pandj and Wakhsh the River of Hulbuk (the names Akhshū and Barbān or Balbān, perhaps to be read Talbār, seem in spite of Iṣṭakhrī's view to have denoted the same river, now called Kulāb-Daryā), the Fārghar or Pārghar, the modern Kizil-Surkhāb or Kizil-Ṣu) and the Andidjārāgh or Andisharāgh, (this variation in the spelling hints, as is well known, at the sound *č*, hence Andīčarāgh, modern name Ṭā'ir-Ṣu). The only tributaries of the Pandj on the left, mentioned by Arabic authors, are the Kökče and Aḳ-Sarai; the pronunciation of the old names cannot yet be established with certainty. The main river is farther joined on the right by the Kāfir Nihān (in the Middle Ages Rāmīdh which is now the name of a head-water) and the Surkhān (called in the Middle-Ages and as late

as the time of Timur Caghān-Rōdh; the *Ẓafar-Nāme* gives it as Djagān-Rōd).

The district through which the head-waters flow consisted of the following countries: The Pandj, after leaving the country of Wakhkhān, separated Badakhshān from Shuknān (also written Shukṇān, Shikināṇ and Shiḳina) and Karrān (probably the modern Roshan and Darwāz; the latter name is mentioned under Timur and his successors). Between Pandj and Wakhsh were situated the mountain district Khuttal or Khuttalān and the plain Wakhsh (the modern Ḳurghan-Tübe). The Wakhsh flowed through the districts Pāmir (written Fāmir and Bāmir; the name apparently included the Alai-valley), Rasht (called Ḳā'ir-Tegin at the time of Timur; modern name Karategin), Kumēdh (written Kumidh or Kumādh, the Κωμηδῶν ὀρεινή of the Ancients). Between the Wakhsh and the Kāfir-Nihān were situated Wāshgird (arab. Wāshdjird, the modern Faidabād and its district) and Ḳuwādhiyān (now called Kabādiyān). The mountain-country containing the head-waters of the Kāfir-Nihān and the Surkhān was inhabited by the people of the Kumidjī (so we ought to read sp. al-Muḳaddasī ed. de Goeje, p. 283 *r*; cp. the passages from Baihaḳī quoted in Barthold, *Turkestan w epokhu mongolsk. nashestw.*, (texts, p. 9). In the valley of the upper Kāfir-Nihān (the district of the modern towns Dūshambe and Ḥiṣār) were situated (from East to West) Shumān and Kharūn or Akharūn; the valley of the Surkhān formed the kingdom of Čaghāniyān (arab. Ṣaghāniyān); the country of Guftān referred to in the history of the Arab conquest is probably identical with the district of the modern town Shīrābād. On the left bank between Badakhshān and Balkh lay Tokhāristān in the narrower sense (also written Tokhāristān); in its wider sense this name (derived from the people Tokhār who appear first in the II. century B.C.) comprises all the mountain districts on the right and left banks of the upper Āmū-Daryā which are dependent on Balkh.

In these districts only the water of the mountain streams which flow into the Āmū-Daryā was used for purposes of irrigations; the canals derived from the Āmū-Daryā itself only began near Zamm (on the left bank, the modern Karki; to-day the irrigation-channels start further up-stream near Kalīf). From Āmul (the modern Čārdjūī) onwards a strip of cultivated land followed the left bank without interruption, although its breadth was subject to many changes; to-day the greater part of the bank between Čārdjūī and the frontier of Khiwa is filled up with sand; and from Ḥamd Allāh Ḳazwīnī it appears that as early as the viii. (xiv.) century the strip of cultivated ground was no longer continuous. Khwārizm, the country irrigated by the lower Āmū-Daryā, began in the iv. (x.) century near Ṭāhiriya, 5 days journey below Āmul; from the v. (xi.) century up to most recent times the town of Darghān (called by Abu'l-Ghāzī Darighān; now ruins of Darghan-Ata) which according to Ḥamd Allāh Ḳazwīnī lay 16 parasangs below Ṭāhiriya, was regarded as the southern frontier-town of Khwārizm. The modern frontier above the town of Pitniak was only determined after the Russian campaign of 1873; near this spot the mountains slope down close to the bank, so that the river-bed is narrowed down to a third of its ordinary width; this 'gate' is about 1100 feet wide, and is called Dahān-i Shīr ('the Lions Mouth', thus already in Ḥamd Allāh Ḳazwīnī) and Duldul-Atlaghan (referring to a legend about a jump of Duldul, the horse ridden by the caliph ʿAlī). On the right bank the cultivated land only began 9 parasangs below these rapids near the town of Gharabkhashna or Gharāmkhashna (leaving out of account the old town Farabr or Farab situated opposite Čārdjūī).

The formation of the soil in Khwārizm causes the river to split up into several branches in its lower course. The delta slopes down in two directions, in the North to the lake Aral, and in the West to the basin of Sāri-Kamish, which is now almost completely dry, though at its deepest point (about 50 feet under the level of the Caspian Sea) two small lakes still exist. The Sārī Kamish basin is connected with the Caspian Sea by the Uzboi, a depression, which was formerly thought to be the bed of a dried-up river, though now opinions as to its origin are divided; it does not extend to the present shore of the Caspian Sea; at the time when the Uzboi still carried water, the low land on the banks to the west of the railway-station Bala-Ishem must have been submerged.

Owing to several causes, both natural and artificial, the precise nature of which has not yet been sufficiently explained, the water of the river was diverted sometimes in branches on the right to lake Aral, sometimes on the left to the Sāri-Kamish; this circumstance caused considerable changes in the direction of the lower course even in historical times (there is no historical evidence for changes in the upper course above the southern frontier of Khwārizm.) The accounts of the Ancients who only knew the Caspian Sea, and of the Chinese who were only acquainted with lake Aral, do not allow us to discover the conditions of their time with any certainty; more precise descriptions are first given by the Arabic geographers of the iv. (x.) century. The gradual destruction of the citadel of Kāth on the right bank (the old capital of Khwārizm, now Shaikh ʿAbbās Walī), which happened at that time, seems to indicate that the river-bed was diverted to the right; at the same time however a tradition of a previous diversion in an opposite direction had been preserved, and the eastern branch Kardar (now once more the main channel) was regarded as the old bed of the river. The earliest detailed description of the lower course is found in Ibn Roste (end of the iii. = ix. century. Marquart, *Osteuropäische ... Streifzüge*, p. 25 sq., fixes the year 310 = 922 as the *terminus post quem* for Ibn Roste's work; but his arguments are not convincing), but it only deals with the left channel, which even then was of secondary importance. According to Ibn Roste this branch left the main river at a point below the town of Djurdjāniya (arab. transcription of the Persian Gurgāndj, near the modern Kunya-Urgenč); at a distance of 4 parasangs from this town it reached the mountain-chain Siyāh-Kōh (i. e. the Čink, the margin of the plateau Ust-Urt), also referred to in the description of the western shore of lake Aral; and near its mouth formed a number of small lakes (*buḥaira*) called Khalīdjān. The opening of the main river into lake Aral is only referred to in general terms; it appears that Ibn Roste (ed. de Goeje, p. 92) or his authority knew from personal observation only the left arm here described. As

this branch is said to have reached the Čink and then to have flown on some distance farther, it seems clear that the group of lakes called Khalidjān must not, as has been maintained, be sought at the Aibugir, but at the Ṣārī-Kamish. None of the later geographers seems to have known the delta from personal observation; al-Iṣṭakhrī and Ibn Ḥawḳal place the fishing-village Khalidjān at the spot where the river enters lake Aral. At the time of al-Muḳaddasī, who wrote in the year 375 = 985-986, or his authority (for there is no doubt that he himself never visited Khwārizm) the left arm of the river west of Gurgāndj seems already to have been dry; and the building of a dyke for the protection of the town of Gurgāndj is given as an explanation for the drying-up of this river-bed. The water is then said to have turned 'eastwards', and to have flowed 'in one direction only'. (Muḳ., p. 288, 16—17). No details are given as to the direction in which the main stream, after being dammed off at Gurgāndj, flowed to lake Aral, nor are we told whether the Kardar joined it or reached the lake independently.

Al-Muḳaddasī already knows the Uzboi as a dried-up river-bed, which even at his time was regarded as the old bed of the Āmū-Daryā; the drying-up of this river-bed and the desiccation of the region near the Balkhan mountains were connected with the rising prosperity of Khwārizm, although the river could have reached the Ṣārī-Ḳamish and the sea only by way of Khwārizm; (traces of a course farther south have not so far been identified with any certainty). That the view given by Al-Muḳaddasī was universally prevalent, is proved by the name 'Old Khwārizm' as applied to the Balkhan district in Ibn al-Athīr (ed. Tornb.), ix., 267. It is still impossible to say with certainty, whether the report that a town existed at the Balkhān, rests on any basis of historical fact; the suggestion made by Tomaschek (*Sogdiana*, p. 94 and 112) and Marquart (*Ērānšahr*, p. 55) to identify Balkhān with the Chinese Po-Lo and the town Βαλααμ mentioned by Priscus (V. century A. D.) cannot be accepted without reservation.

In the vii. (xiii.) century after the Mongol invasion and perhaps in consequence of the devastation of the country and the destruction of almost all the dykes, the course of the river seems to have been diverted towards the left. We are told that several towns on the left bank, among them already Hazārasp, were flooded, and that the Mongols at the capture of Gurgāndj, which was then the capital, (Ṣafar 618 = April 1221) destroyed the dyke and thereby completed their work of devastation. A few years later the town (called Urgenč by the Mongols and later by the Uzbegs), was rebuilt; but it then lay (like the modern Kunya-Urgenč) on the *right* bank of the branch which flows past it. During a space of 350 years this branch which flows towards the Čink mountains and the Ṣārī-Kamish, is referred to in all descriptions of travel and historical accounts (thus in the history of Timur's campaigns) as the main river, while the eastern branches are mentioned under various names as merely subsidiary. It seems probable a priori that after filling the basin of Ṣārī-Kamish, the water found its way to the Caspian Sea through the channel of the Uzboi, and Ḥamd Allāh Ḳazwīnī (470 = 1339-1340) and Ḥāfiẓ Abrū (820 = 1417) state expressly that this was the case. De Goeje (*Das alte Bett des Oxus*, Leiden, 1875) and others have impugned the trustworthiness of these two writers on the ground that the other geographers of the same century still speak of the Āmū-Daryā as flowing into lake Aral only; closer investigation however shows that all these geographers, including Djurdjānī (d. 881—1446) whom de Goeje regards as particularly trustworthy, were completely dependent on the written sources of the preceding centuries. In addition to the Arabic geographers of the iv. (x.) century Djurdjānī used, and sometimes copied verbatim, the Persian *Djahān-Nāme*, composed early in the vii. (xiii.) century for the Khwārizmshāh Muḥammad. Even the remark that 'the desert between Khwārizm and Khorāsān is so well known that no detailed description of it is needed', is taken word by word from the *Djahān-Nāme*, (cp. the text in Barthold's *Turkestan w epokhu mongolsk. našestw.*, i. 81), and can therefore not be taken as referring to Djurdjānī's own observation. The statements of Ḥamd Allāh and Ḥāfiẓ on the other hand cannot be traced to any written sources known to us; and the trustworthiness of the former is particularly supported by the fact that he mentions a large waterfall on the Uzboi, for the modern dry bed actually shows traces of falls of considerable height (up to 28 feet). Obscure references to such a waterfall are also found in ancient authors (Eudoxus quoted by Strabo and Polybius); but the assumption, that Ḥamd Allāh's statement may go back to these or similar sources, is made impossible by the fact that he mentions the Turkish name of the fall (*Görleli*, lit. noise, rumbling, thunder). In the account of Ḥāfiẓ Abrū the statement, that the Sir-Daryā joined the Āmū-Daryā and that the combined river flowed into the Caspian Sea, deserves special notice; for this there is no other literary authority, but traces of such a junction of the two rivers are preserved both in old river-beds and in local tradition; the statement has certainly nothing to do with the opinion of the Ancients which regarded the Jaxartes as an independent tributary of the Caspian Sea. Ḥāfiẓ Abrū wrote his historical and geographical works at the court of sultan Shāhrukh, at a time when Khwārizm belonged to the dominions of this monarch. This fact alone makes it hardly probable, that his information on the lower course of the Āmū-Daryā should have been incomplete. At the same time it must be admitted that neither Ḥamd Allāh nor Ḥāfiẓ knew the Uzboi from personal observation. A more important source (not used by de Goeje) are some contemporary accounts of historical events (campaigns etc.) which took place in the region of the Uzboi, especially the following two: 1. Ẓahīr al-Dīn al-Marʿashī (ed. Dorn, text p. 436, transl. p. 449) narrates how at the command of Timur the saiyids of Māzandarān were in 794 (1392) brought in a ship to Aghrīča, (this is in Ḥāfiẓ Abrū and later in Abu'l-Ghāzī the name of the place where the river enters the Caspian Sea), and thence up-stream on the Djaiḥūn as far as a certain place (obviously as far as the waterfalls); the author's father, then twelve years old, is said to have accompanied them on this journey. 2. Khondemīr in the *Ḥabīb al-Siyar* (ed. Teher., iii. 244—246) describes the campaigns of Ḥusain Baiḳarā (who later became sultan) from Astrabād to the Uzboi in 864 (1460) and 868 (1464); in the year 864 Ḥusain goes

from Astrabād to 'Aghrīča and Adak (a fortress of this name is also frequently mentioned in the accounts of the campaigns of Khān Muḥammed Shaibānī; it is to be sought on the left bank of the Uzboi on the chief route between Khwārizm and the cultivated district on the northern slope of the Kūren-Dagh and Kopet-Dagh, perhaps where the well of Kurtish now is); after seven days he reaches the Amū-Daryā which he crosses on boats; in 868 he leaves Astrabād in the same direction, loses his way, and suffers much 'owing to the proximity of the sea and the great quantity of clay and mud'; he reaches Adak, whence he crosses the Amū-Daryā, his army encamps on the bank of the river Āṣaf-Ugüzü and later occupies the recently founded town of Wezir (situated according to Abu'l-Ghāzī at the foot of the Ust-Urt, at a distance of 6 parasangs from Urgenč). Both narratives prove very clearly, that the Uzboi at that time carried water in its lower course, and that it was regarded as a continuation of the Āmū-Daryā. There is no reason to assume an alteration of the historical accounts under the influence of pre-conceived geographical opinions (such as might have been gathered from Ḥamd Allāh and Ḥāfiẓ, especially not in the case of Khondemīr, who in the section on geography appended to his grandfather Mīrkhond's *Rawḍat al-Ṣafā* and his own *Ḥabīb al-Siyar*, uses only the geographical authors of the iv. (x.) century, and still makes the Āmū-Daryā flow into lake Aral only.

We do not possess a detailed description of the course of the river for the time from the vii. (xiii.) to the x. (xvi.) century. According to Abu'l-Ghāzī both banks of the Uzboi down to the Caspian Sea were not only inhabited, but also under cultivation; the road from Urgenč to the bend at the Balkhān is said to have led 'from aul to aul', and we are told that fields and vineyards ran along both banks (though not 'in an uninterrupted line' as the French translation has it); the occupiers are said to have been semi-nomadic Turkomans (such as now inhabit the district on the Gürgen). Considering that at the time of Abu'l-Ghāzī the banks of the Uzboi had long been desolate, it is probable that his contemporaries had an exaggerated idea of the splendour of this past prosperity; in Ḥāfiẓ Abrū's account the course of the Āmū-Daryā from Khwārizm to the Caspian Sea goes for the greater part through desert country. From the present state of exploration of the bed of the Uzboi and the surrounding district it appears that only the water of the Ṣārī-Ḳamish and the upper Uzboi were used for the purpose of irrigation; further down stream the water probably contained salt, owing to the chemical constituents of the soil, as is now the case in the Atrek. The fact that Ṣārī-Ḳamish was connected with the Caspian Sea was therefore hardly of great importance either for navigation (because of the large falls) or for the spread of cultivation. In the x. (xvi.) century the course of the river was again diverted towards the right. In A.D. 1558 the district was visited by the English traveller Jenkinson, who regarded the Ṣārī-Ḳamish as a gulf of the Caspian Sea, although describing it as a freshwater lake; (there is no doubt that the Ṣārī-Ḳamish is referred to, as the editors E. Delmar Morgan and C. H. Coote rightly saw, and not the Aibugir as had been assumed by Lenz and de Goeje). At that time the water was being diverted more and more into the right branch, the Kurdar of the Arabic geographers (called by Jenkinson Ardoch, prob. for the Turkish Artiḳ), although the left branch flowing past Urgenč and Wezir was still regarded as the Oxus proper (called by Jenkinson Oxus). We are told that the river at that time no longer reached the Caspian Sea.

Soon afterwards the water definitely diverted into the right branch, and in spite of a few isolated attempts (during floods) at breaking through in the opposite direction (such as took place as late as 1879) the river has since then flown in that direction. Abu'l-Ghāzī (born in A.D. 1603 according to the cyclic reckoning; the year of the Hidjra is erroneously given as 1014 instead of 1012) states that the event which robbed Urgenč, then the capital, of its water-supply and resulted in the gradual desiccation of the whole district, took place 30 years before his birth; and it is already referred to by the Osmanli Seifi who wrote in 990 (1582). In the xi (xvii) century Khiwa takes the place of Urgenč as the capital of the country; later on the towns of Urgenč and Wezir are founded in the same district, obviously in place of the deserted towns on the dried-up river bed; the island in the delta Aral (which has given its name to the lake) acquires in the most recent history of Khwārizm an importance which had never belonged to it before. It was not until the last century that some canals were again diverted to the left, and that the town of Kunya-Urgenč (prop. Kuhna-Urgenč, 'old Urgenč' to distinguish it from Urgenč near Khiwa), was rebuilt; except for a few years these canals have no longer been able to reach even the Ṣārī-Ḳamish. The project of constructing an artificial connection between the course of the river and the Ṣārī-Ḳamish and the Caspian Sea, has been under discussion, but as the enterprise would be of no advantage in any respect, it has been given up since.

Delmar Morgan and C. H. Coote (London, 1886; Hakluyt Society, N° 72). — Barthold's treatises in Russian; cp. the account of them in the *Mitteilungen des Seminars für orientalische Sprachen, Westas. Studien*, ii. 85, v. 46, vi. 200 seq., 211 seq. Quite recently G. le Strange, *The lands of the eastern caliphate*, p. 433—459, and de Goeje's reply in the *Deutsche Litteraturzeitung*, 1905, N° 45, col. 2798—2800.

(W. Barthold).

ĀMUL, name of two towns:

1. A town north of the Damāwand, situated at 36° 25′ N. Lat., and about 52° east of Greenwich, at a distance of about 12 miles from the southern shore of the Caspian Sea, in the district which, according to the accounts of the Ancients, was the home of the Μάρδοι (Ἀμάρδοι); Āmul is the regular Mod. Persian form of the (hypothetical) old Persian Āmardha. In the period of the Sāsānids Āmul together with Gēlān (the modern Gīlān) formed a Nestorian episcopal see, cp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, XLIII, 407. The town is also mentioned several times in the *Shāh-Nāme*. In the Muslim period Āmul became an important seat of commerce, and under the last 'Abbāsids took the place of Sāriya (the modern Sārī) as capital of Ṭabaristān. Ibn Ḥawḳal describes

Āmul in the year 367 (978) as a very populous city, larger even than Ḳazwīn. The town was also a centre of active industrial life (carpet-weaving) and of scholarship; it is said to have possessed 70 madrasas (academies) in the vii. (xiii) century. The famous historian al-Ṭabarī was born here in 309 (921). The prosperity of the town was seriously impaired through Tīmūr's devastations in the end of the viii. (xiv) century. To-day Āmul is the capital of a large district of the province Māzandarān (corresponding more or less to the old Ṭabaristān). The rapid stream of the Herhāz-Rūd which leaves the mountain-glens of the Alburs just before reaching Āmul, flows in several branches through the town, which for the greater part is built on its left bank. The old town was situated to the west of the modern Āmul; it is said to have been destroyed in an inundation, and extensive ruins (especially of an old fort) still indicate its site. The number of inhabitants, estimated by Fraser at from 35 000—40 000 in 1822, is stated by Melgunof at 10 000 in 1860, and more recent estimates give sometimes 8000, sometimes 20 000. These fluctuations find their explanation in the large diminution of the populations during the summer, when a considerable number of the inhabitants go to the mountains with their herds. Āmul lies in the centre of an open, well cultivated district, still characterized, as already in the Middle Ages, by extensive rice-fields and rich orchards (famous plums). The small town of Herhāz, the ʿAin al-umm of the medieval Arabic geographers (Yāḳūt, I, 409: Ahlum) situated where the Herhāz-Rūd enters the Caspian Sea, serves as harbour of Āmul.

2. A small town, south-west of Bukhārā, situated at 39° N. Lat. and 63° 35′ east of Greenwich, at a distance of about 3 miles from the left bank of the Oxus (Āmū Daryā). In the Arabic Middle Ages Āmul belonged to the large province of Khorāsān, now it is (under the name of Čārdjūī) a part of Russian Turkestān. Although surrounded on all sides by the desert it once was of great importance for the caravan-trade as meeting-place of the roads leading from Khorāsān to Transoxania. It was near Āmul that in 287 (900) the ʿAlid Muḥammed b. Zaid and his army were routed by the Sāmānid Ismāʿīl, who put Muḥammed to death. The town is frequently mentioned in the oriental sources dealing with the Mongol invasion and the campaigns of Tīmūr. The name Āmul (like that of Āmul N°. 1) is probably connected with the people of the Mardi (Amardi), more especially with an eastern branch (Cp. Pliny, vi. 47). In order to distinguish the town from the place of the same name in Ṭabaristān definitions were sometimes added to the name, as Yāḳūt points out, and it was called either Āmul Zamm (cp. e. g. Belādhorī ed. de Goeje, p. 410, 420) i. e. the Āmul near Zamm (south-east of Āmul, and the nearest ford), or Āmul Djaiḥūn, i. e. the Āmul on the Djaiḥūn (Oxus), or Āmul al-Shaṭṭ i. e. the Āmul of the river (the Oxus). Yet another name of the town, which occurs already in the Middle Ages, is Ammūya (cp. e. g. Belādhorī, p. 410; Yāḳūt, i. 365) or Āmū (Yāḳūt, ed. Wüstenfeld, i. 70); this is perhaps a mere dialectical form of Āmul, from which the later medieval name of the Oxus, Āmū-Daryā (river of Āmū) may have been derived (thus Barthold, cp. the article ĀMŪ-DARYĀ); it may be questioned however, whether Ammūya may not rather be derived from Āmū, an ancient local name of the Oxus. The modern name of the town, Čahār-Djūī, (or Čār-Djūī) 'the four rivers' refers to the important ford over the Oxus in the neighbourhood.

Pseudo Moses-Xorenacʿi* = *Abhandl. d. Kgl. Gesellsch. d. Wissensch. zu Göttingen*, N. F. Bd. III, N°. 2 (Berlin 1901), p. 136, 311; id., *Untersuchungen zur Gesch. von Eran* (Leipzig, 1905), ii. 57. (STRECK.)

AMULET. [See ḤAMĀʾIL.]

ʿAMŪR (Djebel), a mountain massif of Southern Algeria, situated between the Ḳṣūr mountains in the S. W. and the mountains of the Awlād Nāʾil in the N. E. [see ALGERIA, ATLAS]. It is an elevation stretching from N. E. to S. W. at a length of about 62 and a breadth of about 37 miles, and covers an area of about 2700 square miles. Its height is only from 650 to 975 feet above the plateaux from which it rises in gentle slopes; towards the Sahara, however, it slopes down fairly abruptly. The structure of the massif is rather irregular, though several ridges and a few dominant peaks can be distinguished; in the north the Guern ʿArif (5005 feet); the Djebel Sīdī ʿOkba (5548 feet); the Gūrū (5545); the Djebel Maḥāṣur (4600); the Djebel Sīdī Bū Zīd (4895); in the south, the Djebel Sīdī Slīmān (5014); the Djebel Mimūna, the Djebel Umm Khamsāwāt, the Djebel Keddād. A characteristic feature of the eastern part of the Djebel ʿAmūr are the 'gadas', vast plateaux of sandstone cleft asunder by erosions and surrounded by ravines with steep walls of a height from 160 to 500 feet. These 'gadas' are covered with pasture and forests; accessible only by means of steep narrow paths they serve as natural fortresses to which the inhabitants can retire with their herds. The most important are the gada of Enfūs, situated between the two branches of the Oued Mzī, the gada al-Grūn, and the gada Madna.

Owing to its high situation the Djebel ʿAmūr receives abundant rain and, in winter, even snow; it is an important hydrographic centre from which

water-courses descend in all directions, forming rushing torrents with deep-cut valleys which, after leaving the massif, lose themselves in the sands of the Sahara or in the closed basins of the high plateaus. Such are: in the S. E. the Oued Melāḥ, the valley of which, narrowed by the gorge of the Khenag al-Melāḥ is one of the ways of access to the Sahara; in the South the Oued Mzi which, after flowing through the South of Algeria under the names of Oued Djedi and Oued Sasi, loses itself in the Shaṭṭ Melghir; in the North the various streams forming the Oued Sebgag, which flows into the basin of Tagnin whence the Cheliff issues; in the North-east the Oued Sīdī al-Naṣer flowing towards the Shaṭṭ al-Sharḳī.

The high situation, the comparatively freshness of the climate and the abundance of water have favoured the development of agriculture and of vegetation in general. Fields of barley and wheat deep down in the valleys, in the depressions which extend between the mountain-chains, yield in normal years sufficient grain for the needs of the population; there are also meadows and orchards full of fruit-trees. In these regions are situated the villages which are inhabited by the sedentary part of the population and serve as store-houses for the nomads. The following are the most important of these villages, the largest of which contain hardly a hundred homesteads: In the north, Sīdī Bū Zīd, Aflū, the administrative centre of the district, and Tadmama; in the South al-Ḳiṣhr, Tawiala, al-Hamwida, and al-'Alam. The mountain-slopes and the heights of the 'gadas' are covered with trees (terebinths, thuyas, Aleppo pines, ilexes, and oaks with edible acorns), which grow so thick as to give the country the appearance of a real forest. Altogether the Djebel 'Amūr is a very different country from the regions adjoining it in the South and North. 'It is a real Tell of the Sahara ... it always impressed the natives as a fairy-country which their imagination has painted in enchanting colours.' The Djebel 'Amūr, as is proved by drawings scratched in the rocks, and by the tombs found everywhere in the massif, has been inhabited since a very ancient period; at the time of the first Muslim invasion it was occupied by the Waghmert, a group of Berber tribes belonging to the Zanāta. Towards the x. century of our era the Rashīd, a sub-tribe of the Banū Wāsin, settled in the mountains, and gave them their name (Djebel Rashīd); they were driven forth however by the invasion of the Banū Hilāl. An Arab tribe belonging to the Athbedj group, the 'Amūr who later on were joined by the 'Orwa, settled towards the end of the xi. century on the eastern slopes and the surrounding plateaus; thence they advanced gradually, dislodging the Rashīd on the North and South, until in the xv. century they became master of the whole district as far as the Ḳṣūr mountains. The name Djebel 'Amūr was then substituted for that of Djebel Rashīd.

Owing to the protection afforded by their mountains the 'Amūr practically preserved their independence until the French conquest. The Turks were unable to subjugate them, and the beys of Oran never succeeded in gaining possession of Tawi'ala, the principal Ḳsar of the country. They therefore had to content themselves with a nominal suzerainty, and the Djebel 'Amūr was in point of fact a kind of hereditary fief held by the family of the Banū Yaḥyā. In 1830 Djellūl b. Yaḥyā, the head of this family, succeeded in putting an end to the intestine wars, which had devastated the country, and established his own authority over the whole massif. The 'Amūr were at that time divided into seven septs: Awlād Minūn, to which the Banū Yaḥya belonged; Awlād Banī 'Āmer; Awlād Raḥmana; Amara; Awlād Ya'ḳūb; Makna; Hadjalat; they were capable of putting in the field 600 horses and 3000 men. To them must be added the Kemamta, a Berber tribe, of whom the chiefs only spoke Arabic.

The 'Amūr preserved their independence until the year 1845, when they submitted to General Marey-Monge; after 20 years of tranquillity, however, they rose at the instigation of the Awlād Sīdī Shaikh and took part in the insurrection of 1864—1867. — Even before the French conquest a fraction had separated from the rest and penetrated as far as the district of Figuig; they were called 'Amūr Sahara to distinguish them from the Djebaliya, the inhabitants of the massif. In the treaty of Lalla Maghniya concluded in 1845, the 'Amūr Sahara were recognised as subjects of Morocco.

(G. YVER.)

AMURATH [see MURĀD.]

'AMWĀS (or 'AMAWĀS), the ancient Emmaus mentioned several times in the time of the Maccabees and in Josephus; situated in the plain of Judaea, right at the foot of the mountains, and called Nikopolis since the iii. century A.D. The town was taken by 'Amr b. al-'Āṣ; formerly the chief place of a toparchy it remained a provincial capital under the Arab dominion, until the seat of administration was transferred to al-Ramla [q.v.]. The modern 'Amwās is a miserable village with few old remains. The Castellum Emmaus mentioned by the Crusaders may perhaps be identified, as Robinson has done, with the ruin of the castle of Laṭrūn at a distance of little over a mile. 'Amwās is especially known for the fact that it was a chief centre of the plague of the year 18 (perhaps already 17) A.H. (638-639), which for this reason was called the plague of 'Amwās (or plague of 'Amwās and al Djābiya: Ṭabarī, ed. de Goeje, i. 2516, 11). Its victims are said to have been 25 000, among whom were 'Abū 'Ubaida, Mu'ādh b. Djabal, and Yazīd b. Abī Sufyān.

ĀNA [see ANNA.]

'ĀNA, town in the Djazīra (Mesopotamia), near the frontier of 'Irāḳ, situated at N. Lat. 34° 27' and E. Long. (Greenwich) 41° 18'. It is a very old town known already to the cuneiform

inscriptions as Anat (Khanat), and to the Ancients as Anatha (Ἀναθα); cp. Fraenkel, in Pauly-Wissowa's *Realencyclop. der klass. Altertumswissensch.*, i. 2069; Streck, *ibid.*, Supplem. i. N° 1, col. 77, and in the *Zeitschr. f. Assyriol.*, xix, 251, and in *Klio*, vi. 197. In Palmyrene inscriptions 'Āna is referred to as a military station (cp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lxi, 701). In Antiquity and during the Middle Ages (cp. e.g. Ibn Serapion, 290=903; Ibn Ḥawḳal, 367=978) 'Āna was the name of a settlement on an island in the Euphrates; the modern 'Āna is situated on the right bank of the Euphrates, stretching alongside the river at a length of about 2 hours; this length is due to the fact that gardens are situated between the separate houses, and that the mountain-slopes which come very close to the river prevent an expansion in another direction. The modern 'Āna ends near the old town on the island with which it is connected by means of a stone-bridge. The population (consisting almost entirely of Arabs) was estimated by Czernik (1872) at 4000, whose chief means of support is industry; their principal produce is cotton, out of which they manufacture Arab cloaks (about 5000 annually); the commerce is also considerable, as 'Āna is the principal market for the Bedawī's dwelling between Syria and the Euphrates. The zone of palm-trees extends on the Euphrates as far north as 'Āna; the town was famous for its date-plantations already in the Middle-Ages, and even now it resembles a large grove of palm-trees. The Arabic poets also praise the local wine; cp. S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen* (Leiden, 1886), p. 157; G. Jacob, *Altarab. Beduinenleben* (Leipzig, 1897), p. 98, 248. Besides 'Āna Arabic authors (e.g. Beladhorī, ed. de Goeje, p. 179, ,, 182, ,) occasionally use the form 'Ānāt derived from the Aramaic (Syriac 'Ānath). The modern official spelling is 'Ana (!); cp. M. Hartmann in the *Zeitschr. des Deutsch. Pal. Vereins*, xxiii, 122. If the name is derived from the Aramaic it may be explained as '(place of) goats'; cp. Fraenkel, *loc. cit.* Under the Turkish administration the ḳaza 'Āna belongs to the liwā Baghdād; cp. M. Hartmann, *loc. cit.*, xxiii, 2.

Oppenheim, *Vom Mittelmeer zum pers. Golf* (Berlin, 1900), ii. 64, 72, 216. (STRECK.)

ANADOLI, Anatolia or Natolia, originally the name of the largest military district (*thema*) in the Asiatic portion of the Byzantine empire (Anatoles, Ibn Khordādhbeh has al-Nāṭolus) extending from Dorylaeum to Cilicia. Under ottoman rule Anadoli comprised all Asia Minor west of the Ḳizil-Irmaḳ (Halys) and north of Karaman (corresponding more or less to the present Wilāyet of Konia), with the exception of the provinces Ḳodja ili, Bigha and Ṣoghla (Smyrna) which were under the jurisdiction of the Ḳapudan-Pasha. Kutahiya was the capital of this large province and the residence of the Pasha. In a wider sense all Asia Minor was called Anadoli, and this usage still prevails. [Cp. the art. TURKEY.]

ANADOLI HIṢĀR, a castle erected by Bāyazīd I in 798 (1396) on the Asiatic coast at the narrowest part of the Bosphorus. Its original name was Güzeldje Hiṣār; it has now fallen into neglect. On the opposite coast Muḥammad the Conqueror built in 856 (1452) the castle of Rumili Hiṣār, in order to bring Constantinople completely in his power.

ANĀHĪD (NĀHĪD), Persian name of the planet Venus (Arab. Zuhara).

'ANĀḲ, the karakal (from the Turkish Ḳara Ḳulak, 'Black Ear' in Persian Siyāh Gūsh), a kind of lynx which was supposed to walk in front of the lion, in order to announce its approach. In Astronomy 'Anāḳ is the name of the star ζ in the great Bear and of γ in Andromeda (cp. Ideler, *Unters. über den Ursprung u. s. w. der Sternnamen*, p. 19, 126).

AN'ĀM (A.), plural of *na'am*, cattle. Also the name of sūra vi.

ANĀMŪR, the ancient Ἀνεμούριον, a promontory and harbour in Asia Minor: now only a landing place (Scala) and chief town of a ḳaza in the sandjaḳ Içil, wilāyet Adana. The ruins of the ancient Ἀνεμούριον still exist (under the name of Eski Anamur).

Bibliography: V. Cuinet, *La Turquie d'Asie*, ii. 81, 59.

ANĀNĪYA (A.; derived from *ana*, I), I-ness; egoism.

ANĀPA, Harbour on the Black Sea, in the district of Kuban (Russian Caucasus), with an old fortress restored by the Turks in 1781; belongs to Russia since 1828.

ANAS B. MĀLIK ABŪ ḤAMZA, one of the most prolific traditionists. After the Hidjra his mother gave him to the prophet as servant; according to his own statement he was then ten years of age. He was present at Badr, but took no part in the battle, and is therefore not counted among the combatants. He remained in Muḥammad's service up to the time of the prophets death, later he took part in the wars of conquest. He also played small parts in the civil wars. In the year 65 (684) he officiated as imām of the ṣalāt at Baṣra, acting on behalf of the rival caliph 'Abd Allāh b. al-Zubair. At the insurrection of 'Abd al-Raḥmān b. al-Ash'ath he was reproached by al-Ḥadjdjādj with being a partisan of the rebel just as he had formerly taken the part of the enemies of the Umaiyads, 'Alī and Ibn al-Zubair; and although he was highly respected as a companion of the prophet al-Ḥadjdjādj had no scruples in putting round his neck a cord with his seal (72=691). It is said however that the caliph 'Abd al-Malik asked his pardon for al-Ḥadjdjādj's disrespectful act. Anas died at Baṣra at a very advanced age, which is variously given at from 97 to 107 years (the dates most frequently found are 91—93=709—711). — His reputation as a traditionist is none of the highest. Abū Ḥanīfa, it is said, refused to acknowledge his authority in matters of tradition; and his version of the *mi'rādj* (Muḥammad's ascension to heaven) as well as others of his traditions prove that he did not shrink from fantastic stories. A large collection of his traditions is found together in the *Musnad* of Aḥmed b. Ḥanbal.

Wüstenf.) p. 166; Ibn al-Athīr, *Usd al-Ghāba*, (Cairo, 1286), i. 127 *et seq.*; Ibn Ḥadjar, *Iṣāba*, i. 138; Ibn Khallikān, transl. by de Slane, ii. 588; Damīrī, *Ḥayāt al-Ḥayawān*, p. 350 quoted by Caetani, *Annali dell' Islām* (Introd., § 26, note 1).

(A. J. WENSINCK.)

ʿANAZA (A.), staff, spear (see *Lisān* vii. 257). In the Muslim ritual the ʿanaza first appears in the year 2 (624). When Muḥammad for the first time celebrated the festival of Breaking the Fast, Bilāl carried a spear before him on his way to the *muṣallā*; during the service this spear was planted in the ground and served as *sutra* [q. v.]. Precisely the same thing was done on the occasion of the other festival (10th Dhu 'l-Ḥidjdja). — The custom of carrying a spear or staff was observed and expanded by Muḥammad's successors. It has become the rule for the preacher to hold in his hand or to lean upon a staff, a sword or a bow, when he ascends the pulpit at the Friday service. At Cairo in Lane's time a wooden sword was used. It is obvious that all these things are symbols expressing the same ideas as the ʿanaza. According to Becker's explanation staff and pulpit are the two attributes of the judge or orator among the ancient Arabs.

Legend relates that the prophet received the ʿanaza (or even three of them) as a present from al-Zubair, to whom it had been given by the Negus.

Gesetzes*, p. 84, 87 *et seq.*

(A. J. WENSINCK.)

ʿANAZA, an Arab tribe; it is said that their original name was ʿĀmir, but that they were called ʿAnaza, because the ancestor of the tribe killed a man with the short spear called ʿ*anaza*. The name is certainly not connected with ʿ*anz*, the word for a goat; ʿ*anaza* also denotes an animal, apparently a kind of weasel. The nisba *al-ʿAn(a)zī*, 'the man of ʿAn(a)za' is sometimes confused with that derived from ʿ*Anz*. Other tribes of the same name are ʿAnaza b. ʿAmr b. Afṣā (belonging to the Khuzāʿa group) and ʿAnaza b. ʿAmr. b. ʿAwf (belonging to the Ghassān).

The genealogy of the tribe in question is ʿAnaza b. Asad b. Rabīʿa; the Djadīla and ʿAmīra are mentioned as brother-tribes, while the following were counted as sub-tribes: the Yadhkur (including the Aslam), the Yaḳdum, and the Hizzān (including the Shakīs). The modern septs which partly are divided into further sub-divisions with shaikh's of their own are as follows: Fedʿān, Sebāʿ, Hadhdhāl (these two are said formerly to have formed the tribe of Bishr), Hesenne, Ruala (the most numerous and most powerful tribe; Prince Muḥammed, a son of the Khedive ʿAbbās I, was sent to them in order to be brought up in manly accomplishments); Walad ʿAlī, Sirḥān, Erfaddī, Tawf. The whole tribe is estimated by A. Blunt to possess 30 000 tents or 120 000 members. They do not however form a political unit, and instances of wars between ʿAnaza tribes are not lacking: the Hesenne e.g., formerly one of the leading tribes, were reduced to a very inferior position by an unsuccessful war against the allied Sebāʿ and Ruala. A number of smaller tribes are allies or tributaries of the ʿAnaza; and it is a general rule that all Bedawī's and farmers of the Syrian and Mesopotamian plain who live within the sphere of influence of the ʿAnaza or Shammar, the two strongest tribes of that region, pay tribute to one of these, and sometimes to both.

At an older period places are seldom referred to as belonging to the ʿAnaza, so that it is impossible to locate their habitations at that time with any certainty. There were ʿAnaza near Medina, in Yamāma, and even in Yemen. At the present time the district covered by their wanderings includes the whole Syrian plain, and reaches to the North as far as the latitude of Aleppo (they are also found in the Biḳāʿ), to the South as far as the Shammar hills, and eastwards to the Euphrates and even beyond that river. At the beginning of winter they move southwards towards the Shammar hills where they still find fresh pasture for their camels; and from December onwards no ʿAnaza are found in the whole district north of the chain of hills which begins to the north-east of Damascus and reaches as far as the Euphrates. Towards March, when the she-camels have dropped their young, the ʿAnaza begin to return north, so as to reach their summer quarters again by the middle of April. They do not take their sheep with them to the south, but leave them in the care of the subject tribes. The Euphrates is, on the whole, the boundary between the ʿAnaza and the Shammar of Mesopotamia; the former however frequently cross the river by numerous fords in order to make raids in Mesopotamia, so that there is a permanent state of war between them and the Shammar who are barely half their numbers. The ʿAnaza are always readily assisted by the Yazīdī's; the raids from one side of the river to the other usually begin with the arrival of summer. ʿAnaza are found even in the district of Nisibis and Mosul; and east of the Khābūr there is a fairly considerable sept of the tribe, a sub-tribe of the Hadhdhāl, who emigrated to that district in consequence of dissensions with their fellow-tribesmen and joined the Shammar.

Of the history of the ʿAnaza in the older period little is known. Individual members of the tribe occasionally play a part, but like the whole tribe and its various septs, they are of no considerable historical importance. In pagan times they had an idol Suʿair, and like the other Rabīʿa tribes they assigned to Muḥarriḳ a son whom they called Balkh. In the famous war caused by the murder of Kulaib they are said to have joined the Bakr and shared their troubled and perilous existence. In the early times of Islām a certain al-Ḳudāz b. al-Ḥārith is said to have been the most influential person among the Rabīʿa tribes. Al-Faḍl b. Dalam b. Ḥazzādj, a rich and noble citizen of Baṣra, has found immortality through a line of Farazdaḳ. Apart from this they were known through the proverb about the two ḳaraẓ-gatherers of the ʿAnaza. But their importance does not begin until the second half of the xvii. century; about twenty years after the Shammar, coming from the Nedjd, had made themselves masters of

the Syrian desert, the 'Anaza also advanced from the Nedjd; the first tribes to move seem to have been the Fedān and Hesenne, who with the assistance of some of the Bedawī's driven from their seats by the Shammar, forced the Shammar to cross the Euphrates; they were followed, as it seems, by the Hadhdhāl, Seba and Walad 'Alī, next came the Ruala towards the end of the xviii. century, and in the second half of the xix. century the Tawf and Erfuddīt. As the Turkish governors were powerless to intervene in these dangerous movements, the 'Anaza became undisputed masters of the Syrian desert as far as the Euphrates, where they stopped all traffic and commerce. Down to the second half of the xix. century the district on the Euphrates was in their undisputed possession, and therefore a dreaded and almost impassable country; in the sixth decade of the xix. century they made a raid on Aleppo and looted the town. Early in the thirties 'Alī Pasha, the governor of Baghdād who was then fighting the Djarba (Shammar) called upon the 'Anaza for assistance against the Shammar; they came in such numbers that the governor who meanwhile had disposed of the Shammar soon began to be afraid of his friends and allies; he vainly attempted to persuade them to return, on the plea that they were no longer wanted: they demanded a reward for having come to his help from such a distance and settled on the pasture-lands near Baghdād. 'Alī Pasha now incited the Shammar against them, but when war broke out the 'Anaza were victorious, and ravaged the Shammar country; they also gained a decisive victory over the government troops and besieged Baghdād which was full of refugees, but retired before the savage Zubēd whom 'Alī Pasha had summoned against them. The troubled condition of the Syrian desert and the Euphrates district, for which the 'Anaza were responsible, began to improve slowly after 1862 in consequence of the vigorously conducted campaigns of 'Umar Pasha, the governor of Aleppo, and later of Midhat Pasha who at that time was governor of Baghdād. There is much ill feeling between the 'Anaza and the Druzes of the Hawrān, not only because they have put a check on their predatory raids, but because the protection which they afford other Bedawī tribes enables the latter to venture on raids against the much more powerful 'Anaza. It is for this reason that during the great rising of the Hawrān Druzes (1896), the 'Anaza remained loyal to the Turkish government and took part in the suppression of the insurrection. — They seem to be very negligent in observing the Muhammedan religious law (e. g. prayer). When the Wahhābī movement spread to Syria they were obliged to receive the pious Wahhābī imām's and to submit at least outwardly to the strict observances of Wahhābism; but after the fall of the Wahhābī power in Syria they were quick to throw of this irksome yoke of strict piety.

'ANBAR (A.), ambergris (*ambre gris*, *ambra grissa* to distinguish it from *ambre jaune* = amber), a substance of sweet musk-like smell, easily fusible and burning with a bright flame; highly valued in the East as a perfume and as a medecine. It is found floating on the water in tropical seas, (spec. gravity 0.78—0.93), or on the shore, some-times in large lumps. Ambergris probably is a morbid secretion of the gale-bladder of the sperm-whale in whose intestines it is found. Kazwīnī mentions it together with sulphur, asphalt, mineral tar and naphtha, and states in addition to various marvellous theories of its origin that it is secreted by an animal and found in the body of seafishes. There is, he says, no difference of opinion as to its originating in the sea; the 'sea of Zandj' especially (i. e. the part of the Indian Ocean stretching along the east coast of Africa) washes it ashore at certain times in big lumps, mostly of the size of a head, the largest lumps weighing 1000 *mithkāl*. — He states further, that it strengthens the brain, the senses and the heart in a wonderful way; it increases the mental substance, and is of the greatest use to old men owing to its subtle warming effect. — The fullest account of the medicinal effects of ambergris are found in Ibn al-Baiṭār, the most detailed account of its origin of the various commercial varieties and their provenience in the Encyclopaedia of Nuwairī who follows Aḥmed b. Ya'kūb and Muḥammad b. Aḥmed al-Tamīmī respectively. There is an interesting reference to varieties called 'fish-ambergis' and 'beak-ambergris': the former also called 'swallowed ambergris' (*al-mablū'*) is said to be got from the belly of a large fish called *bāl* or *'anbar* who swallows the ambergris floating on the sea and dies in consequence; the body is cast ashore and bursting open gives forth the ambergris which it contains. The, beak-ambergris' (*al-manāķirī*) contains the claws and beak of a bird which alights on the lumps and being unable to get away perishes on them. This fable is obviously founded on the fact (pointed out by Dr. Swediaur) that ambergris frequently contains the hard mandibles (beaks) of a cuttle-fish which serves as food to the sperm-whale.

(J. RUSKA.)

'ANBAR (BANU 'L-'ANBAR), an Arab tribe whose name is derived from ambergris or the sperm-whale [cp. the preceding article]. The grammarians mention Bal'ambar as an abbreviation of the name, but this form occurs only very rarely in literature. Khaddām is also given as the name of their ancestor.

The genealogy is al-'Anbar b. 'Amr b. Tamīm; the Hudjaim, Usaiyid and others were brother-tribes, the Djundub, Ka'b, Mālik, and Baghīḍa septs of the 'Anbar. The 'Uraidj and Hundjul belonged to the Djundub. A malicious genealogical story about the many marriages of their ancestress Umm Khāridja is found in *Aghānī* 1. ed., xii. 79; 2. ed., xii. 75; *Kāmil* (ed. Wright) i, 265. Their seats were in the Yamāma. Of mountains belonging to them there are mentioned: al-Maghāsil, Ṭamiya; of wādī's and wells:

al-A'zala, al-Faky (occupied after its inhabitants had perished with Musailima), Faldj, al-Khall, al-Kharmik, al-Lulaiyān, Māwiya (in the valley of Faldj), Mawshūm, Munbadjis, al-Targhumha, Tibrāk, Usaila; of **localities**: Dhū Sudair, al-Faķ' (inhabited by the Dabba and 'Anbar), Hisy-dhi tamannā (palm-plantations), Lughāţ (inhabited by the Mabdhūl and 'Anbar), Maķāma, al-Rā'igha (palm-plantations), al-Kaķmatān, Shatt Fērōz (palm-plantations and fields). **History**. When Muḥammed made war against the Tamīm in consequence of the refusal of one of their tribes to pay the tax on their cattle, he sent the Uyaina against the 'Anbar. The latter were beaten and had to leave a considerable number of captives in the hands of the Muslims. The induced the whole group of Tamīm tribes to tender their submission through their shaikhs. In the insurrection of the year 11 (632) the 'Anbar seem to have been among the loyal Tamīm, and later they took part in the expedition of 'Ikrima.

(RECKENDORF.)

AL-**ANBĀR**, a town on the left bank of the Euphrates, in the north-east of 'Irāķ (Babylonia), situated under 43° 40′ E. long. (Greenwich) and 33° 23′ N. Lat. According to the Arabic geographers the distance between Anbār and Baghdād on the mail route was 12 (Yāķūt: 10) parasangs (= about 68 km. = ca. 42 miles, reckoning the parasang at 5.7 km.) (Cp. Streck, *Babylonien nach den arab. Geographen*, Leiden 1900, i. 8). The town is said to have been built by the Sāsānid king Shāpūr II (Arab. Sābūr) who reigned from A.D. 310—379; this statement however in all probability does not refer to an actual new foundation, but to the rebuilding and fortification of an older settlement already existing on the spot, especially as the survey of the ruins still extant on the site, which was undertaken by Ward and Hilprecht, has furnished definite grounds for assuming the existence of a pre-Sāsānid town. Anbār soon became one of the principal towns of the Sāsānid empire, and already in the time of Ammianus it was regarded as the most important town of Babylonia after Ktesiphon. As a strong military station intended to protect the capital in case of attack from the side of the Eastern Roman Empire, it was of pre-eminent strategical importance, and thus played a considerable part in the emperor Julian's well-known campaign against Persia. The importance of the geographical position of Anbār was chiefly due to the fact that the first large navigable canal of Babylonia which served as a communication with the Tigris, branched off from the Euphrates at a short distance below the town. This canal called Nahr 'Īsā in the Arabic sources (cp. Streck, *loc. cit.*, i. 25 *et seq*; G. le Strange, *Baghdad during the Abbasid caliphate*. Oxford 1900, p. 71 *et seq*.) undoubtedly belongs to the pre-islāmic period, and seems to have been cut by one of the Sāsānid kings, most probably Shāpūr ii. Being situated in the midst of the most fruitful province of the Persian empire and connected with the capital Ktesiphon by a short and convenient waterway the strongly fortified town was chosen by the later Persian kings for their arsenals and magazines. It is to this circumstance that the town owes its name; for the word Anbār, which the Arabs regarded as a plural, is derived from the Irānian (Old. Irān. hypothet. *ham-bāra*, Mod. Pers. *anbar*, armen. *hambar*) and signifies store-house or treasury; cp. Nöldeke, *Grammatik der neusyrischen Sprache* (Leipzig, 1868), p. 403; S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen* (Leiden, 1886), p. 136; Hübschmann, *Armenische Grammatik* (Leipzig, 1897), i. 178; Schefftelowitz in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, lix. 699. Among the Arabs this appellation almost entirely supplanted the official name of the town Pērōz-Shāpūr (Arab. Fairūz-Sābūr) i.e. Victorious (is) Shāpūr, derived from the name of its second founder, the Sāsānid king. The Persians seem always to have used the name Pērōz-Shāpūr, by which it was also known to the Romans (Ammianus Marcell.: Pirisabora; Zosimus: Βηρσαβῶρα); it is also used by the Syrians who had a Nestorian bishop residing in the town (cp. Guidi in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.* xliii. 413). The Byzantines know only the form Ἀμβαρα (Ἄβασα, Ἀββαρανων) which they had heard from the Arabs. The latter retained the name Fairūz (Fīrūz)-Sābūr only as the designation of a district (*tassūdj*) in the province (*ustān*) al-'Āli, of which Anbār was the chief town; cp. Streck, *loc. cit.*, i. 16, 19.

Anbār remained a flourishing town during the early centuries of Islām. It was taken as early as the year 12 (634) under the caliphate of Abū Bakr, by Khālid who defeated the allied Persians and Byzantines in a sharp conflict near the town. For a short time it even was the seat of the caliphate; the first ruler of the 'Abbāsid dynasty, Abu'l-'Abbās al-Saffāḥ (132—136 = 750—754) made Anbār his residence and was buried there in the palace which he had built; and his successor, Abū Dja'far al-Manṣūr, resided in the town until the foundation of Baghdād in the year 145 (762). After this the importance of Anbār gradually diminished; its capture and devastation by Abū Ṭāhir, the leader of the Karmaṭians in 315 (927) accelerated the process of decay. In the time of al-Muķaddasī (375 = 985) the number of inhabitants was already small. The palace of the caliphs was still extant in the days of al-Iṣṭakhrī (340 = 951), though in a partly ruined condition; it is mentioned once more in Rashīd al-Dīn's account of the Mongol advance against Baghdād in the year 656 (1258).

To-day the site of Anbār is quite waste; the situation of the town is indicated by the ruins of Tell 'Akbar ('Akar, 'Aķra) and Ambār (Chesney: Omm Barrā), in which latter form Ritter already recognised the old name of the town.

The Nahr Saķlāwīya which leaves the Euphrates to the west of these ruins cannot (at any rate in the earlier part of its course) be identical with the above-mentioned Nahr 'Īsā (differently H. and R. Kiepert; cp. the map in M. v. Oppenheim's *Vom Mittelmeer zum Pers. Golf*, Berlin 1899). The very extensive mounds of ruins which indicate a town of considerable size, have recently been visited and described by J. B. Bewsher and Ward (together with Hilprecht).

AL-**ANBĀRĪ** 'ABD AL-RAḤMĀN B. MUḤAMMED B. 'UBAID ALLĀH B. ABĪ SA'ĪD KAMĀL AL-DĪN ABU 'L-BARAKĀT, Arabic philologist, born in 513 (1119), studied philology at the madrasa al-Niẓāmiya at Baghdād where al-Djawālīḳī and al-Shadjarī were amongst his teachers, and later became a lecturer on this subject at the same college. He never left the capital, but towards the end of his days he retired from public life in order to devote himself entirely to his studies and to pious exercises; he died on the 9. Sha'bān 577 (19 December 1181). His most important work from our point of view is a history of philology from the beginning to his own time arranged in biographies, under the title *Nuzhat al-alibbā' fī ṭabaḳāt al-udabā'* (lith. Cairo 1294). His easy manual of grammar, *Kitāb Asrār al-'Arabīya* has been edited by C. F. Seybold (Leiden, 1886). Extracts from his work entitled *Kitāb al-inṣāf fī masā'il al-khilāf baina 'l-naḥwīyīn al-baṣrīyīn wa'l-kūfīyīn* — of which Mss. are preserved at Leiden (*Catal. cod. or. Bibl. acad. Lugd. Bat.* i. v. J. 1886, N°. 169), in the Escurial (H. Derenbourg, *Les mss. ar. de l'Esc.*, N°. 119), and in the Yeni Mosque at Stambul, have been published by Kohut, *Fünf Streitfragen der Baṣrenser und Kūfenser* (Wien, 1878); W. Girgas, *Skizze des grammat. Systems der Araber* (russ., 1873), p. 46—66, Girgas and de Rosen, *Arabsk. Khrestom.*, (St. Petersburg, 1876), p. 435—455, and G. Weil in the *Zeitschr. f. Assyriologie*, xxx, 56 *et seq.* A few smaller grammatical treatises are preserved at Leiden (*Catal.*, N°. 170-171) and Paris (de Slane, *Catal. des Mss. ar. de la Bibl. nationale*, N°. 1013, 4) as well as in the Escurial (Derenbourg, ii. 772, 1). The following of his works are lost: a grammar, *al-Mīzān*, a dictionary *al-Zahīr* quoted by 'Abd al-Ḳādir al-Baghdādī, *Khizānat al-adab*, Būlāḳ, 1299, ii. 352, 4); *al-Kitāb al-fā'iḳ fī asmā' al-mā'iḳ* (quoted by himself in the *Nuzha*, p. 38, 1), *Kitāb al-waḳf wa 'l-ibtidā'* (quoted by al-Suyūṭī, *Sharḥ Shawāhid al-Mughnī*, Cairo 1322, p. 158, 26), and a book on the interpretation of dreams.

Bibliography: Ibn Khallikān (Būlāḳ, 1299, 1310), N°. 432 (ed. Wüstenf., N°. 469); al-Kutubī, *Fawāt al-Wafayāt* (Būlāḳ, 1299), i. 262; Wüstenfeld, *Die Geschichtschreiber der Araber*, N°. 169; Brockelmann, *Gesch. d. arab. Litter.* i. 281. (BROCKELMANN.)

AL-**ANBĀRĪ**, AL-ḲĀSIM B. MUḤAMMAD B. BASHSHĀR, a noted traditionist and writer on philology, died 304 (916). His son Abū Bakr Muḥammad, whom he had taught himself, though he had also been a pupil of Tha'lab, lectured in the same mosque as his father in the latter's lifetime, and was known for his phenomenal memory. He died in the year 327 (939), according to others in 328.

Of the father's works the only one preserved is a commentary on the *Mufaḍḍalīyāt* revised by the son; cp. Ch. Lyall, in the *Journ. of the Roy. As. Soc.*, 1904, p. 319 *et seq.* Of the son's works the following are extant: 1. *Kitāb al-Aḍdād* (ed. M. Th. Houtsma, Leiden, 1881; Cairo, 1325); 2. *Kitāb al-zāhir fī ma'ānī kalimāt al-nās* (MS. in Stambul, Köprülü N°. 1280) 3. *Kitāb al-īḍāḥ fī 'l-waḳf wa 'l-ibtidā'*, on pause in the Ḳor'ān (MSS. in London, *Catal. cod. mss. orient. ... in Museo Britannico* ..., ii. N°. 1589, and Stambul, Köprülü N°. 11; 4. On the passages in the Ḳor'ān where *Tā'* is written instead of *Hā'* (MS. in Paris; see de Slane, *Catal. des mss. ar. de la Bibl. nationale*, N°. 651, 2) probably an extract from the *Kitāb al-hā'āt fī kitāb Allāh*. Ibn Athīr in his preface mentions his *Kitāb gharīb al-ḥadīth* among his sources.

Bibliography: Fihrist (ed. Flügel), i. 75; 'Abd al-Raḥmān b. al-Anbārī, *Nuzhat al-alibbā'* (Cairo, 1294), p. 330—342; Ibn Khallikān (Cairo, 1299), i. p. 637, N°. 614; Flügel, *Die grammatischen Schulen der Araber*, p. 168—172; Brockelmann, *Gesch. d. arab. Litter.*, i. 119; Haffner, in the *Wiener Zeitschr. f. d. Kunde des Morgenl.*, xiii, 344; Kern, in *Mitt. des Seminars für oriental. Sprachen*, xi[2], 262 *et seq.* (BROCKELMANN.)

ANBĪḲ. [see ALEMBIK.]

ANBIYĀ' (A.), plural of *Nabī* [q.v.], prophet; Sūrat al-Anbiyā' is the title of Sūra 21.

AL-**ANDALUS**, Arabic name of the Iberian Peninsula. The name first appears amongst the Arabs, but its origin is still somewhat obscure just as that of the older 'Iberia' of the Greeks and 'Hispania' of the Romans: for the etymological explanation as a patronymic, adduced by some Arabic writers, — 'Andalus (son of Tubal), son of Japheth — deserves of course no serious consideration. It seems to be most natural however to connect it somehow with the German tribe of the Vandals, and thus to derive it from a hypothetical form 'Vandalicia'. This may have denoted either the old province Baetica, which the Vandals however occupied for less than 20 years (411—429) or the harbour Traducta, from which they crossed over to Africa and which some Arabic writers identify with the town later called Tarifa after the Berber chieftain Ṭarīf (although it is more probable that Traducta corresponds to Algeciras). According to this theory the Arab and Berber invaders at first transferred the name from a small town or province to the whole of the old Baetica (of the Romans and Goths), and later extended it to the whole peninsula which they had conquered so rapidly, including in it at first even the dependencies in Southern France (Septimania = Gallia Narbonensis as far as the Rhône). During the slow but steady decay of the Arab power on the Peninsula in consequence of the Spanish 'reconquista', which began under Pelayo as early as 718 and extended well-nigh through more than 8 centuries, the name al-Andalus, at first of such wide content, gradually lost more and more in significance: it was restricted from time to time to the regions in the South which still remained

in the power of the Muslims, and finally limited to the modest kingdom of Granada. The christians of Northern Spain did not know it at all, but used the old name Hispania or Spania for the Arab South, while calling their own country by specific names like Asturias, Leon, Castile, Aragon etc. This is pointed out in a similar way by al-Idrisi (p. 174). Cp. Dozy, *Recherches sur l'histoire et la littérature de l'Espagne* (3. ed.), i. 301—303; Abu 'l-Fidā', *Taḳwīm al-buldān*, transl. by Reinaud, ii. 234; Gosche, *Die Alhambra*, p. 85; *Marāṣid al-Iṭṭilā'* (ed. Juynboll), iv. 178.

Following the ill-drawn and distorted map of Ptolemy, beyond whom they did not easily venture to go in tracing the exterior boundaries, the Arabs frequently describe Spain as an irregular triangle with the following points: Punta Marroqui and Tarifa (Djazirat Tarif) on the Straits of Gibraltar which is called *al-Zuḳāḳ*, the road' κατ' ἐξοχήν, in the South, Finisterre in the North West, Cabo de Creus and Port Vendres (Fanum Veneris = Haikal al-Zuhara) in the (North) East. Similarly the whole coast from Tarifa to Creus (cp. al-Marrākushī, *al-Mu'djib*, p. 4) or at any rate as far as Tarragona and Barcelona is sometimes regarded as the southern frontier, while the chain of the Pyrenees assumed to run almost due south to north and thus drawn in the maps appears as the frontier on the east. Later on however 'Shark al-Andalus' (East Spain) is of course also used more correctly to denote the later Kingdoms of Valencia and Murcia. The western frontier on the Atlantic (Baḥr al-Ẓulma or al-Ẓulumāt, al-Baḥr al-muẓlim = mare tenebrosum; al-Baḥr al-muḥīṭ al a'ẓam, Awḳiyānūs, al-Ḳāmūs, al-Baḥr al-gharbī contrasted with al-sharḳī, al-rūmī, al-shāmī, al-mutawassiṭ, the Mediterranean) is also frequently reckoned only from Tarifa to Cape St. Vincent or to Cabo da Roca near Lisbon; the northern frontier beginning there is made to turn round the corner of Galicia and to reach the West Pyrenees near Fuenterrabia. The Pyrenees are usually called Djebel al-Burtāt, mountain of the puertos (mountain-passes) or al-Djebel al-ḥādjiz or al-fāṣil, the separating mountains (*baina 'l-Andalus wa 'l-Ifrandja*), the mountain ranges of Castile bear the name Djebel al-Shā(r)āt, mountains of the Sierras, and the Sierra Nevada is called Djebel al-Thaldj, snow-mountain, or Djebel Shulair, mons Solorius.

As regards the descriptions and maps of Arab Spain which have hitherto been published, e.g. in the atlases of Spruner and Menke (2. ed. 1880) and Droysen (1894; cp. also the maps in August Müller's *Der Islam im Morgen und Abendland*, ii. and especially in Stanley Lane-Poole's *The Moors in Spain*, 2. ed. 1887), it must unfortunately be said that all without exception are inaccurate and full of errors which are handed down almost ineradicably from the unhappy times of Casiri, Conde, Sousa, Jaubert, Gayangos, Hammer, Mehren etc.; even the labours of a Dozy seem to have left almost no trace on the geographical exploration of Arab Spain, and that great critic and historian himself was not nearly critical enough in dealing with the impossible names and travestied forms in the section on Spain of the *Description de l'Afrique et de l'Espagne par Edrisi* (texte arabe avec une traduction, des notes et un glossaire, par R. Dozy et M. J. de Goeje, Leyde 1866; cp. on this work E. Saavedra, *La geografía de España del Edrisi*, Madrid 1881—1889), though the responsibility for the mistakes probably rests with the original text of al-Idrisi. Apart from such sporadic corrections of details, and identifications of names and sites as are found scattered throughout the works of Dozy (cp. especially *Observations géographiques sur quelques anciennes localités de l'Andalousie* in the *Recherches*, 3e ed., i. 295—347) and in the writings of Saavedra, Simonet, Eguilaz, Codera and Basset, very little has hitherto been done for a scientific treatment of the geography of Muslim Spain. It will therefore be necessary to collect from all accessible printed and unprinted sources all the notices referring to this large subject, which occur in Arabic geographers and historians, as well as in biographical dictionaries and anthologies: the material thus brought together will have to be compared, arranged and subjected to critical analysis, and to be used as the basis of an entirely new geographical description and for the preparation of new maps: no help at all can be derived from the utterly uncritical and unscientific identifications of Casiri and Conde down to those of Hammer and Mehren; it will be sufficient to compare only the undigested mass of 833 place-names of the Iberian peninsula, put down without all critical selection in the most arbitrary forms, pronunciations and mis-readings, which Hammer's blind encyclopaedic zeal compiled chiefly from Casiri, Conde, Jaubert and Gayangos and on which he wasted 47 pages of the *Sitzungsberichte der Wiener Akademie* (1854). In the field of history the great Dozy found it necessary to throw overboard all the old ballast (Conde etc.), before he could write his monumental *Histoire des Musulmans d'Espagne* by the help of the Arabic sources, first critically edited and exploited by himself; in the same way it will be necessary for geographical research to turn over an entirely new leaf, before a really critical exploration and description of Arab Spain — al-Andalus — is possible. I have shown in isolated examples the method to be followed (involving of course, where necessary, the comparative study of the Medieval sources, both Latin and Spanish, and even of Ancient classical literature); and I have indicated, how from the study of Arabic sources results can be gained even for determining and identifying ancient classical place-names and for fixing the corresponding sites; cp. *Otobesa = Athsa = Oropesa y Anáxa = El Puig de Cebolla = Onusa(?)* in *Homenaje á Don Francisco Codera* (Saragossa, 1904), p. 115—119; *Monchique et Arrifana d'Algarve chez les auteurs arabes* in *O Archeologo Português*, viii. (1903); *Zur spanisch-arabischen Geographie: Die Provinz Cádiz* in R. Haupt's *Katalog 8* (1906); *Die geographische Lage von Zallāḳa-Sacralias (1086) und Alarcos (1195)* in the *Revue Hispanique* for 1906; cp. also David Lopes, *Toponymia arabe de Portugal* in the *Revue Hispanique* for 1902. Owing to the fact that during the 'reconquista' especially after the capture of Granada (1492) invaluable treasures of historical and geographical literature, especially dealing with Spain, were sacrificed to blind fanatical zeal and irrevocably destroyed, the material about Spain which still exists scattered in North Africa and the East, should be brought together from all quarters; the whole material should then be made accessible to a wide circle

of scholars, geographers and historians, by means of critical translations accompanied by detailed commentaries. The whole geographical and historical literature of the Arabs, in so far as it contains any reference to Spain, should be treated in this way, beginning with Ibn Khordādhbeh's short notices written in A. D. 846, and the works of al-Ya'ḳūbī, Yāḳūt etc. (cp. especially the monumental *Bibliotheca Geographorum Arabicorum* ed. de Goeje, 1870—1894) down to the late gigantic compilation which the Maghribī Aḥmed al-Maḳḳarī collected at Damascus in the years 1628—30 out of 100 Arabic sources, and which may be described as an encyclopaedia of Muslim Spain, especially as Gayangos' so-called translation of this mine of information, *The History of the Mohammedan Dynasties in Spain* (2 vols. 1840—1843) is most inaccurate, uncritical and obsolete, and avoids difficulties by ignoring them. All geographical references and names should moreover be collected from the vast Arabic dictionaries of learned men and of nisba's especially as many of these books treat of a surprisingly large number of Spaniards, thereby proving the flourishing condition of Arabic letters in Spain; the principal work to be used in this way is of course Codera's *Bibliotheca Arabico-Hispana*, the ten volumes of which contain biographical works specially dealing with Arab Spain; (it is unfortunate however that false readings and corruptions are particularly frequent in the case of place-names).

The history of Muslim Spain can here be only treated in its outlines. It begins with the marvellously rapid Arab conquest of the Peninsula (from 92 = 711 onwards) the story of which has been embroidered by many legends; led at first until 755 by the quickly changing governors of the Umaiyad caliphs of Damascus (more than 20) the Arabs boldly advanced as far as the heart of France (732 Tours-Poitiers); there followed the civil war between Northern and Southern Arabs and Berbers, and in the year 756 the foundation of the separate emirate of Ḳurṭuba (Cordova) or al-Andalus independently of the 'Abbāsids by 'Abd al-Raḥmān I, the Umaiyad who had escaped from the ruin of his family. The rule which he founded reached its highest point of splendour under 'Abd al-Raḥmān III (912—961; caliph 929); soon however it began to wane, especially after the death of the gifted regent (*al-Ḥādjib*) al-Manṣūr (1002) [q. v.], the greatest statesman and general of Arab Spain, who may be called the Bismarck of the x. century; and in 1031 it disappeared entirely. Out of the ruins of the great caliphate there arose numerous but shortlived petty states under princes (*Mulūk al-Ṭawā'if*, Reyes de Taifas) who for the most part were men of high culture. In the years after 1086 (victory of Yūsuf b. Tāshfīn over the Christians at al-Zallāḳa = Sacralias north east of Badajoz) these small dynasties were destroyed in a tragic manner by the rough force of the Almoravids (*al-Murābiṭūn*), Berbers from Morocco, who in their turn were supplanted both in Africa and Spain (1145—1150) by another religious and political sect and dynasty, the Almohades (*al-Muwaḥḥidūn*) = Unitarians). The power of the Almohades in Spain gradually dwindled down after their heavy defeat at Las Navas de Tolosa (al-'Iḳāb) in 1212; and after 1236 the Arab dominion was restricted to the small, but industrially active kingdom of Granada which, though protected by the mountains, yet had to acknowledge the suzerainty of Castile. The town of Granada was taken in 1492; there followed the insurrections of the Moriscos, especially in 1568—70, and at last in 1609, the final expulsion of the Moriscos, Mudejares and Jews. A detailed treatment of this long history would be out of place here, and we must refer the reader to the special articles dealing with the various subjects. Here we content ourselves with an enumeration of the various dynasties which ruled in al-Andalus, with the names of their capitals:

Umaiyads (Cordova)		756—1031.
'Abbādids (Seville)		1023—1091.
Djahwarids (Cordova)		1031—1070.
Ḥammūdids (Málaga)		1035—1057.
Zīrids (Granada)	c.	1015—1090.
Birzālids (Carmona)		1029—1067.
Bakrids (Huelva)		1011—1051.
Banū Yaḥyā (Niebla)		1023—1051.
Banū Muzain (Silves)		1028—1051.
Sa'īd b. Hārūn and his son Muḥammed (Santa Maria de Algarve)		1016—1052.
Afṭasids (Badajoz)		1022—1092.
Banū Dhi 'l-Nūn (Toledo)		1036—1085.
'Āmirids (Valencia)		1021—1065.
Banū Hūd (Saragossa)		1039—1110.
Banū Razīn (Albarracin)		1011—1103.
Banū Ḳāsim (Alpuente)	c.	1025—1092.
Banū Ṣumādiḥ (Almeria)		1044—1091.

Cp. the chronological table in Dozy's *Histoire* (appendix), which is followed in Stanley Lane-Poole, *The Mohammedan Dynasties* (abridged; London 1894); Antonio Vives y Escudero, *Monedas de las dinastías arábigo-españolas* (Madrid, 1893); Codera, *Tratado de numismática arábigo-española* (Madrid, 1879), and his smaller special contributions; Juan de Dios de la Rada y Delgado, *Catálogo de monedas arábigas españolas que se conservan en el Museo arqueológico nacional* (Madrid, 1892); H. Lavoix, *Catalogue des monnaies musulmanes de la Bibliothèque nationale. Espagne et Afrique.* (Paris, 1891).

For the period from 711—1110 we have Dozy's classical work, *Histoire des Musulmans d'Espagne* (Leiden, 1861; german tr.: Leipzig, 1874; spanish by F. de Castro, 2. ed., Sevile-Madrid 1877-1878), an abridgment of which is given by A. Müller, *loc. cit.* For various controversial points and disputed questions recent investigations must of course be consulted e.g. Saavedra's *Estudio sobre la invasion de los Arabes en España* (Madrid, 1892), where it is made probable that Rodrigo escaped after the first battle against the Arabs and Berbers on the Laguna de la Janda in 711, and put up a brave fight in the North West until 713, in which year he was killed fighting against Mūsā in the battle of Segoyuela and Tamámes, south west of Salamanca, a theory supported by the traditional site of his tomb at Vizéu in northern Portugal. (Cp. also Saavedra, *Pelayo*, Madrid 1906; Juan Menendez, *Leyendas del último rey godo*, Madrid 1906)). — The times of the Almoravids, Almohades, and Naṣrids or Aḥmarids (Banū Naṣr, Banu 'l-Aḥmar; 1232—1492) of Granada, i.e. the period covered by the xii—xv. century, still wait for a second Dozy, whose first task it would be to make full use of the Arabic sources. Sporadic contributions like Codera's *Decadencia y desapari-*

ción de los Almoravides en España = *Colección de Estudios árabes*, iii. Saragossa, 1899) are of course to be welcomed gratefully as affording material which ought to be critically analyzed. Fagnan's French translations of several Arabic sources for the history of Spain and the Maghrib are also very meritorious: *L'histoire des Almohades d'après ʿAbd el-Wâḥid Merrâkechi* (Algiers, 1893); *Chronique des Almohades et des Hafçides attribuée à Zerkechi* (Constantine, 1895); *Ibn el-Athir: Annales du Maghreb et de l'Espagne* (Algiers, 1898—1901); *Histoire de l'Afrique et de l'Espagne intitulée al-Bayâno 'l-moghrib* (by Ibn ʿAdhārī), i. (Algiers, 1901), ii. (1904); *En Nodjoum ez zâhira: Extraits relatifs au Maghreb* (out of Abu 'l-Maḥāsin b. Taghrībardī; Constantine, 1907); unfortunately the place-names do not receive sufficient critical treatment.

It is only the last episode of the chivalrous struggle protracted through 800 years for the possession of the beautiful peninsula, which has again and again inspired historical works either of more or less romantic tendency or of serious purpose; these will have to be given their due share of attention in a final history of Granada and its Alhambra, e.g. L. de Eguilaz Yanguas, *Reseña histórica de la Conquista del reino de Granada por los Reyes Católicos según los cronistas árabes* (2. ed. Granada, 1894), one of the latest contributions. For the special geography of the small kingdom of Granada Simonet's (died 1897) *Descripción del reino de Granada sacada de los autores árabes* (Madrid, 1860; 2. ed. 1872) is still the foundation, though even in its second edition it must frequently be used cautiously and critically; the same author's monumental *Historia de los Mozárabes de España deducida de los mejores y más auténticos testimonios de los escritores cristianos y árabes* (Madrid, 1897—1903; Tomo xiii. of the *Memorias de la Real Academia de la Historia*: 58 pp. preface + 976 pp. of text) is to be consulted for the whole Arab period. Of the many histories of towns and localities, so popular in Spain, only a few are of special historical value, e.g. Álvaro Campaner y Fuertes, *Bosquejo histórico de la dominación islamita en las Islas Baleares* (Palma 1888; on which cp. Codera, *Estudios críticos de historia árabe española* = *Colección de Estudios árabes*, vii, Saragossa 1903, p. 249—301; Alfred Bel, *Les Benou Ghânya, derniers représentants de l'Empire almoravide et leur lutte contre l'empire almohade*, Paris 1903); Mariano Gaspar Remiro, *Historia de Murcia musulmana* (Saragossa 1905) etc. Altamira's most recent comprehensive manual *Historia de España y de la civilización española* (i—iii. Barcelona 1900, 1902, 1906 down to the year 1700) is also occasionally useful, although its treatment of the Arab period is based on secondary sources only and must be used cautiously and critically. A good survey (based chiefly on A. Müller) is also given by Th. Lindner, *Weltgesch. seit der Völkerwanderung*, ii. (Stuttgart-Berlin, 1902), 102—140. As a valuable bibliographical contribution must be mentioned: F. Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos arábigo-españoles* (Madrid, 1898); Brockelmann in his *Gesch. arab. d. liter.* also deals with the Spanish-Arabic writers, although his accounts (especially in the first volume) are frequently less complete than might be desired.

Schack, *Poesie und Kunst der Araber in Spanien und Sicilien* (2ᵉ ed. Stuttgart, 1877) gives the best account of the particularly rich poetical literature of the song-loving Spaniards, as well as of the so-called Moorish, as developed especially in their architecture which is characterised by a wealth of decorative detail (arabesques, stalactites, and ornamental inscriptions) and in which the ornamental element predominates over the constructive; its development is traced by Schack from the great mosque of Cordova (786) to that jewel-casquet, the Alhambra. The best pictorial reproductions — many of them in colour — are as yet Calvert's *Moorish remains in Spain* (*Cordova, Seville, Toledo, Granada*; 1906/1907). The manner and the extent of the influence, which the medieval civilization of Arab Spain exercised on the West, has so far been scientifically investigated to a small extent only; this applies e. g. to the still unsolved problem of the so-called school of translators at Toledo, and the intermediary rôle played by the Neo-Hebrew literature of the Spanish Jews which reached a high state of development under the influence of the Arabs. Cp. also Seybold's annual bibliographical reports (since 1891) in Vollmöller's *Romanischer Jahresbericht*; id., *Die arab. Sprache in den roman. Ländern* in Gröber's *Grundriss der roman. Philologie*, I² (1904), 515—523; id., *Hispano-Arabica* in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, lxiii, 350—364 and article ALJAMIA, besides the article ARABIA.

(C. F. SEYBOLD.)

ANDARĀB, Middle Persian (hypothetical) Andarāp-ak ('Between the waters'), a geographical name occurring several times in countries of Iranian speech to denote rivers and localities.

1. The river on which Ardabīl is situated, belonging to the system of the Aras (Araxes). Rising on the south slope of the Sawalān chain (the Sabīlān of the Arabic geographers, see above p. 134ᵇ) it flows in a curve round these mountains, first in a north-easterly, and below Ardabīl, in a north-westerly direction. The sudden change of direction is caused by the mountains of Gīlān which obstruct the course of the river like a dam and prevent it from flowing into the Caspian Sea. To the north east of the Sawalān-Dagh the Nahr Andarāb joins the river of Āhar coming from the west. The united river — the modern name of which is Ḳara-Ṣu — flows northward to join the Aras. The Nahr Andarāb is nowadays called Baliḳ-Ṣu ('fish-river'); the name Ḳara-Ṣu is also frequently extended to it.

2. Name of a town situated at a distance of a few parasangs from Bardhaʿa, the capital of the province of Arrān (q. v.); also name of the fruitful district of which Bardhaʿa is the centre.

3. Town in Khorāsān, 2 parasangs from Merw; also called Andarāba.

4. Town and river, five days journey south-east of Simindjān (to the south east of Balkh); like Nº. 3, it is also called Andarāba.

(STRECK.)

ANDIDJĀN, chief town of the district Farghāna in Russian Turkestān, important commercial town with 49 612 inhabitants (1900). Under the name of Andukān it is mentioned as early as the iv. (x.) century; it is said to have been re-built towards the end of the vii (xiii) century by the Mongol rulers Duwā and Kaidū; under the Timurids and later it was the residence of the princes or governors of Farghāna; in Eastern Turkestān all inhabitants of Farghāna are still called Andidjānī. All buildings of the modern town (mosques, madrasa's etc.) belong to the last century. In 1898 there was a rising against the Russian government, which was suppressed in a few days; in 1902 occurred a great earthquake, in which nearly all the houses of the natives were destroyed, and wich claimed 4500 victims. As in most towns of Turkestān, a Russian quarter has risen side by side with the original 'Asiatic' town.

(W. Barthold.)

ANDJUMAN (Turkish pronunciation Endjümen), a Persian word the original meaning of which is 'union, assembly, group' (Arabic equivalents: *madjlis* and *madjma'*.) For a long time however, as Champlan points out, the word andjuman has been used to denote especially religious or denominational associations such as the Zoroastrian societies of Yezd and Kermān which exercise judicial functions, and the associations of darwishes founded by Ẓahīr al-Dawla, the governor of Hamadhān. Since the introduction of parliamentary government the word has acquired a new meaning, and the political groups which arose in great number at first in the provinces and later in Teheran, were called andjuman's. In the latter sense the word has frequently been rendered by 'club', a translation which, though not incorrect, yet fails to express adequately the character of these societies of modern Persia. Most of them undoubtedly present a striking analogy with the Clubs of the French revolution, and exercise the same kind of political activity. At the same time however they play, according to their importance, the part of provincial parliaments or municipalities. There have also been andjumans formed as philanthropic, scientific or technical societies, or even as professional syndicates; but all these associations, whatever their name, were devoted to liberal and constitutional ideas, and exercised some political activity.

The most famous of these societies is the Andjuman-i-Millī (National Club) of Tabrīz founded on the 1st Ramaḍān 1324 (17th December 1906) by the leaders of the constitutional movement after leaving the British consulate where they had taken sanctuary (*bast*). At first it consisted of twenty merchants and a few *'ulamā'*; but the number of members increased rapidly and soon included representatives of all classes of the community. From the very beginning its influence was such that the *walī 'ahd*, Muḥammad 'Alī Mīrzā was represented in it by an accredited deputy. Nor was the growth of its authority impeded by some conflicts with the Chamber of Deputies, especially when the latter ordered the recall to Tabrīz of the exiled *'ulamā'*, or by the difficulties attending the vote on the law concerning the provincial assemblies which desired to obtain legal recognition at the earliest moment. The club was temporarily dispersed after the coup d'état of June 1908, but re-assembling soon afterwards, it seized the supreme power in Ādharbaidjān and appointed Sattār Khān and Bāḳir Khān generals of the constitutional party; working in agreement with the other andjumans of Persia it organized the well-known gallant resistance against the perjured government. Although supported all through by the press, the National Club decided to found an official organ, the Djerīde-i Millī which published the minutes of their meetings.

The next in importance after the Tabrīz club, is the sacred club of Iṣpahān, founded in 1907; it consists of 18 members, 3 from each class of the community, and ordinarily meets every Saturday. It is the andjuman of Iṣpahān which organised the resistance against absolutism in the South of Persia; it also secured for the constitutional party the powerful assistance of the Bakhtiyārīs and freed Fārsistān from the domination of the Shāh. Other societies of no less activity were founded at Meshhed (3 andjumans, of which one is charitable, and another educational), Hamadhān, Ardabīl, Resht, Shīrāz, Bender-Būshir etc. At the last mentioned place the opening of the meeting was announced by salutes of artillery, and the troops presented arms before the delegates of the people.

The capital was somewhat slow in following the example set by the provinces. At first it had only meetings of corporations for the purpose of preparing the elections — for which each class of the population nominated its representatives separately. — But as soon as the andjumans had been approved of by the religious authorities of 'Irāḳ their number multiplied rapidly. A separate one arose in each quarter of the town, and a central andjuman served as a municipal council and originated many important reforms. Other societies were formed to include people belonging to the same province, or following the same occupations, e.g. students, professors, physicians, and telegraph officials, *or* interested, in the same questions; similarly there was founded a society for Public Education, which had representatives in the provinces, an agricultural club and many charitable associations. The Andjuman of the Brethren admitted Zoroastrians as members. There was even a society of women: the Andjuman-i Niswān which met every Friday for the discussion of social questions of interest to women. During these meetings ladies were not permitted to smoke or to drink tea, nor were they allowed to bring their children. In June 1908 Teheran possessed no less than 114 andjumans; nearly every inhabitant of the town belonged to one, and many to several. It must be admitted that apart from a few exceptions, these societies in spite of their great number and varied aims, maintained on the whole a perfectly correct attitude. Their meetings were much frequented, and the smallness of the contributions facilitated the acquisition of new members.

Several Persian andjumans were founded in foreign countries; at Bombay e.g. there exists a Persian patriotic society called the Andjuman i-Waṭankhāhān-i Īrānī. After the restitution of constitutional government in Turkey several liberal associations, among them a Persian Committee of Union and Progress, were founded at Constantinople in order to collect financial assistance for the champions of freedom, and to secure for them the sympathies of Europe. Persian societies for

mutual assistance have for a long time existed in the Caucasus and in India.

In India the name of andjuman has been adopted by a large number of Muslim societies, on which cp. A. le Chatelier's important article on the *Aga Khan* in the *Revue du Monde musulman* (November 1906, p. 77-78; cp. also *ibid.* November—December 1907, p. 579, January 1908, p. 172, March 1908, p. 600). Such societies are e.g. the Andjuman Islāmīya at Bombay which has done much to improve the state of the Indian Muslims; the Andjuman Islāmiya of Patna, Lahore, Bangalore, Coimbatore, Trichinopoly; the Andjuman-i Muzaffari of Bombay; the Andjuman-i Mufīd Ahl-i Islām of Vellore; the Andjuman Mufīdu 'l-Islām of Madanpore and others.

(L. Bouvat.)

ANDKHUI, in Yāķūt (*Mu'djam*, ed. Wüstenf., i. 372) Andakhūdh, also written Addakhūd and al-Nakhūd, name of a province (khānate) and town in Afghan Turkestān. The town is situated on the river Sangalik and serves as an intermediate station for the caravan trade between Afghānistān and Bukhārā.

Bibliography: G. le Strange, *The lands of the eastern caliphate*, p. 426 and the authors quoted in the note to that passage.

ANEIZA [see 'Unaiza.]

ANFĀL (a.), plural of *Nafal*, booty; *Sūrat al-Anfāl* is the title of Sūra 8.

ANGAREB (angarīb), a low bedstead covered with leather, used in the Sūdān.

ANGORA, the ancient Ancyra, called Anķira by the Arabs and Engüriye by the Turks, capital of the wilāyet of the same name in Asia Minor. The town which, according to Cuinet, has 27 825 inhabitants, is built upon the slopes of a rock which rises above the plain to a height of about 500 feet; at the top of the rock is the citadel (*Ak ķal'a*). The most notable building is the mosque of Ḥādjdjī Bairam dating from the time of sultan Sulaimān, at the north side of which are found the remains of the famous temple with the inscription of the emperor Augustus (Monumentum Ancyranum). Since 1892 Angora has been the terminus of the Anatolian railway. The town is also known for its goats and cats, but the formerly flourishing wool-industry and the important export-trade in materials made of goats hair has now ceased; at present these materials are only manufactured in a single village of the wilāyet called Stanos or Istanos. The distillation of spirits is now a flourishing industry, and the surrounding district produces excellent wine and other kinds of fruit.

History. During the prime of the Arab caliphate the town suffered frequently through the annual raids against the Byzantine empire; it was not, however, permanently occupied by the Muslims until the time of the Seldjūķs. After the fall of this dynasty the district of Angora was temporarily independent, until it was incorporated in the Ottoman empire by Murād i. (761-792 = 1359—1389). In the neighbourhood of the town is the plain of Čibuķābād, the scene of the battle between Bāyazīd and Tīmūr (19 Dhu 'l-Ḥidjdja 804 = 20 July 1402) in which the former was defeated and taken prisoner.

Bibliography: V. Cuinet, *La Turquie d'Asie*, i. 279 *et seq.*; Pauly-Wissowa, *Realencyklop. der klass. Altertumswissensch.*, s. v.

ANHALWĀRA (Aṇahilavāḍa), the former capital of Gudjarāt, taken by Maḥmūd of Ghazna in 416 (1025). The site is now occupied by the town of Patan (in northern Baroda).

al-'**ANḤŪRĪ** b. Selīm Efendi, modern Syrian-Arabic poet, two volumes of whose poems were published at Damascus 1885 and Bairūt 1886, under the title *Sihr Hārūt wa-ḥadā'i Mārūt*. An elegy on the death of his relative Yuḥannā al-Anḥūrī who died in Paris on the 13. Adhār (March) 1890 (cp. *Journ. Asiat.*, série 9, xvii, p. 353) was printed in the collection *al-Mubakkiyāt* published as a memorial to the latter (Bairut 1890, p. 21). Two other works: *Āyāt al-Si'r* and *al-Djawhar al-fard* are mentioned in Zaidān's catalogue for 1906/1907, on p. 105.

(Brockelmann.)

ĀNĪ, an Armenian town, the ruins of which are found on the right bank of the Arpa-Čai (called by the Armenians Akhuryan) at a distance of about 20 miles from the point where that river flows into the Araxes. The origin of the name is unknown, though the suggestion has been made that the town may owe its name to a temple of the Irānian goddess Anāhita (the Greek Anaitis). It is certain at any rate that the district was inhabited in the pre-christian period, pagan tombs having been found in the immediate vicinity of the town. As a fortress Ānī is mentioned as early as the v. century A. D.; it was bound to be chosen for that purpose owing to its strong position between the ravine of Tsaghkotsadzor, through which a stream coming from the Hills of Aladja flows towards the Arpa-Čai, and the steep bank of that river. In the ensuing centuries the royal house of the Kamsarakan had a castle at Ānī, the foundations of this building, erected of stone blocks without mortar right on the rock, have been discovered during the excavations in the citadel. The oldest portion of the building seems to be a little church built perhaps before the castle (towards the vii. century), which later was incorporated in the castle and used by the Kamsarakan as a domestic chapel.

From the viii. century onward the district of Ānī, like the rest of Armenia, was under the suzerainty of the caliphs. During this period the dynasty of the Bagratids succeeded in gradually enlarging their possessions and in establishing their power on a firm basis. The princes of this house endeavoured to enter into direct relations with the caliphs without having recourse to the Muslim governors of Armenia. In A. D. 887 the Bagratid Ashot 'prince of the princes of Armenia and Georgia' was proclaimed king by the nobles of his country and confirmed in this dignity by the caliph. The son of this first king, Smbat

(called by Arabic authors Sanbāṭ b. Ashūṭ) was crucified in the year 914 by the governor Yūsuf b. Abi 'l-Sādj, whose act is stigmatised as 'tyranny and rebellion against God and His prophet' by Ibn Ḥawḳal (ed. de Goeje, p. 252). Even under Smbat the kingdom of the Bagratids is said to have included the whole region from Dwin (Arab. Dabīl) to Bardha'a reaching southwards as far as the frontiers of Mesopotamia (al-Djazīra; thus al-Iṣṭakhrī, ed. de Goeje, p. 188 and 194). The son of the murdered king, Ashot the Iron, succeeded, partly with Byzantine assistance, in re-conquering his kingdom; as ruler of Armenia he bore the Persian title shāhanshāh (king of kings) which had already been conferred on his predecessor and rival, Ashot son of Shapuh, by Sabuk, the successor of Yūsuf.

A early as the first half of the ix. century the Bagratids under Ashot Msaker bought the district of Ānī from the Kamsarakan; but it was not till time of Ashot iii. (961—977) that Ānī became the royal capital. The wall which is now extant was built by Smbat ii. (977—989); the site of an older wall erected in 964 has been fixed by the excavations of 1893, and a comparison of the spaces enclosed by the two walls shows that a few decades had been sufficient to witness a considerable increase in the number of inhabitants. At a later period town life was undoubtedly not restricted to the comparatively narrow space within the walls. The Bagratids built several bridges over the Arpa-Čai thus enabling the trade between Trebizonde and Persia to take the shorter route through Ānī instead of passing through Dwin. Their dynasty reached the summit of its power under Gagik I (990—1020); and the most flourishing state of the capital would naturally coincide with this period; from 993 onwards Ānī was the residence of the Catholicos of Armenia. As numerous inscriptions prove, Gagik retained the Persian title of shāhanshāh which also appears in an Armenian form (arkayitz arkai); he was also styled 'king of the Armenians and Georgians.' The remains of a church erected by Gagik in 1001 were excavated in 1905 and 1906; among them was found a statue of the king which represents him as wearing Muslim headgear (turban); the same headgear is also found in a relief portrait of his predecessor Smbat ii. preserved in the monastery of Haghbat.

Under Gagiks successors the kingdom rapidly hurried towards its close, and as early as 1044 it became a part of the Byzantine empire. The growth of the town of Ānī however was further encouraged by the Byzantine governors (catapans); an Armenian inscription ascribes to the catapan Aaron the erection of a magnificent aqueduct conducting water from the hills of Aladja to the town.

The Greek rule was ended by the sultan Alp Arslan who conquered and destroyed Ānī in the year 1064; according to Ibn al-Athīr (ed. Tornb., x. 27) the town possessed at that time 500 churches. In 1072, a year after the defeat of the emperor Romanos Diogenes, the sultan sold Ānī to the Muslim dynasty of the Shaddādids (probably of kurdish descent, mentioned as early as the x. century as rulers of Gandja), and down to the end of the xii. century the town remained (apart from a few interruptions) the residence of a branch of that family. At that period the town had two mosques, one of which is still preserved and has been used, since 1907, as a museum for the objects discovered during the excavations; the other collapsed during the second half of the xix. century. There are also Christian buildings belonging to the same period; the Shaddādids acted as beneficent rulers even towards their Christian subjects, and being related by marriage to the Bagratids, they were recognised by the Christian population as native and lawful kings. The walls of the town were repaired and furnished with some towers during their rule.

Ānī was for the first time conquered by the Georgians as early as 1124, under David II who laid the foundation of the power of the Georgian kings; after the final expulsion of the Shaddādids the town became a part of the kingdom of Georgia, but was left in the possession of the Armenian dynasty of the Zakharids wo held it as a fief. Under the Zakharids the walls of the town were extended so as to reach the steep banks of the Arpa-Čai. The ecclesiastical buildings of the period show that the Georgian rulers (like their Greek predecessors) favoured the so-called 'Chalcedonitic' (Greek-Orthodox) tendency, which accordingly predominated at the time, — a fact ignored by the Armenian tradition. There was no religious persecution of Muḥammadans during this period, just as there had been no persecution of Christians under the Shaddādids; a Muslim contemporary (cp. Ibn Ḥawḳal, ed. de Goeje, p. 242 *et seq.*) bears witness to the fact that the Georgian king protected Islām against all injury, and that under their rule no distinction was made between Muslim and Georgian.

Ānī was besieged unsuccessfully by the Khwārizmshāh Djalāl al-Dīn in 1226, and conquered by the Mongols in 1239; but even after this conquest the town remained for a time in the possession of the Zakharids; an inscription on the main gate shows that at a later period it was considered the 'private domain' (*Khāṣṣ-Īngū*) of the Mongol rulers of Persia; but it never regained its former importance. According to tradition Ānī was finally destroyed by an earthquake in the year 1319, but both inscriptions and coins of a later date have been found. A variety of copper-coins struck at Ānī by the Ilkhān Sulaimān (1339—1344) is called by the Turks 'monkey-coin' (*maimun sikkesi*), the coins bearing the image of a hairy figure. Money with the inscription Ānī was struck as late as the second half of the xiv. century by the Djalāir, and even in the xv. century by the Ḳara-Ḳoyunlu; but their mint is probably to be sought in the vicinity of the town, perhaps in the fortress of Mahaspert at a distance of less than 2 miles from Ānī. It is impossible to determine when the town was finally abandoned by the inhabitants; the excavations shows that after the decay of the palaces and churches a rude and miserable population had built their dwellings on the ruins. At the time of Ker Porter's visit (November 1817) it was possible even without excavations to distinguish clearly these houses and their separate rooms, as well as the streets of the later period, which are only 12—14 feet wide. Ānī is now the name of a Turkish village situated near the ruins. As the villages of the neighbourhood possess no mosque for the Friday service, the mosque of the town which is still comparatively well preserved, was

down to recent times used for the purpose. This is done even now on one occasion in the year, although in the eyes of many Muslims the building has been desecrated, since the objects found during the excavations, including the statue of king Gagik and many stones with crosses, were brought into the mosque.

Bibliography: Accounts of the **history of Ānī** are chiefly found in Armenian sources, especially in Stephan Asolik, a contemporary of king Gagik I. The Arabic and Persian accounts are extremely scanty, and the town is not mentioned at all by the Arabic geographers of the ix. and x. century; Yāḳūt (ed. Wüstenf., i. 70) gives it a single line; Ḥamd Allāh Ḳazwīnī (cp. Niẓām al-Mulk, *Siyāsat-Nāma*, ed. Schéfer, Supplement, p. 229) states merely that the district has a cold climate and produces much corn and little fruit (translated in *The lands of the eastern caliphate* by G. le Strange, p. 183: 'a town in the mountains where much fruit was grown'). Ibn al-Athīr (ed. Tornb. x. 27) seems to be the only Muslim author who describes (not quite accurately) the situation of Ānī.

The **ruins** were first visited in 1693 by Gemelli-Carreri (*Collection de tous les voyages faits autour du monde*, ii. Paris 1788, p. 94) and described at length in 1817 by Ker Porter (*Travels*, i. London 1821, p. 172—175). Since the peace of Turkmen-Čai (1827), in which Persia ceded the district of Eriwan to Russia, the Arpa-Čai constitutes the frontier between Russia and Turkey; the ruins of Ānī therefore, although on Turkish ground, were now situated close to the Russian frontier, and travellers could visit them from Russia without danger or difficulty. Plans of the town were sketched by Texier (1839; cp. *Voyage en Arménie*, Paris 1842, *Atlas*, plate nº. 14) and Abich (1844; cp. M. Brosset, *Rapports sur un voyage dans la Géorgie et dans l'Arménie*, St. Petersburg 1851, *Atlas*, plate nº. 23 and id., *Les ruines d'Ani*, St. Petersburg 1860, *Atlas*, plate nº. 30); Abich's plan was still used during the excavations of the last years. The Christian monuments were specially described by Murawjew (1848; cp. his *Gruziya i Armeniya*, St. Petersburg 1848); an account of the Muhammadan inscriptions is given by Khanykow (1848; cp. *Mélanges Asiatiques*, i. 70 *et seq.* and M. Brosset, *Rapports etc. 3me rapport*, p. 121—150); the *Album* compiled by Kästner (1850) contains pictures of architectural monuments on 36 leaves, and a collection of Armenian, Arabic, Persian and Georgian inscriptions on 21 leaves (cp. Brosset, *Les ruines d'Ani*, p. 10—63). Among Armenian writers special recognition is due to Nerses Sargisyan and Sargis Djalalyantz for the collection of Armenian inscriptions. A study on the history of the town based on this material was published by the Armenian Alishan (Venice 1855, in Armenian, cp. Brosset in the *Mélanges Asiatiques*, iv. 392—412); the writer had not himself visited the ruins, but his results have only been made obsolete through the excavations of the last decades.

Ānī became a part of the Russian empire through the conquests made in the war of 1877-1878; but the excavations were not begun until 1892; they were interrupted for 11 years after 1893, and continued systematically since 1904. The results of these investigations conducted by N. Marr throw new light on the history of the town. Buildings which formerly had been ascribed to the Bagratids have now been recognised as dating from a later period; on the other hand discoveries have been made both in the town and in its surroundings of buildings belonging to the earliest period of Armenian Christianity, when the influence of the Syrian Church had not yet been supplanted by the Greek civilisation. The excavations have brought to light clear evidence both of Byzantine and of Arab and Persian influence, where the tradition of the church has preserved no record of such connections with foreign culture. The results of the excavations have therefore acquired considerable importance not only for the investigation of Armenian history but also for the treatment of general historical questions on the relations between the civilisations of Christianity and of Islām.

As the excavations have not yet been completed, only separate articles and reports by Marr are so far available: 1. *Ani, stolitsa drevnei Armenii* (St. Petersburg 1898, from the collection *Bratskaya pomoshč armyanam*); cp. *Mitteil. des Seminars für oriental. Sprachen, Westas. Stud.* ii. 93 *et seq.*; 2. *Raskopki w Ani w 1904 godu* (St. Petersburg, 1906, from the *Izwestiya Imp. Archeologičeskoi Kommissii* part 18); 3. *O raskopkach i rabotach w Ani, letom 1906 g.* (St. Petersburg 1907); 4. *Zapiski wostoč. otd. Imp. Russk. Arch. Obšč.*, xvii. protokolly, p. xxv—xxviii (on the excavations of 1905). A systematic study of the history of Ānī based on the results of the excavations is still wanting. The facts brought together in this article are derived partly from the reports quoted and partly from direct communications from the explorer and his collaborators.

(W. Barthold.)

'ANḲĀ', a large **legendary bird**, which is said to have received its name from its long neck or, according to others, from a white collar on the neck. (The name of the biblical 'Anakim is derived from the same root). The further accounts of Arabic authors suggest both the griffin and the phoenix, and legend connects the 'anḳā' with the aṣḥāb al-rass [q. v.] mentioned in sūra 25, 40 and 50, 12. Although it is generally assumed that the bird only existed in the remote past, Ibn Khallikān (quoted by al-Damīrī) claims to have read in the historian al-Farghānī, that an 'anḳā' was to be seen among other strange animals in the zoological garden of the Fāṭimite caliph. The description which he adds indicates that he alludes to a species of waders (herons) occurring in Upper Egypt).

Bibliography: Ḳazwīnī (ed. Wüstenf.) i. 419 *et seq.*; Damīrī, *Ḥayāt al-Ḥayawān* s. v.; Freytag, *Proverbia Arabum*, ii. 25; Lane, *The 1001 nights*, chap. 20, note 22.

'ANKABŪT (A.), the **spider**. Al-Ḳazwīnī and al-Damīrī mention several species, the most dangerous of which is the poisonous tarantula, *al-Rutailā'* or *al-Ruthailā'*. Al-Damīrī also describes a fieldspider of reddish colour with fine hair on its body; at the head it has four claws with which it bites; it digs a nest in the ground, and seizes its prey by night. The weaving spiders make their

webs according to mathematical rules; according to some the male spins the warp and the female the woof; according to others the female only is capable of making a web; as material they use spittle. When the web is finished the spider sits down in a corner waiting for a fly to enter the web, and pounces on it at once. Others suspend themselves on threads, others sit motionless on the ground and catch their prey at a jump; after rendering it helpless by entangling it in their web they carry it off to their lair and suck its blood. According to al-Djāḥiẓ the spiders young are among the most wonderful of existing things because they are able to spin without being taught. The spider lays eggs out of which come small worms which, after three days, change into spiders; the act of copulation lasts a very long time, Damīrī describes how the male approaches the female. — Spiders webs are applied to external wounds to stay the flow of blood; they are also used for polishing cornished silver. The spiders themselves when pounded, are said to be a good remedy against mucous fever etc. — According to the tradition a spider once saved Muḥammad from a great danger. When during the Hidjra he and Abū Bakr had sought refuge in a cave the Ḳuraish who pursued him found a spider web in its opening. They therefore gave up the search thinking that no one could have entered the cave a short time previously. This and similar legends are founded on the fact that the spider makes its web with extraordinary rapidity. — *Sūrat al-'Ankabūt* is the title of sūra 29. — Cp. also the article AṢṬURLĀB.

(J. RUSKA.)

ANMŪDADJ, arabicised from the Persian *anmūda*, model, pattern.

ANNA, a coin and weight in British India. The coin equals 1/16 of a rupee [q.v.]

ANŌSHARWĀN, Arabic form of the name assumed by Khosraw I (Ṭabarī, ed. de Goeje, i. 862), Pehlevī *anōshak-rwān*, Pāzend *anōsh-ruān*, 'of immortal soul'; in Persian it has become Nūshīrawān (Firdawsī), explained as nūshīn-rawān, of gentle soul (*Burhān-i Ḳāṭi'*). — It is also the name of a son of Manūčihr and a daughter of Maḥmūd of Ghazna, who was amīr of Djurdjān from 420—434 (1029—1042; Ibn al-Athīr ix. 262 ₁₁) [cp. NŪSHĪRWĀN]. (CL. HUART.)

ANŌSHARWĀN B. KHĀLID B. MUḤAMMAD AL-KĀSHĀNĪ, wazīr of the Seldjūḳs Maḥmūd (521 = 1127) and Mas'ūd (528—530 = 1134—1136), and from 526—528 (1132—1134) of the caliph al-Mustarshid bi'llāh. Anōsharwān was greatly honoured by his contemporaries, and especially praised in many poems by poets of his time, because he was an author himself and liked the society of poets. He composed memoirs in Persian on the events of his time, entitled *Futūr zamān al-ṣudūr wa-ṣudūr zamān al-futūr*, which were later translated into Arabic by 'Imād al-Dīn [q.v.]. Al-Bondārī's abridged version of this translation has been edited by Houtsma (*Recueil de textes relat. à l'hist. des Seldjoucides*, ii). Another work by him, entitled *Nafthat al-Maṣdūr* is mentioned by al-Warāwīnī (ed. Mīrzā Muḥammad, p. 4) and Ḥādjdjī Khalīfa, but is not extant. It was Anōsharwān who encouraged al-Ḥarīrī to compose his famous *maḳāmas*. He died in Ramaḍān 532 (Mai 1138).

Bibliography: *Recueil de textes relat. à l'hist. des Seldjoucides*, ii. preface; Ibn al-Athīr (ed. Tornb.), x. xi; Sibṭ b. al-Djawzī, MS. Leiden.

ANṢĀB (A.), plural of *Nuṣub* or *Nuṣb* [q.v.].

AL-**ANṢĀR** (A.), 'the helpers', title of the believers of Medina who received and assisted the prophet after his flight from Mekka. They are sometimes called more explicitly Anṣār al-Nabī, 'the helpers of the prophet'. The word is probably the plural of *naṣīr*, which however does not occur in the sense of the religious term in question. To express the singular the patronymic form *anṣārī* was derived from the plural *Anṣār*; this form however is also used as a patronymic in the sense of 'descending from one of the Anṣār' and as an adjective 'belonging to the Anṣār', and forms the plural *anṣāriyūn*. In making Jesus call the disciples helpers of God (Sūra 3, ₄₅; 61, ₁₄) Muḥammad seems to play on the resemblance of the word with *Naṣārā*, the name of the Christians; the idea that the believers should be helpers of Allāh is several times expressed by Muḥammad. He mentions the Anṣār with special distinction together with the *Muhādjirūn* [q. v.] as those who led the way, and who are followed by the other believers (Sūra 9, ₁₀₁); besides Sūra 9, ₁₁₈ this is the only passage in the Ḳor'ān in which the word is directly applied to the faithful of Medina.

At a time when Muḥammad's doctrines had rendered his position at Mekka very precarious, he succeeded in creating an interest in Islām in a number of men from Medina who had come to Mekka for the pilgrimage. Having assured himself of their protection he emigrated to Medina (A.D. 622) and found there the promised assistance for himself and for his community, part of whom were living in the direst poverty and had to rely on the material help of their friends at Medina; he also found assistance in spreading his faith. At first the followers of Muḥammad were chiefly members of the Medinite tribe of Khazradj, and the name Anṣār must be understood as referring to them; the tribe of Aws kept back in the beginning, and was partly even hostile to the prophet, within the ranks of the Anṣār themselves not a few made a distinction between the assistance which they were prepared to render to Muḥammad as prophet and as statesman. The community of believers at Medina is thus divided into Muhādjirūn and Anṣār, and the two constituent parts remained distinctly separate, although the prophet strove from the very beginning to knit them together as closely as possible by establishing the bond of brotherhood between individual Muhādjirūn and Anṣār. The most intimate companions of the prophet always belonged to the circle of the companions of the flight; and within the Anṣār themselves there remained certain pre-islāmic tribal contrasts, which however never again became as acute as before. The duty of supporting the poor, although involving a very pressing burden, was fulfilled by the Anṣār in a most self-sacrificing spirit; for the rest the 'assistance' rendered was at first chiefly of a defensive character, it was only reluctantly that they lent their aid for the offensive wars of the faith, and none of the Anṣār took part in the first struggles against Mekka. The want of enthusiasm shown by the Anṣār in the fulfilment of the military duty was a source of much anxiety for the prophet; he relied however on the help of Allāh,

where the help of men was not forthcoming. Gradually the helpers became his subjects. While expected to advance his cause they were also prohibited from rendering any form of assistance to his enemies; they were commanded e. g. to lay information with Muḥammad against their pagan relatives. At the same time they preserved up to a certain point the right of criticism, and demanded respect for their persons, which Muḥammed was ready to accord. — The Anṣār had no reason to regret their espousal of the cause of the prophet; 'Allāh helps those wo help him' was a saying of Muḥammad, which did not remain unfulfilled. After passing through the critical period the community of the Anṣār soon began to flourish; rich spoils of war flowed into the town, and trade improved. After the taking of Mekka many Anṣār feared that Muḥammad might transfer the seat of government to that town, but he allayed their fears by saying that he wished to live where they lived and to die where they died. It is obvious that he could have found in the population of no other town such trustworthy supports of his ecclesiastical state as the Anṣār had gradually become. Yet it was the fate of the Anṣar to see the noble population of Mekka, who formerly had opposed the prophet in every possible way, loaded with tokens of his favour [cp. further the article MUḤAMMAD.]

Although the Muslim monarchy after Muḥammads death was at first elective, the Anṣār did not succeed in securing the dignity of caliph for one of their number; and when it had become hereditary in a dynasty of the Ḳoraish belonging to Mekka they were for ever excluded from the succession. They became however the classical types of Muslim piety, devoted to the memory of Muḥammad and pre-eminent in the science of tradition. This distinction was their answer to the pride of the Mekkans, which occasionally found expression in venomous words; they could also appeal to the fact that they alone had rendered assistance to the persecuted believers in their direct need, and the recognition which their conduct had received from the prophet. Like the Ḳoraish they traced back their excellence to the character of their noble ancestors and opposed the confident pride of the Ḳoraish in their ancestral nobility by an embellished version, probably invented at that time and for this purpose, of their own early history, which told of glorious past in South Arabia, their traditional home; it is probable that the famous contrast between Northern and Southern Arabs established by the genealogists, had its chief source in the jealous imagination of the Anṣar (see Goldziher, *Muhammedanische Studien*, i. 93 *et seq.*) Yet their chief pride was in the name of Anṣār, which they preferred to their former much praised tribal names of Medina.

(H. RECKENDORF.)

ANṢARA (dialectical form *'anṣereth*), name of a festival celebrated in North Africa and other places on the 24. June (according to the Julian calendar), by lighting fires of plants which produce much smoke, (cp. our fires on the day of John the Baptist) and by similar usages; the object being to produce a wet and therefore fruitful year by sympathetic magic. According to Dozy, *Supplément*, ii. 181, the word is derived from the hebr. עֲצֶרֶת (עֲצֶרֶת), pentecost.

Bibliography: Besides Dozy *loc. cit.* and the books quoted there: Doutté, *Merrâkech*, i. 377; Westermarck, *Midsummer customs in Morocco* (*Folklore*, 1905); Bel, *La population musulmane de Tlemcen* in *Revue des études ethnograph. et sociolog.*, 1908; Destaing, *Fêtes et coutumes saisonnières chez les beni Snous* in *Revue Africaine*, p. 362 *et seq.*

ANṢĀRĪ (Abū Ismā'īl 'Abd Allāh b. Abū Manṣūr Muḥammad), one of the oldest and most famous Persian mystics, usually called Pīr-i Anṣār or (after his birth-place) Pīr-i Hirī, his nisba indicating that he boasted of Arab descent (he is said to have been a descendant of the famous Abū Aiyūb al-Anṣārī). The year of his birth is 396 (1006), that of his death 481 (1088). Anṣārī is the author of several Arabic and Persian works, the titles of which are enumerated by Ethé and Zhukowski in the books quoted below. The best known of them are his Prayers (*Munādjāt*) which have been frequently printed (Teheran, 1299, 1304; India, 1286, 1297).

Bibliography: Suyūṭī, *Ṭabaḳāt al-mufassirīn* (ed. Meursinge), p. 15; Dhahabī, *Ṭabaḳāt al-ḥuffāẓ* (ed. Wüstenf.) p. 24; Djāmī, *Nafaḥāt al-uns* (Calcutta), p. 212; Ethé in the *Grundriss der iran. Philol.*, ii. 282; Zhukowski in *Wostočniya Zamětki*, p. 79 *et seq.*

AL-**ANṬĀKĪ** (Dāwūd b. 'Omar al-Ḍarīr), Arabic writer on medicine, born at Antioch as a son of the ra'īs of Ḳaryat Sīdī Ḥabīb al-Nadjdjār; in spite of his blindness he travelled extensively, and visited Asia Minor where he learned Greek, in order to study the sources of his science in in the original texts. Later he lived at Damascus and Cairo and died in 1008 (1599) at Mekka, where he had resided less than a year.

His chief work is a great compendium of the whole science of medicine *Tadhkirat ulī 'l-albāb wa 'l-djāmi' li 'l-'adjab al-'udjāb*, printed at Cairo 1308-1309 = 1324 (*Dhail* by a pupil, and, on the margin, a treatise on Therapeutics, entitled *al-Nuzha al-mubhidja fī tashḥīdh al-adhhān wa ta'dīl al-amzidja*), cp. Leclerc, in the *Notices et Extraits*, xxiii, p. xiii. The ars amatoria having always been considered as an appendix to medical science, he prepared an abridgment of the work of Muḥammad al-Sarrādj (died 500 = 1106) on Love, entitled *Tazyīn al-aswāḳ bi tafṣīl (tartīb) ashwāḳ al-'ushshāḳ*, printed Būlāḳ 1281, 1291; Cairo, 1279, 1305, 1308; cp. Kosegarten, *Chrestom. arab.*, p. 22; A. v. Kremer, *Ideen*, p. 408; Goldziher, in the *Sitzungsber. d. Wien. Akademie*, *Phil.-hist. Classe*, lxxviii, 513 *et seq.*, n° vii. In addition to a few smaller treatises on his science he wrote a book on the philosophers stone *Risāla fī 'l-ṭā'ir wa 'l-'uḳāb* (de Slane, *Cat. d. mss. ar. de la Bibl. Nationale*, n° 2625, 6) and one on the application of astrology to medicine *Unmūdhadj fī 'ilm al-falak* (*ibid.*, n° 2357, 2).

(BROCKELMANN.)

AL-ANṬĀKĪ (Yaḥyā b. Sa'īd), Arabic author who continued the history of Eutychius [q. v.]. The work which deals with the years from 326—417 (938—1026) was completed at Antioch, where the author had gone in 405 (1014/1015). It is probable that he was born in Egypt where he had spent the first 35—40 years of his life, and that he died in 458 (1066).

Bibliography: V. von Rosen, *Imperator Wasilii Bolgarobóitsa* etc. (St. Petersburg, 1883); Brockelmann, *Gesch. d. arab. Litter.*, i. 148; Wasilew, *Wizantiya i Arabi*, ii², 58 *et seq.*

ANṬĀKIYA (the classical ANTIOCHIA), a town in Northern Syria, situated in the very productive and beautiful plain of the lower Orontes valley, not very far from the rivers mouth, (about 14 miles in a straight line) under 36° 10' North Lat. and 36° 6' East. Long. (Greenw.)

Anṭākiya was founded in B.C. 300 by Seleucus I in place of two unimportant older Greek colonies; as the residence of art-loving rulers and as an important emporium of trade, it soon became the capital of Syria, and was later regarded as the most important and most populous city of the whole Roman empire after Rome and Alexandria, and as the capital of all the Asiatic provinces. Its gradual decay dates from the foundation of the Sāsānid empire which caused the regions on the Euphrates and Tigris to be more and more removed from the sphere of its political and economic influence. This was followed in 499 by the complete separation of the Persian Nestorian Church from the Church of the West, with the result that Anṭākiya lost its primacy over the Christians of Babylonia. It had always been the policy of the Persian kings to weaken the Asiatic centre of the Roman power. As early as 260 the town was besieged and captured by Shāpūr I, who transplanted a large number of its inhabitants to Djundēshāpūr in Susiana (cp. Ṭabarī, i. 827). Again in the vi. century Anṭākiya was the principal object of the expeditions of the Persians. Khosraw I Anōsharwān captured and destroyed the town in 538, and deported a large portion of its inhabitants into the immediate vicinity of Ktesiphon, where a town called Rūmiya was built for them exactly on the plan of the Syrian Anṭākiya; cp. Nöldeke, *Gesch. d. Perser und Araber zur Zeit der Sasaniden* (Leiden, 1879), p. 165, 239; Streck, *Babylonien nach den arab. Geographen*, ii. (1901), p. 266 *et seq.*

Apart from the two devastations by the Persian kings the decay of the town was accelerated by terrible earthquakes which occurred with extraordinary frequency. During the first five centuries of our era no fewer than ten great earthquakes are counted, one of which (in 526) claimed 250 000 victims. The emperor Justinian rebuilt the town on its ruins after the destruction by Khosraw I, but it was restored in considerably less than its previous size. Anṭākiya was occupied by the Arabs in the year 17 (638); cp. al-Balādhorī (ed. de Goeje), p. 132; Weil, *Gesch. d. Chalifen*, i. 79 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 259; and the Muslims remained in possession of the town in spite of the heavy defeat which the inhabitants suffered at the hands of the Byzantines in 69 (688; cp. Weil, *loc. cit.*, i. 470). It was not until the end of the year 355/966 (according to Cedrenus) or at the latest 358/969 (according to the Arabic sources) that Anṭākiya was wrested from the Ḥamdānids by Burtzes, the bold general of the Greek emperor Nikephoros Phokas, assisted by a traitor among the Arabs (an earlier attempt to gain possession of the town, which Nikephoros Phokas himself had undertaken in the spring of 355/966, had proved unsuccessful); cp. Freytag in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xi. 213, 230; Weil, *loc. cit.*, iii. 18; A. Müller, *loc. cit.*, i. 574. For more than a century Anṭākiya remained the chief bulwark of the Byzantine empire against Islām. After 473 (1080) it had to pay tribute to Muslim, the 'Uḳailid prince of Mosul (Mawṣil), and in 477 (1083) it passed again under Muḥammadan rule, the treachery of the Greek governor having opened the gates of the town to Sulaimān I, the Seldjūḳ sultan of Iconium. A dispute broke out between Sulaimān and Muslim regarding the possession of the town, and the latter was killed in 478 (1085) in a battle near Anṭākiya, Sulaimān died soon afterwards (479 = 1086), whereupon Muslim's lieutenant invoked the intervention of Malikshāh who established order by appointing Yāghī Basān amīr of the town. The latter was still ruler of Anṭākiya when the army of the Crusaders appeared before its walls on 21 October 1097.

The town was protected by strong and extensive fortifications as well as by the natural features of the ground, so that the siege presented considerable difficulties to the Christians. It took more than four months to complete the investment on all sides, but as in the case of two previous attacks it was only possible to capture Anṭākiya by the help of a traitor. On 2. June 1098 the crusaders stormed the town with great slaughter. Three days later there appeared a large Muslim army under Kerbōghā, the amīr of Mosul, who had set out to raise the siege: the Christians were now besieged within the town, and their position soon became desperate. But their spirits having been fired by the alleged discovery of the holy lance, they raised the siege on 23. June by a bold sally, which was followed by an overwhelming victory over the troops of Kerbōghā in spite of their great superiority in numbers. For 179 years Anṭākiya remained in the possession of the Christians and became the capital of a principality, a vassal state of the kingdom of Jerusalem, comprising the coast region of Northern Syria from the Nahr Djaiḥān (Pyramus) in the North to the Nahr al-Kebīr (near Lādhiḳiya) in the South and including the 'Amḳ depression [q. v.] and the valley of the Orontes as far as Shaizar (Larissa, to the north west of Ḥamāt). During this period Anṭākiya once more experienced a certain prosperity; many new buildings were erected, and the population increased and gained in wealth owing to the revival of trade.

The Christian rule in Northern Syria found a sudden termination at the hands of Baibars, the Mamlūk sultan of Egypt. Already in 660 (1262) his armies had devastated the principality of Anṭākiya; in 666 (1268) he proceeded to greater deeds. Threatening the town by a sudden attack he gained a complete victory over its knights who had met him in the open field; negotiations for a surrender having proved unsuccessful he attacked the town by open force on 19. May, and

Anṭākiya fell into the sultans hands almost without further resistance; 16000—17000 Christans are said to have perished at the capture of the town, 100 000 to have been led away to captivity; the whole town including the citadel was burned down, and the spoil taken was enormous; Anṭākiya never recovered from this blow; it has remained under Muslim rule ever since, but its importance has decreased steadily.

The situation of Anṭākiya is most delightful; it lies in the richly-watered valley of the Orontes which is here about 140 feet wide. The favourable climate and the great productiveness of the soil make it one of the fairest spots in the East; and Orientals praise Anṭākiya as the most pleasant town of Syria after Damascus. The abundant rainfall to which it is exposed — and which according to Petermann has gained for the town the nickname *al-shekhkhākha* (= pissabed, Wensinck's correction of Petermann's *shekhākhe*) produces a most luxuriant vegetation.

The modern Anṭākiya is situated in the plain on the southern bank of the Orontes and extends as far as the slopes of mons Silpius (Arabic Ḥabīb al-Nadjdjār, 1525 feet above the level of the sea) which belongs to the Casius chain. The town is surrounded by extensive gardens in the East, and the pleasant fruitful land of the immediate surroundings affords a vivid contrast with the wild and rugged mountains of the neighbourhood, the sharp outlines of which present a very beautiful view. In antiquity the slopes of the Silpius were covered with houses, but the modern Anṭākiya occupies hardly a tenth part of the space which it occupied before Justinian's time. Its extent at that period can still be clearly determined by the traces of the ancient walls which suffered no serious damage at the conquest of the town by Khosraw I, and the course of which can still be recognised everywhere. The town as re-built by Justinian occupied a smaller space within these walls.

By far the most interesting of Anṭākiya's ancient remains is the enormous girdle of fortifications of which considerable portions are still extant; it draws a wide curve round the little modern town situated in the north west corner of its circumference. The manybuttressed walls, led boldly over the heights, as well as the enormous dimensions of the fortifications which, for the medieval art of war, were practically unassailable, still excite our admiration. Their length is more than 16 miles; enormous towers of defence rose from the walls at distances of 70—80 paces from each other (altogether, it is said, more than 360). The destruction of the walls has advanced rapidly during the last few decades, as after the last great earthquake (1872) the inhabitants received permission to use them as building material for their houses. The citadel built by Nikephoros Phokas on the Silpius has been in ruins since it was destroyed by Beibars. On the Silpius is shown the martyr's tomb of the 'prophet' Ḥabīb al-Nadjdjār (i. e. Agabos: Acts 11, 28) said to have been the first Christian of Antioch; it is regarded by the Muslims as an honoured place of pilgrimage, and has given to the Silpius its modern name. The most important remains of antiquity are situated on the slopes of the Silpius, the ruins of the colossal aquaducts being especially noteworthy. Of the ancient gates a few are still tolerably well preserved; the interior of the modern town has no buildings of importance, the 14 mosques of the town are unimportant. The houses give an impression of great poverty, and the frequently recurring earthquakes have left everywhere vast heaps of rubbish and ruins. The mounds on which the town is built can in many places be clearly recognised as similar rubbish heaps of an older period.

The ancient Anṭākiya situated at the meeting-place of the roads leading from the Euphrates to the sea with those leading from Syria to Asia Minor, was the chief centre of traffic between the East and the West; to-day trade and industry are in a state of absolute decay. The bazars are unimportant and not much frequented. The most considerable of local industries is the manufacture of soap for which Anṭākiya is the most important town in Syria next to Idlib (S. E. of Ḥaleb). Other occupations of the inhabitants are the production of silk, the cultivation of corn and olives; eels are also caught in the Orontes in large quantities. The appellative noun *Anṭākiya* = 'cover, carpet' indicates the former importance of the town as a seat of textile art; cp. Fränkel, *Die aram. Fremdwört im Arab.* (1886), p. 44, and Zuhair, *Mu'allaḳa*, 8 (9), Var.

In Antiquity Seleucia Pieria (Arab. Salūkiya) served as harbour of Anṭākiya, in the Middle Ages al-Suwaidiya situated farther to the South at the mouth of the Orontes. Both harbours are now in a state of absolute decay. The modern Anṭākiya suffers not only through the want of a protected harbour, but also through the fact that the upper part of the river as far as the town is not navigable. One of the chief reasons why the town in spite of its magnificent and advantageous situation never again rose to any degree of prosperity since it was captured by Beibars, must be sought in the fierce hatred with which Muslim fanaticism regarded the former capital of Oriental Christianity. Another obstacle to economic progress were the frequently recurring severe earthquakes (see the enumeration in Ritter, *Erdkunde*, xvii. 1135 *et seq.*); the most important shocks of recent date occurred in 1822 and 1872. Since the decline of Anṭākiya trade and traffic was more and more diverted to Ḥaleb (Aleppo).

The number of inhabitants, which was very considerable in Antiquity and the Middle Ages is now greatly reduced; in the last decades a slow increase of the population can be observed. In 1853 H. Petermann counted about 10 000 inhabitants (one third of whom were Jews and Christians, chiefly Greeks and Armenians), another estimate dating from 1848 states the number as 17000 (1500 Christians), later authorities give only 6000 inhibitants; Sachau's informant in 1880 estimated the size of the town as containing 3500 houses, i. e. about 17500 inhabitants (among whom 2500 Christians and 250 Jews); Cuinet (1890) notes 25 000 inhabitants, Bädeker (edition of 1900) 28000 inhabitants (4000 Christians, a small number of Jews). In the Arab Middle Ages Anṭākiya was the capital of the 'Awāṣim district [q. v.] i. e. of the 'military frontier' erected against Byzantium on the frontier in Syria and Asia Minor. To-day Anṭākiya belongs to the wilāyet of Ḥaleb and is the seat of a Ḳā'im-maḳām. Of the five existing 'patriarchates of Antioch' belonging to the different Christian sects (on which cp. Neher

in Kaulen's *Kirchenlexikon*, Freiburg 1882 *et seq.*, i. 948 *et seq.*) none has now its residence in Anṭākiya itself.

Bibliography: The accounts of Anṭākiya given by the Arabic geographers are collected and translated in G. le Strange, *Palestine under the Moslems* (London 1890), p. 36. 61, 71, 367—377. — Important information about the author's native town is given by Yaḥyā b. Saʿīd al-Anṭākī in his chronicle entitled *Taʾrīkh al-Nīl*, on which cp. Brockelmann, *Gesch. der arab. Litterat.*, i. 148. Extracts from this work relating to Anṭākiya were translated by A. v. Kremer in the *Denkschriften der Wiener Akad. der Wissensch.*, (1852), iii. Abt. 2, p. 24 *et seq.*; the same scholar gives accounts of Anṭākiya by other Arabic authors, *ib.*, p. 21—31. — Al-Masʿūdī (wrote 332 = 943) gives noteworthy information, based on personal observation, especially on ancient Antioch (foundation, walls, Church of St. Paul); see his *Murūdj al-Dhahab* (Paris), ii. 226 *et seq.*, 282 *et seq.*; iii. 406—410; iv., 55, 91; viii. 68—70. — An anonymous Arabic description of Anṭākiya (Cod. Vatic. arab. nº 286) edited and translated by I. Guidi in the *Rendiconti della reale accad. dei Lincei*, ser. iv. vol. 7 (Rome 1897) is valuable; it possibly goes back to a Syriac original and cannot have been composed before Nikephoros Phokas i.e. before A.D. 968; important corrections to Guidi's edition derived from a Bodleian ms. were given by D. S. Margoliouth in the *Journ. of the Roy. Asiatic Society*, 1898, p. 157—169. The same account of Anṭākiya was used in the universal geography of Ḥādjdjī Khalīfa entitled *Djihān Numā* (Stambul 1145 = 1732, p. 595 *et seq.*) — Abu 'l-Ḥasan al-Mukhtār b. Buṭlān (died 455 = 1063) describes his experiences at Ḥaleb and Anṭākiya in a *Risāla* which was largely used by Yāḳūt in his article on Anṭākiya (*al-Muʿdjam*, ed. Wüstenf., i. 382 *et seq.*); cp. on Ibn Buṭlān: G. le Strange, *loc. cit.*, p. 7; Brockelmann, *loc. cit.*, i. 413; Heer, *Die hist. und geogr. Quellen in Yāḳūt's geogr. Wörterb.* (1898), p. 22.

II. On the history of Anṭākiya during the crusades cp. F. Wilken, *Gesch. d. Kreuzzüge* (Leipzig 1807—1832), i. 173—263; ii. 52, 300, 349, 380; iii. ii. 143; vii. 523 *et seq.*; B. Kugler, *Gesch. d. Kreuzzüge* (Berlin 1880), p. 44—56, 89—95, 116, 218, 380-390; R. Röhricht, *Gesch. des Königreiches Jerusalem* (1100—1291) (Innsbruck, 1898), index; R. Röhricht, *Gesch. des ersten Kreuzzuges* (Innsbruck, 1901), p. 108—152; cp. also Weil, *Gesch. der Chalifen*, iii. (1851), p. 163—169 (events of the years 1097-1098.

III. Of books of travel the following are worthy of notice: R. Pococke, *Beschreib. des Morgenlandes*, german ed. by Breyer and Schreber (Erlangen, 1791), ii. 273—280; Pococke who visited the East in 1737 is the first author who gives topographical details. — C. Niebuhr, *Reisebeschr. nach Arabien* (1774 *et seq.*) iii. 15—18 (corrects Pococke's plan of Anṭākiya in several details); J. Russegger, *Reisen in Europa, Asien und Afrika* (1847), i. 363—373; Chesney, *The expedition for the survey to the rivers Euphrates and Tigris* (London, 1850), i. 425 *et seq.*; Sandreczki, *Reise nach Mosul und durch Kurdistan nach Urmia* (Stuttgart, 1857), iii. 467 *et seq.* H. Petermann, *Reisen im Orient* (Leipzig, 1867), ii. 366 *et seq.*; E. Sachau, *Reise in Syrien und Mesopotamien* (Leipzig 1883), p. 462 *et seq.*

IV. The following works give comprehensive accounts of Anṭākiya: Ottfr. Müller, *Antiquitates Antiochenae*, Göttingen, 1839; K. Ritter, Erdkunde, xvii, 1147—1210; E. Reclus, *Nouvelle géographie univers.* ix., 766 *et seq.*; Streber in *Kaulen's Kirchenlexikon* (Freiburg, 1882 *et seq.*), i. 941—945; V. Cuinet, *La Turquie d'Asie* (Paris, 1890 *et seq.*), ii. 193—197; J. Benzinger in Pauly-Wissowa's *Realencyklop. der klass. Altertumswissensch.*, i. 2442—2445; R. Förster, *Antiochia am Orontes* in the *Jahrb. des deutsch. archaeolog. Instituts*, xii (1897), p. 103—149 (an important historical account of the building of the town). S. Krauss, *Antioche* in the *Revue d. étud. Juives*, 1902, nº 89 (collects and discusses all the accounts found in Jewish sources concerning the foundation of Anṭākiya, the history of the town until A. D. 70, the Christians of the town, and the Byzantine and Arabic periods); Bädeker, *Palaestina und Syrien*, 5. ed. (1900), p. 427—433. (STRECK.)

ʿANTAR(A) B. SHADDĀD B. ʿAMR (according to others b. ʿAmr b. Shaddād) B. MUʿĀWIYA AL-ʿABSĪ, an ancient Arabic poet who flourished in the last decade of the vi. century, two generations before the victory of Islām. He was the son of a black slave-girl called Zabība, and is therefore counted among the *Aghribat al-ʿArab*, 'the ravens of the Arabs'; it was not until he was grown up that his bravery won him his father's recognition as a legitimate member of the family. According to Nöldeke's observation (*Fünf Moʿallaqât* etc. ii. 9) he betrays himself as a half-caste in lines 25 and 27 of his Muʿallaḳa, where like a true upstart, he refers to black slaves in somewhat contemptuous terms. It is not very probable that he was known by the nick-name al-Falḥāʾ, 'of the cleft lip', as in that case he would hardly have represented a man with this infirmity in his Muʿallaḳa (line 41; Nöldeke, *loc. cit.* p. 10, note 1). ʿAntar(a) took a prominent part in the war of Dāḥis and Ghabrāʾ (cp. A. Müller, *Der Islam im Morgen- und Abendland*, i. 5 *et seq.*), and in his old age was killed in a battle against the tribe of Ṭaiyiʾ. He has become the most popular Arab hero whose memory is still preserved in the romance of ʿAntar [q.v.] and in numerous place names (cp. Goldziher, in *Globus* lxiv, 65—67). His poems, although for the most part only preserved in fragments, were held in such estimation, that al-Aʿlam [q.v.] gave them a place in his collection of the six poets. The only complete poem of his which survives, is ranked as one of the Muʿallaḳāt. It is a typical ḳaṣīda, unusual only in the length of the nasīb, which owing to the insertion of several descriptions and similes extends to 35 lines. He similarly breaks through the conventional form of the nasīb in poem nº 20 (of Ahlwardt's ed.), where he combines it with praise of himself. It may be in allusion to this that a later poet prefixed to his Muʿallaḳa that line in which he complains that the poets had left him nothing 'to patch'. In an erotic scene of his Muʿallaḳa, line 64 *et seq.*, his manner is quite modern, recalling almost the style of ʿOmar b. Abī Rabīʿa (Nöldeke, *loc. cit.*, p. 43). A noteworthy feature of his technique is the comparatively frequent occurrence of enjambment (e.g. 15, 9, 11; 20, 9, 13, 14).

Bibliography: *Aghānī*, vii, 1. ed., p. 148—153, 2. ed., p. 141—146; Ibn Ḳotaiba, *Kitāb al-Shi'r* (ed. de Goeje), p. 130—134; *Munyat al-Nafs fī Ash'ār 'Antara b. Shaddād al-'Absī* Intikhāb Iskender Agha Abkarius (Bairut, 1864); Dīwān: W. Ahlwardt, *The Divans of the six ancient Arabic poets Ennābiga* etc. (London 1870), p. 33—52, app. p. 178—183; *Dīwān 'Antara* (Bairut, 1888, 1901, Impr. Scient.; Cairo, 1315); W. Ahlwardt, *Bemerkungen über die Aechtheit der alten Arabischen Gedichte* (Greifswald, 1872), p. 50—57; H. Thorbecke, *'Antarah ein vorislamischer Dichter* (Leipzig, 1867); Th. Nöldeke, *Fünf Mo'allaqāt übersetzt und erklärt*, II (*Sitzungsber. d. Kaiserl. Akademie der Wissensch. in Wien, phil.-hist. Cl.* cxlii; Wien 1900), p. 1—49; Brockelmann, *Gesch. d. arab. Litter.* i. 22. (BROCKELMANN.)

'ANTAR Romance of; Arab. *Sīrat 'Antar*, a popular treatment of old material similar to the *Sīrat Banī Hilāl*, the *Sīrat al-Zāhir* etc. (cp. Brockelmann, *Gesch. d. arab. Litter.*, ii. 62). The *Sīrat 'Antar* shows clear traces of the traditions on which it is based. Essential features of this model badawī are already found in the account which the *Kitāb al-Aghānī* (1. ed. vii. 148; 2. ed. vii. 153) gives of the poet 'Antara (q.v.; for the secondary form 'Antar there is evidence already in the commentary to the Ḥamāsa, ed. Freytag, i. 108 3): his descent from the slave-girl Zabība, his reception into his father's family on account of his brave deeds, his love of 'Abla, his treacherous murder at the hands of Wizr b. Djābir, called al-Asad al-Rahīṣ. The story was amplified by the insertion of numerous elements belonging to other cycles; it is now known in two recensions, that of Ḥidjāz (*al-Sīra al-ḥidjāzīya*) which is more detailed, and the shorter Syrian recension (*al-Sīra al-shāmīya*) with which the Babylonian recension (*al-Sīra al-'irāḳīya*) is probably identical. The date of the origin of these recensions cannot be fixed with any certainty. The earliest authority quoted is al-Aṣma'ī who may be regarded as the rāwī of the old 'Antara poems but has nothing to do with the work in question, in which but little is found of the genuine poems. The Bairut edition mentions a certain Yūsuf b. Ismā'īl al-miṣrī (perhaps identical with Ibn Khallikān's Yūsuf b. Ismā'īl Abu 'l-Maḥāsin) as collector of the *Sīra*. The statement of Ibn Abī Uṣaibi'a, that Abū 'l-Mu'aiyad Muḥammad b. al-Mudjallī b. al-Ṣā'igh al-'Antarī (lived about 540 = 1145) collected stories concerning 'Antar is worthy of attention. We may assume that the stories about the hero and poet 'Antara re-cast in the form of a novel, became at an early period the subject of the recitations of professional story-tellers; a man of literary tendencies may now and again have put together the various recensions known to him, but the work of re-constructing the popular tale did not cease at any given time and is still in progress.

Bibliography: Bibliographical details in Chauvin, *Bibliographie des ouvrages arabes*, iii. 113 *et seq.* (to the Mss. there must now be added: Ahlwardt, *Verz. d. arab. Hss. d. Königl. Bibl. zu Berlin*, n° 9123—9137); Pertsch, *Die ar. Hss. d. Herzogl. Bibliothek zu Gotha*, iv. 363 *et seq.*, v. 53 *et seq.* — Chief editions: Cairo 1306—1311 in 32 parts (*djuz*) and Bairut 1868—1871 in 154 books (2. ed.) and 1883—1885 in 6 volumes. The Cairo edition represents the recension of Ḥidjāz, the Bairut edition probably that of Syria. — About a third of the whole was translated by Hamilton (Terrick) *Antar, a Bedoueen romance* (London 1819-1820; 4 vols.); L. M. Devic, *Les aventures d'Antar, fils de Cheddad, roman arabe des temps anté-islamiques* i. (Paris, 1864). (M. HARTMANN.)

'ANTARĪ (A.), a word derived from 'Antar [q. v.], denoting in Egypt (1) a reciter of the romance of 'Antar and (2) a short garment worn beneath the caftan. In the latter meaning the word also occurs in Turkish, where however it is written with *Alif*, not with *'Ain* (*Antarī*); cp. Dozy, *Supplément*, s. v., and the passages quoted there.

ANṬARṬUS. [See ṬARṬŪS.]

ANWARĪ 'the shining', poetical name of Awḥad al-Dīn 'Alī. Anwari was born at Badna, a small village in the district of Khāwarān, and came to the court of the Seldjūḳ sultan Sandjar after having recited his first ḳaṣīda in praise of this monarch. When his patron had been taken prisoner by the Ghuzz he accompanied the embassy sent by Sandjar's wife, Turkhān Khātūn, to the ruler of Samarḳand, in order to ask for his assistance; on this journey he composed his famous elegy, translated into English by Kirkpatrick under the title *The tears of Khorassan* (*Asiatic Miscellany* i. 286 *et seq.*), in which he describes the terrible devastations perpetrated by the Ghuzz in Khorāsān. After Sandjar's death Anwarī seems to have lived at Merw at the court of the later rulers, until he suffered a serious blow in consequence of his predilection for astrological calculations. He predicted a storm for a certain day of the month of Radjab 581 or 582, on which all the planets stood in the sign of Libra; as however there was a complete absence of wind on that day, he gained nothing but universal derision for his prophecy. On this account he left Merw and went at first to Nīshāpūr, later to Balkh. He probably died shortly afterwards at the latter place (according to Ethé between 585 and 587 = 1189—1191), but the precise date is unknown.

Anwarī owes his fame chiefly to his Ḳaṣīda's which are greatly admired by the Persians. His dīwān has been repeatedly lithographed in Persia and India (Tabrīz, 1260, 1266; Lakhnaw, 1880), and poems of his have been published and translated (apart from Kirkpatrick) by Zhukowski, Fizzi and others.

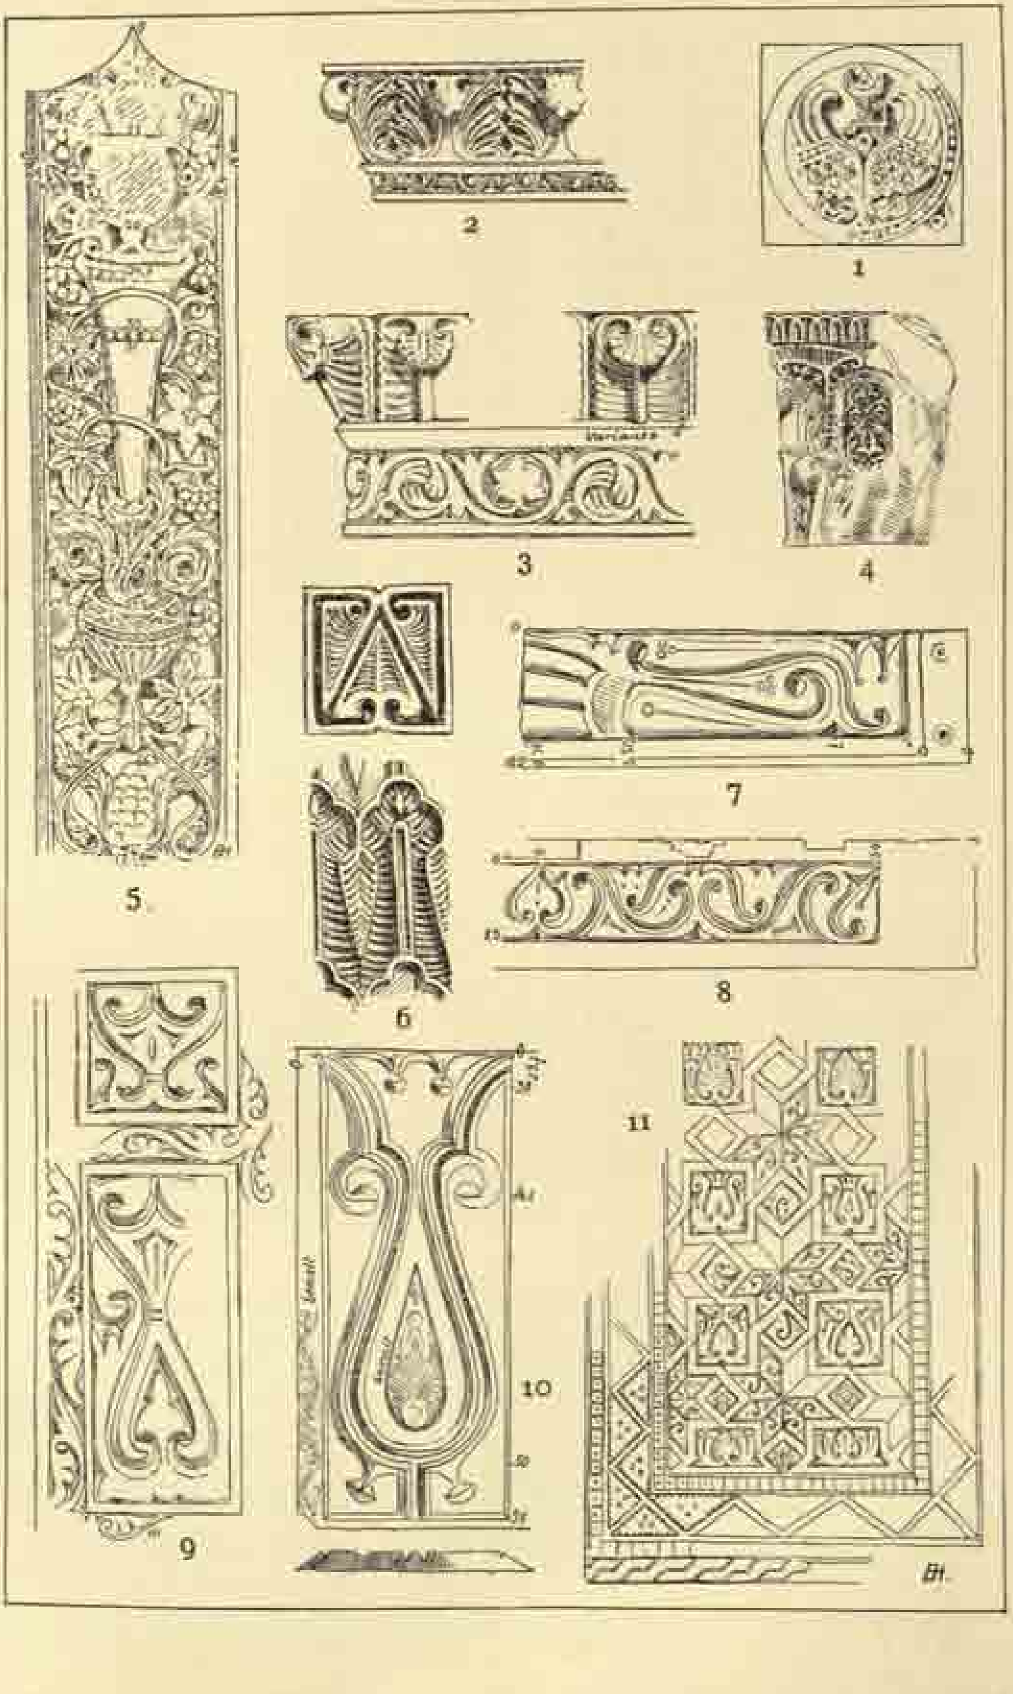
5. Aleppo, Minaret of the Great Mosque, stone entablature, 483 H.

6 and 6a Aleppo, fāṭimid building, near the Bāb Anṭākiya, bracket and ogee, 545 H., stone.

7—10. Mawṣil, Great Mosque, four pieces from the old Miḥrāb, 543 H., stone.

11. Ṣāliḥīn near Aleppo, from Fāṭimid tombs, 6th cent. H.
12. Mashhad near Aleppo, stone frieze of the aiyubid gateway, ± 600 H.
13. Ḳonia, Mosque of 'Alā al-dīn, from the border of a carpet, 6th—7th cent. H.
14. " , Ḳara Ṭai Madrasa, mosaic of enamelled titles, 649 H.
15. " , Aleppo, Bab Anṭākiya, wooden frieze, 6th—7th cent.

PLATE I.



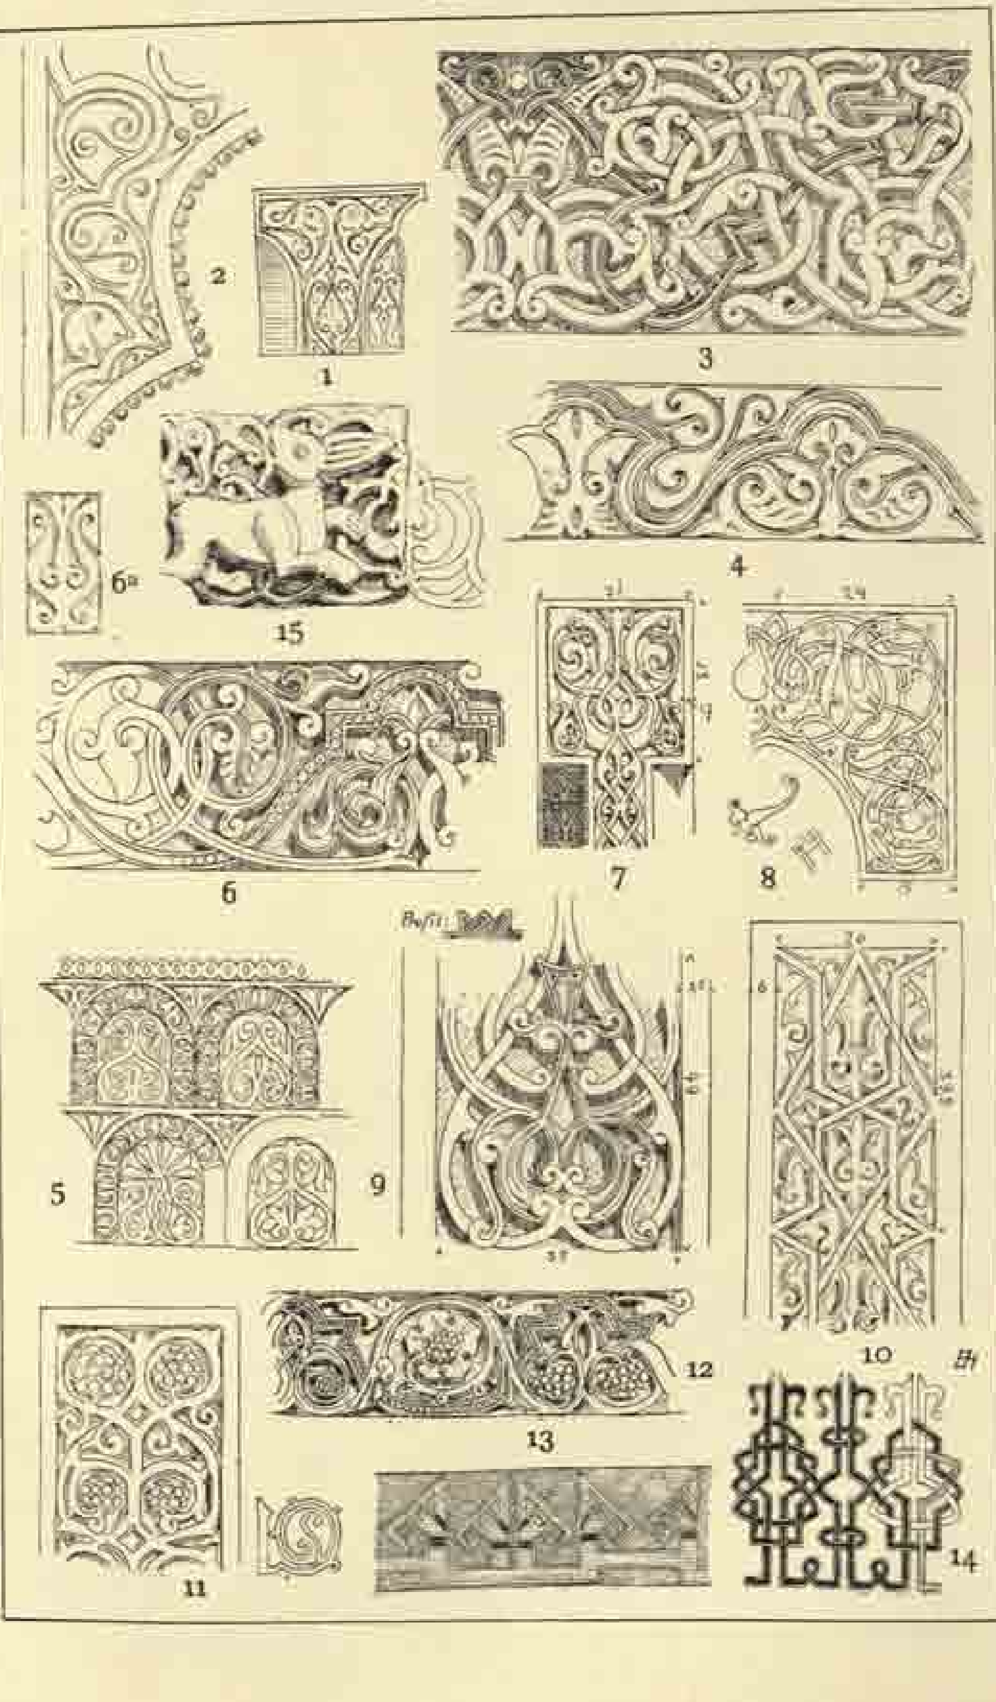


PLATE II.

the Dead Sea. It is a large bare desert of undulating ground traversed by the beds of streams; the mountain-ridge Rīght al-Hawwar divides it into two unequal parts, the larger of which belongs to the Dead Sea. Musil conjectures that even in historical times a narrow arm of the Red Sea reached as far as Ghadyān. To the North is situated the fruitful plain of Ghōr Fēfe which extends as far as the Sebkha, the biblical Valley of Salt. Cp. detailed description in Musil's *Arabia Petraea*, IIa and IIb, where bibliographical references are given.

ARABESQUE. In German the word arabesque denotes the foliage ornament of Muslim art; in a wider sense current already since the Baroque period it is applied to the ornament of that art in general. The word moresque, properly referring to the art of Muslim Spain, is almost synonymous. Modern usage frequently applies the word arabesque to that style of Renaissance ornament, which more correctly is called grotesque. — It is similar in English: the word is used in a general way, but without historical accuracy, to denote decoration in the grotesque style, and the moresque is frequently distinguished from it as being the ornament of Muslim art proper. — In French the adjective arabesque is from of old applied to works of art from the countries of Islām; since the Renaissance it is also used as a noun for the corresponding ornamentation, whence it was transferred to denote decoration in the Grotesque style.

It is probably not without reason that in all three languages the term was transferred to an object which on the surface seems to have no connection with its original meaning. The grotesque, it is true, in the first instance is a Renaissance revival of that form of ancient classical ornament, which was first discovered in the vaults of the thermae of Titus excavated at that period. The attention aroused by these discoveries led Raphael to decorate the Loggie of the Vatican with his famous grotesques, wherein he was assisted by his pupils Giovanni da Udine, Giulio Romano, and Gian Francesco. As the vaulted chambers of the thermae of Titus had been buried under the ground, they were called 'le grotte', whence the strange style of ornamental painting discovered in them got the name 'grottesca'. The grotesque, which is derived from purely classical sources, is an architectural ornament. The ornament of Renaissance arts and crafts however, especially in tapestry, pottery, metal-work and book decoration, exhibits before and after the discovery of the grotesque numerous elements, which are obviously drawn from the ornament of Muslim art. Such arabesque elements are found even in architectural decoration; it is only necessary to mention the churches of San Michele at Pavia, of St. Francis of Assisi, and of San Domenico at Bologna. The arabesque influenced even the grotesque proper, a fact which may have facilitated the general transference of the word arabesque to the ornament of the Renaissance, and to the grotesque in particular. The influence of the arabesque is especially prominent in the ornament of the Renaissance at its prime, and in that of the late period, where it is frequently due to conscious imitation of oriental models. This is particularly noticeable in the French Renaissance in the style of Henri II, especially in book decoration; in Germany, to mention only a few examples, especially in the decorative work of Peter Flötner and Virgil Solis of Nuremberg.

This popular meaning of the word arabesque must be distinguished from the form as now used in the history of art, and as it ought to be used, i. e. as denoting the ornament of the art of the Muslim countries. It would even be justifiable to restrict it to the foliage ornament as being the dominating element of that ornamentation: it would be difficult however in an historical or aesthetical treatment to separate this from the other elements, such as intertwined bands, motifs derived from writing and the less frequent figurative subjects. These may therefore be included in the meaning of the term.

The foliage ornament as conceived by Muslim art can hardly be described and analyzed as a unity, since it exhibits considerable differences according to time and place. There are however some general characteristics which distinguish it clearly from the foliage ornament of other periods e. g. from that of classical antiquity. As to its origin it is certainly derived from the classical foliage ornament with its conventional flora, always unrealistic however realistically treated, consisting of palm-leaves, acanthus and elements derived from these. In Greek antiquity we observe a gradual striving towards life-like forms, a constantly increasing approximation to nature, which reaches its culminating point towards the early hellenistic period; later however there begins a reaction which is caused partly by other, unhellenic ideals and views of Art, but partly also by the decline of technical skill. These under-currents become dominant in the art of Islām, which in a general way may be regarded as representing the further development of the reaction, beginning already in the classical period, of the oriental hellenistic provinces against those of the West. The arabesque of Muslim art shows from the outset a consistent tendency to become more and more abstract and to treat the foliage ornament more and more as a geometrical design. This tendency finds expression in the following principles which are of universal application. In the design of the foliage there is no longer any notion of truth to nature, whereas formerly the principle had been if not to imitate nature, at any rate to avoid direct opposition to it. The design of the foliage is now only determined by a regard for the symmetry which may be required by the pattern itself or by a pendant corresponding to it. The vegetable stalk loses almost entirely its character as a part of a plant, and becomes a mere geometrical line combined to plassing figures and compartments, but meaning less as a representation of a natural object. The leaf similarly loses almost entirely its vegetable character and gives up all pretension to realism, although it is still possible to trace its derivation from the conventional leaf of hellenistic ornamentation in the drawing of the contour and the interior design. This however is not the only source of the treatment of the leaf. The ornamentation of the Ṭūlūnid and early Fāṭimid monuments, as well as that of the buildings of Nūr al-Dīn Maḥmūd in Mesopotamia, show clearly how the whole composition and its separate elements frequently go back to the classical scheme of foliage growing out of a vase, together with many figurative

elements like cornucopias, vases etc. In the fully developed arabesque even these objects, cornucopias and vases, have become abstractly conceived designs of leaves. Abstraction goes so far that the whole wealth of decorative elements taken from plants consists only of many combinations of a small number of patterns some resembling palm-leaves and others wholly untrue to nature. Stalk and leaf are no longer as in nature — two co-ordinate but formally distinct elements — but have coalesced to such an extent, that the leaf no longer grows out of the chief stem on a small stalk, but represents simply an expansion or outgrowth of the chief stem. The want of realism, or rather the direct opposition to nature, is further emphasised by the fact that the stalk grows through the leaf, in other words the leaf does not represent an end, but develops into a new stem and so on in countless repetitions. This is connected with the fact that the composition of the ornament is usually based on the principle of infinite correspondance, that is to say each surface, however small, is ornamented in such a way that by putting together the design we get a doubly symmetrical surface pattern capable of infinite expansion. This law of composition governs not only the ornamentation of surfaces, but also that of borders, although the latter, by their nature, are capable of infinite expansion in one dimension only. In spite of this fact their composition is frequently of such a nature as to admit of infinite continuation, without change, in their secondary direction, viz. that of width. In the case of borders there frequently appears the cognate principle of reciprocity, in which two corresponding parts of the pattern stand to each other in the relation of punch and matrix, so that the infinite correspondence is effected by a means resembling the reflexion of mirrors. Apart from this the ornamentation of borders exhibits the conventional schemes of single, double, and undulating intermittent foliage with a wealth of variations. Another composition of frequent occurrence is that representing the foliage as growing out of a vase. It is dominated by the principle of strict symmetry in relation to a single axis, as is also the scheme of composition known as the 'heraldic style'. Another form of composition, closely related to the last and sometimes indistinguishable from it, represents the foliage growing up as a tree, and may be connected with the old oriental ideas of the tree of life. — While these principles are universally applicable to the arabesque of all periods, other features are subject to variation according to time and place. The quantitative relation between surface and pattern, and that between stalk and leaf, varies between two extremes. One of the extremes is represented by the type of arabesque best known from the stucco decoration of the mosque of Ibn Ṭūlūn at Cairo, where the leaf covers almost the whole surface. The stalk very nearly disappears altogether, so that leaf grows out of leaf. The result is that the ornamented surface is entirely covered, and nothing is seen of the ground. This is the 'horror vacui' of ornamentation. It follows that the design of the positive ornament is effected merely by means of a few negative lines, especially spirals, which pass through the leafage. The artisan in executing the design, draws or carves or paints not so much the ornament itself, as the ground. The opposite extreme is found e. g. in the ornamention of the buildings of Nūr al-Dīn Maḥmūd: here the leaf plays a quite secondary part, the pattern consisting of stalks ingeniously and elegantly intertwined. The positive ornament is equally balanced, or even dominated by the ornamented ground. All the other principles of form and composition are preserved.

The tendency to a geometrical composition of arabesques finds an unmistakable expression in the intertwining of several systems which are frequently arranged in such a way, as to create a contrast between larger and smaller geometrical compartments, or between compartments ornamented with greater or less fulness, or in different styles of design. Besides the ornament consisting of foliage only, geometrically intertwined bands are similarly combined with foliage. This combination is the most common form of arabesque. The intertwined geometrical design forms a complicated framework; the manifold irregular polygons formed by the mutual crossing of the lines are filled by the foliage, either separately or in a connected pattern. These forms pass into arabesques of a purely geometrical nature, i. e. those consisting of intertwined bands. Here all possible combinations are represented, from the simplest plaiting, the mere interlacing of systems of parallel lines, to the most complicated geometrical figures. As in the case of the foliage ornament the effect aimed at is the creation of a contrast: a linking up of the positive pattern by means of larger or smaller portions of the ground surface. A wealth of polygonal shapes or stars appear as the fixed points which create order in the kaleidoscopic confusion, of small irregular polygons. These compositions, which are often most ingenious, are formed by the well-thought out and frequently surprising use of a few lines not unfrequently broken; it is often very difficult to disentangle their fantastic play so as to arrive at the system. A certain advanced stage of the power of geometrical vision is an indispensable presupposition of this kind of composition. The systems most favoured are those founded on polygons or stars with an odd number of angles, e. g. pentagons or nonagons, or stars with seven or fifteen points.

In addition to these two prevalent elements — foliage and intertwined bands — there appears a third specific feature in the motifs derived from the Arabic script. Writing itself as a decorative element plays a much more important part in Muslim art than in any other. It is undoubtedly an expression of a certain bigotry on the part of the Muslims, that they inscribe nearly every article of artistic craftsmanship with some verse from the Ḳor'ān, the confession of faith, or with innumerable, sometimes rather pointless, formulae of blessing or congratulation. But besides these inscriptions proper, which we may well accept with gratitude because of their historical importance, there frequently occur groups of letters which do not form intelligible words or sentences at all. This should by no means lead us to the conclusion that the objects thus inscribed are the work of illiterate men. It is rather a purely decorative use of the characters, an ornament in the shape of letters. The letters most frequently employed in this way are, on the whole, Alif-Lām

and Lām-Alif, which often form whole borders. We may suppose that these are not quite meaningless characters, but that they serve as a kind of 'siglum', being in fact an abbreviation for ornamental purposes of the *Shahāda*, which already in the papyrus protocols is abridged as a number of Lām-Alif's. The decorative value which the letters of the *Shahāda* already possess owing to their rythmical and symmetrical shape, is still enhanced by this abbreviation. — Other meaningless groups of characters are inaccurate copies of the blessings and congratulatory formulas which occur so frequently; and letters, the nature of which has been completely misunderstood, are found on objects made by non-Muslim artisans especially on Western imitations of Arab works of art. Finally — and this of greatest importance for the arabesque — the decorative writing developed into a particular kind of linear ornament, in which all consciousness of the original nature of the letters was completely lost. This phenomenon appears very clearly in carpets from Asia Minor.

The term arabesque in its wider sense, as denoting the ornament of Muslim art in general, also comprises a number of figurative elements. It would indeed be possible to distinguish these from the arabesque, taking this word in a narrow sense, and to class them under the term 'iconography'; but the value of these figurative elements is for the most part purely ornamental, while their composition is frequently closely connected with or even inseparable from the arabesque. A short survey of these figurative elements belongs therefore to an aesthetic analysis of the arabesque. — The most independent elements are a number of genre pictures: hunting scenes, banquets, games, occupations are represented sometimes in a whole series of pictures. They usually fill appropriate spaces of the rich arabesque in the form of medallions. In subjects and style they depend chiefly on miniature painting, and frequently show the influence of Eastern Persia and Central Asia. — Another class is formed by representations with an astrological or originally symbolic meaning, which have become merely decorative forms. Their wide-spread occurrence is due to the decorative value inherent in all symbolic representations, a fact which it would be easy to illustrate by instances from all periods of art. To this class belong pictures of the Sphinx and griffons, genii or angels, the signs of the Zodiac, the seven planets, centaurs with bows and arrows, and animal combats. None of these decorative motifs has been created by Muslim art; they all belong to the inherited stock-in-trade of of older periods of art. No essential change was made even in their specific forms. We may include in this class the somewhat rare old representations of dragons, of St. George slaying the dragon (Khiḍr, Ilyās), probably also the Sāsānid winged crowns which frequently bear the Pehlewī sign of the *Khwarnas* (unless we ought to adopt a recent suggestion and read it as Arabic '*baḳā*') and the royal rams. In the same connection should be mentioned the Chinese motifs, frequent since the Ṣafawid period, but occurring even earlier, such as the dragon, the phoenix, and both together forming the Ming crest, the Kilin and the Fohu, the line of clouds 'tǐ' symbolising immortality, and many others; lastly Indian subjects, such as the three spheres as a Buddhist symbol and the Angavastra garment. Some figures have even been identified as Buddhas and Bodhisatvas, but this identification is disputed. — Another frequent feature of the arabesque are the representations of animals belonging to the so-called heraldic style. They are placed facing each other according to a strict principle of symmetry, some vegetable element serving as axis. The more frequent animals are lions, griffons, deer, hares, peacocks, parrots etc. Besides this animals also occur in another scheme of composition, known already in antiquity, viz. in an undulating foliage ornament interrupted by pictures of animals. — Another group is formed by heraldic crests proper. The Ming crest has already been mentioned. Crests consisting merely of an animal emblem, such as the lion or leopard or the double eagle, belong to the Turkish race, and probably go back to primeval totemistic ideas. There are further the emblematic crests of the Mamlūks which are closely connected with the ornamention of pottery and enamelled glass-ware; and such isolated subjects as the Man with the Moon, the crest of Badr al-Dīn Lu'lu'. In Spain we find representations resembling castles, which recall the crests of occidental towns. These especially, but also the other motifs, are found in close organic connection with the arabesque. — Lastly there occur isolated figurative elements, such as the heads of lions and other animals, the bodies and wings of birds, claws and hands, which coalesce with the arabesque and are of the same ornamental value as the foliage. This phenomenon can be observed particularly in the ornamentation of Mesopotamian art in the period of Badr al-Dīn Lu'lu', but it also occurs in later Eastern Turkish and Turkish works of art.

It is clear that the arabesque as described above according to its principles of composition and its separate elements, did not suddenly come into existence ready made at the time of the rise of Islām. The aesthetic description of the arabesque as something given, must therefore be followed by an inquiry from the point of view of the history of art, which regards it as something in the process of becoming. There is an obstacle to this mode of inquiry in the fact, that our knowledge of monuments varies considerably according to time and place. — As there are some great gaps in our knowledge, it is somewhat dangerous to draw a rapid sketch of the course of development. — So far as we can survey the growth of the arabesque, we may say that the first steps in the arts and crafts of all the provinces of the caliphate meant an uninterrupted continuation of a received tradition; a fact which has recently been emphatically demonstrated by the monuments of Mshatta and Ḳuṣair 'Amra. As mentioned above, the already existing tendencies, which had started as a reaction of the oriental provinces of hellenistic art against those of west, gradually gain a more and more extended authority. The different provinces naturally exhibit considerable differences of style, and some characteristic provincial features of the earlier period are adopted locally. As the material has to a great extent become known quite recently, or is still unpublished we cannot avoid the enumeration of definite examples. Generally speaking the arabesque continues the tradition of the universal hellenistic foliage ornament with

its conventional flora consisting of acanthus, vine leaves and trefoil. In the mosque of ʿAmr in Old Cairo we still see carved blocks of wood over the capitals of some of the columns of the entrance hall, which exhibit an acanthus border of quite classical forms. They belong without doubt to the first period of construction, and have at a later stage been imitated in a degenerate form in a few examples on the western narrow wall of the ḥaram. In Egypt the dependence on ancient classical forms of ornament can also be studied on the tomb-stones belonging to the first three centuries of Islām, on which the inscriptions are usually given in the form of a 'tabella ansata'. In Syria the province where good traditions had been observed most faithfully during the late classical period, the good traditions of craftsmanship survived the Muslim conquest. The only reason why it was possible to regard Mshatta at first as a classical building is the fact, that its rich foliage ornamentation had preserved an extraordinarily classical character; altogether it may be said that the buildings of Syria belonging to the late classical period give a much more archaic impression than the contemporaneous buildings of a province like Asia Minor. Specifically classicistic ornamentation is found in Syria even late in the Middle Ages, thus on the large old minaret of the Great Mosque of Aleppo, built by Aḳ Sonḳor during the reign of Malikshāh, on a building near the Bāb Anṭākiya in the same town dated 545, on a miḥrāb of Nūr al-Dīn Maḥmūd in the masdjid Ibrāhīm al-Khalīl in the citadel of Aleppo, on the minbar of the Djāmiʿ Nūrī at Ḥamāt, and in the form of an acanthus frieze on a mosque of the same Nūr al-Dīn at Raḳḳa (possibly the remains of the decoration of an older building). — In Egypt the Coptic style of ornamentation predominated, as appears from the objects in the Egyptian and Arab museum at Cairo when compared with the ornamentation of the mosque of Ibn Ṭūlūn. The style of arabesque exhibited by the latter is of the specific Egyptian-Coptic type, of which however examples are also found in Syria and Mesopotamia (on all the monuments of Nūr al-Dīn and e.g. on wood-carvings from Takrīt in the Kaiser Friedrich-Museum in Berlin), and in Asia Minor (gate of the Djāmiʿ al-Kalʿa at Diwrigi, 576 = 1180-1181) — The vestibule of the Khāṣekī Djāmiʿ at Baghdād contains a very old miḥrāb fashioned of a block of yellow marble, which exhibits splendid Byzantine ornamentation of the acanthus and vase type; the very archaic forms of this monument force us to place its date in the first two centuries of the Hidjra i.e. in a period preceding the foundation of Baghdād. On fragments of stucco decoration, which are brought to the Baghdād market form the ruins of ʿIrāḳ and the Persian-Turkish frontier (some specimens in the Kaiser Friedrich-Museum) we find typically Sāsānid motifs, such as the winged palm-leaf, the royal ram, and singular bulllike forms resembling rosettes and lotuses; the same motifs, as is well known, occupy a large part of the rich decoration of the Mshatta façade. It would not be difficult to add to this list of examples illustrating the early stages of the arabesque as an immediate continuation of provincial peculiarities.

The present list however is sufficient to enable us to state the historical problem. This is twofold: the question arises 1. how did the arabesque become a dominant feature of supreme authority for the whole art of Islām? and 2. how was it possible for the arabesque, derived as it is from many heterogeneous sources, to become a single organic unity? Both questions can only be answered when treated in connection with the whole of Muslim art. In order to find an answer to the first problem we must remember, that the Muslim outlook on life, as contrasted with that of classical antiquity and even of christianity, left, strictly speaking, no room at all for Art on a large scale. The whole character of the Muslim view of life explains the gradual disappearance of the figurative element from their works of art, whereas in antiquity figures had formed the essential part and vegetable ornament only an accidental by-work. The development of ornamental decoration as exhibited in the arabesque, was favoured by the prejudice against the large forms of art in general and against the representation of figures, which latter applied equally to the detailed work of the craftsman; the great wealth on the other hand created a desire for luxury, art and ornament.

It is even more difficult to find an answer to the second question. An analogy to the unity of Muslim art may indeed be found in the unity of hellenistic art, as the provinces influenced by it extended to the East and West even beyond the frontiers of the kingdom of Alexander and of the Roman Empire. We may even regard the unity of hellenistic art as a necessary condition without which the rise of a homogeneous Muslim art would have been impossible. There is however a great contrast between the conditions at the beginning of hellenistic and Muslim art. In the one case the conquerors were the most artistic nation that has ever existed, and in this respect contributed most in their relation to the conquered peoples. The case of the Muslims was completely different. The Arabs had no artistic gifts, and the conquerors were the receiving element in all matters affecting culture. The hellenistic countries were welded together by Greek civilization; the link which bound together the countries of Islām was only the community of religion and government; handicrafts were left entirely to the subject population. In the hellenistic provinces the participation of the subjects caused the change and the decay of Greek art; in the Muslim countries it created the art of Islām. In view of these facts the only explanation hitherto advanced for the homogeneity of artistic style, and for the dominating position of the arabesque, was a reference to the general economic situation and to the state of Muslim civilization. All the lands of the caliphate were united by religion and language. The pilgrimage to Mekka afforded an opportunity for intercourse and exchange between the inhabitants of the East and the West. In spite of the imperfect means of transit, lively traffic circulated through all the Muslim countries, as formerly through the Roman empire. A great number of individuals travelled through large portions of the known world; while commerce, the most important factor in the spread of art, extended with fewer limitations than at any previous period, through all the countries of Islām. Although these considerations afford a perfectly opposite contribution towards an explanation of the fact of artistic unity, they are yet of such a vague and

general nature, that they cannot satisfy us completely: Recent research, especially C. H. Becker's study of papyri, has brought to light a tangible and very important element: the Greek system of 'liturgies' existed in the early times of Islām: the populations of the most divers parts of the empire were bound to make their contribution towards public buildings and institutions of common utility, not only in the shape of money and materials, but also in the form of workmen and master-builders. In constructing the Umaiyad mosque of Damascus, for instance, a Persian and an Egyptian Arab served as architects; and workmen of the most various nationalities were employed on the great buildings. This fact explains the syncretism of Muslim art; it explains the occurrence of Persian elements at Mshatta, the existence of coptic features in Syria and Asia Minor. The 'liturgies' brought together the craftsmen of different nationalities, and gave them an opportunity of learning the various traditions from personal experience. In this way there began a process of unification and the creation of an homogeneity, from which the art of Islām, and with it the arabesque, arose as a unity. As always in the case of such developments, it is hardly possible to determine the date of its end, especially as the material known to us is scanty. We may say that the arabesque in its developed form is found already in the mosque of Ibn Ṭūlūn. This however does not yet signify the final completion of the assimilating process. The ornamentation in question, although a pure arabesque, is yet a specific variety belonging to Egypt. The arabesque in which the provincial types are blended in a more complex form, and which attained universal predominance, does not seem to have reached its goal until the Fāṭimid period. — Immediately after the end of the unifying process, there begins a series of centrifugal developments. Just as the caliphate dissolves itself into separate states, the art of Islām is broken up into the arts of the provinces, which partly strike out new paths of their own. This development is particularly recognisable in the field of ornamentation, i. e. of the arabesque. Three large regions can be distinguished, characterised both by internal relationship and by manifest differences from each other: the East, with its centre in Īrān, surrounded by the eastern Djazīra, 'Irāḳ, Turkestān and India; the centre consisting of Egypt, Syria with the western Djazīra, and Anatolia, each of which parts maintains a certain independence; and lastly the West consisting of Northern Africa and Spain. The arabesque of the eastern group shows a development towards greater realism, obviously under the influence of Central and Eastern Asia. The arabesque of the central group preserves most faithfully the principles, by which it had been dominated at the time of its origin: Byzantine influence being very noticeable in Anatolia. The arabesque in the art of the western group shows some characteristics approaching occidental taste. — All provincial developments, apart from a few exceptions, change the style of the arabesque in its outward features only. The essential characteristics of the arabesque are preserved throughout, both as regards the composition and the elements; there is therefore only one and the same arabesque in antiquity as well as in modern times, in the East and the West, and in the South as well as the North. (E. Herzfeld.)

'ARABFAḲIH ('Abd al-Ḳādir b. Sālim b. 'Othmān Shihāb al-Dīn), Arabic historian; he wrote towards the year 950 (1543) at Djāzān a history of the wars of the Imām Aḥmed Grañ of Harar against the Christian Abyssinians; the book is entitled *Tuḥfat al-Zamān* or *Futūḥ al-Ḥabasha*, and is based on statements made by the Imām himself and by the amīr Ḥusain b. Abū Bakr al-Djāzānī; the account of the events beginning with the year 934 (1528) is preceded by a short history of the descendants of Sa'd al-Dīn, who ruled over the Somali coast. In addition to the Mss. at Algiers (catal. Fagnan, Nº. 1628 *et seq.*) and London (Rieu, *Supplement*, Nº. 599) cp. Nerazzini, *La conquista Musulmana dell' Etiopia nel secolo XVI* (Rome 1891); R. Basset, *Histoire de la conquête de l'Abyssinie (XVIe siècle) par Chihab eddin Ahmed b. 'Abd el-Qâder, surnommé 'Arab-faqih* (text, French transl. and notes, Paris 1897—1901), and A. d'Abbadie and Ph. Paulitschke, *Futūḥ el-Habacha, les conquêtes faites en Abyssinie au XVIe siècle par l'Imam Muḥammad Aḥmad dit Gragne.* (French transl., Paris 1898).
(Brockelmann.)

ARABIA, the westernmost of the three peninsulas of southern Asia.

a. Topography, Climate, Products.

Arabia, called by the Arabs Djazīrat al-'Arab, "the peninsula (island) of the Arabs", or abbreviated al-Djazīra, "the peninsula", 'Arabistān by the Persians and Turks, is only joined to continental Asia in the North and is bounded to the West by the Red Sea, to the East by the Persian Gulf and the Sea of 'Omān, to the South by the Indian Ocean. By the isthmus of Suez it is connected with Africa, from which only the straits of Bāb al-Mandeb separate it at the entrance to the Red Sea. To the East at the entrance of the Persian Gulf it approaches the coast of Persia. The area of Arabia corresponds to about a fourth part of Europe, but it is almost impossible to give an accurate statement because data as to the boundaries in the North differ considerably. Some draw them as far as the territory of Aleppo and the Euphrates. But although the mesopotamian plain has been inhabited by Arabic tribes for many centuries past, no geographer has made Arabia reach farther than the Euphrates boundary. Neither must the so-called "Arabia provincia", "Arabia Petraea" be regarded as belonging to Arabia but to Syria, although it is inhabited by Arabs. The Sinai-peninsula al-Tīh [q. v.] on the other hand, which most Arabic and European scholars regard as a part of Egypt, geologically belongs to Arabia.

West-Arabia (extending in length about 16°) consists of two large parts: Ḥidjāz and Yemen. Ḥidjāz — the name means barrier — is properly speaking the mountain-range separating Tihāma, the lowland along the coast, from Nedjd, the highland; as a matter of fact however it stands for the whole country, bounded to the West by the Red Sea, to the East by Nedjd and stretching from the farther end of the Gulf of 'Aḳaba to a few days' journeys south of Mekka where Yemen begins. The northernmost part of Ḥidjāz (as far as Tabūk) is called Ḥismā after the mountain-range crossing it from North to

South. It is a poor country, possessing, it is true, a great number of wâdîs (valleys) through which after heavy rains mountain-streams (*sail*) flow towards the sea, but yet suffering much from drought. Formerly the Djudhâm lived here, at present the Ḥuwaiṭât, who are regarded as the descendants of the old Nabataeans.

The road from 'Aḳaba to Medina, the old pilgrims' road from Egypt, goes along the coast as far as Yanbo' or a little farther to al-Djâr, the old harbour of Medina at a distance of two days journey from this town. The only place worth mentioning on the Gulf of 'Aḳaba is Maḳnâ whose inhabitants as early as in the year 9 (630/631) concluded a treaty with the Prophet from which it is evident that they were weavers and fishermen. Next we may mention al-Wadjh were the territory of the Balî-Arabs begins and which offers an excellent roadstead for small ships. Close by is the mouth of the great wâdî Iḍam with its many branches, now called wâdî 'l-Ḥamḍ, which begins to the south-east of Khaibar not very far from the source of the wâdî Rumma. It first turns to the South-West, then passes near Medina and making a great bend goes on to the North West. In pre-historic times this must have been an important stream; now it only occasionally has water after heavy rain-fall. Farther inland but more to the north are the ruins of Madyan [q. v.]. From Madyan the road used to lead straight through Badâ to Wâdî 'l-Kurâ ("the valley of villages"), of which Ḳurḥ was formerly the principal place. Here the road from Egypt to Mekka joins the pilgrims' road from Damascus which goes east of the Ḥismâ-mountains past Ma'ân, Tabûk and al-Ḥidjr, or Madâ'in Ṣâliḥ. Sprenger regarded al-Wadjh as the harbour of al-Ḥidjr which corresponds to Strabo's Egra. On the coast south of this place we find al-Ḥawrâ' ("the white village"), in which Sprenger recognised the old Leukekome. Here is the end of the Balî-territory and the beginning of that of a kindred tribe the Djuhaina. The country between al-Ḥidjr and Wâdî 'l-Kurâ used to be the territory of a tribe famous even up to the present day for their depth of passion, the 'Udhra, "who die when they love".

The whole country round about Medina is volcanic — the volcanic zone is said to reach from Palmyra as far as Mekka — and even in historical times have been a few eruptions. The last of which we know, took place in 654 (1256; see Samhûdî, p. 40). In Arabic the black volcanic mountains are called Ḥarra or Lâba (lava). Medina itself is situated between two of them; hence the phrase: "what is between its two ḥarras (or lâbas)" for "the whole town". The valleys in these ḥarras are remarkable for their comparatively great fertility. The cultivation of dates especially has been of importance for centuries past.

Less than an hour north of Medina is the hill of Oḥod [q. v.]. To the territory of the town belongs the big ḥarra of Khaibar (to the east of Wâdî 'l-Kurâ) where the wâdî Rumma has its rise. Taimâ' (Têma) to the east of Tabûk on the west frontier of the Nufûd desert and even the oasis Dûma (also Dûmat al-Djandal, i. e. the Dûma built of stone), called at present al-Djawf or al-Djôf [q. v.] and situated on the north-west boundary of the Nufûd desert at a distance of 13 days journey from Medina and 10 days from Damascus, are also reckoned to belong to the territory of Medina by the arabic geographers.

From Yanbo' it is possible to travel along the coast to Djidda and from there in two days straight to the east to Mekka. The Holy territory (al-Ḥaram, now also often called al-Ḥudûd, i. e. Ḥudûd al-Ḥaram, the frontiers of the Ḥaram) is entered at Tan'îm at a distance of a parasang from Mekka where the mosque of 'Â'isha stands. In all other directions the boundaries are farther away from Mekka. Even before crossing the frontier the *iḥrâm* is put on. The pilgrims from Nedjd and Yemen put it on at Ḳarn al-Manâzil. In its vicinity was the once famous market of 'Okâẓ where a competition between poets took place. Almost due southward 36 miles from Ḳarn al-Manâzil is Ṭâ'if situated high up in the Ghazwân hills, the summer-resort of the well-to-do Mekkans. The air here is invigorating so that all south-european fruit grows in abundance. Especially famous since olden times, are the grapes and raisins of this district. According to al-Iṣṭakhrî the mountains of Ṭâ'if are the only place in Ḥidjâz where in winter the water freezes. (This happens on many mountains of Yemen, e. g. according to Glaser on the Ḥaḍûr).

The hills to the south of Mekka have been inhabited from very ancient times by the Hudhail, who produced many talented poets. In their neighbourhood we find even to the present day the Thaḳîf to whom Ṭâ'if formerly belonged. Here the mountain-range, called further on Sarât, broadens out and becomes an Alpine country. This is the most fertile part of the Ḥidjâz. The mountains themselves are inhabited by Yemenite Arabs called Bahîmîya (i. e. "cattle-like") by Ibn al-Mudjâwir on account of their rough customs. The instances he gives are partly corroborated by Burckhardt. Ibn Djubair relates that they behaved very disreputably in Mekka in what is still Arabia's most sacred month, the month of Radjab, but that people had to put with their conduct because of the rich supplies they brought to market. At the time, in the xiii. century, they were still called Badjîla, now they bear the name 'Asîr [q. v.]. The eastern part of the alpine highlands is the territory of the Ḳaḥṭân, who are for the greater part camel-breeders. They are a very old but still a vigorous tribe from whom most of the Yemenite-Arabs claim descent.

Yemen — properly the country 'on the right', i. e. the southern country, also the happy country — has been famous from time immemorial for its great fertility and its riches. It consists of two unequal parts: Tihâmat al-Yaman (the coastland of Yemen) and Nedjd al-Yaman (the highland of Yemen, also Djibâl al-Yaman, the mountains of Yemen), with the plateaus of Nedjrân in the North, Mârib in the East, San'â' in the centre, Ta'izz in the South. The Yemenite Tihâma is the continuation of the Tihâma of the Ḥidjâz, according to Glaser's observations it grows ever broader, owing to the retreating of the sea.

The road from Mekka to the highland of Yemen goes round the mountains on which Ṭâ'if is situated and leads over the well-known stations Turaba and Tabâla to Bîsha, the chief town of a flourishing fertile district on the wâdî Bîsha, which continues as far as Central Arabia. Journeying from Ḥidjâz to Yemen the frontier is crossed between Tathlîth, situated at about the

same latitude as al-Sirrain, and Djurah. From there the main road goes straight on to Ṣa'da, while a branch way leads eastwards to Nedjrān [q.v.].

From Ṣa'da the road goes southward to Ṣan'ā', the capital of Yemen. To the east of Ṣan'ā' lies Mārib [q.v.] The territory of which Mārib is the capital, is now called al-Djawf (Djūf). It stretches from Nedjrān as far as wādī Baiḥān to the south-west of Mārib. Everywhere traces of former prosperity are found. Ibn al-Mudjāwir mentions as a town of importance Barāḳish, famous from antiquity. The first Europeans who visited these regions with great danger to their lives were Arnaud and Halévy. The part of Yemen further south has recently been described at length by Landberg (*Arabica*, v).

Going southward from Ṣan'ā' through Damār (Dimār), famous for its horsebreeding, Yarīm is reached, the village where Forskål, Niebuhr's companion died; half a day's journey further are situated the ruins of the capital of the Ḥimyars, Ẓafār in the longitude of Ṣan'ā', and the latitude of Zabīd. From here the road led over Saḥūl, famous for its cotton spinning — the Prophet's body was swathed in a shroud of Saḥūl — to Djanad, formerly the second capital of Yemen with the famous mosque of Mu'ādh b. Djabal, not far from Ta'izz. In the vicinity of Saḥūl was situated the famous fortress al-Mudhaikhira, the basis of the Karmatian rule over Yemen. The town farthest south in the mountains is Ta'izz, in the middle ages and up to a century ago a place of great importance, the capital of the Rasūlids, but now in decay. The mountains are here called Ṣabir, alluded to by Ibn al-Mudjāwir as 'the Prince of Yemen's mountains', and famous for its coffee plantations arranged in terraces and an excellent system of irrigation, and for the cultivation of the ḳāt (celastrus edulis.). The young sprouts of these plants, which are highly valued as an anti-narcotic are exported in large quantities to all the towns of the Tihāma. To the north of these mountains, between Ibb (Abb) and Djibla (Djubla, also called Dhū Djibla), is the watershed between the Indian Ocean and the Red Sea. Here are the sources of two perennial streams the wādī Zabīd flowing to the North and the wādī Banā (Bannā) flowing through the old mikhlāf Ru'ain and opening out into the Gulf of 'Aden to the east of the mouth of the wādī Tuban or wādī Maitam. Another road, which Manzoni has followed, leads from Yarīm straight southward to 'Aden. The road from Ḥodaida to Ṣan'ā' over Manākha (the chief staple for coffee) has been described by Glaser.

The old division of Yemen into districts, *mikhlāf*, which also applied to Ḥidjāz and the Yamāma, has long been obsolete.

South-Arabia. To the east Yemen is bounded by the province of Ḥadramawt, now usually pronounced Ḥadramūt. This is a mountainous country intersected by many valleys, whose industrious enterprising inhabitants in more than one respect resemble the Swiss. Since very early times they yearly have sent part of their young men to other regions to try fortunes and thus they are not only found in the seaport towns of Arabia but also in Egypt and in British and Dutch India. Almost all the Arabs in both the last named countries are Ḥadramīs. The country is bisected from West to East by a wide valley, the wādī 'l-Kasr. This wādī has a perennial stream which falls into the sea on the east frontier near Saiḥūt; the two largest places Shibām and Tarīm are also situated there. To the south east of the latter town, at the entrance of the wādī Barahūt (Balahūt, Borhūt), named thus after a still active volcano, is found the grave of prophet Hūd, well known from the Ḳor'ān. Here begins the great desert which surrounds Ḥadramawt on the North-West, the North and the East. The best seaport of the country is Makalla (the name means simply 'harbour'). It is not improbable that this place is identical with the Lasa (al-Asa) of the Arabic geographers. Just as in Yemen numerous ruins and tombs point in Ḥadramawt to a bygone time of considerable prosperity and wealth.

To the east of Saiḥūt, which perhaps corresponds to the old Khairidj, begins the 'incense-coast', named Mahra and often called Shiḥr by the Arabic geographers, a name meaning 'coast' in the old language of South Arabia. The name Shiḥr is now limited to the first (westerly) seaport. The eastern frontier is Ḥāsik to the east of Mirbāṭ. The latter place has an excellent harbour but it has decayed to an unimportant village. The town which is now called Mirbāṭ lies to the east of the harbour. Originally Mirbāṭ was the harbour of the old, now depopulated capital Ẓafār. This town was devastated according to Ibn al-Mudjāwir in the year 618 (1221). In Ibn Baṭṭūṭa's time however it still was an important town. The latter speaks of the sardines which are still caught there in such enormous quantities that camels are fed on them. In the country they are called *warḳ* and also *'aid*. In the mountain chain which runs parallel to the coast grows the incense-tree. According to Ibn al-Mudjāwir everywhere between Ḥadramawt and 'Omān traces were found of former terraced cultivation. This is corroborated by Bent's description of this remarkable district. The cultivation of incense is now very limited. The inhabitants of the Gara mountains and of the fertile coast between these mountains and the sea are partly troglodytes. The coast to the east of Ḥāsik as far as 'Omān is said to be devoid of trees and shrubs, the inland is absolutely unexplored.

East-Arabia. 'Omān, the easternmost province of Arabia, is for the greater part a very fertile mountainous country with a coast rich in harbours. The gulf of 'Omān abounds in fish and from olden times the people along the coast have been excellent sailors. Ḳalhāt, only founded in the xii. century and once a beautiful fortified town is now in decay. Masḳaṭ on the other hand, of little importance in the middle Ages — al-Muḳaddasī calls it a beautiful place with an abundance of fruit; Ibn Baṭṭūṭa not even mentions it — is at present the most notable town of the country and has the best harbour on the Persian Gulf. According to European travellers the heat there is even greater than at 'Aden and almost unbearable. That is probably the reason why the Prince's residence is either at al-Rustāḳ or Nazwa (Nizwa), both in the Green Mountain (Djebel akhḍar). The latter town, visited by Wellsted is old but still flourishing. To the north of Masḳaṭ lies Ṣoḥār, the old capital, therefore also called 'Omān just as Damascus is now generally called al-Shām, Because of its extensive trade with the East al-

Muḳaddasī calls this town "the portal of China." Ibn al-Mudjāwir says that it lay waste in his time. It must however have recovered afterwards; Wellsted describes it as a well-fortified town of some note. To the north of it, on the east side of the peninsula, the point of which is formed by the promontory Ras Musandam (Missandum), lies Dabā (or Dama), which was already in the time of the prophet a town of great importance and even now the capital of North ʿOmān. Opposite on the west side of the peninsula lies the flourishing seaport town of Shardja. About the aboriginal population of ʿOmān we have no information whatsoever. Tradition only says that after the breaking of the dike of Mārib the Azd migrated into ʿOmān. The former inhabitants seem to have been Mazūn, as ʿOmān is also sometimes called. The Azd appear to have remained the prevailing tribe although great numbers of them migrated to ʿIrāḳ in the time of the Umaiyads. They belong to the Ibāḍites [q. v.]. Ṭaiyites also settled in ʿOmān and a branch of these, the Nabhān, has for a long time have held the upper hand. Even Northern Arabs (Banū Ghāfir) later settled in ʿOmān. Dates are the favourite food and are largely exported to other countries.

The country stretching to the west and north west of ʿOmān as far as the boundaries of ʿIrāḳ was called in the golden age of the Arabs al-Baḥrain, (now the name of the island Uwāl), or after the capital Hadjar. In the beginning of the x. century the Karmatians built their residence al-Aḥsāʾ, also pronounced Laḥsā, not far from Hadjar; this al-Aḥsāʾ (or al-Ḥasā) is at present the name of the country. The southernmost region is named after the tribe which inhabits it, the Ḳawāsim (Djawāsim), who are notorious pirates; farther west is the peninsula of Ḳaṭar. From very old times the inhabitants have been pearlfishers and dreaded pirates. The capital is nowadays called either al-Ḥasā or Hufūf (Hufhūf) which name is not mentioned by Arabic geographers. A few hours farther east lies the harbour of ʿOḳair. Whether Mabarraz, lying not far to the north of Hufūf, is identical with the old Mushaḳḳar it is difficult to decide because the description of the country given by the Arabic geographers is altogether very superficial. To the north of the district Laḥsā lies that of al-Ḳaṭīf named after the well-known seaport. The coast was formerly called al-Khaṭṭ, after a harbour from which the Arabs got the bamboo-canes for their spears imported from India. Laḥsā abounds in dates so that an arabic proverb speaks of 'carrying dates to Hadjar' in the sense of 'carrying coals to Newcastle'. For centuries the ʿAbd al-Ḳais tribes and the Tamīm have contended for the over-lordship. The latter held it as long as the power of the Karmatians lasted (close on two centuries). About the coast from al-Ḳaṭīf to Kuwait nothing need be said: it is flat and sandy. Kuwait — the name means 'the little kōt (citadel)' — is also called Ḳurain ('the little horn'), now pronounced Grēn, hence the English spelling Grane. It lies on the south entrance of a bay and will probably become an important trading-place. For the state of the Shammar it is the nearest port for traffic with the East. The Shaikh of the territory is under Turkish suzerainty but practically independent. On the west side of the bay lies Ḳāṣima, the most important station on the road from Baṣra to Laḥsā and to Yamāma.

Central Arabia. To the east of Yemen, north of Ḥadramawt and Mahra and west of ʿOmān as far as Central Arabia there extends a vast desert, of which we know the borders only and these imperfectly. It seems to be similar to the Nufūd desert in North Arabia. Water is scarcely to be found. After rain the ground is covered with vegetation and abounds in pasturage. Then the bedawīs journey inland with their camels, sheep and families and live there for three or four months. Neither they themselves nor their cattle need water: the people live on milk, and because of the succulence of the herbage — the most juicy plants grow on the sunniest spots — the cattle have no need of water and even refuse it when it is given to them. As soon as the summer heat has dried up the plants they go back to the settlements of their tribe. This is the custom of all bedawīs who live at the edge of the desert. How far they actually venture into the interior is unknown to us. The desert has several names. The part between East-Yemen and Northwest-Ḥadramawt is named Ṣaihad; to the North and the East of Ḥadramawt it is called al-Aḥḳāf (the dunes); the part north of Mahra the Arabs call Wabār; but generally it is called al-Dahnāʾ, 'the red country', after the colour of the sand. On maps it is indicated as al-Rubʿ al-Khālī, i. e. the empty quarter. Whether there is any water in the interior so that at least animals may live there is quite uncertain but not improbable. The bedawīs of Mahra, whose fleet dromedaries (called mahārī) are famous all over the world put down this excellence to the fact that their camel-mares are sometimes covered by camel-stallions of the Djinn. This might lead to the supposition that there are still wild camels living in the interior as is asserted by the Arabs who call them *ḥūshiya* (wild). Perhaps the same applies to the camels of West-ʿOmān which are equally famous. The assertion that a people speaking an unknown language dwells there (cf. v. Oppenheim, *vom Mittelmeer zum Persischen Golf*, II 332), is not likely to be true. According to Ibn al-Mudjāwir bedawīs as late as in the xiii. century ventured to travel right across the desert to Mirbāṭ and Ẓafār for the exchange of goods from ʿIrāḳ. On the north-east border of the vast desert, a three days' journey from the south of the Yamāma and nearly as far from Baḥrain, lies the formerly flourishing, well-watered oasis Yabrīn which was devastated by the Karmatians; after the oasis this part of the desert is sometimes called 'the sand of Yabrīn'. The way from ʿOmān to Mekka goes through this oasis. From here a spur of the desert stretches to the North between Baḥrain and the Yamāma, which is also called al-Dahnāʾ or Nufūd and sometimes 'the sand of ʿĀlidj'. It is described as rich in pasture and is intersected by timbered mountain-chains, residence in which is said to be agreeable and healthy. On the west and north west border of the great dahnāʾ is found the territory of the Ḳaḥṭān and the large depression which was formerly called Faladj but is now named Wādī Dawāsir (Dowāsir) after an Arab tribe. Its continuation south west of Yamāma is the Wādī Aflādj (formerly Faladj al-Aflādj).

To the north of the desert commences the

central highland (Nadjd), the heart of the peninsula and without doubt the most healthy and to Arabs the finest part of Arabia. The south-eastern province (often not counted as belonging to the real Nadjd) is the very fertile Yamāma [q.v.] Yamāma and Baḥrain are together called al-ʿArūḍ.

From the Yamāma two mountain-passes (ʿOyaina and Huraimila) lead to Ḏurmadā', which is already situated in Washm (also Washūm) and from there farther north-west to al-Shaḳrā, the chief town of this province, and in 9 hours to ʿOnaiza, the principal town of the province of Ḳaṣīm, which is bounded on the North by the Shammar country, and on the West by Khaibar in the territory of Medina. We owe to Doughty a detailed knowledge of this country. Two hours north east of ʿOnaiza lies Buraida. Right across Ḳaṣīm goes the large wādī Rumma which comes from the ḥarra of Khaibar (6000 feet high) and extends as far as the vicinity of Baṣra. This is a depression, most probably the bed of a stream in prehistoric times. Although a good many wādīs open out into it and though the beds of torrents (*sail*) conduct into it a considerable quantity of rain-water, still the wādī Rumma, often a day's journey wide, is generally dry — only twice or thrice in a century does it become a real river — but the water oozes through the ground and sometimes is visible in places. Ḳaṣīm owes its fertility to this circumstance. To the west of Ḳaṣīm the wādī goes between the two hills of Abān (well known through the ancients poets), of which the northern is called the black and the southern the red, formerly the white. The width of the valley is here from two to three arab miles. The part of Nadjd which lies farthest north east is now called Sodair (some pronounce Ṣodair, Sedeyr; Doughty even has Siddîr). The name is modern. In the *Djihān Numā* it is the name of a station on the pilgrims road from Baṣra (cp. Norberg's translation, ii. 235 and 203). In olden times the different parts of Nadjd were named after the tribes.

To the West the province of Ḳaṣīm is bounded by the territory of the Shammar, named thus after a branch of the great tribe of Ṭai' [q.v.] after whom it used to be called "the two mountains of the Ṭai'."

The Shammar mountains form the north boundary between Nadjd and the Nufūd or Dahnā', the real desert with exactly the same characteristics as the great desert in the South. After the rain it is covered with green, juicy herbs; man and beast live for some weeks in abundance. But later the sun scorches everything and the country for want of water becomes a bleak waste, perilous for the traveller who loses his way. Several Europeans have crossed this wilderness among whom Lady Blunt and Euting deserve to be mentioned. The soil consists of reddish sand and gives the impression "as if a herd of gigantic horses had stamped through it from East to West" (Euting). On the west side of the *falaḳ* (*falḳ*, *fulūḳ*), as such a hoofprint is called, is a high sand-ridge, at the east base of which the bare stone often shows; then the ground rises gently towards the East. The depression is called Ḳaʿr in Arabic; the high sand-ridge *nifd* or *nafd*, the plural of which *nufūd*, (also *anfād*), now denotes the whole desert, just as in the South the synonymous *aḥḳāf*. This *nifd* of which no trace is to be found in the classical language, has probably arisen through metathesis from *find* or *fand* (with the plurals *afnād* and *funūd*). The facts that these *falaḳ*'s always retain their shape leads to the supposition that the stony foundation already had the described form and that the west wind has blown the sand agaist the ridges and piled it up there. The area of these depressions as well as their depth differs greatly. The length of the largest is estimated at just over a mile, the depth does not exceed 150 feet. The journey from Ḥāyil to Djawf (Djōf) was done (in the opposite direction) by Euting in 8 days, by Lady Blunt in 10. After three days the oasis of Djubba is reached where numerous inscriptions and paintings on the rocks show that it has been visited since remote times. Not quite a days' journey from Djawf there is a well called Shaḳīḳ which Euting (1883) however found filled up. Djawf, already described above under its old name Dūma, is situated on the wādī Sirḥān, a hollow which stretches through Kāf to the Ḥawrān right across the stony desert, which is at present called Hamād, a name not to be found in the written language. Perhaps, as Wallin supposed, the real form is hamīd from the verb *hamada* meaning 'to be barren'.

The name Bādiyat al-Shām, Syrian desert, was limited by the Arabs to the western part; the eastern part was called in the South Bādiyat al-ʿIrāḳ, desert of ʿIrāḳ, in the North Bādiyat al-Djazīra, mesopotamian desert, also Khusāf. The southern part was also often called the Samāwa. The bādiya slopes from West and North to East and South and is intersected by numerous ravines whose water accumulates partly in ponds (*ghadīr*) partly in bigger streams which flow out into the Euphrates. In spring there is an abundant growth of grass and near the wells oasis-like gardens; in some spots where the soil is more bare or consists of limestone covered with a layer of sand, it remains quite sterile. An expedition right across this country from ʿIrāḳ to Syria such as Khālid b. al-Walīd undertook in the year 13 (634) with his horsemen is a hazardous enterprise. The boundaries of the territory expand or contract according to the weakness or the strength of the surrounding civilized states. At present the al-Ḥaṣṣ mountains south of Aleppo forms the north frontier according to Sachau, yet summer bedawis travel often as far as Marʿash with their herds.

Climate. Products. On the whole Arabia suffers more from heat than from cold. Yet in the highlands the nights are often cool even in the summer and in winter the icy cold north wind becomes most disagreeable. — Poets look upon the east wind (*ṣabā*) as the most delightful. Much feared on the other hand is the *samūm*, now generally pronounced *simūm*, the 'poisonous' scorching landwind. All prosperity depends on rain, hence it is often called 'God's mercy' (*raḥmat Allāh*) and the ideas water and beneficence are often synonymous. The time after the rains, the *rabīʿ*, is the loveliest time of the year. Then grow the herbs and the grass needed by the cattle. The camels are specially fond of prickly plants among which the *saʿdān* is foremost, so that the proverb says: 'It is pasture-land but not like the *saʿdān*'. To men the bādiya (desert) yields the *faṯḥ* (a kind of mesembryanthemum), now called *samḥ* (a name probably derived from *ḳamḥ*). Its reddish grains give a flour better than barley flour which is much used for the cooking

of porridge. They also use, but only in times of need, flour got from the seeds of the colycynth. Another product of the desert is the truffle, which is eagerly gathered and eaten; and the well-known senna (*sanā*). Wheat only grows in Yemen, in the Yamāma and in a few oases and always remains dear so that bread always has been an article of luxury. Barley is cultivated more because it is used for the horses. Here and there millet (*dhurra*) is grown in fairly large quantities and in Laḥsa and 'Omān rice as well. The cultivation of tobacco had decreased under the oppressive rule of the Wahhābīs who prohibited this article of luxury, but now it is beginning to increase again.

Of the trees of the bādiya we must mention several species of acacia like the *ṭalḥ*, which yields the gum arabic, the *salam*, the *samur*, the *ṭuwal*, the tamarisk (*athl*), the *nabak* (*rhamnus lotus*), the *ghaḍā* which gives excellent char-coal, the *dūm* (*dōm*)-palm always growing wild and the *ḥennā*. First and foremost, however, stands the date-tree so highly valued by the Arabs. The prophet is reported to have said: 'honour your aunt, the palm, which was made of the same clay as Adam and which is the only tree that is (artificially) fertilised'. The date is for many Arabs the principal food; the unripe fruit is eaten raw. There are several kinds of dates; in the territory of Medina more than a hundred different varieties are counted.

Lions (*asad*) are repeatedly mentioned by the old poets and Hamdānī gives a list of the regions where they were found. Ibn al-Mudjāwir says that there still were some in his time in the mountains north of Ṣan'ā' and Doughty (i. 459) heard the same report in Central Arabia. They seem, however, to be extinct now. Panthers (*namir*) and leopards (*fahd*), hyenas, wolves and foxes are the large beasts of prey. About game the necessary facts are given in the ethnographical part of this article. Monkeys live in Yemen, perhaps also in other parts. Among the birds of prey there are two kinds of eagles, and falcons, hawks and owls. Crows are found everywhere. Among other birds we may mention the hoopoe (*upupa epops*, *hudhud*), the lark, the nightingale, some species of pigeons and of the partridges specially the *ḳaṭā*.

The first place among the cattle is taken by the camel (*djamal*) without which the desert would be practically uninhabitable. Rightly the poets have called it 'the ship of the desert' for it is the only means of traffic within it. The story that people in need of water go as far as to kill the camels and drink the store of water in their stomachs is called by Jacob (*Beduinenleben*, p. 98) a fairy-tale. He is partly right but the story is not wholly invented as appears from Ṭabarī i. 2123 where horses are watered by such means. The Arabian camel has only one hump. A distinction must be made between the beasts of burden (*ba'īr*, collectively *ibil*) and the riding-camels (*dhalūl*, i. e. really 'tamed', or *hadjīn*, 'noble'). To the first kind belong the milk-mares (*nāḳa*). The camel's flesh is eaten a good deal and their milk which tasts and is wholesome is much drunk but it is of no use for making butter for which purpose the milk of goats and sheep is used. Flocks of these animals are kept throughout Arabia, but cattle are rarely found. Only on the Euphrates there are cow-herds called *bakkāra* in contrast to the *shāwiya*, shepherds. The arabian thorough-bred is famous all the world over. It is small but beautifully shaped; and has great speed and endurance, and exhibits an almost touching devotion to its master. Only the wealthy can keep horses as they are used only for war or tournament (*djarīd*, fantasia), for coursing and hunting; besides they are very expensive — a thorough-bred mare is said to be worth 25 camels — and want much barley and water. On plundering expeditions water for the horses is carried on camels; in time of want they often use up the greater part of the household allowance. Many details are found in Lady Blunt's and von Oppenheim's books of travel. Horses are bred not in Nadjd only but also in several parts of Yemen like Ḏamār, in Djawf etc. Since olden times horses have been exported from Arabia to India. The prince of Shammar every year sends some by way of Kuwait to Bombay. — Although donkeys are used in Hidjāz, in Laḥsā and Yemen as well as by the Ṣolaib in Central-Arabia, the bedawis consider donkey-riding beneath their dignity. The semi-bedawis in the valley of Sadjūr on the Euphrates have numerous herds of donkeys.

Of domestic animals we may mention dogs — the ordinary watchdogs very much like jackals, and the grey-hounds (called *slūgī* from *salūḳ*) — and cats bigger than european ones; fowls are rarely kept in the bādiya; in the towns, however, they are found fairly often. Monkeys are said to have been often used in Yemen for domestic services.

The locust plague is well-kown in Arabia. It is said to appear every seventh year. When a swarm settles, young and old come down on it not only to exterminate the destroyers of the precious herbage but also because they regard them as pleasant to eat. They either cook them with salt or roast them. — Bee-farming does not exist; wild honey is found in several parts and regarded as a welcome gift of God.

Bibliography: contributions to the knowledge of the geography of Arabia are given by nearly all the Arabic geographers and historians of whom we may mention al-Hamdānī's *Ṣifat djazīrat al-'Arab* (ed. D. H. Müller, 1884—1891). Further the Turkish geography *Djihān Numā* (Stambul, 1145) deserves attention. The state of investigation till 1845 based on the travels of Niebuhr, Burckhardt, Wellsted a. o. has been summarised by Ritter: *Erdkunde* XII and XIII. The researches of later travellers, the results of which will be given in the special articles on the districts in which they have travelled, have been used in Zehme's *Arabien und die Araber seit hundert Jahren* (1875) and in Hogarth, *The Penetration of Arabia* (1905). For the old geography cp. Sprenger, *Die alte Geographie Arabiens etc.* (1875).

A. ETHNOLOGY.

The theory of the Arab genealogists that all Arabs are descended from Abraham, those of the North through Ishmael, those of the South through Yoḳṭān who is identified with Ḳaḥṭān, is based on the Old Testament. Another view connected with this is that the 'true Arabs' (*al-'Arab al-'ariba*) are the extinct tribes of 'Ād, Thamūd,

ʿImlīḳ (Amalek) etc., together with the tribes descended from Ḳaḥṭān, and that the Ishmaelite tribes represent the 'arabicised Arabs' (*al-ʿArab al-mutaʿarriba* or *al-mustaʿriba*). The name 'true Arabs', however, is also used for the Badawīs who speak the purest Arabic. The plural Aʿrāb or ʿUrbān is even used exclusively for them. They are called Badawī (of which 'Bedouin' is really a plural) because they live in the bādiya, the open country; in contrast to the inhabitants of fixed abodes, the Ahl al-ḥaḍar, they are also called Ahl al-wabar on account of their dwelling in tents of camel- and goats-hair while the Ahl al-madar (or al-ṭīn), have clay houses.

The division of the Arabs into northern and southern tribes is an actual fact. The southern tribes are called Yemenites, the northern ones Nizārites or Maʿaddites. Already in Muḥammed's time, however, many tribes of Yemen were found long settled in the northern half, and in the South there were a few Nizārite ones. Tradition connects the migration of the former to the North with the breaking of the big dyke near Mārib. How far this is historically true we cannot decide from the dates that have come down to us. In any case there must have been other contributory causes and other wanderings must have taken place.

The condition of the country itself keeps the camel-breeding Arabs constantly moving about. The desert which surrounds Central Arabia in the North, East and South yields after the rainy season, extraordinarily rich pasture-land for some three months, so that man and beast can live in abundance. Thither they take their children and baggage and return to the territory of their tribes when the soil becomes barren again. Often, however, when their own country cannot support them all, parts of the tribe travel to other regions where they seek a new home sometimes by force. The Badawīs are very prolific and under favourable conditions a small group of families grows in a comparatively short time into a powerful tribe. Then the expulsion of neighbouring tribes or emigration is inevitable. As the southern territory of the Nomades, between the desert and the states on the coast is limited, the Badawīs of the South were obliged to emigrate to a far greater extent than those of the North. Already centuries before Muḥammed the powerful Yemenite tribe of the Ṭaiʾ had conquered a territory in the North of Nadjd and the Kuḍāʿa tribes had settled in the East and the South of Syria. Hence migrations of northern tribes to the South take place only in exceptional cases.

The opposition between the southern and the northern tribes may be due first of all to the fact that the latter regarded the former as intruders. Through contact with the inhabitants of the southern states (Yemen, Ḥaḍramawt, ʿOmān) they had acquired in their language and perhaps in their customs some peculiarities to which the northern people were not used and which they therefore resented. Afterwards the ill-will increased very much and finally became racial enmity in consequence of the rivalry of the Medinites — the Anṣār — who were of Yemenite origin, and the Mekkans — the Ḳoraish — who belonged to the Nizārite tribes. This antagonism has become disastrous for the Arab rule. It even exists at the present day.

The foundation of the tribe is the family. To have as many sturdy sons as possible is the Arab's ideal; through them his family becomes of importance and acquires supremacy over the kindred families who even recognise him as their elder (Shaikh) and call themselves his children. Out of this springs a tribe which is joined by other and weaker tribes if it is powerful and wealthy. Different tribes also often join force for mutual help or for great enterprises. Such a complex of tribes has a common name, generally that of the principal clan, also often one chosen at random, like 'the Panthers' (Anmār), 'the Dogs' (Kilāb) etc. All affiliated tribes are regarded as the descendants of one father or of one mother. As in olden times the antagonism between Yemenites and Nizārites was not so great as later, we often find in tribal groups that are mainly North-Arab some unmistakenly Yemenite divisions, and sometimes the reverse is the case.

In the genealogical tables of the Arabs Ḳaḥṭān is given as the progenitor of all Yemenites. It is worthy of note that the Ḳaḥṭān still exist as an important tribe in the country to the east of South-Ḥidjāz and North-Yemen and reaching as far as the great desert. (Whether the name of Kathan, according to Bent the name of the inhabitants of the incense-country, is identical with Ḳaḥṭān I do not venture to decide). South of this territory is that of the Kahlān tribe from which the most important of the two groups of Yemenite tribes is said to be descended.

To the Kahlān-group belong or did belong:

1. the Ṭaiʾ, who have held for about two thousand years the two mountains named after them (Adjaʾ and Salmā). The Syrians and Persians called all Arabs Ṭaiʾ [q. v.] after this tribe. Now they are called Shammar after the name of one of their branches which gained supremacy. The ancestral seat of the Shammar was the village of Tawārān in the Adjaʾ-mountains. At present the name Ṭaiʾ only belongs to a few small tribes in Mesopotamia which are under the authority of the Shammar, but do not pay any *khūwa* (protection-money) and are regarded as of equal birth. The Shammar did not come to Mesopotamia where they are ruling now, until the end of the xvii. century, being driven out of the Syrian desert by the ʿAnaza.

2. the Hamdān- and Madhḥidj-tribes, which for the greater part have remained in Yemen. To the latter belong e. g. the Balḥārith, living to the south-east of Ṭāʾif, and the Badjīla who played a great part in the conquest of ʿIrāḳ in ʿOmar's time.

3. the ʿĀmila and the Djudhām, who early settled in Palestine; the Lakhm, founders of the kingdom of Ḥīra on the Euphrates, and the Kinda who had the upper hand not only in their native country of Ḥaḍramawt but also governed the Banū Asad in the Yamāma and whose Emir even bore the title of King. The famous poet Imruʾ al-Ḳais belonged to this royal family.

4. the Azd, a powerful group of tribes which conquered ʿOmān and settled in the Sarāt-mountains and a branch of whom, the Ghassān, founded a kingdom in Eastern Syria; other branches of their group are the Khuzāʿa, once masters of Mekka, and the two tribes who inhabited Yathrib (Medina): the Aws and the Khazradj (the 'Anṣār').

To the other group of descendants from Ḳaḥṭān, at the head of whom the genea-

logists put Ḥimyar, belongs the great confederacy of the Ḳuḍāʿa, of which the Bahrā and the Tanūkh, who settled very early in North Syria form a part; the Djuhaina, occupying the valley of the Wādī Idam in the Ḥidjāz and the kindred ʿOdhra, who lived in their vicinity and are famous for their depth of passion; the Kalb, inhabiting the Syrian desert; and the Balī who settled in the Northern Ḥidjāz. In ʿOmar's time large parties of the Balī and the Djuhaina were moved to Egypt.

The North Arabian tribes are called Nizārites or Maʿadditos after their supposed ancestor. The latter name is found in Procopius as the designation of a group of tribes, the former occurs in an inscription of 328 A. D., discovered by Dussaud at al-Nemāra in the vicinity of the Ṣafā (to the east of the Ḥawrān). This inscription says of Marʾ al-Kais b. ʿAmr, 'King of all Arabs' that he ruled the Asad and the Nizār (Lidzbarski in the *Ephemeris*, ii. 34). Not counting the group of the Iyādh, once powerful but already lost to sight before Islām, they are divided into two great groups: the Rabīʿa and the Muḍar. The dissolution of these groups had taken place long before Islam. The two tribes which had the upper hand, emigrated to Mesopotamia, where the two provinces of Diyār Rabīʿa on the Tigris and of Diyār Muḍar on the Euphrates preserved their names for a very long time. These provinces were afterwards occupied by the Taghlib and the Namir.

To the Rabīʿa-group belong the ʿAnaza and the closely related Asad who lived near each other to the north of the Wādī Rumma. The pilgrims' road from Baṣra to Medina crossed their territory. The ʿAnaza, who are said to have driven the Ḳuḍāʿa from Arabia in the remote past here kept the supremacy. In the second half of the xvii. century they occupied or subjugated nearly the whole of the Syrian desert. To them belong the Banū Sakhr in the North-East and the Ruala in the West. Asad are still found in ʿIrāḳ. Closely related to them are the Wāʾil divided into two important groups: the Bekr and the Taghlib; the fratricidal conflict between these two after the murder of Kulaib, who was in authority over the Wāʾil, became fatal for both. Both migrated to Mesopotamia with the kindred tribe of Namir: the Bekr settled in the northern part in the province called after them Diyār Bekr. The capital Āmid still bears that name. The Taghlib and the Namir occupied the southern part. They were Christians and therefore had to pay the double poor-tax in Islām. To the Bekr b. Wāʾil belong among others the Banū Ḥanīfa, lords of the Yamāma and the neighbouring Shaibān. Also the ʿAbd al-Ḳais, who lived in Baḥrain are considered to belong to the Rabīʿa-group.

The first place among the Muḍar-group was originally held by the Ḳais, who were of such importance that very often all non-Yemenite Arabs were called Ḳaisites. At present it is only the name of a small, half-nomadic tribe on the Euphrates which has to pay the khōwa (s. a.) to the Shammar. To the east of them live the ʿAdwān, also under the authority of the Shammar; they formerly lived near the Fahm and the Hudhail in south Ḥidjāz. To the Ḳais-group belong further the Hawāzin and the Sulaim who possessed the western part of Nedjd to the east of Medina and Mekka. At the beginning of the iii. (xi.) century the Sulaim and their neighbours the Hilāl (reckoned to belong to the Hawāzin) became so troublesome on account of their large numbers, that they grew dangerous to the safety of the holy cities and had to be forcibly subdued. They decided to emigrate to Egypt; where at first they settled in the Nile-delta, then they were obliged to move to Upper-Egypt and in 444 they were persuaded by the promise of a camel and of a dīnār each to cross the Nile and to emigrate to North-Africa. Most Arab badawīs in North-Africa claim descent from these two groups. The Hilāl still live in popular stories, even in Central-Arabia. Formerly they belonged to the tribal-group of ʿĀmir b. Ṣaʿṣaʿa, to which also the Kilāb, the Ḳushair and the ʿUḳail (ʿAgēl) were considered to belong. The last mentioned tribe is still of importance in Nadjd. They supply the greater part of the camels and the escorts for caravans from Syria to Baghdād. A branch of them are the Muntafiḳ, who were already powerful in the iv. (x.) century and still remain so. Their territory lies on lower Euphrates.

The Ḳais-group also comprises the Ghaṭafān. Their two principal tribes the ʿAbs and the Dhubyān are well-known through the fratricidal war between them caused by two race-horses and called after them 'the war of Dāḥis and Ghabrāʾ'. The principal branch of the Dhubyān were the Fazāra. To the Muḍar belonged further the Ḍabba and the Tamīm who occupied the regions in Nadjd which had been formerly inhabited by Bekr and Taghlib. The Tamīm are a large tribe and have spread in all directions. True badawīs of this name are no longer to be found in Arabia (though there are some on the lower Tigris), yet a large number of the inhabitants of the Nadjd towns consider themselves to belong to this tribe. The large badawī-tribes in Nadjd, all of them Muḍarites, are now the Ḥarb (Momina) to the east of the Ḥidjāz dominating the road between the two holy cities; to the east of them, separated by the wādī Rumma, the powerful tribe of the ʿOtaiba; and to the east of these the Muṭair. The Banū Khālid, east of the Yamāma, are also Muḍarites; their importance has diminished under the rule of the Wahhābīs.

Finally there belong to Muḍar the Hudhail who from ancient times have inhabited the mountains in the neighbourhood of Mekka; and the Kināna, once a powerful group in South Ḥidjāz to which the Ḳoraish, the old ruling tribe belong. At present this famous name is only borne by a small tribe of shepherds in the territory of Mekka, the only one among the nomadic tribes skilled in the art of cheese-making.

The conquests of Islām have caused considerable changes in the badawī-world. The badawīs provided very strong contingents for the armies, and when in ʿIrāḳ and in Syria large military stations had first been founded, new centres were formed for these bases in the East and in the West to which other contingents of badawīs were moved. On account of this some tribes were so much weakened that they had to join others and lost their independence in Arabia itself.

Between the Rabīʿa- and the Muḍar-tribes jealousy has existed for ages to

such a degree that the former often allied themselves with Yemenite tribes against the Muḍarites.

The **Huteim** who live scattered in the Ḥidjāz and Nadjd are **not counted among the true Arabs**. They are excellent huntsmen; their herds consist of small cattle; they also often do smiths' work. Related to them are the Sherārāt in the south-west of the Syrian desert who breed riding-camels. Still further removed are the **Ṣulaib** (Ṣlēb), "the gipsies of the desert", really tinkers but none the less excellent hunters (vid. the passages quoted by Oppenheim, *l. c.* ii. 118, N°. 3). They ride on asses only. In ancient Arabic literature they do not seem to be mentioned at all.

The **noble badawī scorns handicraft**. **Cattle-rearing, trading, hunting** and **robbery** are in his opinion **the only occupations worthy of men**. **Agriculture** and **navigation** too he regards as **beneath his notice**. The Azd were often scornfully called 'sailors' by the Tamīm, because their kindred in 'Omān were navigators; the Koraish looked down on the Medinites because they tilled the soil. Their **principal food** is **milk**. From this they make by evaporation a kind of curd which becomes palatable again when mixed with water and is often carried on journeys. It is called *aḳiṭ* (now *biḳḳi*), *marīs* or *maḍīr*. Butter is generally clarified and kept in this form. Generally speaking the badawīs do not know the art of cheese-making. Meat is not every-day food. Except on the not infrequent occasions when they are obliged to slaughter them, they kill their cattle for festive occasions and for guests only. But as a well-to-do badawī-shaikh has guests very often, his family eats meat nearly every day. Butter, wool and stuffs woven from camel's- or goat's hair, and — most important, — these animals themselves and horses (where they are reared), are brought to market by the badawī and he receives in exchange dates, corn, clothes and household utensils. In pre-islamic times many a rich shaikh obtained the expensive, heady wine in this way; now coffee and tobacco have become indispensable to all badawīs. Even these most conservative of all people have to obey the spirit of the time. Thus bows and arrows have been replaced everywhere by the rifle. So long as the Wahhābīs were in authority smoking was tolerated in none of the regions under their influence.

The badawīs have taken part in **commerce on a large scale** only to the extent of providing **the camels for the caravans** and **guarding** these against hostile attacks for which protection they received black-mail (*khifāra*). Even now powerful badawīs living along the high roads receive 'purses' (*ṣurra*) from the Government. Townspeople travelling through the territory of a badawī-tribe must establish with them the bond of 'brotherhood' (*khāwa*, shortened for *ukhūwa*), which they buy for money. The weaker tribes in want of protection have also to pay for this 'brotherhood'.

Hunting with greyhounds (*salūḳī*) and falcons (*ṣaḳr*) is much indulged in. The big game consists of gazelles, mountain-goats, wild cattle, a kind of antelope with heavy, straight horns, in all probability the prototype of the fabulous 'unicorn' — and wild asses. The chase of the latter, the fleetest runners of all, is the principal sport of the Arabs. 'The chase of the wild ass is the sum of every kind of chase'. Of small game there are a few kinds of partridges, hares, jerboas (*yarbūʿ*) and the big lizard called *ḍabb*. Ostriches are shot especially by the Huteim and the Ṣulaib. These birds are gradually disappearing, however, in the North-Arabian desert.

Raids (*ghazw*) play an important part in the life of the badawīs. A poet of the earliest time of the Umaiyads (al-Ḳuṭāmī) says: 'we attack the camp of the Ḍibāb (Muḍarites), and then there happens to them what does happen and sometimes we come down on the Bekr (Ibn Wāʾil), our brothers, if we find no one but our brothers.' So it has always been and so it is still. To rob camels and often wives and children as well from any tribe, best of all from a hostile one, and to spill as little blood as possible that no bloodfeud may be created, is the badawī's ideal life. The women and children can be ransomed, the booty is divided according to fixed rules. The shaikh who has to keep up the tribe's dignity and must have the necessary means for this receives a large share. On the other hand the loss is borne by all the men of the plundered camp and the shaikh is expected to contribute handsomely. It is chiefly for these raids that horses are reared. Those who take part ride camels; the horses are only mounted in the fight and when retreating. A good horse is its master's pride but it is a very great expense, if only from the fact that he must always have plenty of water for his horse. The filibustering expeditions are altogether one of the chief causes of the impoverishment of the people of the desert. The place of destination is often at a great distance and the journey thither very fatiguing for men and beast. When they have attained their end they have to march home post-haste in order to escape the pursuing enemies; in this way not only the raiders but also the plundered people and animals suffer a good deal. If the pursuers succeed in winning back the prey they still suffer losses through the forced marches to which their animals are exposed. And the fortunate robbers are threatened by the same danger from some other direction. A weak tribe therefore is obliged to join a more powerful one. When men are in such a raid the consequences may be disastrous because if no blood-money is paid or accepted a blood-feud ensues which may bring about the fall of a whole tribe.

The **Saiyid** (Lord) or **Shaikh** (senior, though often a young man) of the tribe is really only primus inter pares, and in theory his dignity is not hereditary. As long, however, as his sons excel through ability and wealth it generally remains in the family. As a rule he is at the same time Emīr (commander in chief) or Ḳāʾid (Dux) in time of war. The latter is now generally called **ʿaḳīd**, while the title of Emīr belongs to the ruler of a province, as for instance to the prince of the Shammar. Beside the Shaikh stands the **Judge**, al-Ḳāḍī, whose dignity is usually hereditary. Justice is administered according to the law of custom (*ʿāda*, *ʿurf*), which agrees with Muslim law to the extent in which the latter is founded on the former; but as the Shaikh only gives advice and never commands, so the judge's sentence involves only a moral obligation.

The solidarity of the tribe and the responsibility of the whole tribe for every single member obliges the leaders to exercise some sort of **police-**

supervision. If a member commits a deed of which the tribe refuses to bear the consequences or offends his own tribe, he is expelled and is a lost man if no other tribe will give him protection. The feeling of solidarity and the duty to uphold and promote the interests of the tribe with all one's strength is called *ʿaṣabiya*. Unfortunately this often degenerates into blind party-spirit. The badawis are the most matter-of-fact and the most realistic people one can imagine. In the matter of religion they are not only lukewarm but indifferent, they have little faith. Where the Wahhābīs have had some influence, however, the commandments of Islām are at least outwardly obeyed, as for instance now in Nadjd. Their gloomy fanaticism however has spoiled the character of many nomads. — The settled Arabs on the other hand are religious and are easily led on to fanaticism.

Most badawis have only one wife. As a rule they only take another when the first is barren and they do not want to divorce her. The Shaikhs often have three or four wives, sometimes for political reasons, in order to be related to an influential family, sometimes, but more rarely, to give a home to a woman. Often the girls are only twelve years old when they marry. For this reason and because the women nurse their children for two or three years, they soon grow old. Besides they have much work to do. They have to provide fuel and water, to milk the herds and make butter, usually to cook the food and to weave tent-coverings, blankets and clothes. The wealthier women have all this done by the servants. Yet the position of the badawi-woman is much better than that of the woman of the towns. She enjoys much more freedom and is generally respected. The noble maiden (*karīma*) of the tribe is very dear to all the people; the matrons often have a considerable influence in the decision of matters of importance. But a woman hardly ever enters the men's division of the tent. The veil is not generally worn. The bringing up of the children is very simple, but even in the roughest tribes they are accustomed to obedience to the parents and respect for grown-up people.

The badawis possess, according to the unanimous testimony of all travellers a natural dignity. They are courteous and well-mannered and as a rule generous. That is the kernel of the manly excellence, which the Arabs call *murūwa* (virtus). They are keen on winning booty but theft is a crime in their eyes. They are hospitable, though often only for the reason that they wish their guests to repeat their praises. For to be a person of note, to be praised everywhere as noble, generous and brave, to be feared and admired, is the highest ideal of the aristocratic Arab.

The vicinity of the badawis is a constant danger for all states roundabout the desert. These states have to be strong so that the badawis may not venture to enter their territory without permission. If not, they have to buy their peace and must even thus suffer the badawis to cross the frontiers and devastate their country. In such cases wide stretches of cultivated land become again pasture-lands, as for instance at present a great part of ʿIrāḳ and even regions beyond the Tigris. Or again Arab kingdoms arise on the frontiers, which reach far into the cultivated states, like Palmyra and Hathra in antiquity, the kingdom of the Ghassānids in Syria. And in ʿIrāḳ that of the Lakhmids not long before Islām. In inner Arabia the Wahhābite rule has established a fairly good condition of order, and the heir of their power, the prince of the Shammar in Ḥāʾil has considerable influence over the badawis in Nadjd and in the southern part of the Syrian desert. In the frontier districts the badawis usually become half-nomadic, shepherds or even rearers of cattle and subsequently take to tilling the soil. The reverse process, that farmers take to a nomadic life, happens only very rarely. Life in the desert is much too hard for them and involves too much privation. Only the badawis trained to it by nature can bear it.

The feeling of solidarity with other tribes is usually but a faint one. Nor is there always harmony within the tribe. This makes it easy to the possessor of the authority at any given time to subdue and conquer the otherwise intractable tribes one by one. Owing to the same cause they hardly ever join forces for a common enterprise. Acknowledged evils that might easily be removed by concerted action, remain in existence for years while the people resign themselves to the will of God.

The Arab kitchen is very simple. Formerly the daily food was a mixture of flour or roasted or pounded corn and dates (*sawīḳ*) and water or milk. At present it is *burghūl* (the name is Persian), pounded wheat or Indian corn steamed over water; for the benefit of honoured guests butter, melted lard or sour milk is poured over it and sometimes cooked meat is put on top. Bread was still rare in Muḥammad's time. Since the famine in the Ḥidjāz, however, in 18 (639), wheat was imported from Egypt. Bread is baked in very thin flat cakes. Milk is drunk a good deal and for refreshment they use sour milk (*laban*). Dates form the principal food for many Arabs. In time of need the badawī eats whatever he can find, not only the big lizards (*ḍabb*) and jerboas (*yarbūʿ*), but even snakes, *wabar* (a kind of big rat, according to others more like a rabbit), wolves and foxes, as well as many kinds of plants and roots.

Their clothes too are simple. Those who are not well off wear a shirt only (*thawb*) with a belt and an upper-garment (*ʿabā* or *ʿabāya*). The wealthier people wear over the shirt a kind of kaftan and in winter over this a lined jacket, in place of which others wear a sheepskin coat. In place of the former turban, the *kaffiya* (at present generally pronounced *keffiye*) has become the general head-wear; it is a piece of cloth held together by a black ribbon (*ʿiḳāl*). Trousers are not used. Most people do without foot-wear, only the well-to-do wear boots and slippers.

The clothes are not washed as water is generally scarce. Owing to this same reason their bodies too have to do without regular washing. For bathing the children and for their own hair they have to use camel-urine. Wherever the badawī comes across a pool of water he takes a bath, but as this is a rare event, Islām has substituted in the case of the desert-people rubbing with sand for the ritual ablutions.

Each tribe has for its camels a special mark (*wasm*) by which every badawī recognises them. It is often painted on the rocks to indicate the

frontiers of a tribe's territory. The Arabs who can write like to scribble their names near it with or without additional remarks etc. Formerly they also painted pictures, which do not give us a high opinion, however, of the artistic talents of the desert-people. Nor have they reached a high state of development in architecture. They are much more proficient in ornamentation, and have a turn for music but Islām has not favoured this art. They stand first and foremost, however, as masters of speech.

For the name Saracen, by which the Arabs were known in Palestine and in the West in general, see s.v. (M. J. DE GOEJE).

c. HISTORY.

ARABIA BEFORE ISLĀM.

All that we know of Arabia from pre-Muslim and, further back still, from pre-Christian times, falls naturally into two main divisions, one purely historical and the other dealing rather with civilisation and religion.

Our knowledge of the history we owe partly to inscriptions found in the country, partly to contemporary notices in the literatures and monuments of other nations (Babylonians and Assyrians, Egyptians, Hebrews, Greeks and Romans) partly also (for the centuries immediately preceding Muḥammed) to early Islāmic tradition. If our sources were more complete and especially if the chronology were more certain, we could perhaps draw a picture more or less free from gaps from about 1000 B. C. onwards (or even earlier), but, as it is, we do not even know for certain how far back we can carry the date of the oldest South Arabian inscriptions.

As early as the 3rd millennium B. C. the old Babylonian inscriptions mention a King Maniam (also in the fuller form Mannu-dannu) of Magan or East Arabia; there is much to be said for the view that Magan was only a Sumerian rendering of an Arabic Ma'ān, and that from this centre was founded (at a date unknown to us) the South Arabian kingdom of Ma'ān (later vocalisation Ma'īn) or the Minaean state, which perhaps in the beginning embraced the whole of South Arabia (including Ḳatabān and Ḥaḍramawt). In addition a district named Melukh is mentioned as lying farther off, probably covering Central and North West Arabia, from which as well as from Magan the Sumerians e. g. Gudea of Sirgulla (about 2350 B. C.) imported a large quantity of products (wood, stone and metals) for their temples. Hubert Grimme has given an explanation free from objection of this name Melukh from the Old Testament 'Amaleḳ (broken plural of a singular 'Amlūḳ) with a prosthetic vowel hardened as often in Arabic to 'ain and with the rendering (for which analogies may also be found) of ḳāf by an aspirate sounding like ghain in Sumerian: thus there would really be epigraphic sources for the existence of this 'first of the nations' (Num. xxiv. 20) as early as the second half of the 3rd millennium B. C.

The South Arabian inscriptions begin at the least from about 800 B. C., but very probably several centuries earlier. The more exact understanding of these — not merely as regards the grammar but particularly the subject-matter, has not only laid the foundation for the history of Arabia before Islām, but has actually opened up a new era for semitic archaeology. Our largest acquisition of this epigraphic material, which was very scanty up to the middle of the last century (now we have about 2000 inscriptions) we owe to the scientific explorers Joseph Halévy and Eduard Glaser. These inscriptions fall into two large dialectical groups, the so-called Minaean and the Sabaean. To the first, the Minaean group, belong not only the numerous texts dating from the period of the Kings of Ma'ān (for the name see above), whose capitals Ḳarnāwu and Yathil lay in the South Arabian Djawf, north east of Ṣan'ā', and north west of Ma'rib respectively, but also the majority of the Ḳatabanian royal inscriptions first made known by Glaser, and the few Ḥaḍramawtic inscriptions that have been found up to the present. Future journeys of exploration should start with the latter, for it is known by report that hundreds of inscriptions exist in Shabwat, the hitherto unvisited ancient capital of Ḥaḍramawt. The Sabaean inscriptions on the other hand begin in the period of the so-called Priest-Kings (*mkrb* i. e. *makrāb* or *mukarrib* or *mukarrab*) of Saba', about 700—500 B. C. (this is the old Sabaean epoch, in which may be included the first period of monarchical rule); from about 500—115 B. C. the official title "King of Saba'" is borne by the Princes ruling in Ma'rib, besides whom the only kings still existing were those of Ḳatabān and Ḥaḍramawt. Then a new element appeared, the Himyarites, who probably first made themselves masters of Ḳatabān and then established themselves also in Ma'rib, and whose rulers bore the title "King of Saba' and (of) Dhū Raidān" (after the mountain Raidān near the Ḳatabanian capital Tamna' south east of Ma'rib); it is fairly certain that the era of 115 B. C. used in later inscriptions dates from this critical point, which is politically so significant. (If the era — as e. g. Inschr. Gl. 799 = Langer 7, line 4 — is named after a certain Mabḥūḍ bin Abḥaḍ, this is probably the archon or eponymus then holding office, for the Sabaeans, like the Assyrians, used this mode of reckoning the years). The title mentioned above was amplified about 300 A. D. when the independence of Ḥaḍramawt came to an end, and henceforth ran 'King of Saba' and Dhū Raidān and Ḥaḍramawt and Yamānat (incense-coast?)', to which a further addition was soon made: 'and of their Arabs in the mountains and in the Tihāmat'. After a short Ethiopian invasion occurring in the middle of the iv. century A. D. these native kings with the long titles held their position without a break from about 375—525 A. D. when their place was taken by the Axumites. In this period too, we still have long South Arabian inscriptions, especially the long, dated inscription dealing with the break of the Dam at Ma'rib; it has been discovered and published by Glaser and belongs to the years 657 and 658 of the above-mentioned era (that is 542 and 543 A. D.). This inscription begins: "In the power and grace and mercy of the Merciful (*Raḥmānān*) and his Messiah and of the Holy Spirit, this memorial stone was inscribed by Abraha, the governor of the Ge'ezite (i. e. Axumite) King Ramhis Zibyamān (or Za-bi-Yaman?), the King of Saba' and Dhū Raidān and Ḥaḍramawt and Yamānat and their Arabs in the high land and the low land'; it

mentions among other things embassies of the King of Rûm and of the King of Fârs, and of Mudhdhirân (= al-Mundhir) and Hârith ben Gabalat and of Abû Karib ben Gabalat, so that thus the rival powers of the period shortly before Muhammed, Byzantium and Persia and likewise the outposts planted by them on the Arabian frontier, the kingdom of Hira (al-Mundhir) and that of Ghassân (in the land east of the Jordân), are fully represented here in the distant South, with their interests and intrigues. — An exceedingly interesting fragment in the Ottoman Museum O. M. 281, concludes: 'In the name of the Merciful and his son Krestos the victorious (*ghâlibân*) [and of the Holy Ghost]'; it mentions a King of Saba' Sumaifa' Ashwa' and a Samlakân (sic) Ela-Abheha (probably a mistake of the scribe for Ela-Asbeha), King of Habashat (Habesh), with which compare the Hisn-Ghurâb inscription, dating from 525 A. D. (There we have Sharahbeel Yakmul and Ma'di-Karibân Ya'fur as sons of Sumaifa' Ashwa', the Ἐσιμιφαῖος of Procopius).

The Ethiopian rule, during which the above-mentioned Abraha not merely defeated and deposed the last King of the Himyarites, Dhû Nuwâs (cf. also Inscr. Hal. 63, 1), but later marched with his famous elephant right up to Mekka, was followed about 570 A. D. by the conquest of Yemen by the Persians under Khosraw I, who installed a certain Wahriz as governor. But finally Yemen also succumbed to the conquering power of Islâm. The last Persian governor, whom Khosraw II Parwêz had appointed, was Bâdhân, who, after Khosraws death (628 A. D.) accepted Islâm and recognized Muhammed as supreme lord.

It is not practicable to place the beginning of the Sabaean kingdom much later than 700 B. C. since otherwise we cannot possibly find room for the many names of kings already authenticated (from a still very incomplete knowledge of the epigraphic material which once undoubtedly existed); and though frequently fathers and sons or brothers ruled at the same time, yet we can establish from the inscriptions a large number of genealogical series (often of grandfather, father, son and grandson), and historical experience of all periods, but particularly of antiquity, teaches us that such a series of four members occupies on the average a century. Consequently the above estimates (Old Sabaean epoch 700—500 B. C. etc.) are rather to be regarded as minimum dates, especially (and this applies in particular to the two following epochs, the Kings of Saba' and the Kings of Saba' and Dhû Raidân) as we are still far from knowing all the kings and therefore up to the present can establish only a more or less defective sequence.

Now the important question arises, in what chronological relation do the Minaean royal inscriptions, for which at least 500 years are to be assumed, stand to the Sabaean. While it was regarded as obvious at an earlier period (e.g. by D. H. Müller of Vienna) that they were contemporary, Eduard Glaser, who is followed especially by Hugo Winckler and the writer of these lines, has championed, as is well-known, the theory that the rule of the Minaean kings preceded that of the Sabaean (and also that of the so called Priest-Kings), an hypothesis which would naturally presuppose a much earlier date for the Minaean (1200—700 B. C. at the least). Lately, however, the hypothesis of contemporaneity has been again defended by several scholars, particularly by the Arabist Martin Hartmann and the historian Eduard Meyer; while Hartmann, it is true, now admits that the golden age of the Minaean kingkom preceded that of the Sabaean he holds nevertheless that the oldest Minaean and Sabaean inscriptions are contemporary, and assigns the important inscription Gl. 1155 = Hal. 535, in which mention is made of the incense trade of the Minaeans with Egypt, A'shûr and 'Ibr Naharân (resp. Gaza), as also of a war between Egypt and a people named *Mdhy*, to the year 525 B. C., identifying these *Mdhy* with the Medes (= Persians) under Cambyses. It is far more probable however, that in *Mdhy* Midian lies concealed, and finally also the name Menthiyu, which was that given to the Beduin of Sinai by the ancient Egyptians; for A'shûr also (plural of a singular *Ashr*) and 'Ibr-Naharân we have names (viz. Ashûr, abbreviated to Shûr, in the north of the peninsula of Sinai and 'Ibr-Naharân = region of the Nahar or of the Wâdi of Gaza, which is still called Nahr at the present day), more suitable than Assyria, which was no longer in existence in 525, and the Persian province Ebir-Nâri = Syria and Palestine.

At the most it may be admitted that the oldest Sabaean inscriptions may have been contemporary with the latest Minaean. In point of fact we find in the groups which, also on other grounds I regard as the latest preserved to us (*d* and *e* of my *Südarab. Chrest.*) allusions to the Sabaeans already settled in Yemen, so Hal. 257, where after the Minaean gods, there also occur 'all Gods of the sacred river districts (*ashʿâb*) Dhû Ilim, (Dhû) Shaymnim, (Dhû) Hablim and (Dhû) Humrim', which elsewhere in the Old Sabaean inscriptions are mentioned as 'Gaww' in the closest connection with Saba''; and similarly in Hal. 485 "and all Deities and subordinate Gods (*thayûmat*) and Kings (this points to a number of petty princes) and tribes (*ashʿûb*) of Saba' and Gaww'. Hence the Minaean kings referred to, Khâli-kariba Sadak and Yithi'-il Riyâm, father of Tubbi'-kariba, may well have been contemporaries of the oldest Sabaean Priest-Kings (and thus about 700—650 at the lowest estimate). In the above-mentioned old Minaean inscription, Gl. 1155, on the other hand, the Sabaeans (in conjunction with another tribe Khawlân) clearly appear as a horde of nomads roaming over the country north of Yemen, who were accustomed to raid the Minaean caravans on the high-road between Ragmat (in Nedjrân) and Ma'ân (near Petra; cf. also Job 1, 15 were such attacks are carried back to an early period). The Assyrian royal inscriptions also make mention, shortly before 700 B. C. of a Prince Yit'i-amara of Saba' (the name Yithi'i-amara occurs, especially in the oldest Sabaean epoch, as that of several Priest-Kings) who, as appears from the context, obviously dwelt in Central-Arabia, just as the Queen of Saba', whom tradition places in the reign of Solomon, denotes rather a North Arabian princess (cf. the Queens of Aribi, i. e. probably the North Arabian Djawf, in the inscriptions of Tiglatpilesar and Sargon).

Now it is of the greatest importance that the Minaean kings, for the protection of their incense

trade possessed a colony in the land of Midian which is called Muṣrān in the inscriptions (e.g. in Gl. 1155) a fact directly verified by the discovery of Minaean inscriptions in al-ʿUlā (el-ʿÖla) by Euting. After the collapse of the Minaean kingdom (about 650 B.C.) the Sabaeans were probably the heirs of this Midianitic colony of the Minaeans, as we may infer from the passages in the O. T., Jer. vi. 20 (about 640 B.C.) Ezek. xxvii. 22 and xxxviii. 13 (about 580) and Is. lx. 6 (about 500?). But already other powers made themselves felt about this period in North West Arabia, such as in all probability Nebuchadnezzar (606—562 B.C.) cf. Jer. xxviii—xxxiii, which also explains the fact that the mad Nabunid was sent to Taimāʾ, where the existence of Aramaic-Babylonian influence at this period is independently attested by the Taimāʾ — Stele discovered by Huber and Euting. The 'King of the Arabs' (Herod. 3. 4) mentioned by Herodotus in 525 B.C. is very probably already a king of the Liḥyānites whose capital Agra (Hagar) on the Gulf of Akabah is mentioned by Pliny, and whose inscriptions, pointing both by their form and contents to the Persian period, were discovered by Euting in el-ʿÖla along with Minaean and Nabataean. Every thing is in favour of the view that these Liḥyānites were the successors in North West Arabia of the Minaeo-Sabaeans and the predecessors of the Nabataeans, and that they are therefore to be placed about 500—300 B.C. As a matter of fact, as early as 312 Antigonus wages war with the Nabataeans, who at that time were probably under Egyptian suzerainty, and from the ii. century onwards the names of the Nabataean kings are known to us almost without a break until at length in 106 A. D. this kingdom was brought to an end (by the Romans). The Nabataean capital was Petra, but Midian also belonged to their domain, the land of the Salaimites or Salamaeans (cf. also the Salamite i.e. Sulaimite woman in the Song of Songs). In this epoch falls the unsuccessful expedition of Aelius Gallus (under Augustus) to South Arabia. While the Ṣafāitic inscriptions (about 100 A. D.) found in the Ḥawrān like the earlier Liḥyānite fragments and so called proto-Arabian or Thamūdic scribblings represent by-forms of the South Arabian alphabet, the Nabataean cursive script developed out of the Aramaic branch of the Canaanite script, and the Arabic directly from the Nabataean in the iii. century A. D. The oldest Arabic inscription yet known is that of Nemāra in the eastern Ḥawrān, dated in the year 223 of the era of Boṣrā, i.e. 328 A. D. and set up as a memorial on the tomb of a King Imruʾ al-Ḳais, son of ʿAmr 'King of all the Arabs who wear headbands and King of the two Asad (i. e. Asad and Taiʾ in Central Arabia, near Djebel Shammar) and of Nizār (i.e. N. W. Arabia)'. He extended his conquests, as the inscription further announces, as far as 'Nadjrān, the city of Shammar' (i.e. the South Arabian King Shammar Yuharʿish) and is probably identical with the King of Ḥīra of the same name, whom Arabian tradition places about 250—330 A. D. We here reach the so called Lakhmid kings of ancient Arabic poetry, who were installed by the Persians on the old Babylonian-Arabian frontier as outposts against the predatory incursions of the Arabs, just as Byzantium had posted in the land east of Jordan the Djafnid princes of the family of Ghassān, who had immigrated from South Arabia, in order to protect the frontier and hold the Arabs (and behind them the Persians) in check [s. v.]. As regards both dynasties, but especially the Lakhmids, we have more exact information from Arabian tradition, particularly for the vi. century and onwards until the overthrow of the kingdom of the Sāsānids and the victory of Islām, and we even possess a series of songs and fragments of songs by different court poets of the Kings of Ḥīra.

This covers in brief outline what we know of the political history of the pre-Islāmic Arabs. But the great importance of the Arabs for the ancient East lies far more in the domain of civilisation and religion; the two catchwords incense and moon-worship give the best indication of the direction in which this nation, otherwise so inaccessible and secluded, influenced its nearer and remoter neighbours, especially the Hebrews and the Greeks.

First of all, as regards the religion of the South Arabians, as we find it in their inscriptions, it is a strongly marked star-worship, in which the cult of the moon-god, conceived as masculine, takes complete precedence of that of the sun, which is conceived as feminine. This is shown in the clearest fashion by the stereotyped series of gods (Minaean: ʿAthtar, Wadd, Nakruh, Shams; Ḥaḍramawtic: ʿAthtar, Sīn, Hōl, Shams; Kataḃānian: ʿAthtar, ʿAmm, Anbai, Shams; Sabaean: ʿAthtar, Hawbas, Almāḳu-hū, Shams); here we find throughout, *a*: ʿAthtar (the planet Venus conceived as masculine, Babylonian Ishtar, as symbol of the sky) the god of the heavens, mentioned first; *b*: Wadd or, as the case may be, Sīn, ʿAmm or Hawbas the real chief God, i. e. the moon (cf. particularly Sīn = Babylonian Sin); *c*: Nakruh (Babylonian Makrū = the planet Saturn or Mars), or Hōl (Phoenix, who brings the incense to foreign altars), Anbai (messenger of the gods, Nebo) or Almāḳu-hū ("his written signs" i.e. the stars, cf. similarly Zebaoth), his (the moon's) servant or messenger, and finally *d*: Shams (or in certain cases some epithet denoting her e. g. Dhāt Naḥīk "she of the temple N"), the daughter of the moongod, to whom women may have appealed by preference and who therefore stands at the end of the whole enumeration. Besides these, a certain part was played by a great Mother-goddess, the mother and consort of the moon-god, conceived as a personified lunar station, the Minaean Athīrat (Ashera, Ashirtu), who was called Ḥarimtu among the Sabaeans and who was also in all probability universally known as Ilāt (e. g. as a component part in names of persons, also in the shortened form Lāt). We may also mention various lesser ʿAthtar deities (confined later to the part played by Venus as morning or evening star), and among the West Sabaeans, Taʾlab, a god of the bow who also bears merely the epithet Dhū-Samawī "lord of the heavens" (cf. canaan. and aram. Baʿal Shamayim), and to whom especially camels (*ibil*) are sacred (hence in Midian but probably also in South Arabia Habal or Hubal) etc. It is a particularly favourite mode of thought to conceive the two chief aspects of the moon (waxing and waning moon) as twin deities, in which connection sometimes the one and sometimes the other phase is specially favoured according to the locality; thus

ʿAmm (the paternal uncle) forms a complement to the "father" Wadd or they are set in opposition to one another as Wadd (friend) and Nahsuh (the evil Saturn or Mars transferred to the evil i. e. the waning moon) or as Ruḍwu-Lāt (inferred from Herodotus' Orotalt) and ʿAziz-Lāt (for which there is epigraphic evidence) i. e. favourite of Lāt and enemy (properly, enraged against) of Lāt, or as the Hebrew Habel (camelherd and shepherd, cf. Hubal) and Ḳain (smith and singer, cf. the Sabaean divine name Ḳainān) in the primeval allegory of the nomad and husbandman Gen. iv, or as Wankh (here waxing "moon") and Harimān (hinderer, averter) in a South Arabian (Ḳatabānian) inscription.

We may note incidentally that the whole West-Semitic system of names, which we find fully elaborated as early as about 2000 B. C. in personal names transmitted to us in the cuneiform inscriptions, was first elucidated by the correct interpretation of the South Arabian names of deities, thus in particular in the personal names beginning with *abi-* and *ʿammi-* ("my father" and "my uncle"), this element denotes the waxing and waning moon (cf. above Wadd Ab and ʿAmm) as the special protecting deity of the bearer of the name.

In North West Arabia from Mekka onwards to Petra and further onwards to the Syrian desert (Palmyra) and the Ḥawrān, the same ideas prevailed, partly even appearing under the old names partly with new designations. Here we have especially to do with the cults of Mekka and of the whole Ḥidjāz shortly before Muhammed (al-Lāt and Hubal, in certain cases also al-Lāt and Wadd, in addition al-ʿUzzā, a feminine form of the above mentioned ʿAziz-Lāt, the goddess of death Manāt, a god Ruḍā and others) and at an earlier period the still more important cults of the Nabataeans. Among the latter also we find the moon divided into two twin deities: Dhū Sharā ("He of the mountain"; cf. Arabic Sharā, the Edomitic mountain region) and his consort Khurīshā (the sun, Heb. kheres); the former especially in Petra (Dionysos) and Habal (or Hubal) and his consort Manawat; further also the "Mother-goddess" Ilāt (especially the goddess of ʿAmmi-nad, in which we may perhaps recognize the sulamite region of ʿAmmi-Nadab known from the Song of Songs) and a god Aʿarrā (i. e. Arab. al-Agharra, 'he with the white mark on his forehead', originally perhaps only an epithet of Dusares). The knowledge (so important for purposes of interpretation) of the meaning of *mitlah* ('consort'; cf. sath. *amata*, to marry) and of *ḳain* ('husband') we owe to the penetration of Hugo Winckler.

For everything else the reader must be referred to the literature on the subject; the most important books are mentioned below. But we may point out in conclusion that in all probability the Greeks borrowed from Arabia at an early period, through South Arabian incense merchants (cf. Adramyttion in Lycia and in the Troas, i. e. 'the Ḥaḍramawtic') their Apollo and his mother Leto (Lato, Latin form Latona) as also Dionysos (or Herakles, i. e. according to Usener the 'little Heros') and Hermes, in the same way as (according to Praetorius) they took their additional letters Phi, Chi and Psi from the South Arabian alphabet (instead of from the Canaanitic, as the remainder); the identity of Leto and the divine mother Lāt had already been put forward as a conjecture by the famous Arabist W. Robertson Smith as early as the year 1887, that of Hubal and Habel (Gen. 4) before him by Freytag (*Einl. in das Studium der arab. Sprache*, Bonn 1861, p. 345). This would seem to prove definitively that south Arabian civilisation with its gods, incense altars, inscriptions, forts and castles, must have been in a flourishing condition as early as the beginning of the first millennium B.C.

For the above cf. J. H. Mordtmann and D. H. Müller, *Sabäische Denkmäler* (Vienna 1883); D. H. Müller, *Burgen und Schlösser* (Vienna, 1879 and 1881); D. H. Müller, *Epigraphische Denkmäler aus Arabien* (Vienna 1889); J. Halévy, *Études Sabéennes* (Paris, 1872); Ed. Glaser, *Skizze der Gesch. u. Geogr. Arabiens*, Vol. II. (Berlin 1890; do., *Zwei Inschriften über den Dammbruch von Marib* (Berlin, 1897); do., *Altjemenische Nachrichten* (Munich, 1906); F. Hommel, *Südarab. Chrestomathie* (Munich, 1893), containing pp. 63—88 complete bibliography up to 1892 (continued up to 1907 by Otto Weber in his *Studien zur südarab. Altertumskunde*, iii; (Berlin, 1908) with the first Minaeo-Sabaean Grammar; do., *Aufsätze und Abhandlungen* (Munich, 1892—1901, three parts); do., *Der Gestirndienst der alten Araber* (Munich, 1901); do. *Grundriss der Geogr. u. (F. Hommel.)

Arabia under Islām.

The history of Arabia under Islām will be sketched in the articles dealing with the particular provinces, cities and dynasties. Here it is sufficient to lay down the main outlines.

After Muḥammed had firmly established the supremacy of Islām by the conquest of Mekka, almost all the heads of tribes and petty rulers of the peninsula sent deputations to Medina in order to do homage to the Prophet. On this account the 9[th] year of the Hidjra (630—631) goes by the name, among the chroniclers, of the 'Year of the Deputations'. Nevertheless the Arabs had no intention of surrendering their independence; no sooner was Muḥammed dead (632) than they thought the moment had come to shake off the irksome yoke. Even in the life-time of the Prophet, Musailima [q. v.] the chief of the Banū Ḥanīfa had arisen in Central Arabia as an opposition

prophet. A similar attempt was made by Ṭulaiḥa [q. v.] among the Banū Asad, al-Aswad b. Kaʿb [q. v.] of the tribe ʿAns in Yemen, and the prophetess Sadjāḥ [q. v.] among the Tamīm. Khālid b. al-Walīd, who was sent by the Khalīf Abū Bekr with troops against Ṭulaiḥa, soon settled matters with him and the Tamīm, whereupon the prophetess Sadjāḥ joined Musailima. The latter was then killed in the bloody battle of ʿAḳrabā' and the Banū Ḥanīfa brought into subjection. In Yemen al-Aswad fell a victim to a conspiracy of his own people, and the rising soon came to an end when the Muslim troops invaded Yemen in 633, so that in this year all danger threatening the continued existence of Islām in Arabia was removed.

There followed the period of the great conquests under ʿOmar I, during which it seemed as if Islām had really succeeded in moulding the Arabs into a homogeneous and powerful nation. But ʿOmar's successor ʿOthmān favoured the interests of his family and thereby brought about the first civil war. It now soon became clear that the Arabs set their separate interests and tribal hostilities above any political commonwealth embracing the whole nation. It is true that the first Umaiyad Muʿāwiya succeeded in ending the civil war and in maintaining his rule over the whole of Arabia but he transferred the centre of his authority to Syria with the result that during the reign of his son and successor Yazīd I, the holy cities Medina and Mekka rebelled openly against the government and the second civil war broke out. It now became more apparent than ever that Islām far from having got rid of tribal differences, had made them still more acute by introducing the religious opposition between Shīʿas and Khāridjites. Especially the dogmas of the last named were to the taste of the Arabs and became the cause of repeated insurrections under the later Umaiyads, after ʿAbd al-Malik had defeated his Arab opponents in the year 73 (692) and had restored peace in Arabia. Finally the Khāridjite doctrines gained a footing in certain parts of the peninsula, especially in ʿOmān where they have maintained their hold to the present day.

Meanwhile Arabia under the Umaiyads as afterwards under the ʿAbbāsids, had sunk to the position of a province of the empire of the Khalifs and even with regard to administration did not form a unit. There was no central government, no capital city; different cities and districts of the peninsula had their own governors, who were appointed strictly by the Khalif. When therefore the Khalifate lost its power after the death of al-Mutawakkil (861), it was inevitable that these governors should act as independent princes, especially in isolated districts as in Yemen, where this tendency had already existed before (especially in Zabīd). With such movements religious risings were combined, e. g. of the Zaidites in Ṣaʿda and Ṣanʿā', and of the Karmaṭians in al-Baḥrain. In short, there can no longer be any question of a history of Arabia as a whole; there is only a history of dynasties, tribal and sectarian leaders, who come into prominence in the different parts of Arabia and again disappear. The influence of the central government at Baghdād still makes itself felt at the most from time to time in Mekka and the frontier districts, until, after the fall of the khalifate 656 (1258) the Egyptian Mamlūk-Sultans begin to exercise some influence on the course of events in Mekka and along the shores of the Red Sea.

Under Selim I (918—928 = 1512—1520) the Ottoman Turks came on the scene and established their rule in the holy cities and in Yemen. But in this country they had a difficult position in face of the Zaidites who, under the leadership of their Imāms, at length (1043 = 1633) drove them out of the country. In the rest of Arabia everything remained as it was until the Wahhābīs [q. v.] arose in Central Arabia in the second half of the 18th century and soon won such a strong position that the Porte was compelled to call in the help of Muḥammed ʿAlī. The latter succeeded, but only after great efforts, in breaking the power of the Wahhābīs, yet the power of the Turks in Arabia remained, as before, merely nominal. It was not until the last of the xix. century that they made a vigorous attempt to make their power a reality, and undertook expeditions to ʿAsīr and Yemen (1871-1872), while Midḥat Pasha (1870) and Redīf Pasha (1876), approaching from the East, subdued the inhabitants of the ancient country of the Karmaṭians. In consequence of this Yemen was formed into a Turkish wilāyet, with Ṣanʿā', as capital, while Eastern Arabia, so far as it was subdued at all, was added to the wilāyet of Basra as a new sandjaḳ with the name Nedjd. But the new wilāyet Yemen existed only on paper, because the Arabs living there soon rose in open rebellion and in spite of repeated expeditions Turkey did not succeed in bring them into subjection. The English, on the other hand, succeeded in establishing along the whole of the south coast from ʿAden to Masḳaṭ and further on in the Persian Golf a supremacy which is none the less real for not being quite openly avowed.

Statistical data as to the present condition of the peninsula are not available. In 1875 Reshīd Bey in his *Taʾrīkh-i Yemen we-Ṣanʿā'* (II, 355) estimated the population at 10 752 150 souls but this number is purely conjectural.

d. Arabic writing.

The Arabic character, although one of the youngest in point of age, occupies the first place after the Roman character from the point of view of geographical diffusion. It is the prevailing script from the western frontier of China to the West coast of North Africa and from Constantinople to the Malay Archipelago: in all other parts of the world it is known and more or less used, especially in consequence of emigrations from Syria.

Down to the last century erroneous views were held concerning the origin and the primitive form of Arabic writing. It was thought to be a development of the stiff angular script, called "kūfic" by the Arabs themselves, which had been used for the oldest Arabic documents, manuscripts of the Ḳorʾān, inscriptions on stone and on coins, which were known at that time. This view was first shattered by the discovery of papyri, which have been found in immense numbers since the eighth decade of last century, thus increasing the material in our possession in a most unexpected way. These documents some of which date back to the beginnings of Islām, exhibit the surprising fact that the form of Arabic writing even at that early stage does not essentially differ from the ordinary round script, latter Naskhī, but all the

more, it would seem, from the 'kūfic' character. Forms resembling the latter on the other hand are found on the two inscriptions, which are the earliest monuments of Arabic writing hitherto known, viz. the trilingual (Greek, Syriac, Arabic) inscription of Zebed dating from A.D. 512, and the bilingual (Greek and Arabic) inscription of Harrān in the Ledja which dates from A.D. 568.

The question as to the relation between the angular and the round script may be left aside for the present, in order to continue the account of the origin of Arabic writing.

The two inscriptions just mentioned show a close resemblance to a number of inscriptions from the Sinai peninsula, which, after many unsuccessful attempts, were at last correctly deciphered in the last century. The striking resemblance between the two scripts inevitably led to the conclusion that one must have been derived from the other. The language of the Sinaitic inscriptions was found to be Nabataean (a dialect of Aramaic) although their authors for the most part were of Arab nationality. The type of writing employed is later than that of the other Nabataean inscriptions which are found scattered from Damascus to Medina, dating as far back as the beginning of our era and exhibiting a very archaic script. Even in these however the germs of the later Arabic writing are found developed up to a certain point, especially the laws according to which certain letters are joined together in writing, and the existence of separate final forms for certain other letters. (Euting, *Nabat. Inschriften*, p. 4).

The linguistic and historical importance of the Sinaitic inscriptions is not very considerable; unlike the inscriptions on Nabataean monuments they are not the work of professional calligraphists and practised masons, but of members of the caravans which traded between South Arabia (India) and the Mediterranean. On the details cp. Euting, *Sinait. Inschriften*, p. 10 *et seq.* The inscriptions may be said to represent the type of cursive writing used by the Nabataeans, especially in their capital Petra, in the second and the beginning of the third century A.D., from which period they date; the material written on, in this case hard granite, would of course be responsible for certain modifications. But the general shape of the letters was probably the same, only that rounder forms may have been used and that certain letters were perhaps more frequently joined together. Nothing, however, can be said on this point with any certainty, as documents on any material other than stone and metal are entirely lacking. It is to be hoped that the discovery of such documents (שטרין: Brünnow, *Die Provincia Arabia*, I, inscription to nº. 633) at Petra may prove to be only a question of time. It may be regarded as certain, that in a commercial town like Petra, where the art of writing was in common use, a cursive character adapted to the practical needs of every-day life must have been developed at an early period side by side with the stiff script of the coins and stone monuments.

The latest Sinaitic inscriptions hitherto known are Eut. nº. 457 dating from the year 106 of the Boṣrā era (210-211 A.D.) and nº. 319 dating from the year 126 of the Boṣrā era (230-231 A.D.); later still is the inscription of Hegra (Tammuz 162 = July 267: *Revue Bibl.* 1908, p. 241 *et seq.*); the two oldest Arabic inscriptions date from the years 512 and 568 A.D. (The Arabic inscription of Nemāra which dates from the year 223 of the Boṣrā era (A.D. 328) is still considerably older; but it is written in the Nabataean monumental character, which however shows already many signs of the transition towards the Arabic script: viz. the many joined letters, the form of the ر and especially the disappearance of the letter Samek).

The farther simplification or transformation of the Nabataean cursive writing into the Arabic character must therefore have taken place in the fourth and fifth centuries of our era. We must wait for farther discoveries of inscriptions to show whether this change took place at Petra, then already beginning to decline, or in the rising neighbouring kingdom of the Ghassānids; future finds will similarly enable us to fix more accurately the time of the transformation, as well as the date at which the present arrangement of the alphabet came into use. The numerical value of the letters with its apparent arrangement does not represent the original order; but it becomes intelligible at once, if we consider it from the point of view of the old Nabataean arrangement. In the Nabataean alphabet ت as last letter corresponded to 400; to this were added the following signs which did not exist in the Nabataean writing ث = 500, خ = 600, ذ = 700, ض = 800, ظ = 900, غ = 1000.

The rearrangement i.e. the present order of the alphabet is obviously based on the principle of placing together characters of similar shape. This principle was not however carried out quite consistently, ﻫ e.g. was not put after ﺟ, ﺣ and ﺧ, but placed at the end of the alphabet perhaps because of its distinct terminal form (?). The final forms of ة and ه also differed in the ancient script, yet the two letters were put together in the alphabet.

It is possible that the present arrangement dates back to the pre-islāmic period; it is a noteworthy fact however that Maghribī writing which probably originated towards the year 200 of the Hidjra has a different arrangement which partly corresponds to the old Nabataean order of the letters and partly to the modern arrangement. [See below]. Under the influence of commerce the new script spread to the countries to the North and South of its place of origin. As at the beginning of the vi. century of our era it had reached Northern Syria, we may well assume that by that time it had made similar progress towards the South, and was known and in use throughout the region where Northern Arabic was spoken, especially in the two cities from which the religious and political movement started a hundred years later.

We are told that Mekka at the time of the prophet possessed only 17 men, whose names are preserved by al-Balādhorī, who were able to write, in addition to a few women. This statement however seems very improbable. The prophet himself had from five to ten secretaries. The fact moreover that the Mekkans, like the Egyptians with their fondness for writing, used all possible kinds of materials to write on [see below], as was natural in an old commercial town, indicates very clearly that a knowledge of writing was

pretty widely diffused. According to Arab tradition, which in this case sounds very probable, Arabic script was then brought form North Arabia to the other Arab state, the Kingdom of the Lakhmids in lower Mesopotamia. It is very questionable however whether it was brought there by Christians as Wellhausen assumes (*Skizzen und Vorarbeiten*, III, 201). It is certain on the contrary that the literary language used by the Christians of that region was Syriac, as Nöldeke (*Geschichte des Qorâns*, p. 7, note 3, *Gesch. d. Perser und Araber zur Zeit der Sasaniden*, p. 177, note 1) conjectured correctly. Even the Christians of Nedjrān were addressed in Syriac by Jacob of Sarūdj. It is clear however that the Arabic script was in use at Ḥīra as early as the time of Mutalammis and Ṭarafa (second half of the vi. century A.D.); though possibly it had been introduced only recently; for it still appeared to the Badawī as something very mysterious.

The rise of Islām no doubt helped to spread a knowledge of writing. Written portions of the Ḳor'ān existed before the year 622 A.D. (Nöldeke, *Gesch. d. Q.*, p. 34 *et seq.*), and after the text had been officially fixed under 'Omar and 'Othmān, the art of writing spread together with the study of the sacred book.

The following are the oldest monuments of Arabic writing belonging to the Muslim period:

I. A number of coins beginning with the year 20 (641) (Nützel, *Catalog der Berliner Museums*; vol. i. n° 83 *et seq.*), the oldest of which however bear only very short legends;

II. several inscriptions, none of which are older than the second half of the vii. century A.D. one dating from the year 72 (691-692) in the Ḳubbat al-Sakhra at Jerusalem, three undated mile-stones of the caliph 'Abd al-Malik, and the inscription of Ḳaṣr Kharāne which dates from 92 (710-711). — For the sake of completeness an enumeration of the inscriptions belonging to the ii. century of the Hidjra may also find a place here: 1. in Ḳaṣr al-Akhawīn (N.E. of Palmyra) dating from 110 (728-729); 2. in Ḳaṣr al-Ḥeir (S. W. of Palmyra), both put up by the caliph Hishām; 3. in Antinoë (Upper Egypt) A.H. 117 (735); 4. the Camp of Djerash A.H. 125 (742-743); 5. mosque of Ascalon A.H. 155 (772); 6. cistern of Ramla A.H. 172 (788-798); 7. boundary-stone of Ushmunein belonging to the time of Hārūn al-Rashīd (in the possession of the author); 8. several tombstones found at Fusṭāṭ;

III. A number of documents on papyrus, the greater part of which also belong to the 2. half of the vii. century A.D. It is to be regretted that the oldest of these belonging to the first half of the century, which are preserved at Vienna, are still inaccessible to the world at large; but the documents which are available are quite sufficient to give a complete picture of the script of the vii. century, as it is out of the question that it should have been subject to any considerable modifications between the years 22 (642-643) and 87 (706).

Plate I gives a general view of Nabataean and the oldest forms of Arabic writing.

As in the simplified Arabic script the shape of several letters was indistinguishable from that of others, it became necessary to invent a means which would prevent confusion. Following the model of Syriac writing dots were chosen for this purpose; the date of their introduction is unknown, but they probably go back to the pre-islāmic period. The accounts of the Arabs themselves on this subject (Nöldeke, *Gesch. d. Q.*, p. 305, 311) may well be set aside. Dots were certainly used in the first century of Islām, though perhaps not as extensively as later. On the documents of that period, so far as they have been accessible to me, the following letters have dots:

ذ, ﺯ, ﺧ also ﻳ ﯾﺒﺐ ﺗ ﯾﺖ, and ﻧ but not ى;

ﺟ papyrus of 91 (709-710);

ﺧ coin of 85 (704);

ﺷ papyrus of 91 (709-710);

ض coin of 86 (705);

ق = ڢ papyrus of 91 (709-710), inscription at Kharāne 92 (710-711).

It may be remarked in passing that as early as this period ﺟ was in Egypt pronounced as a hard g as is proved by جسطال (side by side with قسطال and قسطار), the Arabic transliteration of the Latin 'quaestor' (papyrus of the year 90 = 708-709).

The last letter to receive its dots seems to have been ة, which apparently was not thus marked until the ii. century of the Hidjra. Sometimes (in kūfic MSS. of the Ḳor'ān nearly always) the dots were replaced by strokes slanting upwards from left to right; double dots were placed one above the other either vertically or obliquely, three dots were placed in one straight line and in the case of ﺷ frequently combined into a stroke. The punctation of ﻓ and ﻗ exhibits interesting variations. The original distinction seems to have been, that ﻓ had no dot at all and ﻗ one dot; this applied only to the letters when occurring at the beginning or in the middle of a word, as their final forms were at first sufficiently distinct to render a further distinction by means of dots unnecessary. The place where the dot of ق was put was subject to further variations, even in the same country. In Egypt towards the end of the i. and beginning of the ii. century it was placed sometimes above, sometimes beneath the letter (papyri and Antinoë inscription), in Palestine (Kharāne inscription) it was written below. The punctation of ﻓ does not seem to have come into use until the ii. century, at first in the form of ڣ later as ﻓ, whereupon ﻗ necessarily received a second dot. The old final form of ف = ق continued to exist down to the v. century, while the later final form of ق is found in its beginnings as early as the ii. century. Different countries preserved individual peculiarities in the use of the dots; the Maghrib still retains the old punctation of ق = ڧ, and ف = ڢ,

and in Baghdâd, where the oldest paper manuscript so far known (the *Gharîb al-ḥadîth* of Abû 'Ubaid) was written in 256 (870), ق was written ڧ as late as the middle of the iii. century. (*Palaeogr. Society, Oriental series*, plate vi.)

The vowel signs which were likewise borrowed from the Syriac script, seem also to be very old, but as to the date of their introduction even less can be said at present. The original system of vowel marks differed considerably from that which is now in use; as Ewald recognised, it was based on the different phonetic strength of the vowels: *a* (*e*) as strong vowel was expressed by a dot above the letter, *u* occupying an intermediate position was denoted by a dot in the letter, an *i* (*e*) by a dot below; the nûnation being expressed by simply doubling the dots. In order to indicate that the dots were regarded as not strictly belonging to the script proper, they were in copies of the Ḳor'ân usually added in various colours, — in the oldest copies in red, later also in yellow and green, more rarely in blue, — whereas the dots belonging to consonants were apparently always written in black. The dots are occasionally replaced by little circles.

At present it can neither be asserted nor denied, that the vowel-points were added by the writer of the text himself. It is certain however that in the ii. century their use had not yet received canonical sanction. Mâlik b. Anas (died 179 = 795-796) at any rate demanded that copies of the Ḳor'ân destined for use in divine service should contain no vowel-points. In profane writings they were probably not used at all.

Towards the middle of the ii. century this system of marking the vowels was replaced by a new method which is still in use. Owing to the ignorance of the Arabs in all matters concerning the origin of their script, it is impossible to say whether the statement that it was invented by al-Khalîl (died 170 = 786-787?) is founded on fact. The vowel-signs of this system are simply the corresponding vowel-letters: in the case of *ḍamma* this derivation is clearly discernible, *fatḥa* is a slanting (in the Maghrib) a horizontal *alif*, *kasra* obviously an analogous considerably shortened form of the old ي.

The other so-called orthographic signs were probably invented at a still later date than the vowel-marks, but the date of their introduction is equally obscure. It is possible that they also passed at least through two stages of development.

Hamza as the most important is probably the oldest. In the oldest manuscripts of the Ḳor'ân it is expressed by two red dots put alongside of each other, later it is represented by a blue dot or circle which appears sometimes above and sometimes beneath the *alif* or *yâ*.

The other forms of these marks which are still in use are also said to have been invented by the above-mentioned al-Khalîl; a statement which to a certain extent is supported by the fact that they also were expressed by letters of the alphabet: *hamza* is a small ع, and *tashdîd* or *shadda* a small ش.

In a similar way two systems of punctuation seem to have been in use at different periods. In the oldest copies of the Ḳor'ân the end of a verse is denoted by strokes slanting upwards from left to right, the number of which varies from 4 to 10; the end of a group of five or ten verses is expressed by a circle enclosing 3, 4, 5 or more similar strokes. The later system was to denote the end of a single verse by a simple circle, the end of a group of five by a ه, usually in the form of a circle ending in a point at the top, and the end of a group of ten verses by a more or less ornamental circle, more rarely a square, in which the number ten was written at first in numerals, later in letters of the alphabet; occasionally this mark is put not in the text but on the margin. This system disappears in the vi. century; in manuscripts of the Ḳor'ân dating from the later middle Ages only the end of a single verse is denoted by a circle or rosette; and numerals denoting groups of ten are occasionally written out in letters.

In profane writings punctuation is only sparingly used. In the oldest period only the ends of long sentences are marked by a circle, which perhaps represents a modified dot.

Our information about the writing materials used at that time is fairly extensive: it is derived chiefly from the accounts of the traditionists concerning the missionary epistles sent out by the prophet, and about the collection of the Ḳor'ân undertaken by Zaid b. Thâbit in the year 12 (633-634), further details which however belong to a later period are supplied by the statements of the *Fihrist*.

At the time of the prophet and in all probability during the preceding period leather (*adîm*) was the principal material written on. By this we must understand real leather, not the much more expensive parchment, as is proved by a story, told by Ibn Sa'd and repeated in several places (see Wellhausen, *Skizzen und Vorarbeiten*, iv. 123; Ibn Ḳotaiba, *Kitâb al-Ma'ârif*, p. 170), according to which a messenger sent by the prophet to deliver a missionary epistle written on *adîm*, misused it in patching up his leathern water-pail. The other anecdotes told by Ibn Sa'd (*ibid.* N°. 87 and 102) show that the leather was frequently dyed red (brown? Belâdhorî, ed. de Goeje, p. 7, in telling the same story uses instead of *adîm aḥmar* the expression *djild aḥmar*. The Khedive'al library possesses two documents on leather which however belong to a much later period, viz. 233 (847-848) and 239 (853-854). Such documents were rolled up and fastened together with a leather thong and thus could be sealed. There is a well-known story to the effect that Ibn Ṭûlûn's Mesopotamian architect drew the design of his mosque on leather. Other materials used were:

2. *'Asîb*, plur. *'usub*; Karabacek renders this word by "palm-leaf" (Papyrus Rainer, V. 63). It is clear however from the explanation e. g. of the *Kâmûs* that the object referred to is the thick lower end of the palm-branch, which is about 1½ feet long and has a surface of about 2 inches; the leaf of the date-palm, which has a breadth of less than ⅔ of an inch, is much too narrow and too rough. Muḥammed's missionary letter to the 'Udhra was written on an *asîb*. (Wellhausen, *loc. cit.*, p. 127, N°. 60).

3. Camels' bones, *'aẓm*, especially the ribs, *aḍlâ'* and the broad shoulder-blades, *aktâf*. The Khedivial library possesses a specimen of the

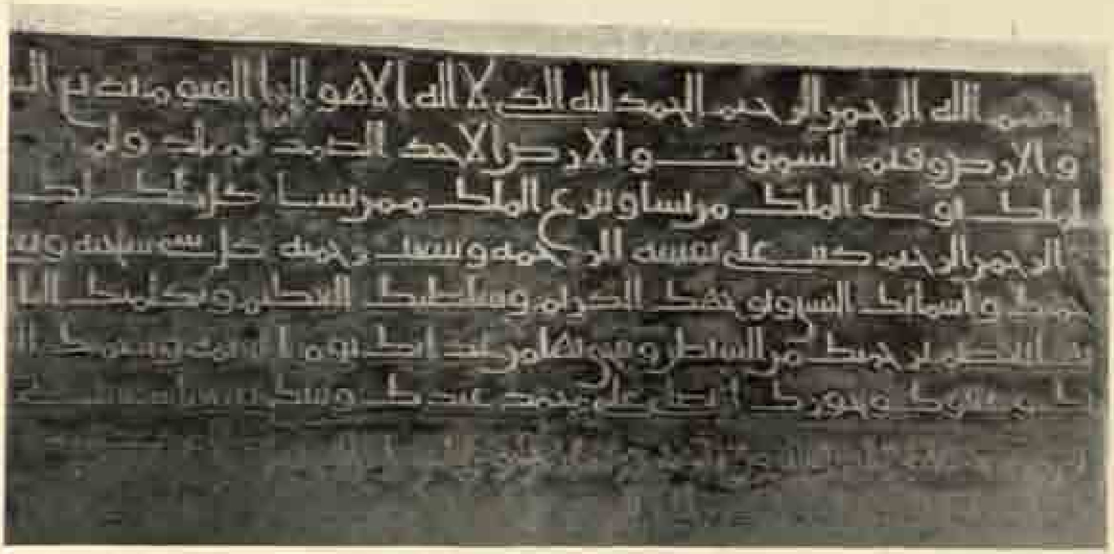
Table of characters.

PLATE II.



Papyrus dating from the conquest of Egypt, c. 24 A. H.

PLATE III.

Papyrus (90 A. H.)

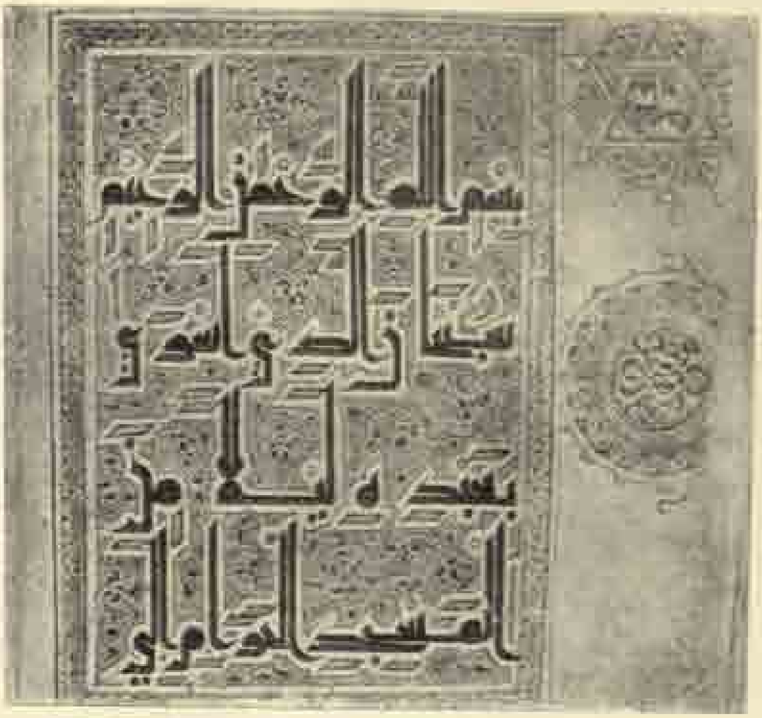


PLATE IV.

Kûfic writing of the ii. and iii. cent. H.

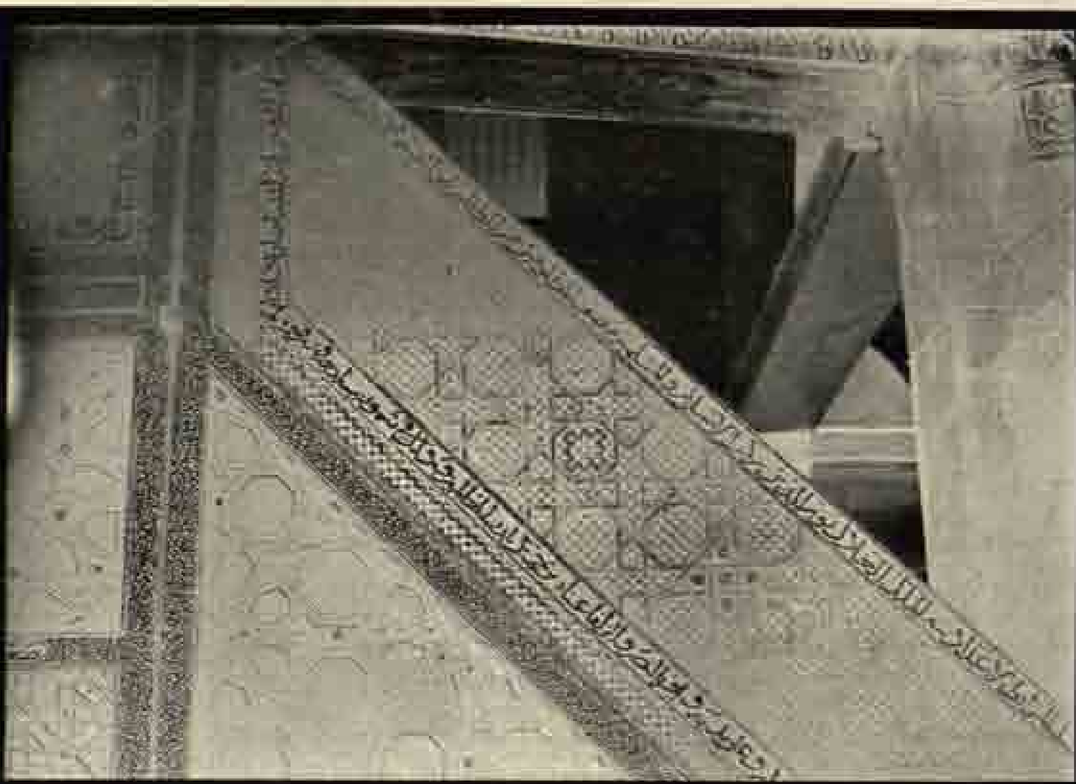
1. Inscription of the Khalifa al-Ma'mûn of the year 116 H. on the Kubbat al-Sakhra, Jerusalem.
2. Kor'ân from Amadjur, Damaskus, 256—260 H.

Ḳor'ān, written in ornamental Kūfī by Abū Bekr of Ghazna, A. H. 566.

Official document of the iii. cent. A. H. bearing the name of the 'Abbâsid Khalîfa al-Muktadir bi 'llah.

PLATE VII.

4 1



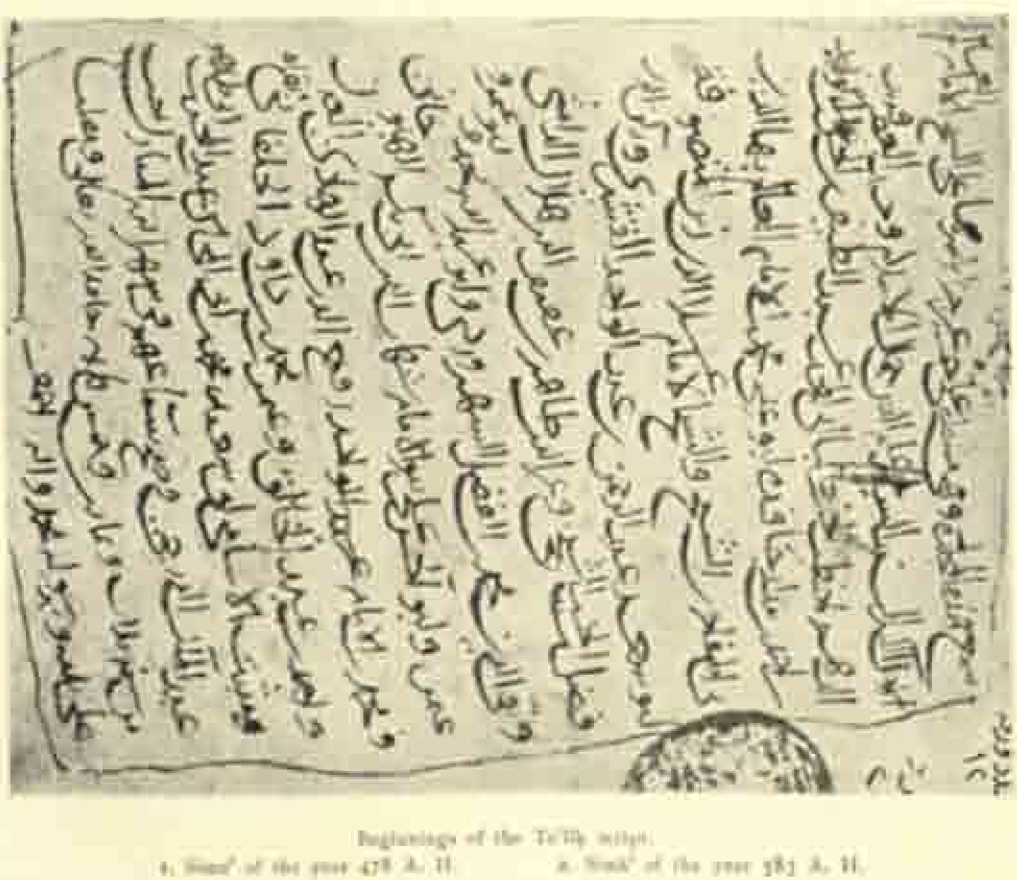
5 2

6 3

Characters used on coins up to the vii. cent. H.

1. umaiyad A. H. 77.
2. ʿabbâsid A. H. 148.
3. ṭûlûnid A. H. 268.
4. fâṭimid A. H. 358.
5. aiyûbid A. H. 615.
6. aiyûbid A. H. 616.

PLATE VIII.



Aiyūbid script.

1. Inscription of Nūr al-Dīn of the year 564 A. H.
2. Inscription of Ṣalāḥ al-Dīn of the year 583 A. H. in the Aḳṣā-Mosque, Jerusalem.

باب قول النبي صلى الله عليه وسلم
الكلام حلوة خضرة
الحمد لله رب العالمين وصلواته على سيدنا محمد النبي وآله أجمعين وسلم
تسليما كثيرا

Beginnings of the Taʿlīḳ script:
1. Naskh of the year 478 A. H.   2. Naskh of the year 583 A. H.

بسم الله الرحمن الرحيم
الحمد لله رب العالمين والعاقبة
للمتقين والصلوة والسلام على
رسوله محمد وآله اجمعين
اركان ايمان الايمان اقرار

باللسان وتصديق بالقلب
وعمل بالاركان احكام ايمان
واعلم ان احكام الايمان
على ستة انواع خمسة في
الدنيا وواحد في الآخرة

1. Sūra I, from a Ḳor'ān written by a Malay.
2. Two pages of a prayer-book "Da'wat al-Muslimīn", printed in Canton.

latter, containing a list of witnesses, unfortunately without date. The bone is pierced, in order to be filed on a cord for future reference.

4. Potsherds, *khazaf* or *shakaf*, chiefly used for short notes. In Egypt, as is well known, this was a favourite material in antiquity as well as during the Greek-Coptic period — there even exists a specimen dating from the brief period of Persian rule —; in the Arab period however it seems to have been much less used, and while thousands of hieratic, Greek and Coptic ostraca are found in many museums, the Khedive'al library alone possesses a few in Arabic. Potsherds were also used outside Egypt, especially in Arabia.

5. Flat white stones, *likhāf*, were also used for short notes: they were probably mostly pebbles of lime-stone cleft horizontally by the heat. No specimen seems to have been discovered so far.

6. It is very probable that wooden tablets were also in use, although no definite statement to that effect can be adduced. A specimen (unfortunately incomplete) is preserved in the khedive'al library; one side contains writing in ink; the *sūrat al-fadjr* is carved in on the other side (ii. century).

7. Parchment (called *rakk*, *djild*, *fuldjān* in the *Fihrist*, p. 21; the expression *al-waraḳ al-ḳashīb* used by Ḥassān b. Thābit can also hardly mean anything but parchment, cp. Nöldeke, *Gesch. d. Q.*, p. 34; *ḳirṭās ḍjā'mi* in Ṭarafa's *mu'allaḳa*, v. 31, ed. Arnold, v. 30 of the Calcutta edition, also means parchment; but since it is mentioned in a parallel with *sibt yamānī* the meaning may be leather. The explanation of the commentators, a cheek as white as parchment is foolish; (Bedawi women are brown!), in consequence of its high price its use must have been limited chiefly to documents, and secondarily to copies of the Ḳor'ān. For the latter purpose it was sometimes prepared in a large size (the MSS. of the Ḳor'ān n°. 1 and n°. 389 have a size of 60: 54 and 70: 48 cm.). In the Maghrib however parchment was used for books as late as the second half of the iv., and perhaps even early in the v. century. — *Ruḳ'a* (in the *Fihrist*) seems to mean a fragment or scrap of a large leaf of parchment or papyrus.

8. Papyrus (*ḳirṭās*, *ḳirṭās miṣrī*), which spread from Egypt over the whole ancient world, was known also in Arabia, and served down to the early 'Abbāsid period as the principal writing-material of the Muslim world. The manufacture of papyrus which had existed since the remote past declined gradually after paper had come into use, as the latter material was less expensive and more convenient for practical purposes; in the first half of the iv. century it seems to have disappeared completely. The most modern papyrus document in the Khedive'al library dates from 319 (931), that in Vienna from 323 (935; *Mittheilungen*, ii. 98).

Paper (*waraḳ*, *kāghid*, *ḳirṭās*) did not become known in Muslim countries until the end of the ii. century. It seems to have been some time however before the use of the new material became general. The oldest book on paper dates from 256 (870) and was probably written at Baghdad; the Cairo ms. n°. 6546 bears the date 265 (878-879), but this is not beyond question; it must have been written however about the year 300 (912-913), most probably at Damascus. In Egypt paper does not appear until the second half of the third century (a fragment dating from the time of Ibn Ṭūlūn is in the possession of the writer); it was obviously a matter of some difficulty, owing to the conservative tendencies of the country, to oust a material like papyrus which had been in use for thousands of years. The popularity of paper seems to have increased rapidly towards the beginning of the iv. century; the change was accompanied by a gradual deterioration in the quality of the papyrus, and towards the middle of the century the latter disappears altogether. The manufacture of paper on the other hand soon developed enormously. In the second half of the century the author of the *Fihrist* knows only seven different kinds of paper, but their number must have increased very rapidly, since paper manufactories arose in almost every large city in the Muslim countries, the products of which were known by distinctive names according to their origin, quality and size. The size of the paper especially proves the high state of development which the industry maintained throughout the Middle Ages. The leaves of the largest Ḳor'ān in the Khedive'al library (n°. 19) which dates from the ix. century, have a size of 117: 98 cm. although the edges are cut. Where even such sizes were insufficient, as in the case of large official documents, foundation deeds etc., several leaves of paper (or parchment) were stitched or pasted or sewn together. Some foundation deeds in the Khedive'al library are 75 feet long.

Towards the end of the Middle Ages European paper began to be imported into the East. Al-Sakhāwī (died 902 = 1496) in the *Ta'rīkh ḳuḍāt Miṣr* refers to a work in 40 volumes, most of which were written on paper coming from Frankish countries. It seems that towards the end of the century European competition gained the upper hand; the paper of manuscripts written in Egypt towards the year 1000 (1591-1592) frequently shows European i.e. probably Italian watermarks.

The Arabs have preserved no tradition concerning the origin of their writing: al-Belādhorī (end of the ii. century) following authorities which may date back to the end of the i. century, seems to hold that it was invented in the kingdom of the Lakhmids. Later writers, Ibn Khaldūn (*Muḳaddima* ch. 30) and Ibn Khallikān (article Ibn al-Bawwāb) repeat this view and state expressly that the art of writing spread through Arabia from Ḥīra or Anbār. The author of the *Fihrist* (p. 4) alone gives an account which may preserve an element of genuine tradition. He writes as follows, on the authority of Hishām al-Kalbī (died according to Ibn Khallikān in 204 = 819/820): 'The first who wrote Arabic were ابو جاد هواز حطى كلمون صعفص قريسات

They are said to be the names of kings of Midian who perished on the 'Day of the earthquake' (sūra xxvi, 189). It may be possible to suggest that this statement contains a reminiscence of the origin of writing in Midian, the country of the Nabataeans. Another authority quoted by Abū Nadīm, Ibn Abī Sa'īd or Sa'īd (see *Fihrist*, ed. Flügel II, 1) gives the same names more correctly: أبجاد هاوز حاطى كلمان صاعفص قرسات.

If we omit the *alifs* from the middle of these words the remaining letters represent the order of the letters in the original alphabet, only that

ص has taken the place of the obsolete Semkat and for this reason had to be replaced by ض. [Cp. the article ABDJAD.]

But for the rise of Islām the use of the script would have been confined to Arabia. But the new religion involved the acceptance of its language and script on the part of the conquered nations; only thus was it possible for the Arabic script to oust other systems of writing, some of which were much more perfect: thus in Mesopotamia, Syria and Palestine it replaced the Syriac and Greek writing, in Persia the Pehlevi script, in Egypt Coptic and Greek, and in North Africa the rather primitive system of Berber writing, if indeed it was still in existence at that time.

The first five centuries saw the development of an immensely prolific literary production in Muslim countries: this fact together with the circumstance that writing soon began to play an important part in the field of decorative art, had the result that more and more attention was paid to the artistic development of the Arabic character. As early as the beginning of the ʿAbbāsid period an immense number of scripts, *Ḳuṭūṭ* (*Fihrist*, chapter on the scripts, p. 6—9) existed both for copies of the Ḳorʾān and for profane literature; we know however very little about their peculiarities and distinctive features, as well-authenticated specimens are hardly in existence. We may regard it as certain that these artificial developments had little or no influence on ordinary cursive writing, and only influenced the character used for copying religious works, especially the Ḳorʾān, and the script used in royal chancelleries and state departments. The latter carried the bureaucratic tendency so far as to adopt separate styles of writing for documents of certain contents and for most of the different sizes of paper. In the following centuries many of these scripts were probably forgotten and replaced by new products of ingenuity. The following are the names of a few among the many calligraphists of the ʿAbbāsid era:

The script still known as *Riḥānī*, was invented by ʿAlī b. ʿUbaida al-Riḥānī (Raiḥānī) who is also known as a prolific author: he lived under al-Maʾmūn and died in 219 (834; *Fihrist*, p. 119).

The calligraphists most famous in the later period were the wazīr Ibn Muḳla (272—328 = 885—940) and his brother Abū ʿAbd Allāh al-Ḥasan (268—330 or 338 = 881—942 or 950). It is impossible for us to say what services they rendered to calligraphy, as no genuine specimens of their art are extant. An alleged autograph by Ibn Muḳla in the Khedīve'al library (*Cat.* I, 141) is a clumsy forgery perpetrated by the modern calligraphist ʿAbd Allāh Bey Zuhdī; the Ḳorʾān itself, written in a Persian hand with a Persian interlinear translation in red ink, is not older than the year 1000 (1591-1592). Later on these two calligraphists (*ṣāḥib al-khaṭṭ al-malīḥ*) were regarded as reformers of the written character. Ibn Khallikān states that Ibn Muḳla transformed the kūfic character into that now in use (*naḳala khaṭṭ al-Kūfiyīn ilā hādhihi ʾl-ṣūra*). How little Ibn Khallikān was conscious of the difference between a calligraphist and a reformer of the script, is shown by the fact that he makes the same statement in the same words with reference to another calligraphist, Ibn al-Bawwāb, properly called Abu ʾl-Ḥasan ʿAlī, who lived 100 years later.

Finally we may mention a calligraphist of the close of the ʿAbbāsid period, who achieved great fame, Yāḳūt al-Mustaʿṣimī, the court calligraphist of al-Mustaʿṣim the last ʿAbbāsid caliph. A script called Yāḳūtī derives its name from him. Genuine specimens of this artist's work are fortunately still extant in the shape of two complete copies of the Ḳorʾān (dated 689 = 1290 and 690 = 1291; see *Arabic Palaeography*, plate 90). It is abundantly clear from these specimens that it would be absurd to attribute to him any original innovation in the written character. Even the artistic merit of his work cannot be placed very high, if we compare it with other specimens of calligraphy: it seems therefore that he owes his fame more to fashion than to anything else. The two copies of the Ḳorʾān show a quite ordinary hand, which is only remarkable as resembling the peculiar somewhat stiff *naskhī* of the later Persians, which perhaps is derived from it, just as the ornamentation of these manuscripts of the Ḳorʾān is clearly the model of the Persian style of ornament. Yāḳūt's signature is written in a kind of *rulc*.

For several centuries after the fall of the ʿAbbāsid khaliphate, Egypt as the largest Muslim state remained the centre of Muslim civilization. Towards the end of the Fāṭimid rule (first half of the vi. century) the round character used for books had reached the highest point of its development, and under the Aiyūbid dynasty it also gained an exclusive predominance on stone monuments. The peculiar round and well-proportioned forms, in which it appears e. g. on Saladin's inscriptions (miḥrāb of the djāmiʿ al-akṣā of 583 = 1187-1188, minbar of 564 = 1168-1169) give it a character entirely its own, so that we are justified in speaking of a separate Aiyūbid style of writing.

During the Mamlūk rule (640—917 = 1242—1512) the round script maintained its full beauty, except on coins, where a curious decadence set in rapidly. The splendid copies of the Ḳorʾān which amīrs and sultans caused to be written for their mosques are the best testimony. In the chancelleries of the rulers and government departments the same attention was paid to the scribes' work as under the ʿAbbāsids at Baghdād. Details on this subject representing the state of things in the middle Mamlūk period (end of the viii. century) are preserved by Ḳalḳashandī who in the second volume of his large work enumerates the different official scripts and adduces examples of each; he mentions the following six:

1. *al-ṭūmār al-kāmil*, in several variations, used for the official correspondence of the rulers;
2. *mukhtaṣar al-ṭūmār*, in two variations; *al-mudaḳḳaḳ* and *al-thulth*;
3. *al-thulth*, in two forms: *al-thaḳīl* and *al-khafīf*;
4. *al-tawḳīʿ* in three forms;
5. *al-riḳāʿ* also in three forms;
6. *al-ghubār* in one form only.

The stone inscriptions of the Mamlūk period also exhibit the written character in its full beauty; only that the letters are more slender and perhaps more elegant than those of the Aiyūbid era.

After the fall of the Mamlūk rule the Ottoman

Turks inherited the poor remains of Muslim civilisation. Like their predecessors they paid considerable attention to calligraphy, following both in literature and art chiefly the example of Persian masters. The civil as well as the military departments of their administration preserved the official scripts of the Middle Ages during several centuries. It is said that as late as the xi. century more than 30 different scripts were known, most of which fell out of use during the xii. and still more the xiii. century. At the present time only the following are used:

1. *dīwānī*, the direct descendant of the old *tawḳī'*, of which there are two forms: a larger form used in the Imperial chancellery for treaties and diplomas (firmāns, berāts) of all kinds; a smaller form is used side by side with the *ta'līḳ* by the ecclesiastical courts, but is falling more out of use. The large *dīwānī* is called 'Djalī-dīwānī.'

2. *sulus* (*thulth*), more for ornamental than practical purposes.

3. *ta'līḳ* and

4. *neskhī*, chiefly used for books, the former more for poetry, the latter for scientific, especially religious literature.

5. *riḳ'a*, an official script, but also the character most frequently used in private life. With the Turkish rule it spread over a part of the Arab countries, though the genuine Arabs detest it as 'Turkish writing'. For the rest these countries use *neskhī* with unimportant, though noticeable variations.

6. For the sake of completeness the *ṭughrā* may be mentioned which is now but little used.

In Turkey itself calligraphy is still highly esteemed, and the works of the great calligraphists Ḥamd Allāh (died 936 = 1530) and Ḥāfiẓ 'Othmān (died 1110 = 1698-1699) are in great repute as models; in the Arab countries however, and especially in Egypt, less and less attention is being paid to the art of writing, principally it seems in consequence of the rapid increase of printing with moveable type.

It has been mentioned above that the oldest examples of Arabic writing hitherto known are two inscriptions of the vi. century A. D. These short forms are dissimilar to the round script of the papyri of the vii. century, but resembling the other Arabic writing, the so-called *kūfī*. The question arises whether these forms represent the only written character existing at that period, or whether their stiff angular shape is due to the basalt in which they are cut, and whether a round cursive form also existed at that time: to these questions no answer can be given at present.

The facts which can so far be stated with certainty are that in the vii. century A. D., the first of the hidjra, two distinct types of script are found to be in existence: a stiffer, more angular script on stone monuments and coins, and a round cursive on the papyri. Closer investigation reveals considerable differences in the writing of the inscriptions: the stone monuments of 'Abd al-Malik (see above) exhibit much more angular forms than the inscriptions of Kharāne (91 = 710) and Antinoe (117 = 735) which are inscribed or painted on stucco by means of a brush or *ḳalam*; cp. Moritz, *Arabic Palaeography*, plate 107—110. Similarly the type of writing found on the coins of the first century, especially those of the early period, is not so very much different from the cursive script.

In view of these facts it is impossible to avoid the conclusion that the difference between the two types was chiefly due to the nature of the material written on, though at the same time there existed a tendency to create a separate monumental script.

The distinction between the round and the angular script became more pronounced in the ii. century; the former assumes a still rounder shape, and apart from a few points of detail, appears in forms practically identical with those now in use; the angular writing both on stone monuments and coins and in manuscripts of the Ḳor'ān becomes still stiffer and more angular. In the iii. century the angular script enters into a new phase of development which removes it even further from the round cursive. — The name 'Kūfic' (*al-khaṭṭ al-kūfī*) has of old been applied to the angular script; but the origin of this appellation is not easily explained.

There can be no doubt that the name is derived from the town of Kūfa which, founded in the year 17 (638), was one of the oldest Muslim cities, and before the foundation of Baghdād (130 years later) was the religious and intellectual centre not only of 'Irāḳ, but of the whole East. It goes without saying that in a town of such importance the art of writing must have flourished, and this is borne out by a statement of the *Fihrist*, according to which the people of Kūfa first invented a special process of tanning by means of (fermented?) dates, whereby the hitherto hard and stiff parchment was made soft and flexible. Although the script itself, as we have seen above, was known in Mesopotamia at least 100 years before the foundation of Kūfa, we may conjecture that it received its name from the town in which it was first put to official use; the name therefore probably arose in Mesopotamia, perhaps in Baghdād itself, and spread from the centre of Islām over the whole empire as an appellation of all the more angular forms of writing to distinguish them from the round cursive. The name is first mentioned by the author of the *Fihrist* who enumerates the following as the oldest scripts: that of Mekka, of Medina, of Baṣra, and of Kūfa. Unfortunately he only describes the Mekkan script in a tolerably intelligible manner. It is surprising that, according to this account, two cities which were situated at a comparatively short distance from each other, should have possessed two distinct types of script, while Syria which for three quarters of a century was the centre of the empire, and Egypt where probably more use was made of writing than anywhere else, are passed over in silence. It would also seem curious that neither of the scripts associated with one of the holy cities was used for copies of the sacred book.

If we read further that these four scripts were derived one from the other by the calligraphist Ḳuṭba at the time of the Umaiyads, we realise that not much reliance need be placed on the statement regarding the four different scripts. It proves however that the appellation 'kūfic writing' was in existence at that time. Later on it occurs frequently, once in Ibn Shiḥna in the form *al-khaṭṭ al-kūfī al-muwallad*, an expression which seems to indicate that it was regarded as a charac-

ter artificially derived from the original script.

During a period of about 500 years the kūfic character, existing side by side with the round script, was used almost exclusively for copies of the Ḳorʾān (of profane books of the older period written in *kūfī* only a single one is known, a fragment of a genealogical work — see Ahlwardt, *Verzeich. Berlin* i. 367, published by Rödiger, *Über zwei Pergamentblätter mit altarabischer Schrift* in the *Abhandlungen der Akademie der Wissenschaften zu Berlin*, 1875) inscriptions on stone and coins, and for a short time also on official documents, especially of a legal character. Standing unrelated to the needs of practical life it was artificially cultivated as a kind of hieratic script: it existed side by side with the cursive, but not without being influenced by it, and passed through a development of its own, which did not like that of the cursive lead to higher perfection, but to degeneracy, and finally to complete extinction. That it was an essentially artificial script, which was frequently found difficult by the scribes, is proved by the fact that the latter often inadvertently drop into writing the round hand (cp. *Arabic Palaeography*, plate 111, 114, 116).

We will now consider the monuments containing Kūfic writing in detail:

1. Manuscripts of the Ḳorʾān. With one exception (*Arabic Palaeography*, plate 43) all old copies of the Ḳorʾān are written in *kūfī*. Apart from the fact that it was regarded as a hieratic script, the use of this higly inconvenient character may possibly have been due to an imitation of the Estrangelo, which as is well known continued to be used for copying the Bible even after the introduction of the Peshitto character: but this hypothesis cannot be proved. The age of the Kūfic Ḳorʾāns was long doubtful, until the discovery of dated manuscripts or fragments rendered more accurate conclusions possible. The dates unfortunately do not refer to the time when the manuscripts were written, but to the date at which they became the property of a mosque foundation (*waḳf*); but as most of these copies, especially those of large size (*ummahāt*) were written for this special purpose, we may assume that the dates in question are not far distant from their time of origin. According to the *waḳfīyas* (remarks on the foundation) most of the dated Ḳorʾāns belong to the iii. century; viz. the Paris copy nº. 336 (de Slane, *Catal.*) dating from 229 (843-844; *bi 'l-Fusṭāṭ fī 'l-djāmiʿ*), the Cairo fragments nº. 33910 from 270 (883-884; *li-masdjid al-djāmiʿ bi-madīnat Dimashḳ*) and from 277 (890-891; probably from the mosque of ʿAmr at Old Cairo), nº. 40160 dedicated by Amādjūr, the governor of Damascus from 256—264 (870—877). The only specimen of the ii. century is the complete Ḳorʾān, Cairo nº 387 with a *waḳfīya* dated 168 (784-785; *fī 'l-djāmiʿ al-ʿatīḳ bi Fusṭāṭ Miṣr*); cp. *Zapiski vost. otd. imp. russk. arkheol. obshch.*, vi. 69—233. By means of these dates, however scanty, we are able to fix the different types of script exhibited in these manuscripts, and thereby to arrive with tolerable accuracy at the date of the other copies as well. The writing of the Ḳorʾān of 168 is still simple and natural, though executed with great care; there are few consonantal dots (ب = ب, ق = ف, ص, غ), and none at all for the vowels; it would be quite wrong however to regard this fact as an argument against the existence of these signs at the period in question.

The writing of the iii. century Ḳorʾāns differs considerably from that of the earlier manuscripts. The letters are of a rounder shape, and the *alif* is drawn out to a long sharp point to the left bottom corner. Occasionally the letters are not written, but practically painted, i.e. the outlines of the characters only are drawn and filled in with ink, thus Cairo nº. 388.

There are no iv. century copies bearing an unquestioned date — the Paris mss. nº. 358 of the year 300 (912-913) and nº. 370 of 366 (976-977) and the Constantinople copy Aya Sofia nº. 21 of 337 (948-949) almost certainly belong to the iii. century — but there seems to be no doubt that the copies in which the tendency towards rounder forms and ornamental flourishes in the final letters is further developed, may be safely assigned to the iv. century. — It is surprising that Kūfic Ḳorʾāns, which however are seldom complete, are very rarely dated; out of the 227 fragments at Paris (= 4800 leaves; catal. de Slane, I, 87) only 3 are dated, of the 66 at Berlin (6 of which are on paper) not a single one, and of 40 copies in Cairo only three.

During the fifth century the use of *kūfī* for copies of the Ḳorʾān seems to have become less frequent. The material in our possession is not sufficient however to fix the date of the change more definitely; for although large numbers of Ḳorʾāns (thousands as we are told) existed at that time, especially in the mosques of Cairo, only very few have been preserved (Brit. Museum *Catal.*, ii, p. 53, of 427 = 1035-1036; a Cairo copy of 499 = 1105-1106; both written in the round hand). The same applies to the sixth century. Of the few dated copies (528 = 1133-1134 at Mekka, 555 = 1160, 566 = 1170-1171, and 599 = 1202-1203 written in Persia) three are written in the round hand; only the copy of 566 exhibits an ornamental kūfī, which represents a third type of that script viz. a form leaning towards the arabesque, especially in the final letters, and corresponding to the script of the stone monuments and coins of that period.

Inscriptions on monuments and especially coins yield far more copious material for the study of the kūfic script; it must be borne in mind however that the shape of the characters may in these cases have been influenced to some extent by the nature of the material written on.

Three principal types of *kūfī* may be distinguished on these inscriptions:

1. The old simple *kūfī*, generally stiff or angular, which on the whole lasts down to the iii. century, although already on isolated inscriptions belonging to the end of the ii. century, e.g. the inscription on a well at Ramla of the year 172 (788-789; see van Berchem, *Inscriptions arabes de la Syrie*, p. 4—7, plate ii. 3) the tops of some letters (ا, ل, ى, ق) are drawn out to a sharp point, thus exhibiting the first beginnings of the tendency towards ornamental flourishes. The numerous sepulcral inscriptions at Old Cairo which date from the iii. century as well as the inscription referring to the building of the mosque of Ibn Ṭūlūn, show a further development in the same direction, which is also exemplified on the coins of that century.

2. The inclination to adorn the characters, especially the final letters, with arabesque-like flourishes becomes still more pronounced in the iv. century, particularly with the rise of the Fāṭimid dynasty; ("coufique fleuri"; see van Berchem, *Matériaux pour un corpus inscr. arab.*, part i, p. 8). This script remains characteristic for Egypt under the rule of the Fāṭimids (about 350—550 = 961—1155), and disappears with the fall of that dynasty.

3. In the v. and still more in the vi. century the *kūfī* of Syria and Mesopotamia assumes fantastically intertwined forms, which in the end become positively ugly; this is particularly noticeable on the coins of the last 'Abbāsids of Baghdād, who retained this script, perhaps as a kind of hieratic character, until the end, although it seems that only professional calligraphists were able to read and write it, while the mass of the people remained entirely ignorant of it.

A reaction against this unnatural and useless script began with the vi. century. We may leave aside the question, whether it started in the East in connection with the Sunnī reaction against the Fāṭimids, which began in Persia in the v. century (this is van Berchem's view, see *Matériaux* etc., i, 85, 254 *et seq.*; *Inscriptions arabes de Syrie* in the *Mémoires de l'Institut Égyptien*, t. iii, fasc. v., p. 450), or whether on the contrary it spread from the West to the East. It is certain in any case that on coins the round script first appears in the West, first of all on the coins of the Almoravid 'Alī b. Yūsuf b. Tāshfīn (500—537 = 1106—1142; see Stanley Lane-Poole, *Cat. Brit. Mus.* v., n°. 60). After the foundation of the Almohade dynasty in 524 (1130) it gained an exclusive predominance; on the coins of 'Alī b. Yūsuf لا still has the old form لا, on the Almohade coins the later form is used without exception. The most modern Kūfic inscription on stone in Egypt dates from 555 (1160); but the round script occurs as early as 100 years before that date under al-Mustanṣir (427—487 = 1036—1094; inscription in the possession of the author); in Syria we find: Damascus 549 (1154-1155) in the round script, 551 (1156-1157) once more in Kūfic, after that only in the round script; 544 (1149-1150) at Boṣrā in the round script. Aleppo 543 (1148-1149) in the round script, 545 (1150-1151) again Kūfic, after this however only in the round script (s. van Berchem, *loc. cit.* p. 451). On coins the round script first appears a few decades later: a silver coin of Saladin of the year 573 (1177-1178) shows a script which is still somewhat angular, but which can hardly be called Kūfic; the genuine *naskhī* (لا e.g. written in this later form) is first seen on a dirham of Afḍal 'Alī of Damascus (592 = 1196; see *Cat. Brit. Mus.* iv. 285). After 622 (1225) Naskhī is used on gold coins as well without exception. Towards the same time it makes its appearance on the coins of the Seldjūḳs of Asia Minor (610 = 1213-1214 still angular, 616 = 1219-1220 round script: *Cat. Brit. Mus.* iii. n°. 112, 118). On the stone monuments of Asia Minor only the round script is used from the beginning of the vii. century onwards (Cp. Sarre, *Reise in Klein-Asien*, passim), *kūfī* is occasionally found as well, but only on ornamental bands containing a short inscription of hardly ever more than a single line; the content is religious, usually a passage from the Kur'ān, and the whole inscription serves only a decorative purpose.

The use of *kūfī* persisted longest in the further East-Mesopotamia and Persia. An extremely ugly form of it appears, to the exclusion of any other script, on the coins of the last 'Abbāsid caliph (640—656 = 1243—1258), at a time when the round script had been used for a long time in the West. The latter however is found on the not very numerous monuments of that period, thus on the Talisman (Ḥalba) Gate at Baghdād dating from 618 (1221-1222; Sarre, *Islamische Thongefässe*, p. 8 *et seq.*), on the bridge of Harba of 629 (1231-1232; Jones, *Memoirs*; chapter entitled: *Median wall of Xenophon*), on the Madrasa Mustanṣiriya in Baghdād (Niebuhr, *Voyage en Arabie*, p. 241); the minaret of the last-mentioned building, now called Manārat Sūḳ al-Ghazl has inscriptions in ornamental Kūfic writing (Oppenheim, *Vom Mittelmeer zum persischen Golf*, ii. 240).

Owing to the lack of old Muslim monuments in Persia, little can be said about that country. The inscription of the Čifteh Minaret at Erzerum, supposed to date from the year 351 (962-963), does not seem to be genuine. The oldest buildings hitherto known, viz. the tomb of Yūsuf b. Kuthaiyir dating from 557 (1162) and the mausoleum of Mu'mina Khātūn at Nakhčewan, erected in 582 (1186-1187), have inscriptions in pure *kūfī*, while the round script is found on the sepulcral mosque of Oldjaitu at Sulṭāniye which dates from the year 620 (1223).

In the different countries conquered by the Muslims, the Arabic script which they were forced to accept together with the language of the conquerors, was subjected to certain modifications, partly perhaps under the influence of the old native scripts, and partly owing to special circumstances which it is impossible to determine in detail. In no case however has the transformation gone so far as to lead to the development of an entirely new script, just as the Roman character, as used in North America, does not differ so very much from that used by the Italians.

The oldest and most widely spread of these modified forms, which for that reason must be regarded as one of the most important, is the Maghribī (i.e. "Western") script, which in our time is used throughout the whole of North Africa and in some parts of Central and West Africa, while in the Middle Ages down to the beginning of the modern period its use extended to Spain as well.

According to tradition the western script was originally called "that of Kairawān"; and there seems to be no reason for doubting this statement. After the conquest of North Africa, Kairawān founded as early as the year 50 (670), became the political capital of the West; and after the foundation of its great university in the next century it was the intellectual centre as well. The importance of the town grew still further in consequence of the political separation of the Maghrib including Egypt from the empire of the caliphs, which took place towards the end of the century; Kairawān now became the residence of the new independent dynasty of the Aghlabids (184—296 = 800—909), and we may assume that

the new script was developed there at this period. That the change took place at Ḳairawān seems to be proved by the name 'script of Ḳairawān'. As to the time the following points may be noticed: 1. The script on the coins of the Aghlabids differs in a striking way from that of the coins of Eastern countries; on the whole it is still stiff and angular, but it already exhibits clear signs of a beginning modification. 2. It is well known that a characteristic feature of the Western script in which it differs from that of the East, consists in the punctuations of ف and ق as ڢ and ڧ, as had been done in the East down to ii. century (see above). This fact seems to prove that the Maghribī writing separated from that of the East at a time when the latter still placed the dots in the older way. Similarly it would seem that the distinct order of the letters in the Maghribī alphabet dates from the period in question. The arrangement is partly that of the old Nabataean alphabet, and partly the later system based on the similarity of the letters. It is as follows:

ا ب ت ث ج ح خ د ذ ر ز ط ظ ك ل
م ن ص ض ع غ ف ق س ش ه و ى لا

The oldest specimens of this script (given in Houdas, *Essai sur l'écriture maghrébine*, in *Nouveaux mélanges orientaux*, p. 91 *et seq.*) do not seem to be much older than the year 300 (912), but they show clearly that Maghribī writing is a development not of the old round hand, but of the Kūfic script; it is therefore not the result of a natural process of evolution, but represents the conscious attempt of a scholar to create a new script on the basis of the old hieratic Kūfī.

A new form of writing arose in Spain after the centre of the Maghrib had been shifted from Ḳairawān to that country: it was called 'Andalusian' or 'Cordovan', and is distinguished from the still somewhat stiff script of Ḳairawān by the remarkably round forms of its letters. Ibn Khaldūn (*Muḳaddima*, i. 5, 30 on the scripts) states that after the script of Ḳairawān and Mahdiya had gone out of fashion, the Andalusian writing spread over (North) Africa, where its use only declined together with the decay of the Almohade power. Under the Marīnids, he says, writing became still worse, so as to be very difficult to read. By this third script he evidently means that used in Morocco, which after Fās (Fez), the third intellectual centre of the Maghrib, is called the 'Fāsī' script.

Although in comparison with Spanish writing it represents an undeniable deterioration, Ibn Khaldūn's judgment is somewhat too severe. The 'Fāsī' script of the books is not only legible, but frequently very pleasing as well.

After the vii. (xiii.) century Muslim states of considerable importance arose in Central Africa; their centre was Timbuktu (founded 610 = 1213-1214), which thanks to its great college became the fourth intellectual centre of the Maghrib, and retained its important position down to at least the x. century. It became the home of yet another script called the script 'of Timbuktu' or 'of the Sūdān', which is characterised by the largeness and thickness of its letters. Specimens of this script as well as of the Fāsī are found in Houdas, *loc. cit.* plate iii. fig. 1, 2; and in Bresnier, *Cours de la langue arabe*, p. 148 *et seq.*

At the present day four types of Maghribī are distinguished in Africa (Houdas, *loc. cit.*, p. 105):

1. The Tunisian script which closely resembles that used in the East, but dots ف and ق in the Western fashion.

2. The Algerian script, usually pointed and angular, and frequently difficult to read.

3. The Fāsī distinguished from the last by the round shape of its letters.

4. The script of the Sūdān, which is generally thick and clumsy and more frequently angular than round. Owing to the progress of Islām among the negroes of Central Africa, especially the Hausa, during the second half of the xii. century, this script has spread considerably, and reaches to the West as far as the Atlantic where Lagos has become a new centre of Islām, and to the East as far as Wadai where it meets the Egyptian *naskh*.

Persian writing. — It has been pointed out above that the end of the vii. (xiii.) century is to be regarded as a turning-point in the development of the Arabic script: it was at this time that *Kūfī* disappeared from practical use and that the round script reached the culminating point of its growth. The evolution of the Persian script — *ta'līḳ* — seems to fall in the same period, though its beginnings can be traced very much earlier.

This new script is characterised by the tendency to scope downwards from right to left: hence the final forms of some letters, especially ا, ب, ت, ث, ف, ق, ك, are drawn out in a long line, ـ and ـَّ end in long curves, and a similar line is required to form the connection between certain letters.

This peculiar development of the Arabic script among the Persians is manifestly due to the influence of the old national script, the Pehlevi. Like the other countries with an old civilisation of their own which fell under the rule of Islām, Persia, where the resistance against Arab influence was particularly strong, retained its old script for several centuries after the conquest.

It is found as late as the year 140 (757-758) on the coins of the Ispahbeds and the Arab governors of Ṭabaristān. More than two centuries later the author of the *Fihrist* gives a very exact description of Pehlevi writing, — he states that flesh was written بسرا and read كوشت, bread written لهما (more correctly لحما) and read نان, — this passage shows that at the period in question the script was still known at any rate to the learned. (It would almost seem that the author of the *Fihrist* even knew something of the old cuneiform writing — though not the Persian alphabetical script — as he states concerning it that each character represented a whole concept). Further proof is afforded by an inscription at Persepolis dating from 344 (955-956) on which the Būyid sulṭān 'Aḍud al-Dawla states that during his visit to the ruins two Pehlevi (not of course Achaemenid) inscriptions were read to him by two men (Cp. however Nöldeke in Stolze's *Persepolis*, ii., note to p. 49). The specimen of this script given in the *Fihrist*, notwithstanding the imperfection of the tradition, shows clearly the

same tendency to slope downwards form right to left; the hypothesis that it exercised some influence on Arabic writing is therefore inevitable (ed. Flügel, p. 23; the first three lines of the specimen are upside down, the fourth line is the recto of the third, unless both lines are intended to be Arabic). The author of the *Fihrist* states in the chapter on the scripts (p. 6) that the Persians derived theirs from a script used for the Ḳor'ān and called قيراموز; but we know neither the meaning of this word nor the character of this script. The oldest document in Persian script hitherto known seems to be a bill of sale dated 401 (1010-1011; published by Margoliouth in the *Journ. of the Royal Asiat. Soc.* 1903, p. 761 *et seq.*), on which the beginnings of the later *ta'līḳ* can be recognised unmistakably. — The *Kitāb al-abniya* of Mowaffaḳ al-Harawī (*Palaeogr. Soc., Or. Ser.*, plate viii and ix) which until recently was regarded as the earliest specimen was written in 447 (1055-1056), and the script used is Persian *kūfī*. — The autograph of Baihaḳī of Nīshāpūr dating from about 450 similarly shows the characteristic sloping tendency of the later *ta'līḳ*.

In books however the old Arabic script was preserved much longer. (To the *risāla* of 543 = 1148 — Berlin, Pertsch *Katal.*, n°. 75 I had no access). Ghazālī's *Kīmiyā' as-sa'āda* of 576 (1180: Cairo, in the Brit. Mus. a MS. of 672) is written in stiff *naskhī*, in which however the Persian punctuation of the letters پ، چ، ژ، and گ is already fully developed though not always consistently used: we find پير but بيش، بيدا and بيدا; چه (but always اكرچه and چيست) and كرتى، كاغى; چهارم and چهارم، چون, but ديكر، اكر.

With the vii. (xiii.) century the new script begins to make its appearance in books, though at first only in those containing poetry: scientific and especially religious works were still nearly always written in the Arabic script i.e. in a peculiar stiff *naskhī* which somewhat resembles the writing of the calligraphist of the last 'Abbāsid caliph of Baghdād known as Yāḳūt (see above). It is noteworthy however that the interlinear translations of the Ḳor'ān, and at a later period the marginal commentaries as well, were nearly always written in *ta'līḳ*, which apparently was regarded as a popular script. Unfortunately we have no data as to the time at which these translations were added to the text. But as the scribes of the text usually left large spaces between the lines, it is probable that the addition of a translation was intended by them from the outset; we may assume therefore that in most cases it took place not long afterwards.

Owing to the great artistic gifts of the Persians the art of writing reached a high state of perfection among them. Specimens of Persian writing of the older period are however so scanty, that it is impossible to get a clear idea of the productions of the Persian calligraphists. One of the most famous artists of that time was Muḥammad Rāwendī, properly called Nadjm al-Dīn Abū Bakr Muḥammad, born at Rāwend near Kāshān in the second half of the sixth century, who was so proficient in his art as to write 70 different scripts (Schefer, *Tableau du règne de Sultan Sindjar*, in the *Nouveaux Mélanges Orientaux*, p. 5).

The Mongol devastation and 150 years later the invasion of Timur destroyed Persian nationality and Persian civilization. What we possess of Persian manuscripts belongs for the greater part to a later period.

It was probably not until this later period that the *nasta'līḳ* arose (said to be a contraction of *naskhī* and *ta'līḳ*), a variation of *ta'līḳ*, from which it does not differ in any essential features. Of still later date is the cursive, *shikesteh* ('broken' script), used in ordinary life; it is a small thin script which is very difficult to read owing to the omission of diacritical dots and the use of ligatures in defiance of all rules of calligraphy. Quite lately a reaction against this script has found expression in a movement to make the written character more legible. It is to be noticed that the script known as *ta'līḳ* to Europeans, is called *nasta'līḳ* by the modern Persians; *ta'līḳ* is their name for a form of the old *tawḳī'*, which is used for official documents. A species of the old *nasta'līḳ* is called by them *taḥrīrī* (script for 'correspondence').

From Persia the Arabic script spread to the East and South East over Asia, where many authorities prophesy a great future for Islām.

In China Islām was known very early, though it is not certain whether it first appeared there as early as the ii. or not until the middle of the iv. century. The passage in the second Chinese inscription in the old mosque of Canton (Himly, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xli, 141 *et seq.*) dating from Radjab 751 (September 1350), according to which the original temple was erected in the period Tsên-Kwan of the Tang (627—650) is not clear. Apart from the Arabic inscription of this mosque we possess practically no written documents of an early date. The inscriptions on old brass vessels can in most cases not be dated with any certainty; it is improbable that they go back beyond the ix. century. Chinese Muslims, in spite of their apparently very considerable number (perhaps 40 millions) have done practically nothing for the religious life of the community and for Muslim learning. It was not until quite recently that Chinese Muslims have begun to write and to print; the latter they do according to a very old technical process by means of wooden blocks, the engraving of which necessitated certain modifications of the written character.

The Muslims of India also received their script from the Persians whose language they study as much as Arabic. The use of *ta'līḳ* prevails throughout, *naskhī* being reserved almost exclusively for religious and legal works, as in Persia and Turkey.

The Malay archipelago, like India, first received Islām from the Persians, whose place was later taken by Southern Arabs who went there in the early Middle Ages as merchants and sailors. At the time of the traveller Ibn Baṭūṭa, c. A.D. 1350, Java was governed by Muslims of Sumatra of the Shāfi'ite school. 100 years later South Arabian emigrants founded several states on the northern coast of Java, whereby the conversion to Islām was greatly accelerated (Van den Berg, *Le Hadramout*, p. 4). Old documents in the Arabic character do not seem to exist; the modern script shows clear traces of its South-Arabian, non-Persian origin.

The conversion to Islâm of the East coast of Africa similarly proceeded from South or East Arabia ('Omân); it does not however seem to have made much progress during the Middle Ages. A new invasion of Arabs from East and South Arabia which began towards the end of the xi. century and was continued with great energy by Negro converts from Zanzibar (Suaheli) since the middle of the xiii. century, had gone far in spreading Islâm throughout large parts of East Africa, at the time when the intervention of European powers began. The progress of the Arabic character which had already reached Uganda and the Congo, has since then been arrested; and in the last years a retrograde movement seems to have set in.

The South-Arabian script. The old inhabitants of South Arabia (Sabaeans, Minaeans and Ḥimyars) used a consonantal script the letters of which — with the exception of a few ligatures or rather monogrammatic combinations — never appear combined on the stone and bronze inscriptions in our possession. This script also is derived from the oldest form of Semitic alphabetic writing, which as Praetorius has pointed out is distinct from the 'Mesa' script hitherto regarded as the oldest. Whether the Southern Arabs received it from Palestine in the North or from Southern Mesopotamia is a question which cannot yet be solved with any certainty, and the same applies to the date at which the script was introduced. If it came from Palestine, the introduction probably falls later than the year 1000 B. C.; if from Southern Mesopotamia it may have taken place somewhat earlier.

It is much more surprising that nothing is known about the time of its disappearance. Probably it did not survive long after the decay of the South-Arabian civilization; in the time of Muḥammad it seems to have been already obsolete, hence e. g. the fabulous statement of Ibn Khallikân that at the time of the rise of Islâm nobody could read or write in Yemen, a most astounding statement which is refuted by direct evidence (e. g. 'the slave from Yemen skilled in writing' in a poem by Labîd). Apparently though it had fallen out of use, it was still known, as is proved by the name applied to it by the Northern Arabs (*musnad*, propped, supported, a name founded on the peculiar shape of the characters usually consisting of one or two vertical or slightly slanting strokes which seem to carry or 'support' a curve, circle, hook or notch). It is certain in any case that after the rise of Islâm the North Arabian script became solely dominant.

The nations of South Arabia, which were characterised in antiquity by the same restlessness as to-day, migrated at various periods, which at present it is impossible to fix accurately, through North Arabia as far as the South of Syria, at first perhaps as traders and later for political reasons. Sabaean inscriptions have been found near al-'Ôla in the far North of Arabia, and it is not impossible that others may yet be discovered in Midian, and on the Southern frontiers of Palestine as well as in the country East of the Jordan.

Apart from these monuments other inscriptions are found in the region of Northern Arabic speech, the script of which is clearly derived from South Arabian writing. According to the shape of the characters it may be regarded as certain that they belong to three different periods, and thus owe their origin to three distinct migrations of Southern Arabs. (The best account of these South Arabian alphabets is found in Littmann, *Zur Entzifferung der Thamudenischen Inschriften* = *Mitteilungen der Vorderasiat. Gesellschaft*, 1904, plate xii, and Dussaud, *Les Arabes en Syrie*, p. 63).

1. The oldest are the Liḥyân inscriptions — according to D. H. Müller, *Epigraphische Denkmäler*, p. 20, this is the oldest form of any South Arabian script, and represents the connecting link between the old Semitic and the Sabaean script — it is chiefly found in the district of al-'Ôla. The texts are unfortunately not very extensive; as they contain undoubtedly Jewish expressions (Lidzbarski, *Ephemeris*, ii, 120) they cannot be older than the hellenistic period.

2. An obviously later type of script is found on the inscriptions, formerly called proto-arabic, and later known as Thamûdic. They were first discovered by Euting in the same district as the Liḥyân inscriptions, they occur however considerably farther North. Burton (*Land of Midian*, ii, 138) found a few in Midian, and the present writer discovered a number in the ruined town of Greye to the North West of Tebûk; see *Mélanges de la Faculté Orientale de Beyrouth*, iii. In spite of their large number — Euting alone collected 792 — they yield very little information, and their date cannot yet be fixed with accuracy.

3. Still more modern, because clearly exhibiting cursive forms, is the script of the very numerous inscriptions found in the Ṣafâ, an uninviting volcanic district about 100 miles S. E. of Damascus. The information yielded by their contents is similarly scanty; it is possible however to fix their origin in the time between A. D. 1—200 with some certainty (Dussaud and Macler, *Mission* etc., p. 66 extend this time as far as before the iv. century). It is impossible to say how late the script survived; it is a striking fact that the inscription of Nemâra dating from the year 328 is written not in the Safâ script, but in Nabataean characters.

The South Arabian script also spread to Africa, where it still survives in a form differing from it externally but not in essential characteristics. The migrations of South Arabian tribes to Abyssinia, where they founded trading-stations at first probably in the district of Aksum, seem to have begun long before the commencement of our era. The Ethiopic nation speaking a Semitic tongue arose from their mingling with the native tribes. Monuments in their South Arabian script which at that time was scarcely modified, only exist from the period after the conversion of the Abissinians to Christianity (iv. century A. D.). Soon afterwards however a fundamental transformation took place, perhaps under the influence of Greek writing; according to D. H. Müller (*Epigraphische Denkmäler aus Abessinien*, p. 68 *et seq.*) it is to be regarded as the conscious work of one man, perhaps a Greek. First of all the direction of writing, which until then had been from right to left and partly boustrophedon, was fixed as running from left to right; the writing was farther transformed into a syllabic script in such a way that the appropriate vowel was affixed to each consonant in the form of a dot, stroke or hook.

Between 900 and 1000 A.D. the Aethiopic language died out, and was replaced by modern dialects, the most important of which, Amharic, is still used beyond the frontiers of Abyssinia as a lingua franca. It has retained the old script, only forming new characters out of the old material, in order to express new sounds. Even some of the neighbouring peoples — Galla and Agau tribes — have tried to adapt the script to their languages.

This modern Abyssinian script is the last direct descendant of the old Semitic alphabet, which after a space of more than 3000 years still retains the principle of leaving the characters unconnected.

2. ARABIC LANGUAGE.
CLASSICAL ARABIC.

The phrase classical Arabic denotes that form of the Arabic language which since the commencement of Arabic literature has been used by the Arabic writing nations for all their literary productions (for the very few exceptions see below, articles ARABIC DIALECTS and ARABIC LITERATURE). The earliest specimens of classical Arabic known to us are found in the preislâmic poems. The problem arises how the poets (who for the most part must have been ignorant of writing) came to possess a common poetical language, — either (perhaps with the object of securing for their works a wider field of circulation?) they used for their purposes a language composed of elements from all the different dialects, such as may have been created by the necessities of trade, and which it only remained for them to ennoble, or the dialect of any particular tribe (perhaps owing to political circumstances?) achieved in pre-historic times special pre-eminence as a language of poetry. A final answer to these questions, if it ever becomes possible at all, will have to be reserved until all accounts of the ancient dialects in our possession have been subjected to a careful scrutiny. It may be remarked however that the analogy of other literary languages, the history of whose origin can be followed more closely (e. g. German, English and French), seems in the case of Arabic also to favour the hypothesis of a single dialect as the original form of the poetical and thus of the written language. — An account of the present state of our knowledge on this subject is given in Brockelmann, *Grundriss der vergl. Gramm. der semit. Spr.* i. 23; cp. also Nöldeke, *Beiträge zur semit. Sprachwissensch.*, p. 1—4; id., *Die semit. Sprachen* (2. ed.), p. 52 *et seq.*, see however the review of the last-mentioned work in the *Liter. Centralblatt*, 1899, col. 1404; Praetorius on Schleichers's *Somali-Sprache* in *Ausland*, 1892, p. 686[b], and A. Fischer in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lix. 662, note 4.

Except in a limited sense there can be no question of a development of classical Arabic. In spite of the fact that vocabulary and forms of expression were again and again subjected to considerable modifications in accordance with the difference of outlook between the various stages of civilization, and with the special needs of the separate branches of literature (cp. A. Fischer, *loc. cit.*, lvi. 580 *et seq.*), it may still be said that the grammatical skeleton of Arabic, as now written by the better class of newspapers in Egypt and Syria, is essentially identical with that of the old poetical language. (The difference between classical Arabic and the modern vernacular dialects is of course proportionally greater; see below: ARABIC DIALECTS).

The cause of this quite unique conservatism may first of all be found in the fact that the later Muslims regarded the language of the Ḳor'ân as genuine classical Arabic (see below), so that this particular form of the language was almost invested with religious sanctity, and secondly, it would seem, in the inability of the Arabs to free their minds from grooves into which they have once fallen.

It would lead us too far to give here an account of the grammatical structure of classical Arabic: we can only refer to the special literature on the subject: Socin's *Arabische Grammatik* (in the 6th edition, 1909, revised by Brockelmann; the most up-to-date of existing grammars; contains on p. 161—200 a good bibliography), Wright's *Arabic Grammar* (3rd ed., 1896 and 1898, revised by Robertson Smith and de Goeje), de Sacy, *Grammaire arabe* (3rd ed. 1904), Fleischer, *Kleinere Schriften*, Nöldeke, *Zur Grammatik des klass. Arabisch*, Reckendorf, *Syntaktische Verhältnisse*, and innumerable articles and essays scattered through the Oriental periodicals. A rapid survey of the Phonetics and accidence of classical Arabic (particularly suitable for non-Arabists) is given in Stumme's *Arabisch, Persisch und Türkisch in ihren Grundzügen*. The most important Arabic sources on classical Arabic are mentioned further down in the article ARABIC LITERATURE. — Dictionaries by Lane, Freytag, Dozy, Kazimirski, Belot, Wahrmund a. o.

A few remarks on the power of expression of Arabic as compared with that of other literary languages may not be out of place. Comparing it first of all with the other Semitic ton-

gues we notice that the possibilities of syntactic distinctions are in Arabic developed to a far greater extent and brought out with greater precision than in any of the others. Where other languages have to content themselves with simple co-ordination, Arabic commands a large number of subordinating conjunctions. In one respect however classical Arabic as well as its sisters compares unfavourably with the Aryan languages: while for the noun it has created a great number of subtle distinctions which enable it to express even the most abstract concepts, the development of the verb has been most one-sided. We seek in vain for a distinction between inchoative and permansive forms of expression: *ḳâma* means 'he was standing' and 'he rose'. Similarly the different grades of the simple meaning of the verb which we render by means of various auxiliary verbs, are frequently left unexpressed: *yaḳra'u* 'he reads' and 'he is able to read'. The expression of the tenses also often lacks precision, in spite of the development of a number of verbal exponents with a temporal force (*ḳad*, *kâna*, *sawfa* etc.) Cp. on this point the grammatical works referred to above, and Brockelmann, *Grundriss*, i. 23 *et seq.*, as well as the same author's *Gesch. d. arab. litter.*, i. 11 *et seq.*

The extent to which Islâm favoured the growth of Arabic literature by putting new problems before it, has been set forth below [art. ARAB. LITER.]; here we content ourselves with drawing attention to a few points in which the *language of Arabic literature* and *Arabic philology* more or less depend on Islâm. Classical Arabic owes its wide *diffusion* and its still unassailable *predominance* to the fact that the *Ḳor'ân* which for the most part was composed in the dialect of Mekka, was assimilated by the Muslims, at least as far as the vocalisation and orthographic signs are concerned, if not to a wider extent (cp. Vollers, *Volkssprache und Schriftsprache im alten Arabien* and Hartmann's remarks in the *Orientat. Litteraturzeitung*, xii, 19 *et seq.*) to the language of the poets which was already recognised as classical. The element which on the whole they did not venture to change (cp. however e. g. Vollers, *loc. cit.* p. 58: *ḥîsmun* in place of *ḥîn*) were the consonants of the sacred book as committed to writing at an early date, although they frequently agreed but ill with the classical pronunciation. This is the reason why the consonantal *orthography* of the Ḳor'ân still remains without any essential changes the norm for classical Arabic. The striking phenomenon presented by the omission of many terminations in the Ḳor'ân is probably to be explained by the assumption that the creators of this orthography in writing down the text pronounced each word separately and thus accepted the 'absolute form' as the normal form of the word. Although this hypothesis presupposes a fairly highly developed power of abstraction on the part of the early scribes of the Ḳor'ân, it is impossible to reject it even on the theory that the town dwellers of the Ḥidjâz had at the time of Muḥammad already lost the short final vowels, the *tanwîn* etc. (see A. Fischer in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lix, 816; Vollers, *loc. cit.*, p. 165—175); without this theory it would be impossible to explain the fact that changes in the position of a word are fairly consistently ignored, a phenomenon most noticeable in the spelling of the feminine termination with *h even in the construct state*, which is found already in the earliest copies of the Ḳor'ân. Cp. Nöldeke, *Gesch. des Qorâns* (1st ed.), p. 247 *et seq.* — The endeavour to read and interpret the Ḳor'ân as 'correctly' as possible is probably responsible for the creation of two sciences which proved highly important for the task of putting the language on a scientific basis and controlling its further development: the sciences of *Phonetics* and *Grammar*. It is true that in the field of the former the Arabs seem to have been influenced by the Indians, and in that of the latter by the Greeks (Aristotle; Brockelmann, *Gesch. der arab. Litter.*, i. 97), there can be no doubt however that their achievements in both subjects are considerable. To the Arabic writers on Phonetics we owe an exact definition of all the old Arabic consonants, and native Arabic grammar (however artificial it may appear to us) has unquestionably rendered an important service to Arabic, by restricting the ambiguity inherent in all Semitic languages to a minimum.

It would be difficult to forecast the future of classical Arabic. In *Muslim* countries all attempts to elevate a vernacular dialect to the position of a new literary language have proved to be failures [see article ARABIC LITERATURE], and we may assume that the language which has had a life of at least 15 centuries, will maintain its position so long as its bulwark exists in the religion of Islâm. (A. SCHAADE.)

ARABIC DIALECTS.

I. *Definition of Arabic dialects.* — Classical Arabic, the oldest specimens of which are found in the pre-islâmic poets, must be regarded as a form of the language which, originating probably in the Eastern part of Central Arabia, was later elevated to the position of a common language, and the rules of which were defined, not without some artificiality, by the Arab grammarians. It is obvious from the outset that forms of speech differing from this language must always have existed in Arabic. Of the South Arabian language we possess many specimens [see SABA']. Further dialectical details of the older period are preserved to us on other inscriptions (including Nabataean monuments) found in Arabia itself and in the neighbouring countries, and especially in the different peculiarities exhibited by early specimens of the language, in variants of the Ḳor'ân, and in numerous statements of Arabic grammarians and lexicographers. At a later stage the mixture of Arab tribes, the intercourse with foreign nations, the influence of the classical language and other circumstances may be expected to have caused modifications in the form of the spoken language. Considerations of this nature show that it is a mistake of method to derive modern Arabic forms of speech (as is usually done) immediately from the classical language. It is necessary on the contrary to make the relation of such dialectical forms to classical Arabic the subject of investigation, while classical Arabic itself has to be divested of its dogmatic character and to be regarded from the point of view of linguistic history. With regard to certain elements of modern Arabic it has already been proved that they are not derived from the classical language [see below]. For the rest it may

be said that the historical investigation of Arabic dialects and of the Arabic language in general has not yet emerged beyond the very first beginnings. In addition to the further investigation of modern Arabic it will be a task of fundamental importance to collect the dialectical peculiarities of old Arabic, so far as they have been handed down to us, with as much completeness as possible, and to consider them as a whole. A part of this problem has already been solved by Vollers. In the following pages we consider the modern dialects, tracing back their history as far as possible. — Cp. Th. Nöldeke, *Das classische Arabisch und die arabischen Dialekte* in his *Beiträge zur semitischen Sprachwissenschaft* (Strassburg, 1904), p. 1—4; K. Vollers, *Volkssprache und Schriftsprache im alten Arabien* (Strassburg, 1906).

II. Extent of the region covered. — The following are the countries where Arabic is still spoken in our own time (partly side by side with other languages): Arabia together with Mesopotamia and Syria as far as the frontier of Asia Minor; North Africa to the boundaries of the Sahara; Malta; Egypt as far South as the western head-waters of the Nile; Kordofan, Darfor, Wadai, Bornu; districts on the curve of the Niger and in Senegal; the western Sahara between Senegal and Morocco. — Zanzibar and the districts on the opposite coast of Africa were colonised from South Arabia; other colonies are found as far as the Malay archipelago. — Arabic was formerly spoken in Spain (down to c. 1500), on the Balearic islands, in Sicily, Pantelleria (down to the xviii. century), Madagascar. Whether Arabic was ever a vernacular language among the Moplas in the South West of India has still to be determined. — Within the boundaries indicated above Arabic came into contact with a number of other languages; see below under the separate countries.

III. Sources. — On the sources for the study of the dialectical conditions of the earliest Arabic, see above under I. For the later period the following have to be considered: 1. Arabic literary texts written in the vulgar dialect or with a vulgar colouring, some of which are of a very early date (cp. e. g. below V. 7: Spain). Of special importance are the Christian Arabic literature — cp. Georg Graf, *Die christlich-arabische Litteratur bis zur fränkischen Zeit* = *Strassburger Theol. Studien*, vii, 1 (1905); id., *Der Sprachgebrauch der ältesten christlich-arabischen literatur* (Leipzig 1905) — and documents in Jewish Arabic. The latter dialect (usually written in Hebrew characters) possesses in addition to important old works (e.g. Abu 'l-Walid Marwān b. Djanāḥ, *The book of Hebrew roots*, ed. by A. Neubauer, Oxford, 1875) an important literature extending to the most recent time which still waits to be exploited from the point of view of linguistic history. Cp. Eusèbe Vassel, *La littérature populaire des Israélites tunisiens*, in *Revue Tunisienne*, July 1904 and following numbers. A large amount of interesting printed literature is preserved in the British Museum, at Strassburg, and in Berlin. Maltese literature (written since about 1800 in the Roman character; cp. Luigi Bonelli in the *Archivio Glottologico italiano*, suppl. period. iv) is also of considerable importance. — 2. Special mention is due to transliterations of Arabic texts or single sentences and names in Coptic and Greek characters, of which very old and important examples are extant. They give important information on the vowel system, the pronunciation of many consonants, the extent to which the *l* of the article was assimilated, the accent inflexions etc. The most important documents of this class are the old Violet fragment of the Psalms (*Oriental. Litteraturzeitung*, 1901), early Egyptian papyri, and the Sicilian diplomas published by Cusa (cp. below under V. 15). — 3. Arabic loanwords in other languages, so far as they were borrowed immediately from the living language. The historical importance of this source is obvious e. g. in the case of the Arabic of Spain. — 4. Works by European authors. Of the most recent contributions works by Landberg, Stumme and Marçais are particularly prominent and useful. Older lexicographical studies, many of which are of considerable value, exist in manuscript in many libraries. Among the numerous 'conversational guides' there are many very inferior productions. — 5. The principal and inexhaustible source is of course the living language itself. For its exploitation a thorough preparation, especially as regards phonetics, is indispensable. The most valuable contributions are texts (not songs) which should be written down with phonetical accuracy, noting the accent everywhere. — For the entire literature of the Arabic dialects (including mss.) see G. Kampffmeyer, *Kritische Bibliographie der arabischen Dialekte*, in preparation for the *Abhandlungen für die Kunde des Morgenlandes hsg. v. d. Deutschen Morgenl. Gesellsch.*

IV. Characteristic features. — The following pages give a comparative account of characteristic features of the Arabic dialects and of traits important from the point of view of linguistic history, arranged according to the usual grammatical scheme; the account does not in any way claim to be complete — the quantity of interesting and historically important material is immense. To this will be added, arranged according to the different dialects 1. where necessary, short remarks referring to the various linguistic spheres; 2. in order to facilitate a rapid survey of the historical relation of the several idioms to each other, the paradigms (either complete or the characteristic forms or the well attested forms) of the independent personal pronoun and the perfect and imperfect of the first stem of the strong verb in the case of each of the better known dialects; 3. a bibliography of the most important literature [1]).

---

[1]) The following points should be noted: 1. The transliteration adopted is that of the *E. o. I.* An acquaintance with the sounds of classical Arabic is presupposed (cp. however Vollers, *loc. cit.*). Occasionally *w*, *i* = *u*, *y* as semivowels, *ę* (open *e*), *å* (= a in ball) have been retained from the sources; the orthography of the vowels has on the whole been simplified; similarly in the paradigms under V it has not been intended to express all the possible shades of the vowel sounds. ´ denotes a short accented, ^ a long accented vowel. The accent has been indicated, wherever it is given in the sources or can be determined with certainty in some other way. Forms in [ ] are corresponding forms in classical Arabic. 2. Abbreviations: m. = masculini, f. = feminini, c. = communis (generis); s. = singular, pl. = plural, cl. = clas-

b Preliminary note. The differences between modern and classical Arabic have been regarded as so slight that some authorities altogether denied the existence of Arabic dialects; cp. Eichhorn, *Über die verschiedenen Mundarten der Arab. Sprache* (1779); Leguest, *Y a-t-il ou n'y a-t-il pas un arabe vulgaire en Algérie?* (1858). These views partly arose from ignorance of the real circumstances and partly from the fact, that the investigation did not look beyond the common idioms such as now exist everywhere. At the present day, after the material in our possession has grown considerably the following points should be noted throughout with regard to general statements: 1. There are large districts concerning which we know as yet nothing; 2. the dialect of a country is not yet nearly known, if we know only the idiom of one particular point (especially the capital); 3. common idioms are to be found everywhere; the typical elements (which are sure to exist in abundance) must be sought far below the surface. Poems are not very suitable as specimens for the purposes of linguistic history. Fairy-tales also often contain many elements belonging to the κοινή or the classical language.

c Consonants. (Cp. Vollers, *The system of Arabic sounds*, in *Transactions of the ix[th] Intern. Congress of Orientalists*, vol. ii. London, 1893). 1. The guttural explosive *Hamza* of cl. Arabic has to a large extent been dropped. This is connected with among other things: α the loss of unaccented vowels e.g. *ḫad(d)* [*aḫadᵘʰᵘ*] (gen.), *ḫbār* [*aḫbārᵘ*] (cp. under **e**); β the concretion of words and elements, e.g. *ǵāb* [*ǵāʾa bi*] 'he brought' (gen.), *marranuḫḫra* [*marratᵃⁿ ʾuḫrā*] Spain. xiii. cent.) 'another time', *insān ᵘuḫḫar* [*insānᵃⁿ ʾāḫarᵃ*] 'another man' (Spain, xv. xvi. cent.), *ʿašar tfāl* [*ʿašaratᵘ ʾaṭfālᵢⁿ*] 'ten children' (Malta). — It is also replaced by (?) *w* and *y*: *wīn* [*ʾaina*] 'where?' *wāḫida* or *yāḫida* [*ʾāḫiḏaᵘ*] 'taking' (cp. under **o**) etc. — On the other hand *Hamza* is not unfrequently found in the dialects where it is absent in cl. Arabic, thus in South Ar. at the end of a word after a long vowel.

2. *Bāʾ*. In the East and West it frequently contains a *w*: *rabbwy* 'my lord' (Trip.). In Mor. it tends to become a labio-dental *v*. For the rest *b*.

3. *Tāʾ*. In Alg. and Mor. frequently *ts*. For the rest *t*.

4. *Ṯāʾ* and 9. *Ḏāl*. Usually *th* and *dh* among the Bedawīs and in the country, also in Sp., South Ar., and Tunis; for the rest = ẓ (*t*, *ts*) and ẓ (*d*); thus also among the Bedawīs of E. Tunis (*t*, *d*). Under the influence of cl. Arabic it becomes *s* and *z* (more generally in Jerusalem and Mekka).

5. *Ǵīm*. In Lower Eg. and partly in Central and South Ar. *g*. For the rest in Central and South Ar. usually *gy*, *dy* (*y*-tendency to *dj*); on the lower Euphrates *y*; in the Nedjd rarely and regularly at Mekka *dj*. — For the rest *dj* and *ž*.

6. *Ḥāʾ*. *ḥ*, in South Ar. weak, tendency towards *h*. Cp. 7.

7. *Ḫāʾ*. *ḫḫ*. In Malta at the present day usually = 6 (*ḥ*), but *ḫḫ* also occurs both for 6 and 7. In the xviii. century the two sounds were still distinguished.

8. *Dāl*. *d*.

9. *Ḏāl*. cp. 4.

10. *Rāʾ*. Trilled *r*; uvular in Baghdād (and with individual speakers at other places).

12. *Sīn*. *s*.

13. *Šīn*. *sh*.

14. *Ṣād* *ṣ*. Among the Bedawīs of E. Tunis as well as in other parts of North Africa and in Malta, *s*.

15. *Ḍād*. Among the Bedawīs and frequently in the country mostly an emphatic *dh*, similarly in Tunis. Other localities *ḍ*, in Morocco also *ṭ*. Among the Bedawīs of E. Tunis, as well as in other parts of North Africa and in Malta, *d*. In Ḥaḍramawt *ł* (Polish guttural), as in Mehri. Under the influence of cl. Arabic, and of Turkish or Persian-Kurdish *z* (or *ẓ*).

16. *Ṭāʾ*. *ṭ*. In South Ar. weak (tending towards *d*). Among the Bedawīs of E. Tunis and in Malta *t*.

17. *Ẓāʾ* = 15.

18. *ʿAin* ʿ, tends to disappear in Malta.

19. *Ghain*. *gh*; in South Ar. partly = 18; as nowadays regularly in Malta, where however *gh* was still preserved in the xviii. century. Among Algerian Bedawīs also *ḳ*. (Cp. 21), in other places *g*.

20 *Fāʾ*. *f*; sometimes containing a *w*.

21. *Ḳāf*. In towns frequently *ḳ*, as also in Sp. and among the educated in Malta; among the Bedawīs and in the country mostly a guttural *g*, as also in Tripolis. It is however a strong *Hamza* in the towns of Syria, in Cairo, usually in Malta, and sporadically in other places (Alg. Mor.); among the Bedawīs of E. Tunis and in other parts of North Africa, in Malta (side by side with *Hamza*), in the surroundings of Jerusalem, and in other places, it is = *k*; in Central Ar. and Mesop. (not in South Ar.), especially near an *i*, *e* = *dj* (and *ž*, *dz*); in South Ar. and partly in Mesop. = *gh* (19). So far as it is guttural it contains a *w*.

22. *Kāf*. Mostly *k*. Partly (Syria, Morocco, always to a limited extent) = *Hamza* (cp. 21). In Central Ar. and Mesop. = *č* (and *tš*; also *ts*, as well as *ksh*, *ks*), corresponding to 21. — Sometimes containing a *w*.

23. *Lām*. *l*. Rarely (regularly in *Allāh*) *ł*.

24. *Mīm*. *m*. Sometimes containing a *w*.

25. *Nūn*. *n*. Sometimes with the nasal sound.

26. *Wāw*. *w* (English *w*).

27. *Hāʾ*. *h*. Usually lost in Malta (where it is regularly = *Hamza* or *ḥ*).

28. *Yāʾ*. *y*.

---

sical Arabic. The abbreviations for the various dialects are easily intelligible through the headings of V; gen. = of general occurrence; E. = East (including Egypt), W. = West (including Spain and Malta). — *A. A. W. B.* = *Philosophische und Historische Abhandlungen der Königl. Akademie der Wissenschaften zu Berlin*; *A. D. M. G.* = *Abhandlungen für die Kunde des Morgenlandes herausgegeben von der Deutschen Morgenländ. Gesellschaft*; *A. S. G. W.* = *Abhandlungen der philologisch-histor. Classe der Königl. Sächsischen Gesellschaft der Wissenschaften*; *B. S. S.* = *Beiträge zur Assyriologie und semit. Sprachwissenschaft*; *J. A.* = *Journal Asiatique*; *M. S. O. S.* = *Mitteilungen des Seminars für Orientalische Sprachen zu Berlin*, Abteilung II; *W. Z. K. M.* = *Wiener Zeitschrift für die Kunde des Morgenlandes*; *Z. D. M. G.* = *Zeitschrift der Deutschen Morgenländischen Gesellschaft*.

d The ordinary values of the sounds are subject to numerous modifications caused by a variety of influences, especially the meeting of certain sounds within the same word, or from word to word. In Tunis e. g. *ts* becomes *ṯṯ*, *td* *dḏ*, *nr* *rr*, *sd* *zd*, *'h* *ḥḥ*, *ḥh* *ḥḥ* etc. Similar phenomena wherever we have exact phonetical descriptions. — Irregularities are frequent where sibilants meet, thus *sĕms* (Trip.), *šĕmš* (Malta and other places in the W.) 'sun', *sins* [*ǵins*ᵘⁿ] 'kind' (Trip.), *džs* or *dǵs* alongside of *ǵās* [*ǵāza*] 'to pass by' (Mor.). Similar phenomena in the E.

In Malta voiced consonants at the end of a word regularly become voiceless. — Double consonants are usually preserved; the reduplication is dropped however regularly in Mes. and Malta, and frequently in other regions, in cases where a double consonant occurs at the end of a syllable; in Malta it is also regularly dropped after a long vowel. — For an instance of a new reduplication see e. g. under **g**, and under V, 9 a in the case of the Algerian verb.

Very common words are often considerably slurred and abbreviated, e. g. *ḳad(d)* instead of *ḳadr*; *dḏrk* and other forms used in Algeria for *dḥa 'l-waḳt* 'now', etc.

e Vowels. Instead of cl. *a-i-u* we have a large variety of nuances of vowel-sounds (*aǟäei*, *ie*, *uoüi*, etc.). To a certain extent the vowels have lost their character as elements distinguishing between different forms: sometimes the groups containing *i* and *u* have become confused (as in 'Om.), sometimes all the three groups (W.), in these cases the vocalization depends only on the nature of the adjoining consonants (whether they are emphatic or guttural etc.) or on other vowels (harmony of vowels especially in the W.). — Assimilation of vowels is frequent, e. g. *širib* [*šariba*] 'he drank' (Syr., Eg.). In the second radical of the verb the vowels of the perfect and imperfect are frequently assimilated to each other. — Unaccented short vowels are dropped, either altogether, or (in the E.) loss of *i* and *u* rather than *a*. Hence e. g. in Syria *kătabit* 'she wrote', but *šírbit* 'she drank'; an interesting distinction occurs in 'Om.: *ḳitil* 'he was killed', *ḫnuḳ* 'he was strangled' (both hypoth.) became fixed in the forms *ḳtil* and *ḫnuḳ* (with corresponding intransitive forms); when the accent was thrown back, these forms could not be changed, while *ḳatil*, *ketib* were fixed in the modern forms *ḳâtil*, *kâtib* etc. A well-known parallel is to be found in Aethiopic. — Vowels are sometimes lengthened under the influence of the accent: *ḳûm* 'rise', *burnûs* for *burnus* (W.) etc. — Long vowels: *ā* where not preserved, 1. *ǟ*, *ē*, *ī* etc., among Maltese peasants, isolated cases in Syria, also in South Ar. 2. *ō*, *iǟ* (Lib. desert, stated also to occur in Malta); *īe* (Malta) *ī* (Sp., Malta) etc.

f Diphthongs: *aw* frequently = *ō* (*ô*) and further = *ū*; *ai*: *ē* (*ê*) and *ī* (*î*); preserved e.g. when followed by *w* or *y* respectively (Eg.), in other regions under other conditions.

Accent: The dialects yield very important information about the accent of Arabic. The Arabic grammarians ignore the subject. Our way of accenting classical Arabic is based on the system employed by Egyptian and Syrian scholars in pronouncing the literary language. These scholars however are influenced by their way of putting the accent in the vernacular (*ḳátal*: *ḳátal*, *bálad*: *báladun* etc.), hence in the West we get a different stress (*ḳatál*, *baládun* etc. corresponding to the stress used in the vernacular). A comparative study of the Arabic dialects proves beyond a doubt that the West Syrian and Egyptian method of putting the accent represents the last stage, reached at an early date in the countries mentioned, of a tendency to throw the accent back to the beginning of the word. This tendency can be traced in the entire field of Arabic speech. The oldest place for the accent which can be historically traced, is found to be nearly always the penultima of classical Arabic forms; in a few cases an even earlier stage (stress on the last syllable) is indicated. To call forms like the modern *ḳtil* etc. 'interchanged' (umgesprungene) (*ḳatál* derived from *ḳátal*) and to accept this appellation generally, is equivalent to a direct reversal of the historical development as proved on the most solid basis of facts, a development which however was ignored in coining and accepting the expression. *Ḳatál* became *ḳátal*, *yaḳtúl* became *yáḳtul* etc. —

g Where suffixes and formative elements are added, we find both in the E. and W. that the accent remains where it would have been without these additions: *beledak*, *ḫeḳíbe*, f. of *ḫaḳíb* [*ḫaḳabatun*], *ḳṣábbe* [*ḳaṣabatun*] (all Central Ar.), *ḫanâma*, f. of *ḫanâm* (Sp.); *támra* f. of *támar* [*tamrun*] (Sp.); *ḳáḍebinā* (Central Ar.), *máuletnā* (Sp.), *fárreḳhā*, 'divide it' (Mor.), *íḫḫlifkā* (South Ar.), *tkéllimt*, 'I have spoken' (Mor.), *ḳátalt* 'I have fought' (Sp.); cp. the forms of the verb further down. In most regions however *farréḳhā* etc. occurs regularly side by side with *fárreḳhā* etc. — Suffixes and formative elements are accented in the Violet fragment of the Psalms (*akálū* 'they have eaten' and similar forms regularly, *li-ṣiḥḥátihi* 'for his safety,' *ḳudsí* 'his holiness') and in the modern language both in the W. (Mor., Alg. among Bedawis) and the E. (Central and South Ar.). Such accentuation leads to forms like *ḳtílu* (as against fixed *ḳtil*) and *ḫḳébe* (as against fixed *ḫaḳíb*) which seems to be the regular modern pronunciation in the W., while similar forms occurring in other regions may have been derived from a *fáʿal* existing side by side with *faʿál*. — The feminine termination in particular is accented not only in the W., but also in the country East of the Jordan (*Z. D. M. G.* xxii, 177); cp. also forms like *send*, *snd* (Sp., modern W., Hadramawt), *myt* 'hundred', *ḏkra* [*ḏikratun*] ('Om.) and others. — Enclisis is found frequently especially in the W., but also in the E.: *l* with suffixes e.g. (to express the dative case) is regularly enclitic, thus; *mā katabtílli* 'you (m.) did not write to me', *katabtíli* 'you (f.) wrote to me'. (Aleppo).

h Pronouns. For the independent personal pronoun see below. In cl. Arabic we have to assume the pronunciation *ánta*, corresponding to which we find *ênte* in Sp. and other parts of the W. The form *nta* etc. found side by side with it in the W. and also in the E. ('Om.) cannot have been derived from *ánta* (nor *nti* f. ('Om.) from *ánti*); perhaps this is a case of preservation of an older form required on historical grounds from which cl. *ánta* was derived at an early stage by throwing back the accent. — In the case of the pronominal suffixes (as well as with the independent pronouns) the distinction between the gen-

ders in the 2. pers. s. and pl. and in the 3 pers. pl. has frequently been lost: thus after cons. *ek*, and in the pl. masculine forms like *kum*, *kon* or feminine forms like *ken*, *kon* (Syr.) used for both genders. At the same time we find e.g. in Syr. 2. pers. s. after cons. m. *ak*, f. *ik*; Central Ar. 2. pers. s. after cons. *ek* and similar forms, f. *il* (*k* as affricata because of the *i*), 2. pers. pl. m. *kom*, f. *kin*, 3. pers. pl. c. *hum* or m. *hum*, f. *hin*. 'Om. 2. pers. s. m. *ek*, f. *ish*, 2. pers. pl. m. *kum*, f. *ken*. 3 pers. s. mostly *u*, among Bedawīs usually *ah* (*a* of the accus. + *h* [*u*]). At Mōṣul *nu*, e.g. *fīnu* 'in him' etc. probably a secondary form derived from plurals and duals ending in

k *īn*, *ūn* with suffixes. — Periphrastic constructions which vary with the locality are frequently employed: Central Ar. *il-bēt ḥaḳḳī* 'my house'; where the object possessed is feminine *ḥaḳḳa*, in the pl. *ḥaḳḳūn*. In other districts *mālī* (Mesop.), and — very widely diffused — *metā'*, *bta'* (also abbreviated) with forms for the fem. and the pl. in Morocco *dīyal*, *dī* (South Arabian, Kampffmeyer). — Relative pronoun mostly *illī* (*il*), *līli*, in South Ar. also *dhī*, 'Om. *hū* (derived from 'ašū), all unchangeable. — The article *al*, *el* etc. has the accent in Central Ar., even in cases like *álḳalb* 'the heart' etc. In South Ar. the article also occurs in the form of *am* etc. — Interrogative pronoun: *min*, *mīn*, in the W. *ashkūn* 'who?'; *ish*, *ēsh* [*ayy shai'in*] etc. 'what?'; *shnū* etc. 'what is it?' [*ayyu shai'in hūwa*], preserving the nūnation.

l The verb. For perf. and imperf. of the principal form see below. Other stems of cl. Arabic: iv. In the W. specially not only change of *adār* to *dār*, but also of '*aḳtil* to *ḳtāl* (like *kbār*, *ḥmār* etc. derived from '*akbar*, '*aḥmar* etc.) so that iv. became identical with i.; hence in the living language iv. has disappeared, and frequently been replaced by ii. Traces of iv. however have been preserved side by side with i., e.g. in the case of verbs med. and tert. *w* and *y*. The verb of admiration on the other hand is common in the W., as well as in the E.: *makbárni*, 'how great I am' etc. — vii. is wanting e.g. in Tunis and Malta, though common in other parts of the W. (Tlemsen, Tripolis etc.), and in other regions, especially as a common way of expressing the passive. — The use of viii. is also limited in the W. (cp. below), ix. (or xi. respectively) occurs in the W. in the form: *f'āl*, e.g. *ṣfār* 'to be yellow', 2. pers. s. *ṣfārt* (Tun.) or *ṣfārīti* (Tlemsen), imperf. *yeṣfār*. — In the W. *tt* (and *st*) occurs in x. in place of *st*. — Combinations: perhaps ii. and x.: *istánnā* etc. [*ista'annā*, or = *ista'nā*] 'to stop' (common) and other cases (see below). — Other stems: i. with *t* prefixed (i.e. corresponding to viii., only that the *t* is not inserted) in the W., e.g. in Tunis, Morocco and other localities, to express the passive, e.g. *tbā'* 'he was sold'. Cp. in Tlemsen the mixed form *ntšāf* 'he was seen', Mor. *ttākil* 'it was eaten'. — *fau'al*, e.g. *gōṭar* 'to go away' 'to walk one after the other' (Mesop., Algeria), also *fa'al* (e.g. *nūal*, *tlla'*) in the sense of ii. (Mesop.). The accent of the different stems is mostly parallel to that of the perf. of i., except in *fá'al* (everywhere).

The old formation of the passive is preserved in 'Om. (cp. supra under **e** and below under V., 3. *x*), traces also occur among the Bedawīs in the interior of Algeria.

m The participle frequently stands for the present tense in isolated cases also for the perfect. In Central and South Ar. especially the participle with suffixes is used to express the past tense; e.g. *ḍārbatak* 'she has beaten you', in place of which we also find *ḍārbitlak*, mostly however forms with nūnation: *ḍāribinnak* 'he has beaten you', f. *ḍāribtinnak* etc. (the suffixes of course are suffixes of the accusative).

n Verbal exponents. *b* common in Syr. and Eg., e.g. *byiktib* 'he writes', 1. pers. pl. *mniktib*. From this must be distinguished *bi*, *b* etc. used in the E. and W. to express volition. In Morocco we find *ka* for the present tense (Sp. *kanna*, *kan*, *ka*, *ki*, the last two forms ± *tashdīd*, *kinn* Central Ar., in 'Om. *kann* + suff. followed by the perf. to express the past tense). In Mor. *ta* occurs side by side with *ka*. In 'Om. *ḥa*, *ha* [*ḥattā*] for the future, in Malta *ḥa* [*ḥalli*] to express a wish; and many other forms.

o Verba med. geminatae. Practically everywhere like *sadd*, *saddit* etc.; in Sp. however *ḥibb* ['*aḥabb*] 1. pers. s. *ḥabēt*, 3. pers. pl. *ḥabbu*.

Verba primae hamza. Forms like *kh'dhā* side by side with *khadh* ['*akhadha*] in the W. (Syr. *ákhad*), participle in the E. and W. *wākhidh*, *yākhidh*, *mākhidh*, as well as regular forms.

p Verba tertiae *w* and *y*: Corresponding to the accentuation *ḳatál* (*ktīl* etc.) we find *ramá* (*ramí* etc.), f. mostly *ramāt* etc., but also as in *ṭhrit* (Trip.). In 'Om. *mishe*, f. *mishit* [*mashā* 'he went'], but *ḥī*, f. *lḳit* (*laḳiya*) corresponding to *bḳīt*, as against *dkhil*. — *rāma* corresponding to *ḳatal*, but in the Violet fragment of the Psalms still *atī* 'he has come', on the other hand already *ba'ath* 'he has sent'; similar cases at the present time in Central and South Ar. — Imperf. *yu'ṭī* 'he gives', (Violet fragment of the Psalms), *yirmī* (Sp.), other parts of the W. *yirmī*, side by side with *yirmi*; the latter form prevails.

q Noun. The *I'rāb* has disappeared. Traces of the nūnation not only in forms like *shnū* 'what is it?' (cp. supra under **k**) and similar fossils, but especially in combinations like *sendnin ṭawīl* (Central Ar.), where *in* must be regarded as derived from *an*; quite similar cases in Sp., concerning Inner Africa see infra.

r Cl. *fa'l* (or other vowel) frequently replaced by *fá'al*, *fú'ul* etc. (with the accent always on the first in Sp., where as a rule the stress is on the last: *támar* [*tamrun*] 'date', f. *támra* etc.) or *fa'āl* etc., as to-day in the W. and E. in dialects which put the accent at the end, sometimes side by side with *fá'al* forms, e.g. in Trip. *bḥār* and *báḥar* 'sea'; or some words = *fi'āl* and others *fá'al*. Similarly forms like *bidū* side by side with *bídu* [*badwun*] in idioms which put the accent at the end. — For cl. *fa'alun* to-day *fa'āl* and *fá'al* consistently corresponding to te verb. — '*ashā* and '*áshe* ['*ashā'un*], *jabī* and *jabi* [*jabyun*] corresponding to *ramā* and *ráma*. — *akbār*, *aḥmar*

s Sp., *kbār*, *ḥmār* Mor., Tlemsen, *ákbar*, *áḥmar* Tun., Trip., Malta (in Trip. however the name *ḥmād* ['*aḥmadu*], similarly Eg., Syr., but Central Ar. *ḥ'mar* (side by side with *aḥámar*); 'Om. *ikbar* (thus the elative forms), but *ḥmār* etc. Fem. Central Ar. *ḥamrā* and *ḥámra*, all other regions *ḥámra* (thus also in Sp. owing to its following the analogy of the ordinary forms of the feminine). — For cl. *fa'ālī*: Sp. in the old **t**

period *fa'āīl* and *fa'āīl*, xv.-xvi. cent. only *fa'āīl*, in the large central towns of the W. and in Malta *fa'āīl*, in remote districts, among Bedawīs and in the country *fa'āīl* side by side with *fa'āīl*. Hence probably not preservation of the old *fa'āīl*, but to be classed with Sp. *nāšūt* 'mankind', Morocc. *Brāhīm* [*'Ibrāhīm*] etc. In the E. only *fa'āīl*.

Feminine termination. Sing *a* (thus almost exclusively in the W.) *ä*, *e*, *i*. The final *h* sounded in the Violet fragment of the Psalms, in Sp. down to the xiii. cent., and nowadays in Central Ar.; Accent *see supra*, Stat. constr. *at* etc.

Dual (usually *ēn*, also in constr.), on the whole restricted to objects found in pairs, and to words denoting measures; in some cases however (especially with some Bedawīs) still used to a greater extent. — Regular *plural* m. *īn*, also in constr. (in Mor. frequently without the accent), f. *āt* (in Mor. frequently without the accent), in Central Ar. also *ā*.

Numerals. For 3—10 usually one form only (m. or f.) is in use. In the cases of the numerals from 11—19 forms preserving ' or terminating in *ar er* are rare. The ' is usually slurred over, or the termination dropped, or both. In the W. and in Malta the termination is preserved in the syllable *el* prefixed to the following word; with regard to assimilation this syllable is treated like the *l* of the article. In Tunis these numerals when followed by a noun end in *en*.

With reference to particles we notice especially the widely diffused use of an enclitic *ši(i)* [*šai'un*] in negations and with questions, e. g. *mā kālitšī(i)* 'she did not say', *mūš* = *mā hūwa šī*; *hīšī* 'is it she?'

The syntax can not be treated here in detail. If a noun accompanied by an adjective is determined, the article generally is put only with the adjective. In the W. a distinction is made between *bārakallāhu-fīk* (verb preceding the noun) and *A'llāh ibārek-fīk* 'God bless you'. A detailed comparative study of syntax (but of that of the spoken language, not of the artificial written idiom; cp. Snouck Hurgronje, *Mekk. Sprichw.*, p. 94) is important, and prevents error even in the interpretation of isolated phenomena. Thus it shows that the common particle *lā*, *ilyā*, *lā* etc., the use of which corresponds partly to that of the cl. *'iḏā* 'when', is not derived as had been assumed without a doubt, from *'iḏā* (change of *ḏ* to *l*!), but is a development of the preposition *ilā*.

From a lexicographical point of view (Dozy, *Supplément aux dictionnaires arabes*; cp. Kampffmeyer, *Bibliographie*) the dialects offer much material which goes beyond the resources of the old language. In some cases this is only due to the fact, that stems which are not absent from the classical language, have developed a new special meaning, cp. e. g. the common *šāf*, *išūf* 'to see', or *ifšēf* 'to see', among the Bedawīs of Eastern Tunis. In some districts (Syria, Malta) foreign influence is not quite inconsiderable from a lexicographical point of view; in other regions, e. g. in North Africa, where a large Berber admixture might be expected to exist throughout, it is strongly developed only in parts, while some idioms have very little of it.

As far as Phonetics and accidence are concerned foreign influence can be definitely proved only in districts where Arabs are surrounded by or dispersed among an overwhelming majority of foreign elements, e. g. in Central Africa, and in certain parts of Mesopotamia. In any case it is strikingly slight.

In the following we have refrained from combining separate groups. Spain, the dialects of North Africa and Malta, exhibit strong resemblances, and the idioms in question are often classed together as Maghribī. In most cases however instances of 'Maghribī' linguistic phenomena can (even at the present state of our knowledge) be found in the East as well; even with regard to the shibboleth imperf. 1. pers. s. *n*—, 1. pers. *n*—*u* it is doubtful whether its home is in the Maghrib (cp. Landberg, *Arabica*, iii. 53: *ana nikūm*, Ḥaḍramawt).

V. The separate regions. — 1. Central Arabia. Syrian desert. The relation between the language of the city of Mekka to the Bedawī idioms is worthy of attention. — Pronoun: *āna*; *int(e)*, f. *inti(i)*; *hū*, f. *hī* (in Mekka: *awarrīk hūwa*, *hīye*, 'I will show him, her to you'); *ḥinnā*, *ḥinnā*, *intum*, *hūm* (in Mekka: *hūma*). Verb: *mit̤lē* and *nidār* with obvious transition in the living language from the first form to the second (Mekka only *nidar*), f. *ikbādhat* and *ǵiťfet* 'she got ill' (the latter forms esp. in cases where the vowel of the second radical is *i*); 2. pers. c. *sinui'e*, *kālit*; 1. pers. identical; plur. 3 pers. m. *nidlam*, *nidil*, 3. pers. f. *gālan* they said, 2. pers. m. *rikāntū* [2. f. probably *-tan*]; 1. *-nā*. Imperf. *yindar*, with gutturals (esp. *ḥ*) like *yuḥdfur*. Terminations: 2. pers. f. s. *īn*, 3. and 2. m. pl. *ūn*, 3. and 2. f. pl. *-an*, *-in*.

Cp. Wallin in *Z. D. M. G.* xii (1858), 666—675; Wetzstein, *ib.* xxii (1868), 69—194; A. Socin, *Diwan aus Centralarabien*, part i—iii (Leipzig, 1900-1901) = *A. S. G. W.*, xix, i—iii; C. Snouck Hurgronje, *Mekkanische Sprichwörter und Redensarten*, in the *Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch Indië* . . ., series 5, i. (1886), p. 433—576, also separately (Hague, 1886).

2. Mesopotamia. Phonetics and accidence of this region are closely related to those of Central Arabia and the Syrian desert. Foreign influences (especially in the North): Syriac, Persian, Kurdish. — Pronoun: *ānī*; *inte*, f. *intī*; *hū'a*, *hūe*, Mōṣul *hūwa*, f. *hī'a*, *hīe*; *iḥnā*; *intum*, *intū*, f. *inten*; *hūmma*, Mōṣul *hīyam*, f. *hinne*. Verb: *kitab* (also *ṭild*), f. *(i)ktibet*; *kitab(i)t*, f. *kitbīt*; *kitab(i)t*; *(i)ktibaw*, *kitbu*, f. *(i)ktiben*; *kitabtū*, f. *kitabten*; *kitabnā*. Imperf. *yiktib* (also *yiktib*), f. *tiktib*, *tiktib*, f. *tiktibīn*; *aktib*; *yiktibūn*, f. *yiktiben*; *tiktibūn*, f. *tiktiben*; *niktib*.

Cp. Meissner in: *B. S. S.*, vol. v. (1906, the part in question = 1903), on this Weissbach in *Z. D. M. G.*, lviii. 931—948; Meissner in *M. S. O. S.* v. (1902) and vi. (1903); Weissbach, *Beiträge zur Kunde des Irak-Arabischen* i. (1908); Sachau in *A. A. W. B.* 1889, i.; Socin, *Der arabische Dialekt von Mōṣul und Mārdīn* in *Z. D. M. G.* xxxvi. (1882), 1—53, 238—277; xxxvii (1883), 188—222. Here only texts.

3. South Arabia. Here also much resemblance with the Arabic of the interior of the Peninsula. We possess a systematic account of 'Omān and good texts in that dialect. Landberg's studies give information about South Western Ḥaḍramawt and districts adjoining it to the West;

for linguistic phenomena of the headland which closes in the Persian Gulf Jayakar is to be compared. — Persian influences especially in the farthest North East (Jayakar). Remains of the old South Arabian language, on which further information is still needed, in Ḥaḍramawt. The Mehri spoken in that region has been studied in detail (see MEHRI). 2. 'Omānī. Pronoun: *ene*; *nti*, f. *nti*; *hūwe* (*hū ūe*), f. *hīye*; *hni*, *ḥnā* (*nḥnā*); *ntū*, f. *ntên*, *hum*, f. *hin*. Verb: *kteb*, f. *ktibit*; *ktibt*, *ktibt*; *ktibt*; *ktbu*, f. *ktiben*; *ktibtu*, f. *ktibten*; *ktibna*. — But intransitive verbs and the passive which is here preserved in the first and second form, like *ḏkāl* 'he forgot' [*ḏḥahila*], *ḫnūḳ* 'he was strangled' *ḳtil* 'he was killed', f. *ḳtilt*, pl. *ktilo*, f. *ktilen*. — Imperf. *yūktub*, f. *tūktub*; *tūktub*, f. *tktibi*; *āktub*; *yktibo*, f. *yktiben*; *tktibo*, f. *tktiben*; *nūktub*. Pass. *yūktel*, *yūḫbar*. β. Ḥaḍramawt. Pronoun: *āna*, f. *ent*; *ente*; *hū* (*hū'*), f. *hī*; *ḥna*, *nāḥna*; *entu(m)*, *hōm*. Verb: Active and passive (or intransitive) similar as in 'Omānī, the active frequently accented on the last (*ḏhabāh*), partly alternating in the living speech with accentuation on the penultimate. Perf. 3. pers. pl. forms like *gitlū* (pass.) *ḥāmilū* (act.), *gātlaw*, *daḫlaw*. Imperf. forms like *yindir*, side by side with *anšḳrōb* 'I drink' *baṭla'* 'I will ascend' etc. (In ii. also forms like *geddūn*) 3. pers. pl. imperf. m. *-ūn*, *-ōn*, *-ū*, f. also *-īn*. Prefix of 1. pers. pl. sometimes *l* instead of *n*.

Carl Reinhardt, *Ein arabischer Dialekt gesprochen in 'Omān und Zanzibar* (1894); on this Nöldeke in *W. Z. K. M.* ix. (1895); Texts in 'Omānī in *M. S. O. S.*, iii. (1900), v. (1902); Landberg, *Arabica*, iii—v. (1895—1898); *Études sur les dialectes de l'Arabie méridionale*, i. (1901), ii[a] (1905), ii[b] (1909). Texts from Ḥaḍramawt also in *Südarabische Expedition*, iii. (Alfred Jahn), iv. (David Heinr. Müller, 1902). Cp. L. W. C. van den Berg, *Le Ḥadhramout et les colonies arabes dans l'Archipel Indien* (Batavia, 1886). — Jayakar, *The Shaḥee dialect of Arabic*, in the *Journal of the Bombay branch of the R. As Soc.*, 1902, p. 246—277 (without transliteration). — Lexicographical details from the district of 'Aden in E. V. Stace, *English-Arabic vocabulary* (London, 1893).

4. Madagascar. Cp. Gabriel Ferrand, *Les musulmans à Madagascar et aux îles Comores* (part iii., Paris 1902 = *Publications de l'École des Lettres d'Alger. Bull. de corr. afr.* ix, part 3), especially p. 41—61; and Ferrand in *J. A.*, ser. 10, ii. (1903), 451—485. Treatment of the numerous Arabic loanwords in the modern language and in earlier documents.

5. Syria. We possess detailed information about the language of the towns of Bairūt, Damascus, Aleppo, Jerusalem, as well as specimens from Lebanon and Galilee. — Foreign influences: especially Syriac (now extinct except for a few remains in Ma'lūla to the North of Damascus); to a small extent Turkish. Pronoun: *āna* (*ānī*); *ānt(e)*, f. *ānti*; *hū* (*hūe*, *hūwa*), f. *hī* (*hīe*, *hīye*); *niḥn(a)*, *iḥna*; *intū* c.; *hēnu(n)*, *hēnne*, *hum* c.; *hin* f. Verb: *katab* (*ḍhirib*), f. *katabet* (*ḍhirbet*); *katabt* (*katābt*), f. *katabti*; *katabt* (*katabt*); *katabu* c.; *katabtu* c.; *katabna*. Imperf. *yiktub* (*byiktub*, *biktub*), f. *tiktub*; *tiktub*, f. *tikt(*ᵉ*)bi* (*btiktibi*); *iktub* (*āktub*); *yikt(*ᵉ*)bu* (*bikitbu*) c.; *tikt(*ᵉ*)bu* c.; *niktub*.

Bairūt: Martin Hartmann, *Arabischer Sprachführer* (2. ed., Leipzig and Vienna s. a.); Damascus: David in *J. A.*, ser. 8, x. (1887); J. Oestrup, *Contes de Damas* (Leiden, 1897); Aleppo: Pourrière-Kampffmeyer in *M. S. O. S.*, iv. (1901), on which cp. Barthélemy in *J. A.*, ser. 10, vi. (1905), 179—186; Lebanon: Barthélemy in *J. A.*, ser. 8, x. (1887), 260—339 and 465—487; Galilee: W. Christie in *Z. D. P. V.*, xxiv. (1901); Jerusalem: Max Löhr, *Der vulgär-arabische Dialekt von Jerusalem* (Giessen, 1905), on which cp. Barthélemy in *J. A.*, ser. 10, viii. (1906), 108—253. 6. Egypt. The dialect of Cairo has been studied in detail. In the outlines of accentuation, phonetics and accidence it closely resembles the language of the large Syrian centres. Foreign influences at Cairo as well as in the rest of Egypt: Coptic which died out in the beginning of the xvii. century. Pronoun: *āna*, *āni*; *inte*, f. *inti*; *hūwa*, f. *hīya*; *iḥnā*: *intū* (*intum*) c.; *hūm*, *hūm(m)a* c. Verb.: *ḍarab* (*misik*), f. *ḍarabet* (*misiket*, *miskat*); *ḍarábt*, f. *ḍarábti*; *ḍarábt*; *ḍarabu*, *ḍárabum* c.; *ḍarábtu* c.; *ḍarábna*. Imperf. *yiḍrab* (*yimsik*), f. *tiḍrab*; *tiḍrab*, f. *tiḍrábi*; *āḍrab* (*āmsik*); *yiḍrábu*, *yiḍrabum* c.; *tiḍrábu*, *tiḍrábum* c.; *niḍrab*. With *b(m)* similarly as in Syria.

Wilh. Spitta, *Grammatik des ar. Vulgärdialectes von Ägypten* (Leipzig, 1880); K. Vollers, *Lehrbuch der ägypto-arabischen Umgangssprache* (Cairo, 1890; transl. into English by F. C. Burkitt, Cambridge 1895); C. A. Nallino, *L'Arabo parlato in Egitto* (Milan, 1900); J. Selden Willmore, *The spoken Arabic of Egypt* (London, 1901; 2. ed. 1905).

As for the rest of Egypt, there is no doubt that conditions are very different and that many peculiar features exist; but reliable information is still scanty. Maghribī linguistic phenomena reach as far as the gates of Alexandria. On Upper Egypt cp. Heinr. Schäfer, *Die Lieder eines ägyptischen Bauern* (Leipzig, 1903); H. Dulac in *J. A.*, ser. 8, v. (1885, 5—38 (Texts without transliteration).

7. Spain. Important sources take us back as far as the xii. century. Pedro de Alcalá (Petrus Hispanus) published in 1505 a systematic account together with a dictionary in transliteration. Spanish-Arabic is particularly important from the point of view of linguistic history, especially with regard to accentuation, as it preserves to a large extent an early stage of development. Foreign influence: Romance and other idioms of the Spanish peninsula; Berber. The following forms according to Pedro de Alcalá. Pronoun: *aná*; *ènte* [also f.?]; *hù*, *húe*, *húet* [*húet* South Ar., cp. Ethiop., Nöldeke], f. *hí*, *híe*, *híet*; *ḥnaḥ*; *éntum*; *húmet* [f. = ?]. Verb: *cḥaráb*, f. *ḥabblet*; *cḥarábt*, f. ?; *cḥarábt*; *cḥarábu*, f. ?; *cḥarábtum* c. ?; *cḥarábna*. Imperf. *yacḥ*ᵉ*ráb* (*nuḳtúb*), f. *tacḥ*ᵉ*ráb*; *tacḥ*ᵉ*ráb*, f. ?; *nacḥ*ᵉ*ráb*; *yacḥ*ᵉ*rúbu*, f. ?; *tacḥ*ᵉ*rúbu*, f. ?; *nacḥ*ᵉ*rúbu*.

xii. cent.: David de Gunzburg, *Le Divan d'Ibn Guzman* (fasc. i., text, Berlin, 1896); ca. xiii. cent.: *Vocabulista in Arabico*, ed. by C. Schiaparelli (Florence, 1871); xv—xvi. cent.: *Petri Hispani de lingua Arabica libri duo*, ed. by P. de Lagarde (Göttingen, 1883; according to the original edition, Granada, 1505).

8. Morocco. The conditions frequently resemble those of Spanish-Arabic. The accent is variable and apparently not subject to any rules;

it is clear however that owing to circumstances which to a great extent correspond to those of Spanish-Arabic, the tendency to throw the accent back which is noticeable in Spanish-Ar., has been carried to an even greater length. The development is in a state of flux, and perhaps caused by the influence of Berber. We may compare this with the conditions existing in Central and South Arabia, where the accent is similarly variable: in the region of the old South-Arabian language (e. g. in Mehri) we find that the accent is thrown back as much as in Spain and even as much as in Morocco. — Foreign influences: Berber; Spanish (both directly and indirectly, as many Spanish Arabs went to Morocco). — Pronoun: *anā*, *anāia* and *āna*; *ntā*, *ntāia* and *inta* c.; but also *enti*, *inti* f.; also *enṭin*, *entīna* c., probably originally f.; *hūa*, f. *hīa*; *ḥnā*, *ḥnāia*; *ntūm*, *ntūma*, *ntuma* c.; *hūm*, *hūma* c. Verb: *ḳtel*, *ḳtelet*; *ḳtelt*, f. *ḳtelti* (also c.); *ḳtelt*; *ḳtelu* (*ḳtelū*) c.; *ḳtelna* c.; *ḳtelna*. Imperf. *yeḳt(e)tel* and *yḳtel*, f. *teḳt(e)tli*, *tḳteli*; *neḳt(e)tel*, *tḳtel* c. or f. *teḳt(e)li* and *tḳtli*; *neḳt(e)tel*, *nḳtel*; *yeḳt(e)lu*, *yḳtlu* c.; *t*— c.; *n*—. Sometimes other terminations than the *ā* of the perfect have the accent.

José Lerchundi, *Rudimentos del árabe vulgar que se habla en el imperio de Marruecos* (Madrid, 1872; of greater linguistic value than the second ed. Tánger, 1889 and 3rd ed. 1902. Also in English, 1900); Texts publ. by Socin *A. S. G. W.*, xiv., iii. (1893), by Socin and Stumme *ib.* xv., 1; by Fischer in *M. S. O. S.*, i. (1898, with valuable remarks), by Meissner, *ib.*, viii. (1905), by Kampffmeyer, *ib.* (1909). In preparation grammar by Kampffmeyer, texts (Tanger) by Marçais.

9. Algeria. a. Tlemsen. Accent generally fixed. Pronoun: *anā*, *ānā* and *āna*; *ntīn*, (*ā*)*ntsīn*(*a*) c.; *hūwa*, *hīwa*; f. *hīya*; *ḥnā*; (*ā*)*ntūm*(*a*), (*ā*)*ntsūmān* c.; *hūma*, *hūmān* c. Verb: *ktib*, f. *ktebets*; *kebts* c.; *ktebts*, *ktebu* c.; *ktebna* c.; *ktebna*. Imperf. *yiktib*, f. *tiktbi*; *tiktbi* c.; *nektsib*; *yiktebu* c.; *t*— c.; *n*—. β. Ulād Brāhīm (Dép. of Oran). Accent not as fixed as might appear from Marçais' account (cp. Marçais, p. 68 *et sqq.*). Pronoun: *āna*, *ānāia*; *enta*, *entāia*, f. *enti*, *entīya*; *hūwa*, f. *hīya*; *ḥnā*, *ḥnāya*; *entūm*, *entūma* c.; *hūm*, *hūma* c. Verb: *gtem*, f. *gtemet*; *gtemt*, f. *gtemti*; *gtemt*; *gtemu* c.; *gtemtu* c.; *gtemna*. Imperf. *yigsem*, f. *tigsem*; *tigsem*, f. *tigsemi*; *nigsem*; *yigsemu* c.; *t*— c.; *n*—. γ. South Algeria, 'Aïn Māḍi. Accent as in Morocco. Pronoun: *ānā*, *enāyā*; *nti*, *ntāya*, f. *nti*, *ntīya*; *hūwa*, f. *hīya*, rarely *hī*; *ḥnā*, *ḥnāyā*; *ntūm*, *ntūma*, *entūma* c.; *hūma* c. Verb: *ktib* (passive: *gubiḍ* 'he was seized' etc.), f. *ktibit*; *ktibt*, f. *ktibti*; *ktibt*; *ktibū*, *ktibū* c.; *ktibtu* c.; *ktibnā*. Imperf. *yiktib* and *yiktib*, f. *t*—; *t*—, f. *tiktbi*, *tiktbi*; *niktib*, *niktib*; *yiktbū*, *yiktibnū*, *yiktbū* c.; *t*— c.; *n*—. Accent also on other terminations than *a*.

Cp. W. Marçais, *Le dialecte arabe parlé à Tlemçen* (Paris, 1902 = *Publications de l'École des Lettres d'Alger. Bull. de Corr. Afr.*, part xxvi); id., *Le dialecte arabe des Ulād Brāhîm de Saïda* (*Département d'Oran*, Paris 1908, Extract from the *Mémoires de la Soc. de Linguistique de Paris*, p. xiv. and xv.). An excellent study. Cp. a text publ. by E. Doutté in the same *Mémoires*, p. xii, Kampffmeyer, *Südalgerische Studien* in *M. S. O. S.* viii. (1905).

10. Tunis (town). Here also considerable immigration of Spanish Arabs. Pronoun: *āna*; *inti* c.; *hūa* (*hūwa*), f. *hīa* (*hīyā*); *ḥna*, *intūma* c.; *hūma* c. Verb: *ktib*, f. *ktbet*; *ktibt* c.; *ktibt*; *ktbu* c.; *ktibtu* c.; *ktibna*. Imperf. *yiktib*, f. *tiktib*; *tiktib* c.; *niktib*; *yiktbu* (*yiktibu*, *yiktibu*, *yiktibu*); *t*— c.; *n*—.

Cp. H. Stumme, *Grammatik des tunisischen Arabisch* (Leipzig 1896); Texts by the same, 1893; on this: Nöldeke in *W. Z. K. M.* viii. (1894), 250—271.

11. Bedawis of E. Tunis. Cp. H. Stumme, *Tripolitanisch-tunisische Beduinenlieder* (Leipzig, 1894, no grammar).

Tripolis (town): Pronoun: *āni* (*ānī*); *inti*, f. *inti*; *hūwa*, f. *hīya*; *ḥnī*; *intum* c.; *hūmmā* c. Verb: *ktib*, f. *ktibet*; *ktibt*, f. *ktibti*; *ktibt*; *kitbu* c.; *ktibtu* c.; *ktibna*; Imperf. *yiktib*, f. *tiktib*; *tiktib*, f. *tiktbi* (*tiktibi*, *tiktbi*, *tiktbi*); *niktib*; *yiktibu* (*yiktibu* etc.) c.; *t*— c.; *n*—.

H. Stumme, *Märchen und Gedichte aus der Stadt Tripolis in Nordafrika* (Leipzig, 1898; with a grammatical sketch).

12. Malta. The dialect must be classed as belonging to the North African group (thus Nöldeke against Stumme), though a Syrian admixture may possibly be traced. It is akin particularly to the idiom of Eastern Tunis. The accent could be thrown back even in the measure *fa'al* apparently because short unaccented vowels were not dropped to the same extent as in the other dialects of North Africa. — Foreign influence: Italian (esp. Sicilian dialect). Pronoun: *yīn*(*a*), *yīn*(*a*) etc.; *int*(*i*) c.; *hūa*, *hū*, f. *hīa*, *hī*; *ḥna*, *intom* c.; *hūma* c. Verb: *kiteb*, f. *kitbet*; *ktibt* c.; *ktibt*; *kitbu* c.; *ktibtu* c.; *ktibna*. Imperf. *yikteb*, f. *tikteb*; *tikteb* c.; *nikteb*; *yiktbu* (*yaḥārtu* etc.) c.; *t*— c., *n*—.

H. Stumme, *Maltesische Studien . . . Texte . . .* (Leipzig, 1904 = *Leipz. semitist. Studien*, I, iv); translation *ibid*, I, v. On the Studien: Nöldeke in *Z. D. M. G.* lviii (1904); systematic grammar by Stumme in preparation.

13. Pantelleria. Arabic loanwords: Gregorio and Seybold, in *Studi glottologici italiani*, ii. (1901), 225—238.

14. Balearic Islands. Arabic loanwords: Luigi Salvatore d'Austria in the *Actes du XIIe Congrès intern. des Orientalistes* (Rome, 1899), p. III, i. (Florence 1902), p. 1—56.

15. Sicily: Salvatore Cusa, *I diplomi greci ed arabi di Sicilia*, I [all published] (Palermo, 1868); cp. also Noël Des Verges in *J. A.*, ser. 4, vi. (1845, II), 313—342. The numerous Greek transliterations of Arabic proper names show that the accent had in its essential features reached the modern West-Syrian or Egyptian stage as early as the xi. century. — Arabic loanwords in Sicily: Gregorio and Seybold in *Studi glottologici italiani*, iii. (1903), 225—251.

16. Libyan desert. Martin Hartmann, *Lieder der libyschen Wüste*...(Leipzig, 1899) = *A. D. M. G.* xi, 3. The linguistic features (North African sphere) are very interesting; the book is a work of great industry, but difficult to use. Hardly any linguistic value can be assigned to L. C. Ewald Falls, *Beduinen-Lieder der lib. Wüste* (Cairo, 1908).

17. Central Africa. Kampffmeyer, *Materialien zum Studium der arabischen Beduinendialekte Innerafrikas*, in *M. S. O. S.*, ii. (1899). Tribes belonging to the North African and Egyptian sphere. Influence of Berber and languages of the Sûdân.

Concerning a wide-spread use of old terminations of the verb and noun, which to a certain extent is undoubtedly found in the colloquial, further materials are needed. But cp. also Kampffmeyer, *Marokkan. Grammatik* (in preparation).

(KAMPFFMEYER.)

f. ARABIC LITERATURE.

Already at the time of their first appearance in history we find the Arabs in possession of a considerable body of traditional lore, which however does not go beyond such elements as are met with in the case of many other gifted races on a low level of civilisation, such as the Bantu negroes or the South-Sea islanders. The Arabic language which has brought out the potentialities of the Semitic family of speech in the richest yet often one-sided development, commands an extraordinarily copious vocabulary; the men who created it, were forced to give a separate name to each object in the phenomenal world, owing to the fact that general concepts, though not unknown to them, had not yet become the basis of their mental processes. From this follows both the chief charm and the chief defect of their literary art: it is restricted to the particular, but for this very reason it is able to work it out with the greater precision.

As early as the year 500 A. D. the whole of North Arabia possessed a common poetical language such as is found in the case of many of the so-called primitive races. We may assume that it arose gradually as a result of the reciprocal relations between the different tribes, which followed from their annual migrations in search of pasture, as well as from the pilgrimages to common places of worship such as Mekka and ʿOkāẓ; the vocabulary probably was drawn from many dialects. It was used not only by the great poets at the royal courts of Damascus and al-Ḥīra, whose art served the desire for refinement accompanying a more luxurious life, but also by the goatherds of the Hudhail for the purpose of immortalising the petty strife of a narrow existence.

The dialects at the same time maintained their position in every-day life, and probably supplied down to a late period the language of many of the more primitive forms of art, which are passed over in silence by tradition. The camel driver who called on his animal and whiled away the time by accompanying its regular trot with a monotonous song, the women in the Bedawī tent and the peasants of the palmtree oasis, who lightened the fatigue of their work by rhythms clothed in words, must surely have used the language of common speech. This poetry of every-day life is only referred to in occasional allusions: thus we hear of lullabies and cradle-songs (Goldziher in the *Wiener Zeitschr. f. die Kunde des Morgenl.*, 1888, p. 164—167), of the workmens songs which accompanied the digging of the fosse for the protection of Medina against the Mekkans (Ibn Saʿd, II¹, 50, 28), or those verses with which St. Nilus heard the Bedawīs of the Sinai peninsula saluting a well (cp. Numbers, 21, 17). Scanty remains of such songs are preserved to us by Balādhorī (*Futūḥ*, ed. de Goeje, p. 49), and in our own day Littmann (*Volkspoesie*, p. 81, Nº. xii) was able to collect specimens in Syria, and Musil in Arabia Petraea (*Arabia Petraea*, iii. Vienna, 1908, p. 259); they not only assisted primitive man in lightening the weariness of his labours, but were believed by him to exercise a direct beneficial influence on his work.

In the eyes of primitive man words have not yet become the current coin of common speech, but are regarded as most potent means for influencing not only the souls of his fellow men, but also his entire surroundings which he likewise believes to be animate; the effect produced by words is much stronger than what we understand by being moved, it is a very real power which casts its spell over the soul of a person to whom the right kind of speech or song has been addressed. For this reason the poet is called by the Arabs *shāʿir*, the knower, that is to say the possessor of supernatural magical knowledge. His art is not only valued as an adornment of life, but also feared as a dangerous weapon, which directed against an enemy, cannot only put him to shame by ridicule, but even has the power practically to lame his energy. Satire, *hidjāʾ*, is thus one of the oldest forms of art; and even after its magical character had disappeared, it continued down to a very late period to play a very important part in public life; under the Umaiyad dynasty it temporarily dominated the whole field of literature. Cp. I. Goldziher, *Abhandlungen zur arab. Philologie*, i., Leiden, 1896, p. 1—121: *Über die Vorgeschichte der arab. Hidjāʾ-Poesie*; id., *Bemerkungen zur ältesten Geschichte der arab. Poesie*, in the *Actes du Xe Congr. d. Orient.*, sect. iii, p. 1—5).

Of equal antiquity as satire of an enemy is the lament for the beloved dead. It is primarily a duty of woman, in whom the mimic and still inarticulate expressions of grief are more fitting than in man. Owing to the nature of the old family organisation the lament of a sister for her brother is stronger than that of a wife for her husband; and thus the most famous poems of this group, those of al-Khansāʾ [q. v.], are laments for the death of her brother. It follows from the very one-sided nature of the virtues, which make up the Bedawī ideal, that the range of ideas in these poems is very limited (Cp. Goldziher, *Bemerkungen zu den arab. Trauergedichten*, in the *Wien. Zeitschr. f. d. Kunde d. Morgenl.*, xvi., 307—339).

But while satire and elegy continued to exist as independent forms, other motifs of poetry, which must have played an equally important part in daily life, completely lost their original character, at any rate in our tradition, which restricts itself almost exclusively to poetry cultivated as an art. This is particularly the case with erotic poetry: it was not until the Umaiyad age with its more refined and civilised atmosphere, that it developed into a definite artistic form; yet it can never have been absent from the mouth of the people. In the old classical poetry the love-song has degenerated into a conventional common-place at the beginning of a ḳaṣīda, the *nasīb*, which corresponds to the praise of the gods as the introduction of a mythological Homeric hymn in Greek literature. (See I. Guidi, *Il 'Nasīb' nella Qaṣīda Araba* in the *Actes du XIVe congr. d. Orient.*, Alger 1905, Paris 1906, iii., 8—12).

The same fate befell the description of nature, especially of animals so far as they in-

terested the Arabs either as game to be hunted or as domestic animals. There can be no doubt that the old period possessed vivid descriptions of the animals of the desert, which were the fruit of personal experience and observation. The camel, it may be said, dominated the thoughts of the Bedawī in the same way in which the cow was the principal object in the eyes of the Vedic Indian, and still is in the eyes of the Herero. Just as reference to the cow runs through the hymns of the Ṛgveda, (see Bruchmann, *Psychologische Studien zur Sprachgeschichte*, Leipzig, 1888, p. 277 *et seq.*), in a similar way we may speak of an Arabic camel-poetry; for the poets never grow tired of praising the excellence of their camels, and the animal practically dominates their imagery. Yet no independent poems of this kind dating from an early period are extant; they are lost as well as the war songs which, according to Sozomenos, celebrated the victory of the queen Māwiya. As a separate species poems of the chase appear very late, even later than erotic poems.

At the time at which our knowledge of Arabic poetry begins, i. e. not more than about 150 years before Muḥammad (see Djāḥiẓ, *Kitāb al-ḥayawān*, Cairo, 1323, i., 37, 19), poetry as an art is already dominated by a rigid conventionalised form, the ḳaṣīda [q. v.] in which all the separate species that once had existed independently, are merged. The range of contents of Arabic poetry had never been very wide; it became still more narrow and barren in this form. Certain stereotyped similes are repeated again and again, while other observations of natural objects which would be equally applicable are never used at all (see Nöldeke, *Fünf Mo'allaqât*, I in *Sitzungsberichte d. Kais. Akad. d. Wiss. zu Wien, phil.-hist. Classe*, vol. cxl., Nº. 7, p. 3); even Arab critics like Ibn Rashīḳ, *'Umda*, Tunis, 1865, p. 170 *et seq.*, can enumerate but few fresh thoughts with which eminent poets enriched the store of imagery possessed by the ancients.

The ḳaṣīda extinguished the independent existence of the separate species without the compensating effect of teaching the aesthetic sensibility of the Arabs to appreciate the symmetrical structure of a connected chain of thought. The general scheme of a ḳaṣīda is usually fixed, yet the details are so loosely connected that the tradition of most of the poems is subject to considerable variations. The aesthetic enjoyment felt by the Arab in reading a poem always proceeds from the single line. The poet who does not succeed in expressing a thought within the limits of one line is adversely criticised (see e. g. 'Askarī, *Kitāb al-ṣinā'atain*, p. 174$_{13}$ infra); but the appreciation of his art is proportionately greater if he can compress a separate thought within a half-line (see Suyūṭī, *Sharḥ shawāhid al-mughnī*, p. 94, 18 *et seq.*), or like Imru' al-Ḳais in line 48 of his *Mu'allaḳa*, make use of four different similes in a single verse ('Askarī, *loc. cit.*, p. 189, $_{3}$).

The outward form of Arabic poetry exhibits greater variety than the range of contents and the composition. The language is rich in vowels with a recurring musical accent; thus it could create a purely quantitative system of prosody, which starting from the simple iambic metre, the Redjez, had even in prehistoric times developed a large number of elaborate forms. It is probable that all the poems were meant to be chanted to a simple musical accompaniment and only this chant could do full justice to the subtle structure of the poetical language, mere recitation which was influenced by the vernacular dialect, being insufficient to bring out its full effect.

An art of this type gave little opening for the expression of individual experience and personal emotion. Thus of the large number of pre-islāmic poets there are only a few who stand out conspicuously as expressing thoughts of their own. Public opinion seems to have decided at an early date to regard the poets of the so-called *Mu'allaḳāt* [q. v.] as the most eminent representatives of their art; they are mentioned, although together with others, as early as the time of Farazdaḳ in a poem (*Naḳā'iḍ*, ed. Bevan, Nº. 39, $_{11-24}$) in which this poet enumerates his predecessors in the field of poetry. It is true that all the most important features of the ancient Arabic poetry are found combined in these seven: the ill-starred prince Imru' al-Ḳais; the frivolous courtier Ṭarafa; al-Nābigha, the adroit friend of the Ghassānids and Lakhmids, who sing of the intense joy of living; the typical bedawīs 'Alḳama and al-Ḥārith b. Hilliza; and Zuhair and Labīd, the preachers of a tranquil wisdom.

The exercise of this art was not however confined to the desert. The inhabitants of the oases and towns began to take their part at an early period, and to a large extent struck out paths of their own. The Jews of Taimā', it is true, like al-Samaw'al b. 'Ādiyā', had become so far assimilated to the Arabs, that their art hardly differs from that of the Bedawīs; but elements of essential difference are found among those Arabs who had settled at al-Ḥīra at the Persian frontier where they had come under the influence of Aramaean civilization. Their principal representative 'Adī b. Zaid [q. v.] in his youth chiefly cultivated the drinking song as a separate species of poetry; in his old age however Christian influence turned his thoughts to religious subjects, such as found expression in his poem on the fall of man quoted by Djāḥiẓ, *Ḥayawān*, iv., 66, $_{1-11}$. Such ideas did not excite much interest among the thoughtless children of the desert; but they appear again at Ṭā'if in the poems of Umaiya b. Abi 'l-Ṣalt [q. v.] whose home almost came within the sphere of South-Arabian influence, and who seems to have derived his inspiration more particularly from Jewish ideas.

Poetry was not however the only intellectual possession of the pre-islāmic Arabs. Prose had also begun to be a medium of artistic expression, especially in proverbs, with which the Arabs class many popular phrases, the origin of which had in most cases been forgotten at an early period. Similarly we find among the ancient Arabs the other forms of popular literature, thus especially the riddle (e. g. *Dīwān Hudhail*, Nº. 97, $_{11}$ in an allusion; al-Djāḥiẓ, *loc. cit.*, iii., 168, $_{10}$; Ibn al-Athīr, *al-Mathal*, p. 401, $_{7}$) and the beast-fable; yet although the proverbs were carefully collected as early as the time of Yazīd I by 'Ilāḳa al-Kilābī and later by the philologists, little attention seems to have been paid to the other two species; the fables therefore are known to us only from occasional allusions and quotations (as the fable of the ostrich *Hudhail* Nº. 73, $_{4}$ = al-Djāḥiẓ, *loc. cit.*, iv., 107, $_{17}$; cp.

Nöldeke, *Die Erzählung vom Mäusekönig*, in *Abhandl. d. Gött. Gesellsch. d. Wissensch.*, xxv., 10; Bashshār b. Burd in al-Kālī's *Amālī*, iii. 108, 11; applied to the gazelle in an 'Omānī proverb, Reinhardt p. 396, N°. 1; cp. also al-Djāḥiẓ, *loc. cit.*, v. 73, 4—13; 153, 10; Baihaḳī, p. 548, 2—4; Ḥarīrī, *Durra*, p. 98, 11 *et seq.*; Rāghib, *Muḥāḍarāt*, p. 101, 14 *et seq.*; 'Āṣim, *Sharḥ Dīwān Imra' al-Ḳais*, Cairo, 1323, p. 11, 10; 'Abbās b. al-Aḥnaf, *Dīwān*, p. 121, 5; Ibn al-Djawzī, *Kitāb al-adhkiyā'*, p. 188—192; al-Shirwānī, *Nafḥat al-Yaman*, Cairo, 1324, p. 186 *et seq.*; a plant fable, al-Ghazālī, *Iḥyā' 'ulūm al-dīn*, Cairo, 1279, iv., 10, 7). Germs of a future literary development were also contained in the orator's art cultivated with great zeal from an early period (cp. Goldziher in *Wien. Zeitschr. f. d. Kunde des Morgenl.* vi., 97—102). But the best school of Arabic prose was the telling of stories at the *samar*, the evening gatherings at the royal courts and in the Bedawī camp. The chief material was furnished by the war-like deeds of the tribe, the *Aiyām al-'Arab* [q. v.] (cp. E. Mittwoch, *Proelia Arabum paganorum, Aiyām al-'Arab, quomodo litteris tradita sint*, Berlin, 1899), and included petty raids as well as events of great historical importance which (as e. g. the death of Zenobia) are strangely distorted in this mirror (cp. Redhouse, in *Journ. of the Royal As. Soc.*, xix, 583—597, and further Hishām b. Muḥammad al-Kalbī, quoted by Ibn al-Djawzī, *Kitāb al-adhkiyā'*, p. 124—129). A favourite theme were the stories of famous lovers, like that of al-Munakhkhal and Raḳāshī alluded to in *Hudhail*, N°. 99, 20. Other motifs were taken from foreign nations and gladly assimilated: heroic tales common to many nations, like the battle between father and son (Hildebrand and Hadubrand: 'Amr b. Ma'dīkarib and his son Khuzaz; al-Kālī, *Amālī*, iii., 153), erotic jests like the story of the marvellous tree (Djāḥiẓ, *loc. cit.*, vi. 51 *et seq.*; cp. the later versions: Ibn al-Djawzī, *loc. cit.*, p. 83 *et seq.* and *Alf Laila*, ed. Habicht and Fleischer, xi. 151 *et seq.*; Brockelmann, in *Studien zur vergl. Literaturgesch.*, viii., 237 *et seq.*), Greek stories like that of the pledge of Moiros-Sharīk (*Aghānī*, 2. ed., xix. 87; cp. the later version: *Alf laila*, Cairo 1306, ii. 206—208), early Christian legends like that of the seven sleepers (al-Kālī, *loc. cit.*, i. 61 *et seq.*; cp. *Mitt. d. Sem. f. or. Sprachen*, iv., 228; de Goeje in *Versl. en Mededeel. d. Koninkl. Ak. van Wetensch.*, *Afd. Lett.*, ser. 4, iii., Amsterdam, 1900, p. 9—33), and Persian heroic stories like those with which Naḍr b. Ḥārith of Mekka rivalled the pious tales of the prophet.

Muḥammad not only demanded of his followers a renunciation of the old Bedawī ideals: he brought a new element into their lives, and incidentally created a new literary form; the influence of the Ḳor'ān on the further development was however only indirect: for owing to its claim to divine origin it excluded all possibilities of imitation for a large public (cp. Goldziher, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxix, 640; xxxii, 383; Thorbecke, *ibid.*, xxxi, 176; Goldziher, *Muh. Stud.*, ii. 403 on al-Ma'arrī's imitation). The form of the Ḳor'ān was probably not entirely new. The short clauses of the earlier revelations, borne on a free, gliding rythm and connected together by the single rhyme, must have been closely akin to the *sadj'* of the old soothsayers (*kāhin*). But their contents, the intimately personal struggle of the soul for its own salvation and that of mankind, was something that Arabia had never known before. Even when calm reflexion had taken the place of ecstatic emotion and the prophet strove to gain the attention of his people by means of stories, and finally when the revelation had become a mere form for laws and ordinances, its language must still have excited the admiration of the Arabs. If we are not always able to share this admiration, this is due to the fact, that our appreciation is affected by the often very serious distortion of subjects familiar to us from other sources.

The Ḳor'ān did not exercise any influence on poetry; on the contrary as its language betrayed its dialectical peculiarities even in the consonantal orthography which became the norm for the entire later literature, it was necessary to adapt it in some points, especially the vocalisation, to the language of the poets which once for all had come to be accepted as a model of unquestioned authority.

Muḥammad not without reason saw in the poets the chief representatives of an ideal of life hostile to his own, yet he was forced to a certain extent to acknowledge their power, which he therefore sought to make subservient to his own ends; to his court-poet Ḥassān b. Thābit [q. v.] fell the task of championing his modern claims against the Bedawīs in their own language; and the greatest poets among his contemporaries, al-A'shā and Ka'b the son of Zuhair, put their art at his disposal, the former voluntarily, the latter not without urgent pressure.

Among the faithful, however, the prophet's dislike of poetry gradually became the prevailing attitude, and the new aims which he had put before his nation fully engaged their energies with the result, that the poets were kept in the background in the public life of the early caliphate; the cynical parasite al-Ḥuṭai'a hardly helped to raise them in the public esteem. The Bedawīs however refused to yield up their delight in song and story and it appears that the great Arab migration created a kind of epic poem consisting of ballads which were put in the mouths of the heroes themselves (see Wellhausen, *Skizzen und Vorarbeiten*, vi., 49).

In the Umaiyad period, after the intoxication of religious enthusiasm had gradually passed away and the Arab nobles following the example of the caliphs had returned to their old ideals of life, poetry also regained its old prominence. The only people of intellectual eminence still remaining at that time in the mother-country were the representatives of the old Mekkan families now eclipsed by the Umaiyads, and the pious zealots of Medina who looked upon their rulers as worldly usurpers and enemies of the theocracy. But even these two classes had been considerably influenced by the changed circumstances of the time. The enormous fortunes brought to the old families by the conquests had undermined the simplicity of manners which before Muḥammad had prevailed even in a comparatively prosperous town like Mekka. Al-Aḥwaṣ there cultivated erotic poetry and the Persian Yūnus composed his new tunes which raised music to the level demanded by a more refined æsthetic sense. Refinement and

luxury now created in Arabia itself a new erotic poetry, the chief representatives of which were the Mekkans ʿOmar b. Abī Rabīʿa and al-Ḥārith b. Khālid, both of the tribe of Makhzūm, ʿAbd Allāh b. Ḳais al-Ruḳaiyāt, and the Umaiyad ʿAbd Allāh b. ʿOmar al-ʿArdjī. Their art was gladly received even in pious Medina which, as the residence of many of the discontented old chiefs, rivalled Mekka in the elegancies of life: it was at Mekka about the year 70 (689) that ʿAbd al-Ḥakam al-Djumaḥī opened a room for reading and games (*Aghānī*, iv. 52). The new art even penetrated to the ranks of the people and among the Bedawīs it became associated with the names of Ḳais b. Dharīḥ, Madjnūn and Djamīl.

Syria and ʿIrāḳ for a long time kept aloof from these frivolities. The old tribal feuds had broken out with renewed fury in the struggle for new settlements in these colonies, and found an echo in the works of the poets. Al-Akhṭal, Djarīr and Farazdaḳ and numerous lesser poets helped to stir the passions with their satires, and at the same time assisted the men in power with their influence on public opinion: thus al-Akhṭal served the Umaiyads, who saw no objection in the fact that he was a Christian, and Djarīr their governor Ḥadjdjādj. Syria was also the home of Dhu ʾl-Rumma, the last representative of the old camel-poetry which with him had already become a conventional mannerism. Similar tendencies are represented by Abū Nadjm and ʿAdjdjādj and the latter's son Ruʾba, who applied the iambic metre, *radjaz*, which until then had only been used for occasional pieces, to the subject-matter of the old ḳaṣīda; the simplicity of the metrical form was compensated for in their art by a proportionately greater artificiality of language, and especially a grotesque use of all the wealth of the vocabulary including its most far-fetched elements.

At the court of the Umaiyads the new erotic poetry did not find a place until the time of their decline. Under al-Walīd b. ʿAbd al-Malik the Yemenite Waḍḍāḥ wrote at Damascus his songs addressed to Rawḍa (one in stichomythia typical of the new manner *Aghānī*, vi. 35) and to the wife of the caliph, which in the end cost him his life. In the same style the later caliph al-Walīd sang the praise of his sister-in-law Salmā; the same poet also cultivated the drinking-song, with preference even to erotic poetry, following the model of ʿAdī b. Zaid, to whose poems he had been introduced by his cup-companion, the ʿIbādite al-Ḳāsim b. al-Ṭufail.

After the ʿAbbāsids had put an end to the glory of the Arab empire, all culture and civilisation became concentrated in the cities of ʿIrāḳ while the desert sank back into deepest barbarism: at this stage the new poetry became universally predominant. The Persians who had carried the new dynasty to power and now retained the power themselves for a long period, had no taste for the old poetry of the Bedawīs, but responded eagerly to the familiar theme of the celebration of love and wine. The predominance of the Arabic language was sufficiently secured for many centuries by the religion of Islām, and could not be undermined by Persian; it is only in jest that poets occasionally venture to introduce Persian words or even Persian lines in their Arabic verses (see Djāḥiẓ, *Bayān*, Cairo, 1313, i. p. 61). But Persian refinement and elegance dominated the poetry as well as the life of the ʿAbbāsid civilisation in its prime. The art of al-Walīd was transplanted to the court of al-Manṣūr by Muṭīʿ b. Iyās; and it found its highest perfection in the art of al-ʿAbbās b. al-Aḥnaf, a native of Khorāsān who introduced the Persian form of the tenzon into erotic poetry (see Brockelmann in *Mélanges Hartwig Derenbourg*, Paris 1909, p. 231), and especially in Abū Nuwās, the son of a Persian mother who became the greatest poet in the Arabic language. The influence of the latter persisted for centuries; his model was followed by the innumerable singers of the joy of life, who after the decay of the central power represented at the courts of the governors and princes from Khorāsān to Spain, the joyous Persian ideal of life, which also dominated the fine arts.

But the old aspirations of the purely Arabic literary art had not yet died away: the foreigners themselves who, as pointed out below, laid the foundation of the scientific study of the Arabic language, at the same time brought about a renaissance of Arabic poetry. The ancients were praised as the unequalled models not only of the language but also of aesthetic beauty, which critics strove to analyse scientifically: it thus became the fashion to imitate them. Even Abū Nuwās who amuses himself by ridiculing the stiff manner of the old Bedawī bards, cannot escape their influence in his panegyrics and poems of the chase. This influence is still more pronounced in the works of the ʿAbbāsid prince Ibn al-Muʿtazz, who made the ancient poets the subject of scholarly research, and of Abū Tammām and his pupil al-Buḥturī, both of the tribe of Ṭaiy (cp. the former's instructions in al-Ḥuṣrī's *Zahr al-Ādāb* on the margin of the *ʿIḳd*, Cairo, 1305, i. 108 *et seq.*). Al-Mutanabbī, the panegyrist of Saif al-Dawla, similarly follows the paths of the ancients, though it must be confessed that the mannerisms of his imagery frequently violate our canons of taste. Although he met with considerable opposition on the part of contemporary critics (cp. the severe criticism of al-ʿAskarī, *Kitāb al-ṣināʿatain*, Stambul 1320, p. 119, 4), later generations regarded him as the last of the great poets, and his dīwān is still read and highly esteemed even in distant ʿOmān (see Reinhardt, *Ein arabischer Dialekt gespr. in Oman und Zanzibar*, Berlin, 1894, p. xiii). His contemporary, the prince Abū Firās, possibly appeals to us more directly owing to the personal touches contained in some of his poems, but in the principal aims of his art he is his inferior, and of the countless number of the later imitators of Mutanabbī no one has equalled him (cp. Goldziher, *Abhandlungen zur arab. Philologie*, i., 122—174).

A single new literary form was produced by the imitators of the ancients. In the early period epic subjects, the stories of heroes, had found expression only in prose in a polished style full of conceits: the later development both of the elegy and the panegyric style led to the creation of a kind of epic narrative in verse. The sad events which happened at Baghdād in the year 197 (812) were told by al-Khuraimī in a long ḳaṣīda (Ṭabarī, iii. 873—

880); Ibn al-Mu'tazz celebrated the deeds of his uncle al-Mu'taḍid as prince and ruler in an heroic poem (ed. by Lang, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xl., 563 *et seq.*, xli., 232 *et seq.*). But these beginnings did not lead to any fruitful development. Ibn 'Abdūn's famous poem on the fall of the Afṭasids employs only allusions, like the South-Arabian ḳaṣīda: and other similar poems of Spanish origin, which for the most part are no longer extant, like that of Tammām b. 'Alḳama on the history of Spain and the works of Yaḥyā b. Ḥakam and Abū Ṭālib (Schack, *Poesie und Kunst der Araber in Spanien und Sizilien*, ii., 87) seem to have been no more than rhymed chronicles in the style of Ibn 'Abd Rabbihi's radjez poem on the wars of 'Abd al-Raḥmān b. Muḥammad (*Ibd*, ii., 288—303); in such works, as well as in numerous other didactic poems, the iambic metre was used only as a mnemonic help, not as an artistic form of aesthetic value. It was not until a very much later period that parts of the romances of heroism and chivalry which had sprung from ancient Arabic stories, were put into metrical form by professional rhapsodists.

Much greater prominence was achieved by another branch of poetical art, religious poetry which in its first beginnings also goes back to the pre-islāmic period. Under the early caliphs and the Umaiyads religious sentiment and poetical form were still mutually exclusive, and the poems of the Shī'ites Kuthaiyir 'Azza and al-Kumait strike a political rather than a religious note. But the civilisation developed in the towns of 'Irāḳ favoured the influx of numerous foreign, especially Persian ideas into the intellectual range of Islām which in its original state did not give much encouragement to the emotional element: and it was here that poetry took possession of the field of religion. In the meditations of Ṣāliḥ b. 'Abd al-Ḳuddūs, who was executed as a heretic in 167 (783) in the reign of al-Mahdī, we find the Persian doctrine of the creation of the world out of light and darkness (see Goldziher in *Transactions of the 9th int. congr. of orient.*, ii., 104—122). His contemporary Bashshār b. Burd in his poems openly confessed to his adherence to the Mazdayasna faith. The religious policy of the 'Abbāsids however protected Islām against the flood of heretical doctrines, and when Abu 'l-'Atāhiya in the second period of his poetical activity turned to religious meditations couched in simple popular language, the only fault that could be found with his orthodoxy was that his pessimism did not take sufficient account of the hope of resurrection. Pessimism is also the prevalent mood in al-Ma'arrī's *Luzūm mā lam yalzam*, the work of his mature age, which however achieves its main effects by means of artificial conceits in the use of language. It was not until a late period that mysticism began to make use of the poetical form; 'Omar b. al-Fāriḍ has hardly any predecessors worth mentioning, and he himself created the form which since then has been regarded as classical.

During the last seven centuries no original idea has made its appearance in poetry in its artistic form; poetical activity finds an outlet in countless *badī'iyas*, poems in praise of the prophet on the model of the *Burda* of Ka'b b. Zuhair and its pendant by al-Būṣīrī; their chief object consists in the endeavour to leave unused no artistic effect sanctioned by rhetoric.

Among the people, it is true, the art of song had not died out, but the 'educated' for the most part thought it beneath their dignity to take any notice of the fact; thus it is only in a casual allusion that Ibn al-Athīr (*al-Mathal al-sā'ir*, Būlāḳ, 1282, p. 46, 4) refers to songs in popular metres which were sung in Baghdād during street processions at night in the month of Ramaḍān. Among the people the ḳaṣīda with its single rhyme running through the whole poem was replaced by a strophic form by means of which it was possible to attain more pleasing musical effects. In Spain this new poetical form was introduced into literature. 'Ubāda b. Mā' al-Samā', the court poet of the 'Āmirids of Valencia who died in 422 (1031), created a definite form for strophic poetry, *tawshīḥ*, which until then had only been cultivated by the people, and transferred it from the popular dialect to that of literary art. He retained however the freer metres inseparable from the strophic structure, and in consequence this form of art remained preserved from the narrow trammels of a language following exclusively the paths of the ancients. In point of subject-matter however the *muwashshaḥ* did not differ to any extent from the older poetry; from erotic poetry, which had been its popular basis, it was soon transferred to the other traditional themes of poetic art, and even pious meditations were frequently clothed in the form of the *muwashshaḥ*. From the West the new art migrated at an early date to the East where Ibn Sanā' al-Mulk, a contemporary of Saladin, was its first recognised representative. But the intellectual desolation which befell the Muslim countries in consequence of the Mongol devastation, did not exempt this artistic form from the general destruction, and the *muwashshaḥ* degenerated to an insipid play with empty phrases (see M. Hartmann, *Das arabische Strophengedicht: I Das Muwashshaḥ*, Weimar, 1897). A hundred years after 'Ubāda his fellow countryman Ibn Ḳuzmān [q. v.] made the bold attempt to introduce the language of the people together with the popular form of the *zadjal* into literature; but he found no successor worth mentioning to continue his work. It was not until 500 years later, in 1098 (1687) that the Egyptian Yūsuf al-Shirbīnī once more used the popular dialect in his *Hazz al-ḳuḥūf*, a satire on his fellow-countrymen; and the desire to use the language of the people for the treatment of serious literary subjects did not arise in Egypt until the xix. century. In venturing on this bold undertaking Muḥammed b. 'Othmān Djalāl committed the mistake of choosing not national subjects, but French materials — Molière's comedies — which failed to appeal to the people, in spite of the ingenuity with which he adapted them to Egyptian surroundings.

Prose as a medium of artistic expression was of much slower growth than poetry, notwithstanding the fact that the art of oratory already zealously cultivated in the time of paganism found most favourable conditions for its development in Islām with its institution of the *khuṭba* delivered in each community on the Friday of every week. But it was only on special occasions that it was found desirable to preserve these speeches for posterity, as was done in the case of the

addresses delivered by the governors of ʿIrāḳ, Ziyād and al-Ḥadjdjādj, on their accession to office. Collections of sermons are first mentioned in connection with the Khāridjites (see Wellhausen, *Oppositionsparteien*, p. 53, n. 3). The rhetorical epistle as a literary form was created by ʿAbd al-Ḥamīd al-Aṣghar [q. v.] who died in 132 (749) at Būṣīr in Egypt (Goldziher, *Abhandlungen zur arab. Philologie*, i. 66, n. 4). But it was left to the literary circle of Saif al-Dawla to cultivate sermons and epistles for the first time from a purely artistic interest: Ḥalab was not only the home of the preacher Ibn Nubāta, it also received the epistolographer Abū Bakr al-Khᵛārizmī, though the restless roving spirit of the latter prevented him from settling at the court of any of the Eastern rulers. The letters of al-Khᵛārizmī had on the whole been restricted in their choice of subjects to literary themes, but the style to which he had given popularity, soon found its way into official correspondence. As with the statesmen of the Italian renaissance it became the ambition of the diplomatists of the ʿAbbāsids as well as the petty rulers, to clothe even the dry matters of official business in an elegant literary form. Prominent representatives of this were Ibrāhīm b. Hilāl, the secretary of the Būyid ʿIzz al-Dawla, and al-Ḳāḍī ʾl-Fāḍil, the secretary of Saladin. But the epistolary style with its pointed antitheses was peculiarly exposed to the danger of becoming corrupted and this showed itself most clearly when it was applied to historical works as was done by al-ʿUtbī and al-Kātib al-Iṣfahānī in their works on the deeds of Maḥmūd of Ghazna and of Saladin. It is true however that Arab sobriety of intellect soon rejected this aberration of taste, which in the case of the Persians almost destroyed the faculty for the writing of objective history.

A subject adapted to this style was discovered by Badīʿ al-Zamān al-Hamadhānī, a younger contemporary of al-Khᵛārizmī, in the *maḳāma* or beggars address (see A. Mez, *Abulḳâsim, ein bagdâder Sittenbild*, Heidelberg, 1902, p. xxiii, *et seq.*) which had first been introduced into literature by al-Djāḥiẓ (quoted by Baihaḳī, ed. Schwally, p. 623 *et seq.*). As in imperial Rome the enormous social contrasts existing in the towns of ʿIrāḳ, especially Baghdād, created a vast proletariate of parasites sponging on the court and the wealthy merchants. Out of this there arose a class of Bohemian men of letters: men who had acquired the whole stock of scholarship and learning created by the philologists, and who wandering from town to town throughout the whole empire indulged their disinclination to serious work and their love of adventure. al-Hamadhānī, himself an example of this type, gave it literary immortality. A century later the literary form of the *maḳāma* was revived by al-Ḥarīrī, who developed it to its utmost perfection. But in the clumsy hands of later imitators the graceful lightness of style degenerated into a mere pretext for displaying stores of empty learning.

Literary entertainments of this type made no appeal to the people which yearned for plot and incident. Their taste was gratified by the *ḳuṣṣāṣ*, story-tellers of the streets, whose existence is attested by Ibn Saʿd v. 148, ; as early as the 3rd generation after ʿOmar. Originally their materials were drawn from Ḳorʾānic legends, which they vulgarized and distorted to a boundless extent; but as early as the Umaiyad period new subjects were introduced by the two Southern Arabs ʿUbaid b. Sharya and Wahb b. Munabbih, who embellished elements of Jewish and Yemenic tradition with the products of their own imagination. Scholars for a long time regarded this pseudo-tradition with contempt, and it was not until the v. (xi.) century that it was given literary form by al-Kisāʾī and al-Thaʿlabī.

The predominance of the Persian element in life and poetry which began under the first ʿAbbāsids, soon had the result of making the literary inheritance of the Pehlevi language accessible to the Arabs. The Persian Rōzbih, called as Muslim ʿAbd Allāh b. al-Muḳaffaʿ, translated the *Khodāi-Nāme*, an account of Persian history embellished with many moralising speeches, which probably was composed in the time of the last Yezdedjird, and which also forms the basis of Firdawsī's *Shāh-Nāme*. This, together with a number of similar works, at a later stage became the basis of a political literature which found an extensive development in numerous 'manuals for kings'. Still greater was the influence exerted by his translation of the Pehlevi version of the Pañcatantra, an Indian manual for kings, under the title of *Kalīla wa Dimna*, which was soon followed by translations of the Buddhist romance of Barlaam and Joasaph and the story of the seven wazirs. The new discovery of these materials led temporarily to an exaggerated exaltation of all non-Arab elements. Aramaeans, Persians and Spaniards who, in spite of their acceptance of Islām, for a long time had found no more than haughty toleration in the Arab empire, thought that their time had come for taking revenge on their old oppressors in the field of literature also, by comparing their achievements with those of the old civilization of Western Asia and depreciating them accordingly. But the efforts of the *shuʿūbiya* (cp. Goldziher, *Muh. Studien*, i. 147—208; *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, liii. 601 *et seq.*) were unavailing to undermine the pre-eminence of Arabic which was based on the sanctity of the Ḳorʾān, especially as their literary tendencies usually went hand in hand with religious heresy, which was opposed by the government from political motives, if from no others.

A new species of literature arose out of the combination of Indo-Persian wisdom with the crystallized tradition of the old poetry and Bedawi stories and with the general philosophical results of Greek literature, which had been made accessible to the Arabs during the same period: this was the *adab*, destined to provide the man of the world with the knowledge necessary for the wise conduct of life in an entertaining form. The real creator of this form of literature is al-Djāḥiẓ, an author whose range of interests is extraordinarily wide. He is attracted not only by the oratory of the Arabs, the superiority of which he defends untiringly against the pretensions of the *shuʿūbiya*: he describes the peculiarities of foreign nationalities with the same relish with which he exposes the evils of the social and economic organization of the towns. There is no attempt at a systematic exposition: his chief work, the Book of Beasts, mingles Arab, Greek, and Persian tradition with

many observations of his own which bear witness to his vivid interest in things. His works, as well as those of Ibn al-Muḳaffaʿ, were largely exploited by Ibn Ḳotaiba, a somewhat younger contemporary, who made it his aim to provide the secretaries (*kuttāb*), the predecessors of the later *munshī's*, with the store of literary and historical learning required in the exercise of their profession. He thus became the creator of the *adab* of the schools. His chief work are the 10 books of the *ʿUyūn al-akhbār*, to which his other writings were only intended as supplements; it not only became the model of countless later works in respect of the arrangement of its subject matter, but was recklessly plagiarised by their authors, especially the Spaniard Ibn ʿAbd Rabbihi in his *ʿIḳd*.

The courts were not always content with the universally harmless diversion offered by this literature. The harem life which had found its full development under the ʿAbbāsids at Baghdād, favoured the tendency already appearing in the ancient satiric poetry of the Arabs, to enlarge with relish on sexual matters: this subject seems to have played a great part in the evening entertainments at the court of the caliphs, so that a courtier of Mutawakkil could without scruples dedicate a book of obscene jests to the latter. The *Ḥikāya* of Abu ʾl-Muṭahhar al-Azdī, a picture of Baghdād manners, shows moreover that the middle classes maintained no higher standard on this point. Following the Indian example it became the fashion to put these matters in a pseudo-scientific setting, and after writings of this kind had been translated from the Sanskrit (see al-Djāḥiẓ, *Ḥayawān*, vii. 70, 13) and following on the systematic treatment of the subject by Ibn Ḳutaiba, the ars amatoria took its place in the regular repertoire of writers on medicine; most of these works are dedicated to rulers or wazirs.

The people on the other hand had more taste for the Indo-Persian fairy-tales, in which the erotic interest on the whole takes a secondary place. As early as the iii. (ix.) century the Persian work *Hazār afsāna* (the 1000 stories) was translated from Pehlevi into Arabic, and became the kernel of the Arabian Nights [cp. ALF LAILA WA-LAILA]. The stories which may be regarded with certainty as belonging to this kernel, viz. the introduction, the stories of the fisherman and the Djinn, Ḥasan of Baṣra, prince Badr and princess Djawhar of Samandal, Ardeshīr and Ḥayāt al-Nufūs, Ḳamar al-Zamān and Budūr, all seem to go back to Indian sources. These are the tales which occupy the highest place from the point of view of true poetic value, subtlety in the assigning of motives and unity of construction, and which for this reason established the fame of the collection. At Baghdād this kernel was amplified by a second group of stories, conceived in a Semitic spirit, the merit of which does not so much consist in the unfolding of a definite plot which holds the attention all through, but rather in numerous subtle traits of wit and irony: to this class belong the novels of middle class life, usually founded on a love story, the plot of which is frequently solved by the appearance of Hārūn al-Rashīd as deus ex machina. A third group of stories was added at Cairo (see Nöldeke, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xlii. 69); this consists of the exploits of rogues and sallies of wit which frequently expose the dishonesty and corruption of government officials. In these Egyptian stories the supernatural and fantastic element again plays an important part. But whereas in the older tales of Aryan origin spirits and demons take a human interest in the fate of the heroes, as e.g. in the case of Ḥasan of Baṣra, the supernatural element in the Egyptian stories is inseparable from a talisman, and its effects are beneficial or the opposite, like those of a blind natural force, without distinguishing between the persons into whose hands it may have fallen: this is exemplified for instance by Aladdin's wonderful lamp. Finally, in order to complete the number of 1001 nights, the story of ʿOmar al-Noʿmān was added, a romance of chivalry, which is attested as belonging to the Nights as early as the xvi. century by the Tübingen ms. Nº. 32, furthermore Sindbād's adventurous travels, the origin of wich may be put at Baṣra towards the year 300, the stories of the 7, the 10 and the 40 wazirs related to Kalīla and Dimna, the ancient Semitic story of Ḥaiḳār, and a number of love-stories like that of the slave-girl Tawaddud, all of which were at the same time handed down independently of the collection. The latter probably received its present form in Egypt during the first half of the Mamlūk period, not apparently at the hands of a single editor, but as the work of many generations of professional story-tellers.

Out of the national traditions of the Bedawīs the luxuriant imagination of many generations created the great romances of chivalry, viz. the *Sīrat ʿAntar* which seems to have received its present form during the wars against the crusaders, the *Sīrat Dhi ʾl-Himma* (these two as well as the romance of Alexander, and the stories of Baṭṭāl, of ʿAnḳāʾ and of Ṭarāf b. Lawdhān are mentioned as early as the middle of the vi. = xii. century; see Steinschneider, *Die arab. Lit. d. Juden*, p. 187), the *Sīrat Abī Zaid wa Banī Hilāl*, *Saif Dhu ʾl-Yazan*, and the romantic story of the sultan al-Ẓāhir Baibars, the contents of which may most conveniently be gathered from Ahlwardt, *Verzeichnis der arab. Hss. der Kgl. Bibl.*, p. 69 *et seq.*

It was also during the Mamlūk period that the shadow-play was introduced into Egypt, a product of the far East which since then has become a favourite form of entertainment throughout the Muslim world: previous to the xix. century it was the only form of dramatic representation known to the Arabs. It is unfortunate that the literary tradition, dominated as it is by the narrow spirit of the schools, refers to it only in casual allusions, and the attempt of the physician Muḥammad b. Dāniyāl [q. v.] to adapt both language and action of this form of play to the taste of the upper classes found no successors. The cultivation of the shadow-play was left to the lower classes, and it was from this source that European scholars of the xix. century first made such plays generally known (cp. G. Jacob, *Geschichte des Schattentheaters*, Berlin, 1907).

While the various forms of belles-lettres never rose beyond a rather primitive stage among the Arabs, their achievements on the fields of scholarship and science are much more considerable. It is true that only a small part of them can be ascribed to the Arabs as a

nation, since from the very beginnings of the several sciences their cultivation was chiefly confined to non-Arabs, Aramaeans and particularly Persians. As the national literature of the Arabs in the proper sense of the term ends with the fall of the Umaiyads the entire later development would be more correctly designated as Muslim literature in the Arabic language.

The writing of history is still most closely connected with the national literature, and at any rate in its beginnings bears a genuinely Arab stamp. The traditions concerning the life of the prophet which had been created rather than preserved by the first generations of Muslims soon developed two distinct branches: the *ḥadīth* which was studied for the sake of its authoritative contents, and the knowledge of the *maghāzī* or wars, which was cultivated for its own sake like that of the 'days' of the ancient Arabs. The earliest literary treatment of the *maghāzī* known to us is due to Mūsā b. 'Oḳba [q. v.][1] they received their classical form at the hands of al-Wāḳidī, and gave rise to the *sīra*, the biography of the prophet by Muḥammad b. Isḥāḳ. In its later development however the biography of the prophet moves away farther and farther from the firm ground of historical fact and loses itself in a luxuriant mass of legends which are not characterised by the first charm of popular fancy, but plainly betray their origin in the inartistic brains of hair-splitting theologians. The large biographies of the later period, like the *Ta'rīkh al-khamīs* of Diyārbekrī, the *Sīra al-sha'mīya* and a still more famous abridgement of the latter, the *Sīra al-ḥalabīya*, still observe the technical rules of the traditionists; but side by side with these there exist countless popular books, like the *Anwār* of Abu 'l-Ḥasan al-Bakrī, which treat their subject in a manner designed for the edification of the faithful on the birthday (*mawlid*) of the prophet.

Closely connected with the biography of the prophet was the tradition concerning the life and deeds of Muḥammad's companions and their immediate successors, a subject the close study of which was of considerable importance from a practical point of view as affording a criterion for the trustworthiness of the authoritative traditions handed down by the various companions. Muḥammad b. Sa'd, a pupil and assistant of al-Wāḳidī, collected all the information within his reach in his large 'book of classes', and the material thus brought together which he made the basis of a separate branch of scholarship, the *'ilm al-ridjāl*, was frequently treated anew by later authors, especially Ibn al-Athīr in his *Usd al-ghāba* and Ibn Ḥadjar al-'Asḳalānī in his *Iṣāba*. The example of the science of tradition exercised a stimulating influence on all the related branches of learning. First of all the great legal schools created their 'books of classes' which were continued and expanded from time to time so as to include not only the great pioneers but also the less important transmitters of tradition: to this type belong especially the works of Ibn Farḥūn and al-Subkī on the Mālikites and Shāfi'ites. There followed among men of letters and philologists the books of classes of the poets such as had been composed already by Abū 'Ubaida and al-Aṣma'ī, the heads of the school of Baṣra: the work of these men and their successors formed the basis of books of final authority like those of Ibn Ḳotaiba and especially the *Kitāb al-aghānī* of Abu 'l-Faradj al-Iṣfahānī, which, though dealing in the first instance with the history of music, finds its centre of interest in the history of poetry treated on the background of a rich store of information on the history of culture. Next came Tha'ālibī's *Yatīmat al-dahr*, the continuations of which succeeding one another through the centuries afford abundant material for the history of Arabic poetical art down almost to the present time, a subject which however gradually becomes less and less attractive. Of biographical collections dealing with men of the different professions we may mention the histories of grammarians and philologists, of which the earliest extant example is the *Nuzhat al-alibbā'* of al-Anbārī, and the biographies of physicians, scientists and philosophers, like the works of Ibn al-Ḳifṭī and Ibn Abī Uṣaibi'a. Another class is represented by the collections of lives of saints and mystics, like those of Abū Nu'aim al-Iṣfahānī or of Sha'rānī, the legends of which frequently resemble those of the corresponding christian literature.

The biographical interest similarly predominated in the local histories which gradually arose in all the important cities of the Muslim countries from Spain to Khorāsān, from the time of Ibn al-Azraḳ's and Ibn Zabāla's histories of Mekka and Medina. It is to be regretted that most works of this class, like so many other books belonging to the great period of Arabic literature, are either lost entirely, or as in the case of the immense work of Abū Bakr al-Khaṭīb on Baghdād and that of Ibn 'Asākir on Damascus preserved only incompletely. At the same time the material in our possession, especially for the history of North Africa and Spain which are treated in the works of Ibn Bassām, Ibn al-Khaṭīb Lisān al-Dīn, Maḳḳarī and others, will continue for a long time to yield an almost inexhaustible store of information concerning Muslim life through the centuries down to our own time.

The professional and local histories formed the basis of the great collections of general biography, the earliest of which if we leave the works of the oldest traditionists out of account, is that of Ibn Khallikān. His book was continued by al-Kutubī and from the ix. (xv.) century onwards was supplemented by comprehensive biographical collections dealing with the different centuries, as for instance that of Ibn Ḥadjar for the viii., that of al-Sakhāwī for the ix., those of al-No'mānī and al-Būrīnī for the ix. and x., of al-Muḥibbī for the xi. and of al-Murādī for the xii. century.

Closely related to the biographies are the bibliographical works, the need for which was most urgently felt at an early date owing to the fact that the number of books produced by the Muslim civilisation was at times practically unlimited. For the period intervening between the date of Ibn al-Nadīm's *Fihrist* and that of the *Kashf al-ẓunūn* by the Turk Ḥādjdjī Khalīfa, both of which aimed at including the entire literary possession of their time, there are a number of monographs dealing with the several branches of learning, particularly theology.

The science of genealogy which frequently touches on the field of biography takes us back to the very beginnings of Arabic literature. Like

other races on the same level of civilization, as for instance the Samoans or the Antaimori of Madagascar, the pagan Arabs attached great importance to a knowledge of the relations of kinship and descent, and the practical needs of the communistic theocracy of warriors under the early caliphs gave it an added interest owing to the fact that the genealogical lists served at the same time as an army roll. In addition to this practical importance of the study there was the interest taken by philologists in genealogical allusions occurring in poetry and the malicious joy with which the *Shu'ūbīya* regarded the countless petty jealousies between the tribes. Of the works of the early genealogists, whose names are given e. g. by al-Djāhiẓ, *Ḥayawān*, iii. 65, 1—4, nothing is extant; and the monograph on the Anṣār by 'Abd Allāh b. Muḥammad b. 'Umāra is known to us only from the quotations given by Ibn Sa'd (see Sachau on Ibn Sa'd, iii., p. xxvii). The work of the early authorities was overshadowed by the zeal and industry with which Muḥammad b. al-Sā'ib al-Kalbī and his son Hishām collected genealogical material: the efforts of these scholars were directed by a genuine interest in their subject, and it was for the very reason of their scientific qualities that they became exposed to spiteful criticism on the part of the theological circles in authority. Hishām even had the courage to collect carefully the accounts about the idols of the ancient Arabs, though as a good Muslim he called his book 'the overthrow of the idols'.

The study of the life of the prophet and his successors and that of genealogy created an interest in the life of the state as such. During the first two centuries however the activity of the Arabs in this field also remained confined to isolated details. As early as the Umaiyad period Abū Mikhnaf wrote at Kūfa the history of the great conquests and of his own time from the point of view of the opposition of the 'Irāḳ to the rulers residing at Damascus. The *Fihrist* enumerates 22 monographs by him, which are partly preserved to us in numerous long extracts found in Ṭabarī: these take us right into the midst of events by means of the accounts of eye-witnesses. He does not seem to aim at selection and arrangement: yet a careful disposition of parts and a definite point of view are very apparent. He is chiefly interested in the risings of the Khāridjites and especially the 'Alids against the Umaiyad dynasty the fall of whom he survived to witness (see Wellhausen, *Das arabische Reich und sein Sturz*, p. iii. *et seq.*). Still more fruitful was the activity of al-Madā'inī, a convinced partisan of the 'Abbāsids who wrote the early history of that family and dealt more particularly with their rise in Khorāsān and their final victory. Owing to the influence of Ṭabarī the later historical outlook is dominated chiefly by al-Madā'inī and Saif b. 'Omar of Kūfa [q. v.] who wrote two monographs on the revolt of the Arabs after the death of Muḥammad and on the conquests. The influence of Saif must be described as well-nigh disastrous owing to the fact that he wrote history without paying heed to chronology and attested facts from the point of view of an artificial pragmatism dominated by local patriotism and tribal jealousy; his language while bearing no comparison with the simple charm of Abū Mikhnaf, made an even deeper impression on the masses through the vivid colouring he gave to his style.

The tradition of Medina regarded historical facts with greater objectivity than that of 'Irāḳ, and its chief representatives Muḥammad b. Isḥāḳ and al-Wāḳidī, who extended the field of their studies from the life of the prophet to the deeds of his successors, are much more reliable than the authors of 'Irāḳ especially in the matter of chronology. It is possible that they also had access to the Syrian tradition which we only know in the form in which it is reflected by Christian Spanish chronicles like the Continuatio of Isidore of Hispalis. The same reliable tradition forms the basis of the two works of Balādhorī, his 'Book of the conquests' and his great genealogy.

The idea of a chronological collection of events, for which the school of Medina had prepared the way, seems to have developed under Persian influence to the plan of a complete series of annals of the empire. At any rate the first author to undertake such a work was a Persian, Muḥammad b. Djarīr al-Ṭabarī, who also achieved great distinction as a theologian through his immense commentary on the Ḳor'ān and as a writer on jurisprudence. His work is intended to embrace the entire history of the world from the creation to his own time, and for the period after the Hidjra it is arranged according to years. It is true that Ṭabarī's critical faculties are not of the highest. But it is for this very reason that we owe to him the preservation of the oldest historical traditions which he places together conscientiously without any attempt at combination; on the other hand we have to make allowances for many a lapse such as the preference for the unreliable Saif. His sources become scantier the nearer he approaches his own time; it is only in exceptional cases such as in the history of the slave war that he once more possesses excellent sources of information. Owing to the fact that Baghdād is the centre of his outlook he surveys only a small part of the Muslim world, and the Maghrib is altogether outside his horizon. The works of Mas'ūdī and Ya'ḳūbī therefore form a welcome supplement to his annals. The former is a typical child of the world-wide Muslim civilisation in its prime. From his native city Baghdād he travelled through the whole Eastern part of the empire of the caliphs, extending his journeys as far as India, Ceylon and China; after returning by way of Zanzibar and 'Omān he resided in Syria and Egypt where he died. It is unfortunate that later generations had no appreciation for the wide sphere of his interests, and we thus possess only two abstracts made by himself of his great historical and geographical work. The travels of the somewhat older Ya'ḳūbī were nearly as extensive; he moreover had the advantage of possessing a detailed knowledge of the Maghrib. In spite of the Shī'ite tendencies hereditary in his family he treated the history of the 'Abbāsids with praiseworthy objectivity on the basis of many old sources which are not extant in any other form; it is preceded by a compendium of universal history which deals not only like the work of Ṭabarī with the biblical, Ḳor'ānic Persian and ancient Arabic tradition, but embraces the whole world so far as it was known at the time, from China to the Berbers and from the peoples of the North to the negroes.

Later generations however preferred the method of Ṭabarī. Soon after his death the Spaniard 'Arīb supplemented his work by a history of the Maghrib and continued it down to the year 320 (932). Not long afterwards the wazīr of the Sāmānids Bal'amī published a Persian abridgment which established Ṭabarī's authority in his own country. All the later writers on universal history, especially Ibn al-Athīr and Ibn Khaldūn, base their works on Ṭabarī, contenting themselves in most cases with adapting the materials furnished by him to the literary requirements of their age.

The decline of the caliphate and the formation of territorial states throughout the empire had the result of subordinating the interest in the common fate of Islām to the events happening in the several countries. Spain was the first province to gain political independence; but the writing of history did not begin there to any extent until the iv. (x.) century with al-Rāzī and Ibn al-Ḳūṭiya. This is probably due to the fact that the long distance from the centre of civilisation arrested the development. During the later period it was the misery of political separation into petty states which, in spite of the fact that the Christian danger constantly kept the religious and national activities alive, prevented any enthusiastic interest in national affairs: Spanish historical writing which culminates in the works of the above-mentioned Lisān al-Dīn and al-Maḳḳarī, thus never got far beyond the biographical stage. Conditions in Egypt and North Africa were much more favourable. A vigourous impulse was given to history by the powerful personality and consistent policy of the Ṭūlūnids, the first independent governors of the Nile province, and during the whole period from 'Abd al-Ḥakam's history of the conquest to Maḳrīzī's *Khiṭaṭ* and again down to Djabartī's *'Adjā'ib al-āthār*, able writers have never been wanting to treat of the vicissitudes of this country. History similarly flourished at the many petty courts of the Maghrib, though it only rarely got beyond a very limited range of outlook. It is only in the works of Ibn Sa'īd and Ibn Khaldūn whom personal experiences brought into contact with more important events — Ibn Sa'īd witnessed the rise of the Egyptian Mamlūks, Ibn Khaldūn the disasters of the Muslim world at the hands of Tīmūr, — that the small dynastic interests take a secondary place: in Ibn Sa'īd's work they are overshadowed by the common fate of all North Africa, in that of Ibn Khaldūn by a philosophical theory of growth and decay in the life of the state. — Cp. F. Wüstenfeld, *Die Geschichtschreiber der Araber und ihre Werke* (from vol. xxviii. and xxix of the *Abhandlungen der Kgl. Gesellschaft der Wissenschaften zu Göttingen*, 1882); M. J. de Goeje, art. *Ṭabarī* in the *Encyclopaedia Britannica*.

The beginnings of geography are closely connected with those of history. Descriptions of the Arabian peninsula are found already in the creators of historical tradition such as 'Abd Allāh b. 'Abbās (quoted by Bakrī, p. 5 *et seq.*) and Wāḳidī (see Suyūṭī, *Sharḥ shawāhid al-mughnī*, p. 16, 18). The interest in geography was further stimulated by the great conquests and by practical administrative needs. The earliest extant description of the lands of the caliphate is the work of a postmaster-general, Ibn Khordādhbeh, and takes the form of an official route book with a detailed statement of the stages, the postal relays and the taxes of each province. At Baghdād, which owed its prosperity in the first place to international trade, there also arose an interest in foreign countries and nations, which found its earliest expression in a naive delight in tales of the marvellous, such as probably formed the subject of the lost book of countries by al-Djāḥiẓ. The book of his contemporary Muḥammad b. Abī Muslim al-Djarmī on the history and organization of the Romaic empire and on the neighbouring barbarians, such as the Avars, Bulgars, Khazars etc. was possibly more systematic; it seems to be the source of a connected description of the countries on the Pontus and north of the Caucasus preserved by al-Djaihānī and later by al-Bakrī and in several Persian works (see Marquart, *Osteur. und Ostas. Streifzüge*, p. xxxii). The basis for a scientific outlook which in astronomy was supplied by the *Almagest* was furnished in geography by the '*Geography*' of Ptolemy; an Arabic translation of this work existed as early as the time of the philosopher al-Kindī, it is only preserved however in an abridgment composed by Khwārizmī in 428 (1036). On the basis of these sources a pupil of al-Kindī, Aḥmad b. Sahl al-Balkhī, wrote the first systematic geography in the form of an atlas, the brief descriptions of which were later expanded by al-Iṣṭakhrī and Ibn Ḥawḳal. A great deal of new geographical material was furnished by voyages undertaken partly from a scientific interest and partly for practical purposes. The travels of inquiry undertaken by Mas'ūdī and their results have already been mentioned. Half a century later his many-sidedness of observation and thoroughness of treatment was rivalled by al-Muḳaddasī, though the latter's wanderings did not extend beyond the frontiers of the Muslim world. A valuable extension of the horizon of the Arab world was brought about by embassies to the states of the North, such as that of Aḥmad b. Faḍlān who was sent to Russia by the caliph al-Muḳtadir in 309 (921), and the mission of the Spanish Jew Ibrāhīm b. Ya'ḳūb to Germany and the Slavonic countries undertaken on behalf of the caliph of Cordova in the time of Otto the Great. The descriptions of the adventures of sailors from Baṣra in Indian and Chinese waters were addressed not so much to the scientific curiosity of scholars as to the delight of the masses in the sensational: they are well characterised by al-Djāḥiẓ in his *Kitāb al-ḥayawān*, i. 191 *et seq.* Yet books like the still extant work of Abū Zaid of Sīrāf, which was based on the narrations of two merchants and that of the captain al-Rāmhurmuzī, as well as the works used by al-Tanūkhī (*al-Faradj ba'd al-shidda*, ii. 79 *et seq.*, 87 *et seq.*) contain in addition to many exaggerations a good deal of valuable information on the Far East. Works of this type were completely overshadowed by the Persian Bērūnī's book on India, the author of which is one of the most thorough observers and explorers of the Arabic writing world. At a later period interest in geography was continually revived by the pilgrimage to Mekka, which not only created handbooks for pilgrims written for the edification and the practical assistance of the people, but was also responsible for works on a higher literary level, like those of Ibn Djubair of Granada in

the vi. (xii.) century and of the Moroccan Ibn Baṭṭūṭa in the viii. (xiv.) century; the latter in accordance with the custom of his time did not hesitate to use the work of his predecessor rather more freely than our conventions would permit, yet his interesting descriptions of India, China, Asia Minor, the coasts of the Black Sea, Constantinople and the Negro countries are entirely his own. Many other books of travel were written in the period after Ibn Baṭṭūṭa, especially in the Maghrib, but all these works, among which we will only mention that by ʿAiyāshī, lose themselves in long-winded descriptions of unimportant personal experiences, and particularly in lists of names of scholars whom the authors met in the various towns. The only noteworthy achievements in the field of systematic geography are found in the works of the Maghribīs al-Bakrī and al-Idrīsī, the dictionary of Yāḳūt once a Greek slave, and the geography of the prince and author Abu 'l-Fidāʾ. — Cp. Reinaud, *Introduction générale à la Géographie d'Aboulféda*, trad., i. Paris 1848; F. Wüstenfeld, *Die Litteratur der Erdbeschreibung bei den Arabern*, in *Zeitschr. f. vergl. Erdkunde*, i. Magdeburg, 1842; M. J. de Goeje, *Eenige Mededeelingen over de arabische Geographen*, in *Tijdschrift van het Aardrijkskundig Genootschap*, 1874, p. 190 *et seq.*; P. Schwarz, *Die ältere geographische Litteratur der Araber*, in Hettner's *Geogr. Zeitschr.*, iii. (1897), part 3.

The fact that the Arabs forced the subject nations to adopt their language, soon created among the new Muslims the need for a scientific method which would facilitate and deepen the study of Arabic; the need was felt the more, because it was necessary to become familiar not only with the dialects used in every-day life, but also with the language of the Ḳorʾān used in devotion and public prayer, and with the classical language of poetry which was required for the intercourse of polite society. As in the case of Greece, India, Assyria, Abyssinia and Japan (cp. v. d. Gabelentz, *Sprachwiss.*, 2. ed., p. 24) it was the contrast between the written language and popular speech which first suggested grammatical observations among the Arabs. The art of reciting the Ḳorʾān which was cultivated down to a late period as a separate branch of study, though it soon degenerated into a mechanical office performed by unlearned readers, probably gave the first impulse to a close observation of the various sounds and their formation; the systematic development of these observations seems to have been influenced by the model of the Indian *Prātiçākhyas*. The fundamental conceptions of grammatical reasoning however were borrowed from Aristotelian logic (cp. most recently Bergthorn, *Aristoteles og de arab. Grammatikere*, in *Festskrift til Wilhelm Thomsen fra Disciple*, Copenhagen, 1894, p. 1 *et seq.*) which had already been eagerly studied under the Sāsānids at the Syro-Persian school of Gondēshāpūr [q. v.] whence it reached the Arabs at an early date. The channel by which certain notions and concepts belonging to Latin grammar only, were transmitted to the Arabs has not yet been elucidated (see F. Praetorius in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lviii., 495 *et seq.*). The beginnings of Arabic philology suffered from the prejudice against the pedantry of the schoolmaster (cp. al-Djāḥiẓ, *Bayān*, i. 151, 12 *et seq.*) but as early as the iii. (ix.) century its representatives had risen to a social status which will bear comparison with that of the humanists of the renaissance. Tradition calls the poet Abu 'l-Aswad al-Duʾalī the first grammarian: with what justification it is impossible to say. The earliest representatives of this branch of learning who appear in a somewhat clearer light are ʿĪsā b. ʿOmar al-Thaḳafī and Abū ʿAmr b. al-ʿAlāʾ, the former of whom had a reputation as a reader of the Ḳorʾān while the latter devoted himself to the collection of old poems. The work initiated by these two men, whose pure Arab descent does not seem to have been questioned, was continued by Khalīl whose tribe, the Azd ʿOmān, are not regarded as genuine Arabs, and his pupil the Persian Sībawaihi (Sîboye). The former created the system of prosody and collected the store of Arabic vocabulary in his *Kitāb al-ʿain*, which was arranged not according to the order of the alphabet, but from the point of view of the physiology of sounds. The latter gave in his 'Book' the first systematic exposition of grammar, in a form which in spite of its clumsiness came to be regarded as the classical standard for all time: later generations rewrote it a countless number of times in order to make it more intelligible, but added practically nothing of an essential nature. al-Aṣmaʿī first gained for the new science the recognition of the upper classes at the court of Hārūn, though he was probably honoured there as a collector of poetry rather than as a grammarian. The principal achievement due to him are his numerous monographs on various fields of lexicography. These founders of the school of Baṣra found rivals at Kūfa, the second capital of ʿIrāḳ, in a number of scholars concerning whose activity we are unfortunately only scantily informed owing to the fact that they are overshadowed in the later tradition by the Baṣrians. Al-Ruʾāsī, to whom Sībawaihi often alludes in controversy as 'the Kūfian', is regarded as the founder of this school. His pupil al-Kisāʾī wrote the earliest extant treatise on the grammatical mistakes of the people thereby creating a branch of literature to which we owe a great deal of valuable information on the early history of the Arabic dialects. From the iii. (ix.) century onwards the controversies were gradually reconciled at Baghdād, the centre of all intellectual activity. It was there apparently that the linguistic theories of the old masters were developed on a philosophical basis especially by Ibn Djinnī (who is regarded as the first representative of the so-called 'great etymology'; see Goldziher in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxi. 545), and that the science of Poetics, first created by the Kūfian Thaʿlab was put in systematic form by Abū Hilāl al-ʿAskarī. From that time onwards the study of philology spread over the whole Muslim world, and was introduced into Spain by al-Ḳālī; the later philologists however in spite of their large number hardly produced any original ideas. We owe to them countless manuals, of which only a few, like Zamakhsharī's brilliantly written *Mufaṣṣal*, rise beyond the level of mediocrity, and particularly a number of most valuable lexicographical collections, such as the *Djamhara* of Ibn Duraid, unfortunately still inaccessible, the *Ṣaḥāḥ* of Djawharī, the *Mukhaṣṣaṣ* of the Spaniard Ibn Sīda, the *Lisān al-ʿArab* of Ibn Manẓūr, the *Ḳāmūs* of

Fîrûzâbâdî with its commentary by Murtaḍâ 'l-Zabîdî. — Cp. G. Flügel, *Die grammatischen Schulen der Araber nach den Quellen bearbeitet*. First part, Leipzig 1862 (*Abh. der Deutschen Morgenl. Gesellsch.*, vol. ii., N°. 4).

We have seen that these branches of knowledge although proceeding from the vital interests of the Arab nation were cultivated principally by non-Arabs; the field of theology lost touch with the national literature even more rapidly in spite of the great part it played in the intellectual life of Islâm. The Ḥadîth [q. v.], as has already been pointed out, was on the whole the product of the first two centuries of Islâm and reflects the intellectual struggles of that period. History and legendary narrative branched off from it at an early date, and Ḥadîth as the evidential material of the schools of Fiḳh was gradually withdrawn from the influences of actual life. In spite of the fact that as early as the ii. (viii.) century the authenticity of each tradition had to be established with scrupulous care by means of an uninterrupted chain of authorities, the material continued to grow like an avalanche; it was therefore a literary achievement of great magnitude which al-Bukhârî performed in digesting and arranging it for the first time according to the systematic order of the science of Fiḳh, while his predecessors had contented themselves with assigning to each tradition a place in the *Musnad* under the name of the last transmitter. Five other collections achieved canonical authority side by side with al-Bukhârî's, but only that of Muslim was in the end able to maintain its position permanently. In the succeeding centuries down to the present day unlimited industry has been at work on the field of Ḥadîth, but it spent its efforts in mere compilations, partly for devotional purposes especially in the collections of 40 traditions, such as were produced by almost every noteworthy theologian, and partly in the work of combining the canonical books for the purposes of scholarly study. In the end the devotional side of tradition reached a stage where it bordered closely upon *adab*, or belles-lettres: Ibn Ḥibbân the compiler of the latest work on tradition which was distinguished by a novel arrangement of the material, was also the author of an adab book, the *Rawḍat al-'uḳalâ'*. The activity of scholars was concentrated partly on the criticism of authorities which, in the case of the great biographical collections, bordered upon history, and partly on the criticism and exegesis of the traditional material. Muḥammad al-Yûnînî who edited the text of Bukhârî in the viii. (xiv.) century was assisted in his work by Ibn Mâlik, the greatest philologist of the time; and already the founders of the school of Baṣra, such as Aṣma'î's pupil Abû 'Ubaid, had studied the special vocabulary characteristic of the language of the tradition: the latter subject was finally dealt with in an authoritative manner in the excellent *Nihâya* of Ibn al-Athîr Madjd al-Dîn, the brother of the historian. Cp. I. Goldziher, *Über die Entwicklung des Ḥadîth* (*Muhammed. Stud.* ii.; Halle, 1890, p. 1—274).

Beginning as a branch of tradition the exegesis of the Ḳor'ân soon became a separate science. 'Abd Allâh b. 'Abbâs [q. v.], a cousin of the prophet who appears as the principal authority for a countless number of traditions, is also reputed to be the author of a still extant commentary on the Ḳor'ân (printed Bûlâḳ 1290; Bombay 1302). The Ḳor'ân then became the subject of philological study, and the purely linguistic exegesis was developed in numerous books on the *Gharîb al-Ḳor'ân* none of which are preserved. An author as early as Abû 'Ubaid wrote a book on the excellence of the Ḳor'ân as a whole and of certain Sûra's and verses in particular (see Ahlwardt, *Verz. d. arab. Hss. der Kgl. Bibl. z. Berlin*, N°. 451) and Ibn Ḳutaiba in his *Mushkil al-Ḳor'ân* tried to defend the trustworthiness of the sacred book against the strictures of the philosophers. Apologetic literature of this kind was however rendered superfluous at an early date by the victory of orthodoxy under government pressure; and Ṭabarî in his great commentary on the Ḳor'ân concentrated his efforts on the task of collecting the traditional material with as much completeness as possible. His book found a later rival in the immense work of Fakhr al-Dîn al-Râzî. The brilliant Persian scholar al-Zamakhsharî combined in his *Kashshâf* the advantages of thorough philological exegesis with those of theological criticism. He did not however repudiate his Mu'tazilite views, and confessed in his very preface his adherence to the heretical dogma of the 'creation of the Ḳor'ân': it is owing to this fact that his work was overshadowed in the judgment of a wider public by the commentary of al-Baiḍâwî, though its undeniable excellence secured for it at all times a large number of readers. Al-Baiḍâwî's work is now regarded by the Sunnî's as the best commentary and is almost invested with sanctity. It is true that it yields a mass of information in a concise and well-arranged form, yet it fails to approach completeness in any of the branches with which it deals (see Nöldeke, *Gesch. d. Qor.*, p. xxix).

The amount of labour spent on Fiḳh, the principal subject of study among Muslims throughout the centuries, has been immense; but very little has been produced that can claim literary importance. Independent intellectual effort, which was very considerable in the beginnings of the different schools of Fiḳh, was replaced after the end of the iii. (ix.) century by a rigid system of tradition which more and more lost touch with the actual facts of legal life. In the different schools of Fiḳh certain manuals acquired canonical authority — al-Ḳudûrî's *Mukhtaṣar* among the Ḥanafites, the *Risâla* of Abû Zaid and later Khalîl b. Isḥâḳ's *Mukhtaṣar* among the Mâlikites, and al-Shîrâzî's *Tanbîh* and the *Minhâdj* of al-Nawawî among the Shâfi'ites; these works were followed by a number of glosses, commentaries and super-commentaries on which the intellectual labour of generations was spent.

The literary achievements of Islâm on the field of dogmatics do not rise to a much higher level. Our information as to the beginnings of this branch of study is very scanty. There is no doubt that at Damascus the influence of Christian theologians, some of whom even enjoyed authoritative respect at the Umaiyad court, had something to do with the origin of the earliest dialectic discussions on the Muslim articles of belief. At Baghdâd it was the study of Greek philosophy which gave rise to the aspirations of the Mu'tazilites to found a rationalist system of faith. As far as the centre of the em-

pire was concerned the strictly traditional orthodoxy, in which the ʿAbbāsids from the time of Mutawakkil onwards saw their best support, succeeded with the assistance of the temporal power to dispose of the troublesome thinkers; but Muʿtazilite ideas continued for a long time to find a favourable soil for their development in the distant provinces of the empire, especially among the Shīʿites. The traveller Ibn Baṭṭūṭa found as late as the viii. (xiv.) century that most of the inhabitants of Khwārizm declared themselves to be Muʿtazila (see *Riḥla*, Cairo 1287, i. 221, 3). In the literature preserved to us orthodoxy which had been put on a philosophical basis by al-Ashʿarī has gained the upper hand, with the result that an end was soon put to all activity in this field, as well as in that of Fiḳh, except as far as the writing of catechisms was concerned. Just as every theologian who thought of his reputation held it to be his duty to edify the faithful by a collection of 40 traditions, nearly every one thought it equally necessary to formulate his dogmatic point of view in an *ʿAḳīda*, even though in point of contents it differed in no respect from those of his predecessors. The only opportunity for genuine scholarly activity existed in the field of the history of dogma which is represented by the works of the Spanish Ẓāhirite Ibn Ḥazm and the Persian Shāfiʿite al-Shahrastānī.

A healthy reaction against the rigidity of the religious life introduced by orthodoxy, was due to mysticism which also was stimulated by the influence of Syrian Christianity: of all the literary productions of Muslim theology those of the mystics are the most brilliant. In its beginnings mysticism was principally a power influencing the practical religious life, and its representatives generally left no written works except poetical effusions expressing their spiritual life and short statements of their chief articles of belief. But in response to al-Ḳoshairī's famous *Risāla* written in 437 (1045) in which he called upon the Ṣūfī's for a revival of the mystical life, literary activity on this field soon became immense. Mysticism was the refuge of al-Ghazālī, the last great theologian of Islām, after he had vainly striven to reconcile philosophy and dogmatic theology. His statement of the Ṣūfī philosophy and its practical demands on the individual, is laid down in his *Iḥyāʾ ʿulūm al-dīn*, the quintessence of which he restated in a form adapted for the masses in the *Kīmiyāʾ al-saʿāda* originally written in Persian: both works have become classics even from the point of view of their literary form. Mysticism achieved its greatest triumphs in the profound systems of the Persians ʿAbd al-Ḳādir al-Gīlānī and al-Suhrawardī and in the luxuriant imagination of the Spaniard Ibn ʿArabī. At this stage it had assimilated new ideas drawn from Indian speculations; Ibn ʿArabī himself assisted by a Yogi revised the translation of the *Amṛtakuṇḍa*, which al-ʿAmīdī had prepared a short time previously under the title *Mirʾāt al-maʿānī*. With the end of the vii. (xiii.) century however the classical period of Ṣūfism had reached its close. In the Persian and Turkish countries it continued for many centuries to attract and satisfy all unlearnt thinkers, but the productions of these men, which include the highest creations of all Muslim poetry, stand to the credit of the national literatures. In Arabic countries there arose only a small number of poets and original thinkers like al-Shaʿrānī, while literary activity found its outlet principally in lives of the saints and rules of the religious orders. (Cp. A. Merx, *Idee und Grundlinien einer allgemeinen Geschichte der Mystik*, Rektoratsrede, Heidelberg 1893; I. Goldziher, *Materialien zur Entwicklungsgeschichte des Ṣūfismus* in *Wiener Zeitschr. f. d. Kunde des Morgenl.*, xiii. 35—56; M. Schreiner, *Der Ṣūfismus und seine Ursprünge* in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lii. 513 *et seq.*

The literary life at Baghdād had found an unexpectedly brilliant development under the early ʿAbbāsids owing to the fact that Greek science was made accessible to the Muslims by Syrian intermediaries. Already under the Umaiyads the prince Khālid b. Yazīd [q. v.] had pursued the study of astrology, medicine and particularly alchemy (see al-Djāḥiẓ, *Bayān* i. 126, 10) and the medical work of the presbyter Ahrun had been translated into Arabic by the Jew Māsardjōye for Marwān, or according to others for ʿOmar II (Ibn al-Ḳifṭī, ed. Lippert, p. 324). At the court of al-Manṣūr we meet with a physician of Gondēshāpūr who is said to have translated medical works into Arabic; and the translator Yūḥannā b. Māsawaih flourished under Hārūn. But it was the caliph al-Maʾmūn, himself full of appreciation and vivid interest in all scientific aspirations, who gave the most powerful stimulus to this form of activity. He founded at Baghdād the *Bait al-Ḥikma* containing a library and an astronomical observatory, which under the direction of Salm soon became the centre of active scientific study. The knowledge of Greek and Syriac continued to remain confined almost entirely to Christians and renegades, but the activity of men like Ḳosṭā b. Lūḳā, Ḥunain b. Isḥāḳ, his son Isḥāḳ and his nephew Ḥubaish, opened to the Muslims a path of access to Greek science. — Cp. M. Steinschneider, *Die arabischen Übersetzungen aus dem Griechischen* in *Centralblatt für Bibliothekswesen*, supplement 5, year vi. (1889), supplement 12, year x. (1893); id. in Virchows *Archiv*, vol. cxxiv. (1891), p. 115—136, 268—298, 455—487; id., in *Zeitschr. der Deutsch. Morgenl. Gesellsch.* l. 161—219, 337—417.

Unlike medicine, astronomy and natural science which were confined to narrow professional circles, philosophy gained a somewhat wider influence on the whole literary development. It has already been pointed out, that both grammar and dogmatic speculation started from suggestions furnished by philosophy. But the orthodox reaction under al-Mutawakkil put obstacles in the way of this influence. The 'philosopher of the Arabs', al-Kindī suffered under reactionary persecutions, and it was only because of his skill in astrology that he was tolerated at the court. His attempt to combine Aristotelian observation of nature with the dominant neo-Pythagorean and neo-Platonic system was not attended by much success; and his studies had to be pursued at a distance from public life owing to the persecution of the orthodox. An eclectic philosophy of nature was transmitted as a secret doctrine in the circle of the 'Brethren of Purity', whose religious and political views the sect of the Karmatians tried to put in practice though only in a grossly vulgarized form. The treatises of the 'Brethren of Pu-

rity' afford a kind of encyclopaedic survey of the sciences of all nations and religions known to their time. The 'book of the beasts and man' borrows its framework from Indian fables, and just as the latter afford a means of telling the truth to a ruler in a way unheard of under other circumstances, so they venture to apply a most scathing criticism to human society and positive religion. Their philosophy of nature however ends almost entirely in psychology. The soul is the real being of man which has developed on a mystical path of ascent from the lower natural orders through the animal stage to an increasingly higher grade of perfection. The Brethren of Purity gained no influence on the activity of the professional philosophers and theologians, but their treatises were eagerly read by the educated and many sects adopted their doctrines. The Aristotelian philosophy on the other hand was always confined to certain circles of the elect, and did not flourish except under the protection of princes, such as was afforded to al-Fārābī at the court of Saif al-Dawla, and to Ibn Sīnā by the rival petty rulers of his Persian home. In the latter country Ibn Sīnā exercised a profound influence not only through his medical canon, but also through his psychology and logic: and his influence on the Christian West was still more powerful, at a time when he was anathematised by Muslim orthodoxy. In the West as well as in the East of the Muslim world philosophy was the privilege of isolated thinkers, who could gain no influence on the masses; they had on the contrary to live in obscurity apart from the exceptional cases in which such men were invited to the court of some intelligent ruler, as happened to Ibn Bādjdja, a follower of al-Fārābī who lived at Saragossa at the court of the Almoravid 'Alī. It thus came about that the Andalusian philosophers have been of greater importance for Jewish and Christian scholasticism than for their own fellow-believers. Only Ibn al-Ṭufail deserves special prominence as the creator of a new literary form, the philosophical novel. The ascent of the mind from the elements through the stage of organic nature to God had already been described by Ibn Sīnā in the allegorical character of the ideal man Ḥaiy b. Yaḳẓān. Ibn al-Ṭufail borrows this character, in order to describe in his example the development of a thinker growing up far from all human intercourse on a lonely island. He creates for himself the conditions of material existence, and in his mature age is led by the contemplation of nature to the vision of God. He then meets a philosopher who has risen beyond the limitations of human society, and the two resolve to communicate his pure knowledge to the people: soon however he realises the vanity of this undertaking, as the people is ripe only for Muḥammad's allegories, and together with his friend he returns to his lonely island. Better times seemed to have arisen for philosophy with the rise of the Almohades who gave public recognition to the doctrines of al-Ash'arī and al-Ghazālī whose concessions to philosophy had until then been rejected in the West as heretical. Under the reign of Yūsuf Ibn al-Ṭufail and Ibn Rushd for a time enjoyed the favour of the court, though the latter had to go into exile in his old age. Ibn Rushd did not reject the state as such, as he appreciated its civilising influence; but his doctrine of the eternity of the material world, of the necessity of a causal nexus between all events, and of the destruction of the particular put him in sharp opposition to theology without any hope of reconciliation. It was only among the ṣūfīs that a certain amount of interest in philosophy was still displayed, though merely for the purpose of gaining a more certain assurance of the higher value of mysticism. 'When towards the middle of the xiii. century A. D. the emperor Frederick ii. put a number of philosophical questions before the Muslim scholars of Ceuta, the Almohade 'Abd al-Wāḥid entrusted the duty of replying to them to Ibn Sab'īn, the founder of a mystical order. He undertook to do so. In the style of a pedantic schoolmaster he enumerates the views of ancient and recent philosophers. He allows us to divine the ṣūfic secret, that God is the reality of all things. But the only thing to be learned from his replies is the fact that Ibn Sab'īn had read books, of which he believed the emperor Frederick to have no knowledge whatsoever'. (T. J. de Boer, *Gesch. der Philosophie im Islām*, Stuttgart 1901, p. 177 *et seq.*). The last thinker of Islām, Ibn Khaldūn, as has already been pointed out, based his system on history, in the events of which he recognised an ordered law (T. J. de Boer, *loc. cit.*). Cp. I. Goldziher, *Die islamische und die jüdische Philosophie*, in P. Hinneberg, *Die Kultur der Gegenwart*, part i., sect. 5 (Berlin-Leipzig, 1909), p. 45—77.

The Mongols in the East and the Berbers in the West destroyed the flower of Muslim civilisation, and their devastating influence is more apparent in the field of literature than in any other. It is true that the literary output was enormous even after the vii. (xiii.) century, but no new idea and no new form has made its appearance. The greatest variety and the most rapid rate of production are the two most coveted titles to fame. To the untiring industry of men like al-Suyūṭī, al-Murtaḍā 'l-Zabīdī, and 'Abd al-Ḳādir al-Baghdādī we owe stores of invaluable information in consequence of the fact that many documents of the literary past of their civilisation which are irretrievably lost to us, were still accessible to them; but from the point of view of the history of literature as such they are of no account.

(BROCKELMANN.)

'ARĀBĪ PASHA, leader of the Egyptian Nationalist party. — Aḥmad 'Arābī al-Maṣrī (= al-Miṣrī, 'the Egyptian'), as he called himself with pride, was the son of a fellāḥ of Lower Egypt. He entered the army and under the Khedive Tawfīḳ (Tewfik) rose to the rank of colonel and commander of the 4th regiment. He took a subordinate part in the officers' revolt of 1879 under Ismā'īl, and later in the great military revolt of 1881-1882 he headed the movement which is known to history by his name.

The occasion which first gave 'Arābī political prominence arose out of the difficult relations which for a long time had been existing between the Egyptian and the Turkish-Circassian officers favoured by the Turkish Pashas in authority. The conflict took an acute form and led in January 1881 to a complaint lodged by 'Alī Fehmī, the commander of the 1. regiment, and 'Arābī against the minister of war 'Othmān Pasha Rifḳī. The ministry procrastinated, in spite of the fact that the complaints were perfectly justified and even attempted secretly to arrest the two colonels in order to have them courtmartialled: this led to a mutiny of the troops who liberated the colonels and demanded of the Khedive the dismissal of the war minister. Tawfīḳ was forced to give way and at the desire of the mutinous troops appointed Maḥmūd Pasha Sāmī al-Barūdī minister of war. The army now became the exponent of national aspirations, and it was by mere chance that 'Arābī, by no means a great personality and an unpractical theorist, found himself at the head of the movement. In the summer of 1881 another change occurred in the ministry of war and in September 'Arābī and his regiment were removed from Cairo. This led to new disturbances which found expression in a second great military demonstration in front of the 'Abdīn palace (9. September). The Khedive was forced to change the ministry and to summon the chamber of notables. In answer to this concession 'Arābī and his compromised colleagues left Cairo with their regiments in the beginning of October. 'Arābī, now a popular hero, had a triumphal progress through the city which he left after delivering a stirring speech. The position of the government however was hardly strengthened by his absence, as the actual power still remained exclusively in his hands; it was therefore resolved to give him a place in the government, and on 4. January 1882 he was appointed under-secretary of state in the ministry of war. Attempts at intervention on the part of the Powers and the struggle about the rights of the chamber with regard to the budget led, on 4. February, to the formation of a new ministry under Maḥmūd Sāmī, who enjoyed the confidence of the Nationalist party, and gave 'Arābī a place in his cabinet as minister of war. On 11. April a Turkish-Circassian conspiracy against 'Arābī was discovered and the officers implicated were sentenced to loss of rank and exile to the Sūdān. According to English sources however the alleged conspiracy was entirely the product of 'Arābī's fears; and the latter's whole activity according to this view is to be explained by his fear of punishment after the first mutiny. Once started on his downward career, fear is supposed to have led him further and further. However this may be, the confirmation of the sentence on the Turkish officers on the part of the Khedive led to a conflict between the latter and the ministry who summoned the notables without consulting the Khedive. The latter now put the matter in the hands of the Sultan of Turkey, and Great Britain and France organised a naval demonstration at Alexandria (20. May), as they refused to treat with the ministry in power and feared for the safety of the foreign residents. The ministry was forced to resign 26. May; on the 28th however 'Arābī at any rate was re-appointed minister of war in response to a very general demand.

The feverish excitement created by the high-handed action of the Powers and especially by the naval demonstration found a sudden outlet at Alexandria on 11. June. A quite ordinary street brawl developed into a sanguinary riot with a pronounced anti-foreign and anti-Christian tendency: 57 Europeans and 140 Egyptians were killed. 'Arābī was perfectly innocent of complicity in these events which created a terrible panic among Europeans and caused them to leave Egypt in large numbers. Alexandria, where the Khedive resided during the summer, became henceforward the centre of gravity of the situation. As the relations to the Powers became more and more strained and a European or Turkish intervention was bound to ensue, 'Arābī began to organise the defence of the country. Great Britain protested against the attempted strengthening of the fortifications of Alexandria, an ultimatum was presented, and on 11. July, after the French vessels had left the harbour, the bombardment of Alexandria, which had been notified to all the Powers beforehand, took place. The troops quitted the town, which now fell into the hands of the populace and was burned. These excesses were headed by a certain Sulaimān Dāwūd Bey Sāmī, who pretended to act on 'Arābī's orders, though the latter succeeded in his trial in proving his innocence. After the fall of Alexandria the Khedive fell into the hands of the English. 'Arābī as the only legitimate representative of the government organised the resistance; on 2. August he proclaimed himself the Sultan's representative and called the Khedive a traitor. In reply he was declared a rebel by the Khedive on the 9. and by the Sultan on the 15. August. On 13. September 'Arābī was defeated at al-Tall al-Kebīr by the British troops who had landed in Egypt under Lord Wolseley; 'Arābī fled, but on the 15th he fell into the hands of the English at Cairo. In the ensuing trial he was sentenced to death, but the sentence was commuted to one of exile, and he was sent to Ceylon, whence he received permission to return in 1901.

Views on 'Arābī and the Egyptian revolution will differ according to the political position of the critic: English, French and Arabic sources contradict each other in all important particulars. It is a fact that the misgovernment under Ismā'īl had brought the country to the verge of bankruptcy. The attempts at reorganisation seemed to deliver Egypt entirely into European and Turkish

hands. This conviction created in the upper classes of the population a profound discontent not always swayed by moderate counsels, which developed into a great Nationalist movement too late recognised as such in Europe. It was a movement of the educated, 'Ulamā', officers and civil servants, and its character was not pronouncedly fanatical and religious, or essentially anti-foreign; but it was directed against the excess of European exploitation and the arrogance of the Turkish Pashas. Its motto was *Miṣr li 'l-Miṣriyīn*, Egypt for the Egyptians.

The Nationalist movement found its first expression in the insubordination of the army. The alliance with the mutinous army, sought at first in secret and later quite openly, secured for it a short period of success, at the same time however destroying all hope of European assistance. It appears from Lord Cromer's memoirs that Great Britain absolutely declined to recognise in any way the de facto authority created by the military revolt, and made all attempts at reorganisation conditional on the removal of the revolutionary leaders and the restoration of legitimate authority. It cannot be denied however that 'Arābī's power, although obtained by force, had received the official sanction of the state. According to expert opinion he did not legally become a traitor until after the bombardment of Alexandria, when he proclaimed himself ruler of Egypt. This view of the political situation as well as the urgent pressure of France (Gambetta, de Freycinet) caused Great Britain to adopt a policy of intervention which inevitably led to the occupation of the country; the occupation was undertaken by England alone owing to the fact that France at the last moment declined to co-operate.

ARABISTĀN, 'the Arab country', modern official designation, used almost to the exclusion of the old name, of the Persian district which formerly was mostly called Khūzistān. For further particulars see article KHŪZISTĀN. Following the Persian usage 'Arabistān denotes occasionally the Arabian peninsula. (Streck.)

'ARABKĪR ('Arabkīr), i.e. 'conquest of the Arabs', Armenian 'Arabkir, town in Turkish Armenia, situated to the North of Malāṭiya on the road from Egin to Malāṭiya under 38° N.L. and 38¼° E. of Greenwich. The town lies in a depression, closed in by rocks of basalt, at a short distance from the western bank of the Euphrates, a tributary of which called 'Arabkīr-Ṣu flows through it. The climate of 'Arabkīr owing to the high situation is inclement. The extensive orchards surrounding the town are worthy of notice. The modern settlement does not go back beyond the beginning of the xix. century; the exterior of the town is therefore quite modern; at an earlier period the town was situated ½ hour further to the North on a site still called Eski Shehr, 'the Old Town', where traces of buildings are still visible. The Byzantines knew the town under the name of Arabrakes; on the other hand it is not mentioned by any of the early Arabic geographers, though referred to several times in Ibn Bībī's (wrote about 680 = 1281) chronicle of the Seldjuḳ edited by Houtsma (Leiden 1902). 'Arabkīr shows clear signs of advancing prosperity. The number of inhabitants was calculated by Ainsworth in 1839 at 8000 (6000 Armenians); the British consul-general J. Brant who visited the town a few years before that date counted 6000 houses (4800 inhabited by Turks, 1200 by Armenians); the latter figure would indicate a larger number of inhabitants. Taylor in 1868 notes 35 000 inhabitants. A large number of these, particularly the Armenian families, support themselves by weaving (manufacture of cotton cloths from English yarn). Every year large numbers of emigrants leave the hills of 'Arabkīr and Kharpūt, in order to try their fortunes in Stambul, Diyārbekr, Damascus, Aleppo and the sea-port towns; at Aleppo especially a servant hailing from 'Arabkīr is, or was formerly, to be found almost in every house.

'ARAḌ (accident), correlative of *djawhar* (substance), denotes every thing in any respect appertaining to a subject. The philosophers restrict the use of the term especially to the 2.—10. Aristotelian categories; the 'Mutakallimūn' however use it in a very wide sense for everything that is not *djawhar*. It is stated to be a characteristic element in the teaching of the Mutakallimūn, that for various stated reasons they deny the possibility of the existence of an accident in another accident. — Cp. e.g. *Dict. of techn. terms*, p. 986 *et seq.*

(T. J. de Boer.)

ARAḌA (also araḍa; a.), the termite (termes arda, white ant). Our knowledge concerning this insect which is found in all hot countries up to 40° N. and S. Lat. is still very scanty; the Arabs were nearly as well informed, at any rate as far as the species occurring within the Muslim world are concerned. The insect described by Arabic authors is the white ant which is found in Egypt in a few species, more frequently further up the Nile in Nubia, and most frequently in the Sūdān. The Arabs made the observation that some of the 'little white worms' possess wings during some part of their life ('after a year', Ḳazwīnī), but failed to recognise the connexion of this fact with their sexual life. The social life of the termites, their common labour in constructing the conical heaps of clay with countless tunnels, their battles with the ants, and particularly their activity in destroying wood, whereby they became quite a plague, were well known. Arsenic and the dung of cattle were supposed to be a protection against them. The voraciousness of the termite and the

damage caused by them were proverbial, and the popular superstition, which regards them as heralds of death, seems to be very old. In the Ḳor'ān (sūra 34, 13) Solomon is shown to be dead by 'a reptile of the earth which gnawed his staff', and in North Africa people still say: 'when a person is going to die, then comes the arḍa knowing it well'.

AL-A'RĀF (A.), plur. of *'Urf* [q. v.]; *sūrat al-A'rāf* is the title of sūra 7.

'ARAFA or 'ARAFĀT, a hill famous as a place of pilgrimage with an adjoining plain of the same name, 6 hours to the East of Mekka. It is a hill of granite of moderate dimensions reaching a relative height of 150—200 feet. On the East broad steps of stone lead to the top; on the 60th step there is a platform containing the pulpit from which a *khuṭba* (sermon) is annually delivered on the afternoon of the 9. Dhu 'l-Ḥidjdja (the day of 'Arafa). On the top there stood formerly a *Ḳubba* named after Umm Salima (thus Ibn Djubair, ed. de Goeje, p. 173) which was destroyed by the Wahhābīs. According to 'Alī Bey pious Muslims may not penetrate beyond the platform. The hill is usually called Djebel al-Raḥma (hill of mercy). Another name is said to have been Ilāl, but it is doubtful whether this appellation really referred to the hill: Wellhausen regards it as the name of a shrine or perhaps of the deity worshipped on the spot in the pre-islāmic period. Pictures of the hill are found in 'Alī-Bey and Burton; see bibliography. — The plain of 'Arafāt spreads southwards from the hill of 'Arafāt and is bounded on the East by the lofty mountain-chain of Ṭā'if. It is covered by a low growth of mimosa plants, and is filled with life only on one day of the year (9. Dhu 'l-Ḥidjdja) when the pilgrims pitch their camp for the celebration of the prescribed *wuḳūf*. Cp. the pictures in Burckhardt and especially in Snouck Hurgronje, *Bilder aus Mekka*, xiii—xvi. The *wuḳūf* or festival assembly takes place on the afternoon of the day mentioned and lasts until after sunset. The pilgrims present express their religious fervour by loud shouts of *labbaika*, by prayers and recitation of the Ḳor'ān.

The origin of the name 'Arafa is unknown. The legendary explanation is that Adam and Eve who had been separated from each other after their expulsion from paradise, met again at this spot and recognised one another (*ta'ārafā*); Arabic authors also mention other etymologies of a similar nature.

AL-'**ARĀ'ISH**, French orthography Larache, sea-port town in Morocco situated on the Atlantic coast about 44 miles S. W. of Tangiers and 83 miles N. W. of Fās (Fez); under 35° 13' N. Lat. and 8° 28' 22" W. Long. (Paris).

Larache is built on the slopes of a hill dominating the left bank of the Wād Lekkus at the spot where the river joins the ocean. The town is surrounded by an old turreted wall, which is adjoined on the land side by the Ḳaṣba and towards the sea by a fortress. It offers little that is of interest: 'the streets are dirty, the mosques common-place, the Ḳaṣba is only a heap of ruins. The only really picturesque spot is the square of the Sūḳ containing both the bazar and the market, which is surrounded on its four sides by white arcades.' (Aubin, *Le Maroc d'aujourd'hui*, 2. ed., p. 90). The surroundings contain groves of orange and olive-trees, pomegranates and even vineyards which produce the wine consumed by the Jews of Northern Morocco. Larache possesses a certain importance from the economic point of view owing to its short distance from Fās and the fertility of the Wād Lekkus valley, the marshes of which support numerous herds. The harbour serves as port of transit for merchandise destined for Fās, and for the export of the produce of the Khloṭ (Akhlāṭ) and the Gharb, particularly wool which is sent to England, France and Germany. In 1901 the imports reached 5 040 000 and the exports 1 230 000 francs. Unfortunately the alluvial deposits of the Wād Lekkus have formed a sand-bank which makes the harbour inaccessible for vessels of large tonnage, and even renders the landing dangerous during one half of the year. The population is about 5000, including 2000 Jews and about 200 Europeans, two thirds of whom are Spaniards. There is a Spanish Catholic mission directed by the Franciscans, a Protestant mission and a school of the Alliance Israélite.

Larache has taken the place of the Roman colony Lixus, which in its turn had replaced the Lybian-Punic town of Lyx. Both of these towns were situated at a distance of about an hour to the N. E. of Larache; their site is still marked by ruins called 'Shemmish' by the natives. — The old town is not mentioned by any Arabic author prior to the xiii. century. It was probably founded by the Berber tribe of the Benī 'Arūs who, by reason of the vineyards abounding in the district, gave it the name of el-'Arāïsh milā' Benī 'Arūs. The Almoravid sultan Ya'ḳūb al-Manṣūr built here a fortress to command the mouth of the Wād Lekkus. In 1270 it was taken by the Andalusian Christians who massacred the male inhabitants and carried off the women as slaves. The town however recovered again and was frequently visited by merchants from Genoa and Venice who brought linen, silk and glass and exported wool, leather and cotton.

The situation of Larache near the straits of Gibraltar could not fail to excite the covetousness of the Christian powers. An unsuccessful attempt at occupation was made by the Portuguese after they had taken possession of Arzila. They succeeded in 1477 in gaining possession of an island at the mouth of the river, but had to retire soon afterwards, as the natives obstructed the channel by means of tree trunks. For the protection of the town against fresh attacks the king of Fās erected in Larache a Ḳaṣba large enough to hold 600 foot-soldiers and 300 horsemen. The Spaniards were more successful than the Portuguese. After various fruitless negotiations undertaken by Philip II who declared 'that Larache was worth

more than all Africa' they succeeded in 1610 in obtaining the cession of the town. It was yielded up to them by Muḥammad al-Shaikh al-Ma'mūn for the price of their support against his rival al-Zaidān. On 24. November 1610 the Marquis de Saint-Germain took possession of Larache in the name of Philip III king of Spain. The Spanish occupation lasted 79 years. Large sums were spent by them on fortifying the town and on the erection of a Franciscan convent; they were however almost continually besieged in the town by the Muslims and gained no advantage from their possession. In 1689 Mūlāi Ismā'īl, resolved to 'purge the sea-board' of all Christians, marched against Larache at the head of an army of 16 000 men re-inforced by bands of 'volunteers of the faith'. After a siege lasting 5 months the town was forced to surrender. Some of the officers and the ecclesiastics were sent back to Europe, but the rest of the garrison were carried off as prisoners in contravention of the terms of the capitulation, and set to work at the building of Mequinez. The Djebala and the tribes of the Rif furnished the new inhabitants. Henceforward Larache remained in the possession of the Moroccans, though on various occasions it became the object of naval demonstrations on the part of Christian powers. In 1765 the French attempted to destroy a number of pirate ships which had taken refuge in the harbour, but they suffered a serious defeat and lost 450 men. No greater success attended the enterprise of the Austrian admiral Bandiera who attempted in 1830 to set fire to the remains of the Moroccan fleet moored under the walls of the town; he was forced to retire with considerable losses. During the war between Spain and Morocco in 1860 Larache was bombarded by the Spanish fleet, but owing to a great storm, which made the shooting of the squadron very uncertain, little damage was inflicted.

(G. YVER.)

ARAKĀN, the northernmost division of the province of Burma in Further India conquered by the British in 1826. The present capital is Akyab; the name of the former capital is Mrohaung (English spelling Myohaung). The number of inhabitants is 762 102 (1901) of whom 162 754 are Muḥammadans.

ARAL (lake), great lake in Central Asia (Russian 'Aralsko'e more' i. e. 'sea of Aral') which according to the most recent calculations (1900—1902) covers an area of 26 140 square miles (without the islands); it receives the two chief rivers of Russian Turkistān, the Āmū-Daryā [q. v.] and the Sir-Daryā [q. v.]. The ancients do not seem to have known lake Aral, though a vague notion of its existence may be the foundation of the contradictory accounts about the Central Asiatic Maiotis (it is conjectured that the name of the sea of Azov was transferred to lake Aral, just as the name Tanais = Don was transferred to the Sir-Daryā) and about the 'Marshes of the Oxus' (Oxianē limnē, palus Oxiana; in Ammianus Marcellinus palus Oxia). Old Chinese sources (from the ii. century A. D. onwards) only refer in quite general terms to a 'Northern Sea' or 'Western Sea' as existing in the district of lake Aral. It is similarly uncertain whether the lake (limnē) mentioned by the Byzantine ambassador Zēmarchos (568 A. D.) may be identified with lake Aral.

More accurate accounts are found in the Arabic geographers. It is possible that lake Aral is mentioned by an author as early as Ibn Khurdādhbeh under the name of lake (*buḥaira*) of Kurdar (cp. Amū-Daryā). It is described by Ibn Roste (end of the iii. = beginning of the x. century) who does not however mention its name; according to him the lake which receives the Amū-Daryā had a circumference of 80 parasangs (al-Iṣṭakhrī and the later authours give the figure as 100). Near the mouth of the Sir (according to Ibn Ḥawḳal two days' journey from the 'New Village', Arab. al-Ḳarya al-ḥadītha, Pers. Dih-i naw, Turk. Yeñi-Kent the situation of which is fixed by the ruins of Djānkent about 14 miles S. W. of the modern Kazalinsk) the coast-line of the iv. = x. century seems to have differed but little from that of the present day. This applies similarly, it seems, to the Southern coast; Muḳaddasī counts a journey of two days from Mizdakhḳān (opposite Gurgāndj or the modern Kunya-Urgenč, at a distance of 2 parasangs from what was then the right bank of the Āmū) to Kurdar, thence a day's journey and two postal stages (*barīd*, at two parasangs each) to Farātegīn (written both Barātegīn and Farātegīn) and from there another day's journey to the coast of the lake. It is impossible to say whether the basins near the Čink like the Aibugir, which are now almost completely dried up, were at that time connected with lake Aral; it is certain that no connection existed between lake Aral and the Sari-Kamish; travellers who wished to go from Khwārizm to the Pečeneg country had (according to Gardīzī) to take the route from Gurgāndj to the 'mountain of Khwārizm' (the Čink) and thence through the waterless desert; the 'lake of Khwārizm' was on the right of this route. Al-Iṣṭakhrī and the later geographers correctly describe the 'lake of Khwārizm' (Buḥairat al-Khwārizm) as a salt-water lake without any outlet to the sea; Mas'ūdī alone (who calls the lake after the town of Djurdjāniya i. e. Gurgāndj) erroneously assumes a connection between lake Aral and the Caspian Sea. In the Djahān-Nāmah (beginning of the vii. = xiii. century) and the works dependent on this source (including that of Djurdjānī, died 881 = 1476-1477) the name 'lake of Djand' (Buḥaira-i Djand after the well-known town on the lower Sir) is used side by side with 'lake of Khwārizm'.

For the period from the vii. (xiii.) to the x. (xvi.) century we possess no accounts of lake Aral which are not borrowed from the written sources of an earlier time. Ḥāfiẓ-Abrū (820 = 1417) goes as far as to state that the 'lake of Khwārizm' mentioned in the 'books of the ancients' no longer existed in his time. The Āmū-Daryā was at that period generally regarded as a tributary of the Caspian Sea; according to some sources even the Sir no longer joined lake Aral. The merchant Badr al-Dīn al-Rūmī (quoted by the geographer Ibn Faḍl

Allāh al-ʿOmarī) states as early as the viii. (xiv.) century that the Sir 'changes its direction' at a distance of three days' journey below Djand; according to Ḥāfiẓ Abrū the river joined the Āmū; in the Bābur-Nāmah it is stated that the Sir joins no other river but loses itself in the sands of the desert. In the case of the Āmū these geographical statements can be verified by means of accounts concerning historical events on the lower course of the river [cp. Āmū-Daryā]; for the Sir no such accounts are in our possession. Already Abu 'l-Ghāzī calls lake Aral 'the sea of the Sir' (Sir-Teñizi); he does not seem to have been aware of the statement that the Sir at one time did not reach the lake. According to the same author the Āmū did not find the way back to lake Aral until after the year 980 (1572-1573); it is uncertain whether the very obscure words in the travels of the Englishman Jenkinson (A. D. 1558) refer to lake Aral. The word 'Aral' (Turk., 'island', in this case probably designation of the delta island) is found for the first time in Abu 'l-Ghāzī as the name of the 'place where the river opened into the lake'; later it gave its name to the lake (among the Kirghiz Aral-Teñizi). In the xii. (xviii.) century the delta island Aral was an independant state with the capital Kungrat; it was not re-united with Khiwa until the reign of Muḥammad Raḥīm Khān (1221—1247 = 1806—1826).

The earliest Russian source mentioning lake Aral is the so-called 'great map' (beginning of the xvii. century) where it is called the 'dark-blue sea' (sineye more) and erroneously connected with the Caspian. The lake bears the same Russian name on the map accompanying Witsen's *Noord- en Oost-Tartarye* (first edition in 1687). In Russian documents the name 'Aralskoʾe more' occurs for the first time in 1697. On Western European maps this name is found as early as 1723 (in de l'Isle), though the Greek Basilios Batatzes who visited Central Asia in 1727, claims to have brought the first account of the lake to Europe and thereby to have created a great sensation in London. The first scientific survey and description of the lake is due to the expedition of Butakow and Pospelow (1847-1848). The assumption that the area of the lake has decreased considerably within historical times (which theory cannot be reconciled with the historical accounts referred to above) arose from the fact that an advance of the coast-line was observed in several cases; during the last twenty years however a constant rise of the water level has been observed in the case of lake Aral as well as in that of the other lakes of Turkistān; everywhere the water has again reached the coast line of 1847 and in many case considerably advanced beyond it. It would appear that a periodical rise and fall of the level of the lake must also be assumed for the preceding centuries; the scientific theory of a rapid desiccation of the inland countries (Persia, Turkistān etc.) has altogether been robbed of its foundation by the study of the Arabic geographers.

Bibliography: The lake has been explored in the years 1900—1902 by L. Berg under the auspices of the Imp. Russ. Geogr. Soc., section Turkistān; cp. the reports in the 'Izwestiya' of the section in question, vol. iii., Tashkent 1902 (with which cp. the collection of the historical accounts concerning the lake by Barthold, ibid, vol. iv., and the review in the *Mitteil. des Seminars für orient. Sprachen, Westas. Stud.*, xi. 216) and in the periodical 'Zemlewʾedʾenie'-1901. An exhaustive monograph on lake Aral in Russian by the same author appeared in 1908 (also with German title: *Der Aral-See. Versuch einer physisch-geographischen Monographie*).

(W. Barthold.)

ARAR. [See harar.]

ARARAT (Turkish Aghridagh, Egridagh; Armen. Masik; Pers. Kūh-i Nūḥ, 'mountain of Noah'), the most important elevation of the Armenian highlands. The Ararat massif is situated between 44° and 45° E. Long. (Greenw.) and under 39° 40′ N. Lat.; it rises almost without the intervention of any foot-hills from the flat plain of the Araxes which it skirts in a wide curve stretching from N. E. to S. W.; only towards the West certain ridges (called Sinak; cp. Dubois, *Voyage* iii. 454) form a connection with the Ab- and Bingöl-Dagh. The Ararat group has a circumference of 80 miles and covers an area of 457 sq. miles. It culminates in two peaks, the great Ararat (16 757 feet) in the N. W. and the little Ararat (12 727 feet) in the S. E.; the two peaks are connected by a narrow ridge of flat round shape and a length of 8-9 miles which bears the name Sardar Bulagh after a spring situated about 5 miles below it. A pass leads across this ridge. The absolute height of the Ararat exceeds that of any European mountain and by its relative height of 14 180 feet it surpasses most of the famous giants of the other continents. For owing to the fact that the Araxes valley at Aralykh has a height of 2578 feet only the Ararat towers above its surroundings to a much greater extent than the gigantic heights of the Himalayas or the South American Andes. Viewed from the North this unique monolith affords what is perhaps the sublimest landscape picture in the world.

The great Ararat (Djebel al-Ḥārith) has the shape of a slightly rounded cone; the peak forms an almost circular plateau with a circumference of 150—200 paces sloping down steeply in all directions, fields of snow and glaciers descend from it to a depth of 3250 feet. The N. E. slope of the great Ararat is crossed from top to bottom by a deep depression (the valley of St. James), the uppermost part of which forms a vast hollow closed in by perpendicular walls of rock; the lower part now a stony desert was once inhabited (village of Argurl, 5645 feet, and monastery of St. James). The little Ararat (Djebel al-Ḥuwairith) has the beautiful shape of a regular pointed cone. All the elevations throughout Eastern Armenia are volcanic and this applies also to the Ararat group. The most terrible earthquake of the last centuries was that of 20. June 1840 which caused a vast mountain slide; the latter destroyed a flourishing community, the ancient Arguri (old Armen. Akori; cp. Hübschmann, *Indogerman. Forschungen* xvi. 364, 395) with nearly all its inhabitants, about 1600, as well as the small monastery of St. James situated almost 2 miles higher up with its monks, and the spring of St. James.

The whole Ararat district suffers from an extreme lack of water; in spite of the large masses

of snow which cover it, the slopes of the great Ararat possess only two springs of any importance (particularly the spring of Sardār Bulagh = spring of the governor, already referred to, 7442 feet; the famous spring of St. James has changed its situation since 1840), on the little Ararat there are no springs at all. The latter does not reach the region of perennial snow unlike the great Ararat (snow boundary at 13 582 feet in the N. and 12 812 feet in the S.).

Owing to the great lack of water the vegetation is very scanty. Apart from a small growth of birch-trees the Ararat like the other mountains of Armenia is characterised by a complete absence of woods. A poor fauna corresponds to the scanty vegetation. Since the destruction of the human settlements in the valley of St. James the whole Ararat group has been an uninhabited lonely desert. Things were quite different in the Middle Ages. The Arabic geographer Iṣṭakhrī (ed. de Goeje, p. 191) mentions expressly that the Ararat was rich in timber and game; Muḳaddasī adds that the spurs of the Ararat were covered by more than 1000 hamlets. The Armenian historian Thomas the Arẓrunian (x. cent.) draws attention to the wealth of the district in stags, wild pig, lions and wild asses; cp. Thopdschian in the *Mittel. des Semin. f. orient. Sprachen in Berlin*, 1904, part ii. p. 150.

The first successful ascent of the great Ararat was undertaken on 9. October 1829 by Professor Friedr. Parrot of Dorpat. Since then it has been ascended more than 20 times usually from Arguri on the Northern base. (Cp. the account by Rickmer-Rickmers in the *Zeitschr. d. Deutsch-Österr. Alpenver.* xxiv. p. 315), thus e. g. in 1834 and 1843 by Antonomoff, in 1845 by Wagner and Abich, in 1856 by Stuart and Monteith, and several times by Radde, the well-known explorer of the Caucasus. One of the most interesting ascents was undertaken in 1850 by the Russian colonel Chodzko for the purpose of the triangulation of the Caucasus; he ascended both peaks and spent nearly a week on the great Ararat in the work of mensuration.

Since the last war between Russia and Persia, the Ararat has been the gigantic boundary-stone between three rival powers; the vast mountain mass is divided up between Persia, Russia and Turkey, the Persian district (Ādharbaidjān) beginning on the Eastern base of the little Ararat; the North with the chief peaks is Russian, and the Southern part belongs to Turkey. For the legends connected with the Ararat see the art. AL-DJŪDĪ (Djebel).

(1899), p. 144—163 gives on p. 162-163 some bibliographical and cartographical particulars. (STRECK.)

ARAS, the Araxes of the ancients, well-known river. [See AL-RASS.]

ARBĀB (A.), plur. of *Rabb* [q. v.]

'ARBĀN, site of ruins in Mesopotamia, on the Western bank of the Khābūr, to the South of the Djebel 'Abd al-'Azīz, situated under 36° 10′ N. Lat. and 40° 50′ E. Long. (Greenw.). The remains of the old town are hidden under several hills, after one of which the site is also called Tell 'Adjādje. It was here that H. A. Layard found several winged bulls with human heads, products of the genuinely Mesopotamian civilization which is closely related to that of ancient Babylonia. 'Arbān is probably identical with the Gar (Sha)-dikanna of the cuneiform inscriptions. During the later Roman period the town, then called Arabana, possessed considerable military importance as the principal station on the line of frontier against the Parthians. In the Arab period 'Arbān played an important part as the centre of the Khābūr district and as place of storage for the cotton cultivated in the Khābūr valley. Geographers (cp. e. g. Yāḳūt s. v. 'Arabān) and historians refer to it frequently as a flourishing town. The date of its destruction is unknown; possibly it took place during the Mongol invasion under Tīmūr.

ARCHIDONA, old town in the South of Spain, the ancient name of which is not certainly known, situated in the N. E. corner of the modern province of Málaga near the rise of the Guadalhorce, between Antequera and Loja (on the Genil); it has 9000 inhabitants. Among the Arabs, who occupied the town in 711 soon after the first battle, it was known as Ardjīdhūna and Arshidhūna (Yāḳūt i. 195 Urdjudhūna and i. 207 Urshudhūna). For a long time it was

the capital of the mountainous province of Rejjo (corresponding to the modern province of Malaga); it played a part in history during the rebellion of the renegade ʿOmar b. Ḥafṣūn (with his chief fortress Bobastro), and later as a frontier fortress of the kingdom of Granada, until it was taken in 1431 by the Grand Master of the order of Calatrava.

ARCHITECTURE. The principal forms of Islāmic religious buildings (Syro-Egyptian school).

Mosques. — The mosque dates from the first beginnings of Islām. The simplicity of Muslim worship allowed of a very simple ground-plan which received a fixed form during the early centuries of the Hidjra: a large rectangular court (*ṣaḥn*) surrounded by arcades (*riwāḳ*) the flat roof (*saḳf*) of which rests on arches (*ṭāḳ*) supported by columns (*ʿamūd*) of stone (*ḥadjar*) or pillars (*rukn*) of brick (*libn*). The origin of this ground-plan has been traced to various older types of buildings (ancient Egyptian temple, old Persian palace, Greek agora, Christian basilica); but owing to the fact that the oldest monuments have either disappeared or been subjected to later alterations, an approximate solution of the problem can only be expected from excavations and from a close examination of the sources respecting the earliest mosques. The most recent explorations in Sāmarrā show that Mesopotamia as being the residence of the ʿAbbāsid caliphs plays an important part side by side with Arabia and Syria.

Like the church the mosque has its orientation; it is directed towards Mekka (*ḳibla*, 'direction towards Mekka'), whither the Muslims turn in prayer according to the Ḳorʾānic ordinance. The absolute orientation of a mosque therefore depends on its geographical position. In Syria it is directed to the South, in Cairo to the East, or rather East-South East. On the side containing the ḳibla the arcade is widened in order to hold the multitude of the faithful: it therefore allows of a larger number of naves than the other three arcades. It is called *al-īwān al-ḳiblī*, 'the orientated arcade', in the vulgar language *īwān ḳiblī* or simply *īwān*. This sanctuary is frequently divided into two parts by means of a screen of trellised wood-work, called *maḳṣūra*. On the side nearest the court it contains the platform (*dikka*) for the officials of the mosque who repeat the words of the imām (*muballigh*). The prayer niche (*ḳibla*, *miḥrāb*) which indicates the direction of Mekka opens out from the background of the sanctuary; by its side is found the pulpit (*minbar*), from which the *imām* and the preacher (*khaṭīb*) direct worship and prayer.

This arrangement exhibits obvious points of resemblance to that of the oldest churches. The court surrounded by arcades with a water basin (*mīḍāʾ*) in its centre suggests the atrium which also was surrounded by arcades and contained a basin for ablutions. The sanctuary corresponds to the main part of a church; the screen is a kind of choir-screen, the *miḥrāb* a kind of apse on a smaller scale. The minaret (*manāra*, *miʾdhana*) finally, perhaps an imitation of the bell-tower, which contains galleries for the call to prayer (*adhān*) becomes the outward and visible sign of a mosque. Like the original bell-tower it has no definite place and rises sometimes from a corner and sometimes from a side of the building. These resemblances are easily explained. The Muslim conquerors appropriated the much more advanced art which they found among the vanquished, and in the first place transformed a large number of churches into mosques. This was the case e. g. with two famous buildings, the great mosque of Damascus, and the mosque al-Aḳṣā at Jerusalem, which betray their Christian origin at the first glance.

Style and methods of construction change from generation to generation, especially as regards the choice of material, the gates, the façades and minarets, the profile of the arches in the interior, and the ornamentation. But the ground-plan of the mosque remains the same down to the time of the Ottoman conquest.

The original classical name of the mosque is *masdjid*, 'place of prostration'. The Ḳorʾān knows no other expression, and the older writers apply it to all mosques irrespective of size. But towards the fourth century of the Hidjra the advance of civilisation and architecture produced a distinction between two kinds of mosques. The great mosque, in which the assembly of the faithful (*djamāʿa*) meets for the Friday service (*djumʿa*) receives the name *masdjid al-djamāʿa*, *masdjid li 'l-djumʿa* or *masdjid djāmiʿ*, and we soon meet with the shortened form *al-djāmiʿ*, 'the great mosque'. From that time the expression *masdjid* denotes only mosques of the second rank, the number of which gradually becomes less and less. Only the great mosques of Mekka, Medina and Jerusalem (*al-Aḳṣā*) are still called *masdjid* owing to the fact that tradition following the Ḳorʾān gives them that name which thus has become popular.

This development in the use of the expressions can be followed in the authors; it is also reflected in the inscriptions which contain accurate official and dated documents. The great mosque of Aḥmad ibn Ṭūlūn built at Cairo in 265 (879) still bears the name of *masdjid* in the dedicatory inscription. But the mosque of the Nilometer also at Cairo, erected two centuries later in 485 (1092), is called *djāmiʿ* in the three texts of the document recording its foundation.

Madrasas. — The Fāṭimid caliphs while spreading the Shīʿite doctrine in Egypt and Syria, effected no change in the ground-plan of the mosque; it is found in its old form especially in the mosques which they built at Cairo. But the development of religious ideas and the political situation created in the Muslim East by the Mongol invasions and the dismemberment of the Baghdād caliphate, led as early as the Fāṭimid period to an orthodox or Sunnite reaction which was directed especially against the ʿAlid or Shīʿite sects and dynasties. This religious (Ashʿarite) and political (Sunnite) reaction produced a number of reforms in all the fields of life. One of the most important was the development of the *madrasa*. The latter first arose in Khorāsān in the beginning of the iv. century of the Hidjra; in its original form it was simply a private school of religious

sciences i. e. tradition, exegesis and law according to the Sunnite rite. But in the v. (xi.) century it was turned into a public institution by the Seldjuk sultans of Baghdād, who had become the most powerful vassals of the ʿAbbāsid caliphate and the official protectors of Sunnism and Ashʿarism: it now became the object of the Madrasa to train an élite of officials for all branches of the administration. It thus developed into a powerful centre of religious and political propaganda, a school of official Sunnism and, in a way, a government institution. In this form the madrasa was introduced by Sunnite rulers in the vi. (xii.) century, especially by Nūr al-Dīn into Syria and by Ṣalāḥ al-Dīn (Saladin) into Egypt.

Differing from the mosque in nature, object and history, the madrasa is also distinct from it in its architectural features. At the time when it was transplanted into Egypt by Ṣalāḥ al-Dīn its ground-plan had already assumed fixed forms: a small rectangular court without a roof (*ṣaḥn* or *ṣūʿa*) surrounded by four high walls and four halls (*līwān*); the latter form together a Greek cross and open into the court by means of a lofty arch (*ʿaḳd*); the exterior angles of the building contain dwelling-houses for the officials and servants of the institution. This symmetrical ground-plan with its fourfold division is excellently adapted to the fourfold madrasa consisting of the schools of the four principal Sunnite rites (*ḥanafī*, *shāfiʿī*, *mālikī*, *ḥanbalī*). Each rite establishes itself in one of the four līwāns, as is shown by the inscriptions of the madrasa of Sultan Ḥasan built at Cairo in 764 (1363). The ground-plan in question seems to have its origin in Syria. It is found already in the Ḳaṣr of ʿAmmān, a remarkable Syrian monument of much greater age than the Syro-Egyptian madrasas. Like the plan of the mosque it combines elements of various origin. The līwāns are vaulted in the Persian style (Sāsānid palaces), but the cruciform arrangement round a centre court suggests the symmetrical ground-plan of some Byzantine and Syrian churches with two axes, with which the Ḳaṣr also corresponds in some other architectural details.

As in the case of the mosque the style and method of construction of the madrasa changed from generation to generation. Down to the end of the xiv. century the līwāns have barrel-vaults (*ḳabw* or *ʿaḳd*) of bricks (*ṭūb*) in the ʿIrāḳian and Byzantine style (in circular layers of bricks placed on end). The most recent great vaulted madrasa at Cairo is that built by sultan Barḳūḳ in 788 (1386). Later the vaults are replaced by flat roofs (*saḳf*) of wood (*khashab*) and by ceilings, the rich many-coloured ornament of which hardly hides the deep decay of architectural art. The only vaulted element which remains is the arch of hewn stones covering the entrance to the four līwāns from the court. In spite of all these changes ground-plan and arrangement of the madrasa remain unaltered down to the time of the Ottoman conquest.

The Sunnite reaction created various institutions akin to the madrasa, particularly the *dār al-ḥadīth* or 'school of (Sunnite) tradition'. But as these institutions did not possess the same political importance they only played a subordinate part and did not develop a separate architectural style: being mere offshoots of the madrasa they adopted the ground-plan of that type of building.

The madrasa retained its character of a government institution with political aims during the reign of the Aiyūbids who had to fear a recrudescence of Shīʿite doctrines. Its first success was the destruction of the Fāṭimid school, the *Dār al-ʿIlm*, a kind of eclectic academy in which the sciences inherited from the Persians and ancient Greeks were taught. The Shīʿite sects however were not the only foes against which Sunnism had to fight, as the crusades had raised up another enemy in the Latin Kingdom of Jerusalem. Ṣalāḥ al-Dīn and his successors who were handicapped by the feudal system and by political decentralisation, had only been able to weaken it without accomplishing its destruction. This was finally effected by Baibars. On the ruins of the Aiyūbid feudal kingdom he founded the Mamlūk empire, a centralised state protected by a regular army and governed by means of a bureaucratic hierarchy. With the help of this powerful lever he destroyed at one blow the Latin Kingdom and the fortresses of the Assassins, the last bulwark of the Shīʿite heresy in Syria. He conferred upon his authority a religious sanction acceptable to the Muslim people by assembling at Cairo the remains of the caliphate of Baghdād destroyed by Hulāghū in 1258. Thus re-establishing for his own purposes the dualism of spiritual and temporal power he restored the continuity interrupted by the Mongol invasion and completed the work planned by the great Sunnites of the preceding century.

Thus an end was put to the struggle: the war-like spirit of Sunnism, fanned into flame by the holy war, had spent itself and turned to good works and contemplative study. No longer having a fighting part to play, the madrasa necessarily lost its old character and became assimilated to the mosque. At this stage all great madrasas are adapted to the Friday service. The *līwān ḳibli*, more spacious than the other three līwāns, serves as sanctuary and contains pulpit and miḥrāb. A minaret finally gives to the madrasa the outward appearance of a mosque. Meanwhile however the madrasa has acquired such importance that, far from being absorbed entirely in the mosque, it threatens to supplant the latter altogether. While the number of great mosques built on the classical ground-plan decreases continually, the number of madrasas with a cruciform ground-plan continues to increase down to the Ottoman conquest.

This development is reflected in linguistic usage. The madrasas intended for worship received the name *madrasa li 'l-djumʿa*; later they were simply called *djāmiʿ* like the great mosques. Maḳrīzī, who wrote his topography of Cairo early in the xv. century, applies this name to most of the Mamlūk madrasas. Inscriptions from 830 (1427) onwards attest that this was the official usage. The word *madrasa* thus shared the fate of the old word *masdjid* and came to be confined to institutions of minor importance. In Egypt at the present day it means no more than a secular school; every large building connected with the cult is called *djāmiʿ*.

The original mosque, *masdjid*, is thus split into two classes, the great mosque (*djāmiʿ*) and the small mosque (*masdjid*). The madrasa similarly develops on the one hand into the *djāmiʿ*, on the other into a secular school. Both kinds of

ḏjāmiʿ finally become identical as far as their purpose is concerned, though not in their architectural ground-plan. The latter remained distinct down to the time of the Ottoman conquest, which led to the disappearance of the ground-plan of the madrasa. The Ottomans go on building an increasing number of *ḏjāmiʿ*'s in Egypt and Syria in the style of the great mosques as modified under the influence of the Turkish school with its type of mosque derived from the church of S. Sophia (cupola).

Monasteries. — The Sunnite reaction which introduced the madrasa from Persia into Egypt, received in the course of its development an admixture of elements which, though of very ancient origin, had been foreign to early Islām. One of the most important of the elements thus assimilated is Ṣūfism, an oriental monastic system of Persian origin with mystical tendency. The architectural monument of Ṣūfism is the Ṣūfī monastery or *khānaḳāh* (Persian *khān-gāh*) which first appears in Syria and was introduced into Egypt by Ṣalāḥ al-Dīn, the founder of the first Egyptian khānaḳāh. In the latter country *khānaḳāh* soon became almost equivalent to *ribāṭ*, an Arabic word denoting a former military station, which has completely lost its original character and been transformed into a Ṣūfī monastery.

Ribāṭ and khānaḳāh flourished under the Aiyūbids and later under the Mamlūks, but without creating a separate architectural form. The monasteries sometimes imitated the plan of the great mosque (monastery of the Emir Shaikhū at Cairo, 756 = 1355), and sometimes that of the madrasa (monastery of Sultan Baibars II at Cairo, 709 = 1310). Like its two prototypes the monastery is furnished with all the elements required for the cult, such as minaret, sanctuary, pulpit and miḥrāb. It is only the subsidiary buildings adapted for the monastic life with their long rows of cells which give a peculiar character to these monasteries. Interesting remains of this type still exist, especially at Cairo where the monastery of Sultan Ināl (858 = 1454) affords the most perfect example.

At the time of the Ottoman conquest ribāṭ and khānaḳāh were supplanted by the *tekye*, the Turkish-Persian dervish monastery (*tekya, tekke*), the architectural arrangement of which was also influenced by the school of Constantinople (halls with cupolas). Finally we must mention the *zāwiya*, a word which in the Muslim East and West denotes a cell or hermitage, and secondarily a monastery; in Egypt it is generally used for a small mosque, a prayer house or a chapel.

Drinking-fountains and schools. — Side by side with these three chief types, mosque, madrasa and monastery, we find two subordinate forms of buildings, known as *sabīl* and *kuttāb*. *Sabīl* means '*way, path*'; the expression *fī sabīl Allāh* '*on the path of Allāh, for the sake of God*' is applied to any good work, to the holy war as well as to the giving of alms; it is used especially of foundations serving the common good, the use of which is free to all. In the East water is most precious; according to a tradition going back to Muḥammad the offering of a drink of water is one of the most meritorious forms of alms-giving. Thus while *sabīl* originally denotes any charitable foundation, it is the public drinking-fountain which is regarded as the *sabīl* par excellence.

In the architecture of Syria and Egypt the sabīl rarely stands by itself. It is found on the ground floor in the corner of a mosque, a madrasa or a monastery, and is characterised by its two large rectangular windows placed corner-wise which are decorated with charming sculptures and closed in by fine bronze gratings. Over the sabīl is found the elementary school (*kuttāb* or *maktab*) made conspicuous from afar by its elegant loggia which opens out towards both façades by means of arcades resting on small columns. This graceful type of the *sabīl-kuttāb* continued to exist down to the Ottoman conquest. After this period the sabīl is erected by itself, at first in conjunction with the kuttāb, and later quite independently. The style continues to degenerate down to our own time: at the present day the drinking-fountain exhibits all the features of the perverted taste of the modern Turkish style.

Monumental tombs. — For the dead of the lower orders a grave is sufficient. Those of the higher classes not content with a grave require a mausoleum. From the earliest times to which it can be traced the Syro-Egyptian mausoleum has its own style: a cubic room on a square base with a vaulted roof. This type may possibly be a remote reminiscence of the ancient Egyptian *mastaba*. It is more directly connected with a Christian type, the kalybe (καλύβη) of which some traces are preserved in Syria. The problem of erecting a cupola on a square base, executed in a rough way in the case of the ancient Syrian kalybe, finds in Muslim architecture the most various solutions in which the thought and the successive inventions of the Persians and Byzantines are reflected. The space of transition from the square to the circle is occupied either by planks covered with stucco, or by corner-trompes made at first of bricks and later of stone, or by stalactite pendentives of stone. The material used, the proportions, the section of the space of transition, of the tympanum and of the cupola, the ornamentation and in fact all the elements of which the style is composed, change from generation to generation; but the general ground-plan remains unaltered down to the Ottoman conquest.

The classical word for mausoleum is *turba*. But owing to the fact that the cupola is its most conspicuous characteristic, the name of the latter, *ḳubba*, is extended to the whole monument. In the authors and in the Syro-Egyptian inscriptions both expressions used interchangeably denote the entire mausoleum i. e. the building enclosing the grave. The grave is called *ḳabr* or *madfan* or *ḍarīḥ*, an Arabic word of Aramaic origin.

In many cases the mausoleum stands quite isolated on a cemetery. But frequently several are placed together in one enclosure (*ḥawsh*) without however forming an organic whole. The mausoleum of some great person is often found in the corner of some sacred building founded by the person in question. For sultans and emirs — former slaves who had risen to power but could never be sure of their fate on the morrow — were wont like the great Italian condottieri of the Renaissance to provide for their tombs early in life.

The conjunction of the monumental tomb with a sacred building creates three main types of combinations: the mausoleum-mosque, the mausoleum-madrasa and the mausoleum-monastery. We may mention at Cairo: the

mosque of Sulṭān Shaikh (823 = 1420), the madrasa of Sulṭān Ḳāit-Bāi (879 = 1474) and the monastery of Sulṭān Faradj (813 = 1411) usually called the tomb of Barḳūḳ.

Occasionally we find more complicated types, e.g. the monastery-madrasa-mausoleum. To this class belong the monumental tombs of the sulṭāns Barḳūḳ (788 = 1386) and Ināl (858 = 1454). All these combinations contain the *sabīl-kuttāb* and combine one or more minarets with one or more cupolas. They do not bear a name of their own, and the inscriptions of these large buildings as well as the authors refer to them by the names of the different parts according to the part to which they wish to draw attention.

The turba like the other types of Syro-Egyptian architecture disappears after the Ottoman conquest. The name however continues to exist, though it denotes no more than any sepulcral monument. After the xvi. century Egypt and Syria have produced no monumental tombs worthy of their past.

Shrines and places of pilgrimage. — Contrary to the expressed desire of its founder Islām adopted at an early date the cult of saints and the belief in miracles worked by the intervention of the saints. This cult was too deeply rooted in the religious systems of the East to disappear before the name of Muḥammad. In Syria especially the old pagan worship of local deities which had withstood Christianity, continued to exist under Islām which had to tolerate it by affecting to assimilate it. The multifarious origin of the Muslim saints finds its explanation in the obstinate persistence of such local traditions. Some of them are pagan deities transformed into Muslim saints by a transference of ideas or religious conceptions or by a mere change of name; others are the great figures of the Ḳor'ān, such as Muḥammad, Jesus and the Jewish prophets, others again are historical heroes, conquerors or great rulers, or finally ascetics, monks or scholars who acquired fame during their lives and were canonised by the people acting under an irresistible impulse towards the supernatural. Each of these saints has his sanctuary (*mashhad*). The belief in miracles worked by their intervention turns the sanctuaries into places of pilgrimage (*mazār*).

The mashhad did not produce an architectural type of its own. Owing to the fact that it always rises from the tomb of the saint it imitates the plan of the mausoleum; viewed from an architectural point of view it is a mere variety of the turba, perhaps the oldest variety. It is found in any size, from the small white-washed chapel covered by a cupola (*marābiṭ* = marabout, *shaikh*, *walī*, *maḳām*) to the great classical mausoleum; they all have a cupola on a rectangular base. The only one of these buildings which deviates from the traditional plan is the famous dome of the rock, the Ḳubbat al-Ṣakhra, at Jerusalem built by the caliph 'Abd al-Malik in 72 (691) and frequently restored since. A whole cycle of Jewish and Christian legends is associated with the rock and the enormous cupola built on a circular base and surrounded by a double octagonal wall. The partly circular, partly octagonal type, which no doubt is derived from the ground-plan of the Christian monument which occupied the site before the ḳubba, is also met with in a group of Syrian churches of the pre-islāmic period (Boṣrā, Ezra', Ḳal'at Sim'ān etc.). But apart from the dome of the rock and a few buildings derived from it (dome of the chain in Jerusalem, mausoleum of Sulṭān Ḳalāwūn in Cairo etc.) the type in question has made no lasting impression on Syro-Egyptian architecture.

Apart from turba and mashhad the cupola found yet another application in this architecture: a small cupola, also called ḳubba, is found in the back-ground of the sanctuary of the great mosque in front of the miḥrāb. This ancient element may possibly be a remnant of the church, viz. of the cupola built over the intersection of the transept in front of the choir. This is the only place assigned to the cupola in the great mosques in the period preceding the Ottoman conquest; the Ottomans following the school of Constantinople place cupolas systematically on all the halls round the court of a great mosque. (M. VAN BERCHEM.)

'ARḌ (A.) breadth, also geographical latitude. — Of the numerous meanings of the word we may mention that of 'a review of troops'. A *Dīwān al-'arḍ* (cf. glossary to Ṭabarī, p. CCCLVII), or 'bureau of army-lists' existed as early as the 'Abbāsid period. Under the Seldjūḳs the head of this department bore the title of *'āriḍ al-djaish*, but the word *'āriḍ*, pl. *'urrāḍ*, was also applied to the subordinate officials (*nāïb*). — *'Arḍ* or *'arḍ al-ḥāl* (Turkish pronunciation *'arzu-ḥāl*, also *'arz-i ḥāl*) further means petition (lit. 'exposition of the circumstances').

ARḌ (A.) earth, country.

ARDABB (A.), Greek ἀρτάβη, Syriac *ardeba* or *arṭeba*, name of a measure; in Egypt = 197, 7 litres. The *ardabb* = 6 *waibe* = 24 *rub'a*.

ARDABĪL (ERDEBĪL), Persian ARDABĪL, Armenian ARTAVĒT (later ARTAVEL), easternmost town of the Persian province of Ādharbaidjān, situated under 48¹/₂° E. long. (Greenw.) and about 38°. N. Lat., at a distance of a good day's march from the Caspian Sea and 25 miles from the Russian frontier. The town stands on an almost circular plateau (4940 feet above the level of the sea), measuring about 6 hours march in diameter, and surrounded on all sides by mountains; to the west of the town is the extinct volcano Sawalān, the Sablān of the Arabic geographers, which with a height of 13665 feet reaches the region of perennial snow. For many miles around the town no trees or shrubs are visible; the dry white chalk soil of the plateau can only be made fruitful by means of artificial irrigation; in the surroundings of the town it has been turned into productive fields and meadows which yield pasture for numerous herds. The climate of the town owing to its high situation is rather inclement (thus already Ibn Faḳīh in De Goeje, *Biblioth. geogr. arab.* v. 209), but has always been regarded as healthy; the vine, oranges and melons do not grow, but apples and pears are produced in large quantities. The town is situated within the watershed of the Araxes (Aras) and Kur. The Bālīḳ-Sū (= fish-river) which rises on the southern slope of the Sawalān chain flows through the town in several branches; later it joins the Ḳara-Sū, which in its turn flows into the Araxes after being united with the Ahar river. Near the town are found warm mineral springs which attract many visitors. It is on account of the springs as well as of the healthy air, that Ardabīl has always been a favourite place of residence of the Persian court.

No account pointing to a great antiquity of Ardabīl is known; the town is not mentioned in the early historical literature of the Armenians. According to an old tradition (found in Firdawsī, Yāḳūt and others) it was built by the Sāsānid king Pērōz (Fīrūz, A. D. 457—484) whence it was also called Bādhān(Ābādhān)-Fīrūz or Fīrūzkerd; cp. Nöldeke, *Gesch. d. Perser und Araber zur Zeit der Sasaniden* (Leiden 1879), p. 123, note 3, and Vullers, *Lexicon persico-latinum* i. 77ᵃ. The Umaiyads made Ardabīl the administrative capital of the province of Ādharbaidjān at the same time transferring the troops stationed at Marāgha to that town (cp. e. g. Belādhorī, ed. de Goeje, p. 325); it was not until the late ʿAbbāsid period that its place as capital of Ādharbaidjān was taken by Tabrīz. Yāḳūt who visited Ardabīl in 617 (1220) describes it as a very populous town, soon after his departure the Mongols appeared at the gates: they sacked and destroyed the town massacring nearly the entire Muslim population. Some time afterwards the town was rebuilt more beautifully than before, and passed through its most flourishing period under the rule of the Safawids. In the first half of the viii. (xiv.) century Ardabīl was the residence of a pious Shaikh Isḥāḳ Ṣafī al-Dīn who acquired extraordinary influence and died towards the middle of the century (735 = 1334?) in the odour of sanctity. Under his successors, the Ṣafawids (Ṣafids), there arose in Ardabīl a kind of theocratic state (on the sources regarding its origin see: Teufel, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxxvi, 91) the military power of which chiefly depended on the descendants of the Turkish slaves manumitted by Shaikh Ṣadr al-Dīn, the son of Ṣafī al-Dīn, the so-called Ḳizil-Bāsh ('Redheads'); cp. A. Müller, *Der Islam im Morgen- und Abendland* ii. 346 *et seq.* The fifth successor of Ṣadr al-Dīn, Ismāʿīl, became the founder of the modern Persian state; in 908 (1502) he laid down the title of 'Shaikh of the Ṣūfīs of Ardabīl' which had been borne by his predecessors, and transferred his residence to Tabrīz as first Shāh of Persia. Of later historical events we may mention that it was in Ardabīl that the Turkish condottiere Nādir was crowned king of Persia in 1736 after the death of the last Ṣafawid. In the beginning of the xix. century Prince ʿAbbās Mīrzā [q. v.] made Ardabīl the seat of his court, and fortified the town according to the European system under the direction of the French general Gardanne, in order to make it the chief frontier fortress against Russia. During the war between Russia and Persia in 1826—1828 Ardabīl was occupied by the Russians, but was restored to the Persians in 1828 after the conclusion of peace.

The most remarkable monument of the town is the mausoleum of the above-mentioned Shaikh Ṣafī al-Dīn in the chief mosque, which became an object of general veneration soon after his death. In the xvi. and xvii. century it developed into one of the most frequented places of pilgrimage, and is still visited as such by many Persians. The sanctuary has suffered considerably in the sack of the town by the Russians in 1827 and in repeated earth-quakes; but it is still very remarkable. According to v. Thielmann's account remains of the old decoration with precious slabs are still extant; the floor of the interior is covered with ancient carpets. There is also a unique collection of old Chinese and Persian porcelain dedicated by the Persian kings. The mausoleum also contains the tombs of the Ṣafawid Shaikhs and of the first Shāh Ismāʿīl (died 930 = 1524). The famous library of Shaikh Ṣafī, once the greatest in all Persia, no longer exists. It was sent to St. Petersburg by General Paskiewitch in 1827 and became a part of the Imperial library of that city. The fort erected by Gardanne has been abandoned since it was stormed by the Russians, and is rapidly falling into ruins.

The commercial importance of Ardabīl is considerable owing to its situation near the sea and the Russian frontier; it plays an important part in the Caspian-Persian trade as frontier-station on the trade-route from Tabrīz to Astara and Lenkorān, particularly as the commercial traffic between Tiflis, Derbend and Baku on the one hand and Tabrīz, Iṣpahān and Ṭehrān on the other passes through it.

The population of the town was very considerable in the Middle Ages and especially under the Ṣafawids. The European travellers Olearius (1637) and Chardin (1671 *et seq.*) describe Ardabīl as the most flourishing Persian town of the time. Towards the beginning of the xix. century it had already lost much of its former greatness chiefly in consequence of the wars and the repeated earth-quakes. Morier in 1813 counted only 4000 inhabitants. Afterwards the town recovered gradually, and recent travellers estimate the population at from 16 000 to 20 000.

ARDAKĀN (modern pronunciation also: ARDEKĀN), town in Persia situated under 32¹/₄° N. Lat. and 53° 50′ E. Long. (Greenw.) between Adjda (Akda) and Maibud, on the route leading along the border of the desert from Kāshān to Yazd. The town is mentioned already by Ptolemy under the name of Ἀρτακάνα. It is situated at a height of 3280 feet above the level of the sea and is fortified with walls and towers; there are several caravanseries and mosques and good bazars. Dupré who travelled in 1888 estimated that the town contained 1000 houses; the number of inhabitants was calculated by Houtum-Schindler

(1879) at from 8000 to 9000, by Stack at 10 000. They include a number of 'Gabrs' (Parsees, fire-worshippers). The town is remarkable for the flourishing manufacture of dyed cloths and of beautiful carpets with blue and yellow square patterns. In Dupré's time most of the materials for the tents used by the Persian court were woven at Ardakān. The town is the centre of a district of the same name which contains 17 villages and townships.

ARDASHĪR, old Persian: Artakhshathra, Greek Ἀρταξέρξης, well-known name of Persian kings. Muslim tradition has certain knowledge only of the later Sāsānid kings of that name, viz. Ardashīr I (226—241), Ardashīr II (379—383) and Ardashīr III (628—629). [See article SĀSĀNIDS.]

ARDASHĪR KHURRA, name of a district in Fārs. [See FĪRŪZĀBĀD.]

ARDIBEHISHT, name of the second month in the Persian calendar the years of which are counted from the reign of Yezdedjird, the last Sāsānid king (i. e. A. D. 632). This era is also used by most of the Arabic astronomers because of its extreme simplicity (each year has 365 days: 12 months of 30 days each + 5 intercalary days). — Ardibehisht is also the name of the 3rd day of any Persian month; a distinction must therefore be observed between *Ardibehishtmāh* (name of the 2nd month) and *Ardibehishtrūz*, which denotes the day of the month. (E. MAHLER.)

ARDILĀN, province in Western Persia, situated between Ādharbaidjān in the North, Luristān in the South and 'Irāk 'Adjamī in the East, with an area of ca. 24 730 square miles. It is occupied by the chains of the Zagros, a range of mountains on the Western border of Irān; the climate is severe and only a few valleys are capable of cultivation; for the rest the district is remarkable for its extensive forest (especially oaks). A number of important rivers have their rise in Ardilān, thus in the North the Kizil Uzen flowing into the Caspian Sea; the central part of the province contains the head-waters of the Diyālā (the chief of which are the Shirwān-Rūd and the Gabe-Rūd), the South those of the Kerkha. The inhabitants are almost exclusively Kurds; hence the district is also called Persian Kurdistān or land of the eastern Kurds; the name Ardilān which does not occur in medieval authors, dates from modern times. The capital of the province is Sihna (called also Sinna or Senna) which was built as late as the xvii. century; it is the residence of the chief of the Kurds who bears the title of wālī and governs the province almost as an independant ruler. A distinction is occasionally made between Ardilān in the narrower sense, consisting of the North Western part of the country with the capital Sihna, and the district of Kirmānshāhān (with a capital of the same name) in the South West, and the district of Camābādān (Kamābādān) in the South East. Cp. further the article (Persian) KURDISTĀN.

ARDISTĀN, a Persian town which in the Arabic Middle Ages belonged to the province of al-Djibāl (Media). It was said to have been the native place of the Sāsānid king Khosraw I Anōsharwān (reigned 531—579). Ardistān, the modern name of which is Ardistān (also Ardestan) is situated to the North of Yazd at a height of 3575 feet, under 33½° N. Lat. and 54½° E. Long. (Greenw.). To the N. E. in the direction of Zuwāra are found Sāsānid remains (fire-temples etc.).

ARDJĪSH (old Armenian Arčēš), old town in Armenia, now in ruins, situated on the N. E. shore of the lake of Wan under 39° N. Lat. and 43° 20′ E. Long. Now as well as in antiquity the continuation of the lake of Wan to the North East takes its name from this town. In the Middle Ages the entire lake of Wan was called by the Arabs lake of Ardjīsh, as appears e. g. from the Persian geographer al-Mustawfī (wrote about 740 = 1340). From the x. century onwards Ardjīsh usually shares the history of the Muslim principality of Akhlāṭ [q. v. and the art. ARMENIA]; the town was destroyed by the Georgians in 1209, see the account of Ibn al-Athīr (see Defrémery in the *Journ. Asiat.*, 4th series, t. xiii. p. 517 *et seq.*). There is evidence for the existence of the town in antiquity: it is called in Greek Ἄρσισσα, Ἀρζησσα, and in cuneiform inscriptions Arzashku (?; thus Thopdschian, *Zeitschr. f. armen. Philol.* ii. 67, note 6). Owing to the fact that the lake of Wan gradually advances more and more to the North, the ruins of Ardjīsh have been surrounded by water since the middle of last century; it is only occasionally when the level of the lake is very low, that they appear on the dry ground (e. g. in 1886). To the N. W. of Ardjīsh, at a distance of about 1½ hours from the lake, there is a small town called New Ardjīsh or Aganis, which contains a small Turkish garrison; it is much frequented as a postal stage on the route from Wan to Erzerum.

ARDJĪSH-DAGH (ERDJIĀS, ERDJISH-DAGH), the Argaeus of the ancients, the most important of a number of volcanic peaks in Cappadocia to

the South of the Halys; rising to a height of 11 480 feet it represents the highest elevation of Asia Minor. The Ardjish-Dagh is situated at a distance of about 2½ miles from Kaisariya almost in the centre of a trachytic district which, extending from W.-S.W. to E.-N.E., forms an irregularly drawn-out oval with an area of about 760 square miles. The massif is characterised by a number of ravines which intersect it in all directions. The chief mountain has the beautiful shape of a pyramid: the summit is cleft into three abrupt peaks covered with perennial snow; hence the name 'white mountain' (Greek: 'Αργαῖον ὄρος, from ἀργός = 'white, shining'). Many smaller cones and volcanic formations surround the chief mountain. To the N.E. protrudes the 'Ali-Dagh rising with three peaks to a height of about 6500 feet; the town of Talas is situated at the north-western base of this elevation. The Ardjish-Dagh was active as a volcano down to historical times, though only to a limited extent. It has been extinct since antiquity, but traces of its former activity are clearly seen in the gigantic masses of debris on the slopes of the mountain. The only oriental geographer of the Middle Ages who mentions the mountain — under the name of Ardjīsh — is the Persian al-Mustawfī (wrote about 740 = 1340). In modern times the first ascent of the Ardjish-Dagh was made by W. Hamilton in 1837; he was followed in 1849 by P. v. Tschihatscheff and 40 years later by H. F. Tozer, probably the greatest authority on the whole mountain and the author of a detailed description.

'AREG, plural of the Arabic word *'irḳ* (literally 'vein'). As a geographical term this word, or more frequently the singular *'erg*, is used as a name of the vast stretches covered with dunes, which form about one ninth of the area of the Sahara [q. v.]. In the Berber dialects they are called *ig'idi* or *edeien*. The most important of these 'seas of sand' are the Libyan desert between the Egyptian oases and Tibesti, — the edeien of the Touareg country between the Hamada of Tinghert, the Hamada al-Hamrā', the Tassili and the Hamada of Murzuk, — the Maghter stretching to the North and East of the western Adrar etc. In a narrower sense the word 'Erg is applied to the sand zone stretching diagonally through the Algerian Sahara form the Hamada al-Hamrā' in the N.-E. to the Wād Sawra in the W. This enormous mass of dunes is divided into two groups: the eastern 'Erg which is much better known owing to the large number of explorers who have visited it (Duveyrier, Méry, Largeau, Flatters, d'Attanoux and particularly Foureau), and the western 'Erg traversed by Colonieu, Godron and Flamand. The former extends from the Shotts of southern Algeria and Tunis to the neighbourhood of the Hamada of Tinghert, from which it is separated by rocky heights called al-Udjh (the cheek); the latter is situated to the N. and N.E. of the Gurara. Its boundaries are clearly indicated in the S.E. by the depression of the Wād Megidden: to the W. the Wād Sawra forms the border. A chain of rocks interrupted in its centre, towards al-Goléa, by rows of dunes, stretches between the two 'Erg from the Mzāb in the North to the plateau of the Tademait in the South.

The configuration of the 'Erg corresponds to that of all the districts consisting of dunes. It is a mass of sand-hills with very narrow ridges called *syūf* (pl. of *seif*, 'sword'), the average height of which is about 325 feet, though occasionally they reach 650 and even 775 feet. The hills stretch in parallel rows separated by depressions free from sand, which are called *feidj* (lit. clefts) in the West and *gassi* (hard soil) in the East. These gassi form natural roads the use of which is indispensable in traversing the 'Erg.

The 'Erg is not as wanting in natural resources as would appear at first sight. Water is not lacking; it is found under the ground, usually at little depth. In some parts of the eastern 'Erg it is met with at a depth of no more than 3-4 feet under the ground. In other parts it collects in basins or pools (*bahar*) dug in the bottom of depressions in the sand. Such is e. g. the basin of 'Ain Taiba right in the heart of the eastern 'Erg which has a depth of 16 feet and a circumference of 1625 feet. These subterranean sheets of water are connected with wādis buried under the sand. Thus the streams descending from the plateaux of Tripoli, from the Hamada of Tinghert and from the Tademait lose themselves in the eastern 'Erg, while the wādis rising on the massif of Figuig, on the hills of the Ksūr and the Djebel 'Amūr similarly disappear in the western 'Erg. The presence of water ensures the growth of some plants which stretch out their roots to collect the water filtering through the sand (*dīs*, *drīn*, *ḥād* etc.). The dunes are therefore visited by the inhabitants of the Sahara, as the scanty vegetation is sufficient to provide pasture for their herds. The 'Erg is however unsuitable for permanent settlements and offers no more than a temporary place of passage.

Long before European travellers reached the Sahara, the following account of the 'Erg was given by Ibn Khaldūn. To the South-East and the South, he writes, the Maghrib is bordered by a barrier of moving sand which forms a line of separation between the country of the Berbers and that of the Blacks. By the Arabs this barrier is called 'Areg. It begins from the shore of the Atlantic Ocean and extends eastwards in a straight line as far as the Nile. Its breadth at the narrowest part is 3 days journey. It is intersected by a stony plateau called by the Arabs al-Hamada which begins this side of the Zāb and reaches as far as the Wād Rīgh. In some years the Ṣanhādja, wearers of the *lithām*, extend their wanderings as far as the southern border of the 'Areg; the northern border is visited by nomad Arabs who possess pasture-lands formerly belonging to the Berbers

(Ibn Khaldūn, *Hist. des Berbères*, transl. by de Slane, i. 196).

(G. YVER.)

ARESHGŪL, old town, no longer in existence, formerly situated at the mouth of the Tafna, opposite the island of Rashgūn, the insula Acra of the ancients. The latter is situated at a distance of 1¼ mile from the Algerian coast under 35° 19' 28" N. Lat. and 3° 48' 53" W. Long. (Paris); it measures about 2600 feet in length and 650 feet in breadth and reaches in its northern part a height of 195 feet. The coast is very steep, except in the S.W. where it is easily accessible.

Areshgūl took the place of the Portus Sigensis, which served as harbour to Siga, the capital of the kingdom of Syphax. The latter town was situated 2½ miles further inland on the left bank of the Tafna at a place bearing the Berber name of Takabrit ('the vaults'). Our accounts of the history of Areshgūl are confused and contradictory. There is no doubt however that the town was in existence as early as the second century of the Hidjra. It belonged to the Idrīsid kingdom at the partition of which it fell to the share of 'Īsā b. Muḥammad b. Sulaimān, a brother of Idrīs I, who died in 295 (907-908). During the fourth century of the Hidjra the possession of Areshgūl was disputed between the representatives of the Fāṭimids in the Maghrib and the Umaiyads of Spain. In the course of these struggles the Idrīsid chiefs were driven from the town, but retained possession of the island where they resisted an attack of the Spanish fleet in 320 (932-933). During the same period, in the year 338 (949-950), Areshgūl was sacked and the inhabitants transported to Spain.

The town however continued to exist and even attained to a certain degree of prosperity. It was situated on the Tafna at a distance of two miles from the sea, but accessible to vessels of small tonnage. At the end of the iv. century of the Hidjra it is mentioned by Ibn Ḥawḳal as a 'small town' surrounded by fruitful fields. It had a harbour protected by the island of Rashgūn which was visited by ships for the purpose of taking in water, as the island possessed cisterns and unfailing springs. (Ibn Ḥawḳal, transl. by de Slane, *Journ. asiat.*, 1842, p. 217). Al-Bakrī mentions the same fact and adds some details about the buildings of the town. It possessed a mosque with seven naves and a strongly built minaret, two baths one of which dated from antiquity, and was surrounded by a wall eight spans thick containing three gates (al-Bakrī, *Masālik* p. 53; transl. by de Slane, *Description de l'Afrique* p. 181-182). The history of Rashgūn during the succeeding centuries is very obscure. Nothing is known except that the town was destroyed in the course of the struggles between Ibn Ghāniya and the Almohades. It subsequently recovered and retained some importance owing to the proximity of Tlemcen to which it served as harbour. Spanish texts of the xvi. century mention the town under the name of Risgol. Charles V intended at one time to attack it by main force, but in a treaty concluded in 1536 with the Zaiyānid pretender Abū 'Abd Allāh he secured the right to build a fort or at any rate to place a garrison in the town for the purpose of keeping the Turks from access to the mouth of the Tafna. It does not appear however that this right was ever exercised. Towards the end of the xvi. century Areshgūl was completely in ruins and the island, called 'isla de los Alimaques' by Diego Suarez, had been abandoned by its inhabitants. Of the buildings erected in the past nothing remained but a tower of sun-dried bricks on the left bank of the Tafna.

The mouth of this river afforded the only communication between Tlemcen and the sea. It was for the purpose of opening up a route of access to Tlemcen and at the same time cutting off 'Abd al-Ḳādir's communications with the coast that Marshal Clausel sent a detachment of troops to occupy the island of Rashgūn (30 October 1835). In the following February a camp was established near the mouth of the river. The treaty of the Tafna restored Areshgūl to 'Abd al-Ḳādir, but left the island in the possession of France. In modern times a lighthouse has been erected on the island and a village has sprung up on the coast. But the traffic from and to Tlemcen has been diverted further to the west owing to the building of the harbour of Nemours, and the mouth of the Tafna is no longer used. The village of Rashgūn consists merely of a few huts inhabited by Spaniards. Its development depends on the realisation of the plans for the construction of a military harbour, which have been drawn up on several occasions, though their execution appears to have been postponed indefinitely.

(G. YVER.)

ARGEL, Spanish name of Algiers [see ALGIERS].

ARGHANA or **ARGHANA MA'ADIN** (*Ma'aden*), town situated half-way between Palu on the Murād-Čai in the N. and Diyārbekr in the S., under 38° 20' N. Lat. and 40° E. Long. (Greenw.), which owes its name of Ma'ādin ('mines') to the copper-mines found to the N.W. of it. It is situated on the 'Ali-Dagh, a steep hill about 3250 feet in height; the number of inhabitants according to Brant was about 3500 in 1837; the greater half of these were Greeks and Armenians, the rest Turks; for the greater part they subsisted by labour in the mines, which are reached from the town after 4 hours march over steep and difficult country. The mountain containing the principal mines, called Maghāra ('the cave'), is situated to the East of Ma'ādin, a settlement of

about 4000 inhabitants. The copper produced by Arghana Ma'ādin supplies a great part of the East with the metal. In cuneiform inscriptions Arghana appears as Arḳania, in Armenian literature as Argni: in Rashīd al-Dīn's History of the Mongols (ed. Quatremère) p. 333 it is called Arghanī.

ARGHŪN, fourth prince (Ilkhān) of Persia (683—690 = 1284—1291), born some time between 1250 and 1255 (his father Abaḳa was born in 1234, his eldest son Ghāzān in 1271). His father Abaḳa entrusted to him the administration of the province of Khorāsān. Summoned to his fathers court in the spring of 1282 he received the news of the latter's death before completing his journey, and had to render homage to his uncle Tekūdar (or Aḥmad) in Ādharbaidjān. In the following spring (1283) he returned to Khorāsān; in 1284 he revolted against Aḥmad, but was defeated by the latter's general Alīnāḳ, to whom he was forced to surrender in the fortress of Kalāt. He was brought to his uncle's camp, but liberated there by the Emīr Būḳāi; the troops of Aḥmad soon went over to Arghūn and Būḳāi, and Aḥmad himself was surrendered to his nephew, at whose command he was assassinated on 26th Djumāda I 683 (10th August 1284). On the following day Arghūn celebrated his accession to the throne; his confirmation by the Great Khān Khubilai arrived in the spring of 1286. Būḳāi to whom Arghūn owed his throne remained chief minister until 1289, in which year both he and his wezīr Djalāl al-Dīn Samnānī were deprived of their offices and executed. During the following years the administration was in the hands of the minister Sa'd al-Dawla, who was hated by the Muslims as a Jew and unpopular with the Mongol grandees; during Arghūn's last illness, a few days before his death, he was deprived of his office and his life by his enemies. Arghūn like his predecessors was distinguished for his religious toleration. He was favourably inclined towards the Christians, but Buddhist monks are said to have possessed the greatest influence with him. The negotiations with European powers (the kings of France and England and the Pope) for the purpose of undertaking a combined action against Egypt, which had been started during the reign of Abaḳa, were continued by Arghūn: the French public archives contain a letter from Arghūn addressed to Philippe le Bel (discovered and edited by Abel Rémusat, translated by J. Schmidt). But no action in this direction was taken during Arghūn's reign, perhaps because his armies were engaged in other work. The fall of the all-powerful Būḳāi was followed by an insurrection in Khorāsān; the movement was headed by the Emīr Nawrūz and received assistance from Central Asia; it was not quelled during the reign of Arghūn. The attempt undertaken by Mangū-Timūr (Khān of the Golden horde) in 1290 to enter Irān through the gate of Derbend, was however frustrated without difficulty. Arghūn is said to have started the building of towns; the first plans of the new towns later founded by his sons Ghāzān and Ūldjāitū (Shamb-i Ghāzān near Tabrīz and Sulṭāniya) are said to be due to him. He is stated to have died on 7th Rabī' I 690 (10th March 1291); he was buried in the mountains of Sidjās (South of Sulṭāniya), where a mausoleum was erected later (under Ghāzān). — Cp. D'Ohsson, *Histoire des Mongols* iv. 1 *et seq.*; Hammer-Purgstall, *Geschichte der Ilchane* i. 359 *et seq.*; Howorth, *History of the Mongols* iii. 312 *et seq.*

(W. BARTHOLD.)

ARGHŪN DYNASTY OF SIND. The early history of the Arghūns has been given under the history of Afghānistān. The attempt of Dhu'l-Nūn Beg and his son Shāh Beg (sometimes called Shāh Shudjā') to found an independent state with its capital at Kandahār, though apparently successful at first, broke down before Bābar's persistent attacks and after his final capture of Kandahār, in 929 (1522) Shāh Beg retired quietly to the highlands of Shāl and Mustang. It seems probable that Bābar had engaged not to molest him there, and had encouraged his invasion of Sind. Dhu'l-Nūn Beg had already as far back as 884 (1479) occupied these highlands, and had in 890 (1485) invaded the plain of Kaččhī by way of the Bolān Pass and taken Sēvī (Sibī) from Djām Nanda, but it was lost afterwards. After his death Shāh Beg who had already conducted the first expedition under his father, was driven out of Kandahār by Bābar in 913 (1507) and falling back on Shāl and Mustang was introduced by Fāḍil Beg Gokaldāsh to the Chiefs of the local Balōč tribes, and formed an alliance with them for the invasion of Sind; but when Kandahār was recovered he gave up the project for the time, but gradually spread his influence. His force, consisting of Arghūns of his own tribe and Tarkhāns who were akin to them, was not very large, and he supplemented it when he could from local resources. Between 917 and 920 (1511—1514) he attacked the Birlās tribe who had established themselves in Siwistān, viz. parts of the Kaččhī plain and the hills north of it, not yet occupied by Balōčes, and took from them the forts of Sēvī and Fatḥpur.

Various tribes joined in the confederacy against him, among them Balōč tribes who were now pressing down into the plains and spreading over Northern Sind and Multān.

In 1519 Shāh Beg's eldest son Ḥusain (sometimes called Ḥasan) fled to Bābar's Court, where he was well treated and joined in Bābar's expeditions into India. In 927 (1520) Shāh Beg advanced into the plains and soon succeeded in overthrowing the forces of Djām Fērōz who had succeeded Djām Nanda. We now find a force of Balōč under the Djām, and it seems probable that rival tribes fought on the two sides. Ḥusain was now with his father, and pushed on rapidly to Thatta in Southern Sind, while Shāh Beg planted garrisons in Shāl, Sēvī, Fatḥpur, Gandjāba (i. e. Gandāva) and Bāghbān (now known as Bāgh). Some years before a pretender to the Sind kingdom had obtained the support of Muẓaffar Shāh II of Gudjrāt and Djām Fērōz asked for the assistance of Shāh Beg. The invader had seized upon Thatta, the capital of Southern Sind, and had been driven out with the help of an Arghūn force, and it is probable

that he had become to some e[illegible] dependent on them and was now anxious to [illegible] off the yoke. He resisted the advance of Sh[illegible], but Thatta was stormed and sacked, and [illegible] submitted. A treaty was made by which [illegible] Sind was surrendered to Shāh Beg while [illegible] Sind was to remain under the Sammās. [illegible] outbreak at Sehwān led Shāh Beg to inva[illegible] thern Sindh again. Sehwān was taken and [illegible] with great severity. Djām Fērōz's misrule le[illegible] further invasion of the pretender Ṣalāḥ [illegible]. Shāh Beg was absent in Ḳandahār (927 [illegible]) and sent Shāh Ḥusain into Sind. The inv[illegible] as defeated and slain, and Shāh Beg now [illegible]roned Djām Fērōz and put an end to the S[illegible]mma dynasty. His final loss of Ḳandahār follow[illegible] and he now made Bhakhar on an island of the [illegible] his capital.

This was a strong post, almost [illegible]pregnable in those days, and well situated fo[illegible]trolling the unruly Balōč and other turbulent t[illegible] in Northern Sind, and also affording a favo[illegible]e base for the invasion of Multān now cont[illegible]dated. Shāh Beg is asserted to have massacre[illegible] Balōč inhabitants of 42 villages by treac[illegible]y and also the Dhareja chief of Čāndko. He die[illegible] 930 (1524), and Shāh Ḥusain who succeeded h[illegible] the *Khuṭba* read in Bābar's name, and immedia[illegible], probably by arrangement with Bābar, proce[illegible] to attack the kingdom of Multān.

The Langāhs who now ruled at [illegible]ltān were a Rādjpūt race, still known in the S[illegible]h Pandjāb, and had formed an independent kingdom after the break up of the Dehlī Sultanate. At this time Maḥmūd was reigning and was supported by a large body of Balōčes, Rinds and Dodāīs who had settled in his country. Shāh Ḥusain Arghūn now found himself opposed by the Balōč everywhere and before starting for Multān he made an expedition against the Rinds and Magassis of Kačči by way of Čatr and Lehrī. (Raverty, in the *Journ. of the Roy. Asiat. Soc. Bombay* 1892, p. 358 reads Baghlīs for Magassis, but the Baghlīs were not known at that period). On his expedition against Multān 931 (1525) he met and defeated a large force of Langāhs and Balōčes near Uččh, and then advanced on Multān. Maḥmūd Shāh at the head of a mixed force of Rinds and Dodāī Balōčes and Djats advanced to meet him on the Satladj, but died suddenly, some say from poison. Confusion followed his death and Multān was taken by Shāh Ḥusain Arghūn. An agreement was come to in the name of the infant Ḥusain Langāh to cede all the country south of the Satladj to the Arghūns. The anarchy in Multān however led to a further invasion on his part. He besieged Multān for more than a year and finally took it by assault, when a general massacre followed. The place was plundered, but Shāh Ḥusain made no attempt to hold it permanently, probably from fear of Bābar who was now emperor of Dehlī. The whole of Sind however remained under his rule throughout his life, i. e. till 961 (1554). He engaged in minor wars, but was undisturbed in his own kingdom till the emperor Humāyūn, his suzerain, claimed his help when he had been defeated and driven out of Northern India by Shēr Shāh Sūr. Humāyūn spent altogether two years and a half in Sind or in the neighbouring parts of the Rādjpūtāna desert. Shāh Ḥusain temporised not wishing to be drawn into war with Shēr Shāh. Humāyūn then tried force, and laid siege to Bhakhar, but was unable to effect anything. Finally he agreed to leave for Ḳandahār by the Bolān Pass. These events occupied the years 947—950 (1540—1543). Two years later Kāmrān Humāyūn's brother came as a refugee to Sindh after losing Kābul, and Shāh Ḥusain gave him his daughter in marriage. Several years afterwards Kāmrān now blinded, came to Bhakhar again on his way to Mecca and was hospitably entertained by Shāh Ḥusain. His wife, Shāh Ḥusain's daughter accompanied him on his pilgrimage. Shāh Ḥusain's latter years were distracted by plots and intrigues. The Arghūns were little more than an army of occupation and had little hold on the country. As Shāh Ḥusain had no son, the rival heads of the army Sulṭān Maḥmūd Gokaldāsh and Mīrzā 'Īsā Tarkhān were candidates for the throne, and immediately upon the death of Shāh Ḥusain hostilities broke out, but the dangerous position of Sind from the Dehlī empire on the north and the Portuguese raids on the coast induced them to make peace and divide the country, Mīrzā 'Īsā keeping Lower Sind with his capital at Thatta, and Sulṭān Maḥmūd Upper Sind with its capital at Bhakhar. The Arghūn element were not altogether satisfied and broke out in rebellion against Mīrzā 'Īsā on one occasion. Akbar annexed Upper Sind to the Empire in 982 (1572). The Tarkhān rule continued in Lower Sind for some time longer. Mīrzā 'Īsā was succeeded by his son Muḥammad Bāḳī in 975 (1565) and he by his grandson Djānī Beg in 993 (1584). He neglected to pay his respects to the emperor Akbar as his grandfather had done, and the result was the invasion of Sind by the imperial army and final extinction of the Tarkhān-Arghūn rule in 1001 (1592).

'ARĪB B. SA'D AL-KĀTIB AL-ḲURṬUBĪ, Arabic historian; nothing is known about him except that he occupied the post of secretary to the Umaiyad al-Ḥakam II (350—366 = 961—976) at Cordoba, during whose reign he wrote an abridgment of al-Ṭabarī's great chronicle. The chief value of this work lies in the fact that the author added the history of Spain and North Africa on which Ṭabarī himself possessed no information. The portion of the work devoted to this subject was made known by Dozy in his edition of Ibn 'Adhārī's *al-Bayān al-mughrib* (on 'Arīb cp., especially, Introduction p. 43—63); the rest so far as it is contained in the unique ms. (Gotha 1554, cp. Pertsch's catalogue, iii, 184-185) was published by de Goeje in 1897 (*Arib, Tabari continuatus quem edidit M. J. de Goeje*, Leiden, Brill). It is uncertain whether Arīb was also the author of other, especially medical and chronological, works as was maintained by Steinschneider (*Zeitschrift für Mathematik und Physik* 1866, xi. 235 *et seq.*; for the opposite view cp. Dozy, *Zeitschrift der Deutsch. Morgenl. Gesellsch.* xx. 595

et seq. and *Le calendrier de Cordoue de l'année 961*, Leiden 1873, preface).

Bibliography: Brockelmann, *Gesch. der arab. Litter.* i. 134, 236 and note; A. A. Wasilew, *Wizantiya i Arabi* ii. 2, p. 43 *et seq.*, where further bibliographical details about 'Arīb are given; Steinschneider, *Hebr. Übersetzungen*, § 428; p. 670 *et seq.*; Pons Boigues, *Ensayo bio-bibliográfico* n°. 47, p. 88 *et seq.*

'ARĪF (A.), pl. *'Urafā'*, 'he who knows' and by virtue of his superior knowledge directs the affairs of the tribe (Goldziher, *Abhandlungen zur arab. Philologie* i. 21-22); supervisor, architect; also corporal, decurio. Cp. Dozy, *Supplément*, sub voce.

'ĀRIF ḤIKMET BEY, Shaikh al-Islām from 1262—1270 (1846—1854) and Turkish poet. 'Ārif Ḥikmet Bey was born in 1201 (1786), the name of his father being Ibrāhīm 'Iṣmet Bey. He bore successively the titles of Molla of Jerusalem, Cairo and Medina, and in 1242 (1826-1827) was appointed Ḳāḍī of Constantinople. He further discharged the offices of Naḳīb al-Ashrāf and of Ḳāḍī-'Askar of Anatolia, and later of Rumelia, until he became Shaikh al-Islām. He died in 1275 (1859). His dīwān which was lithographed in 1283 (1867) contains Arabic and Persian as well as Turkish poems. According to Gibb he is the last representative of the old school of Turkish literature.

Bibliography: Gibb, *A history of Ottoman poetry* iv. 350 *et seq.*

'ĀRIFĪ PASHA, Turkish statesman, son of Shekib Pasha, born in Constantinople in 1246 (1830-1831). He was educated privately and having acquired a knowledge of French, started on his official career in 1261 (1845); in 1263 (1847) he became first secretary of the Turkish legation in Vienna. After having been temporarily recalled to Constantinople he acted as first secretary to 'Ālī Pasha at the Vienna conference in 1271 (1855) and at the Paris congress in 1272 (1856). Later he was first dragoman of the Sublime Porte and discharged successively a number of various high official posts: thus he was Under-Secretary of State in the Foreign Office, ambassador in Vienna, Minister of the Exterior in 1291 (1874), Minister of Education in the same year, ambassador in Paris; in 1293 (1876) he was made a senator and for the second time Minister of the Exterior, in 1294 (1877) he was again ambassador in Paris, in 1296 (1879) Bash Wekīl and President of the Council of State; for a time he lost the favour of the Sulṭān, but in 1297 (1880) he was made Minister of the Exterior for a third time, and in 1303 (1886) once more President of the Council of State; he died in 1313 (1895-1896). Sāmī calls him an upright, cultured, mild-tempered and sincere man.

(F. GIESE.)

AL-'**ARĪSH**, or 'the 'Arīsh of Egypt', the Rhinokorura of the ancients, town on the Mediterranean coast situated in a fertile oasis surrounded by sand, on the frontier between Palestine and Egypt. The name is found as early as the first centuries of our era in the form of Laris. According to the ordinary view which is presupposed e.g. in the well-known anecdote about 'Amr b. al-'Āṣī's expedition to Egypt, the town belonged to Egypt. The inhabitants, according to Ya'ḳūbī, belonged to the Djudhām. Ibn Ḥawḳal speaks of two principal mosques in the town and refers to its wealth of fruit. It was at al-'Arīsh that King Baldwin I died in 1118. Yāḳūt states that the town contained a great market and many inns, and that merchants had their agents there. Al-'Arīsh was occupied by Napoleon in 1799; in the following year a treaty was concluded in the town, by which the French were forced to evacuate Egypt.

(F. BUHL.)

ARISṬŪṬALIS (ARISṬĀṬĀLIS, ARISṬŪ). 1. Even before the rise of Islām the figure of Aristotle was familiar to the legend as well as to the learned tradition of the East. Legend knew him as the wise teacher, the paternal friend or pious counsellor of Dhu 'l-Ḳarnain (Alexander the Great). The learned tradition contained both biographical and doxographical elements; in addition to this there existed, both in Pahlavi and Syriac, translations, abridgments and explanations of Porphyry's *Introduction* and of some Aristotelian writings, principally treatises on logic (*Categories*, *Hermeneutic*, *Analytics*). It may be laid down as a general rule that Arabic translations of these and other works of Aristotle are derived indirectly through the medium of Persian and especially Syriac versions.

2. Like the West in the early Middle Ages, the East knew Aristotle at first chiefly as logician (*ṣāḥib al-manṭiḳ*). In the other sciences he was supposed to be in complete agreement with Pythagoras, Socrates, Plato *etc.*; originality was claimed for him only in logic. In the early period however the *Organon* was known only as far as the categorical figures of the Prior Analytics. The Syriac version of Paulus Persa edited by Land shows to what extent the logical tradition of the period was tinged by Neo-Platonic influences.

The early development of Arabic linguistic speculation was decisively influenced by the grammatical and logical categories of the *Hermeneutic*, though not without an admixture of elements derived from Stoicism. It is the source particularly of the doctrine of the three parts of speech: *ism*, *fi'l* (also *ḳawl* or *kalima*) and *ḥarf*. But outside logic and grammar and apart from many suggestions in the field of Physics which influenced medical circles, the beginnings of philosophical speculation in Islām, so far as they rested on Greek thought at all, were dependent not on Aristotle, but on sources (genuine and spurious) which go back to Plato, Pythagoras, Hermes and the Stoics. When Aristotle gradually came to be known he met with sharp opposition. In theological circles he was anathematized especially for his doctrine of the eternity of the world; and whereas the philosophers (al-Kindī, al-Fārābī) followed the Neo-Platonists in emphasising the agreement between Plato and Aristotle, the theologians drew attention to the points of difference between the two (thus also Joh. Philoponos as against Proclus and Simplicius). Followers of the various theological schools therefore attacked Aristotle: e.g. the Shī'ite Hishām b. al-Hakam (a contemporary of al-Naẓẓām, died 845), the Mu'tazilite Abū Hāshim of Baṣra (died 933) and al-Ash'arī (873—935).

3. The accounts of the life of the philosopher are usually inaccurate. The Arabic historians (already al-Ya'ḳūbī) confuse e.g. Aristotle's father with the Neo-Pythagorean Nikomachos of Gerasa. Ḥunain Ibn Isḥāḳ (died 873) and al-Dīnawarī (died 895) give practically nothing but details of a legendary nature. The biographical tradition on the other hand is best represented by al-Nadīm, al-Mubashshir, Ibn al-Ḳifṭī and Ibn Abī Uṣaibi'a, whose statements go back to three principal sources. Firstly they use a biography with testament and catalogue of writings by Ptolemaios Chennos (the Arabic *al-gharīb* is to be derived from the corruption of that name into ξένος) to which they had access as it seems, in a translation or revised version embodied by Isḥāḳ b. Ḥunain in his *Ta'rīkh al-aṭibbā'*. Secondly they adduce details not derived from Ptolemaios which, though handed down through different channels, go back ultimately to the γένος of an anonymous Greek writer. The accounts based on this γένος, which are widely diffused in Arabic literature, differ from Ptolemaios in the following points (among others): they give only the name of the father of the philosopher, without mentioning that of his mother; his descent is not traced back to Asklepios; he is said to have entered the school of Plato at the age of 17 etc. The tradition of this second source is characterised most significantly by the fact that according to it Aristotle does not reside at the Macedonian court as Alexanders tutor, but the prince is made to go to Athens to see the philosopher: this is undoubtedly an oriental perversion of the original. A third source, from which al-Mubashshir derived an account of the philosopher's youth after his 8th year, is to be sought in a Neo-Platonist biography, the original of which cannot yet be identified with certainty.

4. The Arabic catalogue of Aristotle's writings which is given according to Ptolemaios Chennos by Ibn al-Ḳifṭī and Ibn Abī Uṣaibi'a, contains about 100 titles. Catalogues differing from this have reference either to the philosophical system of the Arabs, or perhaps (like that of al-Nadīm) to the works found in some particular library. The following is an exposition of the Arabic tradition.

According to legend (*Fihrist*, ed. Flügel, p. 243) Aristotle appeared to al-Ma'mūn in a dream and assured him of the fundamental agreement of reason with the religious law and common sense. Al-Ma'mūn hardly required an assurance of this nature in order to feel justified in furthering zealously the activity of the translators who had begun their work under al-Manṣūr. Nor was this activity confined to Aristotle alone. At first the Christian Syrian physicians, who almost alone acted as translators during the 8—10. century, were by no means careful in selecting their materials, though from the time of Isḥāḳ b. Ḥunain, (died 910-911) onwards their activity was on the whole restricted to Aristotelian and pseudo-Aristotelian writings together with their abridgments, paraphrases and commentaries.

The writings of Aristotle — whose number is usually given as 20 — were divided into 4 groups: those treating of Logic, Physics, Metaphysics and Ethics. Porphyry's *Introduction* was put in front of the logical treatises, probably because it was generally thought to be Aristotelian. The logical *Organon* consisted of the *Categories* (*al-Maḳūlāt*), the *Hermeneutic* (*al-'Ibāra* or *al-Tafsīr*), the *Analytics* (*al-Ḳiyās*), the *Apodictic* (*al-Burhān* or *al-Bayān*), the Topics (*al-Djadal*) and the *Sophistici elenchi* (*al-Mughāliṭ*) to which were added the *Rhetoric* (*al-Khaṭāba*) and the *Poetics* (*al-Shi'r*), in order to complete the number eight required by neo-Pythagorean and neo-Platonist example. All these treatises were translated and studied in various ways. — Of the treatises on natural science the following were translated etc.: the *Physics* (*al-Samā' al-ṭabī'ī* or *Sam' al-kiyān*) the *De Coelo* (*al-Samā' wa 'l-'ālam*), the *De Generatione* (*al-kaun wa 'l-fasād*), the *Meteorology* (*al-Āthār al-'ulwiyya*), the *De Anima* (*al-Nafs*), the *De Sensu* (*al-Ḥass wa 'l-maḥsūs*) and the *Historia Animalium* (*al-Ḥayawān*). In order to complete the canonical eight many interpolated a *Mineralogy* (not to be traced) and a *Botany* (that of Nicolaus), in which case either the *Historia Animalium* was omitted or the two psychological treatises counted as one. There followed the *Metaphysics* (*mā ba'da 'l-ṭabī'a* or *kitāb al-ḥurūf*), the *Nicomachean Ethics* (*al-Akhlāḳ*) and in order to complete the number twenty, a spurious *Politics* (see below), a *Mechanics* (*Kitāb al-ḥiyal*) or similar works.

Thus nearly all the didactic treatises (ἀκροαματικὰ συγγράμματα) of Aristotle were accessible to the Arabs. The most surprising fact is the absence of the *Politics*, the place of which was taken by Plato's *Republic* or *Laws*, unless pseudepigraphic treatises were preferred.

A compendium of Aristotle's philosophy by Nicolaus Damascenus which had already been used by the Syrians was also current among the Arabs.

5. We are able to distinguish between genuine and pseudo-Aristotelian elements in the Arabic tradition. The Arabs themselves, especially in the earliest period, were quite unable to draw this distinction. Their study followed closely the neo-Platonist commentaries, and even the purest Aristotelian of the later period, Ibn Rushd, frequently preferred the explanations given by the neo-Platonists Porphyry and Themistius to those of Alexander of Aphrodisias. Under these circumstances it is not surprising that many strange and heterogeneous things came to be connected with the name of Aristotle. Probably the most far-reaching in its influence was the so-called *Theology*, an abridged paraphrase of the *Enneads* (iv—vi) of Plotinus which was accepted as genuine by al-Kindī and al-Fārābī. We may further mention a compendium of the στοιχείωσις θεολογική of Proclus (*liber de causis*); the '*Book of the Apple*', a dialogue on the immortality of the soul which is an Hermetic imitation of Plato's Phaedo; the *secretum secretorum* (*Sirr al-asrār*), a work of miscellaneous contents dealing e.g. with physiognomy and dietetics; further various epistles mostly addressed to Alexander; and many other treatises. For further information — especially on magical and astrological works — cp. the writings of Steinschneider.

6. The so-called Aristotelians of Islām from the time of al-Kindī onwards based their philosophy on a more or less purified tradition. The Muslim community however rejected this philosophy as heretical, inasmuch as it conflicted with three important elements of their faith, the doctrine of the creation of the world, of a special providence

and of the resurrection of the body. The most detailed and effective refutation is that undertaken by al-Ghazālī in his *Tahāfut*.

After the xiii. century Aristotle's influence on the Muslim world has been confined almost entirely to the field of logic.

'ĀRĪYA (A.), gratuitous loan, (commodatum). In Muslim law this is defined as a contract by which a person relinquishes a thing belonging to him — the use or employment of which is permitted by law and does not immediately destroy the object in question — to another person for the latter's use without demanding payment, but under the condition that the recipient should restore the object lent after using it.

(TH. W. JUYNBOLL.)

al-ARḲAM, a companion of Muḥammad. His name was al-Arḳam (= Abū 'Abd Allāh) b. Abū 'l-Arḳam (= 'Abd Manāf) b. Asad (= Abū Djundub) b. 'Abd Allāh. He belonged to the Makhzūm, one of the wealthiest and most respected families of Mekka. His mother Umaima came from the tribe of Khuzā'a. He accepted Islām as a young man and was one of the earliest believers. Although the Makhzūm were bitterly opposed to the prophet al-Arḳam became his devoted adherent and during the time of persecution put his house at the disposal of Muḥammad to serve as place of assembly for the community. It was there that the prophet found a safe and convenient place in which to preach and to carry on his propaganda; the community grew during this period and gained among others the adherence of Ḥamza and 'Omar. Soon after 'Omar's conversion Muḥammad left the house of al-Arḳam. The date and duration of his stay there are not definitely given, but may be placed in the years 615—617. Ibn Hishām does not give any account of the house of al-Arḳam, but may very well have known the story; Ṭabarī similarly knows it and even uses it for chronological purposes, yet does not relate it anywhere in his biography of the prophet. Al-Arḳam took part in the emigration to Medina, where he inhabited a house in the quarter of the Banū Zuraiḳ which was also known as 'the house of al-Arḳam' and was said to have been assigned to him by the prophet; Muḥammad also established brotherhood between al-Arḳam and Abū Ṭalḥa (Zaid). Like many companions of the flight he seems to have preserved a reverent affection for his Mekkan

family; and when the Faithful in the battle of Badr gained possession of the sword al-Marzubān, an heirloom of the Makhzūmite Banū 'Ā'idh, he recognised it and asked the prophet for it. At Medina he took part in all the important battles of the believers, but does not appear to have played any further part in the history of Muhammad. Sa'd ibn Abī Wakkāṣ seems to have been a particularly intimate friend of his; at any rate he ordained that Sa'd should perform the prayer for the dead at his bier. He died in 54 or 55 = 674-675 over 80 years old. From a slave-girl he had a son 'Othmān, the ancestor of a widely diffused family a branch of wich lived in Syria.

For Muslim chronology the period during which Muhammed lived in the house of al-Arkam became important in cases where it was desired to determine the order of the early conversions and the high place of honour in Islām which depended on it. Among the later believers not only the person of al-Arkam, but also his house situated on the hill Ṣafā was an object of great veneration. It is frequently mentioned as 'house of al-Arkam' or 'house of Islām', and down to the time of the caliph Manṣūr it remained in the possession of the descendants of al-Arkam who had turned it into a kind of family fundation. Manṣūr forced the Arkamids to sell it to him for his own family; it was inhabited for a time by al-Khaizurān the mother of Hārūn al-Rashīd, whence it is also called 'house of al-Khaizurān'. The building which is regarded as the house of al-Arkam has been restored or rebuilt on several occasions, a fact which is alluded to in inscriptions found there. It is still visited by Mekka pilgrims.

ARMENIA, country in Western Asia.

a. GEOGRAPHICAL SKETCH.

The name Armenia in its wider sense denotes, now as already in antiquity, roughly speaking the central and highest part of the mountain zone of Western Asia, that is to say the east mountainous country bounded by Asia Minor in the West, the plateau of Ādharbaidjān and the southern shore of the Caspian Sea in the South-East and East, the coast of the Pontus (modern name Djanik and Lazistān) and the Caucasus — from which it is separated by a line formed by the Kur and the Rioni — in the North and North East and in the South by the plain of North Western Mesopotamia (country on the upper Tigris, Oshroëne) with its continuation in Assyria. It includes therefore the vast stretch of country situated between 37—49° E. Long. (Greenwich) and 37½—41¾° N. Lat. Only on one occasion in antiquity was the whole region in question a united kingdom under a single ruler, viz. in the 1. century B. C., in the time of Tigranes the Great, yet the name Armenia has since then become accepted as a geographical term. Viewed from a purely geographical standpoint the wild and rugged mountain tracts bounded by the lake of Wān in the North and the Assyrian plain in the South (the Gordiene of the ancients, modern Bohtān and Ḥak(k)iāri) must also be regarded as belonging to Armenia. But in all other respects this territory, from of old the domain of nomadic tribes, has always been the border land between the Semites in the South and the Aryan Armenians in the North, being successively connected as a loose border province with the states formed by both, and frequently leading a separate existence as an independent territory.

From the geographical point of view the whole region just described as Armenia, the area of which may be roughly estimated at 115400 squ. miles, forms a natural unit, the physical features of which are plainly distinct from those of the neighbouring countries. The geological foundation of the country are **mountains** with an archaic (old crystalline) kernel and considerable palaeozoic and tertiary accretions and deposits. Enormous recent volcanic eruptions have changed the original plastic form of the surface in a decisive manner, and at the present stage the relief of the greater part of Armenia exhibits a variety of small plateaus alternating with superimposed larger and smaller mountain chains, stretching from South East to North West, all of which are characterised by the complete absence of woods. **Plateaus** yielding abundant pasture lie between the mountain ranges, their height varies from 2600—6500 feet above the level of the sea (plateau of Bāyazīd and Erzerūm 6110 feet; Kars 5850 feet; depression of the Murād-Ṣū near Mūsh 4550 feet; Arzindjān 4225 feet; Eriwān 3185 feet), the average height is 5200—5850 feet. As throughout Western Asia the formation of the higher chains which reach the genuine Alpine region is due to the irruption of trachyte and porphyry. Tectonic activity is similarly responsible for the remarkable conic-shaped mountains most of which are ancient craters. A whole system of such extinct volcanoes extends from the great Ararat mostly in a north westerly direction round the lake of Gök-Čai towards the coast of the Black Sea. Among them are the highest elevations of the country: the twin group of the great and little Ararat [q. v.] and the Alaghöz (13585 feet), an almost isolated mountain to the North of the latter; further we may mention the Sīpān (Seihān-Dagh) to the North of the lake of Wān with a height of almost 12350 feet; the name of this mountain seems to have been known already to Belādhorī (ed. de Goeje) p. 198, on which cp. *Zeitschr. f. armen. Philol.* ii. 67[1]; 162[3]; Mustawfī (see Le Strange, *The Lands of the Eastern Caliphate*, p. 183) calls it Kūh Sipān. Of somewhat lesser height are the Bingöl-Dagh (11960 feet, q. v.) to the South of Erzerūm, and the Khori-Dagh (11540) and Ala-Dagh (11440) situated between Bāyazīd and the Sīpān-Dagh.

Armenia is the home of great rivers which descend in all directions, foremost among which are the Euphrates and Tigris; the first of these is formed by the union of two head-waters, the Kara-Ṣū in the West (or rather North) and the Murād-Ṣū in the East (or rather South) both of which rise in the interior of the highlands near Erzerūm and Bāyazīd; the Tigris descends from the southern chain of border mountains, the so-called Armenian Taurus. The system of the

Euphrates and Tigris drains the country in the direction of the Persian Gulf; towards the Caspian Sea the same function is exercised by the Araxes (arab. al-Rass, q. v.) rising on the Bingöl-Dagh which unites itself to the Kur (Kyros) not far from the Caspian. Armenia is clearly separated from the Caucasus massif by the longitudinal valley of the Kur which receives the waters of North-Eastern Armenia, together with its continuation running parallel to it further North, the small Rioni which joins the Black Sea.

In a wide mountain system like that of Taurus and Armenia which is characterised by the prevalence of plateaus alternating with valleys we would expect to find a large number of mountain lakes. This however is not the case, obviously owing to the fact that great rivers break through the mountains at many points, thereby creating an easy way of escape for the water-courses. The most important lakes are: the lake of Wān (5170 feet) [q. v.] called by Arabic authors also lake of Khilāṭ and Arjīsh [q. v.], further the lake of Gök-Čai or Sewanga (Sewan) first mentioned among Muslim geographers by al-Mustawfī (ca. 740 = 1340) under the name of Gök-čah-tengiz = 'the blue lake'. The origin of these two large Alpine lakes, neither of which possesses any outlet, is partly due to plutonic forces; apart from these two there are only a few unimportant basins.

Owing to the high situation of the country the climate of Armenia is speaking generally, very severe and offers a marked contrast to the hot regions on the lower Euphrates and the temperate district on the Pontic shore. In the highlands the winter lasts as a rule eight months; the short and comparatively very hot summer lasts hardly more than two months and is so dry that no harvest is possible without artificial irrigation. It is owing to the great dryness that in Eastern Armenia the line of perennial snow begins as high as 13000 feet, so that only the great Ararat and the Alaghöz are always covered with snow and ice. In the mountains situated farther South in the direction of Kurdistan the region of perennial snow begins at a height of 10725 feet only. The Bingöl-Dagh also is said never to be without snow in contrast to all the other Alpine peaks of Central Armenia. It is worthy of notice that the plains of the Araxes exhibit quite different climatic conditions, being remarkable for a much more favourable temperature.

4. HISTORY.

At the earliest period of which we have any definite historical knowledge Armenia was inhabited by a race of neither Semitic nor Aryan origin whose precise ethnological and linguistic position is still a matter for discussion. In their own inscriptions which are written in cuneiform characters they seem to call themselves *Ḫaldi* (hence the name of the country: *Ḫaldia*, also *Biainas*), while in the Assyro-Babylonian texts they are referred to as *Urarṭaeans* (name of the country: *Urarṭu* = the biblical Ararat). This people which immigrated into Armenia towards the 10th century B. C. founded a powerful kingdom the centre of which was the lake of Wān. After an existence lasting barely 250 years it fell a victim to the Kimmerian invasion which devastated Western Asia in the middle of the 7th century. During and after these revolutions an Aryan population succeeded in occupying the country formerly ruled by the Uraṛṭaeans. By foreign nations these new inhabitants were called Armenians — a name the origin and meaning of which has not yet been explained (it first occurs in Achaemenian inscriptions in the form of Armina, Herodotus: Ἀρμένιοι) whence the country received the appellation of Armenia. This name however was never accepted by the nation itself among whom up to the present day the designation Haik' is used for the people and Hayk' or Hayastān for the country.

Except perhaps during the time of Tigranes II, the Great, the Armenians have never played a leading part in Western Asia. To a great extent this was due to the political disruption of the country where, favoured by the geographical conditions, the feudal system found an unparalleled development. The rulers of the country were a large number of noble families, and the king possessed only the shadow of power. To this must be added the fact that Armenia always had great and powerful empires as neighbours beyond its frontiers. Thus it came about that Urarṭu was a vassal state of Assyria, and after the fall of Nineveh we find the country subject to the Medes and later to the Persians who governed it by means of satraps. During the troubled times following the death of Alexander the Great these satraps became the real rulers of the country though at first acknowledging the nominal suzerainty of the Seleucid kings. Even this appearance without the reality of power was lost after the unsuccessful war of Antiochus III against Rome: after the battle of Magnesia (190 B. C.) two former generals of this king, Artaxias and Zariadris, shook off the Seleucid rule, assumed the title of king and formed two independent states: Great Armenia or Armenia proper and Little Armenia (Sophene, Arzanene and some neighbouring districts). A few decades later Great Armenia came under the suzerainty of the Arsacids which however was only acknowledged in name and not actually exercised. In the 1. century B. C. Tigranes the Great, descendant of Artaxias, shook off the Parthian yoke, dethroned the descendants of Zariadris in Little Armenia and united Sophene and Gordyene as a single kingdom under his rule. It was under Tigranes that the name Armenia received a definite meaning as a geographical term; and it was retained as such by the Armenians in the succeeding centuries although the terminology of the time of Tigranes became less and less applicable to the political conditions of the later period.

After acquiring a certain political importance under Tigranes the Great Armenia was gradually forced into the position of a buffer state between two rival world powers, in the first place between Rome and the Parthians. The internal confusion which reigned in Armenia after the death of Tigranes continually provided both powers with opportunities for intervention and for changes of frontier. About the year 10 of our era a descendant of the Arsacids, Artabanus III, ascended the throne which now remained in the possession of this branch of the Parthian ruling family for more than four centuries. Down to the year 226 A. D. in which the Sāsānid rule succeeded that of the Parthians the Arsacids of Armenia were able to rely on the support of their neighbouring kinsmen in every struggle against the Romans;

the common enemy. Armenia continued to be an apple of discord between the New Persian empire and the Romans. At last, in order to put a stop to the eternal quarrel in a manner acceptable to both parties the two powers proceeded to a division of the helpless vassal state. In the division which took place in 387 the larger Eastern part of Armenia (about four fifths of the whole) passed under Persian rule, the smaller Western part became Roman. Here Arshak III continued to rule until his death in 390, whereupon the country received a Roman comes as governor. The Persian part, called by Westerns Persarmenia, retained its native rulers for some time. But after the dethronement of the last Arsacid Artashesh (428-429) the country was administrated by a Persian Warden of the Marches (Marzbān) who had his residence at Dwin (Arab. Dabīl). In the division of 387 Armenia had suffered considerable loss of territory, as many districts were separated from both parts and directly incorporated into the Roman or Persian empire.

The part played by Armenia remained unchanged when Byzantium entered upon Rome's inheritance in the West. According to the Armenian historian Sebēos who is our most important source for the time from the middle of the 5th to that of the 7th century, the Persian rule never succeeded in gaining a firm foothold in Armenia. The Armenian native rulers (Nakharar's) made use of every opportunity that offered itself to shake off the hated yoke of the fire worshippers, and during the constant struggles with the Persian Marzbāns they frequently invoked the assistance of their Byzantine coreligionists. This led to endless frontier disputes and sometimes to serious warfare. The solidarity of interests between Byzantium and Armenia was suddenly destroyed by the decisions of the Council of Chalcedon in 451 which the Armenians refused to accept. The Greeks henceforward exercised great activity in the attempt to reestablish religious concord, with the result that the Armenians who were utterly averse to these endeavours were driven more and more to side with the Persians under whom they enjoyed much greater freedom in spite of occasional religious persecutions. A short peaceful period began for Armenia with the reign of the emperor Maurikios (582—602) and that of the Sāsānid Khusraw II Parwēz (590—628).

In the succeeding period internal discord continued to trouble both Armenias and warlike intervention on the part of the sovereign powers was frequently necessary. The peace of the country suffered especially through the constant disputes between the numerous native petty rulers who owing to their vacillating attitude were unable to gain the confidence either of the Byzantines or the Persians. Disaffection against the sovereign powers was ripe everywhere. In Greek Armenia the great distance from the central seat of government favoured the rise of seditious movements. Persarmenia before the Arab invasion was practically in a state of anarchy, a condition which was exploited by Theodoros, the energetic ruler of the Rshtunians, for the extension of his own power the base of which was the island of Aghthamar in the lake of Wān.

Another constant source of danger threatening the peace of the country was the appearance of the Khazars [q. v.] on the North-Eastern frontier of Armenia, whence they made frequent incursions into the adjoining Armenian territory.

It was in this sorry condition — devastated by continual warfare, torn in pieces by discord within, disliked by foreign powers — that Armenia had to meet the powerful Muslim attack. Under the circumstances it was to be expected that the resistance to this attack would on the whole be feeble and badly directed.

In the history of the Arab conquest of Armenia many details are still obscure and uncertain, as Arabic, Armenian and Greek sources frequently contradict each other. By far the most important source for the period is the Armenian account of the bishop Sebēos who tells the story of the remarkable events as an eye-witness; a valuable supplement to his work is furnished by that of the presbyter Leontius which is the only authoritative document available for the years 662—770. Among Arabic authors al-Belādhorī occupies the foremost place; his account is based entirely on the narrative of inhabitants of Armenia.

After the death of Herakleios in 641 the Arabs who had made themselves masters of Syria and defeated the Persians began to make repeated incursions into Armenia, in order to wrest the country from the Byzantines. The first raid directed against South-Western Armenia was undertaken by ʿIyāḍ b. Ghanim, the conqueror of Mesopotamia, as early as the end of the year 19 to the beginning of the year 20 = 639-640; he penetrated as far as Bitlis. Both Belādhorī (p. 176, 197), Ṭabarī (i. 2506) and Yāḳūt (i. 206) agree in giving this date, though they differ considerably as to the details. A second incursion of the Arabs took place in 21 according to the account of Ṭabarī (i. 2666) which is followed by Ibn al-Athīr. In four divisions two of which were commanded by Ḥabīb b. Maslama and Salmān b. Rabīʿa the Muslims invaded the regions on the North Eastern frontier of Armenia, but meeting with reverses on all sides they were soon obliged to evacuate the country. The short raid into Armenian territory undertaken by Salmān b. Rabīʿa in 24 (645) from Ādharbaidjān similarly led to no lasting result. Cp. Yaʿḳūbī (ed. Houtsma), p. 180, Belādhorī, p. 198, Ṭabarī, i. 2806.

According to the accounts of the Arabic historians (cp. especially Yaʿḳūbī, p. 194, Belādhorī, p. 197 *et seq.*, Ṭabarī i. 2674 *et seq.*, 2806 *et seq.*, Ibn al-Athīr, iii. 65 *et seq.*) and geographers the great invasion of Armenia, which brought the country for the first time under the effective rule of the Arabs took place during the caliphate of ʿOthmān towards the end of 24-25 = 645-646. A general who had already distinguished himself in in the wars in Syria and Mesopotamia, the aforementioned Ḥabīb b. Maslama, was charged by Muʿāwiya, the governor of Syria, with the conquest of Armenia. He first advanced against Theodosiopolis, the capital of Greek Armenia, (Armen. Karin, Arab. Kālīḳalā, modern Erzerūm) and occupied the town after a short siege; a large Byzantine army re-inforced by Khazar and Alan auxiliaries which met him on the banks of the Euphrates was decisively defeated. He then turned to the South East in the direction of the lake of Wān and received the submission of the local rulers of Akhlāṭ [q. v.] and Moks. Ardjīsh on the North Eastern shore of the lake of Wān similarly surrendered to the Arabs, Ḥabīb next

proceeded to the siege of Dwin, the centre of Persarmenia, which also capitulated after a few days. With the town of Tiflis he concluded a treaty of peace and protection under the condition that it acknowledged the suzerainty of the Arabs and undertook to pay the poll tax (*djizya*). During the same time Salmān b. Rabī'a with his 'Irāḳian army subdued Arrān (Albania) and took possession of its capital Bardha'a.

Armenian tradition as has already been pointed out differs from that of the Arabs both as regards the date and in many points of detail. Complete agreement exists only between Sebēos and Belādhorī in their account of the direction taken by the great Arab invasion, as appears from a comparison of the routes of advance given by the two.

According to the Armenian historians an Arab army which entered Armenia in 642, reached the district of Airarat, took the capital Dwin and left the country by the same route taking with them 35000 prisoners. In the following year the Muslims again invaded Armenia, this time from Ādharbaidjān. They devastated Airarat and advanced as far as Georgia, but upon suffering a severe defeat at the hands of the prince Theodoros Rshtuni they decided to retire. Soon afterwards the emperor appointed Theodoros commander of the Armenian troops, and Armenia which now remained immune from Arab invasions for several years once more acknowledged the overlordship of Byzantium. In 653 there expired a three years truce between Constantine III and the Arabs and the outbreak of fresh hostilities was expected in Armenia. In order to obviate a threatened invasion Theodoros surrendered the country voluntarily and concluded a treaty with Mu'āwiya, the conditions of which were eminently favourable to the Armenians, as in the first instance it only obliged them to acknowledge the suzerainty of the Muslims. In the same year the emperor appeared in Armenia with an enormous army, 100 000 strong, and most of the petty rulers of the country immediately went over to his side. Without much difficulty he once more brought the whole of Armenia and Georgia into his power. But no sooner had Constantine left the country after spending the winter in Dwin (654), than an Arab army made its appearance and occupied the districts on the Northern shores of the lake of Wān. With the assistance of these Arab forces Theodoros forced the Greeks to retire from the country, whereupon Mu'āwiya appointed him ruler of Armenia, Georgia and Albania. The attempts of the Greeks to re-conquer the lost provinces by means of an army commanded by Maurianus proved entirely unsuccessful. In 655 the Arabs extended their sway over the whole of Armenia: even the Greek-Armenian capital Karin (Ḳālīḳalā) was forced to admit them. A few years afterwards however the Muslims found themselves obliged to give up their doubtful possession for the time being. At the outbreak of the first civil war between Mu'āwiya and 'Alī (36 = 657) the former was in need of the army of occupation stationed in Armenia, and the country being denuded of troops once more fell into the hands of its former masters, the Byzantines.

It appears from this account that, according to the narrative of Sebēos, all the events which the Arabic sources connect with the first great expedition of Ḥabīb in the years 24-25 did not take place until after the expiry of the three years truce, and the latter date fits in with the account given in the Chronography of Theophanes. The Arabic historians do not mention the fact that subsequently to the first invasion during 'Omar's reign Armenia once more became subjected to the Byzantine rule, nor do they refer to the events which took place in the country in connection with Mu'āwiya's accession to the throne. The fact that Theodoros Rshtuni submitted voluntarily to Mu'āwiya is attested not only by Sebēos but also by Theophanes, but it would be unintelligible if the country had definitely passed into the possession of the Arabs as a result of the first invasion. Under these circumstances it seems to be best to follow Ghazarian who, in the *Zeitschrift für armen. Philol.* (ii. 173 *et seq.*), analyses the points of difference between the Arabic and the Armenian sources, and to give greater credence to the contemporary account of Sebēos than to the tradition of the Arabs. A. Müller in his *Der Islam im Morgen und Abendland* (i. 259-261) also follows Sebēos. A different view is taken by H. Thopdschian (*Zeitschr. f. armen. Philol.* ii. 70 *et seq.*) according to whom the accounts of the first great Arab invasion given by the Armenian and the Arabic historians agree both as to chronology and as to the events.

Constantine III made the prince Hamazasp governor of Armenia. Theodoros Rshtuni seems to have died in 656. But the Byzantine rule was again of short duration. After his accession to the throne (41 = 661) Mu'āwiya addressed a letter to the inhabitants of Armenia in which he summoned them once more to acknowledge the suzerainty of the Muslims and to pay taxes: the petty rulers of Armenia did not dare to resist this demand. According to the Armenian sources members of the most powerful families among them (especially the Mamikonians, Bagratunians) administered the country under the early Umaiyads down to the reign of 'Abd al-Malik. This however is not borne out by the Arabic historians according to whom Armenia had Muslim governors ever since the conquest under Ḥabīb, cp. the list of governors for the time from 'Othmān to the 'Abbāsid al-Muntaṣir quoted from Ya'ḳūbī, Belādhorī, and Ṭabarī in Ghazarian, *loc. cit.*, p. 177—182.

In spite of the devastating wars the first century of Arab rule was for Armenia a time of national and literary progress. Yet Muslim authority which failed to strike deep roots in the country under the Umaiyads was even less successful in the 'Abbāsid period when the oppressive rule of the Arab governors was felt. Seditious movements and insurrections were frequent. The greatest and most dangerous revolt against the Arabs occurred under the caliph al-Mutawakkil who sent his best general, the Turk Boghā 'the Elder', with a strong army to cope with it. But the rebellion was not quelled without obstinate resistance and much bloodshed (237-238 = 851-852). Nearly all the well-known nobles were at that time taken prisoners. Mutawakkil did not change his hostile policy against Armenia, until he required his troops for a war against the Byzantines, and in order to prevent the outbreak of another great revolt which the latter were organising. He now set the captive Nakharars free

and in 247 (861) appointed the Bagratunian Ashot (Arab. Ashūt) who had rendered great services to the Arab cause chief ruler of Armenia. For 25 years Ashot ruled as 'prince of princes' and during this time gained the sympathies of all his subjects, including the nobles the country, to such an extent that, at the request of the latter, the caliph al-Mu'tamid conferred upon him the title of king in 273 (886). The emperor honoured him in the same way and at the same time concluded a treaty of alliance with him. Ashot's friendly relations with the caliph were never interrupted and he regularly paid the taxes which were obligatory upon him even after his elevation to the royal dignity. But it was only in his own possessions that he was free to act according to his pleasure: the position of the nobles of the country in his reign also was one of almost complete independence.

Ashot who died in 277 = 890 was succeeded by his son Smbat I (Arab. Sanbāṭ) who in spite of his heroic qualities was no match for his external enemies, the Shaibānids and the Sādjids. He fought unsuccessfully against the former, but the intervention of the caliph al-Mu'taḍid which took place soon afterwards (285 = 890) terminated the Shaibānid rule and freed the Armenian provinces from the foreign invaders. Yet Smbat could do nothing to prevent the aggressions of the Arab governor of Adharbaidjān, a member of the Turkish dynasty of the Sādjids called Afshīn, who constantly extended his frontiers to the West and North and whose power continually threatened Armenia. Afshīn died in 288 (901) and under his brother and successor, the cunning Yūsuf, Ashot fared still worse. Yūsuf succeeded in gaining the adherence of the family of the Arzrunians who after the death of Ashot I had become the most powerful rivals of the Bagratids. Gagik the lord of Waspurakān, who at that time was the head of the family was honoured by Yūsuf with the title of king, a distinction which the caliph al-Muḳtadir renewed in 306 (919). During the years following after 910 the incursions of Yūsuf devastated Armenia; at last he besieged Smbat who had been abandoned by the nobles in the fortress of Kapoit. In 913 the Armenian king surrendered to his enemy who, after keeping him in prison for a whole year had him executed under cruel tortures (914).

After the death of Smbat I Armenia was given over to anarchy. But his energetic son Ashot II 'the Iron' (915—928) succeeded with the help of Byzantine troops in maintaining his authority, and having enlisted the support of the kings of Iberia (Georgia) and Abkhāzia (see the art. ABKHĀZ) he cleared the land of the Arabs. Allied with the Greeks he reached the highest degree of power ever attained by the Bagratids. The title of Shāhān-Shāh conferred upon him by al-Muḳtadir in 922 gave official recognition to his claim of suzerainty over the small Christian principalities of Waspurakān, Iberia and Abkhāzia, though it is true that their dependence on the Bagratids was never effective. Henceforward Ashot II and his successors ruled quite independently of the Muslim sphere of power over the greater part of Central and Northern Armenia: in the latter region their family domains had already been added to considerably by Smbat. In Southern Armenia the Arzrunians who also bore the title of kings ruled almost independently over a considerably smaller territory (Waspurakān with the capital Wān). In addition to these comparatively large kingdoms there existed a number of smaller principalities most of which paid no more than a nominal allegiance to the Bagratid rule, there were also, especially in the South, many independent and powerful Arab colonies. The history of the Bagratids therefore is not in any degree identical with that of the whole of Armenia, a fact which must be emphasised as against the treatment of the subject in many old and recent works — but in accordance with its importance it receives the greatest prominence at the hand of the native sources.

Throughout the rule of Ashot II and during the greater part of that of Abas (928—952) the emperor and the caliph were almost continually at war. Ashot III (952—977) made the small fortress of Ānī the official capital of the country and he and his successor Smbat II turned it by means of beautiful buildings into a pearl of the East. [See ĀNĪ.]

Smbat II (977—988) and his brother Gagik I (990—1020) ruled with energy and good fortune, but their foolish domestic policy embroiled them almost continually with the neighbouring Christian principalities; at the same time there were constant disputes with the Muslim emirs of South Armenia. In 988 one of the latter, Mamlān, was severely defeated near Dzempor by David, the warlike ruler of Taikh and lord of the greater part of Iberia. After the death of Gagik I the succession was disputed between the rightful heir Johannes and the more capable Ashot IV, the confusion was made worse by the intervention of the Iberians and the incursions of the Saldjūḳs which then began for the first time. These circumstances appeared to the emperor Basilius II (976—1026) to afford a favourable opportunity for regaining his lost authority in the East. By annexing parts of the country and by deposing some of the native rulers he succeeded in extending his power in Armenia. In 1021 Senekherim, the last of the Arzrunians, influenced by fear of the threatened Turkish invasion, yielded up his domains (Waspurakān) on the Eastern river; the Muslim emirs of the towns round the lake of Wān (Berkri, Manazkert, Akhlāṭ, Ardjīsh) also became vassals of the Byzantine empire and the possessions of the Bagratids were now surrounded on all sides by Greek subjects. King Johannes also was forced to accept the town of Ānī as fief from the Byzantines, and Basilius actively proceeded to secure the new Eastern frontier by means of strong fortifications. In the quarrel between Johannes and Ashot the latter was ultimately successful owing to the support of Byzantine troops. After the death of Ashot IV (1040) the emperor Michael IV made the attempt to make Armenia definitely a part of his empire. An army sent by him was already engaged in the siege of Ānī when it was forced to retire by the Paphlagonian catastrophe (1041). The Armenian nobles now proclaimed the 17 year old Gagik II king (1042—1045). But no sooner had Constantine IX secured his position on the throne than he occupied Ānī and at last put an end to the rule of the Bagratids (1045). Gagik II was compensated by extensive lands in Cappadocia. The covetous Greek clerics now took possession of the wealthy Armenian bishoprics,

abbeys and endowments. The vexations to which the orthodox Monophysites exposed the Armenians knew no bounds and the resentment of the latter provoked by this insane treatment affords an explanation of the success of the Seldjūḳs.

The acquisition of new territory imposed on the Byzantines the heavy task of defending a much more extensive and more dangerous frontier than hitherto. For a time the attacks of the Seldjūḳ hordes which began in 1042 and were repeated several times were stopped by the admirable system of fortifications instituted and excellently armed by Basilius. But the Seldjūḳs developed a new life and new energy under Alp Arslān. The latter started from Ray in 456 (1064), subdued Albania and Iberia and conquered all the important towns of Eastern Armenia such as Nackčawān, Ḳars, then still the residence of a branch of the Bagratids, and especially the valiantly defended Anī [q. v.]. In order to stem the tide of the Turkish power which was continually growing and gaining strength from concentration, the emperor Romanos IV set out in the spring of 463 (1071) with an enormous army of 100 000 men, and regained possession of the highly important frontier fortress of Manazkert which had been lost in 1069. But the divisions of his army sent against Akhlāṭ were pushed back by the Seldjūḳs into Mesopotamia. A great decisive battle took place near Manazkert in which Alp Arslān inflicted upon his enemy an overwhelming defeat; the emperor himself was taken prisoner (Weil, *Gesch. der Chalifen*, iii. 114 *et seq.*, Müller, *Islam*, ii. 89, Gelzer quoted by Krumbacher, *Byzantin. Litteraturgesch.*, p. 1010). This defeat was the first terrible blow received by Byzantium at the hands of the Turkish hordes, and it signified the end of the great Eastern empire. The East of Asia Minor, Armenia, and Cappadocia, that is to say the countries representing the real source of strength of the empire were irrevocably lost to the Turks.

The terrible systematic devastation of the country by the Seldjūḳs put an end to the national life and the civilisation of the Armenians in their own home. During these troubled times many Armenians emigrated to the West in order to escape the oppression of the savage invaders: Cilicia, a country difficult of access from the outside, appeared to them a suitable place in which to settle, and to found a national state that was to be independent of Byzantium. Reuben (Rhupen), a near kinsman of the last Bagratid Gagik II who had been killed in 1079 during an insurrection in Cappadocia openly broke away from the Byzantine empire and in 1080 received the homage of his subjects as ruler of the country. This revival of Armenian supremacy in the old Little Armenia lasted almost 300 years and the warlike successors of Reuben gradually conquered the whole of Cilicia. Their relations with Byzantium were always strained; on the other hand they formed a close alliance with the crusading states and organised their country on the model of the latter with their semi-French feudal institutions. At first an independent principality, their state was raised to the rank of a kingdom by Leon II (1198) as a reward for services of friendship tendered to the crusaders under Barbarossa. The new kingdom soon found itself threatened by stronger neighbours both in the North and the East: thus on the one side by the Seldjūḳ kingdom of Rūm, on the other by the Mongol empire. The Seldjūḳs not only deprived the descendants of Reuben of large portions of their territory but also forced them to acknowledge their suzerainty, until the Mongol invasion of Asia Minor put an end to their rule. Little Armenia henceforward was no more than a feudal state under the overlordship of the Mongol princes (Īlkhāns), and owing to its geographical situation it suffered perpetually under the state of rivalry existing between the Īlkhāns and the Mamlūks of Egypt; in the raids of latter the country was terribly devastated especially during and after the time of the sultan Baibars (particularly in the years 1266, 1273 and 1275). In 1342 the male line of the descendants of Reuben died out with the assassination of Leon IV: their kingdom now passed to the Lusignans of Cyprus who were related to them by marriage. The new kings tried in vain to maintain their position against the attacks of the Mamlūks by attaching themselves to the Mongols and relying on the assistance of the European West. Slowly and one by one they lost their towns: and in 1375 Leon VI was forced to surrender his last stronghold to the sultan al-Malik al-Ashraf. The ill-starred last king of Armenia went to Paris where he died in a monastery in 1393.

During the time of Seldjūḳ supremacy Armenia like Ādharbaidjān and Mesopotamia was divided into several administrative districts, varying in size, each of which was governed by an emīr; from the very beginning the latter occupied a position of considerable independence.

Compared with the other petty Seldjūḳ states which arose on Armenian soil the kingdom of Khilāṭ (Akhlāṭ) in the South West founded by Sukmān al-Kuṭbī [q. v.] in 493 (1100) after the expulsion of the Marwānids was on the whole the most secure in its tenure of power. The Sukmānids gradually extended their territories to the North and North East until they reached the district of Bagrawand; the shores of the lake of Wān and the country as far as Khoi and Salamās as well as Malāzgird and the district of Sasūn were included in their dominions, though the districts in the North frequently suffered from the devastating raids of the Georgians. In spite of the fact that this principality of Khilāṭ the population of which was preponderatingly Armenian included hardly a fifth of the whole of Armenia, its rulers assumed the proud title of *Shāh Arman*, king of the Armenians. Cp. on this title v. Berchem in Lehmann-Haupt, *Materialien zur ält. Gesch. Armeniens*, p. 139.

When the family of the Sukmānids became extinct (581 = 1185) the vacant throne passed into the possession of the Mamlūk Beg-Timur (1185—1197), who after a period of dynastic disputes was succeeded by his son. A few years afterwards the Aiyūbids took possession of the country (604 = 1207). The sultan al-Malik al-ʿĀdil [q. v.] under whose sceptre practically the whole kingdom of his brother Saladin was once more united, made his son al-Awḥad ruler of Khilāṭ. After the latter's death (607 = 1210) he was succeeded by his brother al-Ashraf [cp. the art. AIYŪBIDS]. The Georgians who since the end of the 12 century had made repeated incursions into Armenia and in 1210 besieged the capital Khilāṭ unsuccess-

fully, were forced by al-Ashraf to conclude a peace under terms unfavourable to them. Both al-Awḥad and al-Ashraf ruled under the supremacy of their father al-ʿĀdil; it was not until after the death of the latter (615 = 1218) that al-Ashraf became completely independent. After this date his dominions were considerably enlarged and included the whole Northern half of the countries under Aiyūbid rule, i. e. Khilāṭ, Mesopotamia and Northern Syria with Damascus. As lords of Khilāṭ these Aiyūbids followed the Sakmānid tradition and assumed the title of Shāh Arman.

The last Aiyūbid ruler was al-Muẓaffar Ghāzī; in 642 (1244) after the capital had been taken several times the kingdom of Khilāṭ finally succumbed to the attack of the Mongols. Hulagu obtained possession of the whole of Armenia, Kurdistān, ʿIrāḳ and Mesopotamia. The most prominent of the Ilkhāns as the rulers of the house of Hulagu are usually called, was Ghāzān (694—703 = 1295—1304); he succeeded in reorganising the empire which had fallen into the wildest confusion soon after Hulagus death (663 = 1265), but his success was only temporary; after the death of the Ilkhān Abu Saʿīd (716—736 = 1316 = 1335) under whom the weakness of the state had already become very apparent there followed a period of absolute chaos.

It was during this period that the Turks (Turkomans) became a preponderating and ruling element in the population of Armenia which apart from them consisted of native Christians and Kurdish nomads. The Turkish element was greatly strengthened by the arrival of two fresh hordes of Turkomans who had crossed the Oxus from Turkistan in the time of the fourth Ilkhān, Arghūn (683—691 = 1284—1291) and found a new home on the upper Euphrates and Tigris where the terrible devastations of the Mongols had left enough vacant country for new settlers. After the crests on their standards these hordes were called Ḳara- and Aḳ-Ḳoyunlu i. e. 'Black and White Lambs'. Their power grew step by step and immediately before the invasion of Timur the greater part of Mesopotamia and Western Armenia (especially the districts of Wān, Bāyazīd, Erzerūm, Arzindjān) was in their possession; the power of the Ḳara-Ḳoyunlu originally had its main centre in Mesopotamia, while the Aḳ-Ḳoyunlu who at first had occupied the district of Arzindjān only made themselves rulers of Western Armenia and the North West of Mesopotamia. The small Christian and Muslim principalities still existing in Armenia had to pay tribute to the Turkomans and frequently were exposed to oppressive treatment at their hands.

Such was the condition of Western Asia at the time when the second and last large wave of the Tatar-Mongol migration under Timur advanced against it and overran the country with its devastating fury. The Aḳ-Ḳoyunlu from the first sided with Timur while the Ḳara-Ḳoyunlu took the field with the Ottomans and Mamlūks. During the whole summer and autumn of 788 (1386) and the spring of 789 (1387) the Mongol hosts passed through the provinces of Armenia and Georgia in all directions laying waste everything; the larger towns like Wān and Tiflis suffered particularly. In the year 791 (1389) the insubordination of the Ḳara-Ḳoyunlu provided Timur with a pretext for a second expedition against Armenia which again brought terrible devastations in its train. Five years later Timur appeared in Armenia for a third time; in the spring of 796 (1394) after taking Baghdād and ravaging the Ṭur ʿAbdīn he divided his army in three divisions, crossed the mountains under considerable difficulties and penetrated as far as the Central Armenian plateau of Bagrawand where they found pasture, cp. Tomaschek, *Sasun*, p. 36.

The great khān of the Mongols had no sooner died than endless disputes for the throne broke out among his sons and successors. This state of affairs offered a favourable opportunity to Ḳara Yūsuf the leader of the Ḳara-Ḳoyunlu for regaining at the expense of the Aḳ-Ḳoyunlu the position of power which had been greatly curtailed by Timur. Armenia thus became again the scene of all the ravages of war. In the embittered struggle between the two Turkoman tribes which now ensued the Aḳ-Ḳoyunlu led by Ḳara Yülük proved the weaker side: they were defeated in the battles of 809 (1406) and 813 (1410) and especially in a decisive encounter near Ḳalʿat al-Rūm on the Euphrates (above (Biredjik) in the year 821 (1418). The Ḳara-Ḳoyunlu were now able to kill and plunder in Armenia and Georgia to their hearts content.

Notwithstanding the intervention of Timurs descendants on behalf of the 'White Lambs' the Ḳara-Ḳoyunlu maintained their predominance for the space of fifty years. It was not until the year 871 (1467) that a grandson of Ḳara Yülük, Uzūn Ḥasan i. e. Ḥasan the Tall (857—882 = 1453—1477), was successful in military operations against them and finally broke their power. Djihān-Shāh who had succeeded to the leadership of the Ḳara-Ḳoyunlu after the death of his brother (1437) was killed in a decisive encounter. For several decades after this date the Aḳ-Ḳoyunlu play the most prominent part in the history of Armenia (cp. above p. 225). By degrees Uzūn Ḥasan obtained possession of all the districts formerly ruled by the Ḳara-Ḳoyunlu, and on the zenith of his power he was master not only of Armenia and Ādharbaidjān but also of the two ʿIrāḳ, Fārs and Kirmān.

With the death of Uzūn Ḥasan the power founded by him began to decline. The disputes about the succession which broke out among his descendants favoured the rise of the Ṣefīd (Safawid) Ismāʿīl whose power in the beginning was confined to Ardabīl and the surrounding country. Gradually he succeeded in uniting with his kingdom the whole of the territories formerly ruled by Uzūn Ḥasan which by this time had become split up into three smaller states. But the union of these territories was not of long duration. Quarrels soon broke out between the Shāh and his Turkish neighbour and in 1513 the former invaded Asia Minor. Sulṭān Selīm I now advanced against Ismāʿīl with a strong army (920 = 1514); by way of Siwās and Terdjān he reached the Urmia lake to the East of which near Čaldirān [q. v.] he gained an overwhelming victory over the Persians (23. August). The sovereignty over Mesopotamia and Western Armenia now passed to the Turks in whose possession it has remained ever since.

It is worthy of note that the rapid passing of Armenia from Persian to Turkish rule was as-

sisted to a considerable extent by the attitude of the influential Kurdish chiefs of the country. The interior troubles of Armenia and the devastating wars which went on unceasingly during the last centuries had attracted a continually increasing number of Kurds whose chiefs (Begs) exercised complete local autonomy in many parts of the country. Owing to the decay of the power of the Aḳ-Ḳoyunlu their authority increased continually. From the very beginning the Kurdish chiefs had offered a determined opposition to the attempts of Ismāʿīl to establish order and to put an end to brigandage; they preferred therefore to swear allegiance to the Turkish Sultan and secured as a reward the confirmation of their wonted privileges. Since this time large districts of Armenia have been subjected to the arbitrary rule of the Kurdish Begs, and the authority of the Porte has never been of much account in the parts in question. During the 19. century and after the Turks attempted on various occasions to restrain the power of the Kurdish chiefs by the use of genuinely Oriental draconic methods, hoping thereby to bring the Armenian provinces under the direct authority of the Sultan, but the success of these attempts has so far been very inconsiderable.

Shāh ʿAbbās I. the Great, the re-organiser of Modern Persia (995—1037 = 1586—1628) once more began the struggle against the Ottomans which had been at rest for some decades; in 1012 (1603) he defeated them at Sufyān near Tabrīz whereupon the latter town as well as Eriwān (1604) and Ḳarṣ capitulated. The war was interrupted for a short time by the peace of Adhruf (1027 = 1618) but lasted altogether more than 20 years; the districts of Armenia and Georgia bordering on Persia passed under Turkish rule.

During the tyrannical rule of Shāh Ṣafī (1037—1051 = 1628—1641), the successor of ʿAbbās I, most of the Armenian possessions of Persia were once more lost to the Turks who inflicted on their enemies a severe defeat on the plain of Čāldirān already famous as the scene of the decisive battle of 1514. In 1635 the Porte once more obtained possession of Erzerūm, Tabrīz and, by the help of a traitor, of the highly important strategical centre of Eriwān. It was not until after the death of Sultan Murād IV (1640) that the Persians succeeded in recapturing the two last-mentioned places.

Georgia, the neighbour of Persia to the North, had been reduced to the position of a vassal state by Nādir Shāh in 1735. After the death of this ruler in 1160 = 1747 the Grusinian prince Heraklius (Irakli) II shook off the foreign yoke and extended his own dominion over the Armenian territory between the Kur and the Araxes. He imposed tribute on the khānates of Djanza (Gendja) and Eriwān belonging to Persia, but was unsuccessful in his attempt to bring the last-mentioned town which he besieged in 1779 under his immediate control. An intervention of the Shāh was now to be expected which meant for Georgia the imposition of Persian suzerainty and forcible conversion to Islām; under these circumstances Heraklius in 1783 placed his country under the protection of Russia. His successor George XIII was completely under Russian influence, and in 1802 left a will by which Georgia was given to the Czar. Previous to this (in 1210 = 1796) it had been temporarily subjected by the Persian king Agha Muḥammad (cp. above p. 180). Russia at once entered upon its inheritance; it thus for the first time became possessed of Armenian territory, and as it thereby threatened Asiatic Turkey and Persia, frontier wars with both states could not be avoided. In 1804 the Russians conquered Djanza which received the name of Elisabethpol in honour of their empress. Ḳara-Bāgh surrendered to them voluntarily in 1805. But all their efforts to gain possession of Eriwān by siege or main force (17 Nov. 1808) proved unavailing. The war between Russia and Persia continued until British intervention brought about the peace of Gulistān in 1813. By the provisions of this peace the frontier between Russian Transcaucasia and Persia was determined in its main points; the dividing line followed the Southern bank of the Araxes, turning to the North West above Nakhčawān and Eriwān (cp. on the regulation of the frontier K. Ritter, *Erdkunde*, ix. 869 *et seq.*). But the fact that the details of the frontier had been left undefined in this treaty, gave rise to lengthy negotiations and in the end to a second war. Hostilities were opened in July 1826 by the Persian heir-apparent ʿAbbās Mīrzā who made a successful raid into Russian territory: nearly the whole country as far as the gates of Tiflis fell into the hands of the Persians. The hostilities began once more in the spring of 1827 and General Paskewitsch now succeeded in securing the upper hand for the Russian arms.

In the spring of 1828 a treaty was concluded at Turkmančāi which modified the peace of 1813 in such a way that all the country to the North of the Araxes, particularly Ordūbādh and the Persian Khānates of Nakhčawān and Eriwān as well as Ečmiadzin passed under Russian rule. From this time onwards the colossus of the Ararat has served as the gigantic boundary stone between three rival powers. In the citadel of Eriwān which dominates the extensive plateau on the left bank of the Araxes, once the home of a large population, Russia gained an extremely important base for operations against Persia and Turkey. As a central point between Īrān and the Georgian capital Tiflis, Eriwān had been an important emporium of trade, but under its new sovereign the commerce of the town declined to a vast extent. The territorial division created by the peace of Turkmančāi is of considerable political importance owing to the fact that by it the classical soil of Armenian Church history, the country which for the religious sentiment of the Armenians is the most attractive in all the East, passed under the rule of a Christian monarch. Another point worth mentioning is the provision insisted upon by Russia in this treaty as well as in that with the Turks a year later, whereby native Christians were given the right to emigrate. This stipulation has done more to weaken Persia than the cession of entire provinces; most of the Armenian subjects of the Shāh made use of the permission thus gained; the inhabitants of entire villages began to emigrate and whole districts became depopulated to the dismay of the Persian authorities. Most of the emigrants were given new settlements in the Armenian district of Ḳara-Bāgh. After this date the peace between Russia and Persia has not been seriously disturbed.

Immediately after the hostilities against the Persians and the subsequent regulation of the frontier had been completed the Russians declared war upon the Turks; on the 14th September a peace was signed at Adrianople which reconstituted the frontier in Russia's favour in such a way that the latter country gained possession of a portion of Armenian territory containing the important fortresses of Ak̲h̲alčik̲h̲ and Ak̲h̲alkalaki.

On the frontier between Persia and its Turkish neighbour, especially Turkish Armenia, relations became more and more strained owing to continual quarrels and disputes. In 1821 insignificant causes led to the outbreak of open war between ʿAbbās Mīrzā and the Turkish governor of Erzerūm. The treaty of peace eventually agreed upon by both governments left the frontiers unchanged (cp. on this war K. Ritter, *Erdkunde* ix, 872 *et seq.*). During the two following decades the political situation between the two great Muslim powers again tended to become more and more critical and they were about to refer the old frontier dispute to the arbitration of the sword, when the influence of Russia and Great Britain succeeded at the last moment in bringing about a settlement by means of a treaty concluded at Erzerūm in 1847. According to the provisions of this treaty commissioners of these two European powers as well as of the states affected were to regulate and fix the long line of frontier between Turkey and Persia. After immense difficulties the commission appointed succeeded in completing its task in 1852. Turkey however refused to ratify the treaty; it was not until 1878 that the Berlin Congress (article 60) obliged the Porte to yield up the Armenian district of K̲h̲otur (half way between Wān and the Urmia lake); this decision was carried out by Turkey.

Differences arising out of the question of the 'Holy places' brought about a new war between Russia and Turkey, the so-called Crimean war (1853-1854), and Armenia was once more subjected to all the sufferings of a campaign. After the conclusion of peace it enjoyed a rest of only twenty years. For in 1877 another war broke out between Russia and Turkey owing to the refusal of the Porte to accept the reforms proposed to it in the interests of its Christian subjects. This war was ended by the preliminary peace of San Stefano.

The provisions of this treaty were subjected to a minute revision by the Berlin Congress (ended on 13th July 1878). Article 58 obliged the Porte to cede to Russia the Armenian districts of Ardahān, Ḳarṣ and Batum as well as the country situated between the old Russian-Turkish frontier, (altogether about 10230 sq. miles). The new boundary line was accurately determined (cp. *Petermanns Geogr. Mitteil.* 1878, p. 321 with map). Article 60 on the other hand restored to Turkey the valley of Alas̲h̲gerd (Toprak-Ḳalʿa) and Bāyazīd which had become Russian according to article 19 of the peace of San Stefano. The possession of K̲h̲otur, as has already been mentioned, was decreed to Persia.

The reforms in Turkish Armenia resolved upon by the Berlin Congress have had the worst possible results for the native Christians; the situation in the country gradually became unbearable until the hidden fire broke out in open flame in the year 1894. Bloodshed and barbarous massacres on a large scale occurred in many towns, thus in 1894 in Sāsūn, in 1895 in almost all the larger towns, particularly in Trapezunt, Edessa and Bired̲j̲ik, in 1896 in K̲h̲arpūt, Nīksār and Wān. During these disturbances innumerable villages were burned down, hundreds of churches were desecrated, plundered and spoiled of their treasures. There followed a few quieter years. But in 1904 fresh massacres occurred in the wilāyets of Wān and Bitlīs, and the social conditions of the country still contain enough inflammable material to make the outbreak of new disturbances possible at any moment. In the interests of a country which has suffered much it is to be sincerely hoped that the new regime of the Young Turks may mean the dawn of better times for Armenia.

5. DIVISION, ADMINISTRATION, STATISTICS, TRADE AND COMMERCE, NATURAL PRODUCTS AND INDUSTRY.

The term Armenia was subjected in the course of the centuries to considerable variations with regard to the territories included under it: in the same way the division of the country designated by the name was not always the same. In antiquity the Armenians (cp. the *Geogr. des Pseudo-Moses-Xorenaçi*, p. 606) divided the whole country into two unequal parts: Mec-Haik = Armenia major and Pokr-Haik = Armenia minor. Armenia major or Armenia proper extended from the Euphrates in the West to the district near the river Kur in the East and was subdivided into 15 provinces. Armenia minor consisted of the country between the Euphrates and the sources of the Halys. This division into two parts was known to the Arabs (cp. e. g. Yāḳūt, i. 220 ₁₅). But in contrast to the Armenians who are followed by the Romans and the Byzantines, the Arabs use the term Arminiya in a wider sense so as to include under it the whole district situated between the Kur and the Caspian Sea, i. e. D̲j̲urzān (= Georgia, Iberia), Arrān (= Albania) and the mountainous districts of the Caucasus as far as the Derbend pass (Bāb al-Abwāb). This is due to the fact that the history of these districts was always closely connected with that of Armenia, especially where the struggles against Muslims are concerned. By the term Arminiya al-kubrā, 'Great Armenia', the Arabs (cp. Yāḳūt, ib.) understand particularly the district of which K̲h̲ilāṭ (Ak̲h̲lāṭ, q. v.) is the centre, while Arminiya al-ṣug̲h̲rā, 'Little Armenia', designated the district of Tiflīs (i. e. Georgia). Ibn Ḥawḳal (ed. de Goeje, p. 295) knows yet another partition of Armenia proper (without Albania and Iberia) into two divisions: the two parts being the inner and the outer Armenia (Arminiya dāk̲h̲ila and Arminiya k̲h̲ārid̲j̲a); the former includes the districts of Dabīl (Dwin), Nas̲h̲awā (Nak̲h̲čawān) and Ḳālīḳalā, later Arzan al-Rūm (Karin); to the second division belonged the region of the lake of Wān (Berkrī, Ak̲h̲lāṭ, Ard̲j̲īs̲h̲, Wasṭān etc.).

Side by side with this division into two parts there existed in Armenia a very old system of quadripartition, this also was taken over by the Byzantines (division of Justinian in 536) and apart from some modifications introduced by Maurikios (591) remained in force down to the Arab invasion. The Arabs in their turn borrowed from the Greeks the principle of designating the chief groups of the Armenian provinces as Arminiya

I—IV, but deviate considerably from their predecessors in their method of assigning particular districts to these groups; this discrepancy can only be explained on the assumption that a repartition into provinces took place after the Arab conquest. The statements of Arabic historians and geographers also differ considerably among themselves, but on the whole we get the following scheme of the Arab division of the country: 1. Armenia I: Arrān (Albania) with the capital Bardha'a and the district between the Kur and the Caspian Sea (Shirwān). 2. Armenia II: Djurzān (Georgia). 3. Armenia III: consisting of central Armenia or Armenia proper, with the districts of Dabīl, Basfurradjān (Waspurakān). 4. Armenia IV: the South West with Shimshāṭ (Arsamosata), Ķālīķala, Akhlāṭ, Ardjīsh.

In addition to this some Arabic writers (al-Sharīshī, ii. 156 *et seq.* and Abu 'l-Fidā, ed. Reinaud and de Slane, p. 387 = Ya'ḳūbī, ed. de Goeje, p. 364, 5, 11) refer to a tripartition of Armenia which seems to represent a parallel to the division of the country before Justinian, but the enumeration of the districts belonging to each division shows that the number three is arrived at by merely leaving out the Armenia II of the quadripartition given above.

Cp. on the pre-Muslim division of Armenia H. Gelzer, *Die Genesis der byzantinischen Themenverfassung* (Leipzig, 1889), p. 66 and the same author's edition of Georgius Cyprius (Lipsiae, 1890), p. xlvi. *et seq.*; on the Arab period cp. Ghazarian in *Zeitschr. f. armen. Philol.*, ii. 207-208, Thopdschian *loc. cit.*, ii. 65 and in the *Mitteil. des Semin. f. orient. Spr.*, 1905, ii. 137.

As for the administration of the country during the Arab period (cp. especially Ghazarian, *loc. cit.*, 193—206. Thopdschian, *loc. cit.*, 1904, ii. 123—127) it must be remembered that Armenia in the sense in which this term was familiar to the Arabic authors, did not always form a separate province, but was frequently united with Ādharbaidjān and the Djazīra (Mesopotamia) under a single governor. The latter ('Āmil or Wālī) was usually appointed by the caliph himself; his residence in Armenia was Dwin (Arab. Dabīl to the South of Eriwān near the Araxes), a town which had been the seat of a Persian Marzbān before the Muslim conquest. The chief duty of the governor was the protection of the country against domestic and foreign enemies; for this purpose he had at his disposal a standing army, the garrison of which was not however in Armenia itself but in Ādharbaidjān (it had its headquarters at Marāgha and Ardabīl). Another important duty of the governor was to watch over the punctual payment of the taxes. For the rest the Arabs did not interfere in the administration of the country, but left it to the several local rulers (Armen. *Ishkhan* and *Nakharar*, Byzant. ἄρχων, Arab. Baṭrīḳ = πατρίκιος) who retained all their domains after the Arab conquest and were permitted considerable independence within the boundaries of their own possessions. In case of war each of these local rulers had to furnish a certain number of troops, and certainly since the 'Abbāsid period they received no payment for this service.

Compared with the other provinces of the caliphate the taxation to which Armenia was subjected was moderate. The levying of the various kinds of taxes (*djizya*, *kharādj* etc. = poll-tax, land-tax etc.) was replaced in the beginning of the 9th century by the Muḳāsa's system under which the Armenian princes were obliged to pay a fixed sum of money. Ibn Khaldūn's statement of taxes which refers to the most flourishing period of the caliphate gives the Armenian revenue (in the wider Arabic sense of the name) during the years 158—170 (775—786) at 13 million dirhams which corresponds to about £ 625 000; to this must be added various contributions in kind (carpets, mules etc.); the average revenue for the years 204—237 (819—852) is given by Ḳudāma at no more than 9 million dirhams. Cp. on the financial conditions A. v. Kremer, *Kulturgeschichte des Orients*, i. 343, 358, 368, 377; Ghazarian, *loc. cit.*, 203 *et seq.*, Thopdschian, *loc. cit.* (1904) ii. 132 *et seq.* The Arabic system of coinage was introduced into Armenia; money was struck in the country as early as the Umaiyad period (cp. Thopdschian, *loc. cit.*, 1904), ii. 127 *et seq.*).

According to Yāḳūt (i. 222, 14) Armenia possessed as many as 18 000 towns and villages of various sizes; 1000 of these (according to Ibn Faḳīh) were situated on the Araxes. The more important towns of Armenia proper during the Arab Middle Ages were Dabīl (Armen. Dwin), which during the whole period of the caliphate was the capital and seat of the Muslim government (at that time a very populous town, now an unimportant village), next Ķālīķala, later called Arzan al-Rūm (Erzerūm), Arzindjān (Erzindjan), Malazdjird (Manaskert), Badlīs (Bitlis), Akhlāṭ (Khilāṭ), Ardjīsh, Nashawā (Armen. Nakhčawān), Ānī and Ḳars (cp. the several articles). The bulk of the population during the time of the caliphate was composed of native Armenians; it was only in centres like Dabīl, Ķālīķala, also in Bardha'a (in Arrān) and in Tiflis (in Djurzān), the principal strongholds of the Arab power, that strong Arab colonies were to be found. Apart from these large towns settlements of Arab tribes existed particularly in the South West in the district of Alsnik (Arzanene); the old district of Badjunais (Armen. Apahunik) of which Malazdjird was the capital was occupied by a branch of the famous Arab tribe of Ḳais. All the Muslim colonies (on which cp. especially Thopdschian *loc. cit.*, 1904, ii. p. 115 *et seq.*) regarded the rise of the Bagratid power with the utmost dislike as it interfered with the consolidation and extension of their own rule.

Since the Russo-Persian and Russo-Turkish wars of the last century the territory of Armenia has been divided up between Turkey, Russia and Persia.

1. Persian Armenia, the smallest of the three divisions (about 5770 sq. miles), consists only of a few districts and in a sense is no more than an appendix of Russian Armenia; from an administrative point of view it forms part of the province of Ādharbaidjān. To the West it borders on the Turkish wilāyet of Wān. The northern frontier against Russia is formed by the Araxes along a line of about 110 miles stretching from the eastern base of the Ararat to Urdūbādh (Ordūbādh). The capital is Khoi (20 000 inhabitants) and other places of importance are Maku, Čors, and Marand. Persian Armenia corresponds more or less to the eastern part of the old Armenian province of Waspurakān (Arab. Basfurradjān).

2. Russian Armenia forms the southern and south-western part of the province of Transcaucasia and covers an area of about 39615 sq. miles. It is composed of the districts bordering upon Persia and Turkey, particularly the whole governments of Eriwān (10667 sq. miles), Ḳars (7211 sq. miles) and Batum (2685 sq. miles). Of the governments of Yelissawetpol and Tiflis only the southern and western part, of that of Kutais only the southernmost portion on the right bank of the Rioni are to be regarded as Armenian territory, for the rest these governments are composed of districts formerly belonging to Georgia (or Georgia and Albania). The following are the most considerable towns of Russian Armenia: the harbour of Batum, of great importance from the strategical and the commercial point of view, and capital of the gouvernement of that name (31 700 inhabitants); in the government of Tiflis there are the two fortresses Āḵhalṭikh [q. v.] and Akhalkhalaḳi. In the administrative district of Ḳars: the strongly fortified town of that name, important also as a centre of commerce (20 000 inhabitants), and the ancient town of Ardahān, situated at a height of 6230 feet and likewise a fortress of the first rank. In the government of Eriwān the greater part of which formerly belonged to Persia we may mention: the capital Eriwān (31 000 inhabitants) and 12 miles to the West of it the famous monastery of Etmiadzin, the religious centre of the Armenians; next Nakhčawān (Arab. Nashawā, q. v.) a town which like Eriwān plays an important part in Armenian history, and Alexandropol, (originally called Gumri), with 35 600 inhabitants (1897), until 1878 important as a frontier fortress, now a rising industrial centre (silk). Among the towns of the government of Yelissawetpol we may mention: Yelissawetpol, the ancient Djanza (Gendja, q. v.) with 35 400 inhabitants, which like Shūsha in the district of Ḳara-Bagh was formerly the capital of a khānate; further the frontier town Urdūbādh (Ordūbādh) on the Araxes.

3. Turkish Armenia. The greater part of the Armenian territory, far more than the Persian and Russian portions combined, has for nearly 500 years been in the possession of the Turks. It is divided up among the wilāyets of Bitlis, Erzerūm, Ma'mūret al-'Azīz (Kharpūt), Wān and a part of Diyārbekr and occupies an area of c.ª 71 730 sq. miles. The most important towns are: Siwās with 43 000 inhabitants (1897), Erzerūm (Arzan al-Rūm) with 38 900 inhabitants, Wān and Arzindjān (Erzindjān) with 30 000 inhabitants each, Bitlis, (Badlīs, 20 000 inh.) Kharpūt, Mūsh and Bāyazīd [see the articles in question].

Population. Since the second half of the Middle Ages the population of Armenia has by degrees been transformed to an enormous extent, partly owing to the invasion of Turkoman and Turkish tribes and partly owing to the advance of the Kurds (in the South) and of the Georgians and other races of the Caucasus in the North-East: the result is that at the present time the original inhabitants of the country, the genuine Armenians, form little more than one fourth of the total population of the region which once was their own in its entirety. According to the reliable statistics compiled by L. Selenoy and N. v. Seidlitz (in *Petermann's Geog. Mitteil.*, 1896, p. 1 *et seq.*) the six governments of the province of Transcaucasia enumerated above, which consist entirely or partly of Armenian territory, have on an area of ca. 62 300 sq. miles a total population of about 3 470 000, of whom 897 000 (or about 27%) are Armenians. If in the case of three of these governments we include in our calculation only those regions which may be regarded as Armenian territory we are left with an area of ca. 39 615 sq. miles containing an estimated total population of about 2 000 000 of whom about 760 000 (= ca. one third) are Armenians. Among the Transcaucasian governments that of Eriwān is the only one in which the Armenian element (56%) outnumbers the other nationalities. Throughout Transcaucasia the Armenian element is stronger in the towns than in the country, thus especially in the government of Tiflis (Tiflis 48%). In the whole of Transcaucasia the Armenians (960 000) form only 20% of the total population of 4 782 000.

The number of inhabitants of the five wilāyets of Turkish Armenia is 2 642 000, of whom 1 828 000 are Muhammadans, 633 000 Armenians and 179 000 Greeks, the Armenians therefore form barely one fourth of the total population: it is only in the sandjaḳ of Mūsh (wilāyet of Bitlis) and in that of Wān (wilāyet of Wān) that they preponderate numerically.

On the basis of these figures the total population of Russian and Turkish Armenia may be estimated at ca. 4 642 000, of whom ca. 1 400 000 are Armenians. In Russian Armenia the bulk of the population now is of caucasian nationality (Georgians, Lazians etc.), while in Turkish Armenia it is composed of Kurds and Turks; to these must be added numerous Greeks scattered throughout the country, as well as Jews, Gipsies, Circassians and Nestorian Christians (the latter to the South East of the lake of Wān) and lastly nomadic tribes of Tatars (Turkomans) especially in the East. Concerning the population of Persian Armenia no statistics are available, but it may be estimated at but little more than 200 000. In 1891 the Armenian population of the whole of Persia was stated to be 42 000, one half of which number belonged to Ādharbaidjān, i. e. chiefly to the Persian Armenian territory incorporated with the latter province; it appears therefore that here also the Armenians are in the minority, the bulk of the population consisting of Persians and Turkomans.

It is to be observed that the number of Armenians on Turkish territory is steadily decreasing, partly in consequence of the wholesale massacres perpetrated by the Kurds and partly owing to emigration. The settlement of so many Armenians in foreign countries and their dispersal all over the ancient world which recalls the similar fate of the Jews, has its principal cause in the generally unhappy political conditions of their native country: the emigration movement begun a few centuries before the Arab invasion and has continued ever since though not without interruptions and variations in its extent. Cp. on this point especially Ritter, *Erdkunde*, x. 594—611; M. Wagner, *Reise n. dem Ararat*, p. 239—250. According to an approximate estimate the total number of Armenians living in the various countries of the ancient world may be put at 2—2½ millions.

Trade and commerce. During the Middle

Ages Armenia played an important part from the economic point of view as a stage of transit between the Pontus and Mesopotamia and as the boundary between Byzantium and the eastern parts of the caliphate. The great number of traders and caravans passing through the country necessarily had a share in the development of native industries: apart from this factor trade itself and the industries of the country were stimulated by its wealth in natural products. The commercial importance of Armenia is proved by the numerous trade routes which traversed the country in several directions: to the more important of these the Arabic geographers have devoted detailed descriptions. From the Arab point of view the chief importance of these routes lay less in the fact that they served the needs of commerce than in the assistance which they rendered to their military interests; it was for this reason that the principal routes met at Dabīl, the Arab stronghold for the domination of the country. The maintenance and the protection of the roads, especially in a province surrounded by hostile territory, took an important place among the duties of the Muslim governors. It is for the same reason that Erzerūm, as meeting-place of all the principal roads, is now regarded as a place of great strategical importance and as the key of all Asia Minor.

Armenia maintained its communication with Byzantium by way of Trapezunt (Arab. Ṭarābazunda), which was the principal place of storage for Byzantine merchandise (especially precious textiles). The great fairs held at Trapezunt several times in each year were visited by merchants from all the Muslim countries. The merchandise was usually transported from Trapezunt to Dabīl and thence to Ḳālīḳalā (Erzerūm). In Persia Ray was the most important market for the Armenian traders (cp. Ibn al-Faḳīh, ed. de Goeje, p. 270); they also maintained direct commercial relations with Baghdād (al-Yaʿḳūbī, ed. de Goeje, p. 237).

Natural products and industries. Armenia was regarded as one of the most fertile provinces of the caliphate: it produced corn in such quantities as to be able to export it to other districts e. g. to Baghdād (Ṭabarī, iii. 272, 275). The rivers and lakes of the country which yielded an abundance of fish also favoured the development of the export trade: the lake of Wān e. g. produces enormous quantities of a species of herring (Arab. *ṭirrīkh*) which in the Middle Ages was salted and exported over great distances (according to Ḳazwīnī, ed. Wüstenfeld, ii. 352 as far as India); it is still found all over Armenia, Ādharbaidjān, Caucasia and Asia Minor as a favourite food.

Armenia is particularly rich in mineral treasures, it contains copper, silver, lead, iron, arsenic, alum, mercury, sulphur (yellow vitriol) and even gold. We know very little about the exploitation of this wealth by the Arabs; the only Arabic author who gives any valuable information about the natural products of Armenia is Ibn al-Faḳīh. According to the Armenian writer Leontius silver mines were discovered towards the end of the 8. century A. D.; he refers probably to the silver (and lead) mines near the town of Gümüsh-Khāne = 'silver house' (about halfway between Trapezunt and Erzerūm, cp. Ritter, *Erdkunde*, x. 272 and Wagner, *Reise nach Persien*, i. p. 172 *et seq.*); these are still being worked. Other productive mines are found near Baiburt and near Arghana [q. v.]. The extensive and very old copper mines of Kedabeg with a branch at Kalakent (between Elisawetpol and the Gökčai lake) have undergone a considerable development during the last few decades through the enterprise of the founders and proprietors of the local foundries, the firm of Siemens Brothers; cp. especially Lehmann-Haupt, *Armenien einst und jetzt*, i. p. 122 *et seq.* The mineral found in Armenia in the greatest quantities was salt which was exported not only to the surrounding countries but as far as Syria and Egypt. All the salt deposits referred to by medieval writers were probably situated to the North East of the lake of Wān. A very old deposit of mineral salt which is still unexploited is that of Kulp to the South of the upper Araxes (east of Ḳaghizman), cp. on this subject Ritter, *Erdkunde*, x. 470 *et seq.*; Radde, *Vier Vorträge über den Kaukasus*, p. 47.

The industries for which Armenia was particularly famous during the Middle Ages were weaving, dyeing and embroidery. The centre of this activity is to be found in Dabīl where costly woollen fabrics, carpets and heavy, coloured silk stuffs with flowery patterns (Arab. *buzyūn*) were manufactured; these found a ready market both in the country and abroad. The dye used was derived from an insect called *ḳirmiz*. During a long period Armenian carpets were regarded as the most excellent on the market. The town of Ardashāṭ (Artaxata), a few miles distant from Dabīl, was so famous for its dyeing industry that Balādhorī (ed. de Goeje, p. 200 cp. *Zeitschr. f. Armen. Philol.*, ii. 67, 217) calls it 'the town of the red dye' (*Ḳaryat al-ḳirmiz*). Cp. on the trade and industry of medieval Armenia Thopdschian in the *Mitteil. des Semin. f. orient. Spr.*, 1904, ii. p. 142—152.

(1895) and the same author's *Histor.-Topographisches vom obern Euphrat* in the *Kiepert-Festschrift* (Berlin, 1898).

The native old Armenian sources, nearly all of which date from the Middle Ages, have been used especially in Indjidjean's excellent *Description of old Armenia* (in Armen., Venice, 1822). Cp. also L. Alishan, *Topogr. of Great Armen.* (Venice, 1855); *Geogr. of the province of Shirakh* (ibid., 1879), *Sisuan* (ibid., 1885) *Airarat* (ibid., 1890) and *Sisakan* (ibid., 1893), all in Armen.; H. Kiepert, *Die Landschaftsgrenzen des südl. Arm. nach einheim. Quellen* = *Monatsber. der Berl. Akad. d. Wiss.*, 1873; H. Thopdschian in the *Mitteil. des Seminars f. orient. Sprachen in Berlin*, 1904, ii. p. 104—153 (*Die inneren Zustände Armeniens unter Ashot I*); ii. p. 98—218 (*Polit. u. Kirchengesch. Armeniens unter Ashot I und Smbat I*); Sebēos, *History of Heraklius*, (deals with the period from 457/9—602) and Leontius, (treats of the years from 532—790. The relevant chapters of Sebeos were translated by H. Hübschmann, *Zur Gesch. Armeniens u. der ersten Kriege der Araber* (Leipzig, 1875). — Belādhorī (ed. de Goeje), p. 193—212; Pseudo-Wāķidī, *Geschichte der Eroberung von Mesopotamien und Armenien u. s. w.* (Hamburg, 1847); Yaʿkūbī (ed. Houtsma), 190 *et seq.*; M. Ghazarian, *Armenien unter der arab. Herrschaft bis zur Entstehung des Bagratidenreiches* in the *Zeitschr. f. armen. Philol.*, ii, Marburg, 1904), p. 149—225; H. Thopdschian, *Armen. vor und während der Araberzeit*, ibid., ii. 50—71. Cp. also E. W. Brooks, *Byzantines and Arabs in the time of the early Abbasids* in *The Engl. Historical Review*, 1900 and 1901; cp. also H. Daghbaschean, *Die Gründung des Bagratidenreiches unter Aschot Bagratuni* (Berlin, 1893) and A. Green, *The Bagratid dynasty in Armenia* (Russian) in *Journ. des k. russ. Ministeriums der Volksaufklärung* (St. Petersburg, 1893), vol. ccxc, p. 51—139; J. Marquart, *Osteurop. und ostasiat. Streifzüge* (Leipzig, 1903), p. 177—186, 391—465; K. Chalatianz, *Die Entstehung der armen. Fürstentümer* in the *Wien. Zeitschr. f. d. Kd. des Morgenl.*, xvii. 60—69. The principal source for the Seldjūķ period is the history of Aristakes of Lastivert which deals with the years 989—1071 (Armen. ed., Venice, 1843; French transl., Paris, 1864). The work of Kirakos of Gandzak dating from the 13. century gives a mainly contemporary account of the years 1165—1265 (Armen. ed., Moscow, 1858 and Venice, 1865; French transl. by Brosset, 1870 *et seq.*). A history of the Mongol invasion (down to 1272) was written by the monk Malakʿia (Armen. ed. St. Petersburg 1870; Russian translation by Patkanean, ibid. 1871; French translation by Brosset, 1851). A history of Timur and his successors was composed in the 15. century by Thomas of Medsoph (Armen. ed. by Schahnazarian, Paris, 1861). The chief source for the sufferings of the Armenians under Shāh ʿAbbās I is the *History* of Arakʿel of Tauris (dealing with the years 1602—1661; Armen. ed. Amsterdam, 1669; translated by Brosset). There also may be consulted the works on Byzantine history (see the bibliography in Krumbacher, *Byzant. Litteraturgesch.*, 2. ed., p. 1068 *et seq.*) and the relevant chapters in works of Muslim history or the history of the caliphate.

(STRECK.)

ARNAUTS, an Indo-European people, known to us as Albanians, who occupy the territory which is under Ottoman dominion on the eastern shore of the Adriatic Sea from the 39. to the 43° N. Lat. The range, which is called in the South Pindos or Grammos, in the North Shār, of the high central chain of mountains, is frequently denoted as the eastern boundary of their settlements; but those districts which are situated on the other side, viz. Monāstir, Kesrie (Kastoria), Perlepe (Prilip), Ḳalḳandelen, Üsküb, Prishtina, and even the territories ceded 30 years ago by Turkey to Servia, viz. Ivrānya, Leskovač and Kūrshūnlī must also be included within the sphere of the Albanians, so that this has a West to East extension from the 19th to the 20° E. Long. (Greenw.). Albania, which has the shape of an irregular triangle with a line from Dulcigno (Turk. Ülgün) to the Bulgarian frontier as base and the Gulf of Prevesa as apex, occupies a surface-area of 24 129 sq. mls.

I. Physical Features: Albania is in the main an inhospitable hill-country consisting of a number of close-crowding chains of hills and valleys which run lengthwise from N.N.W. to S.S.E. In the North however there appears to be a curving round from the normal direction of the chains of hills; they run here from W.S.W. to E.N.E. Here too are the most extensive and greatest elevations: the "North-Albanian Alps" of which very little is yet known contain peaks which are not much under 9850 ft. high. The highest mountain in the midlands is Lyŭbātin (Lyuboten) in the Shār-range (8230 ft.). Mt. Tomōr (7915 ft. high), to the East of Berāt, is specially famous. The summit, which has a difficult ascent, is crowned by the ruins of a very ancient holy place wherein local legend honours the remains of the grave of ʿAbbās (died 680 A. D.), son of the Caliph ʿAlī; from the thunderous peal which from time to time fills the neighbourhood of the mountain with its rumblings, good and ill are predicted according to a very ancient custom. Along the coast-line of the Adriatic there stretches a range of fruitful plains. Some of them are quite open towards the Sea, e. g. the largest among them, that of Musāḳyā (Turk. Müzāḳa), while others are cut off here and there by small strips of coast, e. g. the plain of Ishḳōdra, whose eastern portion bears the name of Zadrime. From Cape Glossa (the promontory of Acroceraunia) to the South there follows the coast-line a range of mountains which rises in peaks of over 6500 ft. high. The eastern districts of Albania partake of the character of Macedonia in having extensive basin-shaped plains; the plain of Metōya (in the upper region of the valley of the White Drin), and those of Ḳōsova (plain of the Blackbirds) and Ḳalḳandelen (Slavic Tetovo) may be mentioned. Some of these plains are occupied by lakes, e. g. those of Okhri and Prespa; the plain of Monāstir is marshy in its lower parts.

Hydrographically Albania belongs partly to the Adriatic, partly to the Aegean and partly (through the Lim and Ibār, which flow into the Drina and Mōrāva) to the Pontic side of the watershed. The network of rivers is close, and the land generally has abundance of water. With few exceptions however the rivers are not natural highways for shipping. At best the Bōyāna up to Ishḳōdra and the Ārta (Turk. Nārda) to the town of the same name could be called such. The river-valleys being mostly of the nature of glens cannot be used for roadways. Of the rivers making for the Adriatic Sea the Drīn surpasses the others both in its volume and the impetuosity

of its descent; it is formed by the union of the Black Drin (Ḳara Drin, alban. Drin Zi) which flows from the Lake of Ōkhri (Ochrida), and the White Drin (Aḳ Drin, alban. Drin Bardh), but it now discharges most of its water below Ishḳōdra into the Boyāna along a branch which arose in the years 1858-1859. South of it come Māt (Matya), Ārzān (Rçan), Ishḳumbi, Samān (Semeni), Viōsa and Ḳālāmās. Further the upper portion of the Vardār, which flows into the Gulf of Selānīk, belongs to Albania, as does its tributary the Lepenāc, which through a furcation also joins the Sitnića, and this, again, joins (at Mitrōvića) the Ibār, an affluent of the Mōrava. — Albania has a wealth of large lakes, which correspond to former plains wherein subsidence has occurred, or to basins into which there have been irruptions: the Lake of Ishḳōdra, measuring 137 sq. mls., half of which belongs to Turkey, and half to Montenegro, and which discharges itself through the Bōyāna into the Adriatic, Lake Ōkhri (104 sq. mls.), Lake Prespa (131 sq. mls.), the marshy Lake Mālik, and, farther South, Lake Yānia. Right in the North is Lake Plava, through which the Lim flows. The existence of lagoons ought also to be mentioned, such as that of Būtrintō.

The climate of Albania is on the whole a healthy one, being mild at the coast, and very cool in the mountains of the interior which are covered with snow during several months. On the coast of Upper-Albania, at Durazzo and still more on the Bōyāna there are constantly malarial fevers. The mountain-chains are dry and stony and never yield a harvest; on the other hand, the plains and valleys are but the more fertile. The plain of Musāka is like a paradise. Whilst rice, lemons, oranges, pomegranates, grapes, figs, olives, melons and other southern fruits thrive in the south-western region, called Čāmlīḳ, the plain of Ḳōsova can boast the excellent qualities of the fruits indigenous in Central-Europe. In good years part of the harvest of rye, oats and maize can be exported; but owing to drought the supply not rarely falls short of the demand. Plantations of fir-, pine-, beech- and planetrees are also found. The commonest is an excellent quality of oak, and the timber used to be exported in large quantities to France.

The chief means of sustenance of the population are maize and what they gain by the breeding of cattle. Their herds of wethers and goats are so considerable that in winter some of them are driven over the borders into the lowlands of Thessaly. Forest and mountain, where no European has yet set foot, house a plenitude of beasts of the chase (wild-boars, bears, wolves, chamois) which have become rare in our quarter of the globe.

A number of native crafts have been preserved into our time. The preparation of leather has its home in Yānia, Prizrin and Ishḳōdra, and in these places Albanian handicrafts are mostly concentrated. The cloaks, called Shayāḳ, with which we always associate an Albanian, are made by the women of the district, whilst the mālisōrs (i. e. hill-dwellers) wear only clothes which they have woven from home-grown wool. At Prizrin and Djāḳova iron-wares such as table-knives, scissors, weapons with inlaid pearls and precious metals and even modern muskets are produced.

The sea-harbours are among the natural trade-resources. The best shelter from storm is offered by the roadsteads of Preveza and Pasha Limāni in the Bay of Avlōnia (Avlona), but steamers can also moor in the venerable Drāč (Durazzo, Alb. Dürrus), which is now recovering, laboriously however, from its deep decline, and in S. Giovanni di Medua (Turk. Shengin). The native seagoing class is recruited almost exclusively from the Muhammadan inhabitants of Dulcigno, which now belongs to Montenegro, and sails to the Atlantic, even as far as England, and possesses about a hundred ships. For the rest, commerce, especially the wholesale branch, is in the hands of Austria, which through the excellent arrangements of the Trieste-Lloyd and the careful regulation of freights has hitherto been able to stave off all, even Italian competition. Statistics of the trade of Albania are of little account. Twenty years ago Preveza's foreign trade amounted to 8½ million francs, Ishḳōdra's to 5½ million. The Montenegrin customs-station of Podgoritza, which is showing a steadily progressive tendency, has importance as a commercial emporium for Ishḳōdra. Albania contains part of two railways, one passing through the Vārdār-valley from Mitrōvića to Selānīk with a branch line from Üsküb to Belgrade, and the line from Selānīk to Monāstir. Prishtina is the strategically decisive point for the control of western Roumelia; further, the entire provinces of Roumelia could be held in check from here before Bulgaria was raised to a principality (1878). The sole highway running the whole width of the land passes from Selānīk to Yānia. The following are passable roads of the second grade: — 1. from Prizrin by Varishović and Prishtina to Servia (the stretch from Ishḳōdra to Prizrin is not passable). — 2. from Durazzo by Elbaṣān (written: Elbaṣān) and Ōkhri to Macedonia. This is the route of the great Roman military-road Via Egnatia. — 3. from Durazzo by Berāt and Kliṣūra to Yānia. — 4. from Ḳliṣūra by Tepedelen and Ergeri (Argyrokastro) to Būtrintō. — 5. from Ḳliṣura by Aidōnāt (Paramythia) to the sea. Bridges, even wood-bridges were till recently regarded as a luxury, a fact all the more regrettable because traffic suffers enormously in the rainy season without them.

II. Population. The population of Albania amounts according to the present division into Wilāyets to little under 2 600 000 inhabitants, of whom 1½ million Arnauts form the kernel, whilst the rest are composed of Turks, Wallachs, Bulgarians, Greeks, Serbs and Gipsies. It is a great step gained by the Greeks that with the aid of their excellent schools in the southern and more especially the south-eastern districts they have either entirely or else half-hellenised many Wallachs and Arnauts. The Roumanians living on the Pindus speak only their mother-tongue; those who dwell farther West towards Berāt as a whole understand also Albanian. Those Wallachs who are become quite Albanicised and number here not a few, have in the eyes of Albanian patriots a special roll of fame in the Albanian nationalist movement. Bulgarians are numerous in the region of Monāstir and more especially at Üsküb, Serbs around Prizrin. Of the gipsies of western Albania only those following a nomadic life are not yet albanicised.

The term Arnaut is to be traced back to the region Arbeni extending along the coast from

Corfu to Avlōnia, whose inhabitants are called Ārber, according to the Gheg pronunciation Ārben. The Greek form is Ἀρβανίτας, the Servian Arbanas. By metathesis and replacing the *b* of the Greeks by *n* (< *wn*) the Turks obtained the form Ārnaūt (Arab. plur. Arānīt), which however appears in the modern Stambul pronunciation and in writing as Arnaūd. In Bulgarian Arnaut is customary. The inhabitants of Arberi probably immigrated here from a place Arbona situated to the East of Durazzo. Gustav Meyer conjectures that the ancient Greeks by exchanging *l* for *r* and having in mind the Albans, who lived in the Caucasus and in Central-Italy, obtained the form Albania now usual in Europe.

The Albanian is generally distinguished by his tall stature, well-developed chest, and slender, elastic body. He can frequently be recognised by his flat forehead and short eyebrows. Of stern appearance, he scarce makes a jest or listens without contradiction. On the march, thanks to his tenacity he leaves all others lagging far in his rear; in the mountains he moves with light step over the stony ground, and climbs rocks like a chamois. His step has the power of the athlete, he walks with an actor's air; his nature is somewhat savage, as though he deemed his nation's mission the chastisement of a perverse world. It is very obvious that war is his natural element, and thus Illyrian legions in the time of the Romans and Albanian troops in Turkish service have covered themselves with lasting fame. The Albanian wife is loyal and industrious. In the towns her activity is restricted to managing the home and zealously visiting her female friends, in the villages and mountains however she performs every labour of the fields and devotes her leisure, especially in winter, to spinning wool.

The largest towns of Albania are Prizrin and Monāstir with over 40 000 inhabitants each, Ishkōdra with 35 000, and Djākova and Kalkāndelen with 25 000; Üsküb, Ipek and Yānia have each 20 000; Elbaṣān is estimated at 12 000, Prishtina and Berāt at 11 000, Dibra, Tirāna, Okhri and Korina (Turk. Güridje) at 10 000; the figure 8000 is given for Ergeri and for Kesrie, 7000 for Prevesa. Smaller towns of more historical importance are Akče Hisār (Alb. Krūya, about 10 000 of a population), Avlōnia (6000 pop.) and Lesh (Turk.; Alb. Lyesh, Ital. Alessio) and Durazzo with each 5000. Albanians dwelling without the towns belong to one of the clans (Alb. *Fis*, *Fār*), which are often named after mountains, towards which they are pledged to loyalty even though they be long absent. The members of the clan are organised into companies (*Bairak*) whose leaders (*Bairakdār*) are subordinate to the chieftain. In the north-west of Albania, on the borders of Montenegro, the most important clans besides the clan of the "mountains of Ishkōdra" are the Klimenti, Hōti, Iskrieli, Kāstrāti and Pūlāti. These five tribes achieved renown under the name of Mālisōrs. The Vassović and Dukadjīni farther east and south-east are also held in regard. All these tribes are settled on extraordinarily unfavourable soil and it is astonishing that they can find here the necessary means of subsistence. The condition in which they live is felt by the rare European visitors to be one of distressing misery, but by themselves to be the enviable lot of freemen. None of the tribes could count more than 7000 persons. They are exceeded in number and respect by the Mirdites, who are governed as an independent community. They are organised into five *Bairak* counting 15—25 000 persons. Since their chieftains, whose family-traditions however do not carry back beyond the year 1700, are mostly called Prenk (i. e. Peter), they falsely, confounding it with the Romance word "prince", arrogate to themselves the title of "prince". There residence is Ōrōsh, a little low-lying hamlet among the mountains, which enjoys but few hours of sunshine even in summer. The political affairs of the Mirdites are settled in a general assembly of the people which is annually convoked in the chief church in Ōrōsh. The Mirdites are considered to be exceptionally brave. The tribes when conquered attribute their defeat to the absence of the Mirdites. The latter yielded their submission to the Sultan under the promise that they would never be liable for tribute and that no Muslim would be allowed to settle in their territory. They pledged themselves in return to rally to the help of their sovereign in the event of war with a considerable corps, one man per home. They have more than once made the Sultan experience their strength; but they have control of the three highways to northern and central Albania: to Ishkōdra, Lesh and Akče Hisār-Tirāna. They are, in consequence, strategically the masters of the country. The important services which they rendered the Turkish government against Austria in the xviii. cent. are still rewarded by an annual gift of twenty tons of maize. Since the tribe during the last Russo-Turkish war did not march against Montenegro its loyalty fell under suspicion; and the chieftain Prenk Bib Doda was banished to Asia Minor in the year 1887. Only the proclamation of the constitution in Turkey (1908) restored him to his home. We owe to English travellers valuable information about the no less interesting mountain-clans of southern Albania. The Liaps are most worthy of note, because the Greeks in an earlier period suffered heavily from this tribe's passion for war, and hence even yet apply this name in contempt to the whole Albanian nation.

In Roumelia and north-western Asia Minor the Albanians impervious to weather-conditions have monopolised the calling of herds. Everywhere in Turkey-in-Europe their idiom can be heard. In Constantinople 20 000 at least of them are engaged in the most varied occupations. Since they brave wind and weather nobody makes a rival bid for the sale on the street of bread and lemonade which are bought by thousands. For a long time Albanians of the Greek-Orthodox Church and Tosks have been settled in Greece; they constitute a tenth of the population, 200 000—250 000. They are thickest in the Peloponnesus; but in many districts they have succumbed to the irresistible hellenising influence. In Italy Albanians have been settled since the xv. cent.; we find them in Capitanata, Basilicata and the Terra d'Otranto, and numerous in Sicily. All together they are estimated as 100 000 at most. Thanks to their national ecclesiastical organisation, the Albanian clergy and bishops of the Greek rite, but subject to the Pope, they have been able to preserve through the course of centuries their language and customs. Hungary possesses two Albanian villages in Mitrovic in Croatia.

III. Religion. It is generally stated that the Albanian is cool in his attitude towards religion, even indifferent. Whether Muḥammadan, Catholic or Greek-Orthodox dogma is to him as in many an instance to the modern European more a matter of custom than of deep inward conviction. This attitude of aloofness towards the supernatural favoured the transition to the victorious Islām. The latter found the greater vogue the farther the people were removed from Iskender Bey's glorious war of liberation, so that by the beginning of the xix. cent. the conversion of the rest of the nation appeared to be only a question of years [see *infra* Section viii]. The Shāll and Shōshī in the Sandjak Ishkōdra have remained the most loyal to Christianity, and can boast of counting no renegades in their midst. They are thus the poorest also of all the hill-peoples, but at the same time those who have preserved most purely the rude customs of primitive times. The tribes of Keči and Lobo in the Wilāyet Ishkōdra are almost wholly Muḥammadan. Entirely Islāmic districts are surprisingly few; Kurwelish (Tepedelen, Ergeri), the valley and range of the upper Arzān as also the district of Māt; the Muḥammadan Ghegs preponderate around Elbaṣān, Okhri, on the right bank of the Drin, at Dibra, Prizrin, Djakova and Ghūsīn. The adherents of Christianity belong north of the River Ishkūmbī to the Catholic, south of it to the Greek rite. For the numerical proportion of the professors of the two Christian creeds there are no data; but the Catholic Arnauts might be estimated at about 180 000, the orthodox inclusive of the half-hellenised at over 300 000. Muḥammadan Arnauts number about 1 million. Their Christian fellow-countrymen designate them as Turks.

With a section of the Muḥammadans religious feeling vents itself in impassioned adoration of the sect of the Begtāshī which has risen strangely into favour only since the abolition of the Janizaries. Almost the whole population of Tirāna and Akče Ḥiṣār belong to it, a fact to which attention has only very recently been drawn. Attempts were formerly openly made to promote the prosperity of this order in order to secure a firmer footing for Muḥammadan institutions; but the populace on the other hand have by attaching themselves to a half-heretical sect given forcible expression to their feeling for freedom which they have converted into a religion. But such has been only outwardly the case, for the Albanian Begtāshī are among the loyallest adherents of the government. Their centre is Akče Ḥiṣār. In its neighbourhood a pupil of the Ḥādjdjī Begtāsh, Ṣarī Ṣāldik, killed a dragon which was devastating the crops, and so has everywhere naturalised the medical lore of the order. The whole population annually pilgrimages to the grotto situated on the plateau above Akče Ḥiṣār in which the saint is buried. The names of the Derwishes Bābā ʿAlī Efendī and especially Bābā Ḥūdjdjet who achieved for the inhabitants of the town their alleged chartered rights of exemption from taxation are held in high repute. The sect of the Albanian Begtāshī has a deeply imprinted Shīʿite character. They do not swear by the Ḳorʾān, declare Paradise and Hell to be theological inventions, fast in Ramaḍān only three days, but the first nine days of Muḥarram to make up for that; ʿAlī they hold in far higher esteem than do the Turks. Their formula of confession of faith runs: lā ilāha illa 'llāh, Muḥammad rasūlu 'llāh, ʿAlī walīyu 'llāh. One will actually seek in vain for the names Abū Bekr, ʿOmar, ʿOthmān amongst the Albanians.

IV. Life and Customs. There can be nothing stranger than an Albanian house in the country. Built of clay and mostly on a pathless eminence it serves for defence against enemies who are never wanting. The small openings in the walls are loopholes which only incidentally fulfil the function of windows and are stopped up with paper in winter. Not a trace of furniture is to be seen within, unless one considers the mats of poplar-leaves lying spread out here and there as such. The carpet which is so popular elsewhere in the East is here the rare luxury of the rich. An Albanian meal consists of a soup of rice or maize-flour cooked in milk. If he travel on foot from morning till evening he is content with one meal. At feasts a roast (Yakhnī) floating in sauce is served up with chick-peas, a dish which even the most pampered taste praises as an incomparable delicacy. At these always ample banquets the heroic deeds of their last-deceased forebears are celebrated in song by the tribal bard, and finally the old national battle-march is heartily voiced by the whole assembly, a ceremony as inflammatory for the rude temper of the native as crushing in its effect on the stranger.

The dress of the Albanians, even if varying considerably according to locality and social position, has something picturesque about it, a fact made all the more prominent by the proud carriage of the people. In well-to-do families in the south the men wear the fustanelle (Turk. *Fistān*), a kind of kilt with many folds and consisting of 122 separate pieces of white cotton sewn together, which reaches from the hips to the knees; a gold-embroidered smock covers the body and over this a vest is worn which is open at the breast. The whole is held together by a silk-girdle in a front leather-pocket of which the revolver with inlaid silver is kept. A low, red Fez with thick, long tassel of stout blue silk is used to cover the head. From this garb of the Muḥammadan Albanians living in the towns that of their Christian fellow-citizens is distinguished simply by the darker colour of the smock. The superior Bey in the south wears over and above a white, broad-sleeved jacket which suits the fustanelle very well. The raiment of the Muḥammadan townswoman is notwithstanding its simplicity one of the most romantic the Orient can show; wide trousers of bright colours, and the Dolma (from the Turk. *Dōlāma*), a scarlet-red cloth with edges and trimmings in gold and black-silk embroidery, which is drawn over the head in the fashion of a hood; although at the height of the shoulders it has slits for the arms the slender Albanian prefers to wrap the cloak round body and arms in Oriental fashion, and glides thus along the street with seductive grace. Quite different is the heavy, costly and more European garb of the Catholic woman in North-Albania. The black trousers with the long, purple, mantle-like overgarment and the gold-embroideries, recalling the grand ecclesiastical robes, give an exceeding solemnity to the figure. Such splendour however is only suitable for the towns. In the mountains, especially of North-Albania, the Albanian has a

more practical outfit; he is satisfied with trousers of a coarse white cloth with black braiding, over the chest a close-fitting waistcoat, and above that a black jacket which covers only the back and hips. For protection against cold and rain he wears a sleeveless mantle of black wool which reaches to the haunches and ends above in a kind of hood. As foot-gear high gaiters and light shoes to which sandals are fastened with leather straps are worn. The Albanians, with the exception of the Khōdjas, shave off the beard. The wearing of the Fes is general among the Christians and Muhammadans; among the poorer class of them it is very frequently made from the durable, thick, uncoloured home-grown wool.

There are really but few regions in Europe whose populations are at as low a stage of civilisation as the Albanians. Public schools are confined to the towns; reading and writing are everywhere regarded as inestimable arts. All legal situations are controlled by the unwritten, and to us unknown in detail, law (*Ḳānūn*) of the Lek Dukadjin (Tosk. Dukagin), whose crulity knows no higher justice than that of blood-revenge, the obligation to which extends to the whole kin and compels the families at strife to years of preparedness for fighting. In these regions where honour is everything and life counts for nothing murder is the cause of death in from 19 to 30% of the mortality among the male population. The tribe Toplana heads the list with 42%. The notion of honour is so strongly developed that a girl to whom even harmless inclinations are falsely ascribed knows no remedy but to seek a voluntary death, but the heavier falls her luckless kinsmen's vengeance on the slanderer's head. Sometimes the Osmanli governors are successful in negotiating a peace (*Besā*) between the quarrelling families. A decade ago, however, when the Wālī of Ishkōdra came to an understanding with the tribes that blood should be avenged only on the murderer himself the Mirdites refused their assent; they would not hear of questions touching honour becoming matter for political arbitration.

V. Administration. The political division of Albania has been for centuries subject to continuous mutations. At the present day it is split up into four Wilāyets, the number of whose inhabitants however can only be approximately estimated: Yānia with 700 000 inhabitants (it falls into 5 Sandjaḳs: Yānia, Preveza, Laskovik, Berāt, Ergeri), Monāstir with 700 000 (5 Sandjaḳs: Monāstir, Güridje, Dibra, Serfidje, Elbaṣān), Ḳōsova with 1 000 000 (5 Sandjaḳs: Ipek, Üsküb, Yeñipāzār [Novipāzār], Prizrin, Prishtina), and Ishkōdra with 200 000 (2 Sandjaḳs: Ishkōdra, Drāḍj).

The authority of the imperial government is more limited than elsewere in Rumelia. The right of the people to carry weapons is in contradiction to the laws. In every relation the officials have to impose on themselves reserve, and it is asserted that whether it concern governance or the administration of justice their calling is one of the most difficult. Often and often do the members of the court of justice receive letters threatening that they will have to atone by death for a damnatory sentence. These threats are not empty words, often enough examining magistrates and assessors are received with shots if they show themselves on the street. Moreover the power of the authorities many a time does not extend beyond the proximity of their seat of office. Their authority has chief recognition from the Muhammadan population generally and the Christians living in the towns. With the majority of the Christian population in the mountains, who are organised into clans of their own, they communicate only through the medium of their delegates, the Muhammadan Bölük Bāshī, whose principal duty consits in collecting the taxes.

VI. Albanian, which in its original form was an Illyrian idiom, is an independent member of the great Indo-European family of languages, and stands in no closer relation to Greek than to, say, Celtic; perhaps the Baltic-Slavic group is nearest related to it. In its presents shape Albanian has eight conjugations which are distinguished by the infinitives. Composite words have become second nature to it; nor is it innocent of long periods and constructions. It separates according to the dialect into two main branches, that of the northern Ghegs (Turk. ghigha), and that of the southern Tosks (Turk. Tōska). The dividing line is said by the natives to be the course of the Ishkūmbi. Von Hahn has more precisely defined the linguistic-provinces and to this effect, that the district of Berāt situated to the south of the Ishkūmbi shows a transition-dialect. The purest Albanian is spoken, according to the unanimous testimony of the natives, at Elbaṣān. The term Ghegs one hears used only by the Tosks, whilst the latter call themselves Tosks in several of their native districts. It is preferable to call both groups Shkypetār (Turk. Ishkīpetār), the usual explanations of which name ("Rock-dwellers or Eagles") are rejected by Gustav Meyer. He compares it with *shkyip* (= Albanian language), which is to be derived from the Latin "excipere", and *shkipōny* (= I understand). This explanation which von Hahn has defended is not to our knowledge shared by Albanians. Albania is called Shkipert, Ghegish Shkipeni. Although Tosk and Gheg on the occasion of a first conversation — and this observation is relevant to the dialects of all languages — can only with difficulty make themselves mutually intelligible, this stumbling-block is removed after longer intercourse. Educated Albanians warmly emphasise the fact that, dialectic differences notwithstanding, they can easily exchange opinions with each other.

A great number of the ordinary terms of civilisation such as the names for day, night, mouth, year, for limbs, etc. Albanian has in common with the other Indo-European peoples. The Celtic invasion of the Balkan Peninsula at the beginning of the iv. cent. B. C. appears to have had no influence on the language. All the more important is the mark which the wars of the Romans and their dominion over Illyria have left. *C* before *e* and *i* is still pronounced as *k* as in Old-Latin. Also words expressing certain notions and which no nation submits to having forced upon it by another language at a moment's notice, e. g. those for horse, dog, cock, and words expressing notions associated with civilised life, e. g. those for gold and silver, have been borrowed from the Romans. Most of the expressions connected with a settled mode of life and organised political conditions can be referred back to them. The influence of Latin does not stop however at the vocabulary, but extends to the sphere of inflections. Albanian exhibits purely Latin tenses and moods; further

the plural is formed after the Latin fashion. Some numerals have simply been adopted from Latin; even the article (a modification of the demonstrative pronoun) and several pronouns possibly take their origin from this source. Moreover, since Latin was both colloquial and official language in the Balkan Peninsula in the v. cent. A. D. it wanted little for Illyrian to have become completely romanised. The language of the Visigoths, who at the beginning of the Middle Ages settled for over a century (until 535) in Illyria, has left not the slightest trace of itself in modern Albanian. The influence of the Slavs, who from the iii. to the xiv. cent. frequently played a very decisive rôle, expressed itself with lasting effect. Only a few expressions in Albanian can be referred to Bulgarian; the majority of the Slavonic words have a Servian stamp. On the other hand the presence of Slavs has in the main had no influence on inflection.

Next to Latin Turkish has had most prominent influence on the vocabulary of the Albanians. Not only was the community of religion decisive in this direction, but also the fact that the Turks in contrast to the Slavs appeared as representatives of a higher culture and are still regarded as such by the Albanians. The number of vocables adopted in their full Turkish form is astonishingly great; to nouns, verbs, particles, everything in short the Albanians are accessible. Even into the vocabulary of their Italian kinsmen who emigrated centuries ago several Turkish words have found their way, and this must have happened very early; *hak* (right), *inat* (anger), *pazar* (market), *pendžer* (window). Of Turkish inflectional endings only the *d* (in Albanian sometimes changed into *t*) characteristic of the Turkish historic-perfect has gone over into Albanian, e. g. *sev-d-is* (may esteem), *boya-d-is* (may colour). In the Albanian spoken by the Muḥammadans, especially the Gheg dialects, and among these again the dialect of Ishkodra in particular, there is a great wealth of Turkish words. Modern Greek has made its presence decidedly felt in the South. The degree of its influence is not much inferior to that of Turkish. The Albanians of Greece, who are here of course surrounded by Hellenes, have gone far towards adopting the official language. According to Gustav Meyer's researches, of the 5140 Albanian words he had before him 400 proved to be common to the Indo-European languages, 1420 to have been borrowed from the Romans, 540 to be of Slavonic, and 1180 of Turkish origin, and 840 to have been adopted in consequence of their intercourse with the modern Greeks.

The majority of the Albanians can speak besides their mother tongue one or several other idioms almost with the same fluency. In the South Greek has a strong hold and competes with Albanian on the coast. In Yānia, the seat of the Wālī, the whole population without distinction of creed attends the Greek schools, and at home, although Albanian is often understood, Greek is spoken as a rule. In the North Slavonic is spreading unchecked through all the veins of their life; here the Albanians are masters of Turkish from their childhood.

VII. Albanian Literature. The beginnings of a literature in the mother-tongue were made by those Albanians who obtained in Italy a more secure existence; they availed themselves at first of the Latin alphabet. There first appeared a Grammar and a Dictionary, the latter printed at Rome in 1635 by Franciscus Blanchus. They formed a basis for the religious tracts which subsequently had only a limited circulation. On so difficult a task as the translation of the Bible none yet ventured. The first translation of the Bible dates from the year 1824; in it — it was made during the Hellenic war of liberation — Greek first had the honour of supplying the Albanians with an alphabet. But it was at once apparent that the Albanians of the Balkan Peninsula were still too backward in their civilisation to be able to produce any large independent work. This rôle, then, fell to Girolamo de Rada of San Demetrio in Calabria citeriore, of whose family we find mention in the xvi. cent. His first work in epic form is the *Canti di Milosao figlio del despota di Scutari*, which appeared in 1836. In 1843 another national composition of his, *Canti di Serafina Topia*, issued from the press. The popular national songs are as a rule the threads de Rada's fancy spins to a lengthy web. In 1866 he published the *Rapsodie di un poema albanese*, and between 1873-1884 his *Poesie albanesi*. An analytical criticism of his poetical productions would be in our opinion more than ought to be attempted. The harshness of which he has been accused and his views on literary taste were rooted in tendencies which by his time had already had their day in the rest of Europe; but he was not writing for what we mean by a "modern" public.

Whilst this noble champion yet flourished the collection of Albanian tales and folk-poetry was began. Of such collections we have up till the present, excepting the smaller ones, five: two by J. G. von Hahn, in the 2. Part of his *Albanesische studien*, and in the ii. Vol. of his *Griechische und albanesische Märchen* (Leipzig, 1864); *'Αλβανικὴ μέλισσα* by the Tosk Mitkos, who lives in Egypt (Alexandria, 1873); by Auguste Dozon in his *Manuel de la langue chkipe ou albanaise* (Paris, 1879), and by Holger Pedersen in *Abhandl. d. phil.-hist. Classe der kgl. Sächs. Gesellsch. d. Wissensch. zu Leipzig*, Bd. xv., Leipzig, 1898, translated by him in *Zur albanesischen Volkskunde*, (Copenhagen, 1898). During the last decades the leadership of the literary movement has been transferred to the Balkan Peninsula. The first to come forward here was Nesim Bey of Premedi, son of 'Alī Pasha Trakuli (Turkali?), whose poems are mostly lyrical in nature, and have an Oriental flavour; after Turkish fashion every line exhibits Arabic or Persian words. They are all composed in the Gheg dialect. His name, though very familiar half a century ago, has almost completely disappeared from the memory of the present generation. After him appeared Konst. Kristoforidis, who, having equal mastery of the Tosk and the Gheg, had a more thorough lexical knowledge than any other. He translated firstly the Psalter in 1868, and in the following years the various sections of the Holy Scriptures, mostly into the Tosk dialect. The work wherewith he won for himself a lasting name in the scientific world, viz. the "Dictionary of the Albanian Language" (Λεξικὸν τῆς 'Αλβανικῆς γλώσσης), and which even in its author's lifetime (died 1898) attained a legendary fame, was printed at Athens in 1904. In the year 1879 28 Albanians formed themselves into a society with the object of

printing and circulating Albanian literature. This society began in 1884 the publication of the Albanian monthly magazine *Drita* (= *The Light*), which soon however changed its name to *Dituria* (= *Education*). A little previously (1883) de Rada had begun to issue in Italy the Albanian journal *Fiámuri Arbërit* (= *The Banner of Albania*), it was dropped however after the fourth volume, and in the *Arbri i ri* (= *The young Albanian*, Palermo, 1887), conducted by Schiro, had a short-lived successor. The Albanian newspaper *Shkipëtári* (*The Albanian*), which has been published at Bucharest since 1888, has been received with the loudest approbation. About this time there was opened at Koritsa as a private institution the first school using Albanian as the medium of instruction; in spite of good results and a fairly long existence it had, however, to close its doors in the end. Among Muḥammadan Albanians of that period Shams al-Dīn Sāmī Bey of Frāsher (1850—1904) stood out preeminent for his literary zeal, but his pioneering activity is rather within the sphere of Turkish philology. We will mention only three works written by him in Albanian, which like all his writing had a practical aim; an *A. B. C.-Book*, an *Elementary Grammar*, both printed at Bucharest in 1886, and the excellent, in Europe less known, *General Geography*. At the same time there appeared his far more gifted brother Na'īm Bey (1846—1900). In 1886 were published at Bucharest his three very brief works: 1. *Reading Book for Children*. 2. *Cattle and the life of the Farmer* in which he extols in sentimental language country-life, the ideal of the Albanian. Nothwithstanding its brevity — there are only a dozen pages — it is regarded by many as Na'īm's best work. 3. *Stories for maturer youth*, collected from pagan mythology, the Bible and the Ḳor'ān with the object of giving to boys some definite point beyond the antitheses of the religions round which to rally their national convictions. The most splendid sample of his talent Na'īm has given us in two extensive poetical works, both of which appeared at Bucharest in 1898; an epic poem *Skender Bey* containing 10 000 *Beit* and an exhaustive a tragedy in verse on the death of Ḥusain, with the title *Kerbelāya* (= *Kerbelā*). In the compass of the works, in the accumulation of scenes which have only an external connection with the action, in the fondness for vehement outbursts of feeling there are certain artistic weaknesses. But they are noble productions which will still long assert their place in the literature. Na'īm was a free-thinker, and nothing could have lain farther from his mind than the intention of stirring up the fanaticism of his co-religionists. Those who knew him assert that the object he aimed at with *Kerbelā* was simply to arouse enthusiasm for the national ideal in the Begtāshī who were so numerous in his native-land. His death was momentous for the Albanians of the Turkish capital. Other capable literary productions, which may be mentioned were Lumo Skendo's Albanian translation of Lamartine's *Wilhelm Tell* (Sofia, 1898) and A. Upi Kologna's Albanian rendering of Sāmī Bey's *Besā* (Sofia, 1901).

What is most worthy of mention in the modern Albanian agitation is the person of Fā'iḳ Bey of Ḳōnitsa. Son of Shāhīn Bey, and, born about 1874, he grew up under his mother's care, who herself enjoyed repute as a heroine. He first attended the Greek school of his native place, and later acquired Latin among the Jesuits of Ishḳōdra. Next he studied for some time at the Royal Lyceum (Ghalata-Serāi) in Constantinople, until, turning his back on Turkey (1895), he went to complete his education in Europe, where he received the name "Thrung Spiro Bey". His activity is mainly devoted to conducting the newspaper *Albania* which he founded in 1897 with the aid of the large Albanian Society in Bucharest, and which appears in Albanian and French; in this he has published also several novels national in character. Soon he added to it a purely Albanian section containing news of the day. By mixing the Tosk and Gheg dialects and coining new words he is endeavouring to give his nation a single literary language. He has had this gratification, that the municipal-council of Brussels called the street in which his paper is printed Rue d'Albanie.

VIII. **History.** If the question of the descent of the Arnauts has not yet been completely cleared up still it can be asserted with tolerable certainty that they are direct descendants of the Illyrians who dwelt between the Ishkūmbī and the Danube, the Sea and in the region of Venice, but perhaps also descendants or in part at least very close relatives of the old Epirots who were settled to the South of the Ishkūmbī, and of the Macedonians who extended towards the East as far as the Strymon. Certain parallels in their civilisations are an argument in favour of descent from these two peoples. On the other hand, the statement that the Pelasgians were also forebears of the Arnauts can in the present condition of the science of language be neither proved nor disproved. To leave the Macedonians aside, the Epirots and the Illyrians, split up into small clans, only twice, in the iii. cent. B. C., formed an independent political organisation; the Epirots then crossed over under Pyrrhos to Italy. The campaign of Aemilius Paulus and his victory over the Macedonian king, Perseus (168 B. C.) added besides Macedonia both Illyria and Epirus to the Roman Empire. In Strabo's time Greeks and Epirots were separated by the Ambracian Sinus, Epirots and Illyrians by the Genusus (Ishkūmbī). The chief town of the district in the later Roman period had the same name as this river, viz. Skampa, which was situated in the neighbourhood of the modern Elbasān. We then for the first time encounter the 'Αλβανοί with their capital Albanopolis, whom the geographer Pausanias (middle of the second cent. A. D.) mentions as one of the Illyrian tribes. It is the Slavs again with their ravaging expeditions who are the first to exercise a lasting influence. Before the pressure of their advance towards the South, which began in the iii. cent., the Macedonians retreated to the Albanian mountains, where they became merged in the peoples who were of common kin. In the vii. cent. the Serbs conquered the North of Albania; until 1360 this formed a province of the Servian Empire, and was quite cut off from the Southern part of the country. Finally in the second half of the ix. cent. the Turkish Bulgarians who by this time had been taken up by the civilisation of the Slavs, carried their attack against Macedonia, and being favoured by fortune quickly made themselves masters of the whole of central and southern Albania as far as the Am-

lonian Gulf. Finally in the years 1018 and 1019 the Byzantine Emperor Basil Bulgaroktonos succeeded in again reducing Western Roumelia under his dominion; he left the Bulgarians however in possession of their domains. From this point, after we have had for almost a millenium to content ourselves with the names Epirus and Illyria inherited from antiquity, the modern designation is used with great consistency: the town Albanon, Arbanon, Elbanon is the local centre of the Byzantine power now opening on a new period of prosperity; the whole region, so far as it belongs to the Byzantines, is called after it. When Nicephorus Bryennios' successor in the governorship of Durazzo rose in arms against the Byzantine emperor and advanced in 1079 by Okhri to Selānik he mustered besides Normans, Bulgarians and Greeks also 'Αρβανῖται in his army. From this time on we meet them in all the battles in the west of the Balkan Peninsula, sometimes also as 'Αλβανοί. After the conquest of Constantinople and the greater part of the Roman Empire by the Latins (1204) a scion of the exiled imperial family founded the state of the Despot of Epirus which included also Aetolia and Acarnania, and numbered among its most famous towns Lepanto (turk. Īne bakhti), Arta and Yānia. Apart from these districts which lie more to the South and now have an independent existence, Albania was constantly an apple of discord to foreign states, especially to Servia and Bulgaria, so much that the Greek-Orthodox bishops of Albania saw that the only hope of safety lay in passing over to Latin Christianity (circa 1250).

The state of the Despot of Epirus during the entire xiii. and xiv. cents. was undermined by the disputes for the succession to the throne, so that any sound development was out of the question. At this period the Turks first came into inimical relations with the Albanians. These were 2000 subjects of the Emir Umūr Bey of Aidin, who in 1336 went out in the pay of the Byzantine emperor Andronikos III with the purpose of reuniting this state of the Despot with the Greek Empire, and who won for their nation permanent repute as fearsome opponents. They pursued the Albanians over the most trackless ranges, killed the men and brought away a vast booty in women and herds. In this time the great Czar of the Servians, Stefan Duschan (1331—1355) inflicted those mighty blows which brought Albania (until 1340), northern Macedonia and Thessaly under his sceptre. Under the influence of these victories a large section of the Albanians returned from the Latin rite to the Greek.

The long protracted turmoil of dynastic wars had made germinate in their real victims, the Albanians, the seeds of a national sentiment which contained great promise, so that, when after Duschan's death a descendant of the former "despots" returned to the province, the inhabitants rose *en masse* and, under the leadership of Karl Topia, cut down the pretender and his entire force in the battle at Acheloos; further, a Turkish punitive force which had just landed in Thessaly and attached themselves to the Greeks perished with the latter on the field of battle (1388). The family of Topia held for a century a position of authority in the history of North Albania. The mother of Karl, victor of Acheloos, was a natural daughter of the Neapolitan king Robert of Anjou, so that the proud chieftain could with some right plume himself on being "the first of the house of France". A no less important family of Servian origin are the Balsha. They are mentioned only from the middle of the xiv. cent., but soon thereafter we meet with them as masters of Ishkodra, Antivari, Dulcigno, Trau and Sebenico. The Kastriots do not make their appearance till a decade later; their ancestor, the Serb Branilo, is first mentioned in a deed of the year 1368.

A body of Turks — we know not whether they were Osmanlis — under an Albanian convert of the name Shāhīn held the town of Yānia and district in check from the year 1381 for its master, the Servian despot Thomas. After the path had been thus cleared for the Osmanlis their most capable general, Timūrtāsh Pasha, four years later carried the fame of his weapons as far as Ārta; he immediately returned however, so that the helpless population escaped on this occasion all but terror. At this same time prince Balsha II was defeated and fell before the Turkish Grand Wezir Khair al-Dīn Pasha in the battle at Saura on the Viōsa. Then when Timūrtāsh Pasha pressed forward in 1387 into the region of Periepe and Monāstir the despot of Yānia had to submit to visit the court to pay homage in person to the sultan Murād I. From Monāstir the Turks pushed forward their advance towards the Adriatic, and for two years threatened the immediate neighbourhood of Durazzo. This is the first occasion on which they planted their standard in North-Albania. Finally the need for mustering all available forces against Servia compelled them to withdraw. Whatever Roumelian legend, taking sides with the Osmanlis, may tell of the part the Albanians played in the battle at Ḳōsova (1389) there is nothing more certain than that they fought on that occasion in the opposing ranks and constituted the reserves of that army of the allied Slavonic princes which collapsed before the impact of the Muslims. After this event so momentous for the history of Europe the Turks did not at first have leisure to push their former enterprises in Albania to a prosperous conclusion, and later were prevented from doing so through the collapse of their own forces under the attacks of Timūrlenk (1402), so that the Arnauts were spared by their enemies for almost three decades. But, far from utilising the opportunity for becoming united, in many districts the people had long since lost all hope of a happy future and left house and home to follow a dark fortune abroad. And as from the pressure of the heavy hand of Stefan Duschan the Albanians fled to the Peloponnesus, where the first mention we find of them is as mercenaries in the pay of the young despot Manuel Kantakuzenos, entrusted with the task of reducing the Archons who had made bold to rise against him, to obedience to their master who was labouring at the time under heavy difficulties.

Regarding the events which transpired in the first decades of the xv. cent. in the Albanian mountains we have no information. We only know that in the year 1421 on the death of Balsha his most important towns, Drivasto, Antivari, Dulcigno, Alessio and Budua fell to the Venetian Republic, which, being already in possession of Durazzo, now held command over the whole coast. The north of the Viōsa presumably as far as Zenta — by this latter name the coun-

try of Montenegro is to be understood, before it fell under Osmanli sway — was at that time subject to the family of the Kastriots which had suddenly risen to authority. The south as far as the Ambracian Gulf was subject to the far more powerful Arianits, who ostentatiously boasted the surname Komnenes which came to them from their mother's side. His contemporaries conferred on the Arianit Topia the epithet of "the Great" in recognition of the bravery he had displayed in the wars with the Turks. Since he had no relations with Europe, history has not recorded the deeds of this national hero, who prepared his countrymen for the notable high position they attained later. Not till the year 1423 do we again hear of an Osmanli campaign, in the course of which ʿIsā Bey, son of Ewrenōs, devastated the countryside and forced the towns and both the Arianits and John Kastriota to acknowledge the Sultan as their superior. John Kastriota was allowed to return home on giving up as hostages his four sons, including the youngest, George, and the Arianits, who were ever meditating ambitious plans, contrived to strike off every fetter from themselves and escape to fill every mountain with the summons to fight the Turkish colonists. The latter were slaughtered in barbaric hecatombs, and terrorism and the sword were carried far and wide into the country of the Osmanlis. Threatened by enemies on every hand in Asia and Europe only after the lapse of ten years did Sultan Murād find time to despatch (1438) a considerable fighting force under ʿAlī Bey against this people which loved its liberty more than aught else. Its success was short-lived. On its withdrawal the Albanians rose afresh, and the Osmanlis who had sought protection in the fortified town of Ergeri would have been put to the sword, had not Tūrākhān hastened in the middle of the winter (1435-1436) to the relief of the hard-pressed fortress. The Sultan now felt so secure that in violation of all right he arrogated to himself the sovereign authority over Akče Ḥiṣār which really belonged to George Kastriota, called Iskandar Bey. The latter, now awakening to consciousness of a long repressed indignation, made his escape on the defeat of the Osmanlis at Nish (1443) from the Muhammadan army, in which he held important rank, and summoned all Albania to battle for its freedom. The details of his glorious deeds are not in place here. It is sufficient to remark that there was rarely an encounter in which the Albanians did not strew the field of battle with the corpses of thousands of the intruders. But even in the life-time of Iskandar Bey it frequently appeared as if even his heroic soul could not cope with the weight of numbers. After his death (1467) the Republic of Venice entered on the oppressive heritage of protecting, from its position in the Adriatic Sea, the freedom of the Albanian mountains. On the fall of Akče Ḥiṣār, however, in the year 1478 the Doge had to sue for peace, and, in return for the recognition of Venetian authority in the places on the coast, to acknowledge (1479) the supremacy of the Sultan over the entire interior and especially in Akče Ḥiṣār and Ishkōdra.

In the year 1550 the inhabitants of the mountains in northern Albania secured to themselves, in return for their acceptance of the terms of compulsory military service in the event of war, the rights, which had hitherto been disputed to them, of self-government and exemption from taxation. The only extension of the Osmanli empire on the Adriatic coast consisted in the annexation in the xvi. cent. of Antivari (Turk. Bār) and Dulcigno, 1571, shortly before the memorable day of Lepanto. A rumour was put in circulation at that time by officious Venetian agents that the Albanians intended to take up arms against their masters; the people did not venture to do so however, notwithstanding the fact that the war had resulted unfortunately for the Osmanlis. Most resistance to the central authority came from the Klementi, troglodytes who were armed with lances, shields and broad girdle-knives; to bridle this race of brigands a fort was built in the year 1612 in the neighbourhood of Ghūsīnī (Gusinyé). In this period occurred a fresh move on the part of the Pope to keep the inhabitants in the ancient faith; the first Franciscan mission is set down by a reliable source to the year 1624. New antagonistic complications with the Turkish authorities and the castigation of the insurgents by Dūdje Pasha fall according to the authority of the historian Naʿīmā into the year 1624. The conquest of Morea by the Venetians (1687) did not prejudice the Osmanlis with the Catholic Albanians. When the City of the Lagoons made at that time an attack on Dulcigno which lay opposite to it, the Hōti joined the side of the Muslims and so distinguished themselves in the successful defence of this fortress by the sea that precedence over all the Catholic tribes (the Mirdites excepted) was granted to them.

The Greek-orthodox Albanians had not for centuries ventured to raise their voice against the Turkish yoke. Only when the splendid deeds of Austria enlivened the perished hopes of the Christian world in the xvii. cent. did they turn their eyes towards the west and the north. After the Caliph renewed in 1715 the war with Venice, and soon thereafter went to war also with the German emperor, the Greek archbishop of Okhri in his own name and in the name of other bishops and prelates repeatedly invited the imperial commanders-in-chief, Prince Eugene of Savoy, to come to the country's liberation (1716). But these unruly spirits had at first to rest content with the fact that the Venetians did decide (1716) upon several landings, which miscarried however, at Bütrintō, Prevesa and Vonitsa (Turk. Vōnīča) in Southern Albania. Also the siege of Antivari (1717-1718) and the blockade of Dulcigno (1722) by Venetian squadrons left no traces.

Favoured by the obscurity of the political horizon Meḥmed Bey of Bushāt, a village near Ishkōdra, attained in the middle of the xviii. cent. such importance that, for good or ill, the Porte had to nominate him Wālī of his native place. The influential families in the town and province he incited to a war of mutual extermination, so that he remained unrestricted master of northern Albania. For refusing to take the field against Catherine II he was put to death by command of the Porte. His two sons, Muṣṭafā and Maḥmūd succeeded him in the governorship. They incorporated the districts of Lesh, Tirāna, Elbasān and the whole of Dūkadjīn within their sphere, and even in Dibra and Mati their word was law. During the first war of Catharine II against the

Porte the Tosks of Morea revolted against the latter and could only be held in check by the despatch (1770) of 3000 Ghegs, who were favourably disposed towards the Turks, under Muṣṭafā Pasha across the Isthmus of Corinth to the Peloponnesus. But soon Tosk and Gheg in league produced yet madder disorder, until Ghāzī Ḥasan Pasha, who was almost the sole embodiment of the unity of the empire, in a great battle bowed their obstinate necks.

About the same time as the Beys of Būshāt in the north ʿAlī of Tepedelen [q. v.], whose family held for decades an important position, had usurped the authority of Southern Albania, but fell back at first before the masters of the north. Maḥmūd Pasha of Ishkōdra had in 1785 given the loose to his enterprising spirit and made an invasion which excited a great sensation at the time into Venetian territory, then advanced against Kūrd Pasha of Elbaṣān who had been commissioned to subdue the unruly spirit of ʿAlī of Tepedelen, and in conjunction with ʿAlī inflicted defeats on the Pasha (1788). Next he butchered in the plain of Kōṣova the Osmanli troops who had been despatched against him, so that he saw nothing for it but to throw himself into the arms of Austria. The Emperor Joseph II offered to recognise him as sovereign of Albania as soon as he should turn Catholic. Maḥmūd, who always showed a great fondness for Catholicism, made Catholic and Muhammadan alike swear by the Gospel and the Ḳorʾān respectively to fight all their last breath the enemies of Albanian freedom. By the excommunication which the Shaikh al-Islām fulminated against him he was only enflamed to the more violent hate and inflicted fresh defeat on the Turkish armies moving against him. The Emperor Joseph sent him shortly before the Austrian declaration of war against the Porte a large silver cross, under an armed escort of 2600 men. Maḥmūd entertained the deputation at a splendid banquet, and had them murdered in their cups; this bold exploit he turned to such good account in Constantinople that the Sulṭān, under threat of war from his northern neighbours, assented to his pardon (1787). A year later it is ʿAlī Pasha who is seeking to negotiate because of his elevation to be ruling prince of Albania, but on this occasion the negotiations are conducted with the Russian commander-in-chief Potemkin. Soon after this the Christian Albanians of Sūlī, who for over a century had led an independent life in their inaccessible and rather unproductive region, entered into similar intrigues. They joined in April of 1790 the deputation from the Greek Islands to St. Petersburg, to request of the Empress Catharine a ruler for their devastated native country. Not till 1803 did ʿAlī Pasha of Tepedelen succeed in driving the Sūliōts out of the land.

We are now verging on the epoch when the old-Hellenic element rose in rebellion against its Osmanli oppressors. This is now meet opportunity to make mention of the Arnauts who were settled in Greece and had played so eminent a part in these wars. The immigration which had continued for centuries of Tosk Albanians into Hellas had in no wise stopped since the bloody war with the Ḳapūdān Pasha Ghāzī Ḥasan in the year 1779, so that by the beginning of the xix. century a fifth of the population of Greece was composed of Albanians, who to the number of 200 000 persons formed separate groups in the larger part of Boeotia, the whole of Attica, Megaris, Corinth, Salamis, Arcadia and almost the whole of Achaia; they preferred the mountains and the low lands, whilst in the towns trades and crafts as a rule were in the hands of the Greeks. On the islands Poros, Hydra and Spezzia all the inhabitants were Albanians, Hydra alone counting 40 000, and being bold, contented seafaring people amassed extraordinary riches in a few decades. The islanders of Hydra and Spezzia had to provide a number of sailors for the Turkish navy, and maintain them during their term of service.

The warlike nature of the Muhammadan and Christian Albanians brought it about that on the occasion of the Greek rising they cooperated with the Greeks in resolute fashion, and made ample contribution towards the liberation of the Hellenic nation. After he had masqueraded for more than half a century before the world as a defiant rebel ʿAlī of Yānia felt his position grow daily more insecure. As it was he, the Muhammadan Albanian, who emboldened the Greek revolutionaries centralised in Roumania by his illusory representations and kept the spirit of unrest awake in Morea also, so was it the Christian Albanians of Sūlī who first unfolded (Dec., 1820) the banner of freedom from Osmanli domination and thus made the prelude to the Greek war of liberation which broke out four months later. The fact of ʿAlī being able to hold out until February, 1822, in his fortress at Yānia promoted in remarkable fashion the plans of the champions of liberty.

Whilst the Tosks had become deeply involved in the cause of the Greeks, the Ghegs were also brought into sympathy by the prevailing instability of the situation.

The merchant marine of the people of Dulcigno perished almost utterly in the unequal fight with the enthusiastic Greeks. Further, Muṣṭafā of the famous Būshāt-family availed himself of the straits in which the Porte had laboured, since the extermination of the Janizaries to press more and more shameless demands. In 1828 he delayed joining in the Russo-Turkish war, then when the two powers had concluded an armistice he made bold on his own responsibility to renew the hostilities. After the declaration of peace he contrived to muster round his colours a line of Roumelian Pashas. The Porte was compelled to despatch (1830) against him its most capable general, the Grand Wazīr Meḥmed Reshīd Pasha, who succeeded in totally defeating (1831) Muṣṭafā at Perlepe and compelling him to capitulate (1832) in Ishkōdra. With Muṣṭafā the line of native governors in Albania became extinct.

The activity of ʿAlī and the masters of Būshāt has special importance also on the side of social development, in that so far as they could they cleared away the Albanian custom according to which every town was a state and every home a fortress, and thus terminated for Albania its mediaeval age. Meḥmed Reshīd Pasha gave the finishing blow to the last remains of local independence in the central part of the country, so thoroughly indeed that for decades after every innovation was traceable to him, the "Ṣadr-i aʿẓam".

With the xix. cent. there dawned also a rosier day for the Christians in Albania. Previously those of them living in or near the towns had had occasion to groan under sore vexations; their clergy had sometimes been hanged as common criminals because of trifling misdemeanours against the public law of the State and Islām. When the Turkish maxims of state came after the beginning of the xviii. cent. under humaner revision the Christian Albanians were able to breathe freely again. It resulted in the approximation of the two creeds. The lords of Būshatī and ʿAlī of Tepedelen relied for the defence of their authority on Christians as much as on Muḥammadans. But these events were only the overture to religious equality which was the more firmly secured after the downfall of the Janissaries. Since the overthrow of ʿAlī and Muṣṭafā of Būshatī the Muḥammadans in Albania have been no less liable to taxation than the Christians, the latter, indeed, had after 1832 the advantage in that they were exempted almost without exception from a military service which has proved very severe because of the many wars. The reforms and the taxation both of the Muḥammadans and of the Christian mountain-clans who in many respects had hitherto been independent could not be effected all at once in so broken and mountainous a country. The disputes between the authorities and the tribes lasted for decades. Serious revolts on the part of the Muḥammadans fall to be recorded especially for the years 1835, 1843-1844, and 1847. Further in 1854 there were bloody conflicts with the warlike tribe of the Lower-Vassojevič on the Montenegrin frontier on the occasion of the collection of the taxes, but these ended with the defeat of the tribe and its submission to the laws of the state.

During the last Russo-Turkish war (1877-1878) the Catholic and orthodox mountain-clans refused, notwithstanding pressing suggestions on the part of the Russians, to take up arms against their sovereign, the Sultan. Russia avenged herself at the Berlin Congress by providing for the conquered Servians and the victorious Montenegrins at Turkey's expense and also obtained for them many Slavic and Albanian districts: viz., Ivrānya, Ḳūrshūnli and Leskovāč for Servia, the districts of the Vassojevič, Hōtī, Ḳlīmentī and Iskrieli for Montenegro. Now for the first time Muḥammadan and Christian tribes were seen united in one Albanian league which claimed to represent the unity and integrity of their nationality. Servia retained her three districts, whilst Montenegro, which possessed also Podgoritza and Antivāri, was given in compensation for the loss of hers by far the larger part of Muḥammadan Dulcigno. Before the Albanians would submit to this parcelling of their country they had to be brought under subjection by campaigns expressly undertaken in 1880 and 1881 by Derwīsh Pasha.

Changes especially in the system of taxation repeatedly led later to serious dissensions with the Porte. In 1902 Shemsī Pasha found great difficulty in restoring peace at Ipeḳ/Djaḳova.

(K. SÜSSHEIM.)

ARPA (T.), barley, barley-corn, as weight = 1/3 *Ḥabba* [q. v.].

ARPALIḲ, a term. techn. from the age of Feudalism in Turkey, denotes properly "Barley-money". There was understood by it an extra-allowance made to a deserving official, really for the purpose of defraying the costs of fodder for the horses he was required to keep. In ancient time there were no actual investitures with fiefs under the name Arpaliḳ, and an Arpaliḳ amounted at most to 19 999 Aḳče (cf. Ḳoči Beg, Constantinople 1303, p. 17 = *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xv., 278). This custom was departed from later. Persons already invested with a fief could receive a second as Arpaliḳ in increase of their income. And thus it could be given not only to Sipāhi but also to 'Ulamā'. Cf. Tischendorf, *Das Lehnswesen in den mosl. Staaten* (Leipzig, 1872), p. 126, N°. 64 and Belin in the *Journ. Asiat.*, Série 2, iv., 493, N. 4.

(F. GIESE.)

'ARRĀDA (A.), a kind of Ballista, the same indeed as was called by the Romans Onager. It is really a loan-word from the Aramaic, though Fraenkel has not accepted it.

ARRADJĀN, town in Fārs (Persis). According to the Arabic authors it was founded by the Sāsānid king, Ḳawādh i. (488, 496—531), who settled there the prisoners of war from Āmid (Diyārbakr) and Maiyāfāriḳīn, and gave to the new settlement the official name Weh Āmid-i Ḳawādh = "Good (or Better)-Āmid of Ḳawādh", ran together and arabicised into Wāmḳubādh or usually simply Āmid-Ḳubādh (thus would Marquart emend in Ṭabarī, i., 887, ult.; 888, 1). Some Arabic writers have erroneously given to Arradjān the name Abar(z)ḳubādh, which was borne by a district and a town on the western frontier of Ahwāz (Khūzistān); see also *supra*, art. ABARḲOBĀDH. In any case, the name which is in common use, Arradjān, comes from an older town which existed before the new one founded by Ḳawādh.

In the Arabic mediaeval age Arradjān was a very frequently mentioned frontier-town of Fārs against Ahwāz, and down to the end of the vii. (xiii.) cent. was the capital of the most westerly of the five provinces of Fārs; a part of the province of Arradjān belonged earlier not to Fārs but to Khūzistān (cf. Ibn Faḳīh, p. 199, 4; Muḳaddasī, p. 421, 16). Arab geographers describe Arradjān as a large place with excellent bazaars, which manufactured much soap, grew great quantities of corn, possessed numerous date- and olive plantations, and was considered to have one of the healthiest situations of the "hot land" (Garmsīr). The rise of the Assassins portended its decline: for they seized possession of several strongholds on the neighbouring hills and from there made frequent plundering raids on the town and its adjacent district, and finally took it in the vii. (xiii.) cent. Arradjān never recovered from the horrors of this conquest. The inhabitants emigrated mostly to the neighbouring town, Bihbahān, which succeeded Arradjān as capital of the province.

According to the Arab geographers Arradjān lay on the road leading from Shīrāz to 'Irāḳ (Babylonia), 37 miles distant from Shīrāz and Sūḳ al-Ahwāz (or, al-Ahwāz, q. v.), and a day's journey from the Persian Gulf; it was situated on the river Ṭāb, which here formed the boundary between Fārs and al-Ahwāz. C. de Bode has discovered the ruins of Arradjān; they lie a little under 31° 40′ N. Lat. and 50½° E. Long. (Greenw.). The site is called to day Arradjān or Arghān; Mustawfī shows that the latter (Arghān or Arkhān) was the form in popular use at the beginning of the viii. (xiv.) cent. The Ṭāb, the modern Āb-i-Kurdistān, was then called after it, and still is occasionally (cf. P. Schwarz. *Iran im Mittelalter nach den arab. Geogr.*, i. 6. N. 1), Āb-i Arghūn (cf. 'Alī b. Yazd's Ẓafar Nāme, Bibl. Indica, i., 600). The site of the ruins, according to the communications of their latest visitor (Herzfeld), is 2 good hours to the East of Bihbahān, Behbahān, now pronounced Beibūn), on a canal leading out of the Āb-i Kurdistān, and forms an almost rectangular plain of ruin 3930 × 2620 ft., close by the foot of the Kūh-i Behbehān. In a gorge in the latter bitumen (Mūmiyā) is found, which is used as a precious remedy, a fact previously mentioned by Ḳazwīnī (ii., 94, 160). Close to Arradjān two famous bridges whose ruins still exist led across the Ṭāb in the middle Ages.

(STRECK.)

'ARRĀF (A.), seer, one who can discover what has been hidden or stolen. Cf. Goldziher, *Abhandlungen zur arab. Philologie*, i., 25 N.

ARRĀN, frequently written al-Rān, — Arabic name for ancient Albania (Armenian *Ałuank'*); later Greek writers also call the country Arianía instead of Albania, and the people Ariamí instead of Albanoi; according to Marquart (*Ērānšahr*, p. 117) these terms as well as the later Arabic name of the country are to be traced back to the Persian form of the name Aran. As in ancient time under the name Albania so under the name Arrān originally the whole region from Derbend in the North-East to Tiflis in the West and the Araxes in the South and South-West was comprised (cf. Iṣṭakhrī, ed. de Goeje, p. 190). Later writers denote by the name "Arrān" merely the land "between Shirwān and Ādharbaidjān" (thus Yāḳūt, ii., 132, 4) or "from the bank of the Araxes to the Kura, between the two rivers" (thus Ḥamd Allāh Ḳazwīnī in Schefer, *Siyāsat Nāme*, Supplement, p. 226). The town of Partav (among the Arabs, Bardha'a), on the Terter (in Yāḳūt, i., 560, 2 Tharthūr), not far from where it discharges into the Kura, which in the vi. cent. A. D. had taken the place of the ancient capital K'awalak (in Ptolemy Chabala, in Pliny Cabalaca, among the Arabs Ḳabala) is described also by

the Arabs as the capital of Arrān and the largest town in the whole of Caucasia. In the iv. (x.) cent. Arrānī i. e. Albanian, was still spoken in the district around Bardha'a (cf. Iṣṭakhrī, ed. de Goeje, p. 192, 2). Albanian Christianity had not yet been finally driven out of Albania by Islām; according to Muḳaddasī (ed. de Goeje, p. 376, 8) Christians formed the majority of the population in the towns of Shābarān (now in ruins about 15 mls. south-east of the modern Kuba) and Shakkī (now Nūkhā). Nor had the Albanian Church surrendered her claims to independance of the Armenian Mother-Church.

Arrān was conquered in the time of 'Othmān (644—656 A. D.) by Salmān Ibn Rabī'a al-Bāhilī, but was frequently punished later by the Khazar. The oldest Arabic coins stamped in Arrān date from the year 90 (708-709). The country was united with the other Arab possessions in Caucasia under one governor, Armenia (Armīniya) being the name usually given to the districts so united although the governors resided mostly in Bardha'a as the largest town. The ancient dynasty of the Albanian kings had by then been long extinguished; the Persian house of the Mihrakan, which had been established here towards the end of the vi. cent. A. D. and had accepted Christianity some decades later, appears to have ruled only a part of the land. In the Arabic period the sphere of these princes, who bore the Persian title Irānshāh, was distinguished from Shirwān (written by the Arabs also Sharwān, by the Persians later usually Shārwān), the sphere of the Shirwanshāh (i. e. the land between the Kura and the Caspian Sea). The Irānshāh is also called "Baṭrīk (i. e. Patrikios) of Arrān" (Ya'kūbī, ed. Houtsma, ii., 562). The last prince of the house of the Mihrakan, Waraz-Trdat, was murdered by his relative Nerseh (Arab. Narsī, *ibid.*) in the year 821-822 A. D. In the reign of Mu'taṣim (833—842 A. D.) the governor Afshīn was routed by Sahl Ibn Sunbāṭ, who had taken possession of Arrān (Ya'kūbī, ii., 579; Balādhurī, ed. de Goeje, p. 211); this same Sahl, however, soon after (223 = 837-838) performed a great service to the Arab government by surrendering Bābek, and in return was confirmed as Baṭrīk by the Caliph (Ṭabarī, ed. de Goeje, iii., 1232). In the history of Albania by Moses Kalankatvac'i (Russ. transl. by Patkanian, St. Petersburg, 1861, p. 266) Sahl is designated as Irānshāh (Arm. Eranshahik).

Mas'ūdī (*Murūdj*, ii., 69) tells us that in his time, therefore shortly before 332 = 943-944 the Irānshāh Muḥammad Ibn Yazīd made himself master of the land of Shirwān after the death of the Shirwānshāh 'Alī b. al-Haitham, and took the title of Shirwānshāh; this same Muḥammad b. Yazīd on the death of his brother-in-law or his son-in-law (Ṣahr) 'Abd Allāh (according to the Paris Edition; some Mss. have 'Abd al-Malik; according to the coins Haitham Ibn Muḥammad ruled in Derbend in the year 330 = 941-642) Ibn Hishām, Prince of Derbend, annexed this town to his province (*Murūdj*, ii., 5). In this way all the parts of ancient Albania would have been politically reunited; but Mas'ūdī's information is not confirmed from any other source. Ibn Ḥawḳal (ed. de Goeje, pp. 250, 254) mentions a Shirwānshāh Muḥammad Ibn Aḥmad al-Azdī, contemporary of the ruler of Ādharbaidjān Marzbān Ibn Muḥammad (died 346 = 957-958), but he also has no mention elsewhere; how far his province extended towards the West is not stated by Ibn Ḥawḳal. During the following centuries Arrān remained politically separate from Shirwān and was ruled by a dynasty of Kurdish origin, the Shaddādids (Banū Shaddād). The capital of the country at that time was Gandja (the modern Jelisawetpol); the old capital Bardha'a had had fearful punishment inflicted by the Russians in the year 332 = 943-944 and could not recover from the consequences; Yāḳūt describes Bardha'a as an unimportant village. On the extinction of the little important (not even mentioned by Ibn al-Athīr) dynasty of the Shaddādids Arrān was immediately annexed to Ādharbaidjān and has since had no ruling-house of its own; as in Ādharbaidjān, Shirwān and Derbend the population has since the time of the Seldjūḳs gradually grown Turkish; since the period of the Mongols the southern portion of the country has been usually designated by the Turkish name Ḳarabāgh. By that time the name Arrān was retained really only as a literary tradition.

For the later fortunes of the country see GANDJA.

(TH. W. JUYNBOLL.)

'ARSH, throne. [See KURSĪ.]

ARSHIN (ARSHUN) (T.), ell.

ARSLĀN (T.), lion; also frequently appears as a Turkish proper-name.

ARSLĀN b. SELDJŪK was the oldest son of Seldjūk, the ancestor of the Seldjūḳs, and appears to be identical with Isrā'īl, who in other sources is named as such. Sometimes the name Paighu precedes that of Arslān, this name however appears also in connection with another son Mūsā. In the part of Baihaḳī's history which has been preserved to us neither the one nor the other is mentioned. In the biblical names of Seldjūk's sons, (Isrā'īl, Mīkā'īl, Mūsā and Yūnus; the latter is not mentioned in all the sources) there seems to be retained a reminiscence of the Christianity which once was wide-spread among the Turkish tribes in Semiryetchensk, a fact of which the Syro-Nestorian Tomb-inscriptions published by Chwolson bear evidance. Cf. Barthold in the *Zapiski vostoč. otd. imper. russk. arkheol. obšč.*,

1894, p. 18 *et seq.* According to Muḥammadan tradition however Seldjūḳ was a convert to Islām. However that may be, in the beginning of the iv. (x.) cent. we find the Seldjūḳs settled in Nūr Bukhārā, with Arslān apparently head of the family and having at his disposal a large number of cavalry, dangerous guests, of whom the neighbouring princes would gladly be rid when they could not utilise them against their enemies. When Maḥmūd the Ghaznawid came in 416 (1025) to Transoxania he concluded an alliance with the Karakhānid Ḳādir Khān, and on this occasion the matter of the Seldjūḳs was discussed and Maḥmūd formed the plan, which was only carried out some years later, about 420 (1029), of capturing Arslān and disbanding his Turkish soldiers. The disorganised remnant then settled in Khorāsān and was kept in check through their captive chief. The plan seemed cleverly conceived; but, as is well known, was fateful for the Ghaznawids, for the Turkish brigands who settled in Khorāsān here began robbing and plundering and could not be held in subjection, since they were again and again reinforced by new troops which crossed the Oxus, and had no care for the captive Arslān. He was kept in custody in the fortress of Kālindjar until his death which probably occurred in the year 427 (1035-1036). Of his two sons, Ḳutulmish (q. v.), founder of the Seldjūḳs of Asia Minor, is the better known.

ARSLĀN b. Toghrul b. Muḥammad Abu 'l-Muẓaffar, Rukn al-Dunyā wa 'l-Dīn, the Seldjūḳ, reigned from 555—571 (1160—1175). Arslān was only a year old when his father Toghrul died (528 = 1134), and he was educated with his cousin Malikshāh b. Seldjūḳshāh. In 540 (1145-1146) by the command of the Sultan Mas'ūd both were imprisoned in the fortress of Tekrīt, and only set at liberty again through the Caliph al-Muḳtafī (549 = 1154). Arslān then succeeded in escaping to his step-father, the powerful Atabeg Ildegiz [q. v.], with whose help he ascended the throne after the assassination of Sulaimānshāh [q. v.] in the year 555 (1160). He had of course to resign all pretension to real power since that was in the hands of Ildegiz. When the latter died in 568 (1172) his son and successor Muḥammad Pahlewān [q. v.] got rid of the sickly Sultan (571 — 1178) by poison, as some historians probably rightly state, whilst he recognised the latter's son Toghrul, who was yet a minor, as Sultan.

ARSLĀN ARGHŪN, son of the Seldjūḳ sultan Alp Arslān; on the occasion of the premature death of his brother Malikshāh (488 = 1062) he took possession of Merv, Balkh, Tirmidh, Naisābūr and other towns of Khorāsān, and was allowed at first to hold them in peace by Malikshāh's successor, Barkiyāruḳ. But this friendly relation endured only as long as Mu'aiyad al-Mulk, son of Niẓām al-Mulk, was Wazīr. When the latter was dismissed, Barkiyāruḳ sent another son of Alp Arslān, Būribar, to Khorāsān. But he met with little success, and was soon after seized by his brother and strangled by his command (488 = 1095). Arslān Arghūn however held sway but a short time, for in the end of the following year (1096) he was stabbed by one of his slaves.

ARSLĀN-KHĀN, Muḥammad b. Sulaimān, Karakhānid, Prince of Transoxania. His father Sulaimān-Tegin, grandson of the "great" Tamghāch-Khān Ibrahim, had governed the country for a short time about 490 (1097) as vassal of the Sultan Barkiyāruḳ. On the conquest of Transoxania by Ḳadr-Khān Djibra'īl of Turkistān the young Prince Muḥammad fled to Khorāsān; after this Karakhānid had been defeated by the Sultan Sandjar the Prince was appointed ruler in Samarḳand with the title Arslān-Khān (495 = 1102); his daughter was afterwards married to the Sultan Sandjar. Only after a prolonged struggle did he succeed in producing peace in the country; several times he had to invoke aid from his son-in-law, who interned the promoters of the seditions (both Turkish praetorians and ecclesiastic dignitaries) in Merv. Arslān-Khān appears to have done a great deal, however, in furthering civilisation in the country; in the History of Bukhārā (Continuation of the *Ta'rīkh-i Narshakhī*) he is credited with erecting in this town and its neighbourhood buildings for the common good. At the same time he procured an army of 12 000 Mamlūks and made frequent expeditions into the land of the "unbelieving Turks". In the closing years of his life he had, owing to a seizure of apoplexy, to associate his sons, first Naṣr, then Aḥmad, with him as regents. From these circumstances the seditious movements in the country acquired new strength; Sandjar again appeared in the role of peace-maker, but not however, till after peace had actually been restored, and consequently was regarded by the princes as a burdensome ally; between his father-in-law and him there were first words, then open war; Samarḳand was besieged and taken in Rabī' I., 524 (month began 12 Febr., 1130); the ailing Arslān-Khān was fetched out in a litter to his daughter and carried thence to Balkh, where he died soon after (the year of his death is variously given: 524, 525, also 526) and was buried in Merv in a Madrasa he had himself erected.

Houtsma), ii. Cf. also the excerpts from various Mss.-sources in Barthold, *Turkestan im Zeitalter des Mongoleneinfalls*, Teil I, especially the letter in the name of the Sultan Sandjar to the clergy of Samarḳand during the siege, p. 25, 26. (W. Barthold.)

ARSLĀN-SHĀH b. Kermān-Shāh, Muḥyi 'l-Islām wa 'l-Mu'minīn, the Seldjūḳ, Prince of Kermān 495—537 (1101—1142). The long but apparently rather inactive reign of this prince is celebrated as a very fortunate one; towards the end of his life, however, he fell under the influence of a favourite wife Zaitūn Khatun, who was desirous of securing the succession for her

son Kermān-Shāh. But the latter proving incompetent an other son, Muḥammad, caused his aged father to be arrested and seated himself on the throne. Arslān-Shāh died soon after, but whether a natural death remains uncertain.

ARSLĀN-SHĀH B. MAS'ŪD, the Zengid. [See NŪR AL-DĪN.]

ARSLĀN-SHĀH B. MAS'ŪD B. IBRĀHĪM, the Ghaznawid, ascended the throne on his father's death in the year 508 (1115) and immediately threw his brothers into prison, with the exception of Behrām-Shāh [q. v.], who succeeded in escaping and finding asylum with the Seldjūḳ Sandjar. The latter supported his cause because Behrām-Shāh's mother, a sister of Sandjar, had met with unworthy treatment at Arslān's hands, and on Arslān's refusing to give ear to his representations he set out with troops towards Ghazna, which he entered in 510 (1117) along with Behrām-Shāh. When he withdrew Arslān-Shāh, who had fled to Hindustān, returned to Ghazna, but immediately took to flight when the troops despatched by Sandjar advanced on it. He was discovered however, and delivered a prisoner into the hands of Behrām-Shāh and strangled by his command (512 = 1118).

ARSLĀNLI (T.), lion-piastre, ancient Turkish coin. [See GHURUSH.]

ARTENA, Mongolian dynasty in eastern Asia Minor. The founder of this dynasty of Artena, under the honorific title 'Alā' al-Dīn, obtained independence about the year 736 (1335-1336) after the death of Ilkhān Abū Sa'īd, and reigned in Aḳsara, Ḳaisariya, Siwās, Amasia, Gümüsh-khāne until about 753 (1352). His son Ghiyāth al-Dīn Muḥammad and his grandson 'Alā' al-Dīn appear to have ruled there after him till 782 (1380).

'ARŪBA, name of a day of the week, our "Friday", in the calendar of the ancient Arabs in pre-Islāmic time. Doubtless it is the *'ereb* of the Hebrews, having reference to the festival of the Sabbath customary among many Arabian tribes. 'Arūba is, however, not of old-Arabian but of Aramaic origin (Fischer, *Die altarabischen Namen der sieben Wochentage*, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, l. 224). (MAHLER.)

'ARŪḌ denotes, according to tradition, the pole which is erected in the middle of the tent as its support. In prosody it is applied to the last foot of the first Hemistich, since this is as constant in the middle of the verse (*Bait al-Shi'r*) as the pole is in the middle of the tent (*Bait al-Sha'r*). In this sense 'Arūḍ is feminine, as is *'Arīḍa* from which it is derived. Used metaphorically it denotes simply prosody and versification. In this meaning it has both genders, masculine (= *'Ilm*) and feminine (= *Ṣinā'a*). Prosody, in the widest sense (*'Ilm al-Shi'r*), falls, according to the view of the majority of the grammarians into the Science of Metre (*'Ilm al-'Arūḍ*) and the Science of Rhyme (*'Ilm al-Ḳāfiya*). By the former Arabic prosody proper is understood, which, like that of other languages, has to discover the laws of rhythm in the structure of verses. Arab philologists frequently compare the Science of 'Arūḍ to a balance, and define it then as the science of the principles by means of which the right metres (*Wazn*) used in poetry can be distinguished from the false. The etymology of the name 'Arūḍ is not clear, and native grammarians have nothing satisfactory to offer. According to one prosody is called 'Arūḍ because the verse is constructed on its analogy (*yu'raḍ 'alaihi*); according to others it is because al-Khalīl developed it in Mekka, which city had an epithet al-'Arūḍ; while yet others, with whom Lane agrees, hold it is because of the transferred application of the term for the last foot of the first hemistich, i. e. the most essential part of the verse, first to the whole verse, and then to the science of verses in general. Jacob (*Studien in arab. Dichtern*, p. 180) adduces in explanation of the name the passage in the Dīwān of the Hudhailites (95, 21) in which the poem is compared to an obstinate she-camel ('Arūḍ), which the poet tames. Arabic is the only Semitic language which can show metre proper, and grammarians early applied much logical acumen to the development of an extremely subtle metrical system. The principles of the native system of Arabic prosody are as follows:

Every verse in the final analysis consists of "quiescent", i. e. vowelless, and "moved", i. e. vocalised consonants, through the union of which there arise the constituent elements of the foot, the *Asbāb* (Sing. *Sabab* = rope) and the *Awtād* (Sing. *Watad* = peg); these names like most of the metrical terminology have been borrowed from Beduin-life, and especially from the tent. At least 4 such combinations of consonants can be distinguished: *Sabab khafīf* (light S.), e. g. *ka-d*, *Sabab thaḳīl* (heavy S.), e. g. *la-ka*, *Watad mafrūḳ* (separated W.), e. g. *ma-ḳ-ta*, and *Watad madjmū'* (united W.), e. g. *ma-ḳa-d*. The further combinations of more than 2 and 3 consonants (the *Fāṣila ṣughrā* and *kubrā*) can be divided into *Asbāb* and *Awtād*. Through certain combinations of these elements arise the 8 primary feet of the Arabic verse. Each foot is called *Djuz'* or also *Taf'īl*; this latter term it receives from regard to the formation of the names of the normal feet. The feet, that is, like the paradigms of the grammatical forms, are expressed in certain voces memoriabiles by means of *f-'-l* and the 7 added letters. The following are the 8 primary feet: 1. *fa'ūlun*, 2. *fā'ilun*, 3. *mafā'īlun*, 4. *fā'ilātun*, 5. *mustaf'ilun*, 6. *maf'ūlātu*, 7. *mufā'alatun*, 8. *mutafā'ilun*. It should be noticed that the 3 letters of prolongation *Alif*, *Wāw* and *Yā* are regarded here as quiescent consonants, the syllable *fā* (فَا) e. g. thus representing a *Sabab khafīf*. Some prosodists suppose there are 10 primary feet be-

cause of the two possible divisions of the feet 4. and 5. into different *Asbāb* and *Awtād* (*fā'ilā-tun*, *fā'i-lā-tun*; *mus-taf-'ilun*, *mus-taf'-i-lun*). These being really parts of every verse are subject to certain alterations which are constantly occurring, *Ziḥāfāt* (relaxations) and *'Ilal* (Sing. *'Illa*, illness). *Ziḥāfāt* consist of alterations which the *Sabab* experiences in its second letter. There are 12 of them (with a technical term for each), which the poet can utilise at will in individual feet. *Khabn* e. g. consists in the suppression of the second consonant of a foot when it is quiescent, thus changing the primary foot *mus-taf-'ilun* first into *mu-taf-'ilun*, and then, since this form is linguistically impossible, into the metrical equivalent *ma-fā-'ilun*; the same form also arises e. g. through the operation of the *Ziḥāfa* called *Ḳabḍ*, i. e. the suppression of the fifth consonant of a foot when it is quiescent, upon the primary foot *ma-fā-'īlun*, where the quiescent *Yā* (*'ī* = *'iy*) is then dropped. — *'Illa* on the other hand is found only at the end of the last foot of a hemistich; it arises through addition to (*Ziyāda*) or omission from (*Naḳṣ*) *Sabab* and *Watad*; accordingly 3 + 10 *'Ilal* are distinguished. If there is an *'Illa* in the first verse of a poem, it must, in contrast to *Ziḥāfa*, be continued through the whole poem. *Tadhyīl* e. g. consists in the addition of a quiescent consonant to the *Watad madjmū'*, *mus-taf-'ilun* becoming *mus-taf-'ilān*; *Ḥadhf*, on the other hand, e. g., denotes the omission of a *Sabab khafīf*, *ma-fā-'ī-lun* becoming *mafā'ī* which is metrically equivalent to *fa'ūlun*. An accurate knowledge of this subtle metrical terminology is necessary to the understanding of the Arab prosodists and scholiasts, and is to be obtained from the larger treatises on the science of 'Arūḍ (see *Bibliography*).

Through the application of different *Ziḥāfāt* and *'Ilal* to the 10 primary feet there arises a large number of possible and permissible variations of these; their number varies between 66 and 85. Only then is it possible, in the view of Arab grammarians, to understand the metres. Each verse (*Bait*) consists of at least two feet and falls into two hemistichs (*Shaṭr* or *Miṣrā'*), the last foot of the first hemistich being called *'Arūḍ*, that of the second *Ḍarb*. The terms used to denote the other feet vary, and are mostly regarded by the Arabs as less essential and called as a whole *Ḥashw* (stuffing). Through the right scansion (*Taḳṭī'*) of the verse we obtain the metre (*Baḥr*). According to the common view of the Arabs there are 16 metres, which consist of combinations of the 10 primary feet, and their hemistichs are in their normal form clearly presented by the Arabs through the following exceedingly practical mnemonic-verses:

Ṭawīl: *fa'ūlun mafā'īlun fa'ūlun mafā'īlun.*
Madīd: *fā'ilātun fā'ilun fā'ilātun.*
Basīṭ: *mustaf'ilun fā'ilun mustaf'ilun fa'ilun.*
Kāmil: *mutafā'ilun mutafā'ilun mutafā'ilun.*
Wāfir: *mufā'alatun mufā'alatun fa'ūlun.*
Hazadj: *mafā'īlun mafā'īlun.*
Radjaz: *mustaf'ilun mustaf'ilun mustaf'ilun.*
Ramal: *fā'ilātun fā'ilātun fā'ilun.*
Sarī': *mustaf'ilun mustaf'ilun fā'ilun.*
Munsariḥ: *mustaf'ilun fā'ilātu mustaf'ilun.*
Khafīf: *fā'ilātun mustaf'ilun fā'ilātun.*
Muḍāri': *mafā'īlun fā'ilātun.*
Muḳtaḍab: *fā'ilātu mufta'ilun.*
Mudjtathth: *mustaf'ilun fā'ilātun.*
Mutadārik: *fā'ilun fā'ilun fā'ilun fā'ilun.*
Mutaḳārib: *fa'ūlun fa'ūlun fa'ūlun fa'ūlun.*

On the etymology of the names of the metres the Arabs have made many unsatisfactory conjectures. The famous grammarian al-Khalīl invented a system of five circles (*Dawā'ir*) in order by deducing one from another to demonstrate in some measure the ideal ground-type of each metre. About the periphery of one circle there is written the scheme of a hemistich or of a whole verse of one metre, from which others are to be derived, and, similarly to our metrical signs for "long" and "short", the vowelless and vocalised consonants are marked by dashes, circles and points. According to the place where one breaks open this circle-complex and begins to read, the rhythmical structure changes. Let us take the first circle, called *Dā'irat al-Mukhtalif* as an instance; here from the scheme Ṭawīl (*fa'ūlun mafā'īlun* ...) Madīd (*fā'ilātun fā'ilun* ...) is derived by beginning to read onwards from the first *lun*, and also Basīṭ (*mustaf'ilun fā'ilun* ...) by beginning to read from *'ī* of the second foot. Similarly Kāmil is derived from Wāfir, Radjaz and Ramal from Hazadj, Mutadārik from Mutaḳārib, and the five remaining metres from Sarī'. Thus for every metre we get a primary form, which rarely however, and in most cases never, appears in this shape. The metres which really are used by the poets we get by applying the system of *Ziḥāfāt* and *'Ilal*, which has been sketched above, to the various feet. The intervening feet termed *Ḥashw* here play a secondary rôle, only the alterations of the last foot of the first and second hemistich, the *'Arūḍ* and *Ḍarb*, being important. Thus there arise various subspecies for all metres, and, since the *Ḍarb* as the last foot of the verse is subject to far more alterations than the *'Arūḍ*-foot, the number of possible metres of one type is reckoned according to the various *Ḍurūb*. Ṭawīl, e. g., has only 1 *'Arūḍ*, i. e. has always the same last foot (*mafā'ilun*) in the first hemistich, but 3 *Ḍarb*, i. e. in the last foot of the second hemistich two other forms are admissible. We speak, therefore, of a first, second or third Ṭawīl according as the *Ḍarb* has the foot *mafā'īlun*, *mafā'ilun* or *fa'ūlun*. Similarly with the other metres; Kāmil having 9 has the highest number of *Ḍurūb*. The sum of the possible 'Arūḍ of all 16 metres is 36, and that of all *Ḍurūb* 67, i. e. there are in all 67 possible paradigms in the Arabic metrical system. — Of non-classical metres grammarians have recognised only 6 as used in the Middle Ages of Islām, Mustaṭīl and Mumtadd, i. e. the inverted forms of Ṭawīl and Madīd, further Mutawaffir, Muttaʾid, Munsarid and Muṭṭarid. These consist entirely of the primary feet, can be fitted into the scheme of circles, and are subject therefore to the same rules as the 16 canonical metres.

In this brief sketch simply the views of native grammarians are represented, and any notion of a scientific metrical system has been purposely excluded in order to show the Arab theories of 'Arūḍ, in their purity, but at the same time to show their inadequacy and impossibility. A criticism of the Arab metrical system would have two fundamental errors to expose. The first error is one of a methodical nature, and here the famous Grammarian al-Khalīl (died between 170 and 186) was at fault. For there is no ground

for questioning the national tradition which names him as the founder of the science of ʿArūḍ, and attributes to him the coinage of the majority of the metrical termini. Goldziher's proofs (*Abhandlungen zur arab. Philol.*, I, 76 ff., 83, 98; cf. Nöldeke, in the *Wiener Zeitschr. f. d. Kunde d. Morgenl.*, X, 342), that with three exceptions the terminology which was usual later was quite unknown in the earliest period of Islām, and its sudden coming into existence point to the first bloom of Arabic philology as the season of its origin. Besides the very great honour which al-Khalīl experienced from most Muslims on account of the establishment of his theories, he was much attacked by contemporary and later critics. Al-Akhfash "the middle one", in particular, appears to have instituted a rival system, of which the metre Mutadārik, which traces back to him, is still preserved. Of the vehement opposition of Abu 'l-ʿAbbās ʿAbd Allāh b. Muḥammed al-Nāshī al-Anbārī (died 293 = 906) to the theory of al-Khalīl details have been handed down (cf. Ibn Khallikān, trans. of de Slane, II, 578; Masʿūdī, Paris Ed., vii. 88). Goldziher has collected other scattered material of a similar nature (*Wiener Zeitschr. f. d. Kunde d. Morgenl.*, xvii. 188 f.). Al-Khalīl's system, however, won the day, and in consequence the circle-theory which traces back to him became authoritative. This circle-theory is the one fundamental mistake in the metrical structure of the Arabs, and has involved them in the complicated system of *Ziḥāfāt* and *ʿIlal*. The immediate consequence of the scheme of circles is, that the forms of the several metres which fit into it, or rather which are derived from it, are considered to be the really primary forms of this metrical type, and the other forms with varying *ʿArūḍ* and *Ḍarb* to be irregularities. But such is not the case, for of the 16 primary metres 11 never appear in the complete primary form, and the remaining 5 (Kāmil, Radjaz, Khafīf, Mutaḳārib, Mutadārik) but rarely. This error was carried yet farther. These alleged complete primary forms of the metres were analysed, and 8, or rather 10 feet in all were found to be common to all metres, and these naturally were primary feet. But just as little as to the primary forms of the metres does any guiding significance attach to these alleged primary feet. In order, then, to reconcile the results of the scheme with reality the system of *Ziḥāfāt* and *ʿIlal* was invented, and thus the feet which actually appear in the ancient poetry were deduced as irregularities from the alleged primary feet. If the circles had no existence, then there perished the primary forms of the metres and with them the 10 primary feet, and the Arabs would have to enumerate singly the 67 paradigms with their 85 possible feet. This natural differentiation of the metres appeared to them far too diverse, and they created the scheme which finally became much more complicated than the reality.

The second fundamental error in the structure of the Arabic metrical system is to be explained by the Arabic-Semitic system of writing. Since only the consonants and not the vowels are expressed in the script, the ordinary notion of a sound as the word-atom is wanting, and necessarily, therefore, the notion of the syllable as the union of one or more consonants with vowels having equal phonetic justification. For with the notions of Arabic phonetics it is impossible to explain the real elements of any foot, the short and the long syllable. This the Arabs felt, and had to feel, in the construction of a metrical system, but they cleverly availed themselves of the ingenious combination of moved and quiescent consonants into *Asbāb* and *Awtād*. But these are not elements of the foot, since they are composed of long and short syllables. The real elements of the prosody would be, expressed in Arab fashion, the moved consonant (li = ◡) and the *Sabab khafīf* (ḳad = –).

It is due to the concealment of this simple fact that it has not been at once generally recognised that we have to do in the ancient poetry with a quantitative metrical system, whose laws were instinctively followed by the ancient poets in virtue of a finely developed feeling for the length of the syllable, and without al-Khalīl's rules. If, then, the general laws of a quantitative metrical system are applied to the Arabic verse they lead to the same results as the complicated rules of the Arabs. An examination of *Ziḥāfāt* as possible alterations of Arabic feet shows that four of these can be explained by the law of the neutrality of certain syllables in the verse which admit a long as well as a short syllable (*Khabn*, *Ṭaiy*, *Ḳabḍ*, *Kaff*); that two exhibit the possible appearance of a "long" in place of two "shorts" (*ʿAṣb*, *Iḍmār*); that four kinds exhibit the combination of both possible alterations at one and the same time (*Khabl*, *Khazl*, *Shakl*, *Naḳṣ*); and finally *ʿAḳl* and *Waḳṣ* the possible omission of one of the two "shorts" in Wāfir and Kāmil. Of the *ʿIlal*, on the other hand, the 9 *ʿIlal al-Naḳṣ* are explained by the law of catalexis of the last foot, and the 3 *ʿIlal al-Ziyāda* by the possible addition of a syllable or increasing the length of a long syllable at the end of the verse.

Since both foundations of the native prosody of the Arabs have been proved to be too weak, the whole erection collapses. Individual portions, however, can be saved. We must be grateful above all for this, that in the traditional rules for scansion, viz. the mnemonic-verses enumerated above for the various metres, they have provided us with the key to the understanding of the rhythm, for without these would be, as in many Greek songs, constant doubts in regard to the placing of the colons. These mnemonic-verses with their divisions of the rhythm in the verse were certainly the starting-point of their metrical theory, and they were fixed by ear by the Arabs, who had the declamation of the verses in view, in order that the characteristic rhythm of the several metres might thus be retained in memory.

The general characteristic of Arabic prosody indicates that the origin of the Arabic art of versification and also of the science of the structure of the verse is not to be sought among the Greeks, as has sometimes been supposed, but is autochthonous. The Arabs have occasionally advanced theories on the origin of prosody as art, and classed the camel-drivers' songs, which harmonise with the rhythmical stride of the camel, as the oldest poems. Masʿūdī (viii. 92) relates that Ibn Khurdādhbeh expressed before al-Muʿtamid his opinion on the song and made this statement among others, that the *Ḥudāʾ*, the song of the camel-drivers, existed before the *Ghināʾ* and generally illustrates the beginning of musical

declamation and song. He uses as illustration of the mutual influence of the camel's stride and the song the well-known story of the Beduin, who, when his arm was broken by the fall of his camel, involuntarily uttered this rhythmical expression of pain, *yā yadāh, yadāh* ("Oh my hand!"). We find something similar in the *Ḳāmūs* (*Tādj* X, 134 see under *daidoi*): a Beduin had beaten his servant, who uttered in his pain *daidai*, the sound of which affected the camel's gait. From such traditions and the observations of travellers it is obvious that not only has the camel's gait influenced the driver's song, but vice versa the slow or quickened tempo of the marching-song has had an effect on the beast's stride, and still has (Bücher, *Arbeit und Rhythmus*, 4. Ed. 1909, p. 131). Corresponding to the iambic alternation in the lifting and lowering of the camel's feet there arose as the oldest verse an iambic alternation of long and short, i. e. Radjaz. Through tradition and the work of scholars it has been established as the oldest metre. Its age may be observed from the fact that it occupies a middle position between rhymed prose, Sadj', and the more artistic metres, and thus seems to be the connecting link. The view of Grimme (*Orient. Litt. Zeit.*, i. 398 *et seq.*), that Radjaz is the latest and not the oldest metre, since iambic-series stand at the end of a development and always belong to the later formations, has met with no support and remains unproved. It is impossible to demonstrate in as vivid a fashion the origin of the more perfect and richer metres, for even in the oldest poets they are found already fully developed. And so the hypothesis of Jacob must also be abandoned, which derives the various metres from the measure in the various gaits of the camel on the journey. Many other phenomena and noises have normatively influenced the rise of metres. Bücher, who derives all metre ultimately from the rhythmical beat in work, distinguishes three primary modes of motion of the workman, and though he does not pretend to have solved all the problems, thus arrives at the Iamb and Trochee, i. e. the alternation of a soft and a firm tread, the Spondee, i. e. the metre in beating, and the Dactyl or rather the Anapaest, i. e. the metre in hammering. To the first form would correspond Arab tradition with its derivation of Radjaz from the camel's stride, and the well-known account of al-Khalīl's invention of his metrical system would approximate to the others. It is said (Ḥarīrī, ed. de Sacy, p. 451) that he was stimulated to lay down a system by observing in the course of a walk through the street of the fullers in Baṣra the different tones on the rebound of the smith's hammers (*daḳ, daḳ daḳ, daḳoḳ daḳaḳ*). On the other hand, it is also recorded that Mutadārik, when all its feet consist of Spondees, is called *Daḳḳ al-Nāḳūs*, i. e. "the pounding of the hammer".

Further development brought this result that the ancient Radjaz, the real "muse populaire", had quite early little vogue, and was only employed to a limited extent when with artistic poetry more perfect and varied metres were developed, which in contrast to the former were called Ḳarīḍ. Freytag (p. 15 N.) and Jacob (p. 190) have compiled statistics of the occurrence of the various metres in the ancient poetry and have reached almost the like results. Ṭawīl is by far the most frequently employed, then Wāfir, Kāmil and Basīṭ; Muḍāri', Muḳtaḍab, Mudjtathth and Mutadārik are entirely wanting. Observation of this led to the really correct conjecture, that these metres had no actual existence, and that they were derived by al-Khalīl from the fourth circle simply for the sake of symmetry; whilst Mutadārik, the metre of al-Akhfash, also gives us reason to hesitate.

Ewald has the merit of having set up an entirely new system of Arabic prosody, and thereby, as Wellhausen rightly says (*Cosmopolis*, i. 594), takes equal rank with al-Khalīl. Under impulse from the pioneer-works of the classical philologist, Gottfried Hermann, he set aside the native traditional theory, and began to apply the system of the classical quantitative prosody to Arabic verse, and published his results in the short work *De metris carminum arabicorum libri duo* (Brunswick, 1825). Freytag having shortly thereafter issued his *Darstellung der arabischen Metrik* (Bonn, 1830), Ewald in 1833 again dealt with this subject in the Appendix to his *Grammatica critica linguae arabicae* (II, 323—343). In his criticism of Freytag's book Ewald (*Abhandlungen zur orient. und bibl. Lit.*, Göttingen, 1832, I, 27—52) emphasises very sharply and not unjustly that this book marks no progress in the understanding of the nature of Arabic prosody, since Freytag has entirely followed the system of the native grammarians. He himself lays down the thesis, that the structure of the Arabic verse and also all variations from the norm are to be explained by a specific rhythm. The treatment and development of this thesis, however, is essentially different in detail in his two treatises. Whilst he asserts in the former that Arabic prosody knows only nimble, agile metres, which proceed from short syllables to long, he modifies this statement considerably in the Appendix to his Grammar. Consequently the two theories laid down by Ewald regarding the construction of the 16 metres from the various feet differ very much from each other. Whilst there was for him at first only the *one* iambic rhythm, in the Appendix to his Grammar he distinguishes 5 kinds (Genus jambicum, Genus antispasticum, Genus amphibrachicum, Genus anapaesticum, Genus jonicum), under which he subsumes the 16 metres. The first system, in consequence of the tracing all metres back to a single rhythm, must collapse; the second is on surer ground, even if it is not tenable in this form. Ewald's mistake lies in this, that instead of applying only the principles of quantitative prosody to Arabic verse, he has taken over in its entirety Greek prosody with all its characteristic feet and the rhythmical complexes peculiar to it. In this he pays no heed to the fact that the Arabs themselves have handed down in the mnemonic-words for the verses the best and only method for placing the colons in the verse. Whilst Ewald at first, thanks to his iambic theory, left this fact out of account and made e. g. Ṭawīl (*fa'ūlun mafā'īlun*) equivalent to the following metrical complex (⏑ – ⏓ | ⏑ ⏑ – | ⏓ –), he gave more heed later to native tradition. Even in his second treatise he is far from being correct, since he did not accept the traditional rhythmical groups of the Arabs in their original forms, but pressed into them Greek feet alien to them in nature. Through an amphibrach, an anapaest, or other specifically Greek feet Arabic verses can never

be entirely explained. Westphal, who in dealing with prosody in general (Berlin, 1893) deals also (p. 478 *et seq.*) with the prosody of the Arabs, but confines himself mainly to repeating the rules laid down by Ewald, advances the unproved and certainly false hypothesis, that the whole metrical system of the Arabs was borrowed from the Greek grammarians, and may even be based on an Arabic translation of a metrical compendium.

Guyard in his *Nouvelle théorie de la métrique arabe* subjected Arabic prosody to an entirely new treatment (*Journal asiatique*, serie 7, vii. 413 *et seq.*; viii. 101 *et seq.*, 285 *et seq.*; x. 97 *et seq.*). Proceeding from the close connection in general between speech and music he came to the decision not to be content with the mere distinction of "long" and "short", but also to time the various long syllables and to fix them in musical notes. The division of the verses handed down in the Arabic mnemonic verses he regarded as correct, but through measuring them according to musical principles he obtained the result, that a *temps fort* and a *temps faible* must alternate. Apparent contradictions he settled either by declaring a *temps fort* to be weak (as e. g. the syllable 'ī, *fā* or *mus* in the feet *mafā'īlun*, *fā'ilun*, *mustaf'ilun*) or by inserting a pausal-note (*silence*), which was not graphically expressed however, but which played the role of a *temps faible*, e. g. after the 'ū in *fa'ūlun* or between the two feet immediately following one another *fā'ilun fā'ilun*. Further alterations are possible through the law of the double "ictus" in every Arabic foot, and so he can eventually explain the 16 metres with all their variations as corresponding to the musical rhythm; only the foot *maf'ūlātu* does he dispose of as imaginary, because incompatible with the principles he sketches. He has not, however, by this means explained the metrical verse, but turned it into a musical one. D. Ginzburg seems to have obtained similar results (*Zapiski vost. otd. imp. russk. arkheol. obsh.*, vii. 83—168; viii. 103—146). The inadequacy of Guyard's system has been emphasised on many sides, especially by Hartmann. To proceed to explain a metrical verse by purely musical principles is an arbitrary act, since in this way one could divide any verse into whatever metrical divisions one pleased, and explain not only the Arabic but every quantitative metrical system. We owe, however, to Guyard the discovery of a primary law of Arabic prosody, the law of Dipody, with a chief and a secondary accent, whose significance has been shown in extenso, especially by Hartmann.

Hartmann by avoiding the errors of Ewald and Guyard, in that he would not apply the musical theory of the *rgávo* to the verse, but returned to the traditional division of the verses, thereby laid the foundation for the structure of a system of Arabic prosody. In his work *Metrum und Rhythmus* (Giessen, 1896) he endeavoured to discover the origin of the simplest metre, the alternation of the accented and the unaccented syllable, in the camel's mode of advancing her feet in pairs, and to establish the rule of the chief and the secondary tone in Arabic verse. Accordingly he distinguishes in his preface (*Actes du 10e congrès internat. des Orientalistes*, Sect. iii., p. 53—56) 4 types of verse for Muwashshaḥ: the Hazadj-type (*mafā'īlun* ⏑ ⏗ – –), i. e. a diiamb with a constant short syllable in the first place, and the Radjaz-type (*mustaf'ilun* – – ⏑ ⏗), i. e. a diiamb with a constant short syllabe in the third place. Corresponding to these, the Ramal-type (*fā'ilātun* ⏗ ⏑ – –), i. e. a ditrochee with an obligatory short for the first depression, and a Maf'ūlātu-type (– – ⏗ ⏑) with the short for the second depression. This established he explains the more complicated metres; his theory, however, is far from being fully developed; its importance lies in its setting of 4 main types with their variations, and the consequent notes on the possible combinations of feet. Its value may also be observed in this, that it can be applied to the more recent poetic forms.

The Arabs, then, have devoted their attention only to the prosody of the classical poetry; in explanation of its rhythmical structure they have besides the theory of 'Arūḍ, i. e. prosody proper, also developed the science of rhyme, which, however, will be mentioned here only to explain the strophical construction of the poems. On the other hand, Rhymed-prose (Sadj'), which is used in the Ḳor'ān, sermonic literature, the Maḳāmāt and frequently elsewhere, and a strophic structure similar to the ancient-Hebrew, which D. H. Müller discovered in the Ḳor'ān, do not fit into the frame of prosody in its stricter sense. The keeping of the same rhyme at the end of every second hemistich throughout the poem is the primary principle of the *Shi'r*, i. e. the classical poetry, and the cause of its utter lack of strophic arrangement. The starting-point for the theories of the Arab grammarians is the *Ḳaṣīda*, a poem containing at least 7 complete verses (*Bait*), in one of the 16 canonical metres maintaining the same rhyme throughout, and having a mid-rhyme in the first verse, the so-called *Maṭla'*. If the latter be wanting, the whole is only a *Ḳiṭ'a* (a fragment). Groups with a smaller number of verses are seldom found; 2 or 3 *Bait* ranged together are termed *Nutfa*, a single complete verse *Yatīm*.

In sharpest contrast to this constant, monotonous repetition of the rhyme stand the more recent poetic forms of the Arabs, which are distinguished from the ancient poetry through their use of the colloquial and a number of new metres, but especially by the grouping of the verses into strophes. This change came about slowly, however, and the various stages are unknown to us. It was crippled by the Arab theorists, who prohibited everything which fell without the scheme of canonical feet and metres, and so intimidated many poets, perhaps even corrected their writings. Even if in quite early times Abū Tammām Ḥabīb b. Aws (died 231 = 846) disregarded the prohibition and used a new metre (Freytag, *see Supra*, p. 10 N.; p. 443), and even if Abu 'l-'Atāhiya spiritedly declared that he was greater than rules of prosody (*Aghānī*, iii, 131), and many such verses pouring ridicule on the metrical theories were in circulation (Freytag. p. 7), yet entirely new poetic forms are only of late appearance. On the other hand, it is impossible to suppose that the Arabs allowed themselves to be for centuries completely fettered by the academic bann, and that there existed no folk-songs or poems in the colloquial (*Laḥn*). The song which the Muslims sang at the digging of the trench around Medina in the 5th year of the Hidjra (de Goeje in *Kultur der Gegenwart*, i. 7, p. 141) was certainly not entirely in the *I'rāb*, and of the elegy

of the slave-girl of Ḏja'far al-Barmakī, the earliest known Mawāl, the contrary is expressly mentioned. Only to late writers however do we owe more accurate information about the existence of new poetic forms. Ibn Khaldūn, Ibs̲h̲īhī and others speak of 7 kinds of strophe, which are known by the name of the *Sab'a Funūn*, and have been treated of by Gies in his by no means exhaustive monograph (Leipziger Diss. 1879). The most important of them are Muwas̲h̲s̲h̲aḥ, which Hartmann has given special treatment on the basis of abundant material (*Semitist. Studien*, No. 13, 14; Weimar, 1896-1897), Zadjal, Dūbait, which was borrowed from Persian poetry, and Mawāl, which is in general use today as the metre of the folk-song; the other three, Kān wa-kān, al-Ḳūmā and al-Ḥimāḳ (rather al-Salsala) scarcely exist now, and have importance for the scholar only. It is certain that in the *S̲h̲i'r* composed in the classical tongue, the *I'rāb*, the law that the same rhyme must be preserved throughout was early violated, and that strophic groups were distinguished. In this transition-period the old long verse with its two characteristic hemistichs, the one rhymeless and the second rhymed, had to go. The verse in the folk-poetry is a unit in itself, and has approximately the length of a classical hemistich. If we take several of these hemistichs of the same metre, and see that they have the same end-rhyme, and then set at the end of this strophic group a verse with another rhyme, which, however, is always repeated at the end of each strophe as the principle rhyme and thus holds the whole poem together as a unit, we get the simple and exceedingly popular poetic form Tasmīṭ (the stringing of pearls). Each strophe must consist of not less than three and not more than ten such short verses; and so we obtain 8 kinds of Musammaṭ — poems, which are named, according to the number of the verses, *muthallath, murabba', mukhammas, .. mu'as̲h̲s̲h̲ar*; the favourite, and indeed the oldest of these strophes is Murabba' (aaax, bbbx); tradition, however, places a Mukhammas as early as the ii. cent. of the Hidjra (Hartmann, *Das Muwaššaḥ*, p. 112 *et seq.*). Among the Persians we find all the varieties of Musammaṭ; in Arabic poetry, however, mostly the odd numbers only are chosen as the verses which shall have the separate rhyme, perhaps thereby to preserve outwardly the Ḳaṣīda-form of the whole, Tasmīṭ as a poetic form in the classical tongue and in the 16 canonical metres being generally regarded as *S̲h̲i'r*.

It is otherwise with Muwas̲h̲s̲h̲aḥ, which Hartmann rightly derives from Musammaṭ as a further development. Muwas̲h̲s̲h̲aḥ consists of 4—10 strophes in different metre having the same or different separate rhymes, which are held together as by a girdle (*Wis̲h̲āḥ*) by the principle rhyme, which occurs in the introductory strophe and must be repeated at the end of each strophe. Those portions of the strophes (*Dawr* or *Bait*) which do not share in the common rhyme are called *G̲h̲uṣn*, and those verses with the common rhyme *Ḳufl*; an introductory strophe (*Maṭla'*) and a final strophe (*Khardja*) with a common rhyme have special names. But, in sharp contrast to Musammaṭ, the verses (*Djuz'*) of the two parts of each strophe of Muwas̲h̲s̲h̲aḥ consist not of one member but of several (*Fiḳra*) whose number, rhyme and metre must be the same in every strophe. Further it is important to notice that not only the 16 canonical but also a large number of new metres, some of which are difficult to scan, are employed, whose number, according to Hartmann, amounts to about 200. According to the common tradition found in Ibn Khaldūn, Ṣafī al-Dīn al-Ḥillī, etc. the classical tongue, the *I'rāb*, must be used in Muwas̲h̲s̲h̲aḥ, the Laḥn in the last verses only of the last strophe which show the common rhyme. In contrast to this Zadjal, which in other respects is constructed like Muwas̲h̲s̲h̲aḥ, is composed entirely in the colloquial. Whilst scholars, following the lead of Ibn Khaldūn, commonly hold Muwas̲h̲s̲h̲aḥ to be the older and Zadjal the later and vulgar imitation of it, Hartmann sees in Muwas̲h̲s̲h̲aḥ an artistic composition in the *I'rāb*, a refinement of the original and older folk-song, the Zadjal, and in which the Khardja-verses in the Laḥn still indicate its origin. The poems which stand midway between these two poetic forms and show the correct as well as the colloquial tongue are called *Muzannam*. Spain is the traditional home of both these poetic forms, Ibn Ḳuzmān (died 555 = 1160) being one of the first to employ Zadjal and the most famous. Later development has brought it to pass, that from about the viii. (xiv.) cent. only poets of the Mas̲h̲riḳ have cultivated these poetic forms, and that very little is composed in them at the present time outside Egypt. There were also other alterations. The modern Zadjal is scarce sung any more by professional singers, but is recited and has become an entirely literary form, the most frequent metre employed in it being a kind of Munsariḥ maḳṭū'. On the other hand the notion of Muwas̲h̲s̲h̲aḥ has been much enlarged and is given to any song sung in the vernacular; accordingly Muzannam, representing an earlier transition-stage between these two, has quite disappeared.

There exist besides these in the modern Islāmic world many and very varied kinds of folk-songs proper, a knowledge of which has only been acquired in the last two decades through study of the songs collected by travellers. But a comprehensive treatise on the metres of these songs and on the laws of prosody observed in them, as also of their strophic structure, has not yet been written; we can only refer therefore to some, mostly brief, metrical introductions to the publications of these songs:

Sachau, *Arabische Volkslieder aus Mesopotamien* (Berlin, 1889), p. 4 *et seq.*, 17 *et seq.*, 43 *et seq.*; Stumme, *Tunisische Märchen und Gedichte* (Leipzig, 1893), i., xii—xiv; and *Tripolitanisch-tunisische Beduinenlieder* (Leipzig, 1901), p. xiv *et seq.*; Meissner, *Neuarabische Gedichte aus dem Iraq. Mitt. d. Sem. f. Or. Spr.* (Berlin), vii, 1 *et seq.*; Marçais, *Le dialecte arabe parlé à Tlemcen* (Paris, 1902), p. 205 *et seq.*

It is impossible to enumerate all the known kinds of songs; only the best-known, constantly recurring groups will be mentioned. Besides the quatrain composed in the classical tongue, the Persian Dūbait or Rubā'ī, there are three forms of popular quatrains.

1. The origin of 'Atāba (or, more accurately, of the *bāt 'atāba*) is to be sought for in the desert; it is current to-day only in Syria, Palestine and Mesopotamia. Of the four short lines the first three have the same rhyme, the fourth rhymes

with the syllable *ā* of the mnemonic-word 'Atāba, and is prolonged in singing, and frequently is simply added without any sense. The syllable *yā* is rarer at the end of the fourth short verse. Meissner records for an 'Atāba-song of this kind the name Lāmi. The metre is a sort of Wāfir (⏑ – – – | ⏑ – – – | ⏑ – –).

2. 'Arūbī, called Murabba' in Egypt is current in Africa; its second and fourth verse must rhyme, the first and third do so frequently. Its metre, which according to Stumme is iambic, is to be classed as Mudjtathth. 'Arūbī-songs with more than 4 verses are properly called 'Arūbī Zā'id.

3. The last and widest spread of these popular quatrains is Mawāl, which is to be found from Mesopotamia to Morocco and has, in contrast to 'Atāba, its home in the towns. Accordingly it admits both the correct and the colloquial tongue. The metre of Mawāl is an abbreviated Basīṭ; it usually contains four, five or seven lines. In the quatrain either all four short lines rhyme or only the first two with the fourth. The form with five lines has special vogue in Egypt and in Tlemcen: its fourth short verse is unrhymed; according to tradition it is also styled the limping Mawāl (*al-a'radj*), in Tlemcen it is called Mawāl Khawfī. It is interesting to note that Ibn Khaldūn mentions the latter name as a sub-species of Mawāl, that the Būlāḳ-edition however of the *Muḳaddima* has inserted in place of it the strophic form called al-Ḳūmā. Lastly the sevenlined Mawāl is commonly styled the Baghdād- or Nu'man-Mawāl; Meissner records from 'Irāḳ the name Zeheri (= zuhairī) for this form; it contains a double rhyme (a a a b b b a).

Besides these vulgar folk-songs the ancient form of artistic poetry has been preserved down to the present time, the Ḳaṣīda of the Beduin. The most abundant material is now contained in Socin's *Dīwan aus Centralarabien* (Leipzig, 1901, T. 1—3), in which the older literature is also collected (Vol. iii. 1 *et seq.*) At the present day the Ḳaṣīda is cultivated by Beduin almost exclusively, and if its name has a wider extension than formerly, being sometimes given even to quite short poems and to modern strophic forms, yet must it be regarded 'in content, form and language as in direct descent from the ancient-Arabic art of versification', besides Ḳaṣīdas with a single rhyme throughout one very often meets others in which now the first and now the second hemistichs rhyme with each other. The metre of the modern Beduin-Ḳaṣīda is mostly a Ṭawīl with the first syllable wanting (not Munsariḥ); Ramal, Basīṭ, Radjaz and Wāfir are also still in use. Outside the artistic poetry Ṭawīl is very rare, but is still found in almost all the Ḳaṣīdas in the vernacular which occur in the Romance of Hilāl; Wāfir is similarly employed in the Romance of Zīr. Of the ancient metres Madīd, Kāmil, Maḍāri' and Muḳtaḍab are quite wanting in the folk-poetry.

In connection with the rich collections of material of Arab folk-songs the question of the nature of modern Arabic prosody has been frequently raised and been variously answered. Whilst, in the first place, Stumme believed that in some pieces the rhythm of the verse is determined only by the accent, Sachau and Socin have firmly held by the principle of a quantitative prosody for the later poetry as well. This principle was for the first time seriously questioned through Landberg's publications and researches; he demonstrated that in the songs of the modern Arabs the metrical form becomes apparent only when they are sung, since it is only then that the necessary helping-vowels are inserted; now these being wanting when the song is declaimed there can be no question of metre. From this he concluded — somewhat too radically — the inseparableness of metre and melody, and declared music to be primary, and metrical form secondary; in practice however he applied the old quantitative metres as being quite sufficient. His investigations have thrown light on the question of the manner in which Arabic poems were conveyed to the listener, but they have not overthrown the views entertained as to their metrical character. The helping-vowels, which are mostly remains of the old *I'rāb*, must be wanting in the folk-poetry when this is spoken, and for this reason, that they are also wanting in the vernacular; but the circumstance that they must appear immediately one wishes to introduce a metre, either theoretically or through singing, shows that they are metrically necessary elements of the verse, which in this its complete form would in the main almost exactly coincide with the classical *Bait* or *Shaṭr*. Whether the ordinary Arab brings any intelligence of rhythm to a verse spoken in the Laḥn and inserts the necessary helping-vowels or not, is a matter of indifference for the point in question, and hence the complaint of most investigators and travellers about the deficient rhythmical and metrical intelligence of the modern Arabs is not generally valid, especially as the contradictory accounts do but show that this intelligence is entirely a question of the individual. Stumme, e. g. asserts that the Arabs pronounce their poems very rhythmically when reciting them with the requisite quickness, but not when they dictate them (cf. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lvi. 418); but none will deny to the poet himself a conscious striving after metre whenever he would create a rhythmically ordered verse. In these folk-songs we have quite irrespective of singing and the melody, to distinguish between the pieces in the form in which they are dictated and the metrical emendations a poet may have made in them. We will then arrive with Hartmann at the conclusion, that the original metrical form can be recognised in the majority of cases, but only by those who are familiar with the characteristic treatment of the syllable by the vulgar poetry (cf. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, li. 178). Hence the principle of a quantitative prosody appears to be established also for the late-classical poetry and for the modern folk-poetry in the songs and strophic forms which have been treated of above. Indeed certain rules of quantity can be laid down especially for the vulgar poetry, which hitherto have been dealt with incidentally only by Stumme (*Trip.-tun. Beduinenlieder*, p. 24 *et seq.*) and Kern (*Molière's Femmes savantes übers.* Leipzig, 1898, p. 15—16, 18), e. g. the ambiguity of the final vowels, the possible solution of any "long" into two "shorts", that diphthongs are not counted as such, etc.

If it were desired to derive theoretically from the scheme an accentuating metre in the vulgar poetry, it would be necessary to begin with the verse in which the syllables are counted. In this case the transition would be constituted of

such metres as e. g. the four-syllabled Mutadārik, which as *Daḳḳ al-Nāḳūs* may appear purely in the form of spondees. By the careless construction of such metres an accentuating metre could come about through the intervention of "shorts". Byzantine poetry could be adduced as an analogy, where in late times the verses were still constructed regularly according to the quantity, but were really accentuating. Further, such a view would be strengthened by observing that the ancient Arabs made short syllables long and long syllables short, and that this phenomenon is still more frequently perceptible at the present day. But everything of a numerical verse in any shape or form is strenuously rejected by Sachau; "The Arabs have never copied from the Christian poets of the Greeks, Romans, Syrians the method of syllable-counting, and if in many popular compositions the metrical form appears only to consist of a certain number of syllables, yet we must not see in this a new principle, but only an extravagance on the part of the old one" (p. 5). Even though feeling for the length and the shortness of the syllable was dwindling they did not introduce the word-accent to regulate the rhythm, and "if in quest of the word-accent we examine songs in which of the old metre only a corresponding number of long syllables now remain, we will find many a time that metrical and word-accent coincide, and that this agreement is a purely casual one, and that the intention of enlivening a monotonous number of long syllables by means of the word-accent has always been far from the Arab poet's thoughts" (p. 6.) This is still valid for the songs and strophes of the poets, but in "the folk-poetry in its most real sense", as Stumme styles it, or the "poésie maghrebine", as Desparmet calls it (*La poésie à Blida*, *Actes du 14ᵉ congr. intern. des Oriental.*, iii. 437 *et seq.*), one will not always be able to apply the laws of a quantitative prosody and therefore the scheme of the Arabic metres and their varieties, for the modern Arabic vernacular with its frequent slurring and especially its deficiency in short vowels cannot always satisfy the demands of a quantitative prosody. A poet of course can by the insertion of helping vowels still measure the syllables of the verse according to their own quantity, but the real folk-poetry proper can not. In it the emphasis of certain syllables and the rhythmical accent of the whole will frequently owing to the deficiency of short vowels be the sole normative influence. The final answer to this question may still perhaps have to be long awaited; but we must remember how long it has taken to come to a decision upon the metrical character of the old-Italian versus saturnius, which presented similar but not so difficult problems. A system of Arabic prosody will only be possible when accurate investigations into individual metres and poetic forms have been undertaken independently of Arab tradition.

Like the Romans who took over with the knowledge of belles-lettres also the art of versification from the Greeks, the Persians adopted from the victorious Muslims the almost canonical system of Arabic prosody, adapted it to the peculiarities of their own language and poetry, and endeavoured to bring it into harmony with their rich literary tradition. The main principles of Persian prosody are the same as those of Arabic, indeed in the structure of the verse the metrical law of the quantity is much more marked than in Arabic. Of the 16 Arabic metres Ṭawīl, Basīṭ, Wāfir, Kāmil and Madīd appear almost not at all; of the rest the epic Mutaḳārib and the metres Ramal and Hazadj are in special favour. Through synthesis of the primary feet of the two last three new peculiarly Persian metres have arisen, Djadīd (*fāʿilātun fāʿilātun mustafʿilun*), Ḳarīb (*mafāʿīlun mafāʿīlun fāʿilātun*), and Mushākil (*fāʿilātun mafāʿīlun mafāʿīlun*).

As in Arabic poetry so also in Persian there are no rhymeless verses; a special feature of the Persian verse is the Radīf or Refrain-rhyme. It arises through one or several, but always the same words being added throughout the poem to the main rhyme of each line. But out of almost these same elements the Persians have been able to construct richer and finer strophic forms than the Arabs. The Persians, too, have the Arabic artistic Ḳaṣīda with one or several initial verses having mid-rhyme (*Dhāt al-Maṭāliʿ*), but it is far from holding a dominant position. The Ghazal, which has quite the same structure as the Ḳaṣīda, being a poem in one metre, with one rhyme and *maṭlaʿ*, but with a limited number of verses, is more common; the number of *Bait* in it varies between 4 and 15. Besides the various kinds of Tasmīṭ a characteristically Persian strophic poem must be mentioned, the Tardjī Band. It consists of a series of one-rhymed strophes of 5—10 verses in the same metre, but with different rhyme, to which an invariable rhyme-verse in the same metre is added as a refrain (*Wāsiṭa*). If the *Wāsiṭa* at the end of the several strophes is not the same but always different, the poem is than called Tarkīb Band. In contrast to these later poetic forms which have been mostly only derived from Arabic models stand the two originally Persian kinds, the older Rubāʿī and Mathnawī. Rubāʿī or Dūbait is a quatrain in which the first, second and fourth short verse rhyme with each other; if the third also rhymes, the poem is called Rubāʿī Tarāna (= melody). Each of these quatrains is complete in itself, without relation to the others. In the Rubāʿī a special group of 24 metres is used, which are all regarded as varieties of Hazadj, and, according as the foot *mafāʿīlun* becomes *mafʿūlun* or *mafʿūlu* in consequence of the licence *Kharm* or *Kharb*, are derived by Persian prosodists from two circles. The characteristic foot of the Arabic and Persian Dūbait (——⏑⏑—| —⏑⏑—|—⏑⏑—) is *mustafʿilatun*. Finally Mathnawī is known by its rhyming in couplets (aa bb cc): each hemistich rhymes with the other, but the same rhyme does not run through the whole poem. On account of the great freedom in the choice of the rhyme this poetic form is the usual one for long pieces, whilst the one-rhymed or Arabic system is preferred for shorter.

If the application of the metrical system of the Arabs to Persian verse must seem a strange thing since the rhythm in the structure of the verse is different in the two languages and the forcing in of this system could but result in rough edges and harsh outline; the adoption by the Turks of Arabic prosody, which the Persians had remodelled, exhibits the utter subversion of the measure and rhythm of the real Turkish verse and can only be explained by the enthusiasm of the Ottomans for the belles-lettres of the Persians. Their

original and distinctive mode of verse-construction was never systematized by the Turks; they codified only the Arabic-Persian metrical system. But the alterations are of so trifling a nature that it would be superfluous to enumerate them. Peculiarly Turkish verse-construction depends simply on the enumeration of the syllables, the *Parmaḳ Ḥisābi* (i. e. finger-counting). Each hemistich consists of 7—15 syllables with a caesura after about every 4, and the tone is determined by the accent of the word itself. When the Persian metrical system was adopted the syllabic and the quantitative prosody were both in use at first, until the former entirely disappeared in the xv. cent. Remains of the old Folk-ballad, the Turkī, have been preserved to the present hidden in Sharḳī which has been derived from it and metrically adjusted. Recently a beginning has been made on the one hand to get back to the ancient Turkish verse, and, on the other, to introduce European forms of verse into Ottoman poetry.

The rules and metres of Arabic prosody have been adopted also by Jewish poets in Islāmic lands, and have been introduced into the late-Hebrew poetry.

(WEIL.)

'ARŪḌĪ. [See NIẒĀMĪ 'ARŪḌĪ.]

'ARŪDJ, famous Turkish Corsair, co-founder of the Algerian-Turkish state. Christian authors often give him the name Barbarossa, which however rather belongs to his brother Khair al-Dīn [q. v.]

His origin has been much disputed. Some take him to be the son of a Turkish captain, others that of a Greek or Albanian renegade or even of a nobleman of Saintonge. The most probable view is that his father was a potter of the island Metelino (the ancient Lesbos). From earliest youth along with his two brothers Khair al-Dīn, Elias and Isḥāḳ he practised piracy in the Grecian Archipelago. On one of these piratical expeditions Elias was killed and 'Arūdj taken captive, whereupon he had to serve a term at the oars on the galleys of the Knights of St. John. For the rest, his early years are much veiled in darkness, notwithstanding the legends with which popular fancy has adorned the life-story of the famous corsair. It is certain however that 'Arūdj left the region of the Archipelago and turned towards the western Mediterranean. From 1501—1510 he cruised continuously along the Spanish coasts, feared by the Christian population and already in renown amongst the African Muslims. A host of adventurers attached themselves to him, so that by about 1510 'Arūdj mustered over 1000 wellarmed men and a flotilla of from 10—12 ships. The Ḥafṣid-sultan of Tunis, Mūlāi Muḥammad, whom he had won over to his enterprises by the gift of a part of his booty, empowered him to provision himself in the harbours of Tunis, and transferred to him the governorship of the island of Djerba, which he made his head-quarters.

'Arūdj had wider designs however, and purposed creating an independent principality. For the settlement of disputes between the sultans of the Barbary States he offered to mediate, in the hope of possessing a strip of land as recompense for his services. In 1512 he readily complied with the call of the King of Bougie, 'Abd al-Raḥmān, when the latter sought for his aid against the Spaniards, who had driven him out of his capital. He besieged Bougie, but at the storming of the town lost his arm by a cannon-ball, and had to withdraw. Another and likewise unsuccessful attack on Bougie which was undertaken two years later (1514) forced him to flee to Djidjelli. From there he watched events in Kabyle, whose possession two native princes were contesting, 'Abd al-'Azīz, Sultan of the Banū 'Abbās (the "Sultan of Labes" of the Spanish writers), and Aḥmad b. al-Ḳāḍī, the Sultan of Kuko. 'Arūdj embraced the cause of the former and helped him to get rid of his opponent in 1516. Thereafter 'Abd al-'Azīz proved for 'Arūdj a valuable confederate, who furnished him with soldiers especially for his expedition to Algiers. For about this time, the Shaikh of Algiers, Sālim al-Tūmī, requested 'Arūdj's help in freeing Algiers from the Spaniards, who from the fortress of Peñon controlled the town with their cannon, prevented the entry and departure of the corsair-ships and so brought ruin on the inhabitants [see ALGIERS, p. 258a]. 'Arūdj hastened to fulfil the request. He sent the half of his troops by sea, and himself with 800 Turks and 5000 auxiliaries from Kabyle marched towards Algiers; he first overcame Shershell, of which one of his former officers had taken possession, caused this rival to be hanged, then advanced into Algiers whose inhabitants welcomed him. But their attitude changed when they observed the ineffectiveness of the attacks attempted by 'Arūdj against Peñon and the violences of the Turkish soldiers, who treated Algiers like conquered territory. In view of the growing discord 'Arūdj speedily removed Sālim al-Tūmī by throttling him in his bath, then had himself proclaimed sultan by his own soldiers. Bloody violence suppressed the protests of the townspeople, and military expeditions secured the subjection of the Mitīdja.

The occupation of Algiers by the dreaded corsair naturally caused disquietude in Spain, and so

already in 1516 Cardinal Ximenes endeavoured to wrest the town from him. But the expedition led by Don Diego de Vera against Algiers came to grief and cost Spain 1500 men (30th Sept., 1516). Since the conduct of the sultan of Tenes (Tanas) had been open to suspicion, ʿArūdj used this as a pretext for an attack. He conquered Milyāna and Medea (al-Madiya), and eventually, after the annihilation of his opponent on the banks of the Wād Djer (Wajer), brought Tenes under his power. He was still in this town, when a deputation of people arrived from Tlemcen to ask his aid against king Abū Ḥammū, a confederate of the Spaniards of Oran, and this was extremely opportune for ʿArūdj's ambitious plans. He transferred to Khair al-Dīn the administration of Algiers and made with all speed towards the West. On the way thither he took the Ḳalʿa of the Banū Rashīd, in which he put a garrison under command of his brother Isḥāḳ, put to flight the army of Abū Ḥammū at Arbal, and entered into Tlemcen without striking a blow. But then, instead of restoring to the throne the pretender Abū Zaiyān in whose interest he had moved, he took possession of the town for himself. Then he intrenched himself in the Mashwār (Citadel), had the Zaiyānid princes and their adherents put to death (according to a local tradition 70 members of the royal family were drowned on one day in the Ṣahāridj (a pool in front of the town [see Tlemcen]), garrisoned the districts Tibda and Udjda, and made raids into the region of the Banū Snassen to force them to recognition of his authority. Finally he set on foot negotiations with the Merinid sultan of Fās for common procedure against the Spaniards. For the latter fitted out an expedition against Tlemcen in order to wrest it from the Turks and to restore their old confederate Abū Ḥammū to the throne. In January 1518 Don Martin de Argote with a small Spanish army reinforced by native troops took the Ḳalʿa of the Banū Rashīd, and thereby cut off ʿArūdj's return to Algiers. Isḥāḳ after a powerful resistance was compelled to surrender the fortress, but was done to death by the Arabs against the terms of the capitulation. Simultaneously Marquis Comares, commander-in-chief of Oran, advanced to the siege of Tlemcen. ʿArūdj defended himself for six months, at first in the town, and then, after it became untenable, in the Mashwār where he barricaded himself in with his Yoldash („Comrades"). But on the day of the ʿĪd al-ṣaghīr the Moors of the town entered the Mashwār under pretext of a desire to pray in the mosque of the citadel, and put to death the majority of the Turks. ʿArūdj, who had but a few faithful companions left, resolved on flight, and escaped by night making for the sea. He was pursued by the Spanish cavalry and overtaken at the ford of the Rio Salado, and after a desperate defence was slain by the Spanish Ensign Garcia de Tineo. ʿArūdj was only 44 years of age. According to Haëdo he was "of medium stature, powerful, indefatigable and very brave; had a reddish beard and a brown complexion. His soldiers loved and feared him, obeyed him and bitterly lamented his death". He was not only a capable soldier, but displayed also great political insight. He recognised the possibility of utilising the anarchy of the Maghrib to found a mighty islāmic state on the ruins of the small Berber principalities which would impose a limit on the attacks of the Christians on the African coast. His considerable fighting-strength allowed him to prepare this great plan, which Khair al-Dīn was called on to adopt and realise.

ARZACHEL. [See IBN AL-ZARḲĀLA.]

ARZAN, town in Armenia, half-way between Siʿird (Söʿört) in the East and Maiyāfāriḳīn in the West, 7 Parasangs (1 parasang = 3,6 miles) distant from the latter, situated rather under 41° 40′ E. Long. (Greenw.) and a little over 38° N. Lat. According to ancient-Armenian geography Arzān (in Armenian Arzn) was the chief place in a district of the same name belonging to the province Alznik, and this name the foreigners (Greeks and Romans) have transferred to the province (Arzanene). The names Alznik and Arzanene ought, moreover, to be sharply distinguished from each other. The Arabs, who took possession of the town on their first Armenian expedition under ʿIyāḍ b. Ghanim in the year 20 (640), included it in the territory of Djazīra (Mesopotamia). Arzan, the Ἀρζὲν of the Byzantine historian Cedrenus (Bonn, 1839, ii. 577), was situated, according to the accounts of the Arabic authors, in the middle of a fruitful, well-cultivated region, and was considered in the Middle Ages to be one of the most flourishing towns of Armenia; it was protected by a strongly fortified fort. The average revenue from taxes of the districts of Arzan and Maiyāfāriḳīn together amounted, according to Ḳudāma (de Goeje, *Bibl. Geogr. Arab.*, vi. 246), in ʿAbbāsid times to 4,100,000 Dirhams = ca. £ 165,000. (Cf. A. v. Kremer, *Culturgesch. des Orients unter den Chalifen*, i. 368). At the beginning of the iv. (x.) cent. the Ḥamdānid Saif al-Dawla took up his residence in Arzan. When he and his brother (Nāṣir al-Dawla) were engaged in war and political enterprises in Babylonia, the Byzantines utilised this favourable opportunity for an incursion into Mesopotamia in the year 330 (942), when they took and sacked Arzan; cf. Weil, *Gesch. der Chalifen*, ii. 673, Anm. 1, 690, and Freytag in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, x. 472. The town appears to have

entirely recovered in the course of time from this blow, for al-Mustawfī on his travels in the viii. (xiv.) cent. describes it (he calls it Arzanah) as a flourishing place. But from the beginning of the v. cent. there is evidence of Arzan (in Syriac Arzōn, hence occasionally also in Arabic Arzūn) being the see of a Nestorian bishop (cf. Guidi in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, XLIII, 408). Arzan is to-day a pretty extensive stretch of ruin, which occupies according to Taylor an area of 5000 paces (ca. 0.386 sq. m.) and in which Kiepert, wrongly however, would find the site of the Armenian royal-city of Tigranocerta. Arzan lies on the right bank of the Arzan (Erzen)-Ṣu (Čai), in Kurdish Gharzan (Gherzen)-Ṣu, which, coming from Gharzan-Dagh, falls into the Tigris about 25 miles south of Arzan. Below Arzan this river is also called Redwān-Ṣu after the town Redwān (Riḍwān); its other name, Yazīd-Khāne-Ṣu comes from modern neighbouring Kurds who belong to the sect of the Yazīdīs; the Arab geographers call this watercourse Nahr al-Dhi'b (Dhīb) or al-Sarbaṭ. This Arzan-Ṣu must not be confused with the Nahr Arsanās (also Nahr Shimshāṭ) of the Arab geographers; for the latter is the Arsanias of the classics, the modern Murād-Ṣu (or Čai), the eastern (better southern) one of the two sources of the Euphrates; for further details, see under Murād-Ṣu and Euphrates. The name Arzan is found elsewhere in this region, e. g., as the name of a small, eastern tributary of the Euphrates, which has its mouth below Malāṭiya (cf. the art. Arsanias N°. 2 in Pauly-Wissowa's *Realencyklop. der klass. Altertumswissensch.*, ii. 1272). Finally warning must be given against the confusion, which appears several times even in Oriental authors, of our Arzan (near the Tigris) with a town of the same name situated in the region of the source of the Euphrates, near Theodosiupolis. When this town was sacked by the Seldjūks in the year 1049 those inhabitants who escaped the blood-bath went over and settled in the neighbouring Theodosiupolis (Armenian Karin, Arabic Kālīkalā), and named this after their desolated home "Roman-Ardz(n)", Arabic Arzan al-Rūm, the modern Erzerūm; for further details, see art. ERZERŪM.

ARZAN AL-RŪM. [See ERZERŪM.]

'AṢĀ (A.), Rod, Stick. — The rod mentioned in the Kor'ān is that of Moses; the self-same account is given of it (Sūra 7, 104; 26, 31) as of Aaron's rod in the Bible (Ex. Ch. 7, 8 *et seq.*). On the occasion of Allāh's self-manifestation in the fire Moses receives the command to cast his rod to the ground, and here, too, it becomes changed into a serpent (Sūra 20, 18; 27, 10; 28, 31). As in the Bible, the rod is effective at the passage through the Red Sea (Sūra 26, 63), and makes water flow from the rock (Sūra 2, 57).

The commentators and writers add further details which show partial dependence on Jewish legends (cf. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, p. 162 *et seq.*). Only the following need be mentioned here: Moses' rod was a branch of a myrtle-or black-berry bush in Paradise, 10 ells long. Adam fetched it thence with him, and after him it became the heritable possession of the prophets till Jethro. — According to another version it was entrusted to Jethro by an angel. — Moses received it miraculously from his father-in-law.

Moses' rod has served many purposes; its two branches shone in the darkness, it made water gush forth from the ground and disappear again, it put forth leaves and fruits, etc. — It is also related that Solomon had a rod from which he never separated.

Djāḥiẓ has embodied in his *Kitāb al-Bayān wa 'l-Tabyīn* a section on the rod, in which he speaks specially of the use of the rod amongst the ancient Arabs and in the Khuṭba (Kairo, 1311—1313, vol. ii. p. 49 *et seq.*). Also Usāma b. Munḳidh has composed a *Kitāb al-'Aṣā*. Cf. Derenbourg in his edition of the Text of the Autobiography, p. 499 *et seq.*; and *Mélanges orientaux* p. 116.

For the use of the staff in public worship see 'ANAZA.

(A. J. WENSINCK.)

'AṢABA, 'AṢABĀT (A.), as a juristic term denotes Agnates. Cf. the art. MIRĀTH.

'AṢABĪYA (A.), patriotism, party-spirit.

ASAD (A.), the lion. Known to the Semites from earliest times the lion has engaged the imagination of the Arab people and the Arab poets, especially in the pre-Islāmic period. By that time, indeed, lions may no longer have been at all abundant in Arabia, for the number of *Ma'sada's*, i. e. districts abounding in lions, mentioned in the literature is small (the lions of Sharā and Khafīya were held in most fear). Notwithstanding the scarcity of the lion the oldest literature shows the most thorough acquaintance with its characteristics. The thick neck — almost never the mane — is regarded as the symbol of power and majesty; the fetid breath, the adroit spring, the fearsome roar, the boldness and voracity of the lion recur again and again; but his occasional cowardice, his craftiness and his "going in the rain" were also sharply observed. As old as Arabic poetry itself is the identification of the dread warrior with the lion; the forest of lances with which the Beduin enter the fray appears to the poets like the thicket of reeds (*Ghāba*) which lions haunt. Just as the lion has found a place among the constellations in the heavens, so does a whole Beduin-tribe bear the proud name "sons of the lion" (see next art.). — In Islāmic time the

number of lions in Arabia decreased more and more, but one became acquainted in their stead with new varieties in Nubia and the Sūdān, North Africa, Mesopotamia, Persia and India. Yet knowledge of the lion remained surprisingly scanty in Arabic Science. Even al-Damīrī can scarce inform of a trait which could not be found in poetry or Saga, e. g. that the lion eats only his own prey, that he drinks no water from which a dog has lapped, that the lioness bears only 1—2 cubs, etc. The therapeutic and magic powers which have been ascribed to the several bodily parts of the lion, the skin, the fat, the flesh, the tooth, etc. are also rooted in ancient superstition, and even the numerous (500 it is said, according to others 1000) epithets of the lion in the Arabic language do not yield a perfect portraiture of it, but are synonyms for the most outstanding characteristics. The lion-chase has never been a knightly sport with the Arabs, but consisted in the laying of pitfalls in which a kid was made fast for a lure. — In Syria and Palestine the lion is now extinct, and on the Euphrates it was by the middle of last century a rare sight; Arabia still has a Ma'sada in Yemen (Doughty, *Travels in Arabia Deserta*, i. 459); even in Tunis, Algeria, Morocco, the oasis Fezzan and in Abyssinia it is not nearly so abundant as formerly. Constantly increasing traffic is driving it more and more to the southern wilds. The variety extant in Abyssinia, the Sūdān and Senegal with a short main which is only about five inches long and is never black but always a yellowish brown may be the nearest approach to those described in Arabic poetry.

In Astronomy Asad denotes the Constellation of the Lion, and specially the Star Regulus (α Leonis); in Alchemy it signifies "Gold".

ASAD, arab tribe. In Ptolemy Ἀσατηνοί(??) Genealogical Scheme: Asad b. Khuzaima b. Mudrika b. al-Muḍar. Brother-tribes are al-Hawn and Kināna; sub-tribes Dūdān, Ṣa'b, Ḥulma, Kāhil, Hind and 'Amr (= Na'āma). Unimportant tribes and clans are Asad b. 'Abd al-'Uzzā, Asad b. Djusham, Asad b. Musliya, Asad b. 'Abd Manāt, Asad b. Murr.

Dwelling-places. The Asad occupy a spacious region. It extends almost right across Arabia from Medina to the Euphrates. They are not masters however of this entire region, but live in scattered groups and really exercise no correspondingly significant authority, as the regard paid them by the other tribes does not appear quite proportioned to the area of their wanderings. Towards the North their main settlement extends to the Shammar-hills, but they also dwell beyond them. In Africa the Asad appear in Saṭīf (west of Kairawān). Neighbours of the Asad were: The 'Abs (in the Wādī Gharaiyir between Nibāgh and Nukra. The stronghold of the 'Abs, Uthāl, lay near the border. Of the Wādī Thādiḳ the lower part belonged to the 'Abs, the upper to the Asad; similarly with the Wādī Gharaiyir); Yarbū'ites (in Dhāt 'Ushaira in Wādī Khaww); Ḍabba (in Wādī 'Aḳīl); Ḥanẓala (in the steppe of al-Shaigha); Kinānites (in the West); Ṭaiyites (in the North); Sulaimites (in the West); Rabī' b. Mālik (on the hill Dhū 'Alaḳ); Fazāra (in the West); Djadhīma b. Mālik (on the hill Banān); Ghanī (in the upper part of Wādī 'Aḳīl). — Hills in the territory the Asad: al-'Abd, al-Akirān, Djila, Farkain (between Baṣra and Kūfa), Ḥabashā, Ḥaẓram, al-Hibs, Ḳalkh, al-Ḳanān, Ḳarn Ẓaby, Ḳaṭan, Ḳulāb, al-Ḳunna, Ḳusās (iron-mine, whence Ḳusāsian swords take their name), Mulḥaiyāt, Rakd, Ṣafar, Sāḳ al-Farwain, Ṣīra, Shaṭab, Ṭuraf, 'Uwāriḍ, al-Zahrān. — Wādīs and Watering-places: Abraḳ al-'Azzāf (often named; on the road from Baṣra to Medina), 'Abs, Akhthāl (wādī), 'Aḳīl (wādī), Alya, Armām (wādī), Banāna, al-Ba'ūḍa, al-Buṭāḥ, Buzākha (famous battle, see infra), al-Da''āth (wādī), Ḍalfa', al-Dhanaba, al-Dhiba, Dhū 'Urāṭ (wādī), al-Djiwā (wādī), Djumaiyir (wādī), Djurthūm, al-Ḥafar, al-Ḥafīr, Ḥawmānat al-Darrādj, Ḥazīz Ṣufaiya, al-Ḥiẓā', 'Iṭyar, al-Kahfa, Kaṭan, Khajma, Khaww(a), Khidhām, Malḥūb, Man'adj (name of the Wādī 'l-Rumma in the Asad-region), Nabawān, al-Radjī'a, Rawḍat al-Ḥazm, al-Rimth, al-Shabaka, Sharīl, Shifān, Sil' al-Sutar, Ṣufaiya, Tarman, Ṭathra, Thādiḳ, al-Thalathā', al-Zawrā', Zulfa. — Asadite Place-names: al-Abāṭir, Abraḳ Alya, Aihab, Akhira, al-'Āliya, Arīk al-Abyaḍ, al-'Athyar, al-Buraira, Bustān Ibrāhīm, al-Dadjā', Dhāt al-Sitar, Dhū Akhthāl, al-Djamrān, Djaww, Djufāf, al-Ghamr, al-Ghamrān, al-Gharrā', al-Ghurabāt, Haḳīl, Hubaiy, al-'Iyāba, Immara, Khidhām, Kufā, al-Nādjiya, al-Nā'i', Nuḳār, al-Rawḳā', Rawtha, al-Ruḳaḳ, al-Ṣaf'ha, Samīrā', al-Ṣammān, al-Sarā', al-Sarāra, al-Shafīr, al-Sharaba, Sharḳ, Sil', Ṣu'ā'ik, Turmud, Tawbadh, Tiyāsān, Tīn, al-'Udjaifir, 'Urfat A'yār, Zabad (near Ḳinnesrīn), al-'Uwāliya.

History. From pagan times come accounts of many struggles of the Asad, e. g. with the immigrating Taiyites by whom they were displaced from part of their territory. Again, on a predatory expedition against the Asad, Ṣakhr, who has become famous by reason of the laments for him composed by his sister al-Khansā' [q. v.], received the wound from whose consequences he died. But they are best known by their variances with their king Ḥudjr and his son, the poet Imru' al-Ḳais [q. v.]. In this instance the Kindite prince al-Ḥārith ibn 'Amr had on dividing his empire appointed his son Ḥudjr king of the Asad. Some time after the Asad took advantage of Ḥudjr's absence in the Tihāma for an uprising, which, however, met with a bloody suppression from Ḥudjr who had hastened hither; henceforth the Asad were called "Slaves of the Club", because on this occasion some of them were beaten to death with clubs. Besides this they were transplanted to the Tihāma, but afterwards pardoned. On their return home they fell upon Ḥudjr and put him to death. According to another account Ḥudjr of his own free will renounced the royal power, but then fell the victim of an act of revenge. Or again, the Asad came out to meet Ḥudjr who was advancing from the Tihāma to quell the rising, and defeated and killed him.

Imru' al-Ḳais, Ḥudjr's son, did indeed take heavy vengeance on them, but was unsuccessful in his endeavour to bring them under subjection to himself.

With the year 624 they make their entry into the history of Muḥammad. Two men of consequence of the Asad thought they might turn to use Muḥammad's supposed weakness after his defeat at Oḥod (624) in order to recommend to their tribe a predatory expedition against Medina; some other with truer judgment of the position of affairs warned them against it, but in vain. However before the assembled Asad were ready to set out, the Prophet got wind of the matter and, faithful to his policy of nipping every such movement in the bud, sent about 150 men under a capable leader by forced marches against the Asad, who fled to escape attack but left with the Muslims considerable booty in camels and sheep. The person who gave the Prophet information about the proposed expedition of the Asad was a Ṭaiyite, and they were Ṭaiyites also who availed themselves of the confusion which was now spread amongst the Asad and attacked and utterly despoiled them. In the year 627 they gave a contingent to the great coalition (The Campaign of the Ditch) formed by the people of Mekka against Muḥammad, which separated later with its object unaccomplished. In the same year Muḥammad despatched an expedition against the Asad, who fled being warned in time, but again lost camels. At the beginning of the year 9 (Spring, 630), which was for them a year of famine, a section of the Asad announced their political submission. To this embassy and its negotiations Sūra 49, 14—17 makes reference. Here too the outward mark of political subjection was the payment of the Ṣadaḳa; but whether conversion to the religion of Islām occurred among this widely-dispersed tribe, of which, too, some lived far apart, is really uncertain. The alleged ill-conduct of the Asad envoys in Medina is but a biassed invention; the Asad appear, however, even in Muḥammad's lifetime to have offered many an occasion for complaint. Immediately before the death of Muḥammad Ṭalḥa (Ṭulaiḥa), the chief instigator of the Asad attack planned in 624, the leader of the Asad in the Campaign of the Ditch, participator in the Asad embassy to Medina, had ventured to proclaim himself a prophet — an attempt with inadequate means, to be sure — and to urge apostasy from the State of Muḥammad. Muḥammad's death, the generally uncertain situation produced thereby and the absence of the large Muḥammadan army in North Arabia enabled Ṭulaiḥa to greatly extend (632) the religious-political movement initiated by him. At first he succeeded in bringing the Asad to open apostasy. But his endeavours to incite the powerful Bedouin tribes whose encampments were in the West to a great, united insurrection had only partial success. It appears that only the Fazāra attached themselves openy to the Asad. But bye and bye men from the 'Abs, the Dhubyān and the Ṭaiy seem also to have been found among them. At the well of Buzākha, in the territory of the Asad, there ensued a fight with the faithful under Khālid's leadership. When Ṭulaiḥa in the middle of the fight was left in the lurch by the Fazāra the day was lost to the Asad. Some subsequent skirmishes (e.g. at al-Ghamr) completed their subjection. Only then appears to have occurred their conversion to Islām.

In Kūfa they occupied later a quarter of their own, and constituted a considerable section of the local population. We then find also their Kūfic contingent, e.g. in the armies of 'Alī, Ḥusain, Mukhtār, Muhallab and Yazīd.

ASAD b. 'ABD ALLĀH AL-ḲASRĪ (according to the Arabic sources; according to the Persian al-Kushairī), governor of Khorāsān under the Caliph Hishām b. 'Abd al-Malik, 106—109 (724—727) and 117—120 (735—738). Especially during his first term of office he conducted himself in relation to the Arabs as a fanatical adherent of the Yemenite party. With the Persian Dihḳāns (landowners) he was in high favour and was praised by them as a prudent "householder" (Katkhudā) of his province. Sāmān-Khudāt, the ancestor of the Sāmānids, embraced Islām under him, and in his honour gave his son the name Asad. The city of Balkh which had been demolished by the Arabs he had built anew, and transferred (107 = 726) the Arab camp thither from Barūḳān (2 parasangs from Balkh); later he made this city his place of residence, probably in order the more effectively to carry on the struggle with the princes of Tukhāristān, their Turkish allies and the Arab insurgents under Ḥārith b. Suraidj. In contrast to his successor Naṣr b. Saiyār he did not archieve any great military successes. The village of Asadābād near Naisābūr was built under him, and remained in possession of his successors until the administration of 'Abd Allāh b. Ṭāhir (q.v.).

ASAD b. AL-FURĀT b. SINĀN, ABŪ 'ABD 'ALLĀH, born 142 (759-760) in Ḥarrān, came while yet quite young with his father to Africa, afterwards in Medina he attended the lectures of the famous jurist Mālik b. Anas (q.v.). After the latter's death he went to 'Irāḳ, made the acquaintance of the pupils of Abū Ḥanīfa, and studied thereafter in Egypt under Ibn Ḳāsim (q.v.). Returning to Ḳairawān (181 = 797) he soon acquired the reputation of a great jurist [cf. art. AGHLABIDS], and by the Aghlabid Ziyādat Allāh was appointed Ḳāḍī of this town (203 = 818-819) along with Abū Muḥriz Muḥammad who was already occupying this office, although it was unusual for two Ḳāḍīs to officiate at the same period in the same town. Great as was the repute he enjoyed as jurist he is yet better known by the expedition to Sicily (210 = 826) which was commanded by him (with the title "Amīr"), in the course of which, during the siege of Syracuse, he died (213 = 828) of the plague, or, as another tradition has it, by an enemy's hand.

AS'AD EFENDI. (See ES'AD EFENDI.)

ASADĀBĀDH, town in Djibāl (Media), 7 parasangs or a day's journey to the west of Hamadhān, on the western slope of the Alwand-Kōh (Elwend), at the entrance to a fruitful, well-tilled plain (5659 ft. high). As a permanent caravan-station on the famous, ancient highway Hamadhān (Ekbatana)-Baghdād (or Babylon), it is a settlement reaching back into antiquity, and (according to Tomaschek) is probably the Ἀδρapάνa of Isidor of Charax and the Beltra of the Tabula Peutingeriana (cf. in this connection Weissbach, in Pauly-Wissowa's *Realencykl. d. klass. Altertumswissensch.*, III, 264). In the Arab Middle ages, and even into the Mongol period, Asadābādh was a flourishing, thickly populated place with excellent markets, and its inhabitants were considered well to do because of the rich yield of their domains, to which canals gave a plentiful supply of water. It is to-day a fine village with some 200 houses according to Bellew, some of which are occupied by Jewish families. The Persians call it, according to the accounts of European travellers, Absadābādh (Petermann, Bellew), also Sa'īdābādh (Dupré, Petermann) or Sahadzbādh (Ker Porter). In the year 514 (1120) there was fought at Asadābādh a battle between the two Seldjūḳ Sultans Mas'ūd of Mawṣil (Mosul) and Maḥmūd of Iṣpahān, which resulted in favour of the latter. 3 parasangs from Asadābādh there stood imposing buildings of Sāsānid-time which the Arabs called Maṭbakh or Maṭābikh Kisrā, i. e. the Kitchen(s) of Khusraw; for the explanation of this name cf. the legend deriving from the Itinerary (*Risāla*) of Mis'ar b. Muhalhil in Yāḳūt, *Mu'djam* (ed. Wüstenf.), IV, 593 s. v. Maṭbakh Kisrā.

Bibliography: Yāḳūt, *Mu'djam* (ed. Wüstenf.), I, 245; Quatremère *Hist. des Mongols de la Perse* (Paris, 1836), i. 250, 264—266 (N. 87), 427 f.; G. le Strange, *The Lands of the Eastern caliphate* (Cambridge, 1905), p. 196; Weil, *Gesch. d. Chalifen*, iii, 218; Tomaschek, in the *Sitzungsber. d. Wiener Akad. d. Wissensch.*, cii (1883), 152; Ritter, *Erdkunde*, ix, 81, 344; H. Petermann, *Reisen im Orient* (1861), II, 252; H. W. ASADĪ, ABŪ NAṢR AḤMAD B. MANṢŪR AL-ṬŪSĪ, one of the oldest of the Neo-Persian poets, who died during the reign of the Ghaznawid Mas'ūd (1030—1041). Little that is certain is known of his circumstances, for what Dawlat-Shāh tells of his relations with Firdawsī appears to be of a legendary nature. Specially is he known for his Strife-poems (Munāẓarāt), a form of composition wich, according to Ethé, is imitated in the Provençal Tenzone.

Bibliography: Dawlat-Shāh, *Tadhkirat al-Shu'arā'* (ed. Browne), p. 35 f.; Ethé, in the *Verhandlungen des 5. internation. Orientalist-Congresses* (Berlin), ii, 48 f.; and in the *Grundriss der iranisch. Philol.*, ii, 226 f.; Horn, *Gesch. der pers. Litter.*, p. 113; Browne, *A Literary History of Persia*, ii, 148 f.

ASADĪ, 'ALĪ B. AḤMED, son of the above-mentioned, author of a Neo-Persian Dictionary of Rhyme, edited by Horn (*Asadī's neupersisches Wörterbuch Lughat-i Furs*; Göttingen, 1897). He is also held to be the author of an epic poem entitled *Garshasp-Nāme*, which was completed in 1066. Selections from this were published by Turner Macan in the 4[th] Vol. of his edition of the *Shāh-Nāme*. It may also be mentioned that the well-known and very ancient Vienna MS. of the *Liber Fundamentorum Pharmakologiae* edited by Seligmann bears the signature of our poet.

ĀṢAF B. BARAKHYĀ (Hebrew Asaf b. Berekyah), name of the alleged Wazīr of King Solomon. According to the legend he was Solomon's confidant, and always had access to him. When the royal consort Djarāda was worshipping idols Āṣaf delivered a public address in which he praised the apostles of God, Solomon among them but only for the excellent qualities he had manifested in his youth. Solomon in anger thereat took him to task, but was reproved for the introduction of idol-worship at the court. This was then done away with and the consort punished; the king became repentant.

Bibliography: Ṭabarī (ed. de Goeje), i. 588 *et seq.*; Weil, *Biblische Legenden der Muselmänner*, p. 265, 270; Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, p. 222. (A. J. WENSINCK.)

ĀṢAF-DJĀH, title of the Niẓām of Ḥaidarābād [q. v.].

ĀṢAF-KHĀN. This title was borne by several persons at the court of the Great Mogul of whom the following deserve mention:

1. ĀṢAF-KHĀN MĪRZĀ DJA'FAR-BEG B. MĪRZĀ BADĪ' AL-ZAMĀN, born at Ḳazwīn, came in 988 (1577) to India and received after the death of his uncle Mīrzā Ghiyāth al-Dīn the Office of a Bakhshigarī which the latter had administered, with the title Āṣaf-Khān (989 = 1581). Under Djahāngīr he was appointed Wazīr, but he owes his fame mainly to his literary merits. He composed poems, and had a share in the great historical work *Ta'rīkh-i Alfī*. Āṣaf-Khān died 1021 (1612).

Bibliography: al-Badā'ūnī, *Muntakhab al Tawārīkh*, iii. 216 *et seq.*; Elliott and Dowson, *History of India*, v. 150 *et seq.*

2. ABU 'L-ḤASAN, son of the Wazīr I'timād al-Dawla and brother of Nurdjahān [q. v.], after his father's death he was also appointed Wazīr by Djahāngīr, as well as under his successor Shāh Djahān, who had married his daughter Ardjumand Bānū Begam (Mumtāz Maḥall, q. v.) was first man of the empire in esteem and in wealth. Āṣāf-Khān died 1051 (1641). His tomb in Shahdara, not far from Lahore, is still existent.

ASAFĪ. [See SAFĪ.]

ASĀS (A.), foundation. This word has a special denotation in the system of Ismā'īliya [q. v.]. According to this there follow upon each appearance of the Nāṭiḳ (Speaker, Prophet) who appears anew at the beginning of the seven world-periods as the embodiment of the World-intellect, seven Imāms one after the other who are termed Ṣāmit (silent); after these 7 Ṣāmit there begins again a new cycle of the self-renewing Nāṭiḳ. The first in point of time of each group of seven

of these Ṣāmit is the Asās (or Naḳīb) as the incarnation of the world-Soul; to him there emanate from the Nāṭiḳ the secrets of the progressively revealed true doctrine. Thus to the Nāṭiḳ Adam belongs the Asās Seth; to Moses, Aaron; to Jesus, Peter; to Muḥammed, ʿAlī; to Muḥammed b. Ismaʿīl, ʿAbd Allāh b. Maimūn al-Ḳaddāḥ, grandfather of the Mahdī ʿUbaid Allāh, the founder of the Fāṭimid dynasty.

Nation.*, xxii. i. 177–192); de Goeje, *Mémoire sur les Carmathes du Bahrain et les Fatimides*[2] (Leiden, 1886), 166 *et seq.*; Blochet, *Le Messianisme dans l'hétérodoxie musulmane* (Paris, 1903), p. 59; E. Browne, *Literary History of Persia* (London, 1902), p. 408 *et seq.*

(GOLDZIHER.)

AṢFAR (A.), yellow: also, in distinction from black, simply light-coloured. Some Arab philologists and exegetes indeed claim for *aṣfar* also the meaning "black"; see the discussions thereon in the *Khizānat al-Adab*, ii. 465. The Arabs called the Greeks *Banū 'l-Aṣfar* (fem. *Banāt al-A.*: *Usd al-Ghāba*, i. 274, 1 ab infra) according to Ṭabarī (ed. de Goeje, i. 357, 11; 354, 12) signifying "Sons of the Red One" (Esau). In the Ḥadīth mention is made of the contest of the Arabs with the Banū 'l-Aṣfar and of the conquest of their capital Constantinople (*Musnad Aḥmad*, ii. 174). *Mulūk Banī 'l-Aṣfar* (*Aghānī*, i. ed. vi. 98, 12) = the Christian princes, especially those of the Rūm (ib. p. 98, 7 ab infra; cf. Abū Tammām, Dīwān, ed. Beirut. 18 ult. in a poem to al-Muʿtaṣim after the battle at ʿAmmuriya). Later this designation was applied to Europeans in general, especially in Spain. *Taʾrīkh al-Ṣufr* (Spanish Era) can thus be best explained; other views in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxiii. 626, 637. Many genealogists have explained Aṣfar as the name of the grandson of Esau (Σωφάρ in the Septuagint, Gen. 36, 11) and father of Rūmīl (Reʿūʾēl, Gen. 36, 10), ancestor of the Rūm. According to the explanation of De Sacy (*Not. et Extr.*, ix. 437; *Journ. As.*, 3. Serie, Pt. i., p. 94), which Franz Erdmann accepts (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.* ii. 237–241), the designation Banū 'l-Aṣfar was a literal translation originally referring to the Flavian dynasty, then became extended beyond it to the western nations. From his travels among the present-day Noṣairis (q. v.) H. Lammens relates that they designate the Emperor of Russia *Malik al-Aṣfar* (*Au pays des Nosairis* in *Rev. de l'Or. chrétien*, Paris, 1900, p. 42 of the separate edition).

Bibliography: In Goldziher, *Muhammedanische Studien*, i. 268 *et seq.*; Caetani, *Annali dell' Islām*, ii. 242; *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, iii. 363; *Journ. As.*, 10. Serie, ix. 230; 10. Serie, xii. 190.

(GOLDZIHER.)

AL-**AʿSHĀ**, ABŪ BAṢĪR MAIMŪN B. ḲAIS AL-BAKRĪ, of the tribe Ḳais b. Thaʿlaba, eminent poet of the period of transition from the Djāhiliya to Islām. To distinguish him from other poets of the same name he is called al-Aʿshā 'l-akbar. The epithet al-Aʿshā was given him from a verse in his so-called *Muʿallaḳa* (ed. Lyall, Calcutta, 1894, v. 20). The year of his birth is unknown; he died ca 629 A. D. Though he lived therefore into the period of Islām and even composed a very famous poem in praise of Muḥammad, yet he did not accept the new faith. But just as little may he have been really a Christian, although he professes to be a monotheist and came into close contact with Christianity through intercourse with the court of al-Ḥīra and through those in his intimate neighbourhood. Next to Imruʾ al-Ḳais, al-Aʿshā is the ancient-Arabian poet who has wandered about most in the world and procured for himself thereby a proportionately broad horizon. Hence, too, the astonishing number of allusions to historical incidents, and the numerous foreign words, especially Persian, in his poems. Through their Wine-songs al-Aʿshā and ʿAdī b. Zaid have served as models for the later singers of wine.

Bibliography: Brockelmann, *Gesch. d. arab. Litter.* i. 37; Geyer, *Zwei Gedichte von al-Aʿšā* (Wien, 1905); H. Thorbecke, *Al-Aʿšâ's Lobgedicht auf Muhammed*, in the *Morgenl. Forschungen*.

(A. HAFFNER.)

AʿSHĀ HAMDĀN, properly ʿAbd al-Raḥmān b. ʿAbd Allāh, Arab poet, who lived in Kūfa in the second half of the i. (vii.) cent. He was married to a sister of the theologian al-Shaʿbī, and he, again, had married a sister of al-Aʿshā. The role which he played under ʿAbd al-Raḥmān b. al-Ashʿath is best known. He took part in his campaign against the Turks and was taken captive but escaped with the aid of a Turkish woman whose passions were enflamed for him. When Ibn al-Ashʿath turned against al-Ḥadjdjādj the poet's sharp tongue aided him with satires. The decisive battle at Dair al-Djamādjim resulted unfortunately; Ibn al-Ashʿath took to flight, and al-Aʿshā was led prisoner before al-Ḥadjdjādj, who immediately recalled to him some of his malicious songs. His extemporaneous flatteries availed him no longer: al-Ḥadjdjādj's sentence of death was carried out on the spot (83 = 702). The poems of Aʿshā Hamdān which have been preserved to us are reflexes of his adventures and political sentiments.

Bibliography: *Aghānī* (1st ed.), v. 146 *et seq.*, 162 *et seq.*; Masʿūdī, *Murūdj* (Paris), v. 355 *et seq.*; Ṭabarī (ed. de Goeje), s. Index.

(A. J. WENSINCK.)

AṢḤĀB (A., sing. *Ṣāḥib*) or Ṣaḥāba (a single one: Ṣaḥābī), "Companions"; as term. techn. of Islām it has the special sense of "The Companions of the Prophet". In earlier times the term was restricted to those who had enjoyed intercourse with the prophet for some time, and had accompanied him on his expeditions. Later the circle of Companions became more and more extended, the condition that this must have been actual intercourse being disregarded, and those orthodox being also included in the Aṣḥāb who had met the prophet during his life, or who had seen him even if but quite a short time, without regard to the age of the persons in question. (On the differences of opinion on the definition of this term, cf. Goldziher, *Muh. Studien*, ii. 240). The definition which is valid in Theology attaches itself to the wider extension of the term (Ḳasṭallānī, vi. 88). ʿĀmir b. Wāthil al-Kinānī Abu 'l-Ṭufail who died shortly after 100 A. H. is styled the last of the Companions (*Usd al-ghāba*, iii. 97, v. 233), and must have been

quite a little child when he saw Muḥammad; he was only born in the year of the battle of Oḥod and was with the prophet at the age of 8 (cf. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxiii. 595). Orthodox Djinn, whom legend mentions as having communication with the prophet, also have according to this canon their place among the Aṣḥāb. The Aṣḥāb occupy in Sunnī Islām high rank in the estimation of the Faithful. After the Ḳor'ān they are the sources of authentic religious doctrine, since information about the prophet's expressions and procedure traces back to the communications which they as ear- and eye-witnesses have made regarding them. On the dicta handed down by them as authentic the Ḥadīth is based; those Ḥadīth which trace back to them in an unbroken chain are *musnad* ("propped"). Attested accounts of their own procedure are regarded as evidences for the correct Sunna, which the Faithful must hold to be the rule of conduct for all times. Their intercourse with the prophet and the importance which they have in the establishing of Islām have made them from the beginning objects of piety to the orthodox. To revile them or to hold them in contempt is considered an execrable crime. Scourging is the penalty set upon their reviling (*Sabb al-Ṣaḥāba*), even capital punishment in the event of an obstinate repetition. As precedence among the Aṣḥāb the first four Khalīfa's occupy the highest places in the order of their accession to the ruling power; six other Aṣḥāb share with them this preeminence, that Muḥammad assured them while yet they lived of Paradise (*al-'Ashara al-mubashshar lahum bi 'l-Djanna*); they constitute a separate category of the Aṣḥāb. Other categories among the Aṣḥāb are determined by the different nature of their share in the prophet's enterprises: *Muhādjirūn* (who emigrated with him to Medina), *Anṣār* (natives of Medina, their share begins only after the emigration), *Badriyūn* (who cooperated with him at Badr), etc. The opinions on their qualitative gradation have been collected in Nawawī's Commentary on Muslim (*Ṣaḥīḥ*, V, 161). The contemptuous attitude which manifests a hatred that not rarely becomes intensified into a wild fanatism towards the Aṣḥāb, because with their approval the first Khalīfas wrested away the rights of 'Alī and his family, forms an outstanding peculiarity of the Shī'a in contrast to Sunnī Islām. The adherents of the latter constantly make the Tarḍiya-Eulogy (raḍiya Allāhu 'anhu, "Allah be pleased with him!") follow the mention of any one of the Aṣḥāb in speech or writing. In the theological literature of the Sunnīs the collection of the traditions concerning the virtues (*Faḍā'il* or *Manāḳib al-Aṣḥāb*) receives assiduous attention, most systematic works on Ḥadīth contain a section on such. There are, besides, several works in which the names of the entire companions have been collected with biographical notices and communications regarding the Ḥadīth they have handed down. They display many variations from one another. Of 'Abd al-Bāḳī Ibn Ḳāni', a Mawlā of the Omaiya-family (died in Baghdād 351 = 962) a *Mu'djam al-Ṣaḥāba* is mentioned (Dhahabī, *Ṭabaḳāt al-Ḥuffāẓ*, iii. 99). The authors of the most famous of these works dealing with the Companions are: Abū 'Abd Allāh b. Manda (died 395 = 1004-1005), Abū Nu'aim al-Iṣfahānī (died 430 = 1038-1039), Abū 'Omar b. 'Abd al-Barr al-Namarī al-Ḳurṭubī (died 463 = 1070-1071), *Kitāb al-Istī'āb fī Ma'rifat al-Aṣḥāb* (2 Vols. Haidarābād, 1318; cf. the critical notes on this in Subkī, *Ṭabaḳāt al-Shāfi'iya*, vi. 135), Abū Mūsā Muḥammad b. Abī Bakr al-Iṣfahānī (died 581 = 1185-1186). The material of these predecessors has been critically compiled, corrected and supplemented by 'Izz al-Dīn Ibn al-Athīr al-Djazarī (died 630 = 1232-1233) in his comprehensive *Usd al-Ghāba fī Ma'rifat al-Ṣaḥāba* (5 Vols. Cairo 1286), also Dhahabī, *Tadjrīd Usd al-Ghāba* (2 Vols. Haidarābād 1315; 8809 Biographies). Still fuller material is given by Abu 'l-Faḍl Ibn Ḥadjar al-'Asḳalānī (died 852 = 1448-1449) in his *al-Iṣāba fī Tamyīz al-Ṣaḥāba* (4 Vols.; printed in the *Bibliotheca Indica*, Calcutta 1853—1894; 8 Vols. Cairo 1323—1325).

(GOLDZIHER.)

AṢḤĀB AL-ḤADĪTH (A.), the adherents of tradition in contrast to the *Aṣḥāb al-Ra'y* [q. v.]. For further information on this and similar combinations see Ahl.

AṢḤĀB AL-KAHF, "the people of the cave". This is the term used in the Ḳor'ān to denote the youths who in the West are commonly called "the Seven Sleepers of Ephesus". This is the story almost as Muḥammad tells it (Sūra 18, 8 *et seq.*): Some youths in a pagan town are loyal to the one God; they conceal themselves in a cave, whose entrance is on the north side. There God puts them and their dog to sleep. "And if you had come upon them you would have fled thence and been filled with terror." After 309 years the sleepers awake and send one of their number into the town to buy bread. — The Ḳor'ān has no more to relate; there is only added that their number is variously given as 3, 5 or 7 and that the story is intended to confirm faith in the resurrection.

The historians and commentators have more to tell. Of the various traditions which al-Ṭabarī (ed. de Goeje, i, 775 *et seq.*, *Tafsīr*, fasc. xv. 123 *et seq.*) communicates the majority are of the following type: In a town of Rūm (i. e. in Greece or Asia Minor) some youths, who have gone over to Christianity refuse to worship the idols. They flee from the town and with a dog which would not be chased away conceal themselves in a cave, where they go to sleep. The pagan king Daḳyūs (Dāḳiānūs, Dāḳyānūs) soon appears at the scene with his servants to seize the persons of the young men. But no one is able to enter the cave, and so the only thing possible for him to do is to build up the entrance that those shut in may die of hunger and thirst. This he does. Afterwards the thing is forgotten. On day an owner of herds sends workmen to remove the wall at the entrance, and causes a sheepfold to be constructed there. The workmen however do not observe the sleepers. In God's good time the latter awake. Filled with anxiety they send, observing all caution, one of their number into the town to buy bread. The baker does not recognise the coin which is given in exchange and brings the young man before the king, when everything is explained; the men have slept for 300 years; in the meantime the pagan has given place to a Christian generation. The king is much rejoiced, for the presence of this youth is proof that the body is raised with the spirit, a thing which some had doubted. As soon as the young man enters the cave again he goes to sleep beside his companions. A church is then built at the spot.

This account must suffice. Only one differing version need be mentioned which originates from Wahb b. Munabbih (Ṭabarī, ed. de Goeje, I, 778 *et seq.*; Ibn al-Athīr, ed. Tornb., I, 254 *et seq.*): One of the apostles went to the above-mentioned town; at the gate he found that an idol had been set up before which every one who entered had to prostrate himself. In consequence he remained without the town and hired himself out as an attendant at the baths. There he carried on his propaganda and won the youths for Christianity. One day as the son of the king was about to enter the baths in company with a female the apostle admonished him. This time he was prevailed upon to forego his intention, but not the next time however. Then the divine punishment fell on them both, and they died in the bath. As soon as this reached the king's ears he issued a warrant of arrest on the person of the apostle. But he and the young man were carried off for safety to a cave by an acquaintance; there was also a dog with them.

What it goes on to state agrees with the other version. — The story is told in the sources with much historical and geographical detail; many of these details are contradictory, and others have not yet been explained. The most important of them will now be noticed.

The pagan king is named Dāḳyūs, i. e. Decius (249—251), who persecuted the Christians, and the Christian is Theodosius II, (408—450). This however does not agree with the Ḳor'ānic account, that the sleep lasted 309 years, nor with others, according to which it lasted 472. — The question as to which town is the scene of the story is important. The western sources all name Ephesus; some of the oriental, Afsūs. The Arabs know of two places called Afsūs: the one is the well-known town; the other is the old Arabissus in Cappadocia, which is called also Absūs (now Yarpuz). Are we to seek there the scene of these actual or supposed events?

De Goeje has adduced proofs out of the literature in favour of this view. Some travellers e. g. relate that a cave was pointed out to them there containing 13 male corpses which looked as though they had dried up (Yāḳūt, *Mu'djam*, ii. 806; al-Muḳaddasī, p. 153; Ibn Khordādhbeh, p. 106, 110: al-Bīrūnī, *Chronology*, ed. Sachau, p. 290). Further in the *Recueil des textes rel. à l'histoire des Seldjoucides*, ed. Houtsma, iv. 152 it is simply stated that Arabissus is the place of "the people of the cave". Perhaps it is this discovery which is the original source of the legend of the seven sleepers. Because of the name Absūs people came to think later of Ephesus.

Another important question is connected with the meaning of the last word in the Ḳor'ānic "men of the cave and (of) al-Raḳīm". Many take it to be the name of the dog, or to be the tablet which contains the story of the youths. The Arab geographers regard it as a geographical name; Ibn Khordādhbeh e. g. calls the cave, which is mentioned as containing the corpses, al-Raḳīm; he lays the scene of the story of the youths at Ephesus. Al-Muḳaddasī on the other hand regards the 13 men discovered as the Aṣḥāb al-Kahf, and knows of a place al-Raḳīm in the country to the East of the Jordan not far from 'Ammān. There a wonderful incident has occurred with 3 men who are therefore called Aṣḥāb al-Raḳīm. Clermont Ganneau has visited the cave there and considers it to be the one described in the Ḳor'ān.

What significance attached to the dog we cannot tell, nor where the mountain Anchilus (the spellings of it are very various) is to be looked for; nor is there unanimity in regard to either the number or the names of the youths.

The oldest mention of the legend in the east we find made by Dionys de Tell Mahra in a Syrian work of the v. cent.; in the east by Theodosius in his book on the Holy Land. In these versions the names of the youths are Greek. Opinions are at variance in regard to the question whether the version found in Dionys was translated from the Greek or was originally composed in Syriac. — The legend is widely spread in the literatures of east and west. On this point see the work by John Koch, who has attempted to give it a mythological interpretation.

AṢḤĀB AL-RASS, "the people of the ditch" or "of the well", are twice mentioned in the Ḳor'ān (Sūra 25, 40; 50, 12), along with 'Ād, Thamūd and other unbelievers. The commentators know nothing for certain about them, and so give widely divergent explanations and all manner of fantastic accounts. Some take al-Rass to be a geographical name (cf. Yāḳūt, sub voce); some hold that these people, a remnant of Thamūd, cast (*rassū*) their prophet Ḥanẓala in to a well (*rass*) and were consequently exterminated. It is also related that the mountain of the bird 'Anḳā' [q. v.] was situated in their region. — Ṭabarī mentions the possibility of their being identical with the Aṣḥāb al-Ukhdūd [q. v.]; otherwise he does not know of anything relating to them; just as little do we.

AṢḤĀB AL-UKHDŪD, "the people of the ditch", mentioned in Sura, 85, 4 *et seq.* The Muslim historians relate as follows in regard to this passage:

King Dhū Nuwās of Yemen was a devotee of Judaism and intolerant of the Christians. He bade them choose between Judaism and death. The Christians preferred martyrdom. Thereupon the king caused a long ditch to be constructed in which they were burned alive.

This story is partly confirmed by Christian sources and enlarged upon. When the Kūshites were unable, since winter had set in, to send a viceroy to Yemen, Dhū Nuwās (he is variously named), who was a convert to Judaism usurped the authority and persecuted the Christians. Moreover he laid siege to Nadjrān, and breaking his word on the capture of the town destroyed the steadfast Christians with fire and sword. Of a real ditch however there is no mention. — Almost the same as this is the account given by Simeon de Bēt-Arshām and by the anonymous writer in Boissonade. The account of these events was written in the spring of 524 A. D. in Syria; they happened therefore towards the end of 523.

Other explanations are also given, e. g. that the "people of the ditch" were Daniel and his companions (Ṭabarī, *Tafsīr*, s. loc.), a view which Geiger (*Was hat Mohammed* etc., p. 192) and Loth (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, XXXV, 121) regard as probable. — According to a tradition in Tha'labī the „people of the ditch" were Antiochus in Syria, Nebuchadnezzar in Persia, and Dhū Nuwās in Yemen.

A'SHĀR. [See 'USHR.]

AL-ASH'ARĪ, ABŪ BURDA 'ĀMIR B. 'ABĪ MŪSĀ, judge and traditionist. When Shabīb b. Yazīd appeared at the head of the Khāridjites in the year 76 (695-696) and surprised Kūfa, Abū Burda had also to pay homage to the insurgent. Later he was appointed judge in Kūfa. Through his personal qualities he gained great regard as occupant of this office: besides he was considered to be well versed in Muḥammadan tradition. According to the usual account he died in the year 103 (721-722); but 104, 106 and 107 are also given as the year of his death.

Bibliography: Ibn Sa'd, vi. 187; Ṭabarī (ed. de Goeje), ii. 131 *et seq.*; Nawawī (ed. Wüstenfeld), p. 653 *et seq.*; Ibn Khallikān (Trans. of de Slane), ii. 2 *et seq.*
(K. V. ZETTERSTÉEN.)

AL-ASH'ARĪ, ABU 'L-ḤASAN 'ALĪ, famous theologian, born at Baṣra in the year 260 (873-874), descendant of the above-named. The complete genealogy is: 'Alī b. Ismā'īl b. Isḥāḳ b. Sālim b. Ismā'īl b. 'Abd Allāh b. Mūsā b. Bilāl b. Abī Burda. Until his 40. year he was a zealous pupil of the Mu'tazilite theologian al-Djubbā'ī [q. v.], then on the occasion of a dispute with his teacher on the fitness of God's predeterminations disagreed with him and went his own way. But Spitta has shown that we have to do here with a biassed legend and that probably the study of the traditions elucidated for him the contradiction between the Mu'tazilite views and the spirit of Islām. However that may be, he henceforth championed the orthodox views against the Mu'tazilites and composed a large number of works of a dogmatic and polemic nature. Ibn Fūrak states that their number amounted to about 300, Ibn Asākir gives the titles of 93 of them, which are repeated with occasional notes in Spitta, *Zur Geschichte Abu 'l-Hasan al-Aš'arî's* p. 63 *et seq.* Only a few of them have been preserved, and are enumerated by Brockelmann, *Gesch. der arab. Litter.*, I, 195. The work *al-Ibāna 'an Uṣūl al-Diyāna* was printed with three supplements at Ḥaidarābād in 1321 (1903). Also a *Risāla fi 'stiḥsān al-Khawḍ fi 'l-Kalām* (ibid. 1323). His philosophical system is sometimes disparagingly judged. Cf. Goldziher, *Beiträge zur Litteraturgeschichte der Šî'â*, *Sitzungsberichte*, Vienna, Bd. LXXVIII, p. 472 *et seq.* For the rest he belonged to the Madhhab of Shāfi'ites. He spent the closing years of his life in Baghdād and died there in the year 324 (935).

Al-Ash'arī enjoys the credit of having overcome the antipathy of the older Muḥammadan scholars to dialectic in articles of faith by his successful utilisation of it to combat the Mu'tazilites and the chiefs of other sects who were suspected of heresy. He is, therefore, the founder of orthodox scholasticism (*Kalām*), since the few orthodox teachers who had ventured on it before him had too little culture to be able to avoid giving offence by certain of their expressions. His method in consequence found acceptance especially with the Shāfi'ites, and he gathered round him a circle of pupils from whose midst there went forth various famous theologians who developed and spread his dogmas. The best-known of these older Ash'arites are al-Bāḳillānī, Ibn Fūrak, al-Isfarā'inī, al-Ḳushairī, al-Djuwainī (Imām al-Ḥaramain) and especially al-Ghazālī. Outside the Madhhab of al-Shāfi'ī the opinions of al-Ash'arī met with less recognition. The Ḥanafites preferred the doctrine of his contemporary al-Māturīdī, who however differed from him only in subordinate controversial points; the Ḥanbalites kept to the old point of view and remained opponents of the Ash'arite school. In Spain Ibn Ḥazm [q. v.] opposed the doctrine of al-Ash'arī. Under the first Seldjūḳ, Toghrul-Beg, the distin-

guished Ash'arite teachers were even persecuted at the instance of the Wazir al-Kundurī; however, his successor, Niẓām al-Mulk soon put an end to this treatment of them. They gained more and more influence generally, especially through the writings of the famous al-Ghazālī. In the Maghrib they found an ardent champion in Ibn Tūmart, the founder of the empire of the Almohades. The eventual result was that the Ash'arite *Kalām* was everywhere taught in the schools of the Sunnis and the initial opposition became silent.

AL-ASH'ARĪ, Abū Mūsā 'Abd Allāh b. Ḳais, governor. Abū Mūsā belonged to Yemen and early accepted Islām. According to the usual tradition, after his conversion in Mekka he joined the emigration to Abyssinia and only retured on the conquest of Khaibar. Thereupon he was appointed governor of a district by Muḥammad. In the year 17 (638) 'Omar conferred on him the governorship of Baṣra on the deposition of al-Mughīra b. Shu'ba. It was no light task however to hold the restless Beduin in check, and when Abū Mūsā set out to assume his office he took with him twenty nine distinguished men in order to strengthen his position. When the inhabitants of Kūfa were dissatisfied with their governors the Caliph acquiesced in their desires, and since they declared they would like best of all to have Abū Mūsā he was transferred to Kūfa in the year 22 (642-643). But soon it proved that the new governor was unable to satisfy the capricious people of Kūfa, and he was recalled after a year and was given back his post in Baṣra. Soon after he was sued before the Caliph who, however, accepted his excuses, and even after 'Omar's death Abū Mūsā, who had distinguished himself as a commander on the field, filled the governorship of Baṣra. But some years after 'Othmān's accession he was deposed and 'Abd Allāh b. 'Āmir nominated his successor, whereupon Abū Mūsā settled in Kūfa. In the year 34 (654-655) 'Othmān appointed him governor of Kūfa; but when on the murder of the Caliph this town joined the cause of 'Alī, Abū Mūsā was forced aside and had to flee. Once again he appears in the history of Islām, for, when hostilities were interrupted in the Battle of Ṣiffīn in the month of Ṣafar, 37 (July, 657), and the combatants agreed to leave the decision as to whether the sovereignty belonged to 'Alī or to Mu'āwiya to two impartial arbiters, Abū Mūsā and 'Amr b. al-'Āṣ were entrusted with the commission. In Ramaḍān of this year (February, 658) the two arbiters met in Dūmat al-Djandal (or rather in Adhroḥ [q. v.]). Here Abū Mūsā was outwitted, and declaring both 'Alī and Mu'āwiya unworthy of the Caliphate left the choice of a successor to the Islāmic community. 'Amr then stepped forward and agreed with him in regard to 'Alī, but authorised Mu'āwiya's possession of the dignity. This was the end of Abū Mūsā's political activity. Equally unpopular with both parties he only with difficulty managed to save himself and escape to Mekka. But here also he felt insecure, and later betook himself to Kūfa. The year of his death is variously given. According to the oldest tradition he died in Kūfa in the year 42 (662-663) or in 52.

(K. V. Zetterstéen.)

AL-ASH'ATH b. Ḳais b. Ma'dīkarib, Kindite prince in Ḥaḍramawt. His real name was Ma'dīkarib. He was called al-Ash'ath because of his ever unkempt hair. Rare epithets given to him are al-Ashadjdj, "who has a scar on his head", and 'Urf al-Nār, a South-Arabian term used to denote a traitor. His *Kunya* is Abū Muḥammad. His father, who on the fall of the dynasty of Ākil al-Murār was the real heir to the chieftainship amongst the Kindites was murdered by the Murādites. To avenge his father's death he undertook an expedition against them, but was taken prisoner and had to pay 3000 camels for his ransom. In the year 10 (631) he was the leader of the embassy which announced to the prophet the submission of a section of the Kindites. According to some he had by that time already married Umm Farwa (or Ḳuraiba), sister of Abū Bakr, but could not take her with him to Ḥaḍramawt. A sister of his was engaged to Muḥammad; but Muḥammad died before the nuptials. Perhaps even in Muḥammad's life-time he had provoked disturbances amongst the Kindites. In any case after Muḥammad's death (632) he brought about the defection of his clan, the al-Ḥārith b. Mu'āwiya, to whom the 'Amr b. Mu'āwiya, having been driven to extremities by the conduct of the Muḥammadans had previously attached themselves. He was defeated by the army of the Muḥammadans which had meantime advanced against him, and he threw himself into the citadel of al-Nudjair. When he saw that there was no help for it he made a compact with the besiegers, according to which his person and that of 9 others should be immune from danger if he surrendered the citadel. But since he, as it is said, omitted when drawing up the contract to insert his own name in the list he was within an ace of being executed. However it was decided to send him a prisoner to Medina for the Caliph to decide what was to be done with him; there he succeeded in securing not only his pardon but also reinstatement in his dignity. At this time [cf. supra] Abū Bakr gave him his sister in marriage. He then remained in Medina. When 'Omar in the year 15 (636) for the first time employed South-Arabian troops to cooperate with him in the Persian war which had then entered on a new stage, al-Ash'ath and his Kindites took part under the leadership of Sa'd. He fought at Ḳādisīya, Madā'in, Nahāwand, and also in Syria at the Yarmūk, where he lost his one eye. On the founding of Kūfa he was among the first settlers, and possessed a house there until his death. In the

year 26 (646-647), in the reign of 'Othmān, al-Walīd b. 'Uḳba after his campaign of conquest in Ādharbaidjān appointed him his representative there. He even became governor and administered the province under 'Alī also, who however recalled him since he needed him and his troops in the war against Mu'āwiya. Here he rendered good service at first, and took an energetic part in the fighting at Ṣiffīn. But in the decisive battle 37 = 657) he simply caused 'Alī to comply with the pressing demand for a court of arbitration, to terminate the battle, and to send him to negotiate with Mu'āwiya. There he agreed upon the modalities of the court of arbitration, and next forced 'Alī to send the unsuitable Abū Mūsā to this court as his advocate. When the arbitration-court turned out to be but a trick it was mainly he who restrained 'Alī from at once resuming the fight with Mu'āwiya. The remainder of his life he spent among his kinsmen in Kūfa. He died in the year 41 (661-662), shortly after the conclusion of peace between Ḥasan b. 'Alī (who moreover was married to a daughter of his) and Mu'āwiya. His whole family, from his father to his grandson, was regarded as a nest of traitors.

(RECKENDORF.)

'ASHĪ (A.), Evening, night, time of the night-prayer.

'ĀSHIḲ ČELEBI, author of one of the oldest biographies of Osmanli-Turkish poets. His full name is al-Saiyid Pīr Muḥammad b. al-Saiyid 'Alī al-Naḳḳāsh. Mu'allim Nādjī in his *Asāmī* gives 924 (1518) as the year of his birth, Sāmī in the *Ḳāmūs al-A'lām* 926 (1520). There is disagreement also as to the place of his birth (Laṭīfī and Ḳinālizāde: Brussa; Riyāḍī and Nādjī: Roumelia.) At the conclusion of his studies he was judge in various Roumelian towns (Silivri, Prishtina, Serfidje), and finally in Üsküb, where he remained until the end of his life. According to Ḳinālizāde Ḥasan Čelebi the year of his death was 976 (1568-1569), according to Ḥādjdjī Khalīfa and Mu'allim Nādjī 979 (1571-1572). The year 939 given in Sāmī is a printer's error for 979, as we gather from his statement that "he was a contemporary of Ḳinālizāde, author of the *Tadhkira*, and died in the same year." Here of course Sāmī has mistaken the two Ḳinālizāde, father and son. Under Ḳinālizāde he gives the dates correctly (979 for the father, 1012 for the son).

'Āshiḳ Čelebi's chief work is the Biographies of the Poets *Mashā'ir al-Shu'arā'* (Ḥādjdjī Khalīfa N°. 2815 and 12059), commonly called *Tadhkirat al-Shu'arā'*. It is more extensive than that of Laṭīfī, and is of great value especially for the contemporary poets, some of whom the author knew personally. Gibb used it extensively in his *History of Ottoman Poetry* (cf. the Index); Ḳinālizāde says, that the circumstances and characteristics of the earlier poets have been carefully investigated in it, but that the style is without charm. The work was completed in 976. Gibb possessed MSS. (see his *History of Ottoman Poetry*, I, 139), and there are two exemplars in Vienna, the older having the date 994 (1586).

'Āshiḳ found expression also in poetry. Ḥādjdjī Khalīfa in N°. 553 mentions a Dīwān and in N°. 7697 a *Shehrengīz* of his. Further he translated various Arabic works into Turkish. The following may be mentioned:

1. *al-Tibr al-masbūk fī Naṣā'iḥ al-Mulūk* of al-Ghazālī; — 2. *Rawḍ al-Akhyār* of Muḥyi 'l-Dīn Muḥammad b. al-Khaṭīb Ḳāsim (extant in Vienna); — 3. *al-Siyāsa al-shar'iya fī Iṣlāḥ al-Rā'ī wa 'l-Rā'iya* of Ibn Taimiya; — 4. A commentary to the *Ḥadīth-i-arba'ūn* of Ibn Kamāl-Pasha Shams al-Dīn Aḥmad b. Sulaimān (died 946 = 1539-1540; cf. Flügel, *Katal. Wien*, III, 537); — 5. A translation of Tashköprüzāde's *Shaḳā'iḳ al-Nu'mānīya* (see Nādjī); — 6. A translation of the History of Medina of 'Omar al-Ḥāfiẓ (Ḥadjdjī Khalīfa N°. 4772).
(F. GIESE.)

'ĀSHIḲ PASHA, his real name was 'Alī; he was the oldest of the West-Turkish poets, and wrote a large work entirely in Turkish. He was the son of al-Mukhliṣ, the son of Shaikh Ilyās, who had the surname Bābā Ilyās. Concerning the lives of these three we have little information, and it is often contradictory. 'Āshiḳ Pasha lived in Ḳir-Shehr in Anatolia under the reigns of the Sultans 'Othmān and Orkhān. He was born in 670 (1271-1272), and died on the 13. Ṣafar, 733 (3. Nov., 1332). There is extant a long Mathnawī-poem of his, with the title *Gharīb-Nāme*, but which is usually, even if inaccurately, called the "Dīwān of 'Āshiḳ". Ḥadjdjī Khalīfa mentions it under the title *Ma'ārif-Nāme*. It consists of 10 *Bāb* of 10 *Destān* each, and, corresponding to the metre of the Mathnawī of Djalāl al-Dīn and of the *Rebāb-Nāme* of Sultan Weled, is composed in hexameter Ramal. It was completed in the year 730 (1329-1330), three years therefore before the death of 'Āshiḳ. It was intended to introduce those Turks who did not understand Arabic or Persian to the doctrines of Ṣūfism, which — naturally systemless — are dealt with and explained by means of examples. If the work be poetically valueless yet this first attempt deserves full recognition on the linguistic side.

The *Gharīb-Nāme* has not yet been printed; MSS. are numerous. Besides those mentioned in Rieu, *Cat. of the Turk. MSS. in the British Museum*, p. 161ª, last paragraph, and in Pertsch, *Verzeichn. d. türk. Hss. d. Königl. Bibl. zu Berlin*, N°. 359, the author of the present article has in his possession a well-preserved, excellently written exemplar.

(F. GIESE.)

'ĀSHIḲ-PASHA ZĀDE, great-grandson of the above; his real name is, Aḥmad b. Yaḥyā b. Salmān b. 'Āshiḳ-Pasha; the oldest Osmanli historian. His work had already become rare by the time of Ḥadjdjī Khalīfa; a fragment is extant in the Vienna Hofbibliothek (Flügel, *Katal.*, ii. 206).

ASHĪR (French, Achir), ancient fortified town whose ruins lie S. E. of Medea on the Kāf 'l-akhḍar, on the south-eastern slope of the mountains of Titeri, situated 0° 57′ E. Long. (Paris), 35° 55′ N. Lat. These ruins are built upon a rock, now called Banya or Manzah bint al-Sulṭān, which falls sheer away in high precipices, and has a surface of about 95 acres, and they are without doubt those of Ashīr as it is described to us by the Arab historians and geographers. The town has an exceedingly picturesque site and obtains excellent water from two copious springs, now called 'Ain

Banya and 'Ain Bahîra. The town formed a natural stronghold and could be attacked only on the east from the ridges of the Djebel Tsemsâl. There the citadel was built, now called *Mansah bint al-Sulṭân*, which was protected on one side by an inaccessible mountain-ridge, and on the others by walls. About 1½ mls. N. W. of Banya, and exactly opposite it ruins are to be seen on the flat scattered over an area of about 37 acres, which are now called Ashîr or el-Yashîr. Traces of three gateways can still be recognised; otherwise the ground is now under cultivation, and only the remains of tiles, bricks and rubbish heaps in the upper part of the town bear evidence of the town that once stood there. About 3¼ mls. as the crow flies to the west of the modern el-Yashîr, on the northern declivity of the Kâf 'l-akhḍar are situated the ruins, now called Mansah bint al-Sulṭân, of the citadel which stood upon a projection of the rock slightly flattened, steep at almost every point and insurmountable. Running from S. to N., and about 3960 ft. high this rock is clearly separated from the central point of the chain which rises about 490 feet higher, and stands vertical to the Kâf 'l-akhḍar. The plan of the citadel forms a quadrilateral of about 905 ft. × 82 ft. There can still be seen the remains of a bastion, two piles, a cistern, a tower and an inner court. A single door placed in the west wall and commanded by the middle tower served as entrance. A foot path, which is impracticable at several points and is still used by the people of the tribe Rab'îya, went through the pass of the Kâf Smir and joined those three places.

The last-named part, Mansah bint al-Sulṭân, is undoubtedly the ancient Ashîr or Ashîr-Zîrî; el-Yashîr, on the other hand, is the town built by command of the Fâṭimid-Caliph al-Manṣûr, and finally Banya the recently built Ashîr.

Ashîr or Âshîr was founded between 324 and 334 (30. Nov., 945 — 2 Aug., 946) by Zîrî b. Manâd, chieftain of the Ṣanhâdja, a large Berber-tribe, which possessed almost the entire modern Département of Algiers with Tiaret and Biskra excepting Greater Kabylia. The Fâṭimid Caliph Abû Ṭâhir Ismâ'îl, later called al-Manṣûr, commissioned his vassal Zîrî to extend the town. Abu 'l-Futûḥ Yûsuf Buluggîn, son and successor of Zîrî, transported to Ashîr the inhabitants of Tlemcen who had risen in revolt in 361 (24 Oct., 971 — 12 Oct., 972). The governorship of Ashîr was preserved under this prince and his successors and direct heirs Abu 'l-Fatḥ al-Manṣûr and Abû Manâd Bâdîs in almost unbroken succession from 337 (987-988) till Ḥammâd b. Buluggîn, the founder of the Ḳal'a of the Banû Ḥammâd and of the Ḥammâdid-dynasty. In 395 (1004-1005) Ashîr was besieged by the Zenâta, who however had to flee before the advance of Ḥammâd. In 408 (1017-1018) on the ratification of his independence Ḥammâd obtained permanent possession of the town. In 468 (1075-1076) Ashîr was temporarily occupied by the Zenâta al-Muntaṣir b. Khazrûn, but soon after came again under the dominion of the Ḥammâd. In 495 (1101—1102) Tashfîn b. Tinâmer, governor of Tlemcen, took possession of the town in name of the Almoravid Yûsuf b. Tashfîn, and utterly demolished it. Rebuilt by the Ḥammâdids Ashîr fell into the power of the Ṣanhadjid Ghâzî, who availed himself of the arrival in Bidjâya of his ally, the Almoravid governor Abû Ghâniya, to obtain the mastery of Ashîr (c. 580 = 1184-1185).

After this date Ashîr became forgotten, so that we do not know when it disappeared to leave only a heap of ruins as evidence of its former splendour.

Ashîr was the birth place of Abû Muḥammad 'Abd Allâh b. Muḥammad b. 'Abd Allâh al-Ṣanhâdjî al-Ashîrî, jurist, collector of traditions, grammarian and littérateur, who died at Baalbek in 561 (1165-1166); according to the author of the *Tâdj al-'Arûs* however this scholar belonged to Ashîra, a hamlet in the neighbourhood of Saragossa in Spain.

'ASHÎRA (A.), tribe, syn. *Ḳabîla* [q. v.].

ASHKABAD, properly 'ISHḲÂBÂD ('*Ashḳ*, Turk. form of the Arab.-Pers. '*Ishḳ*, "love"), Russ. Askhabad, capital of the Trans-Caspian region; 19, 428 inhabitants (1897); first became a township under the Russian regime; previous to 1881 was the most important Turkoman-Aul (500 tents) in the district of Akhal-Tekke [q. v.]. The town possesses a museum (contains also ethnological exhibits of the Turkomans) and a public library (possesses also some Persian Mss.). Some 4-5 mls. to the West are the ruins of the town Nasâ (two ruin-mounds, no remains of ancient buildings appear on the surface); 6-7 mls. to the East are the ruins of the town Anaw (remains of a fine mosque with inscription of the builder Abu 'l-Ḳâsim Bâbur, died 861 = 1456-1457).

(W. BARTHOLD.)

AL-**ASHMÛNAIN**, town in Upper Egypt. Al-Ashmûnain, more correctly al-Ushmûnain, lies between the Nile and the Baḥr Yûsuf, about 27° 47′ N. Lat., not far from the railway-station Rôḍa in Upper Egypt. It is a small country-town (*Nâḥiya*) of 3855 (including 3 dependencies, 7729) inhabitants, and belongs to the district (*Markaz*) of Mallawî in the province of Asyûṭ.

This place which is now quite unimportant was formerly one of the chief towns of Egypt. The name — an Arabic dual — corresponds to the old Egyptian Khmûnu, the Coptic Shmûn; the Greeks and Romans called the town Hermopolis Magna. Some ruins still witness to its former greatness. In the Coptic-Arabic Saga the Eponym Ushmûn, son of Miṣr, is regarded as the founder. The modern name, for which however there is extant evidence in early Arab times, as a dual points to a double Ushmûn, and can only have originated in the Arabic period; and certainly

the Papyri of the i. and ii. centuries of Islām know of two places, Ushmūn al-Suflā and Ushmūn al-ʿUlā, i. e. Lower- and Upper-Ushmūn. One of these two towns is the ancient Hermopolis, the other is doubtless of late foundation, and was made possible through the drying up of the Baḥr Yūsuf or through the shifting of the Nile-bed, a matter about which there are various accounts existing. The double-name of this transition-period then adhered to the new town. First as Shmūn was in ancient time the capital of a νομός, so Ashmūnain became in the Islāmic period the representative town of a *Kūra*, and, on the inauguration of the provincial divisions under the Fāṭimid al-Mustanṣir, the capital of a province. It flourished till late into the Mamlūk-period, but by 1720, in consequence of a fresh change of the Nile-bed, the neighbouring town Mallawī became the chief town; the same conditions resulted later in the preeminence of Minia (Munyat al-Khaṣīb).

In the Middle Ages Ashmūnain was famed for its fertility. Red woollen-carpets after the fashion of the Armenian Ḳirmiz-carpets were also manufactured there. Owing to the sheep-rearing of the Arabs who encamped in its neighbourhood it became a centre for the manufacture of wool, and the products (garments) were exported.

Maḳrīzī informs us about all manner of legendary buildings, and especially of a walled passage under the Nile connecting it with Anṣinā, the ancient Antinoe.

The town must not be confused with two other places of the same name in Egypt, Ushmūn (or Ushmūm) al-Rummān near Damietta and Ushmūn (al-Djuraisāt) in the province of Manūfiya.

al-**ASHRAF**, name of three Aiyūbids.

1. Al-Malik al-Ashraf Muẓaffar al-Dīn Abu 'l-Fatḥ Mūsā was a son of al-ʿĀdil I. [q. v.], and thus a nephew of Saladin. Born in Cairo or in Karak in the year 578 (1182-1183), he received from his father in the year 598 (1201-1202) the governorship of Edessa to which Ḥarrān was added later. He quarrelled with the Zengid Nūr al-Dīn Arslān-Shāh of Mosul, and defeated him in the year 600 (1204) in the battle of Bain al-Nahrain. Later his father transferred to him also Khilāṭ, Maiyāfāriḳīn and other towns, and from the year 606 (1209-1210) on he conquered the larger part of Mesopotamia; his residence was at al-Raḳḳa. On the death of al-Ẓāhir Ghāzī of Aleppo (613 = 1216) he saved Aleppo to his line, when it was threatened by Saladin's unfortunate son al-Afḍal and Kai-Kawūs of Rūm (Asia Minor).

When on his father's death the Franks lay before Damietta, he decided after some hesitation to hasten to the help of his brother al-Kāmil, the new head of the family. The reconquest of Damietta was ascribed to his lucky star. When on the death of al-Muʿaẓẓam of Damascus his son al-Nāṣir was attacked by al-Kāmil, he joined first al-Nāṣir, but soon after al-Kāmil, who transferred to him Damascus in return for his yielding up his claims to a portion of his eastern possessions (626 = 1229). Shortly afterwards he allied himself with Kai-Kobād of Rūm against the common enemy Djalāl al-Dīn Khwārizm-Shāh, last prince of this house, who was being hard pressed by the Mongols; him they defeated in the year 627 (1230). Soon afterwards the Aiyūbid Princes al-Ashraf and al-Kāmil were at variance with Kai-Kobād, who made an attack on Mesopotamia (631 = 1233-1234); their expedition was at first unfortunate, but they succeeded in repelling the Seldjūḳ in the year 633 (1235-1236). Thereafter al-Ashraf, obviously from jealousy, broke with al-Kāmil, and the latter took the field against him, but, before arms could decide the issue, al-Ashraf died in Damascus on the 4. Muḥarram, 635 (27. August, 1237). Al-Ashraf was reputed for his liberality and kindliness, and so was beloved by his subjects. Nothwithstanding the praise lavished on him he cannot be placed on a level with the great princes of his house.

Bibliography: Abu 'l-Fidāʾ (*Recueil des Historiens des Croisades*; *Hist. Or.*, i. 80—113); also (Constantinople), iii. 116 ff.; Ibn Khallikān (Transl. of de Slane), iii. 486 ff.; *Dhail Kitāb al-Rawḍatain* (*Recueil* etc., v. 158 ff.); Ibn Khaldūn, *ʿIbar*, v. 339 ff.; A. Müller, *Der Islam im Morgen- und Abendland*, ii. 163 ff.

2. Al-Malik al-Ashraf Muẓaffar al-Dīn Mūsā, son of al-Manṣūr Ibrāhīm, was the last Prince of Ḥimṣ of the house of the Aiyūbids (Line of Shīrkūh). He succeeded his father in the year 644 (1246-1247). Two years later al-Nāṣir of the Aleppo-line supplanted him against the wishes of al-Ṣāliḥ of Egypt. On the invasion of the Mongols he was restored to his states, and his position confirmed later by the Mamlūk Ḳuṭuz. The dynasty became extinct on his death (661 = 1262-1263), and Ḥimṣ was administered directly by the Mamlūks.

Bibliography: Abu 'l-Fidāʾ (*Recueil des Historiens des Croisades*; *Hist. Or.*, i. 124—150); also (Constantinople), iii. 184 ff.

3. Al-Malik al-Ashraf Mūsā, son of Yūsuf and grandson of the last Aiyūbid prince of Yemen, Yūsuf; in the year 648 (1250) this lad of six years was proclaimed by the first Egyptian Mamlūk Sulṭān, Aibek, as nominal master of Egypt. The comedy lasted for two years. Nothing further is known about him.

(C. H. Becker.)

al-**ASHRAF**, name of several Mamlūk-princes. [See barsbey, djānbalāṭ, ināl, ḳāʾitbey, kānṣūh ghūrī, khalīl, kūdjūk and tūmānbey.]

ASHRAF (Ashruf, Eshref), town in the Persian province of Māzandarān and chief town of a district (*Bulūk*) of the same name, situated 53° 40′ E. Long. (Greenw.) and 36° 40′ N. Lat., distant about 6 mls. from the South-Eastern shore of the Caspian Sea, on the road leading from Astarābādh to Sārī, about 40 mls. to the west of Astarābādh. This town, built at the foot of the Elburs range, is distinguished by its picturesque site and wealth of vegetation above all the others on the south coast of the Caspian Sea; the district of Ashraf

however is one of the poorest in the whole province of Māzandarān; excellent rice, cotton and sugar-cane are cultivated in the villages. Of trees the pomegranate, lemon and mulberry trees grow best. Before the time of Shāh ʿAbbās I. Ashraf was an unimportant village; its situation so pleased this Persian king that he made it an imperial residence (1021 = 1613), and in its gardens erected palaces which, according to the Persians, had no equal in splendour and grandeur. The palmy days of the town fall into the period of Shāh ʿAbbās I., the Great, who chose it wherein to set up his splendid court; in 1627 there were 2000 families living in it, and it contained no less than 300 public baths. About the middle of the xviii. cent. Ashraf was more than once the scene of civic disorders, and was also repeatedly plundered by the Turkomans. These internal disorders and the dangers which constantly threatened from without caused many inhabitants to leave Ashraf. And so the town, in which the peace between Turkey and Persia was concluded on 3. October, 1727, again fell into neglect and gradually into decay. It has now declined into a large but unimportant village of 845 houses (in 1860), therefore of about 8—10 000 inhabitants, who support themselves mainly by a transit-trade, the cultivation of cotton and silk.

The gardens, well-known under the name Bāgh-i Shāh ("King's Park"), lie to the south-west of the town at the foot of the mountain Sūt-i Kulūm, and are divided into 6 contiguous gardens, separated from each other by high walls and contain a number of palaces and other buildings. In the course of time they have all suffered so much from fire, devastation and earthquake that they now give no idea of their former splendour. The palace Čihil-Sutūn which was reerected by Nādir-Shāh in 1144 (1731) after a conflagration is the best preserved. Fully 1/4 ml. to the north of the town ʿAbbās erected upon a mountain with a magnificent view another palace with an observatory, which is now usually called Ṣafīābādh after Shāh ʿAbbās' successor Ṣafī; it is also lying in ruins.

ASHRAFĪ, also Sharīfī, sequin, dinār gold-coin. Cf. Dozy and Engelmann, *Glossaire des mots espagn. et portug. dérivés de l'Arabe*, 2. ed., p. 353.

ASHRAFĪYA, Dervish-order (according to d'Ohsson), which takes its name from ʿAbd Allāh Ashraf (Eshref) Rūmī, died 899 (1493) in Čīn Iznīk.

AL-ASHTAR, MĀLIK B. AL-ḤĀRITH AL-NAKHʿĪ, loyal companion and lieutenant of the Caliph ʿAlī b. Abī Ṭālib; accompanied him on a campaign against the Byzantines on the northern frontier of Syria (Belādhorī, ed. de Goeje, p. 164); conveyed to Medina the complaints of the habitants of Kūfa about the forestalling of estates which Saʿīd b. al-ʿĀṣ, governor of ʿIrāḳ, was executing for ʿOthmān on behalf of the Ḳoraish; but since his mission met with no success, he incited the inhabitants to revolt, blocked the way for Saʿīd, and at the Caliph's command submitted to Abū Mūsā ʾl-Ashʿarī, a former governor under ʿOmar. At the time of the conspiracy which led to the murder of ʿOthmān, he brought 200 men to Medina (35 = 655); on being persuaded by ʿAlī's promise of reforms he returned with his companions, but was met on the way by a retainer of the Caliph who carried their death-warrant. He did not however take any part in besieging ʿOthmān's house (*Waḳʿat al-Dār*) nor in his assassination. After this event he compelled some who had remained obstinate to take the oath of allegiance to ʿAlī (Ṭabarī, ed. de Goeje, i. 3069); and was commissioned to bring round the waverers of Kūfa to his master's side; then when ʿAlī took the field against the rebellious Baṣra he fetched him reinforcements. In the Battle of the Camel (10. Djumādā II, 36 = 4. Dec., 656) he fought hand-to-hand with ʿAbd Allāh b. al-Zubair (or according to Ṭabarī i. 3201, with ʿAbd al-Raḥmān b. ʿAttāb). In Kūfa he vainly endeavoured to restrain ʿAlī from sending Djarīr b. ʿAbd Allāh al-Badjalī to Muʿāwiya, after the former had pledged himself to urge Muʿāwiya to acknowledge ʿAlī's authority (Yaʿḳūbī, ii. 214); in the campaign against Muʿāwiya he forced the obstinate inhabitants of Raḳḳa to construct a pontoon across the Euphrates (Ṭabarī, i. 3259; Yaʿḳūbī, ii. 218). At Ṣiffīn he commanded a corps of 4000 cavalry and infantry, and was in command at the indecisive battle on Tuesday, 7. Ṣafar, 37 (25. July, 657). On the following Thursday he commanded the attack against the soldiers of Muʿāwiya who had vowed to fight to the death and had donned the green silk turban (Masʿūdī, *Murūdj*, iv. 356); some state that it was he who killed ʿObaid Allāh b. ʿOmar with a thrust of his lance. On the decisive day he overthrew the right flank of the Syrians and held victory in his hand, when ʿAmr b. al-ʿĀṣ suggested to Muʿāwiya the famous artifice of sticking leaves of the Ḳorʾān on the points of the lances. On being referred to by ʿAlī whom the rebels had threatened with death he was in favour of continuing the fighting. When ʿAlī proposed him as the arbiter for his party, he was rejected as having been the chief agent in provoking the civil war; he refused in consequence to sign the arbitration-agreement. He was appointed governor of Egypt, but at Muʿāwiya's instigation was poisoned (38 = 658-659; Ṭab., i. 3393; Belādhorī p. 228; Yaʿḳūbī, ii. 227) in Kolzūm through a honey-drink given him by the Djāistār (Tax-collector, *quaestor*, Gloss. Ṭab.). When ʿAlī received news of his death he exclaimed: *Li ʾl-yadaini wa li ʾl-fami* ("his hands and his mouth have killed him"), Muʿāwiya, on the other hand, exclaimed: "God has legions (*Djunūd*) even in honey". He took to himself as surname al-Afʿā, "the viper" (Masʿūdī, *Murūdj*, iv. 357). Muʿāwiya regarded him as one of ʿAlī's two right hands,

the other was 'Ammār b. Yāsir (Ṭab., i. 3394) who fell at Ṣiffīn.

'ĀSHŪRĀ', name of a voluntary fast-day which is observed on the 10. Muḥarram. When Muḥammad came to Medina he adopted from the Jews amongst other days the 'Āshūrā'. The name is obviously the Hebraic עשור with the Aramaic determinative ending; in Lev. 16, 29 it is used of the great Day of Atonement. Muḥammad retained the Jewish custom in the rite, that is, the fast was observed on this day from sunset to sunset, and not as was usually the case only during the day. When in the year 2 Muḥammad's relations with the Jews became strained Ramaḍān was chosen as the fast month, and the 'Āshūrā'-fast was no longer a religious duty but was left to the option of the individual. — On which day of the Arabian year the fast was originally observed cannot now be ascertained owing to our defective knowledge of the calendar of the period; naturally its observance coincided with the Jewish on the 10. Tishri, and so fell in the autumn. The 10. Muḥarram finds early mention as the 'Āshūrā'; probably the tenth day of the first Muslim month was selected to harmonise with the tenth day of the first Jewish month. From the calculations which have already been made it does not seem possible that it could have been originally celebrated on the 10. Muḥarram (see Caetani, *Annali*, i. 431 f.).

Presumably for the sake of distinguishing themselves from the Jews some fixed the 9. Muḥarram either along with or in place of the tenth as a fast day with the name *Tāsū'ā'*.

The Jewish origin of the day is obvious; the well-known tendency of tradition to trace the Islāmic customs back to the ancient Arabs, and particularly to Abraham, states that the Mekkans of olden time fasted on the 'Āshūrā'. It is not impossible that the tenth, as also the first nine days of Muḥarram, did possess a certain holiness among the ancient Arabs; but this has nothing to do with the 'Ashūrā'.

The fast of the 'Ashūrā' was later and is still regarded by Muslims as commendable; the day is kept by the devout of the entire Muslim world; it is holy also on "historical" grounds: on it Noah left the ark, etc. In Mekka the door of the Ka'ba is opened on the day of the 'Āshūrā for visitors (see Snouck Hurgronje, *Mekka*, ii. 51). In lands which are Shī'ite or come under Shī'ite influence quite different usages have become associated with the 10. Muḥarram; in this connection see MUḤARRAM.

(A. J. WENSINCK.)

AL-**'ĀṢĪ** is the name in use among the Arabs for the Orontes, the chief river in the north of Syria, whose usual designation in classical antiquity is preserved in Arabic literature as al-Urunṭ, al-Urand. Presumably the word as with the Greek Axios is to be referred back to an ancient native name. The common explanation of al-'Āṣī = "the rebel" is a popular etymology with no actual foundation, and the name al-nahr al-maḳlūb = fluvius inversus but a scholarly invention.

The river-system begins to the north of the watershed of the highland-valley of al-Biḳā' not far from Ba'albakk, but really only obtains its volume of water further north at al-Hirmil from a spring, generally called simply the Orontes-Spring, which wells forth in a strong stream from the rock. Following the line of the Syrian canal to its northern end the river flows through several lakes or marshes (those of Ḳadas and of Tāmiya = Ḳal'at al-Mudīḳ); on its banks are situated the most important towns of central Syria, Ḥimṣ and Ḥamāt. Where the Syrian wooded ranges meet the folds of the Armenia-Asia Minor region, the river winds round from the north into a southwesterly direction, and takes up the water which has been drained off northern Syria and is collected in the marshy region of al-'Amḳ, and discharges itself below Anṭākiya, to the South of the Amanus, at a flat and havenless shore (Seleucia and al-Suwaidiya were artificial havens).

Ritter, *Erdkunde*, xvii. 159—177, 995—1271; Wellhausen, in *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, lx. 245 *et seq.* (R. HARTMANN.)

'ĀṢIM EFENDI AḤMAD 'AINTĀBĪ, Turkish philologist and historian, received the first part of his education in his native town 'Aintāb, and then went to Constantinople, where from 1211 (1796) he was engaged as Mudarris. After a short residence in Selānīk he returned to the capital and died there in 1235 (1819). Of his writings the following may be named as in the first rank: the Turkish translation of Fīrūzābādī's Arabic dictionary *al-Ḳāmūs* (ed. Būlāḳ, 1250, and Stambul, several times), the Turkish translation of the Persian dictionary *Burhān-i Ḳāṭi'* with the title *Tibyān-i nāfi' dar Tardjama-i Burhān-i Ḳāṭi'* (cf. in this connection *Allgemeine Literaturzeitung*, p. 308 *et seq.*) Among his philological works are: *Kitāb Siyar*, *Marḳ al-Ma'ālī fī Sharḥ al-Amālī* and *Tuḥfa-i Lughat-i 'Arabiya*. As official historiographer he composed the *Waḳā'i' Selīmiya* (cf. Flügel, *Catalog der Hofbibliothek zu Wien*, ii. 312 *et seq.*).

'ĀṢIM EFENDI ISMĀ'ĪL. [See ČELEBI-ZĀDE.]

'ASĪR, a hilly region in Arabia between Ḥidjāz and Yemen; since the Turkish conquest (1871) has been a Sandjaḳ belonging to the Wilāyet of Yemen; is divided for purposes of administration into 7 Ḳaẓās (al-Abhā, Banū Shehir, Ghāmid, Ghunfude, Maḥā'il, Ridjāl Alma' and Ṣabyā), though this division holds good only on paper. The Arab geographers of the Middle Ages do not

know it as a geographical name, and include this region partly in Ḥidjāz, partly in Yemen. Al-Hamdānī (ed. Müller, p. 118) alone knows of an originally Yemenite tribe of the name of 'Asīr, which however was reckoned among the Ismā'īlī tribes, as belonging indeed to the 'Anz b. Wā'il, and names among its locations the above-mentioned Abhā. From this tribe the region, which was occupied by other tribes, especially the Badjīla (cf. Ibn Djubair, ed. de Goeje, p. 132), Azd and Khath'am, took its name. Niebuhr is not acquainted with it; he states that the Arabs of the coast between Abū 'Arīsh and Ḥidjāz dwelt in tents and spoke a dialect which differed from the Arabic spoken in Djidda and in Yemen. Although they call themselves Muḥammadans, they are regarded in Yemen as Kāfirs and are reviled as Benī Halāl, worshippers of the moon. He mentions as one of their customs that they circumcise not merely the foreskin, but have a section of the skin of the abdomen entirely removed, and submit with the greatest courage to this painful operation, which often enough results in death. These accounts are confirmed by Ibn Djubair (see *supra*) and others, so far at any rate as they make mention of the rude customs of this brave hill-folk. According to Burckhardt they sell their marriageable daughters in open market and place their wives at the guest's disposal.

The region has only become known to any extent, still insufficiently however, since the Egyptian campaigns of 1824—1827. Like the whole west coast 'Asīr also is divided by vast mountain-chains (*Sarawāt*) into two parts, a flat coastal region (Tihāma, q. v.), and a hill-country, the real 'Asīr. Various Wādīs run from these mountains towards east and west, e. g. Wādī Bīsha, Wādī Shahrān, Wādī Djanfūr. Some of these Wādīs, especially Wādī Bīsha, belong to the fairest and most fertile districts of Arabia.

History. 'Asīr only became known in Europe when, in consequence of the Wahhābī rising in Nedjd, a certain Muḥammad Abū Nuḳta, with the aid of the Wahhābīs, made almost the whole of 'Asīr subject to himself and compelled the inhabitants to accept the Wahhābī doctrines. Ibrāhīm-Pasha had in consequence to dispatch Aḥmad-Pasha with Egyptian troops to 'Asīr in the year 1824, but this expedition even after a second attempt, in the following year did not bring about the submission of the brave hill-folks. Just as little success attended the campaigns of 1834 and the following years; in the end the Egyptian troops, seriously weakened by famine and cholera, had to vacate the field, whilst the then Shaikh of 'Asīr, 'Ā'iḍ b. Mūsā, continued to hold sway in peace in the hill-country and bequeathed it to his son Muḥammad. The latter extended the province of his authority, and in the winter of 1870-1871 drove the Turkish garrisons out of the coast-towns of Yemen and made himself master of the whole region. The government of Turkey was now compelled to intervene, and sent troops under the leadership of Muḥammad Radīf-Pasha, who actually succeeded in forcing an apparent submission on the part of the hill-tribes.

ASĪR (A.), captive, slave.

ASĪR, more precisely Mīrzā Djalāl Asīr b. Mīrzā Mu'min, Persian poet, born at Iṣpahān, died while still young in 1049 (1639-1640), according to another account in 1069 (1658). He was a pupil of the poet Fasīḥī and a friend of Shāh 'Abbās I., and composed the majority of his songs while under the influence of drink. An edition of his *Kulliyāt* appeared at Lucknow in the year 1880.

ASĪRGARH, name of an ancient fortress situated in the district of Nimar in the Central Provinces of British India; it stands on a projection of the Sātpurā Range. In 1600 it was wrested by Akbar from the last king of the Muḥammadan dynasty of Khāndēsh; this event is also mentioned in an inscription which is set down to that period. Of the buildings, some of which were erected by Akbar's successors, a mosque of the year 992 (1584) and still in a state of preservation is noteworthy from the fact that it (like another preserved in the neighbouring Burhānpūr) bears both an Arabic and a Sanskrit inscription. This mosque erected by the last of the 'Ādilshāhī dynasty of Khāndēsh perhaps served Hindus and Muḥammadans conjointly in accordance with the "Dīn-i Ilāhī".

(J. Horovitz.)

ASITANE. [See istanbul.]

ĀSIYA. This is the name given by the commentators to Pharaoh's wife, who is twice (28, 8; 66, 11) mentioned in the Ḳor'ān. She plays the same part as Pharaoh's daughter in the Bible, so that there is obviously confusion. In the last mentioned passage these words are put into her mouth: "My lord, build me a house with thee in Paradise, and deliver me from Pharaoh and his doings and deliver me from the wicked". In connection with this passage it is related that Āsiya endured many cruelties at the hands of Pharaoh because of her faith (she was an Israelite); and finally he even caused her to be cast down on to a rock; at her prayer God took her soul to himself, so that only the body fell on the stone. — It is also related that Pharaoh scourged her to death, but on Moses' praying to God she did not feel any pain.

Tornb.), i. 119 ff.; Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, p. 155 ff.; Weil, *Biblische Legenden der Muselmänner*, p. 38 f.; Tha'labī, *Ḳiṣaṣ al-Anbiyā'* (Cairo, 1287), p. 179 f.

(A. J. Wensinck.)

'ASḲALĀN, a former coast-town of South Palestine, one (Hebrew: 'Ashḳelōn) of the five Philistine towns known to us from the Old Testament; in the Roman period as oppidum Ascalo liberum it was (according to Schürer, *Geschichte des Jüdischen Volkes im Zeitalter Jesu*, 2. Ed., ii. 67) "a flourishing Hellenistic town famous for

its cults and festal James" (Derceto-Aphrodite-shrine); in the Christian period a bishop's see (tomb of the tres fratres martyres Aegyptii).

'Asḳalān was one of the last towns of Palestine to fall into the hands of the Muslims, but was soon after ravaged by the Greeks and restored by 'Abd al-Malik b. Marwān. According to an inscription from a building which was discovered by Clermont-Ganneau the Caliph al-Mahdī in 155 (772) caused a mosque and minaret to be erected there. After varied fortunes the town fell into the power of the Fāṭimids. 'Asḳalān attained its greatest importance in the period of the Crusades. For over half a century it successfully withstood the Franks and was a continuous menace to the capital of the young Kingdom of Jerusalem. Not till 548 (1153) did Balduin III get possession of the town. After the battle of Ḥiṭṭīn it had, like most of the strongholds in Palestine, to surrender to Ṣalāḥ al-Dīn (583 = 1187). In 587 (1191) the latter found himself after the defeat at Arsūf not in a position to hold 'Asḳalān against Richard of England and destroyed it. Richard rebuilt the fortress. According to the conditions of peace of the following year it had however to be again destroyed. The variances between al-Ṣāliḥ Aiyūb of Egypt and al-Ṣāliḥ Ismā'īl of Damascus again let it slip into the hands of the Franks. After the decisive battle of Ghazza the newly-fortified 'Asḳalān could no longer expect help. It fell in 645 (1247). In order to make it impossible for the Christians to effect a landing the Mamlūk-Sultan Baibars in 668 (1270) destroyed 'Asḳalān and other places on the coast. This was the end of the town.

In antiquity and the Middle Ages the now desolate environs of the town were famous for their wine, sycamores and Henna (Kypros). It has given its name to a species of onion (Shalot). By al-Idrīsī's time there was a noticeable lack of gardens and trees (see *Zeitschr. d. Deutsch. Pal.-Vereins*, viii. 123). Mediaeval authors often call 'Asḳalān the "Bride" of Syria or of the world, Sponsa Syriae, a phrase which is traced back to the Prophet. It is uncertain whether this expression is used to characterise it as the maiden = the unconquered or the lovely.

Into the period of the Shī'ite supremacy of the Fāṭimids falls the construction by al-Afḍal b. Badr al-Djamālī (491 = 1098) of the Mashhad for the reception of the head of the Prophet's grandson, Ḥusain. This highly-venerated relic was in 548 (1153-1154) saved from the Franks (cf. Maḳrīzī, *Khiṭaṭ*, 2. Ed. ii. 284; Mehren, *Câhirah og Kerâfat*, ii. 60), and carried off to Cairo. Later Muslim pilgrims visited besides Ḥusain's chapel especially an Abraham's Well.

AL-'ASḲALĀNĪ. [See IBN ḤADJAR.]

AL-'ASKAR (A., from Pers. *Lashkar*), the army, the soldiers, etc.

AL-'ASKAR. [See 'ASKAR SĀMARRĀ.]

'ASKAR MUKRAM ("Camp of Mukram"), town in Ahwāz (Khūzistān), one of those places refounded by the Arabs which here and there in the time of the Umaiyads grew up out of fortified cantonments. Mukram, an Arab commander whom al-Ḥadjdjādj had sent to Ahwāz to suppress a rebellion, pitched his camp near a town which the Arabs had destroyed of the name of Rustam Ḳawādh (corrupted by the Arabs into Rustaḳubādh). From this camp there soon developed owing to the favourable natural situation a flourishing town; for only a little below it the main arm of the River Dudjail (or Kārūn), the modern Shuṭait (= Shuṭaiṭ, i. e. small river), reunites with its eastern branch the Mashruḳān-Canal (modern Āb-i Gargar or Gerger) which branches off at Shushter, and not very far from there its most important tributary, the Dizfūl Rūd (modern Āb-i Diz) flows into the Dudjail. 'Askar Mukram lay on both sides of the Mashruḳān, and was the chief place on this canal. It is stated to have been the mint-town during the iv. (x.) century under the Būyid Mu'izz al-Dawla; cf. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xl. 452. The name 'Askar Mukram is no longer found on our maps; its place is marked however by the ruins of Band-i Ḳīr ("Embankment of Bitumen"), about 28 mls. to the south of Shushter (Arab. Tustar); the inhabitants of Shushter wrongly look for the remains of 'Askar Mukram in some considerable mounds of rubbish quite close by their town, which they therefore call also Lashkar (Pers. = Arab. al-'Askar).

Bibliography: Belādhorī (ed. de Goeje), p. 383; Yāḳūt, *Mu'djam* (ed. Wüstenf.), iii. 676; G. le Strange, *The Lands of the Eastern Caliphate* (1905), p. 233, 236 f., 242, 246 f.; also in *Journ. of the Roy. Asiat. Society*, 1895; p. 312 (on the Mashruḳān); K. Ritter, *Erdkunde*, ix. 164 f., 182 f., 191—193, 227; Weil, *Gesch. der Chalifen*, ii. 457. (STRECK.)

'ASKAR SĀMARRĀ or 'Askar al-Mu'taṣim, the camp of Sāmarrā or of Mu'taṣim, is the place where the Caliph al-Mu'taṣim bi 'llāh encamped with his Turkish troops at the founding of Sāmarrā in the year 221 (836). Hence this quarter of the town, like 'Askar Abī Dja'far at Ubulla or 'Askar al-Mahdī, i. e. Ruṣāfat Baghdād, received his name, and with greater right, since Sāmarrā retained as long as al-Mu'taṣim was ruler, i. e. till 227 (842), the character of a camp, and only became under al-Wāthiḳ, as Ya'ḳūbī says, a civilised town. The story of the foundation of Sāmarrā shows that the quarter 'Askar al-Mu'taṣim stood upon the site of an older settlement which appears among the Syrians as Shūmerā and in the classic writers of the time of the campaign of Julian the Apostate as Sumere (Ammianus Marcellinus) or Σοῦμ(ρ)α (Zosimos). It is this quarter too of the large town which alone survived the transference of the Caliphate to Baghdād, as Yāḳūt and the *Marāṣid* tell us, and which still exists. Here lived and were buried the tenth Imām, 'Alī, and his son al-Ḥasan, who consequently have the cognomen al-'Askariyain. Besides these holy tombs this place preserves the *Serdāb* of the Ḳā'im Muḥammad al-Muntaẓir al-Mahdī under a golden dome presented by Naṣr al-Dīn Shāh and completed under Muẓaffar al-Dīn Shāh in the year 1905. This Mashhad of the Mahdī is also occasionally called al-'Askar owing to its situation.

Bibliography: Ya'kūbī (ed. de Goeje) p. 265, ₂; Yāķūt, *Mu'djam* (ed. Wüstenf.), iii. 675; also, *Mushtarik*, p. 309; *Marāṣid al-Iṭṭilā'*, ii. 258 and iii. 5; Suyūṭī, *Lubb al-Lubāb*, p. 179; Streck, *Die alte Landschaft Babylonien* (Leiden, 1900-1901); E. Herzfeld, *Samarra* (Berlin, 1907); G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905). (E. HERZFELD.)

AL-'ASKARĪ, ABŪ AḤMAD AL-ḤASAN B. 'ABD ALLĀH B. SA'ĪD, Arab philologist; born Thursday 16. Shawwāl, 293 (11. Aug. 906); a pupil of Abū Bakr b. Duraid; lived in 'Askar Mukram, where the Ṣāḥib Ismā'īl b. 'Abbād held intercourse with him; died Frid., 7. Dhu 'l-Ḥidjdja, 382 (3. Febr., 993).

Of his works the following are preserved: 1. *Kitāb al-Zawādjir wa 'l-Mawā'iẓ* (Köprülü, N⁰. 730); 2. *Kitāb al-Maṣūn yashtamil 'alā Abwāb shattā min al-Adab* (Derenbourg, *Les mss. arabes de l'Escurial*, i. N⁰. 377); 3. *Risāla fi 'l-Tafḍīl baina Balāghatai al-'Arab wa 'l-'Adjam* in *al-Tuḥfa al-bahiya* (Stambul, 1302), p. 213—221. His *Kitāb al-Taṣḥīf* or *Taṣḥīf al-Shi'r* Suyūṭī has often used (see his *Muzhir*, i. 278, ₄; ii. 181, ₄; *Sharḥ Shawāhid al-Mughnī*, S. 6, ₁₀, 7, ₁₉, 51 ₁₇, 98, ₂, 251, ₂₂), also 'Abd al-Ķādir al-Baghdādī in *Khizānat al-Adab* (ii. 500, ₄ *infra* 510 *infra*.; iii. 181, ₁₁; iv. 22, ₁₉, 297, ₂₀). His *Kitāb Rabī' al-Adab* is cited by al-Suyūṭī in *Sharḥ Shawāhid al-Mughnī*, p. 186, ₁₇.

Bibliography: Ibn Khallikān (Cairo, 1299), i. 164, N⁰. 156; Yāķūt, *Irshād al-Arīb*, iii. 126—135; Suyūṭī, *Bughyat al-Wu'āt*, p. 221. (BROCKELMANN.)

AL-'ASKARĪ, ABU 'L-ḤASAN 'ALĪ B. MUḤAMMAD, the tenth Imām of the Shī'ites, who have given him the honorific title of al-Naķī (the pure); he was born in 213 (828) and passed his youth in Medina, where also his father, Muḥammad al-Djawād, usually resided. Although he exhibited in public the greatest piety and apparently took no part in political intrigues, yet he aroused the suspicions of the 'Abbāsid Caliph al-Mutawakkil, who had him transferred to his new residential town Sāmarrā in order to keep a better watch on his actions. Hence he has become known under the *Nisba* al-'Askarī [see supra, Art. 'Askar Sāmarrā], for he was never again permitted to leave Sāmarrā. He died in 254 (868), but whether a natural death is uncertain, and left two sons, al-Ḥasan and Dja'far. The former was recognised by the "Twelvers" as his successor, and given the honorific title al-Zakī. He was born in Sāmarrā in 231 (846) and died there in 260 (874), wherefore like his father he is sometimes called al-'Askarī. That he was also called al-Khamī ("bitter fruit"), as A. Müller states in *Der Islam im Morgen- und Abendland*, ii. 13, is not correct. Al-Khamṭ is according to an uncertain tradition the name of his slave and concubine who bore him the twelfth Imām Muḥammad, but other names are also given to her. Cf. Friedländer in *Journ. of the American Oriental Society*, xxix. 54. It is doubtful whether he left any children at all, but this controversial question will be more appropriately discussed under the article Muḥammad b. al-Ḥasan.

Bibliography: Ibn Khallikān (Cairo, 1299), i. 239, 578; ii. 222; Mas'ūdī (Paris), vii. and viii.; Shahrastānī (ed. Cureton), p. 128 ff.; Blochet, *Le Messianisme et l'hétérodoxie musulmane*, p. 20; Friedländer *see supra*, (contains further references).

AL-'ASKARĪ, ABŪ HILĀL AL-ḤASAN B. 'ABD ALLĀH B. SAHL B. SA'ĪD B. YAḤYĀ B. MIHRĀN, Arab philologist, a pupil of his namesake (according to others, of his maternal uncle) Abū Aḥmad al-'Askarī; from his devotion to knowledge he led a very retired life, and died after the year 395 (1005), in which according to the account given by Yāķūt in his *Mu'djam al-Udabā'* he finished dictating the *Kitāb al-Awā'il*, and hence Ḥadjdjī Khalīfa in several places gives this as the year of his death.

His chief work was the *Kitāb al-Ṣinā'atain al-Kitāba wa 'l-Shi'r* (or *al-Naẓm wa 'l-Nathr*), composed in 394 (1004), in which, in order to make a true appreciation of the linguistic excellencies of the Kor'ān possible, he gave the first systematic presentation of Arabic rhetoric, after al-Djāḥiẓ in his *Kitāb al-Bayān* had set out the material in stimulating but not very lucid fashion; publ. by Muḥammad Amīn al-Khāndjī, Stambul, 1320 (from the Mss. Köprülü 1333—1335; others in Paris, de Slane, *Catalogue des mss. arabes de la bibl. nationale*, N⁰. 4370 and at Tripolis, according to Landberg, *Proverbes et dictons*, p. 101, ₄; cf. P. Schwarz in *Mitt. des Sem. f. or. Spr. Berlin*, ix. 581 *et seq.*). Of his other writings enumerated by 'Abd al-Ķādir al-Baghdādī in *Khizānat al-Adab*, i. 112, the following are preserved: 1. *Kitāb Djamharat al-Amthāl*, a collection of proverbs, printed Bombay 1306-1307 and on the margin of Maidānī, Cairo 1310. — 2. *Kitāb Dīwān al-Ma'ānī*, an anthology in 12 Vols. (*Catalogue of the arabic Mss. in the British Museum*, N⁰. 1418). — 3. *Kitāb al-Awā'il*, dealing with the supposed inventors of arts and customs (Paris, Schefer 5896), abridged by al-Suyūṭī in *Kitāb al-Wasā'il*, which was partly edited by Gosche in *Das Kitāb al-Awā'il, eine literarhistor. Studie, Festgabe zur 25. Versammlung Deutscher Philologen*, Halle 1867. — 4. *Kitāb al-Karamā'*, publ. by Maḥmūd al-Djīlānī (Cairo, 1326). — 5. *Kitāb al-Mu'djam fī Baķiyat al-Ashyā'*, on the names of the remains of various objects (Ahlwardt, *Verzeichnis der arab. Hss. der Kgl. Bibliothek zu Berlin*, N⁰. 7052). — 6. *Sharḥ Dīwān Abī Miḥdjan*, ed. by C. Landberg in *Primeurs Arabes*, i. Leiden 1886, p. 58—73. — 7. *Kitāb al-Nawādir fi 'l-'Arabiya* (Ḥādjdjī Khalīfa, vi. 388) is perhaps contained in Escurial, N⁰. 753 (Derenbourg, *Les mss. arabes de l'Esc.*, ii. 42).

Litter.*, i. 126. (BROCKELMANN.)

AṢL (A.), root, ground, principle, etc.; also term. techn. [See Uṣūl.]

ASMĀ', daughter of the Caliph Abū Bakr. Her mother was Ķaila or Ķutaila bint 'Abd al-'Uzzā. She was the elder sister of 'Ā'isha, and was born 27 years before the Hidjra. She received the surname Dhāt al-Niṭāķain, "she of the two girdles", because to supply the want of another strap she tore her girdle in two in order to fasten on with these pieces the water-skin and wallet which she had brought to the Prophet and her father on

the occasion of their flight [see infra]. She was one of the earliest believers and married in the first period of Islām al-Zubair b. al-ʿAwwām [q. v.], who was also one of the earliest believers and found himself at that time in such distressing circumstances that she was compelled to do heavy and humble work; in this matter her husband also acted harshly towards her. She did not join her husband in the emigration to Abyssinia. When Muḥammad and her father on their flight to Medina concealed themselves for 3 days in a cave, she fetched them every evening food and water, and after the flight she settled in Ḳubā', not far from Medina, with her eldest son, the well-known ʿAbd Allāh b. al-Zubair [q. v.], and became the mother of the first believer born after after the Hidjra. She had 5 sons and 3 daughters. Later al-Zubair separated from her, whereupon she joined her son ʿAbd Allāh and experienced all the vicissitudes of his fortunes, and learned of his fall (73 = 692) when she had reached her 100th year, and though grown blind still retaining her mental vigour. Her request to be allowed to bury the impaled corpse of her son was refused. A few days later her eyes closed in death.

(RECKENDORF.)

ASMĀ' (A.), names, plur. of *Ism* [q. v.].

AL-AṢMAʿĪ, ABŪ SAʿĪD ʿABD AL-MALIK B. ḲURAIB, one of the most famous of Arab philologists, born at Baṣra in 122 (740), died there 213 (828). His name al-Aṣmaʿī he took from one of his ancestors al-Aṣmaʿ. He was reared in indigent circumstances, and applied himself with plodding zeal to his studies in the school of his native town, where he specially enjoyed the teaching of al-Khalīl, of Abū ʿAmr ʿIsā b. ʿOmar and of Abū ʿAmr b. al-ʿAlā'. Soon he became himself a teacher much in request at this school, and turned out such notable pupils as (Abu 'l-Faḍl) al-Riyāshī, Abū ʿUbaid, Abū Ḥātim al-Sidjistānī and (Abū Saʿīd) al-Sukkarī. His astonishing memory embraced all the branches of knowledge of his time; he had a very special mastery of the language of the desert-peoples and their dialects, as well as of the whole range of poetry, and as a philologist held unchallenged supremacy among his contemporaries. His fame reached the ears of Hārūn al-Rashīd, who brought him to his court at Baghdād as tutor to his son al-Amīn. Here he soon became the acknowledged leader in the active intellectual life of the Caliph's court. While held in high honour he retired with the wealth accumulated by a prudent economy to spend the rest of his life in his native Baṣra.

Of al-Aṣmaʿī's many works a large number have been preserved; some manuscripts, among them besides well-known writings a *Kitāb al-Faras*, *Kitāb al-Arāḍjīs*, *Kitāb al-Maisir*, etc., are contained in a private collection in Baghdād (cf. Haffner, *Texte zur arabischen Lexikographie*, Leipzig, 1905, Preface, p. v.), and so an edition of them is unfortunately impracticable. His works deal with their subject somewhat arbitrarily and are never exhaustive, but the material contained in them is reliable and is based on his own studies, in which connection the oft-related anecdote of how al-Aṣmaʿī won in competition with the great philologist Abū ʿUbaida a horse from the Wazir al-Faḍl b. al-Rabīʿ is significant. The splendid renown of al-Aṣmaʿī is shown by the fact that he is the most frequently quoted authority in Arabic works, so that from these whole books of his can be compiled. Of the ancient Arabic poetry he has not only preserved in his works single verses in the form of quotations mostly taken from the oldest literary inheritance but also prepared collections of whole poems. Besides the collection, al-Aṣmaʿiyāt, bearing his name, most of the dīwāns of the Arab poets which have been preserved are due to him.

Bibliography: Brockelmann, *Gesch. der arab. Litter.*, i. 104 f. and Addenda p. 514; in 3. (*Kitāb al-Khail*) the note (= Köprülü 1360?) should be struck out; — in 5. (*Kitāb al-Ibil*) there ought to be added: ed. Haffner, in *Texte zur arabischen Lexikographie* (Leipzig, 1905), p. 66—157. — of 6 (*Kitāb al-Aḍdād*) the Vienna MS. contains only a fragment, which however can be supplemented, since there is in St. Petersburg a second fragment, and in the private collection in Baghdād a complete manuscript, of which the author of the present article has been able to obtain a collation. — 8. and 9 are the same treatise (*Kitāb al-Nabāt wa 'l-Shadjar*), — in 10. (*Kitāb al-Dārāt*) there should be added: ed Haffner. — 11. *Kitāb Khalḳ al-Insān*, ed. Haffner in *Texte zur arabischen Lexikographie* (Leipzig, 1905), p. 158—232. — 12. *Kitāb al-Karm wa 'l-Nakhl*, ed. Haffner in *Machriq*, 1902, p. 883 ff. — Cf. also: Ahlwardt, *Sammlungen alter arabischer Dichter*, i. *El-Aṣmaʿijjāt* (Berlin, 1902).

(A. HAFFNER.)

ʿAṢR (A.), time, particularly the afternoon, hence *Ṣalāt al-ʿAṣr* = Afternoon-prayer (see Th. W. Juynboll, *Handbuch des islām. Gesetzes*, Index); *Sūrat al-ʿAṣr* is the title of the 103. Sūra.

ASRĀ (A.) = he travelled in the night, Inf. *isrā'*; hence *Sūrat al-Isrā'*, one of the titles of the 17. Sūra.

ASRĀFĪL. [See ISRĀFĪL.]

ASRĀR (A.), secrets, plur. of *Sirr*; in Turkish (used as sing. and pronounced *Esrar*) it denotes a preparation of hemp.

ASSAM, name of a district in British India, which since 1905 has formed with 15 districts of northern and eastern Bengal the new province of "Eastern Bengal and Assam". The district of Assam covers 61, 682 Eng. sq. mls., and lies between 22° 19' and 28° 16' N. Lat. and 89° 42' and 97° 12' E. Long. The population in 1901 amounted to 6, 126, 343 persons, of whom 1, 581, 317 were Muḥammadans, and of these 2724 called themselves Shīʿites. Almost three-fourths of the Muḥammadan population belong to the district of Sylhet. The first Muḥammadan conquest of Sylhet is ascribed by legend to the Saint Shāh Djalāl of Yemen, whose grave in Sylhet is held in veneration. Of the numerous invasions of the Muḥammadans which succeeded one another from Bengal from the end of the xiv. cent. some were unsuccessful, and none secured for them lasting possession of the country. Eventually in 1663 they abandoned the attempt to conquer the district. In the Morias, a depressed class of the Muḥammadan population we have descendants of the captured troops of the Muḥammadan commander Turbak, who made in 1532 an unsuccessful invasion. The remaining Muḥammadans of Assam call themselves Gariās, which name they intend

to indicate their origin from Gaur, the ancient Muḥammadan capital of Bengal.

'AṢṢĀR, SHAMS AL-DĪN MUḤAMMAD, Persian poet, died 784 (1382-1383). 'Aṣṣār was one of the panegyrists of Shaikh Uwais, but is chiefly known for his poem (which has been translated into Turkish), *Mihr u-Mushtarī* composed in 778 (1377), the content of which has been described by Ethé in *Grundriss der iranischen Philologie* in the following words: "the story of a love, which is free from every frailty and pure from every sensual lust, between Mihr, son of Shābūrshāh and the comely stripling Mushtarī."

Bibliography: Peiper, *Comment. de libro persico Mihr o Mushteri* (Berlin, 1839); Fleischer, in *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, xv. 389 ff.; Rieu, *Catal. Brit. Mus.*, ii. 626; Pertsch, *Katal. Berlin*, p. 843 ff.

ASSASSINS is the name given to those Ismā'īlīs, who at the time of the Crusades occupied fortified hill-fortresses in Syria and other Muḥammadan countries, and were wont to rid themselves of their opponents by assassination. The ordinary meaning of *assassin* however did not belong to the word originally, for the latter is to be traced back to the Arabic *Ḥashīshīyūn* denoting "consumers of Ḥashīsh". Ḥashīsh is a preparation of hemp (Cannabis indica), which oriental mystics sometimes consumed in order to induce the ecstatic state and to become intoxicated. It is said that those who were selected, the so-called Fidā'īs [q. v.], by the spiritual leaders of the Assassins to carry out any important mission, e. g. an assassination, were urged to its use in order that they might as volitionless tools be ready for any deed. From the Fidā'īs Ibn Khallikān calls the Assassins in general also Fidāwiya; but in the oriental sources, when they are not simply called Ismā'īlīs, they are often named Malāḥida (heretics) or Nizārīs.

The Assassins in so far as they are a branch of the Ismā'īlīs and have general principles in common with all Ismā'īlīs will be referred to in the article on the latter. What specially distinguishes them is less a doctrine differing from the other Ismā'īlīs than their political organisation into a secret league whose members owed blind obedience to the spiritual head; and also the fact that they availed themselves of murder to get rid of their foes is no new phenomenon in Islām. Abū Manṣūr al-Idjlī and Mughīra b. Sa'īd, whose followers were called "Stranglers" (*Khannāḳ*), had previously resorted to it and magnified assassination for political ends as a religious and meritorious act. For the rest, the theological tenets of the Assassins so far as they are not contained in the Ismā'īlī writings discussed below are insufficiently known to us, for their holy books, of which only one is known to us by name (*Sarguḏhasht-i Saiyidnā* = History of our lord, i. e. of Ḥasan b. Ṣabbāḥ, see infra) were all destroyed in the Mongol period. This much we know, that the founder of this secret league, Ḥasan b. Ṣabbāḥ, whose biography follows in a later article, during his residence in Egypt (1078—1080) was won over to the claims of the Fāṭimid Nizār b. al-Mustanṣir, from whom the members of the league derive the above-mentioned name Nizārīya. As is well-known it was not Nizār but a younger son of al-Mustanṣir who on his father's death was recognised by the Fāṭimids as Imām under the name al-Musta'lī; but the Assassins supported the claims of Nizār until a later successor, who was also called Ḥasan (b. Muḥammad), of Ḥasan b. Ṣabbāḥ gave himself out to be a descendant of Nizār and hence laid claim to the dignity of Imāmship. With this end in view he summoned all his followers to a great assembly (*'Īd al-Ḳiyāma*, feast of the resurrection) in the year 559 (1164), at which he not only secured his recognition as Imām but also publicly proclaimed the abrogation of Islāmic law. A reversion occurred under a third Ḥasan (Djalāl al-Dīn), who on succeeding his father in 607 (1210) returned to the statutes of Islām, informed the 'Abbāsid Caliph of his submission to him, and allowed his mother to make the pilgrimage to Mekka. Hence his name Naw-Musulmān (new believer). Under his successors there arose among the Assassins differences of opinion and factions, about whose real nature nothing is accurately known, and soon afterwards the political strength of the secret league was destroyed by the Mongols. With this the Assassins as such cease to exist, and those of them who survived the catastrophe and continued loyal to their views were absorbed by the other Ismā'īlīs.

The history of the Assassins commences with the conquest of the hill-fortress of Alamūt by Ḥasan b. Ṣabbāḥ in the year 483 (1090-1091), who removed his residence there and from this place of difficult access carried on his propaganda. This consisted first in his followers obtaining possession of a large number of hill-fortresses in all parts of Persia, and getting rid of the most dangerous of their opponents by assassination. One of the first victims was the famous Seldjūḳ-Wazīr Niẓām al-Mulk (485 = 1092). The death of Sulṭān Malik-Shāh which occurred soon after, and the resulting disputes for the succession among the various pretenders, and the appearance soon after of the Crusaders in the lands of Islām threw the Muḥammadan world into a disorder which assured great success to the Assassins. Their strength consequently became very considerable in a few years, until the Seldjūḳ-Sulṭān Muḥammad I. ascended the throne and strained every nerve in combatting the Assassins. The fortress of Dizkūh, called Shāh-Diz by Malikshāh, in the vicinity of Iṣpahān, was at that time in the hands of a distinguished leader of the Assassins of the name of Ibn 'Aṭṭāsh, who had counted Ḥasan b. Ṣabbāḥ among his pupils. It was captured after a courageous resistance (500 = 1107). Cf. the official account of this in Ibn al-Ḳalānisī (ed. Amedroz, p. 152 *et seq.*). The Turkish Emīr Anushtegīn Shīrgīr was then entrusted with the conduct of the war against the Assassins, and he after several successes was on the point of taking the fortress of Alamūt itself when the death of Muḥammad (511 = 1118) forced him to raise the siege. Ḥasan survived this danger almost 7 years; he died in 518 (1124) leaving the leadership of the Assassins to Kiyā Buzurg Ummīd Rūdhārī, who bequeathed the conduct of affairs to his descendants. The following were the rulers of Alamūt:

Ḥasan b. Ṣabbāḥ . .	483—518 (1090—1124).
Buzurg Ummīd Rūdhārī	518—532 (1124—1138).
Muḥammad b. Buzurg Ummīd	532—557 (1138—1162).

Ḥasan b. Muḥammad . . 557—561 (1162—1166).
Nūr al-Dīn Muḥammad . 561—607 (1166—1210).
Djalāl al-Dīn Ḥasan b. Muḥammad . . . 607—618 (1210—1220).
ʿAlā al-Dīn Muḥammad 618—653 (1220—1255).
Rukn al-Dīn b. Muḥammad . . . . 653—654 (1255—1256).

During the rule of these Grand-Masters the Assassins had more than once to endure sore persecution, but neither the Caliphs nor the Seldjūḳ-Sultans succeeded however in breaking their power and destroying their robber's-den. They skilfully rid themselves of their most implacable enemies by assassination and zealously carried on their propaganda. Especially did they succeed in setting firm foot in Syria, where the Seldjūḳ of Ḥaleb, Riḍwān, availed himself of their aid. A certain Abū Ṭāhir, who seems to have plied the art of goldsmith and hence was called al-Ṣāʾigh, was sent to Syria as emissary and won in Ḥaleb particularly many followers. In 499 (1105-1106) he managed by treachery to remove from his path the governor of Apamea, but was disappointed in his hopes of becoming himself master of the town since the Crusaders soon after took possession of it. The bloody persecution of the Assassins in Ḥaleb after the death of Riḍwān in 507 (1113) did not prevent another Persian emissary named Bahram some years later from obtaining a large following and even gaining possession (520 = 1126) of the town of Bāniyās, which was surrendered three years later to the Crusaders. The Assassins often entered into friendly relations with the Christians, and contrived to strengthen their position by cleverly availing themselves of the political conditions. In 535 (1140-1141) they conquered the hill-fortress of Ḥiṣn al-Masyād (Masyāf) and other fortresses situated in North-Syria, e.g. Kahf, Ḳadmus, ʿUllaiḳa, al-Khawābī, etc. The temporary chief of these Syrian Assassins was usually called *Shaikh al-Djabal* (translated by the Christians as "the Old Man of the Mountain", "le Vieux de la Montagne"), so that this term does not denote, as is sometimes stated, the Persian Grand-Master, the universal chief of the Assassins. One of the most famous of the Syrian rulers is Rashīd al-Dīn Sinān [q. v.].

The Mongols who effected such great changes in the political conditions of Asia accomplished also the downfall of the Assassins. The last Grand Master Rukn al-Dīn had just entered upon his dignity when Hulagu marched his forces on Alamūt. Resistance was impossible; Rukn al-Dīn had to submit (654 = 1256), and was to be brought before the Great-Khān, but was executed on the way thither. The strongholds held by the Assassins were taken and some of them razed to the ground. The hill-fortresses of Syria, e. g. Masyād, fell in 658 (1260) for the time being under the power of the Mongols, but it was reserved for the Mamlūk-Sultan Baibars to give the Assassins the finishing blow (671 = 1272). This ended for ever the political power of the dreaded sect, but there were and are to the present day in the mountains of the Nuṣairīs Ismāʿīlīs descended from the Assassins, as also in Persia and India. [Cf. the arts. Ismāʿīlī and Khodja.]

Bibliography: The history of the Assassins is contained in the Universal Histories of Ibn al-Athīr, Ibn Khaldūn, Abu 'l-Fidāʾ etc. Cf. also the appropriate section in Mīrkhond's History, separately edited in *Notices et Extraits*, ix. 194 *et seq.* and in *Taʾrīkh-i Guzīda*, translated in *Journ. ASSUAN, town in Upper Egypt. Assuan, in Arabic character Uswān (Uṣwān also appears), popularly known in the Middle Ages as Aswān, is situated 24° 5′ 30″ N. Lat. on the east bank of the Nile to the north of the first cataract, and is the capital (13 000 inhabitants) of the Egyptian province of Nubia and chief town of the district (Markaz) of the same name. The district of Assuan inclusive of the island of Elephantine bore in antiquity the name Yēbu, "land of elephants", a name which the island still bears. The island was in ancient time more important than the town lying on the east bank, viz. Swēnet, the Syene of the Greeks, the Suān (Yāḳūt) but mostly Uswān of the Arabs. In the neighbourhood were stone-quarries whence the ancient Egyptians obtained their columns and the blocks for their statues. Pliny calls this stone Syenite after the place whence it is obtained, but this name does not denote quite the same as the modern geological term. In Islāmic time mill-stones were quarried there — perhaps ancient columns were turned to a like account. This manufacture of mill-stones was for a time a royal prerogative. The stone-ware of Assuān (pots and pitchers) was also famous.

In the town stood an old temple containing the representation of a serpent. If on the 12. Barmūda clay (*Ṭafl*, not *Ṭifl*) were pressed on this scorpion, any one carrying with him a piece of the clay was immune from the bites of scorpions (Abū Ṣāliḥ).

Assuan both in antiquity and the time of the Arabs was the frontier-fortress of Egypt against Nubia. The frontier ran just on the other side of the cataract at Philae (Bilāḳ). The first Nubian town was al-Ḳaṣr. The Christian king of Nubia paid annually to the Prefect of Assuan so-called tribute (*Baḳt*), which was in reality only a kind of official exchange, for he received an equally costly present in return from Egypt. The oldest contract in this connection dates from the year 31 (651—652). The proximity of the gold-mines of ʿAllāḳī [q. v.] and other economic interests attracted numerous Arabs into this region, and this led to constant friction. From the iv.—x. cent. Assuan suffered partly from Nubian incursions, partly from these Beduin-hordes [see Article Nubia]. Under the Fāṭimids, but especially under the Mamlūks, Assuan or rather the most southern province of Egypt, when in the hands of weak governors became the asylum of rebels who were here for the time-being beyond the jurisdiction of the central authority. This did not entirely cease until the time of Muḥammad ʿAlī who removed the Egyptian frontier well towards the south. The

conquest of Nubia under the Mamlūks brought little change.

Assuan possessed at all periods great economic importance; for it formed the natural centre of the Nubian, Central African, and for a long time also of the Indian trade. Slaves, gold, ivory and ostrich-feathers were the chief imports. Egypt exported on the other hand corn, wine and manufactures (clothes). In the first centuries of Islām Assuan was a favourite starting-point for the pilgrimage to Mekka, which proceeded from here through the desert to ʿAidhāb and thence by ship to Djidda. Assuan long remained therefore the most important town in Upper Egypt. Later it declined very considerably when traders and pilgrims preferred the route by Ḳūṣ. By the close of the Fāṭimid period it had declined administratively, and in the Mamlūk period economically as well, into a dependency of Ḳūṣ. The political conditions previously described prevent it from regaining its former splendour, but, thanks to its position (cataract, junction of several caravan-roads), it remains an emporium for The Central African trade. Recently it has lost greatly through the Mahdi-rising.

The climate is excellent; the fertility (corn, vineyards) of the district is lauded by all geographers; in the Middle Ages it was famed for its dates. There were more varieties of dates here than in ʿIrāḳ. The section by England in our age of the huge dam (*Khazzān, Sadd*) has essentially affected the climate, but has enriched Assuan with a spectacle of the first rank and the whole of Egypt with a source of increasing blessing.

ASTARĀBĀDH (also Astrābādh, Istarābādh, Starābādh), name of a North-Persian town and province.

1. The town of Astarābādh, chief town of the same name; situated 36° 40′ N. Lat. and 54⅓° E. Long. (Greenw.), and near the south-eastern corner of the Caspian Sea (23 mls. east of it). It stands on an insignificant eminence (380 ft. above sea-level) at the foot of a very high and thickly-wooded chain, a spur of the Elburz, and on the margin of a large and in many parts marshy plain, which though fertile is but little cultivated and later ends in the Turkoman sandy desert (Ḳara-Kum). Occupying a commercially and strategically important position Astarābādh certainly dates back to a remote antiquity. Very probably it is mentioned (according to Mannert, Mordtmann, Kiepert) by Arrian (*Anabasis*, iii. c. 23 and 25) as Ζαδράκαρτα. Some explain the name Astarābādh as the city of the stars (Pers. *astar*, *sitāre*, "star"), others as the city, or rather the place of the mules (Pers. *astar*, *satar*, "mule"), since, it is said, there dwelt in it originally only ass- and mule-drivers. The re-founding of a town here is ascribed to the Arab general Yazīd b. Muhallab, who when on his campaign towards Djordjān and Ṭabaristān in the year 98 (716) was so pleased by the site (occupied at that time by the village of Astarek) that he took up residence in it. In the Arab Middle Ages Astarābādh was the second town of the province of Djordjān; in the history of the Caspian coast-lands it is often mentioned. Since there were several adjoining peoples in its vicinity it was often involved in wars and feuds. During the civil disorders which recurred repeatedly in Persia in the xviii. cent. Astarābādh frequently suffered invasions and was several times ravaged. Under Nādir-Shāh (1736—1747) it attained its present compass (3. mls.).

The town which is built four-square is surrounded by a high picturesque wall flanked by bastions, which was last repaired under Agha Muḥammad Khān [q. v., vol. i., p. 180] but is now much dilapidated. The handsome palace (now the governor's residence) erected by Shāh ʿAbbās I is also on the way to ruin. The frequent rains compelled the inhabitants to build their homes of stone, and hence Astarābādh presents a more regular appearance than other Persian towns. The numerous prayer-houses and public mosques (47 in number) are characteristic; with them are associated 7 academies (Madrasas). Astarābādh is regarded in Persia as a stronghold of Shīʿite-persecuted Sunnis; hence the epithet *Dār al-Muʾminīn*, "the house of the faithful" (also on coins); there is a large number of alleged descendants (called *Saiyid*) of the Prophet dwelling in it. The number of the inhabitants, who must have been more numerous in earlier centuries, is now given at 10—12,000. Astarābādh was never a large town, yet it was never without importance; for since it stood at the beginning of two important trade-routes, one leading to Herāt-Meshhed and the other to Iṣpahān-Ṭeherān, which bifurcate to the south-east at Bisṭām, it was natural that there should spring up here an important trade-emporium, a bazar for the products of Persia and Central Asia. The chief articles of trade are cotton, rice, silk, sugar-cane, salt, soap, sesame-oil, carpets, horse-rugs. Since the Russians advanced their frontier close to the southern shore of the Caspian Sea an active exchange of wares has been set up with them also. On the other hand the commercial intercourse of the town has suffered heavily by the opening of the Trans-Caspian line, in that the wares from the interior of Asia coming through Khiwa and Bukhārā are despatched almost exclusively by this line, so that the transit-trade of Astarābādh is being more and more limited to the products of Persia and Russia.

The small town of Bender-i Gez or Kenār-i Gez (Russ.: Gäs or Pereval, i. e. passage) with ca. 1200 inhab., situated about 30 mls to the west of Astarābādh and about 2⅓ mls. to the south of the gulf of the same name serves as port of Astarābādh. This is the best and most sheltered harbour on the whole southern coast of the Caspian Sea. In the Middle Ages the town of Ābaskūn [q. v.] served as common port for Djordjān and Astarābādh.

2. The Province of Astarābādh, named after the chief town of the same name. It comprises the region at the south-east corner of the Caspian

Sea and extends from the river Ḳara-Ṣū on the east, or rather north-east, along the northern slope of the Elburs-range, which separates it from the province of Khorāsān, westwards till about the middle of the Bay of Astarābādh, where the river Gallīgō is considered to be the boundary between it and the province of Māzandarān. Area: 5634 sq. mls.; population small: ca. 80 000 (only 14.2 to the sq. ml.). The land is exceedingly thickly-wooded, but is also very marshy. There are no rivers of any importance. Among the products rice must have first mention, further walnut-wood, soap and sesame-oil. In the Middle Ages there was considerable rearing of silk-worms. With few exceptions (Gäz and a few places in the hills) all the villages of the province are in pretty poor plight. Affluence and industry nowhere exist. Apart from the capital and its port Gäz (emporium for Persian cotton) trade and commerce are quite insignificant. The magnificent chaussee laid out by Shāh ʿAbbās I. in the xvii. cent. is now quite destroyed. In summer the sand-filled river-beds serve as roads. The shameless incursions of the Turkomans, at whose hands the country formerly suffered bitterly, have almost quite ceased since Russian authority extended as far as the river Atrek (about 38 mls. to the north of Kara-Ṣu). Astarābādh falls into 6 *Bulūks* or circles. Among the inhabitants (partly Shīʿites, partly Sunnis) there is a surprisingly large percentage of Mollahs (clergy) and Saiyids (ʿAlids). In many villages reside Gudars, an energetic tribe, widespread in the provinces of Astarābādh and Māzandarān especially, and despised by the Persians, which is engaged in agriculture, cattle-rearing, the cultivation of silk and the drying of fruits. Astarābādh is also the native place of the present ruling dynasty in Persia, the Ḳādjārs, a Turkoman nomadic tribe, which came to Astarābādh on the conquest of Ṭabaristān by Timur, and gave Agha Muḥammad Khān as first king of the present reigning house.

Bibliography: ʿAbd al-Raḥmān al-Idrīsī (died, 405 = 1014) wrote the chronicles of the town of Astarābādh, a work often quoted by Yāḳūt, but now lost; cf. also Brockelmann, *Gesch. der arab. Litter.*, I. 138, and Heer, *Die hist. u. geogr. Quellen in Yakut's geogr. Wörterb.* (1898), p. 40; *Bibl. ASṬARLAB. [See ASṬURLĀB.]

ASTRAKHAN, Russian administrative province and its capital, properly Ḥādjdjī Tarkhān; founded by the Mongols in the neighbourhood of the Khazar town of Itil [q. v.]. The town is mentioned by European and Muhammadan travellers as early as the first half of the viii. (xiv.) cent.; according to Ibn Baṭūṭa a sainted Mekkan pilgrim dwelt there, and so the place was exempted from all taxation; hence the name. Coins appear to have been minted in Astrakhan only from the year 782 (1380). Demolished by Timur in the winter of 1395-1396, the town arose to new prosperity in the xv. cent., probably due in some measure to the simultaneous decline of the ancient capital Sarāi. After the decay of the "Golden Horde" there arose in Astrakhan a new ruling house which endured until the middle of the following century. In 1554 Astrakhan was conquered by the Russians, who appointed at first Khān Derwish ʿAlī their vassal and did not annex the country till 1559; in 1569 a Turkish army appeared before Astrakhan, but soon had to quit the field; in 1589 a Russian fortress was built near the Tartar town. Astrakhan has since remained under the sway of the Russians, and owing to its favourable situation at the mouth of the Volga has gradually by trade and industry developed into a large town (at present 113,000 inhabitants).

(W. BARTHOLD.)

ASTROLOGY. Its technical name with the Muslims ʿ*ilm* (or *ṣināʿat*) *aḥkām al-* (or *ḳaḍāya ʾl-*) *nudjūm*, "the science (or the art) of the decrees of the stars", or, shorter, ʿ*ilm* (*ṣināʿat*) *al-aḥkām*. Some Arab writers from the xiii. cent. A. D. on use also the expression ʿ*ilm al-nadjāma*. On the other hand the expressions ʿ*ilm* (or *ṣināʿat*) *al-nudjūm*, "the science (or art) of the stars", ʿ*ilm ṣināʿat al-nudjūm*, ʿ*ilm al-tandjīm* denote indifferently astrology or astronomy or both these sciences together. — The astrologer is called *aḥkāmī* or *munadjdjim*; but the latter name denotes also the astronomer. Not till we reach the xix. cent. A. D. do we find any precise distinction made between *munadjdjim*, "astrologer", and *falakī*, "astronomer".

The majority of philosophers and authors of bibliographical and encyclopaedic works, keeping to the classification of the sciences given by the

Aristotelians, consider astrology as one of the seven or nine branches (*furū'*) of the "natural sciences" (*'ulūm ṭabī'iya*), placing it with medicine, physiognomy, alchemy, interpretation of dreams, etc. But the astrologers and astronomers and other savants (e. g. al-Fārābī, the Ikhwān al-ṣafā' and Ibn Khaldūn), following the example of Ptolemy, consider astrology as a branch of the "science of the stars", which itself is only one of the four great divisions of the "mathematical sciences" (*'ulūm riyāḍīya*). — For the rest it must not be forgotten that the mathematical-astronomical rules for calculating, of which the astrologer always stands in need, are set out only in astronomical treatises.

Astrology is based on the principle that all the changes occurring in the sublunary world, i. e. the Aristotelian "generation and corruption" (γένεσις καὶ φθορά, *al-kawn wa 'l-fasād*), are intimately connected with the particular nature and the movements of the celestial bodies. Man especially, who as microcosm has affinities with the entire macrocosm, is subject to the influences (*ta'thīrāt*) of the stars; whether with Ptolemy we explicitly assume the physical theory of forces or influences emanating in rays from celestial bodies and tending to make the nature of the patient (*ḳābil*) similar to that of the agent (*fā'il*), or, in order to approximate more nearly to Muslim orthodoxy, consider the celestial bodies not as real agents but rather as indicators (*dalā'il*) of future events. — The influence of the stars depends on their individual nature, and also on their position relatively to the earth or to the other stars; the events of the sublunary world and human vicissitudes are therefore subject always to the extremely complex and variable combination of very numerous, very varied and even contradictory celestial influences. To know and to combine these influences is the astrologer's very arduous task.

Not only the celestial bodies, but also places having only a theoretical existence in the heavens are supposed to possess a particular virtue capable of radically modifying the virtue of those stars with which at the given moment they sustain certain relations. From the astrological point of view the "head" (*al-ra's*) and the "tail" (*al-dhanab*), i. e. the ascending node, and the descending node of the lunary orbit, are oftenest assimilated to the planets, — an assimilation which is rejected only by the adherents of what might be called the "classical Astrology of Ptolemy". The signs of the Zodiac also, considered separately or in groups of three according to the four "trigons" (*muthallathāt*, triplicitates), have their particular virtue; as also have certain subdivisions unknown to the Ptolemaic astrology of the Zodiacal signs, such as the "Decans" (*wudjūh*, facies), the third part of a sign, and the "Novenaries" (*Nuhbahrāt* or *Nawbahrāt*, novenariae), which are the ninth part of a sign; even the degrees of the zodiac are considered by many astrologers to have each their own peculiar nature, and are divided into masculine (*mudhakkara*), feminine (*mu'annatha*), shining (*muḍī'a* or *munīra*, lucidi), dark (*muẓlima*), coloured (*mutalawwina*), smoky (*ḳatima* or *mudkhina*, fumosi), void (*khāliya*), wells (*ābār*, gradus puteales), increasers of happiness (*zā'ida fi 'l-sa'āda*), etc. Further, there are parts and points of the Zodiac which are of the highest importance from their relation to the sun, the moon and the five planets, for they are their limits (*ḥudūd*, termini, fines), houses (*buyūt*, domus, domicilia) and injuries (*wabālāt*, detrimenta), exaltations (*ashrāf*, exaltationes, principatus, altitudines) and falls (*hubūṭāt*, casus, dejectiones).

The horizon and the meridian also play a great part; their points of intersection with the ecliptic are called the four pivots (*awtād*, anguli, centra, cardines): 1. the ascendant (*ṭāli'*), i. e., the point of the ecliptic rising to the horizon at the given moment; 2. the pivot of the earth (*watad al-arḍ*, *al-rābi'*, angulus terrae, imum caelum), i. e., the intersection of the ecliptic with the lower meridian; 3. the descendant (*watad al-ghārib*, *al-sābi'* angulus occidentalis, occidens, occasus), i. e. the point of the ecliptic vanishing at the horizon; 4. the culminating point (*watad al-samā'*, *al-'āshir*, medium caelum), i. e., the intersection of the upper meridian with the ecliptic. — The arcs of the ecliptic contained between these pivots are each divided into three equal parts by means of circles of declination (which pass through the poles of the equator); the ecliptic is thus divided into twelve sections, called the twelve celestial houses (*buyūt*, houses), which form the basis of every astrological calculation.

The relative position of the planets (including the sun and moon) is also of the greatest importance; it admits of five principal combinations, viz. the conjunction (*ḳirān* or *muḳārana*, but called *idjtimā'* when it is a question of the sun's relation to the moon), and the four aspects (*anẓār*, aspectus) or "applications" (*ittiṣālāt*), i.e., 1. the opposition (*istiḳbāl*), when the two planets are diametrically opposite; 2. the "sextile" (*tasdīs*), when there is between them a difference of longitude of 60°; 3. the "quadrature" (*tarbī'*), when the longitudinal difference is 90°; 4. the "trine" (*tathlīth*), when the difference is 120°. — If about a planet as centre a circle be described with a radius of 60°, 90° or 120°, the two points of intersection of the ecliptic with this circle, and also the trigonometrical process of calculating them are called the "projectio radiorum" (*maṭraḥ al-shu'ā'*). These astrologers who adhere most closely to the Ptolemaic tradition do not take these five combinations into account; but all the rest add many others (Ibn Hibintā reckons 24), which are called "status (*ḥālāt*) planetarum ad invicem."

Further, mention might be made of the lots, or, to keep the technical expression of our mediaeval writers, the "partes" (*sihām*, sing. *sahm*), which are at bottom only imaginary ascendants reckoned on the ecliptic at a certain distance from the true ascendant. Ptolemy and his Arab followers admit only the "pars fortunae" (*sahm al-sa'āda*, ὁ κλῆρος τῆς τύχης), but the other astrologers admit a very considerable number, which amounts in the *Introductorium* of Abū Ma'shar to 97 exclusive of about 30 other "partes" mentioned by al-Kabīṣī.

Lastly, the geographical element ought not to be omitted; for, since every region of the earth is subject to the particular influence of one of the Zodiacal signs and one of the planets, the same prognostication for persons in different countries cannot be drawn from the state of the heavens.

Such is the astrologer's equipment in its main features. Its usage is no less complicated. — The Muslim astrologer can confine himself to three prin-

cipal systems: 1. The system of "interrogationes" or "questiones" (*masā'il*, ἐρωτήσεις), intended to reply to questions relative to the events incident to daily life, e.g. when the client desires information regarding some one who is absent, or to discover a thief, or to recover something which has been lost, etc. This is the simplest and commonest part of the art. — 2. The system of "electiones" (*ikhtiyārāt*, καταρχαί), i.e. the choice of the auspicious moment for accomplishing such and such an act; this moment is determined by observing in which of the twelve celestical houses the moon is. Astrologers who preferred the Indian methods employed the 28 lunary stations (*manāzil*) in place of the twelve houses. — 3. The genethlialogical system, or, to keep to the nomenclature of Muslim writers, that which is based on the "revolutiones annorum" (*taḥāwīl al-sinīn*), i.e. on the years or fractions of the tropical year which have expired or are thought to have expired since the birth of an individual or the commencement of a reign, sect, or religion, or the foundation of a town, etc. Its fundamental principle, which is quite different from that of the other two systems, is that at the instant of birth the configuration of the celestial sphere irrevocably fixes the destiny of the newly born, and it will then be independent or nearly so of subsequent changes of the sphere. This is the system adopted by Ptolemy, who makes only very slight and implicit concessions to the principle of the "electiones", and has not a single word to bestow on the "interrogationes"; it is also a system which has more technical difficulties than the other two and too often encounters the impossibility of knowing the instant of birth or of commencement with sufficient approximation. When the prognostications concerned individuals, the "revolutiones annorum nativitatum" (*taḥāwīl sinī 'l-mawālīd*) were employed; for prognostications concerning peoples, towns, sects, etc., (and consequently epidemics, famines, wars, inundations, etc.), the "revolutiones annorum mundi" (*taḥāwīl sinī 'l-'ālam*) were employed.

The fundamental operation in all these three systems was the determination of the ascendant (*ṭāli'*), from which the initial (*mabādi'* or *marākiz*) of the remaining eleven celestial houses were calculated. In the case of the "interrogationes" and the "electiones" the ascendant to be determined was that of the moment in question; but in the third system, the genethlialogical, it was the ascendant at the birth of the individual or the commencement of a reign, etc. Now even supposing that the precise date of the birth or commencement were known, how could the ascendant be determined if it varies very rapidly in consequence of the diurnal movement of the celestial sphere? Birth is not an instantaneous act; even if the astrologer had aided at the accouchement he would not be able to choose the exact instant for determining the ascendant. The genethlialogical system had therefore to frame for births the theory of the "animodar" (*namūdār*), i.e. very complicated rules for choosing an imaginary ascendant for the nativity; the methods most in vogue with Muslim astrologers are the method of Ptolemy and those which they ascribe to Hermes and Zoroaster respectively. For prognostications not concerning individuals the ascendant of the eclipses or of the great planetary conjunctions were employed.

But there is still more contained in the genethlialogical system. Destiny is determined by one of the planets (including the sun, the moon, also the "pars fortunae" and the ascendant) occupying at the moment of the fictitious ascendant one of the five places which Ptolemy calls τόποι ἀφετικοί, and our mediaeval astrologers "loci hilegiales" (*mawāḍi' al-hailādj*). In this situation the planet (sun, moon, "pars fortunae", ascendant) becomes the apheta or indicator (*dalīl* or *hailādj*, significator, alhylech, hilegium, ἀφέτης), which is to be "directed" towards the stars and those points in the heavens possessing a particular astrological signification. From the examination of the combinations arising from these meetings may be learned the fortunes of the newly born. On its mathematical side this directing (*tasyīr*, atazir, directio, ἄφεσις) can be explained as follows: in consequence of the diurnal movement of the celestial sphere a planet or a point of the ecliptic having a particular astrological importance will arrive at a certain moment at the circle of position (i.e. the circle passing through the points of intersection of the horizon and the meridian) formerly occupied by the indicator. The equatorial angle (hour-angle) thus traversed is calculated; when dealing with human life a solary year is counted for each equatorial degree, but with general events each degree counts only as one day. — It ought to be added that for prognostications relative to peoples, towns, religions, etc. the indicator is chosen in a different manner. According to the Arab followers of Ptolemy it is the planet or the star possessing the most "dignities" over the point of the ecliptic where there has occurred an eclipse of the sun or moon. But the majority of Muslim Astrologers give the preference to the system of the planetary conjunctions (*Ḳirānāt*), which they probably learned from the Indians; they base their calculations on the conjunctions of the three superior planets (Mars, Jupiter, Saturn), whence they draw their prognostications by the method of the *tasyīr* or by other methods. — The *tasyīr* of the above-mentioned indicator gives the duration of life. For the other events of life one must choose, according to the nature of the event one wishes to know about, between five other indicators (ascendant, pars fortunae, moon, sun, culminating degree) and "direct" the one chosen. — Further it is necessary to translate into terms of time, according to special rules, the uniform movements of the indicators according to the order of the signs (i.e. from west to east), in order to determine species of lords for the tropical solar years, the months, and the days of life; this movement (of the indicator), or the point of the ecliptic where it arrives, is called *intihā'* (alynthie, profectio). — Finally, there are cycles of the years of life which are specially subject to the influence of this or that planet; these cycles, corresponding fundamentally to the planetary "rulers of time" (χρονοκράτορες) of the Greeks, but modified however and often very complicated (especially in Abū Ma'shar), are called *fardārāt* (fridariae).

Other secondary methods were also employed, among which I will mention only that of the constellations and images (*ṣuwar*) ascending with the decans, which goes back to the Chaldean tradition of Teucer, and that which is founded on the risings of the star Sirius (Sothis of the an-

cient Egyptians), and was employed only by the Muslims of Egypt.

Muslim-Arabic astrology has drawn from the most diverse sources. Its Greek masters were Ptolemy, Vettius Valens, Dorotheus Sidonius, Teucer, Antiochus and several pseudepigraphical treatises, i. e. not only authors proceeding on radically different principles, but also authors who, like Vettius Valens and Dorotheus, had already amalgamated the most diverse doctrines. At the same time it drew from Pahlawī and Indian books, and also absorbed the oral traditions of Mesopotamia, Syria and Egypt. It is not surprising therefore that only a small number of Muslim astrologers have adopted in its purity one or other of the three fundamental systems. The others, i. e. the majority, accepted the "interrogationes", "electiones", "revolutiones annorum" en bloc, considering the one as the complement or even as a confirmation of the others, and leaving it to the practitioner to choose between the systems and the different methods according to his own ability, to expediency, and the rank and needs of his client. The completest and strangest mixture is met with in the books of Abū Maʿshar, a veritable jumble of the most heterogeneous doctrines.

What really distinguishes the astrology of Muslim peoples from preceding systems is, apart from its eclecticism, the degree of perfection attained in the mathematical processes. They are set forth with all the precision that could be desired in the astronomical treatises, alongside the other problems of spherical trigonometry; and it was to aid to this end that the calculators drew up very numerous and detailed mathematical tables. In this regard there is a striking contrast with Greek and Indian astrology which made clumsy calculations and always shrank from an excessive complication of mathematical elements.

Theologians, jurists and philosophers are almost unanimous in condemning astrology; exceptions, e. g. al-Kindī, the Ikhwān al-Ṣafā' and Fakhr al-Dīn al-Rāzī, are very rare. But in practical life the condemnation had no effect; at the court of the caliphs and sultans as well as with the masses astrology triumphed until last century when the introduction of European civilisation and especially of the Copernican system gave it a mortal blow. But in places to which European culture has only slightly penetrated astrology still survives, although destitute in great measure of the splendid scientific pomp with which it was arrayed in the Middle Ages. To-day in Yemen — irony of fate — it is no less personages than the Ḳāḍīs themselves who practise the profession of astrologers.

Astrological problems, so far as they are mathematical (geometrical, trigonometrical, arithmetical) problems, are dealt with in the works on astronomy and in the tables compiled and calculated for astrological purposes. The "judicial" side, that of the *aḥkām*, has been the subject of innumerable treatises and monographs whose titles it would be impossible to enumerate; for the rest, save for two unimportant treatises which have been wrongly ascribed to Abū Maʿshar, a chapter of the *Introductorium* of Abū Maʿshar (in Boll, *Sphaera*, 1903), and the treatise of al-Kindī on the duration and fortunes of Islām according to the theory of the planetary conjunctions (in O. Loth, *al-Kindī als Astrolog*, in *Morgenländische Forschungen* [*Fleischer-Festschrift*], Leipzig, 1875, p. 263—309), all the original texts are unedited. The following works as having been translated into Latin in the Middle Ages and printed should be mentioned: the commentary of Haly Heben Rodan (ʿAlī b. Riḍwān) on the *Quadripartitum* (Τετράβιβλος) of Ptolemy, and that of Aḥmad b. Yūsuf, called Ibn al-Dāya, on the *Centiloquium* (Καρπός, *Kitāb al-thamra*) wrongly attributed to Ptolemy, the two printed together in Venice, 1493 and 1519; several works of Albumasar (Abū Maʿshar, q. v.); the large treatise in eight books of Albohazen Hali filius Abenragel (Abu 'l-Ḥasan ʿAlī b. Abi 'l-Ridjāl), printed in Venise, 1485, 1503, 1523, and, with slight stylistic corrections, at Basle, 1551, 1571; the convenient Liber introductorius of Alcabitius (al-Ḳabīṣī), several times printed, oftenest with the commentaries of Johannes de Saxonia, and annotated also by V. Nabod (Cologne, 1560, with stylistic improvements on the older version); the treatise of Zahel (Sahl b. Bishr) and of Messahallach (Mā Shā' Allāh), printed as appendix to the commentaries on the *Quadripartitum* and the *Centiloquium* mentioned above; the *Liber nativitatum* of Albubather (Abū Bakr al-Ḥasan b. al-Khaṣīb) printed in Venice, 1492 and 1501; the *De judiciis nativitatum* of Albohali (Abū ʿAlī Yaḥya 'l-Khaiyāṭ), Nurnberg, 1546 and 1549; the *De nativitatibus* and *De interrogationibus* of Omar (Muḥammad b. ʿOmar b. al-Farrukhān al-Ṭabarī), Venice, 1503, and as appendix to Firmicus Maternus, Basle, 1533 and 1551; lastly, some treatises of unknown or uncertain authorship.

Bibliography: The sources and the characteristics of Muslim astrology, its role in social life, and the philosophical and theological polemics against it, will be fully dealt with by the author of the present article in the *Encyclopaedia of Religion and Ethics* (edited by Dr. Hastings), s. v. "Star"; an article presupposing an elementary acquaintance with Greek astrology. — The explanation of some mathematical-astrological processes and of a certain number of technical terms are to be found in Nallino's commentary on *al-Battānī sive Albatenii opus astronomicum*, Milan, 1899—1907, 3 Vols. — For a number of the technical terms, see also: *Mafātīḥ al-ʿulūm* (ed. van Vloten); *Dictionary of the technical terms used ..... by the Musulmans* (ed. Sprenger); Dieterici, *Die Propädeutik der Araber* (Berlin, 1865) — all unsatisfactory. — For the theory of the planetary conjunctions applied to the history of Islām: O. Loth, in the monograph on al-Kindī cited above; Ibn Khaldūn, *Prolégomènes*, (Transl. of de Slane, ii. 217—226). — For the life and works of the Astrologers: Suter, *Die Mathematiker und Astronomen der Araber* (Leipzig, 1900; = *Abhandl. z. Gesch. der mathem. Wissenschaften*, x. Heft; with the important *Nachträge*, in *Abh. z. Gesch. d. math. Wiss.*, xiv. 1902, 157—185). — Lastly, the astronomical works mentioned at the end of this article. (C. A. Nallino.)

ASTRONOMY. This science is called by the Muslims *ʿilm al-haiʾa* "science of the aspect (of the universe)" and *ʿilm al-aflāk* "science of the celestial spheres". For other names common to

it and astrology s. Astrology; further al-Fārābī and Ibn Rushd (Averroes) understand by *ṣinā'at al-nudjūm al-ta'līmiya* ("the mathematical art of the stars") theoretical astronomy, and by *ṣinā'at al-nudjūm al-tadjribiya* ("the experimental art of the stars") observation of the stars. — Following the Aristotelian classification of the sciences Muslims unanimously consider astronomy as one of the four mathematical sciences (*'ulūm riyāḍiya*). For them, as for the Greeks, astronomy only aims at studying the apparent movements of the stars and giving a geometrical representation of them; it comprises therefore what we call spherical astronomy (with the calculation of the planetary orbits and their employment in the compilation of ephemerides) and the "theory of the instruments". The study of meteors in the Aristotelian sense (including comets, shooting stars, etc.) and of what might be called an elementary Astro-Physics and Celestial Mechanics (origin of celestial movements, nature of the spheres, light of the stars, etc.) belongs entirely to the domain of physics and metaphysics. — The sum total of the practical knowledge necessary for determining by calculation or instruments the hours of day and night, having especially in view the fixing of the times of the five canonical prayers in the mosques, is called *'ilm al-mīḳāt* or *'ilm al-mawāḳīt* "science of the fixed times".

At the beginning of Islām the Arabs already possessed some knowledge of practical astronomy. In their frequent night-journeys the Beduin often had no other guide than the moon and the brightest stars, whose places of rising and setting they knew and from which they could estimate approximately the time by night; they determined also the seasons of the year from observing the position of the moon relatively to 28 successive groups of stars called lunary stations (*manāzil al-ḳamar*). Among the majority of settled tribes the agricultural seasons and meteorological prognostications were associated with the annual rising of certain stars or the cosmic setting (*naw'*) of the lunary stations.

But it was only in the ii. (viii.) century of the Hidjra that the scientific study of astronomy was entered on, under the influence of two Indian books: the *Brāhmasphuṭasiddhānta*, composed by Brahmagupta in 628, which was brought to the court at Baghdād in 154 (771), perhaps only in an abridgment, and was used as a model in Arabic by Ibrāhīm b. Ḥabīb al-Fazārī and Ya'ḳūb b. Ṭāriḳ; and the treatise of Āryabhaṭa (al-Ardjabhad or al-Ardjabhar of the Arabs) composed in 500, from which Abu 'l-Ḥasan al-Ahwāzī derived his tables of the planetary movements. These books consisted of a short explanatory text followed by numerous tables of celestial movements arranged according to the artificial millennial cycles; for the fundamental hypothesis was that at the commencement of the world the moon and the planets were all in conjunction in the same degree of longitude, and will again be in conjunction there at intervals of millions of years. This method, which was called *al-sindhind* (corruption of the Sanskrit *siddhānta*, "treatise on astronomy"), was still employed by Muslim astronomers at the beginning of the v. cent. A. H. (xi. A. D.). From Indian books the Muslims learned also the use of trigonometrical Sines.

To these selections from Indian books there was soon added the Arabic translation of the Pahlawī tables entitled *zīk i shatro-ayār*, "royal astronomical tables" (Arab. *zīdj al-shāh* or *zīdj al-shahriyār*), which had been compiled in the last period of the empire of the Sasanians. They had great vogue with the Muslims of the ix. cent. A. D.; but about two centuries later they ceased to be used.

The Greek influence was the last in order of time, but first in order of importance; it introduced into Muslim astronomy the geometrical representation of the celestial movement, so characteristic of the Hellenic genius. The first and not very satisfactory Arabic translation of the *Almagest* dates from the end of the viii. or the beginning of the ix. century; it was followed by two others much superior, that of al-Ḥadjdjādj b. Maṭar finished in 212 (827-828; not in 214 = 829-830, as is commonly stated), and that of Ḥunain b. Isḥāḳ (after the middle of the ix. cent.) revised by Thābit b. Ḳurra. In the first half of the ix. cent. there were also translated the Geography, the Hand-Tables, the Planetary Hypotheses and the Planisphere of Ptolemy; the Hand-Tables of Theon of Alexandria; the work of Aristarchus on the size and distance of the sun and moon; two treatises of Autolycus, three of Theodosius and one of Hypsicles. In this same century appeared very probably the translation of the tables of Ammonius, and the translation of a work entitled *Kitāb al-manshūrāt*, wrongly ascribed to Ptolemy, dealing with the size and distance of the celestial bodies.

The first series of regular observations with the aid of fairly accurate instruments appears to have been made at Djundaisābūr (Gondēshāpūr in the South-West of Persia) in the first years of the ix. cent., and was utilised by Aḥmad al-Nahāwandī when compiling his "General Tables" (*al-zīdj al-mushtamil*). But it was during the Caliphate of al-Ma'mūn (813—833 A. D.) that the most brilliant period of Muslim astronomy commenced. At the Observatory which stood in the quarter called al-Shammāsiya in Baghdād the Caliph's astronomers under the directorship of Yaḥyā b. Abī Manṣūr (d. 830 or 831 A. D.) not only made systematic observation of the celestial movements, but also verified with remarkably precise results all the fundamentel elements of the Almagest: the obliquity of the ecliptic, the precession of the equinoxes, the length of the solar year, etc. After these observations they composed the celebrated "Verified Tables" (*al-zīdj al-mumtaḥan*), for which they also had at their disposal the series of observations made in the other observatory of the Caliph on the mountain of Ḳāsiyūn, 2—2¼ mls to the north of Damascus. This same Caliph carried out one of the most difficult and delicate geodetic operations, the measuring of an arc of meridian in the region between Tadmur (Palmyra) and al-Raḳḳa in the plains of Mesopotamia. The mean result gave 56⅔ Arabic miles as the length of a degree of meridian, a remarkably accurate value; for the Arabic mile being 6475 ft. this value is equal to 366,842 ft., a number which only exceeds by about 2877 ft. the real length of the degree between 35° and 36° N. Lat. (for fuller details concerning these numbers see Nallino, *Il valore metrico del grado di meridiano secondo i geografi arabi*, Turin, 1893). — Among the astronomer-calculators of the time of al-Ma'mūn

mention ought to be made also of Muḥammad b. Mūsā 'l-Khwārizmī, whose *zīdj* had a wide circulation during two centuries.

From 850 to 870 A. D. the three sons of Mūsā b. Shākir made regular observations in the observatory they had fitted up in their house in Baghdād, at the gate Bāb al-Ṭāḳ, on the Tigris; in the second half of the ix. cent. others made observations with excellent instruments at Shīrāz, Naisābūr, Samarḳand; the celebrated al-Battānī [q. v.] made observations from 877 to 918 A. D. at al-Raḳḳa on the Euphrates; Thābit b. Ḳurra (d. 288 = 901) utilised the observations of his predecessors in revising the theory of the movements of the sun; al-Māhānī and al-Nairīzī continued systematically the immediate study of the heavens. Shortly after the year 300 (912-913) Ḥabash composed at Baghdād his principal work in which trigonometrical processes attained an unexpected degree of perfection. — In the second half of the x. cent. the Būyid-Sulṭāns founded an observatory in their own palace and gathered around themselves astronomers including 'Abd al-Raḥmān al-Ṣūfī (d. 376 = 986; q. v.), Ibn al-A'lam (d. 375 = 985), Widjan b. Rustam al-Kūhī, Aḥmad al-Ṣāghānī (d. 379 = 990). Abu'l-Wafā' (d. 388 = 998; q. v.), and various others. At Ghazna in Eastern Afghānistān al-Bīrūnī (d. 440 = 1048; q. v.), the most original and the profoundest thinker that Islām has produced in the domain of the physical and mathematical sciences, displayed the greater part of his literary activity.

In Egypt the scientific study of astronomy began during the reign of the Fāṭimid Caliph al-'Azīz (365—386 = 975—996), the founder of a celebrated observatory at Cairo, which received a rich endowment also from the Caliph al-Ḥākim (386—411 = 996—1021). It was here that Ibn Yūnus (d. 399 = 1009, q. v.) made from 367 (977) to 398 (1007) the regular series of observations which served as a basis for his famous "Ḥākimid Tables" (*al-zīdj al-ḥākimī*). Among the writers on astronomy in Egypt ought to be mentioned also Ibn al-Haitham (d. 430 = 1039), author of a very popular little manual wherein obviously on the analogy of the second book of the *Hypotheses* of Ptolemy, he explains the celestial movements by the two hypotheses of solid spheres and of discs (*manāṭiḳ*) of the sphere, i. e. segments passing through the centre of the sphere.

In Spain astronomy was cultivated especially from the middle of the x. cent. A. D., and regarded with favour by the princes of Cordova, Seville and Toledo, and it is to Arab astronomy that the works which appeared first in Spanish and afterwards in Latin by order of Alphonso x. of Castille (1252—1282) must be reckoned. The most distinguished Spanish astronomers were Maslama al-Madjrīṭī (d. 398 = 1007-1008), Ibn al-Samḥ (d. 426 = 1035), Djābir b. Aflaḥ (d. between 1140 and 1150 A. D.) called Geber filius Afflac by our mediaeval translators, and especially al-Zarḳālī (Arzachel in the translations), who flourished in the second half of the xi. cent., and with whom we will deal later. It was in Spain, as will be shown below, that the philosophers opposed the Ptolemaic representations of the celestial movements. — In North-Africa lying west of Egypt no regularly organised observatories are known of, but certain astronomers who made good observations could be mentioned, e. g. Abū 'Alī al-Ḥasan al-Marrākushī (wrongly called Abu 'l-Ḥasan 'Alī in some manuscripts), who wrote in Morocco about 1250 A. D.

Around the Seldjūḳs of northern Persia were gathered a number of astronomers who had at their special disposal an observatory founded in 467 (1074-1075) at al-Raiy or at Naisābūr by the Sultan Djalāl al-Dīn Malikshāh, the same who introduced into the civil calendar a very important reform based on an excellent determination of the length of the tropical year. For one of his successors the astronomer al-Khāzinī composed shortly after 512 (1118) his important "Sendjaric Tables" (*al-zīdj al-sandjarī*). — A year after he had pillaged Baghdād and overthrown the 'Abbāsid caliphate the Mongol Khān Hūlāgū of the dynasty of the Īlkhān commenced in 657 (1259) the construction of the great observatory of Marāgha in western Persia near the lake of Urmiya; with this was associated a number of select astronomers under the direction of the illustrious savant Naṣīr al-Dīn al-Ṭūsī, who after spending twelve years preparing them published in Persian his famous "Ilkhānic Tables" (*al-zīdj al-īlkhānī*). Ḳuṭb al-Dīn Maḥmūd al-Shīrāzī (d. 710 = 1310), a pupil of Naṣīr al-Dīn, also deserves special mention. — At Cairo, Ibn al-Shāṭir (d. 777 = 1375—1376, or 781) took good observations; his tables were renowned in Syria, Egypt and the whole of North Africa. — The astronomical science of the Muslims experienced its last glories at Samarḳand. Sultan Ulūgh Beg, grand-son of Tamerlane, founded a large observatory there, to which he summoned the most eminent astronomers of his time, such as Djamshīd al-Kāshī, Ḳāḍī Zāde, al-Rūmī, 'Alī al-Ḳūshdjī, etc.; and for several years presided in person at the observations, and left in his tables (*zīdj*) a glorious monument of his zeal for science. Like Naṣīr al-Dīn before him Ulūgh Beg not only had the tables of celestial movements improved, but also undertook a complete and independent revision, i. e. one based on direct observation of the heavens, of the catalogues of the stars made by his predecessors. The Sultan himself wrote in Persian the preface a few months before he perished by an assassin's hand (853 = 1449).

With Ulūgh Beg the scientific study of Astronomy ceased throughout the Islāmic world. Henceforth we only meet with authors of elementary manuals, compilers of Ephemerides and Almanacs and describers of the commonest instruments; the real astronomers have disappeared and in their place we find only the *muwaḳḳits* of the mosques.

Muslim astronomers accepted almost without reserve and always followed in their tables the fundamental features of the Ptolemaic system of the universe: The earth stands absolutely motionless in the centre of the universe; the movements of the celestial bodies are all circular and uniform, and their apparent inequalities are explained by the combination of circles concentric (*mumathṯhila*) with the Zodiac, eccentric circles (*khāridjat al-marākiz*) and epicycles (*aflāk tadāwir*). — Even in the iv. cent. A. H. the possibility that the earth revolves on its own axis is one of the questions discussed; but in the following centuries its absolute immobility is universally accepted. The question as to the nature of the spheres (*aflāk*) is dealt with only by the philosophers and

the dogmatic theologians, whilst the astronomers of the first centuries are not concerned therewith, being content to consider them for the purposes of their science as geometric circles, and it is only in the time of Ibn al-Haitham (d. 430 = 1039) that there is introduced into astronomical instruction the idea of solid and transparent spheres. Although the hypothesis of eccentric circles and epicycles made the idea of planetary movements an extremely complicated one, yet it corresponded too well to the data from observation (without pendulum or telescope) and the needs of the calculator to be replaced by other hypotheses for which no satisfactory physical explanation was then forthcoming. — No trace is found of the heliocentric system, to which at one and the same time the authority of Ptolemy, the philosophy of Aristotle and the dogmas of astrology would have been opposed. It ought not to be forgotten that with us the question of the Copernican system was for more than a century a purely philosophical one, indifferent to the astronomy of observation which could not have contributed any decisive or important argument in support of it.

The Arab astronomers understood perfectly that instead of advancing new general theories no more demonstrable than the ancient ones it was necessary to observe the heavens methodically for centuries and thereby to correct the numbers given in the Almagest. This task they splendidly performed, without allowing themselves to be influenced by the so-called, fallacious observations of Ptolemy. They perceived that the apogee of the sun, believed to be immobile by the ancients who stated that they had always observed it from the same point of longitude, is subject to the movement of the precession of the equinoxes; al-Zarḳālī even succeeded in discovering the slight movement peculiar to this apogee. They perceived that the obliquity of the ecliptic is not invariable, as the Greeks had asserted it to be on the ground of fictitious observations, but is subject to a slow secular diminution whose approximate limits only our Celestial Mechanics of the xviii. cent. has naturally been able to determine. The elements of the sun and partly also of the moon, the length of the tropical and the sidereal year, the precession of the equinoxes they investigated with marvellous accuracy; they also improved the Planetary Tables, and Naṣīr al-Dīn al-Ṭūsī endeavoured to perfect the theory of the planets by rendering the geometrical constructions of Ptolemy yet more complex. It ought also to be mentioned that, in contrast to the Greeks, the Arab astronomers gave to Venus the same longitude of the apogee, the same eccentricity and the same centre of equation as to the sun, which was fundamentally equivalent to transforming the orbit of Venus into an epicycle of the solar orbit having the sun for centre, i. e. to making Venus a satellite of the sun. Arab catalogues of the fixed stars, in so far as they have not been simply derived from the catalogue of Ptolemy, have considerable importance; lastly, in the application of trigonometrical formulae, in the number and the quality of their instruments, in the technique of their observations the Arabs have splendidly outstripped their predecessors the Greeks. In the number, continuity and precision of the observations we mark the most striking contrast between Greek and Muslim astronomy.

The hypothesis of the trepidation (*ḥarakat al-iḳbāl wa 'l-idbār*, i. e. motion forwards and backwards) of the fixed stars, which was accepted by Thābit b. Ḳurra and in a slightly different form by al-Zarḳālī, is false; but its authors had given expression to it in order to bring the observations of the Greeks into harmony with those of the Arabs in regard to the variations of the obliquity of the ecliptic and of the precession. — It is a mistake to attribute to Abu 'l-Wafā' the discovery of the third lunary inequality or variation, which was first made by Tycho Brahe; but it ought not to be forgotten that about the half of this "variation" was already contained in the *πρόσνευσις* of Ptolemy and in the "equation of the lunary anomaly" (*ta'dīl ḥiṣṣat* [or *ḥiṣaṣ*] *al-ḳamar*) of the Muslim astronomers.

An eminent theologian and philosopher, likewise astrologer, Fakhr al-Dīn al-Rāzī (d. 606 = 1210) expressed on several occasions his profound scepticism in regard to various fundamental hypotheses of the Astronomers. But it was in Spain that certain philosophers in the name of Aristotle proclaimed war against the Ptolemaic representation of the celestial movements. The first was Muḥammad b. Yaḥyā b. al-Ṣā'igh, called Ibn Bādjdja, the Avenpace of our writers (d. 533 = 1139), who rejected the epicycles and claimed to be able to explain the whole by means of eccentric circles. Ibn Ṭufail (d. 581 = 1185-1186) rejected both the epicycles and the eccentric circles, but has not left any written exposition of his views. Ibn Rushd or Averroes (d. 595 = 1198) largely revived Eudoxus' hypothesis of the concentric spheres, with its spiral-shaped (*lawlabī*, the *ἱπποπέδη* of Eudoxus) planetary movements, i. e. in the form of an elongated ∞ according with the ecliptic, the one half ∿ being in the eastern and the other ◡ in the western hemisphere; but he had not time to give a completed exposition of his system. Lastly al-Biṭrūdjī (Alpetragius; d. ca. 600 = 1204), in order to reduce everything to harmony with the principles of the peripatetic Physics, not only admits, with Averroes, only spheres concentric with the earth and turning on different axes, but also makes another strange hypothesis (which he held in common with the Ikhwān al-Ṣafā' and Fakhr al-Dīn al-Rāzī), denying the existence of any motion of the celestial bodies from west to east: i. e. the direct movement (towards the east) of the planets is only an optical delusion due to the fact that the angular celerity of the planets is less than the celerity with which the celestial sphere accomplishes its diurnal rotation round the earth. None of these hypotheses of the Spanish philosophers were accepted by the astronomers.

Bibliography: Delambre's, *Hist. de l'astron. au moyen âge* (Paris, 1819), p. 1—211, 513—539, is not a history, but a mathematical analysis, of very unequal worth, of several works of Muslim authors, an analysis which has the further disadvantage of frequently substituting Delambre's own expositions for those of the authors studied. The other histories of astronomy, of which Wolf's is the best, are all out-of-date and insufficient. Reference may be made here to my extensive article which will appear in the *Encyclopaedia of Religion and Ethics* (ed. by Hastings), s. v. *Star*; Nallino, *al-Battānī sive Albatenii Opus astronomicum* (Milan, 1899—1907, 3 vols.); Caussin, *Le livre de la Grande*

Table Hakémite observée par .... Ebn Iounis, in *Notices et extraits des mss. de la Bibl. Nat.* Vol. vii. 1804, p. 16—240 (Text and Translation of the more important historical parts); Sédillot, *Mémoire sur les instruments astronomiques des Arabes* (Paris, 1841); L. Gauthier, *Une réforme du système astronomique de Ptolémée tentée par les philosophes arabes du XIIe siècle* (*Journ. Asiat.*, 10e sér., Vol. XIV, p. 483—510; astronomically very insufficient); von Braunmühl, *Vorlesungen über Gesch. d. Trigonometrie* (Leipzig, 1900), i. 42—86. For biographical and bibliographical notices of astronomers see the excellent work by Suter mentioned at the end of the art. Astrology.

(C. A. Nallino.)

ASṬURLĀB or Aṣṭurlāb (A.; on the vocalisation see also Ibn Khallikān, ed. Wüstenf., n°. 779; n°. 746 of the Egyptian editions), Astrolabe, from the Greek ἀστρολάβος, name of several astronomical instruments, which can be reduced to three fundamental types according as they represent the projection of the celestial sphere on a plane, or the projection of this projection on a straight line, or the sphere itself without any projection.

1. The astrolabe in its stricter sense is the flat (*saṭḥī* or *musaṭṭaḥ*) Astrolabe or "astrolabium planisphaerum", in Arabic called also *dhāt al-ṣafāʾiḥ* "(the instrument) consisting of tablets". It is a portable metal instrument in the form of a disc of from 3.9" — 7.8" diameter, with a handle (*ʿurwa*, *ḥabs*) through which passes a suspending ring (*ḥalḳa*, *ʿilāḳa*) by means of which it is suspended in a vertical position. The simplest type of this astrolabe, and the one which was known to the Greeks and Syrians, consists of the following pieces; (*a*) the "mother" (*umm*), a disc or circular tablet, with a raised edge (*ḥuffa*, *ḥadjra*, *ṭawḳ*) which gives it the appearance of a box; it contains the other tablets. Its circular inner surface is called "face" (*wadjh*), the exterior surface "back" (*ẓahr*); (*b*) other discs or circular tablets (*ṣafāʾiḥ*, sing. *ṣafīḥa*), usually nine in number, contained in the mother; (*c*) the "spider" (*ʿankabūt*) or the "net" (*shabaka*), a tablet placed above the others in the mother; it is made as open as possible having of course due regard to its solidity and the requisite space for marking in the signs of the Zodiac and the places and names of the chief stars, and in consequence consists only of strips of metal with several points or indicators (in the sing. *shaẓiya*, *shaẓiyya*) artistically cut, which indicate the stars; (*d*) the ruler or diopter or alhidade (*ʿiḍāda*), revolving round the centre of the "back" and as long as the diameter of the latter; its two arms are sharpened to a point (*shaẓīya*, *shaẓiya*) and each has a perforated sighting-piece (*libna*, *daffa*, *hadaf*) so that the sun's rays can pass through the two holes (*thukba*) of the sighting-pieces; the axis or pivot, "pole" (*miḥwar*, *ḳuṭb*), a bolt which passes through the centre of all the other pieces and holds them together; the head of the bolt is to the back of the astrolabe, and at its other extremity there is a small bolt or screw-nut which prevents it from slipping out and from its form is called the "horse" (*faras*).

On the back of the astrolabe are several concentric circles having the degrees marked and also chronological indications (i. e. a sort of perpetual calendar); they with the alhidade are used for measuring the elevation of the stars. On both sides of the tablets *b* is marked the stereographical polar projection of the Almucantarats (*muḳanṭarāt*), i. e. circles parallel with the horizon, the projection of the vertical circles (*dawāʾir al-sumūt*), of the equator and of the ecliptic, for a particular geographical latitude in this projection the observer's eye is situated at one pole of the sphere and the plane of projection is tangential to the opposite pole and parallel to the plane of the equator. Certain astrolabes have also a tablet which gives for a particular geographical latitude the projection of the circles of position, of which use is made in the astrological calculation called "directio" (*tasyīr*); others have a tablet for all latitudes (*li-djamīʿ al-ʿurūḍ*), also called the tablet of the horizons (*ṣafīḥa āfāḳiyya*) or general tablet (*djāmiʿa*), the use of which is not very clear. — According as the almucantarats of the tablets *b* are all marked, or only from 2 to 2, from 3 to 3, from 5 to 5, from 6 to 6, from 9 to 9, from 10 to 10 degrees, the astrolabe is called *tāmm* "complete" ("solipartium"), *niṣfī* ("bipartium"), *thulthī* ("tripartium"), *khumsī*, *sudsī*, *tusʿī*, *ʿushrī*. Lastly this common, flat astrolabe is distinguished into northern (*shamālī*) or southern (*djanūbī*) according as the plane of projection is tangential to the north pole or to the south pole of the sphere; the former is naturally the more common. By adding other markings to those already on the tablets and changing the order of the zodiacal signs on the net they obtained astrolabes which were at the same time northern and southern and were named after the somewhat fantastic figure in which the zodiacal signs were grouped on the net, as *ṭablī*, "Drum-", *āsī* "Myrtle-", *saraṭānī* or *musarṭan*, "Crab-", *ṣadafī*, "Shell-", *thawrī*, "Bull-", *shaḳāʾiḳī*, "Anemone-Astrolabe", etc. Probably the astrolabe *zawraḳī*, "Boat-astrolabe", of Aḥmad al-Sidjzī (ca. 400 = 1009) belongs to this category. The "perfect" (*kāmil*) Astrolabe bore besides the other markings the circle of the sun's equation. — Other flat astrolabes which have as basis a different projection from the stereographical are to be regarded as theoretical constructions without practical significance, e. g. the astrolabe devised by al-Bīrūnī and called *usṭuwānī*, "cylindrical Astrolabe", because of its projection (the "Analemma" of Ptolemy), which al-Bīrūnī called cylindrical, and which we now call orthographic; the circles of the sphere are projected on to this in the form of straight lines, circles and ellipses. The *musaṭṭaḥ* ("flattened") astrolabe, described by al-Bīrūnī (*Chronology*, p. 358-359), appears to have been only a stellar chart in equidistant polar projection, i. e. the pole of the ecliptic was the centre of the projection, the parallels with the ecliptic or circles of longitude were represented by equidistant concentric circles and the circles of latitude by equidistant radii.

The astrolabe gives on immediate observation the height of any star, and consequently the hours already spent of day and night; it also enables one to solve without any calculation all the problems of spherical astronomy. It is useful further in geodetic operations, e. g. for calculating the distance of an inaccessible place, the height of a building, the depth of a well whose diameter can be measured. Naturally we cannot look for absolute accuracy from so small an instrument, which moreover on account of the precession of

the equinoxes and the diminution of the obliquity of the ecliptic is no longer of any use when a long period of years has elapsed since the period for which it was made.

Each marking on the tablets *b* is valid only for a particular geographical latitude, and so a very considerable number of tablets would be required before the instrument could be utilised in all latitudes. This inconvenience was removed by a Spanish Arab, al-Zarḳālī (Arzachel), who transformed the particular astrolabe into a general by substituting for the stereographical polar projection the horizontal projection. The eye of the observer is placed at the point to the east or to the west of the horizon, i. e. at one of the two equinoctial points; the plane of projection is the plane of the solstitial colure, i. e. of the meridian passing through the solstitial points; the projections of the two celestial hemispheres exactly coincide, so that one sign suffices for both. In its final form, which al-Zarḳālī called *al-ʿabbādīya* in honour of al-Muʿtamid b. ʿAbbād, king of Seville (461–484 = 1068—1091), the entire instrument consists of a single tablet with two small subsidiary pieces. On the face of the tablet in stereographical horizontal projection the equator is represented with its parallels (*madārāt*) and its circles of declination (*mamarrāt*), and the ecliptic with its circles of latitude and longitude, not only then is the tablet valid for any geographical latitude, but also, since the projections of the two hemi-spheres exactly coincide with the coordinates of the ecliptic and the principal stars, replaces the "net" of the other astrolabes. A rod (*ufḳ māʾil*) "oblique horizon" fixed at the centre of the graduated face fulfils the other functions of the tablets *b* of the common astrolabe; by inclining it more or less to the line of the equator we obtain the horizon of the place of observation, and can then deduce from its divisions the eastern and western amplitudes. On the back of the tablet are the alhidade and the markings found on the back of the common astrolabes; but al-Zarḳālī further added the "circle of the moon", which enabled him to follow also the course of our satellite, and also a trigonometrical square which immediately supplied the "straight (horizontal) and inverted (vertical) shadows" (*aẓlāl mabsūṭa wa-mankūsa*, cotangents and tangents related to the radius divided into twelve parts) of the angles measured. — This simple and perfected astrolabe was called by the other Arabs *al-ṣafīḥa al-zarḳālīya*, "the tablet of al-Zarḳālī", and was famous in Europe under the name *Saphaea*. — A variety of this instrument of al-Zarḳālī is the *ṣafīḥa shakkāzīya* (or *shakkāzīya*), about which we do not yet possess any accurate information.

2. The "linear" (*khaṭṭī*) astrolabe, also called *ʿaṣā ʾl-Ṭūsī*, "the rod of al-Ṭūsī", after its inventor al-Muẓaffar b. Muẓaffar al-Ṭūsī (d. ca. 610 = 1213—1214) resembles in form a calculating-rod. The projection of the common, planispheric astrolabe is projected on a straight line in the same plane; the instrument represents accordingly the intersection of the plane of the meridian with the plane of the projection of the planispheric astrolabe. Points marked on the rod indicate the straight and oblique ascensions, the divisions of the ecliptic, the almucantarats, etc.; the threads attached to the rod are used for measuring the angles. The same operations can be performed with this instrument as with the flat astrolabe, but not with the same accuracy.

3. The spherical (*kurī*, *ukarī*) astrolabe, called "astrolabio redondo" in the Spanish works of King Alphonso x. of Castille, exhibits without projection the diurnal movement of the sphere relatively to the horizon of the given place; it is of service therefore in measuring the heights of the stars, in determining the time, and in solving a number of problems of spherical astronomy. It consists of the following pieces: (*a*) a metal globe on which the ecliptic, the equator, the horizon of the given place with its almucantarats and its circles of height, the positions of the principal fixed stars, the division of the day into hours and equinoctial hours, the geographical latitudes of various places, (*b*) the "spider" or the "net" (*ʿankabūt*, *shabaka*), a metal hemisphere fitting closely round the globe and of such open work that it contains only the ecliptic (which forms its rim), the positions of the principal stars and half of the equator; (*c*) a small strip (*ṣafīḥa*) of metal fitting closely to the surface of the net and with one extremity fastened to the equatorial pole, so that the other extremity is always on the equator; (*d*) a gnomon placed at right angles to the metal strip; (*e*) an axis passing through the globe, net and metal strip from one equatorial pole to the other.

(C. A. NALLINO.)

AL-ASWAD, epithet of ʿAihala (according to some, ʿAbhala) b. Kaʿb of the madhḥidjite tribe ʿAns. He had another epithet Dhu ʾl-Khimār, "the veiled" (not Dhu ʾl-Ḥimār, as Beladhori, p. 105, writes it). Shortly before the death of Muḥammad he assumed the lead of a national revolt in South-Arabia which soon overthrew the Persian officials and with them the superiority of the Prophet. He set out from Kahf Khabbān, conquered Nadjrān, defeated and put to death Shahr, son of the former Persian governor Bādhān, and took possession of the capital Ṣanʿāʾ, so that the whole of south-west-Arabia came under his sway in rather less than a month. The majority of Muḥammad's officials in the country fled to

Medina or to Ḥaḍramawt. To legitimise his claims he married the widow of the murdered Shahr. But his power was of short duration. A member of another madhḥidjite tribe, Ḳais b. Hubaira al-Makshūḥ, with whose aid he had conquered the country, allied himself with the overthrown Persians, at whose head stood Fērōz and Dādhawaih, and obtained effective support from the widow of Shahr, who had wed the usurper much against her will. With her help they made their way into the fort and, according to tradition, killed al-Aswad as he lay on his couch a few days before the death of Muḥammad. The fall of al-Aswad had however no importance for the Muḥammadans, since Ḳais soon afterwards arrogated to himself the authority and separated from the Persians who had given him their help. The accounts about al-Aswad are of special interest from the fact that they represent him as possessing prophetic aspirations, a feature which has undoubtedly historic reality. According to Belādhorī he was a Kāhin or prophet and styled himself Raḥmān of Yemen (i. e. he who speaks in the name of Raḥmān), just as Musailima had come forward as Raḥmān of Yamāma. Another account calls him a juggler who did some remarkable tricks and deluded the mob with his words. He had a Shaiṭān who communicated to him everything, even the plans of his enemies; and the story is graphically told of how after the slaughter of a number of sacrificial animals in the open square in Ṣan'ā' he listened with his ear to the earth and heard the mysterious voice of his spirit ("he tells me"). When on the occasion of an obsession by night he bellowed like a bull his wife pacified the watch who came hurrying up with the words: "he has a divine revelation". Also his epithet "the veiled one" is consistent with his art of divination.

ASYŪṬ, town in Upper Egypt. Asyūṭ, the largest and most commercial town of Upper Egypt, is situated 27° 11' N. Lat. on the west bank of the Nile. Owing to its situation in one of the most fertile and compact districts of the cultivable Nile-valley, and also to its being the natural terminus of great desert-highways it was in antiquity an important town (Syowt, Greek: Lykopolis) and the chief town of a Nomos. Under Islām Asyūṭ remained the chief town of a *Kūra* (modern *markaz*, "district"), and on the inauguration of the division into provinces became the capital of a province (*'Amal*, now *Mudīriya*). The town itself contains 42,000 inhabitants, the district 120,000, and the Province embracing 9 districts 783,000.

Asyūṭ is the colloquial form of the literary Usyūṭ. Both are Arabisms for the Coptic Siout, to which in the survey-records of the Middle Ages the form Sayūṭ or Suyūṭ corresponded. But as early as the time of Ḳalḳashandī (d. 821 = 1418) the popular pronunciation was Asyūṭ.

A history of Asyūṭ cannot be written for the reason that we scarce find any mention of it in the historians, and only towards the end of the Mamlūk period, under 'Alī Bey, did it play any historical part, viz. in the year 1183 (1769-1770) when it was for a time the centre of revolt. From the accounts of geographers and travellers we ascertain that it enjoyed unbroken prosperity throughout the entire Islāmic period. At the end of the xix. cent. it experienced a considerable accession of importance, especially after it became linked by rail with Cairo (in 1292 = 1875). Its population has risen from 28 000 in 1293 (1876) to the present figure 42 000.

In the Middle Ages Asyūṭ was famed for its agricultural products, its industry and trade. Besides corn and dates quinces were found here in great quantity. The main industries were the weaving of woollen, cotton and linen goods. Owing to the alum and indigo obtained from the adjacent oases dyeing was extensively carried on; e. g. the materials manufactured for export to Dār Fūr were dyed here. Its specialities were linen goods, called *Dabīḳī* after their chief place of production Dabīḳ in Upper Egypt, and soft woollen goods and carpets made to the Armenian standard pattern. Asyūṭ now manufactures black and white Tulle-shawls with silver-work, which are very popular in Europe, and represent the last remains of an industry once very famous throughout the Orient. Further Asyūṭ was engaged in the preparation of opium and in the making of pottery which with its antique patterns is still much in demand as black and red "Asyūṭ-wares".

There was a brisk trade in all these products throughout Egypt and abroad. The direct trade with the Sūdān is specially famous. The annual Dār Fūr caravans (ca. 1500 camels) brought slaves, ivory, ostrich-feathers and other products of the Sūdān, and received in exchange the products of Egypt's industries, especially stuffs. The scholars of Napoleon's expedition made careful investigations into this trade which has now so much declined.

Like all industrial towns of Egypt Asyūṭ had a large Christian population — 60, according to others as many as 75 churches and chapels —, but no Jews at all, a fact explicitly stated.

Caravanserais, bazaars, baths — one of the latter famous and very ancient —, mosques and other public buildings adorn the town to-day as formerly. In one of the mosques stood a Minbar which at certain seasons was filled with corn and carried through the streets as Maḥmal (Ibn Duḳmāḳ). Like all the flourishing towns in modern Egypt, Asyūṭ has a strong admixture of Levantines and is assuming a European appearance.

Asyūṭ is the birth place of Plotinus, the Coptic Saint John of Lykopolis and of several Arabic scholars bearing the name al-Suyūṭī, of whom the savant Djalāl al-Dīn (d. 911 = 1505) is the best known.

AT (T.), horse; in compounds; *Atbazar*, horse-market, etc. Name of a town in the west of the district of Akmolinsk; *Atmaidān*, horse-ground in Constantinople on the site of the imperial Hippodrome, etc.

ATA (T.), father; in compounds: *Atabeg*, Father Beg, originally a customary form of address for the guardian and tutor of Turkish princes who during the Seldjūk period were entrusted while still in their youth to some prominent emir who assumed a paternal relationship towards them. From this originated a fixed title which was given to other powerful emirs. Under the Mamlūks of Egypt the emir who held the position of commander-in-chief of the troops took this title whence it became customary to speak of an Atābeg al-ʿasākir. Cf. van Berchem, *Matériaux pour un corpus inscript. arab.*, i. 290. — *Atalik*, fatherhood, high title of a Wazīr or Beg in Turkestan. Hence the well-known Yaʿḳūb Beg [q. v.] is often called Atalik Ghāzī.

ʿAṬĀʾ b. ABĪ RABĀḤ, Arab jurist and traditionist. A native of Yemen he was reared in Mekka; he was of humble origin and is commonly referred to as Mawlā of the family of Abū Maisara b. Abī Khuthaim al-Fihrī. Among his masters ʿAbd Allāh b. ʿOmar and ʿAbd Allāh b. ʿAbbās and many others are mentioned. As Muftī in Mekka he attained extraordinary repute and was regarded as one of the most eminent authorities in jurisprudence and Muḥammadan tradition generally. Especially was he considered to be an unsurpassed authority in all that concerned the pilgrimage-ceremonies. He died in Mekka in 114 (732-733) or 115 at the age of 88 years.

ʿAṬĀʾĪ, poetical name of ʿAṭāʾ b. Yaḥyā Newʿī Zāde [q. v.]

ʿATĀʾIR (A.). Plur. of *ʿAtīra*, name given to the pre-Islāmic sacrifices in the month of Radjab. Cf. Wellhausen, *Reste arab. Heidenthums* (2nd Ed.), p. 118.

ATAK, ATEK. [See ATTOCK.]

ATALIḲ. [See ATA.]

ʿATAMA (A.), the first of the three divisions of the night; also a name given (instead of *ʿishāʾ*) among the Beduin to the Night-prayer, but forbidden by tradition as pagan.

ʿATBARA, tributary of the Nile. The ʿAtbara (Astaboras of the ancients) is the only important tributary of the united Blue and white Nile. It comes from Abyssinia and has its origin not far from lake Tana. Between 17° and 18° N. Lat. it discharges its waters slightly to the south of Berber into the Nile. Whilst in the season of the Nile-flood it flows in fertilising volume, from April to June it is almost dry. The Battle of the Atbara (8. April, 1898) is famous, in which Kitchener defeated the emir Maḥmūd, the leader of the Mahdists, thus opening the way to Kharṭūm. The name ʿAtbara is now given also to the little railway-station at the mouth of the river (385 mls. from Wādī Halfā). Here the line for Suākin and Port Sūdān branches from the Nile-line.

ʿATEIBA. [See ʿOTAIBA.]

ATEK, district in Russian Turkestān, on the northern slope of the frontier-mountains of Khorāsān, between the modern railway-stations Gjaurs and Dushak. The name is really Turkish, Etek, "edge border" (of the mountain-chain), and is a translation of the Persian name given to this district, viz. Dāman-i Kōh, "foot of the mountain"; but the word is always written Ātak by the Persians. During the Middle Ages no special name for Atek appears to have been in use; being a district of the town of Abīward [q. v.] it belonged to Khorāsān. In the x. (xvi.) and xi. (xvii.) cents. it fell into the power of the Khāns of Khwārizm, and later into that of the Turkomans; before the appearance of the Russians the frontier towards Persia was never clearly defined. Previous to the delimitation of the borders in 1881 a part of Atek with Abīward belonged to the principality of Kalāt, which was subject to the over-lordship of Persia. Under the Russian administrative system the district (pristawstwo) of Atek forms part of the circle (uyezd) of Tedjen (Transcaspian region); it has no towns nowadays. (W. BARTHOLD.)

ĀTESH (P.), fire, in compounds: *Ātesh-Parast*, fire-worshipper, Magian [see MADJŪS]; *Ātesh-Kada*, fire-temple, also the title of a Persian Tadhkira composed by Luṭf ʿAlī Beg; *Ātesh-Dagh*, volcano, etc.

ʿAṬF (= Connection), as a grammatical term used in the sense connection with a preceding word. 2 kinds are distinguished: *ʿAṭf al-Nasaḳ* also called simply ʿAṭf, and *ʿAṭf al-Bayān*:

1. The simple connection in a sequence (*ʿAṭf al-Nasaḳ*) consists in this, that by means of one of the 10 particles of connection a word is joined on to a preceding, e. g. *ḳāma Zaid wa-ʿAmr*. The particles of sequence (*al-ʿAwāṭif* or *Ḥurūf al-ʿAṭf*) are distinguished according to their degree of strength: *wa* is used for simple coordination (*li 'l-Djamʿ*); *fa*, *thumma* and *ḥattā* for superordination, or rather subordination (*li 'l-tartīb*); *aw*, *immā* or *am* to express an alternative (*li-taʿlīḳ al-ḥukm bi aḥadi 'l-madhkūrain*), and *lā*, *bal*, or *lākin* as an adversative (*li 'l-khilāf*). The ʿAṭf can connect both words (*mufrad ʿalā mufrad*) and sentences (*djumla ʿalā djumla*) with each other. According to Ibn Yaʿīsh *Nasaḳ* is a Kufic term, *ʿAṭf* a Basran.

2. The explicative connection (*ʿAṭf al-Bayān*) is an apposition, which however cannot be an adjective, and, in contrast to *Badal*, explains the preceding word, e. g. *djāʾa akhūka Zaid*, or *aḳsama bi 'llāh Abū Ḥafṣ ʿOmar*. As such it is identical in use with *wa-huwa*.

In both kinds of ʿAṭf the second word is called *al-maʿṭūf*, and the preceding *al-maʿṭūf ʿalaihi*.

ATFÎH, town in Middle Egypt. Atfîh (also written with *t* instead of *ṭ*), is a small town of 4300 inhabitants on the East bank of the Nile on the eminence of the Faiyûm. The old-Egyptian name of the town was Tep-yeh or Per Hathor nebt Tep-yeh, i. e. "house of Hathor, lady of Tep-yeh". From this the Copts obtained the form Petpeh, the Arabs Atfîh; the Greeks identifying Hathor with Aphrodite called the town Aphroditopolis, abbreviated to Aphrodito. The town must still have possessed importance in the Christian period, for it had over 20 churches, of which in the xiii. cent. 10 were preserved. The ancient *κώμη*, later Kûrat Atfîh was called also al-Sharkîye, since it lay on the east bank; on the occasion of the division into provinces towards the end of the Fâṭimid period a whole province, Iṭfîḥiya, was named after it. Not till the year 1250 (1834-1835) was it incorporated as a district (*markaz*) of the province of Djîza. Recently al-Ṣaff took the place of Atfîh as chief town of the Markaz.

Information about Atfîh is very scant, it must have seriously declined in the Mamlûk period; the Khedives first began to do anything for this region by putting an end to the incessant pillaging on the part of the Beduin and Mamlûks, and building, or rather restoring canals. Atfîh is to-day a port with a small trade and possessing some local importance.

Bibliography: Ḳalḳashandî (Transl. of Wüstenfeld), p. 93, 104; Maḳrîzî, *Khiṭaṭ*, i. 73; 'Alî Mubârak, *al-Khiṭaṭ al-djadîda*, viii. 77; Ibn Duḳmâḳ, iv. 133; Yâḳût, *Mu'djam*, i. 311; Abû Ṣâliḥ, fol. 56a; Ibn Khordâdhbeh (*Bibl. BECKER).

ATHAR (A.; properly signifies "trace"), 1. Tradition [see HADÎTH]; 2. Relic; *al-athar al-sharîf* (Plur. *al-Âthâr al-sharîfa*), relics alleged to have belonged to the Prophet, such as hair, teeth, pieces of raiment, autographs, utensils, especially impressions of his foot-prints which are preserved in mosques and other public places for the edification of Muslims [see ḲADAM]. The relic is also called both by Christians and Muslims *Dhakhîra* (treasure).

Bibliography: Goldziher, *Muh. Studien*, ii. 356—368. (GOLDZIHER.)

'ATHLÎTH, formerly a harbour on the coast of Palestine between the promontory of Carmel and al-Ṭanṭûra (Dora), on a little tongue of land which lies to the north of a small bay and is washed on three sides by the sea. According to the *Itinerarium Burdigalense* there was a mutatio Certha there, but the name 'Athlîth appears to be ancient. 'Athlîth appears in the light of history in the period of the Crusades. In 583 (1187) it fell into Saladin's hands. In 1218 the Castellum peregrinorum, as the Franks called it was reconstructed as a powerful Templar-fortress. Along with Districtum-Détroit (Khirbet Dustê) it had to guard the passes of Carmel leading south. In 690 (1291) it was conquered and demolished by the Mamlûk Sultan al-Ashraf Khalîl. But about 1400 'Athlîth is again mentioned as the most southerly official post of the Mamlaka of Ṣafed. — About 100 Fellahin now dwell among the ruins, which are worthy a visit.

Palästina-Vereins*, xxxi. 167—186). (R. HARTMANN.)

'ÂTIKA, a native of Mekka and daughter of the Ḥanîf Zaid b. 'Amr (of the Ḳoraishite family of 'Adî b. Ka'b) and Umm Kurz bint al-Ḥaḍramî. She accepted Islâm before the Hidjra and accompanied Muḥammad on the Hidjra. Her first husband was 'Abd Allâh, son of the later Caliph Abû Bakr. Of dazzling beauty she so captivated him that he in dalliance with her omitted to fulfil the religious obligations, even the obligation to war, and Abû Bakr insisted on their separation. After long resistance 'Abd Allâh submitted to this; but was so consumed by his longing for her that Abû Bakr consented to their reunion. On his death-bed 'Abd Allâh extracted from her a promise that she would ever remain a widow, and bestowed on her in return a considerable legacy. But a year after his death 'Omar, who subsequently became Caliph, prevailed on her to acquit her of her promise by restoring the inheritance to the family of the deceased and to give him her hand in marriage. According to another account this restitution was only effected after yet another marriage at the instance of 'Â'isha, sister of 'Abd Allâh. According to another account she did not marry 'Omar until he became Caliph. ('Omar's father al-Khaṭṭâb and 'Âtika's grandfather 'Amr were brothers). After 'Omar's death she married al-Zubair b. al-'Awwâm [q. v.]. On his death she married Ḥusain, son of 'Alî; further both 'Alî and Marwân had been unsuccessful suitors for her hand. Before her marriage to 'Omar she had been consort of his brother Zaid. 'Omar was assassinated, her other husbands were mortally wounded on the field of battle; hence arose the saying, who will die a hero's death may wed 'Âtika. Her elegy on her husband al-Zubair has attained some celebrity.

ATJÈH[1], the most northerly part of the island of Sumatra. Here flourished the once powerful Muslim empire of Atjèh, which is now subject to the authority of the Netherlands. The southern limit is now formed by the administrative districts of "Sumatra's Westkust" and "Sumatra's Oostkust", but in earlier times the province (or at least the sphere of political sovereignty) of Atjèh extended much farther towards the south. A considerable part of both the east and west coasts of Sumatra was subject to the authority of Atjèh, and even the pagan chiefs in the Battak-regions received their rank at the hands of the princes of Atjèh.

Great-Atjèh. Only the district to the north-west with the Atjèh river and the port Atjèh,

1) In this article *tj* is retained from regard to the official mode of writing in the Netherlands; *é* = closed, *è* = open *e*; *ô* = open *o*.

the former residence of the princes of Atjèh, was from the first reckoned as Atjèh proper. The Dutch named it Great-Atjèh and the capital Kuta Radja (i. e. fort of the prince). The port of Sabang situated on the island of Pulu We (to the northeast of Kuta Radja) only dates from the beginning of the present century. The inhabitants of the littoral (Barōh) are distinguished in many respects from the population of the highlands of the interior (Tunòng); the customs and speech of the former (who live of course in the vicinity of the residence) are always considered to be the more refined.

The Dependencies. The other districts situated on the west, north and east coasts are usually referred to as the Dependencies. Among the important towns are: on the west coast: Mölabōh, Tapa' Tuan and Singkel; on the north coast: Sigli in the region of the former empire of Pidiē (Pedir), Gigieng, Mörödu, Samalanga, Pösangan and Lhō' Sömawé. In the region between the latter place and the river Djambō Ayé stood the flourishing empire of Pasè (Pasei) which Ibn Baṭṭūṭa (ed. Defrémery and Sanguinetti, iv. 228 *et seq.*) visited in the year 1345; recently many monuments with inscriptions have been discovered here (cf. C. Snouck Hurgronje, *Arabië en Oost-Indië*, p. 8—10 = *L'Arabie et les Indes Néerlandaises* in *Revue de l'histoire des religions*, lvii. 63 *et seq.*). On the east coast are situated among others: Simpang Ulim and Idi. A steam tramway laid some years ago joins the east and north coasts with Kuta Radja. The weal of the dependencies which on the coasts are very thickly populated at parts is mainly dependent on the cultivation of pepper, great quantities of which are exported annually. A part of the population has migrated thither from Great Atjèh; many Malays have also settled here from the neighbouring districts.

Gayō and Alas-Countries. High mountain-chains overgrown with virgin forest separate the littoral from the Gayō-country; transverse chains divide the region of the Gayōs into four table-lands. The most northerly (containing the great Tawar lake and the sources of the river Pösangan) is occupied by the so-called "Urang Laut" (i. e. people of the lake), the plain to the south of it is occupied on the other hand by the "Urang Dörōt" (i. e. people of the land); to the south-east lies the table-land of Serbödjadi containing the sources of the river Pörüla which flows in an easily direction. The fourth table-land, situated in the south and containing the bed of the river Tripa which discharges its waters on the west coast, is called Gayō Luos (i. e. the wide, spacious Gayō-countries). The Alas-countries lie south of this. The population of these regions, who differ in many respects from that of Atjèh, have from the first recognised the authority of Atjèh. The four chiefs appointed by the princes of Atjèh in the several parts of the Gayō-country (the so-called "Kedjurōns" were the mediators between the Gayōs and Atjèh. Two of these Kedjurōns had their sphere of influence in the region of Lake Tawar (their distinctive titles were Rödjō Bukēt and Siah Utama), among the Dörōt, and the fourth in Gayō Luos (with the title Rodjō Linggō, or Pëtiambang). Serbödjadi was formerly without inhabitants; later its most eminent chieftain was also called Kedjurōn (Kedjurōn abōk). In the Alas-countries the authority of Atjèh was represented by two Kedjurōns.

For accurate information about the people of Atjèh we are indebted above all to C. Snouck Hurgronje, who (first in the years 1891-1892) investigated the previously but little known social, political and religious conditions of this nation (*De Atjèhers*; Batavia, 1893—1894; cf. the English translation of this work which is provided with a new introduction and some additions by the author: The *Achehnese*, Batavia-Leiden, 1906), and later described at length the land and customs of the Gayos (*Het Gajōland en zijne bewoners*; Batavia, 1903).

Population and Language. Little is known about the origin of the people of Atjèh. Linguistically they belong to the Malay-Polynesian peoples. Slaves (from the island of Nias, etc.) and other foreigners (e. g. merchants from Hindustan) have influenced to some extent the composition of the population. Atjèh has many dialects, and each dialect again many differences; the literary language has in general closest affinity with the idiom of the Barōh-district. For the literature of Atjèh see Snouck Hurgronje, *De Atjèhers*, ii. 67—193 (rather fuller in *The Achehnese*, ii. 66—189). The dialect of the Gayōs is so different from that of Atjèh that it may be regarded as an independent language. Malay is almost unknown in Atjèh except among a portion of the inhabitants of the sea-ports. Those scholars who wrote books in Malay while yet the empire flourished were mostly foreigners. From earliest times in Atjèh letters, official documents and many works on theology were written in Malay, but as a general rule Achehnese who are not well educated do not understand Malay; for further details see C. Snouck Hurgronje, *Studiën over Atjèhsche klank- en schriftleer* in *Tijdschrift van het Bataviaasch Genootschap van Kunsten en Wetenschappen*, 1892, xxxv. 346—442, also *Atjèhsche Taalstudiën*, *ibid.*, 1900, xlii, 144—262; K. F. H. van Langen, *Handleiding voor de beoefening der Atjèhsche Taal*, Haag, 1889; also *Woordenboek der Atjèhsche Taal*, Haag, 1889; G. A. J. Hazeu, *Gajōsch-Nederlandsch Woordenboek met Nederl.-Gajōsch register*, Batavia, 1907.

Tribes and Families. There are still preserved traces of a division of the population of Atjèh into 4 tribes. The members of such a tribe or family — Achehnese: *Kawōm* (from the Arabic *Kawm*, people) — regard themselves as blood-relations in the male line, and have (especially in regard to Blood-feud and the payment of Blood-money) common rights and obligations. The members however of the various Kawōms are scattered throughout the country; only where many kinsmen dwell together are they wont to choose a chief to represent their common interests. The traces of this Kawōm-division which has been preserved from a remoter period of civilisation are disappearing among the Achehnese; the Gayōs on the other hand are still divided into families who dwell together under their chiefs (Rodjōs). When Rodjōs disagree decision rests with the Kedjurōn.

Administration of the Villages. In Atjèh the *Keutjhi'* or *Sjiki'* (i. e. the elder) is the head of the *Gampōng* — i. e. village, also a quarter of a town (= Mal. *Kampong*) —; in case of necessity he consults the "elders" (i. e. the people who have had experience of life). The religious affairs of the Gampōng, e.g. leading the community in the Ṣalāt, are the concern of the Tëngku. This

title is borne in Atjèh both by people whose functions are connected with religion, and by those who have acquired some acquaintance with the sacred law. The Gampōng-Tōngkus are not men of learning. Their rank has become hereditary, and the ignorance of many Tōngkus is so great that they are scarcely able to administer their office without the help of other people.

The Princes, Ulèëbalangs and Sagi-chiefs. In historical times Atjèh has always been divided into many small districts, whose hereditary chiefs — the so-called Ulèëbalangs (i. e. commanders-in-chief) — lived in constant feud with each other. They paid homage however to the prince of the port of Atjèh as their common over-lord. The latter had the title of Sultan in Official (Malay) documents, but was usually called by the Achehnese *Radja* or *Pòtè* (i. e. "our master"). The power and dignity of the Achehnese princes and the riches and splendour of their court, which are mentioned both in the earliest native and European accounts, depended on the tribute of the neighbouring regions on the coasts and the harbour-dues of the capital Atjèh. The bold Achehnese mariners were master of sea and harbours; if they demanded tribute few dared resist. The interior of the country possessed little interest for the princes. Even when the empire was flourishing (2. half of the xvi. cent. and particularly during the 1. half of the xvii.) the authority of the Sultan was confined to the immediate vicinity of the capital.

By the end of the xvii. cent. the princes were become quite independent of the Ulèëbalangs in Great-Atjèh. The latter had at that time apparently on the ground of common interests formed themselves into three federations, the socalled *Sagis*, "sides", i. e. of the triangular-shaped Great-Atjèh), which exist to this day. Each Sagi had an over-lord (*Panglima-Sagi*), whose authority however did not extend beyond the common Sagi-interests. (In the Dependencies also such federations are found). The Sultan chosen by the three Sagi-chiefs used to pay to them a certain sum. He usually belonged to the family of the previous ruler, but strangers, e. g. Saiyids, who dwelt in Atjèh, were sometimes elected to the Sultanate. In the course of time other chiefs obtained a voice in the choice of a ruler; according to tradition at one period 12 chiefs (including the 3 Sagi-chiefs) formed a kind of electoral college.

The majority of the Ulèëbalangs in Great-Atjèh and the Dependencies later received and still receive their authority from the Sultan's hand and in witness thereof were given a document bearing the ruler's seal (a so-called *Sarakata*; on the Hindustani origin of this seal see G. P. Rouffaer, in *Bijdragen tot de Taal-, land- en volkenk. van Ned.-Indië*, Serie 7, v. 349—384; cf. C. Snouck Hurgronje, *ibid.*, Serie 7, vi. 52—55). The Kedjurōns of the Gayōs and Alassers on the other hand usually received a kind of dagger as symbol of their rank.

Division into Mukims. The Friday-service according to the Shāfi'ite doctrine is only valid if 40 *Muḳīm*-s are present. A Muḳīm is a person domiciled in the place and satisfying the stipulations of the law. Since the population of most of the Gampōngs was not numerous enough to be able to hold a regular Friday-service with 40 participants, it became the custom to group together several Gampōngs and as near the centre as possible of such a district to construct a mosque for the Friday-service. Hence Muḳīm (here pronounced Mukim) acquired, not only in Atjèh but also in some other Malay regions, the meaning: department, circle. Each Ulèëbalang was lord over several of these Mukims. Further the names of the 3 Sagis have been derived from the original number of their Mukims; i. e. they are called: the Sagi "of the 22 Mukims" (in the South), the Sagi "of the 25 Mukims" (in the west) and the Sagi "of the 26 Mukims" (in the east of the triangular-shaped Great Atjèh). These ancient names were preserved even after the number of the Mukims in the Sagi of the 25 Mukims and especially in that of the 22 Mukims had mounted up owing to the increase in the population.

The chiefs of the Mukims bore the title of *Imōm*. This word denoted originally the leader of the Friday-service (Arab. *Imām*). The Imōms became however gradually hereditary, secular chiefs, who transferred the leadership of the Friday-Ṣalāt to special Officials.

Administration of Justice. Laws. As a general rule the chiefs themselves were wont to fulfil the functions of judges; they based their decisions on the unwritten law of custom (*ʿĀdat*). There are indeed some statutes (*Sarakatas*), which tradition credits Mòkuta ʿĀlam and other famous rulers with having issued, and the Achehnese, who know these laws only by name, ordinarily assume that they contain an exact statement of their law; they really consist however only of brief regulations regarding matters of administration, court-ceremonial (including the homage to be rendered to the rules by the Ulèëbalangs), the division of the harbour-dues and the fulfilment of several religious obligations. These regulations date from the time when the princes attempted, without permanent result however, to centralise their imperial administration; muslim scholars at the court also left their impress on these laws (for fuller information see C. Snouck Hurgronje, *De Atjèhers*, i. 3—17; *The Achehnese*, i. 4—16; K. F. H. van Langen, *De inrichting van het Atjehsche staatsbestuur onder het sultanaat* in *Bijdragen tot de Taal-, land- en volkenk. van Ned.-Indië*, Serie 5, iii. 381—471). Further both the Sultan and the Panglimas had their *Kali* (= Ḳāḍī), but these ecclesiastical judges only took a share in the administration of justice on exceptional occasions (e. g. in the division of an inheritance, in some forms of divorce, in contracting marriage, and in other cases where the religious law was usually followed; in other occasions only if the chiefs expressly took them into council). The judge of the sultan bore the title *Kali Malikōn Adé* = *Ḳāḍī Malikु 'l-ʿĀdil*); his hereditary office degenerated in course of time: he became the peculiar chief of several Gampōngs within the sultan's realms. Also the rank of the other Kalis became hereditary, and if those people who were Kali in virtue of their hereditary right possessed the knowledge requisite for this office it was by a rare chance.

Religion. From earliest times there existed trade relations between Atjèh and Hindustan. The civilisation and language of Atjèh were at first subject to Hindu influence; later Islām reached the shores of Atjèh, probably conveyed thither by Hindustani merchants. When Ibn Baṭṭūṭa visited Pasè in 1345 Islām held the field; the ruler of the country warred against his unbelieving neigh-

bours. The Achehnese are orthodox Muslims, but Islām as it exists in Atjèh and elsewhere in the Dutch Indies has some peculiar features which are to be explained by its Indian origin. Such are, for instance, the existence of a heterodox mysticism and some characteristics distinctively Shī'ite. The first month e. g. is in Atjèh always called *Asan Usèn*, obviously from the two martyrs Ḥasan and Ḥusain who are held in special honour in Shī'ite countries. The representation on a captive standard of 'Alī's sword Dhu 'l-Faḳār with a Shī'te marginal inscription has formerly led some scholars to the false opinion that the Achehnese were partly Shī'ite (cf. A. W. T. Juynboll, *Een Atjinesche vlag met Arabische opschriften* in *Tijdschrift van Ned.-Indië*, 1873, ii. 325 ff.; 1875, ii. 471—476; M. J. de Goeje, *Atjeh* in *De Nederl. Spectator*, 1873, p. 388). In agreement with the character of their Indian teachers which is disposed to an ascetic view of life the Achehnese in general are lax in the fulfilment of many religious duties. The *Salāt* for instance is usually neglected by the majority. On the other hand many Achehnese are went annually to join in the *Ḥadjdj*. Further the *Kitāb*-s (Malay, Arabic and Achehnese) are still studied in various places under the guidance of masters learned in the law (cf. C. Snouck Hurgronje, *Eene verzameling Arab. Mal. en Atjèhsche handschriften en gedrukte boeken* in *Notulen van het Batav. Genootschap van Kunsten en Wetensch.*, 1901, xxxix. n°. vii.; also *De Atjèhers*, ii. 1—33; *The Achehnese*, ii. 1—32). The students who mostly come from remote districts live in a common residence (*Rangkang*). Whilst yet the Empire flourished the splendour of the court not rarely induced foreign scholars from India, Syria and Egypt (including a son of the celebrated Ibn Ḥadjar al-Haitamī) to settle in Atjèh. For the Achehnese princes they composed in the Malay tongue some works which are still held in high esteem, including the Malay Fiḳh-Book *Ṣirāṭ al-mustaḳīm* (printed in Mecca in 1892) of Rānīrī, an Indian savant of Gudjarāt. He also dedicated in the year 1637 his encyclopaedic work *Bustān al-Salāṭīn* to the then sultan Iskandar II. (cf. G. K. Niemann, *Bloemlezing uit Maleische geschriften*, 2 Pt.) Similarly 'Abd al-Ra'ūf of Sinkel dedicated his Fiḳh-Book *Mir'āt al-Ṭullāb* to the princess Ṣafīyat al-Dīn (1641—1675). Cf. S. Keyzer in *Bijdragen tot de Taal-, land- en volkenk. van Nederl. Indië*, Serie 2, vii. 223 ff.; A. Meursinge, *Handboek van het Mohamm. regt in de Maleische taal*, Amsterdam, 1844.

Many Achehnese pilgrims become members in Mekka of one of the orthodox mystic brotherhoods (especially the Ḳādirīya or Naḳshibandīya) but these *Ṭarīḳa*-s do not have in Atjèh the same importance as they possess in many other parts of the Dutch Indies. Formerly there were prevalent in Atjèh the forms of Pantheistic mysticism which at that period were generally spread throughout Hindustan. The most famous representatives of this heterodox tendency in Atjèh were Shams al-Dīn of Sumatra (or of Pasè; d. 1630) and his predecessor Ḥamza Pansūrī. Its chief opponents were Rānīrī and 'Abd al-Ra'ūf (cf. H. N. van der Tuuk in *Bijdragen tot de Taal-, land- en volkenk. van Nederl. Indië*, Serie 3, i. 464). The latter had studied in several lands, amongst other places in Medina, where Aḥmad Kushāshī was his teacher. After the latter's death in 1661 'Abd al-Ra'ūf returned home and introduced the more orthodox mysticism of his master (the so-called Shaṭṭārīya). Cf. D. A. Rinkes, *Abdoerraoef van Singkel*, Leid. Doktor-Diss. 1909; F. Wüstenfeld, *Die Çufiten in Süd-Arabien im XI (XVII) Jahrh.*, in *Abh. der Kgl. Gesellsch. der Wissensch. zu Göttingen*, 1883, xxx. 127—129. Certain forms of the ancient heterodox mysticism have been preserved till modern times, but such differences from the orthodox teaching, which are based on ignorance, are gradually disappearing before the increasing communication with the centre of Islam. (Fuller information in Snouck Hurgronje, *De Atjèhers*, ii. 14 f.; *The Achehnese* ii. 13 f.). Veneration of saints has still an important place in the popular faith of the Achehnese. The pilgrim visits the tombs of illustrious saints and seeks by gifts and vows to secure their favour and intercession. Some of the most celebrated Achehnese saints were foreigners, as e. g. the Arab Tĕngku Andjōng, who died in 1782, and the Turkish or Syrian "saint of Gampōng Bitay", who according to tradition came to Atjèh in the xvi cent. The afore-mentioned 'Abd al-Ra'ūf, who so combatted the sins and heterodoxies of his countrymen that he became regarded by later peoples as the introducer of Islām into Atjèh, is also honoured as a saint. After his death in Atjèh he was honoured under the name Tĕngku di Kuala, because his tomb is situated at the mouth (Kuala) of the river Atjèh.

Princes of Atjèh.

I. 'Alī Mughāyat Shāh (± 1514 — ± 1528).
II. Ṣalāḥ al-Dīn (1528—1537).
III. 'Alā' al-Dīn al-Ḳahhār (1537—1568).
IV. Ḥusain (1568—1575).
V. Sultan Muda (a child; reigned only some days).
VI. Sultan Sri 'Ālam (1575-1576).
VII. Zain al-'Ābidīn (1576-1577).
VIII. 'Alā' al-Dīn of Perak = Manṣūr Shāh (1577 — ± 1586).
[IX. Sultan Buyung (± 1589)].
X. 'Alā' al-Dīn Ri'āyat Shāh (1586[89]—1604).
XI. 'Alī Ri'āyat Shāh (1604—1607).
XII. Iskandar Muda = Mĕkuta 'Ālam (1607—1636).
XIII. Iskandar Thānī (1636—1641).
XIV. Ṣafīyat al-Dīn Tādj al-'Ālam (daughter of XII, widow of XIII, 1641—1675).
XV. Naḳīyat al-Dīn Nūr al-'Ālam (1675—1678).
XVI. 'Ināyat Shāh (1678—1688).
XVII. Kamālat Shāh (1688—1699).
XVIII. Badr al-'Ālam Sharīf Hāshim Djamāl al-Dīn (1699—1702).
XIX. Perkara 'Ālam Sharīf Lamtuy (1702-1703).
XX. Djamāl al-'Ālam Badr al-Munīr (1703—1726).
XXI. Djawhar al-'Ālam Amīn al-Dīn (reigned only a few days).
XXII. Shāms al-'Ālam (reigned only a few days).
XXIII. 'Alā' al-Dīn Aḥmad Shāh (1727—1735).
XXIV. 'Alā' al-Dīn Djuhan (1735—1760).
XXV. Maḥmūd Shāh (1760—1781).
[XXVI. Badr al-Dīn (1764-1765)].
[XXVII. Sulaimān Shāh (1743)].
XXVIII. 'Alā' al-Dīn Muḥammad (1781—1795).
XXIX. 'Alā' al-Dīn Djawhar al-'Ālam (1795—1815; under a regency till 1802).

XXX. Sharîf Saif al-'Âlam (1815—1818).
XXXI. Djawhar al-'Âlam II (1818—1824).
XXXII. Muḥammad Shâh (1824—1838).
XXXIII. Manṣûr Shâh (1838—1870).
XXXIV. Maḥmûd Shâh (1870—1874).

The earlier history of the princes of Atjèh is known only in its main outlines from Malay chronicles, occasional notices by European authors and a few other sources. According to tradition the founder of the kingdom of Atjèh, which had hitherto been a dependency of Pedir, was 'Alî Mughâyat Shâh (*supra* n°. 1.) His two sons Ṣalâḥ al-Dîn and more especially 'Alâ' al-Dîn Ri'âyat Shâh al-Ḳahhâr increased the importance of the new kingdom. In the first half of the seventeenth century Atjèh reached its greatest prosperity, attaining its zenith during the reign of Iskandar Muda, honoured after his death by the title of Mökuta 'Âlam (*i. e.* Crown of the World, *supra* n°. XII). The dominion of the Atjehnese was extended far to the south during his reign. Iskandar's expedition with a great fleet against Pahang and Malakka forms the subject of an important Atjehnese epic (for particulars see Snouck Hurgronje, *De Atjèhers*, ii. 83—92; *The Achehnese*, ii. 80—88). After the death of his successor (Iskandar Thânî, *supra* n°. XIII) four princesses ruled over Atjeh in the second half of the seventeenth century (1641—1699). This period of feminine rule was naturally much to the advantage of the Uleebalangs whose power and authority were thereby increased; but on the other hand many disapproved of this state of affairs and declared on the authority of a *fatwâ* received from Mecca that it was forbidden by law for a woman to rule. Thereupon at the beginning of the eighteenth century arose a series of dynastic wars. Some of the princes who contended for the throne were Saiyids (i. e. descendants of Husain) born in Atjeh. The best known among these was Djamâl (*supra* n°. XX.) After he was deposed in 1726, he held out for a considerable time against the later Sultans, amongst others against Aḥmad (*supra* n°. XXIII, a man of Buginese descent, ancestor of the last dynasty of Atjèhnese princes) and his son Djuhân (*supra* n°. XXIV). The contest between Djamâl and Djuhân and the death of the former are the subjects of another great Atjehnese epic (*cf.* Snouck Hurgronje, *De Atjehers*, ii. 92—100; *The Achehnese*, ii. 88—100). Even after the authority and wealth of the court had gradually become insignificant, there survived, indeed till quite recent times a great reverence (among the Atjehnese) for their rulers whom they honoured as the representatives of a glorious past.

The Subjection of Atjeh. The piracy and slave trade of the Atjehnese and their raids on neighbouring territories constituted a constant danger. Merchants visiting the shores of Atjeh for the pepper trade were always liable to be murdered or robbed. The Dutch government were at first not in a position to put a stop to this evil as they had pledged themselves to England in 1824 not to extend their dominion in Sumatra to the north. When this obligation was removed by a new treaty with England in 1871, Dutch troops occupied in 1873 the chief town of Atjeh with its immediate neighbourhood and some ports in the Dependencies. The last prince (*supra* n°. XXXIV) fled from his residence and died soon after (1874). It was now expected that the inhabitants of the interior of the island would gradually acknowledge the sway of the Dutch; but this hope was not fulfilled; on the contrary there grew up among the Atjehnese a powerful, irreconcilable faction in favour of war, organised chiefly by the native jurists. Learned men have always enjoyed a certain authority in Atjèh but the political situation at this time increased their influence to an extraordinary degree; they went throughout the land preaching a holy war; their war-chest was the Zakât-tax levied on the people; the native chieftains were ignominiously thrust into the background. Other political adventurers, amongst them the famous Töku 'Umar, made use of the changed state of affairs to obtain for themselves positions of power. On the other hand Muhammad Dâwûd, the 6 year-old boy chosen Sultan in 1873 who subsequently stayed with his court as a rule in Kömala in Pedir, had really no political influence.

After Great Atjèh had been conquered and occupied in the years 1877—1891, the Dutch troops were again concentrated in the near neighbourhood of Kuta Radja. As recently as 1896 they had again to take vigorous offensive measures, chiefly in Great Atjèh but also in 1898 in the Dependencies and even later in Gayoland and Alasland. This had the desired result; the sovereignty of the Dutch was gradually recognised everywhere by the Uleebalangs and other chiefs and in the beginning of 1903 by the Sultan Muḥammad Dâwûd also. Nevertheless the latter was not confirmed in his dignity.

For some years Atjèh with Gayoland and Alasland has been quite subdued. The different districts and departments are governed by the traditional native chiefs under control of the Dutch authorities. Continual miniature warfare in many parts of this wide territory still requires, however, a fairly strong body of troops to follow to their hiding places and render harmless the last unruly spirits — not only the implacable fanatics but also the incorrigible marauders.

(Th. W. Juynboll.)

ATLAS. The collective designation of the whole mountain system which forms the skeleton of North Africa and stretches from the Atlantic Ocean through Morocco, Algeria and Tunis to the Gulf of Tunis. The name, which was already in use among the Greeks, seems to be a corruption of the Berber word *Adrâr* ("mountain"). Although North Africa was a Roman possession the ancients appear to have had only very indistinct notions of the Atlas.

Strabo (Book xvii) identifies the Atlas of the Greeks with the mountain called Dyrin (Berber: Deren) by the natives, which lay in the extreme west of Mauretania beyond the pillars of Hercules. At the same time, however, he mentions a mountain-chain which stretched from Mauretania through Numidia to the Syrtes.

The Arab Geographers are not much more accurate: al-Bakrī (transl. by de Slane p. 249) designates by the name of „Adlant" (atlas) a mountain „opposite which the Isles of Bliss lie", but he does not appear to extend this name to the whole North African mountain system. The statements to be found in this and some other authors are of two classes: on the one hand fairly clear and detailed descriptions of the elevations to the South of the town of Marrākush which modern geographers call „the High Atlas" and the Morocco Berbers Adrār-'n-Deren; on the other hand very obscure conceptions of the western extension of this elevation and a want of exact accounts of its boundaries and direction. „In Tamerurt" writes al-Bakrī „begins the pass over the Deren. This range, placed there as it were, to be a rampart to face the desert, is inhabited by Ṣanhādja tribes .... it is said to stretch as far as the Muḳaṭṭam hills in Egypt". (transl. by de Slane, p. 353). According to Muḥammad bin Yūsuf the Deren is the highest mountain in the world and stretches to Awrās and the mountains of Nefūsa at Tripoli (Bakrī, *loc. cit.*). According to Idrīsī Djebel Daren al-A'dem, at the foot of which passes the road from Tarudant to Aghmāt, is notable for its height, the fertility of its soil and the great number of settlements in it. „It stretches from Sūs on the Atlantic coast to the chain of Djebel Nefūsa the name of which it takes. Some authorities on the other hand insist that these mountains stretch to the Mediterranean as far as a place called Awthān." (Idrīsī, transl. by Dozy and de Goeje, p. 73 f.) Ibn Khaldūn regards the mountains of Daren as „a girdle enclosing Maghrib al Aḳṣā from Aṣfī to Taza", *Hist. of the Berbers*, Transl. by de Slane, i. 178.) In another place he describes the Daren range in detail.

„The Daren range, situated on the western border of Maghrib is to be counted among the highest mountains of the world. Having their roots in the depths of the earth these mountains touch the heavens with their summits and fill the space between with their colossal mass. They form a continuous wall around the coast lands of Maghrib and starting from Aṣfī on the Atlantic Ocean they stretch to the East an unknown distance. According to some accounts however they are said to come to an end in the land of Barka south of Berenike. Across the breadth of Morocco they appear to be arranged in layers so that they rise in terraces from the desert to the Tell range. The traveller coming from Temesna or the coast of Morocco who desires to cross this range to reach the provinces of Sūs or Drā'a (Dhirā') requires more than a week to do it". Writing in the sixteenth century, Leo Africanus, who collects the previous notices, is not much better informed, though he distinguishes the mountains „of the coastland of Barbary" which lie along the African coast from Rīf to Bona, and the Atlas range in the narrower sense which runs from mount Meies in the neighbourhood of the Egyptian frontier to Messa in Sūs and whose mean distance from the South coast of the Mediterranean is about a hundred miles. (*Description of Africa*, i. 77.) These two ranges are called „Sierra Menor" and „Sierra de Athalante Mayor" by Marmol (Africa, i., Ch. 5.) Some additions to these statements are given in the seventeenth and eighteenth centuries by isolated European visitors to the Barbary states, notably Shaw (*Travels or observations relating to several parts of Barbary and the Levant*, London, 1740; second edition 1757) at the beginning of the nineteenth century the Atlas mountain-system was thought to consist of two chains, the one, the little Atlas range running along the mediterranean coast from Tanger to Cape Blanco, the other, the Great Atlas range, along the northern limit of the Sahara from Sūs to Tripoli. Between those two chains lay a broad plateau, traversed in Morocco by the heights of the Middle Atlas range (Ritter, *Erdkunde*, i. 886, 895). The possession of Algeria by the French paved the way for the scientific exploration of the country. As regards Algeria and Tunisia this work is now almost finished but in Morocco on the other hand, in spite of the numerous journeys of exploration undertaken in the second half of the nineteenth century, there remains a good deal to be done and many blanks are still to be filled up. In this article we will confine ourselves to a few general observations and for details refer the reader to the articles on Morocco, Algeria and Tunisia.

The Atlas is an expansive corrugated mountain system covering the whole of North West Africa. It stretches about 1600 miles from West to East and with its ramifications covers an area of more than 165,000 square mls. In the South it is bounded by a series of valleys formed by the beds of the Wād Drā'a, the Wād Djedī and the streams of the Algero-Tunesian Shoṭṭs. In the North it slopes rapidly down to the mediterranean coast. Geologists consider it to be an upheaval formed at the same time as the Apennine and Baetican systems and separated from them in comparatively recent times. The folding of the Morocco chains appears to have been completed by the end of secondary times but on the other hand the upheaval of the Algero-Tunesian ranges seems to have taken place for the most part in tertiary times. During the quartiary period these upheavals were subjected to very great erosion. The debris proceeding from this erosion has covered in various places the framework of the ranges and altered the original physiognomy of the system in a marked manner. With reference to these distinctions the Atlas system can be divided into three distinct groups: *a.* The ranges of Morocco; *b.* The plateau of the Shoṭṭs; *c.* The ranges stretching along the coast.

a. The Ranges of Morocco. These traverse Morocco in the narrower sense and have the highest peaks of all North Africa. Four parallel lines are distinguished: the High Atlas range in the middle, the Middle Atlas range in the North and the Anti-Atlas range in the South of the High Atlas; and lastly the Djebel Bānī on the border of the Sahara. Stretching from S. W. to N. E. the various folds are separated from one another by valleys lying along them which in their turn are again cut up into divisions by transverse ranges. Through these valleys run the chief water courses of Morocco; the Mulūya and the Wād al 'Abīd in the North, the Wād Sūs and Wād Drā'a in the South. The High Atlas is the most important of these ranges; it runs from cape Ghir on the Atlantic

coast to Shoṭṭ Tigrī, a distance of about 650 miles; its average height is about 10,000 feet but some peaks surpass this; thus Tizā is 11,300, Meltsin 12600 high, and lastly Djebel Aiyashīn, a mountain range abut 100 miles broad, 15000 feet high. There are no glaciers, however, no eternal snow. The greatest elevation of this range, called by the natives Adrār-'n-Deren, lies to the immediate south of the town of Marrākush. The High Atlas range forms an exact dividing wall between Morocco and the Sahara; it is difficult to cross as its passes are all at a considerable height. The most frequented, the Pass of Bibāun over which runs the road from Marrākush to Sūs is 5830 feet high, the others with the exception of the most eastern are on an average 6600 feet and in the Adrār 'n-Deren about 10,000 high. This mountain wall thus affords secure protection against the dry wind from the Sahara while the moist winds from the Atlantic Ocean strike the northern slope and nourish forests extolled by Arab authors, notably by Ibn Khaldūn (*loc. cit.*) The Middle Atlas range, still little known, especially in its eastern parts runs northward from the High Atlas range, from Wēd Tessaut in the province of Demnat to the breach at Mulūya. At first surrounded by rather low spurs, it starts out more on the other side of the ravine of the Wēd al-ʿAbīd and runs as a single, fairly unbroken ridge to the sources of the Umm al-Rebīʿa (Djebel Amhāwsh). Its height is almost as considerable as that of the High Atlas range; its passes are never less than 5700 feet high. The mountain ridge alone would be difficult enough to cross but it is rendered still more impassable by the woods on both its slopes in which wild animals (lions and panthers) lurk. On this account the trade-routes from Fās to Marrākush go around it with a wide curve to the west. At the other side of the sources of the Umm al-Rebīʿa this mountain chain bifurcates. The most important branch, which again branches and ends with a rugged decline into the Mulūya valley, possesses several peaks; the Djebel Tamarakuit, the Djebel Esuki and the Reggu. To the Northern branch belong the Djebel Zaiyān almost as high as the main range, Djebel Shiāta and Djebel Watirets. To the W. and N. W. the Middle Atlas range shows a series of gradations which stretch in several ramifications almost to the Atlantic coast.

The Anti-Atlas begins in the vicinity of the Atlantic Ocean and stretches, some 600 miles wide, as far as the district of the Wēd Gir near the Algerian border. Somewhat to the west of the meridian of Marrākush it is united with the High Atlas by a huge spur, crowned by Djebel Sirua (about 11,000 feet). The greatest part of its course the Anti-Atlas exhibits a fairly straight ridge about 7000 feet high in the centre. Passes are fairly numerous but they are all from 5000—7000 feet high. The slopes are on an average bare, with the exception of the north slope in the Sūs district. The Anti-Atlas may be divided into three sections: a western section from the coast to the chain uniting the Anti-Atlas and the High Atlas; a middle, from this point to the southern branch of the Wēd Drāʿa, and an eastern from the Wēd Drāʿa to the Wēd Gir. The western Anti-Atlas consists of two principal chains with numerous spurs penetrating the Wēd Nūn district to the Atlantic coast. The middle Anti-Atlas shows a much simpler structure: a single, very sharp ridge, turning twice at right angles, with very steep slopes on the south side and gentle declivities to the north. The eastern Anti-Atlas rises on the other side of the Wēd Drāʿa, to Djebel Saghro, the highest point of the whole chain and then sinks and stretches out in a wide plateau pierced in the middle by the valley of the Wēd Zīz.

The Djebel Banī 400 miles long, running parallel to the Anti-Atlas and separated from it by the plain of al-Feija is a wall of rock of black sandstone devoid of vegetation from $^2/_3$ to $1^1/_2$ miles broad. Its greatest elevation in the middle part is about 3000 feet but the outlying parts are scarcely 1500 feet high.

b. The plateau of the Shoṭṭs. While in western Barbary the Atlas system branches off into several distinct chains, in central Barbary it expands into a wide tableland whose height and breadth decrease from West to East and in the somewhat altered centre of which the water collects in enclosed basins (Shoṭṭs, Sebkhas). This is the Algerian Highlands. In the north and south the closely connected mass of these plateaus is bounded by mountains on its verge, in the north by the Tell-Atlas and in the south by the Sahara Atlas. How these two ranges connect with the Morocco chains is not exactly known. The Tell-Atlas range runs with the plateau of Debdū as far as the break at Mulūya. The Sahara Atlas range meets the Anti Atlas in the neighbourhood of Kenadsa. These Algerian ranges are distinguished from those of Morocco in more than one respect. They are, first of all, lower for their highest peaks in the north are only 7000 feet, in the south only 8000 feet in height at most and are also more accessible. The individual mountain masses have been divided into sections by erosion and are cut up by broad ravines which render possible the traffic of the plateaus with one another and with the outer world. Nowhere in Algeria are the mountains such obstacles to traffic and isolating barriers as in Morocco; and lastly the two border ranges do not run parallel but gradually approach one another and unite at last in the province of Constantine, while the ridges of the Sahara Atlas combine with those of the Tell Atlas and spread over the whole of the North East of Algeria and northern Tunisia. In Tunisia the mountain chains diverge some to the east and some to the north-east, the river Medjerda forming the boundary between the two groups. In the north extend the mountains of Khrumir-land covered with cork- and "zān"-oak forests: to these are joined the heights of the Mogod district. In the south the Zeugitania chain runs like the backbone of Tunisia with a continuous series of rounded summits and flattened plans to the vicinity of the Gulf of Tunis. Here the average height of the Atlas decreases still more. The Khrumir mountains do not rise above 3000 feet and the highest peaks of the Zeugitanian range not above 6300 feet [see ALGERIA and TUNISIA.]

c. The ranges lying along the coast. — These appear now only as fragmentary mountain masses separated from each other and scattered along the coast, which some Geographers have denoted by the common name of Sahal (*Sāḥil*) or Rīf (*Rīf*). These ranges are separated from the main Atlas system by a subsidence. Their height does not exceed 100 feet and their direction in

Morocco as well as in West and Central Algeria is clearly marked by the river courses of the Wād Innauun, the Mulūya, the Shalif, the Summam etc. The valleys running parallel to the coast facilitate traffic between eastern and western Barbary and serve as natural roads not only for commerce but also for hostile raids. In eastern Algeria, however, the tertiary formations of the Shoṭṭ tableland have filled up the valleys in different places between the coast and the interior and rendered the distinction between the mountains on the coast and the border chains of the Shoṭṭ plateau, occasionally, rather difficult. The most important mountains on the coast are those of the Rif and Trāra districts of the Algerian Dahra (Zahra) and those of Great Kabylia. Their height varies considerably and ranges from 1300 feet (the Sahels of Algeria and Oran) to 600 feet (Kabylia) [see MOROCCO and ALGERIA.]

Though the Atlas range may be called the skeleton of North Africa, its individual parts are so very different from one another that one cannot establish any general characteristics for the whole system. Every one of the mountain groups specified has its own peculiar character, its own special physiognomy. There could scarcely be a greater contrast than between the huge masses of the Moroccan Atlas with their wooded slopes and green pastures running up to a height of 3500 feet on the one hand and the bare plains and the slopes of the Tell Atlas, cut up by ravines or the scarcely discernible ridges of the Sahara Atlas on the other. Within the same group the contrasts are often no less striking. One cannot, for example, compare the jagged ridges of the Djurdjura with the plateaus of the Awrās cut up by deep and narrow glens or the cloud-capped summits of central Tunisia. The influence of the Atlas range on hydrographic and climatic conditions varies considerably, also, in different localities. Torrents stream from the summits of the Moroccan Atlas, which are covered for nine months with snow, down courses which have nothing but the name in common with the Wādis of Algeria and Tunisia. From the point of view of climate also the Moroccan Atlas plays a much more important role than the middle or eastern mountain ranges. The middle High Atlas and the western Anti-Atlas shelter the northern districts from the winds from the desert. It is quite the opposite with the Tell- and Sahara Atlas, partly on account of the ravines penetrating them, and partly on account of their insignificant height. On this account, the Moroccan Tell shows many more special features than the Algerian Tell where the climatic influences of the Sahara counteract those of the Mediterranean sometimes even down to the districts on the coast.

Nevertheless from the economic and ethnographic points of view some common features in the whole Atlas system can be found. For the Atlas in its whole extent seems to conceal important mineral treasures and it is inhabited for the greater part by Berber tribes. Its richness in minerals is undoubted. Iron, copper, lead containing silver, calamine and other ores have been found in numerous places in Algeria and Tunisia. The exploitation of these natural treasures as well as the phosphate deposits disseminated throughout the whole of eastern and central Maghrib, seems to assure Tunisia and Algeria of a permanent place among he richest lands of the earth in ores and to promise them a brilliant future. Morocco appears to be no less favoured. Even in the sixteenth century Leo Africanus called attention to its deposits of iron, lead, silver and antimony. The preliminary investigations of present-day explorers seem to confirm the reputation (for mineral wealth) of the soil of Morocco.

Regarding the ethnography, the original population seems to have survived more unmixed in the Atlas than in the plateaus and plains. In Morocco where the Berber element preponderates, Arab culture, and with it the authority of the Sharifs, ceases at the foot of the mountains. The tribes in the Atlas, the Rif and in the mountains of the Benī Iznāsen have preserved an almost complete independence in speech, manners, and customs from the ruling caste in Fez. In the same way in Algeria the mountains of Trāra, Great Kabylia, of Awrās and in a lesser degree the mountain stock of the Varsenis (Wānsherīsh) of the Zakhar, Little Kabylia and Djabal 'Amūr and in Tunisia the Khrumir district have remained uncontaminated by the consequences of the Hilālī invasion. There the mountains afforded the Berber population an almost inaccessible place of refuge from the Arab invaders and enabled them to preserve their languages, manners and customs and until the possession of their land by Europeans their political institutions and independence also.

Bibliography: see Bibl. to the Articles MOROCCO, ALGERIA, TUNISIA, BERBERS, AWRĀS.

(G. YVER.)

AṬLAS (A.), smooth, level. From this comes the name Atlas for a certain kind of silk, quite unknown in the Romance languages. Cf. Quatremère, *Histoire des Sultans Mamlouks*, II. 1. p. 69.

AṬRĀBULUS. [See ṬARĀBULUS.]

ATREK, a river forming the present day boundary between Russia and Persia. The name seems to appear first in Ḥamdallāh Ḳazwīnī (740 = 1339); it is not mentioned by the geographers of the IV. (X.) century. It rises on the northern slope of Mount Hazār-Masdjid, flows through the districts of Ḳūčān and Budjnurd which have been Kurdish principalities since the days of Shah 'Abbās I (one of the most fertile districts in Khorāsān, the ancient Astabēnē or Astauēnē and the mediaeval Ustuwā) and receives the waters of the Sumbar (more correctly Simbār) at the village of Čat or Čatli. From this place till its discharge into the Caspian Sea it has formed since 1882 the boundary between Russia and Persia. At the village of Garmkhāna (north of Budjnurd) where the river is spanned by a wooden bridge, it is 25—30 feet broad and 2-3 feet deep. Below the village of Khuraki both banks are almost quite uninhabited with the exception of a few huts of the Turkoman tribe of Yomut though there are many traces of ancient irrigation canals. Quite recently a dam, built on the Russian bank (at Gadri) has given its lower course a northerly direction, so that the southern river-bed chosen as the political boundary, is now almost quite waterless. The district watered by the lower course of the Atrek on the north side, was called Dahistān in the middle ages (perhaps from the Dahs, an ancient people). Now there is to be found there the ruined town of Mashhad-i-Miṣriyān, usually called Mestoryan on maps; water was brought to this town from the Atrek and even farther from the Sumbar (over 35 miles). Dahistān is said to have been settled as early as pre-Muḥammadan times but Iṣṭakhrī and Ibn Ḥawḳal

only mention it as a little place which was only of importance for its fisheries and as a refuge for ships in stormy weather.

As early as the tenth century Muḳaddasī (375 = 985) knows Dahistān as a flourishing district, the richest in Gurgān with its capital Āḵhur and 24 villages. Above the gateway of the chief mosque in the ruined city of Mestoryan is an inscription of its builder (photographed and published by A. Semenow in the *Zapiski wost. otd. russk. arkh. obshč.* xviii, 3156), Sulṭān Muḥammad Khwārizmshāh (596—617 = 1200—1220). Dahistān is mentioned as a village by Ḥamdallāh Ḳazwīnī; the name appears to be used by Abu 'l-Ghāzī only as the geographical designation of the whole district. When civilisation ceased on the lower course of the Atrek has not yet been ascertained. On the present condition of both banks see especially C. E. Yate, *Khurasan and Sistan* (Edinburgh and London, 1900); on the ruins of Dahistān the chief work is A. Conolly, *Journey to the North of India* (London, 1838) and in Russian A. Konshin, *Elucidation of the question of the Ancient Course of the Amu-Darya*, St. Petersburg, 1897 (contains a plan of the ruined city). (W. BARTHOLD.)

ATSIZ B. ABAḲ (AWAḲ), Turkish emir under Malik-Shāh who wrested Ramla, Jerusalem and the whole of Palestine with the exception of Ascalon from the Fāṭimids in 463 (1071). He then laid siege to Damascus in vain but in the succeeding years kept harassing the country round the town with his raids till he succeeded in obtaining possession of it in 468 (1045). A campaign which he undertook in 469 (1046) against Egypt was not a success and some years later he was himself besieged by the Fāṭimids in Damascus. They withdrew, however, on the approach of Tutush, who had received the Governorship of Syria from Malikshāh but he had Atsiz put to death (471—1078) as he was in his way. The Turkish name Atsiz was pronounced Aḳsīs by the Syrians or with the Arab article Alaḳsīs.

Bibliography: Ibn al-Athīr (ed. Tornberg) X, 46, 68, 70, 72.

ATSIZ B. MUḤAMMAD B. ANŪSHTEGIN, prince of Khwārizm (Khwārizmshāh) succeeded his father in this position in 521 or 522 (1127-1128) as vassal of the Seldjuḳ Sulṭān Sandjar. He, first of all, consolidated his power by the conquest of Djand and Manḳashlāgh (more correctly the Turkish Mīñ-Ḳishlaḳ, "the thousand winter dwellings" on the Caspian Sea) and by a campaign into the interior of Turkistān; soon afterwards he declared himself independent but was defeated by Sandjar at Hazārasp in 533 (1138) and driven from the country. Sandjar appointed his own nephew Sulaimān b. Muḥammad Shāh of Khwārizm, but Atsiz was recalled by the inhabitants in the following year and the prince expelled. In the middle of the month of Shawwāl 535 (May 1141) Atsiz submitted to the Sulṭān and swore him unchanging fealty but broke his pledge in a few months when the power of the Sulṭān had been broken by his defeat in battle with the Kara-Khiṭāi (5 Ṣafar 536 = 9 Sept. 1141). In the same autumn Atsiz appeared with his forces in Khorāsān and conquered Marw. In the following spring Naisābūr submitted to him but immediately after he was dispossessed of the country by Sandjar; in 538 (1143-1144) attacked in Khwārizm itself and had again to acknowledge the suzerainty of the Sulṭān. A short time afterwards he revolted for the third time and threw the ambassador of the Sulṭān, the poet Adīb-Ṣābir, into the Āmū. In the month of Djumādā II 542 (Nov. 1144) Sandjar undertook his third campaign against Khwārizm, captured the town of Hazārasp after a two month's siege and attacked Gurgāndj; Atsiz submitted to the Sulṭān and was allowed to retain his office although he conducted himself very indecorously on his meeting with Sandjar (Muḥarram 543 = May-June 1148). In 548 (1153) Sandjar was captured by the Ghuzz; Atsiz wished again to invade Khorāsān, this time as a faithful subject and defender of his Sulṭān and demanded that the important town of Āmū (the modern Čārdjūī) should be handed over to him, but this request was denied him. It was not till 551 (1156) that he appeared before Nasā and assured his sovereign, who had shortly before escaped from his confinement, of his loyalty; he died soon after, however, on the 9 Djumādā II (30 July) of the same year in Khabūshān (the modern Kūčān) at the age of 59.

Bibliography: Djuwainī, *Ta'rīkh-i Djihān Kushāi* whom Mīrkhwānd follows (edited by Defrémery, Paris 1842); Ibn al-Athīr (both here made considerable use of the lost *Mashārib al-Tadjārib* of Abu 'l-Ḥasan Baihaḳī); Rāwandī (*Nouv. mélanges orientaux* Paris 1886); *Recueil de textes relatifs à l'histoire des Seldjoucides* (ed. Houtsma), Vol. II. On the struggles between Atsiz and Sandjar see the state documents of both combatants in Barthold's *Turkestan w epokhu mongolsk nashestw*. Pt. I, quoted from a manuscript in the Institute for Oriental Languages in St. Petersburg. (W. BARTHOLD.)

ʿATTĀBĪ (A.), nomen relativum from ʿAttāb, after which a quarter of Baghdād bore the name *al-ʿAttābīya*. A certain kind of carpet which was manufactured there was hence called *ʿAttābī* and this name has passed into the languages of Europe in various forms. (French: *tabis*, English: *taby*; Spanish, Portughese, Italian: *tabi*; Dutch: *tabyn*. Cf. Dozy *Supplément* s. v.).

ʿAṬṬĀR (A.), druggist. The Persian poet FARĪD AL-DĪN ABŪ ḤĀMID MUḤAMMAD B. IBRĀHĪM was known by this name. Little is known with certainty of the circumstances of his life; even the year of his death is variously given as 589, 597, 619, 627 and 632; it appears certain, however, that he was still alive in 618 so that the date 627 (1230) preferred by Dawlatshāh, is perhaps the correct one; but that he was born as this author states, in 513 (1119) and taken prisoner and slain by the Mongols is hardly to be accepted. What else is related of his career is also of a legendary nature, for the works of the poet, the only reliable source, yield very little information. ʿAṭṭār has not like almost all his fellow poets, — and this is greatly to his honour — left behind him any panegyrics from which various data might be derived. Here and there he has scattered throughout his poems a few personal reminiscences. From these it is evident that he spent 13 years in his youth in Mashhad and occupied himself for 39 years in collecting the poems and prose writings of devout Ṣūfīs and also that he was born in Nishāpūr and settled there after many wanderings. His name ʿAṭṭār refers to the fact that like his father he was a dealer in drugs and followed the calling of a medical man.

ʿAṭṭār wrote a great deal, according to his own

statement about 40 works containing 202,060 verses. Among his prose writings are the Lives of the Saints, *Tadhkirat al-Awliyā'*, edited by Nicholson (London and Leiden, 1905—1907) his most important as well as most voluminous work. His poetical works are likewise devoted to the cause of Ṣūfism. The best known is the short *Pandnāmah* edited and translated into French by Silvestre de Sacy (1819) (repeatedly printed in the East). More extensive is the poem *Manṭiḳ al-Ṭair* edited by Garcin de Tassy (1857) and likewise translated into French (1863); a lithographed edition of his complete works (*Kulliyāt*) appeared at Lucknow in 1877 and there are similar editions of single poems. The titles of his writings are to be found in the under-mentioned works though the best account of them and of 'Aṭṭār's biography is to be found in the introduction (in Persian) by Mīrzā Muḥammad Ḳazwīnī to Nicholson's edition of the *Tadhkirat al-Awliyā'*.

Litter.* 158 f.; Browne, *A Literary History of Persia*, II 581 ff.

AL-'**AṬṬĀR**, ḤASAN B. MUḤAMMAD, Arab stylist and theologian, born in Cairo in 1180 (1766), was at first his father's assistant and studied at the Azhar. Later he travelled in Syria and Turkey but finally returned to his native town where he took up the position of editor of the state gazette *al-waḳā'i' al-miṣriya*, founded by Muḥammad 'Alī in 1244 (1828). Three years later, however, he was appointed Rector of the Azhar-Madrasa. He died either in 1250 (1834) or 1254 (1838). His Arabic guide to letter writing *Inshā' al-'Aṭṭār* was repeatedly printed in Cairo (1270, 1297, 1300) and in Bombay (1302). His commentary to the *al-Muḳaddama al-Azhariya fi 'Ilm al-'Arabiya* has likewise been printed (Būlāḳ, 1284, Cairo, 1291).

Bibliography: 'Alī Pasha Mubārak, *al-Khiṭaṭ al-djadīda* IV, 38 ff.; Brockelmann, *Gesch. der arab. Litter.* II, 473.

ATTOCK (ATAK), capital of the district of the same name, founded in 1894, in the Rawalpindi division of the Punjab (Pandjāb). The district, which has an area of 4022 square miles, had 464,430 inhabitants in 1901 of whom over 90% were Muhammadans. The fort of Attock which stands on the Indus was built by Akbar in 991 (1583) who called it Atak-Banāras.

'AWĀLIḲ (sg. 'Awlaḳī, Beduin Mawweleḳ and Mawleḳi), dynastic name of a group of tribes in South Arabia. Their country is bounded in the South by the Arabian sea, in the West by Dathīna (in the southern part), by the land of the 'Awādil (in the centre) and by that of the Raṣṣāṣ (in the northern part); in the Northwest by the Kaṣābī (Gazāb), in the Northeast and the upper part of the East by the land of the upper Wāḥidī and in the lower (southern) part of the East by the land of the Dhiābī (Dhiēbī). The whole country of the 'Awāliḳ falls into two divisions: 1. The country of the upper 'Awāliḳ. 2. The country of the lower 'Awāliḳ.

1. The territory of the Upper 'Awāliḳ consists in the main of three large plateaus: Markha (the eastern part only) in the South, Niṣāb (Anṣāb) to the northeast of Markha and Ḥābt (with its salt-mines) in the northwest. The largest wādī is the Wādī 'Abadān. The climate is tropical and the ground fertile and produces wheat, maize, tobacco and indigo. The chief town is Niṣāb (Anṣāb) with about 2000 inhabitants (including several hundred Jews); it contains many palaces, fortresses and a large mosque. The southeastern part of the upper 'Awāliḳ is ruled by its own chief who is only dependent on the Sultan of the upper 'Awāliḳ in external matters. He has his court at Yashbum (Yeshbum), a town with about 1000 inhabitants (including several families of Jews) containing several mosques and fort-like houses. The inhabitants of the country of the upper 'Awāliḳ belong for the most part to the tribe of Mahādjir in the North (whence the name Arḍ al-Mahādjir for the nothern part of the upper 'Awāliḳ) and in the South (Yeshbum) to the Ma'n tribes (among these are the Madhidj of Hamdān) who are mostly independent (Ḳabā'il); they are fond of fighting and enlist in great numbers for service in the East Indies.

2. The country of the lower 'Awāliḳ consists of the great plateau of Monḳa' in the East; the remainder is partly highland and partly lowland. The largest wādī in this barren coastland is the Wādī Aḥwar (Hauwar) which is almost always dry. By this river dwells the tribe of Bā Kāzim; for the most part they are subject to the Sultan who levies taxes on and exercises jurisdiction over them. Another, quite different tribe, the Ḳumāsh, inhabits the plateau of Monḳa' and is independent (Ḳabā'il). The capital and residence of the Sultan is Aḥwar (Hauwar). Cf. Maltzan, *Reise nach Südarabien* (Braunschweig, 1873), pp. 239—251 and Landberg, *Notes préliminaires sur les tribus du pays libre de Dathina et du Sultanat des 'Awāliq supérieurs* etc. (in *Arabica*, iv, Leiden, 1897), pp. 39—54. (J. SCHLEIFER.)

'AWĀRIḌ AḲČESI or WIRGŪSI. The name of a direct tax which has been levied in most of the provinces of Turkey. This impost belonged to that class of public burdens which are known as voluntary taxes (*Takālīf-i-'Urfiya*) in opposition to those laid down in the Sharī'at (*Takālīf-i-shar'iya*). This tax with the others in the same category was abolished with the reforms instituted in 1255 (1834) and replaced by a single tax (wirgū).

Opinions differ regarding the adjustment and application of this tax; what complicates matters is that the practice in administrating the very numerous taxes differed considerably in the various provinces of Turkey and that the word *'Awāriḍ* was applied in a general way to denote several quite distinct extraordinary levies.

The Hungarian historian Franz Salamon says

in his work cited below that during the Turkish rule, by *ʿAwāriḍ* which was called "statute labour" was understood such special services as unpaid labour (Slav. *robot*), as fortifications and the supplying of relays of horses and fodder to an army marching through the district.

According to some Turkish authorities the tax, introduced in the time of Sulṭān Selīm III and called *ʿAwāriḍ Aḳčesi* (Wirgusi), was levied at most, once every four or five years on every 20 aḳče and its yield was used for the defrayal of expenditure on public necessities (*Maṣārif-i-beledīye*). The modern Turkish financier Sulaimān Sūdī thinks on the other hand, after examining the records on the subject that those houses which according to the registers of taxation were liable to *ʿAwāriḍ* were noted and bound to pay certain dues in money or kind. A fixed part of these payments was earmarked for local purposes and the remainder handed over to the authorities. In some districts at any rate, the *ʿAwāriḍ-aḳče* appears to have consisted in demanding a money payment in place of the boatmen (Kürekči) who were at the disposal of the naval arsenal one from each 8 to 10 houses. Documents found in the archives at Sarajevo support this hypothesis. According to Sulaimān Sūdī it was the custom to send officers (*Mubāshir*) from the capital to collect and hand over the proceeds.

Jurany, Leipzig, 1887) p. 82; Sulaimān Sūdī, *Defteri muḳtaṣid* (Constant., 1307), i. 78 (2. edition); *The collection of turkish taxes* (MSS. in the possession of the Government of Bosnia and Herzegovina Nº. 82). (J. Kracsmarik.)

ʿAWĀRIḌ WAḲFI. By this term is understood a Waḳf foundation whose receipts were devoted to the defrayal of extraordinary or periodic requirements of a village or quarter of a town (*Maḥalle*) as for example such waḳf as those which were founded for the burial of paupers who had died in the district, for the support of persons incapable of earning their own living and also for repairing the streets or for bringing in a water supply.

Bibliography: ʿOmar Ḥilmī, *Itḥāf al-Akhlāf fī Aḥkām al-Awḳāf* (Const., 1307) § 36. (J. Kracsmarik).

AL-**ʿAWĀṢIM** (A., "defences, fortifications") the region of fortifications, the radius of the Syrian-Asia Minor boundary which from the time of ʿOmar separated the dominion of the Caliph from that of the Emperor. At first the two hostile states sought to keep one another off by turning a fairly wide stretch of country into a desert. This unclaimed, waste zone was called al-Ḍawāḥī i. e. "the outer part, the outer land" (Cf. Ṭabarī ed. de Goeje, ii. 1317; Ibn al-Athīr, ed. Tornb., iv. 250). Later, though still in the time of the Umaiyads, the Arabs began to gain a footing there and to rebuild as fortresses various towns destroyed and abandoned by the Greeks besides erecting blockhouses to strengthen the line of fortification. The most important points, strategically, were Ṭarsūs, Adhana, al-Maṣṣīṣa (Mopsuestia), Marʿash and Malaṭya (Malatiya), which were all situated at the intersections of military roads or at the entrances to mountain passes. Even down to the days of the first ʿAbbāsids this border district was incorporated in the most northern of the five Djunds (military divisions) into which the Arabs had divided Syria for administrative purposes after its conquest, namely the Djund of Ḳinnasrīn. But as after the time of al-Manṣūr this Djund attained too great a compass by a considerable advancing of the frontier Hārūn al-Rashīd resolved in 170 (786) to separate the marches from Djund Ḳinnasrīn and to raise them to the rank of an independent jurisdiction under the name of Djund al-ʿAwāṣim or briefly al-ʿAwāṣim, a precautionary measure which at that time and later proved itself eminently suitable for the effectual barricading of the frontier. This new province comprised the whole district of Anṭākiya nearly to the mouth of the Orontes in the Southwest and to Ḥalab (Aleppo) and Manbidj in the Southeast and all the country northwards to the Byzantine boundary.

Even in quite early times a distinction was made within the 'military marches' between the inner (southern) borderlands, the ʿAwāṣim in the narrower sense and the outer (northern and northeastern) strip of land, the Thughūr = κλεισοῦραι (*Thughūr* plur. of *Thaghr* fissure, then boundary) also called Thughūr al-Islām, the real girdle of fortifications on the border. About the middle of the tenth century this ran (according to al-Iṣṭakhrī) from Awlās on the Mediterranean Sea past Ṭarsūs, Adhana, Maṣṣīṣa, Zibaṭra, Marʿash Malaṭya, Ḥiṣn Manṣūr to Sumaisaṭ (Samosata) on the Euphrates and then along the west bank of this river southwards to Bālis (Barbalissus). The border line therefore followed as a rule the course of the ranges of the Taurus and the Antitaurus. The Thughūr are again often subdivided into the Syrian and Mesopotamian; by the former is understood the western part of the cordon of fortifications, the district containing the important passes between Syria and Cilicia, (with Marʿash as chief town) while places on the border line east of Marʿash were classed to the Mesopotamian group. Strictly speaking however the name is applied only to places in Syria; the description of certain κλεισοῦραι as Mesopotamian arose, according to the Arab writers, from the simple fact that the garrisons there were recruited from volunteers from Djazīra.

The district of the 'Thughūr' had no common capital; the most important place in it was Malaṭya. Manbidj was at first reckoned the centre and capital of the province of ʿAwāṣim and later Anṭākiya where the Muḥammadan governor resided; the 'Thughūr' were for the most part also under him, the remainder being regarded by the Arab geographers sometimes as a quite independent district and sometimes as a subdivision of the Djund al-ʿAwāṣim. Besides the towns already mentioned the following deserve to be noted as belonging to the military boundary: Baghrās, Bayās, Dulūk (Doliche), Iskandarīya (Iskandarūn, Alexandretta), Ḳūrus (Cyrrhus), Raʿbān and Tīzīn. The province of ʿAwāṣim was organised on military lines by Hārūn al-Rashīd; all important points were held by standing garrisons and numerous new border forts and blockhouses erected.

The history of these Arabian marches reflects the changing phases of the great struggle between the Byzantine Empire and the Caliphate for the mastery in East and South Asia Minor. There is scarcely a land more soaked in blood than this, where every foot of land was fought for repeatedly and bitterly. Under the early ʿAbbāsids incursions into the hostile Greek territory (the so-called

'summer-campaigns') from the 'Awāṣim-district were organised every summer, considerable bodies of troops being often called out who always returned with rich booty and a considerable train of prisoners.

Through these constant raids and devastating incursions the marches very often became much depopulated. When the Caliphs for their protection and to strengthen the Muslim population settled there, several times brought people from distant provinces of their kingdom hither, the old population of the country gradually changed to a varied mixture of immigrant or imported elements. Among the latter were Christian Arab tribes (*mustaʿriba*: Ṭabarī, ii, 1185, 1194), Slavs, Persians, Mardaits, Sayābidja and Zuṭṭ. The Christian Mardaits whose origin is unknown were originally active on the Byzantine side but were taken over into the Arab service as frontier guards under Walīd I. The apparently Turkish tribe of the Sayābidja [q. v.] was settled in Anṭākiya and the Cilicia-passes. Large numbers of the Zuṭṭ [q. v.], an Indian people (Hindu: Djatt) who had been sent by the conqueror of India, Muḥammad b. al-Ḳāsim with great herds of buffalo to South Babylonia, were sent by order of the Caliph Yazīd II to the Cilician border and particulary to al-Maṣṣiṣa (Mopsuestia). By the introduction of thousands of these buffaloes with their accompaniment of Zuṭṭ herdsmen al-Walīd I sought to combat the plague of lions which was becoming so serious in the deserted valleys in the neighbourhood of Antioch. From this period dates the abundant supply of buffaloes in these districts (cf. also M. Hartmann, *Das Liwā Haleb*, 1894, p. 71). In the end al-Muʿtaṣim removed a large colony of the Zuṭṭ to ʿAin Zarbā [q. v.]; cf. Ibn al-Athīr, vi. 311; *Fragm. hist. Arab.* (ed. de Goeje), ii. 473.

From the time of al-Wāthiḳ (842—847) the Byzantine troops pressed the Arabs farther and farther back; the Ḥamdānid Saif al-Dawla succeeded, in the middle of the tenth century, in defending the military marches against the arch-enemy successfully but his success was only temporary. In 353 (964) and 354 (965) al-Maṣṣiṣa, Adhana and Ṭarsūs, long the strongest points in the line of defence, fell into the hands of the Greeks and were turned by them into fortresses against the Muslims. Subsequently the district of 'Awāṣim was merged in the principality of Antioch which had arisen with the help of the Crusaders; parts of it also passed under the sway of the kings of Little Armenia (*Bilād al-Sīs*) who resided in Sīs. With these territorial changes the hitherto independent position, for political and administrative purposes, of the North Syrian and Asia Minor borderlands ceased to exist.

AWDAGHOST (or AWDAGHOSHT), an ancient town in N. W. Africa which has quite disappeared from the face of the earth. According to Bakrī it was situated between the land of the negroes and Sidjilmāsa, distant about 51 days journey from the latter oasis and 15 from Ghāna; according to Barth's hypothesis it lay between long. 10° and 11° w. of Greenwich and between 18° and 19° north., not far from Ḳṣar and Barka, that is to say S. W. of the military station of Tidjika in French Mauretania.

We have only a few scanty notices of this town; it appears to have been originally a trading settlement of the Zenāga (Ṣanhādja) on the northern border of the Kingdom of Ghāna. About the end of the tenth century when the Zenāga had conquered a large part of Ghāna, Awdaghost was the capital of a powerful tribe. From 350—360 (961—971) they had a Ṣanhādja prince, Tin Yerutan, as their ruler who numbered over twenty negro kings among his vassals and whose kingdom measured 60 days' journey in length and breadth. In the following century Ibn Yāsīn, founder of the Almoravid sect, attacked Awdaghost, stormed the town, plundered it and massacred the inhabitants (446 = 1054-1055). After this the Zenāga power declined. At the beginning of the thirteenth century the Sussu invaded the country and drove out the Zenaga or made them tributary.

In the time of al-Bakrī Awdaghost was still a flourishing town. Its considerable population consisted of Maghrib Arabs and allied peoples from the province of Ifrīḳiya, of Berbers (Berkadjenna, Lowāta, Zenāta, Nefūsa and especially Nefzāwa) and of courses of negroes also. The town, surrounded by orchards and palmgroves, contained schools, mosques, splendid public buildings, handsome houses, busy markets. It had an important trade in corn and fruit from Muḥammadan countries, in amber from the Atlantic coast, in cloths, copper wares and brocades. Payments were made in gold-dust. By the time of Idrīsī its decline was evident. The population had dwindled away, the commerce was unimportant and camel-breeding formed the only means of livelihood of the inhabitants. The complete downfall of the town is no doubt connected with the ultimate break-up of the Zenāta power.

'AWDHILLA (sing. 'Awdhalī, pl. 'Awādhila, in Hamdānī, Banū ʿAwd; according to Sprenger, *Die alte Geogr. Arabiens*, p. 206, 269, identical with the Οὔδνοι of Ptolemy and the Autaridae of Pliny), a South Arabian tribe. Their territory, lying between the land of the Yāfiʿa and that of the 'Awāliḳ, is for the most part highland and crossed by a great range, the Djebel Kawr (Kor) often also called Ẓāhir (Daher). Of the Wādīs that rise in the Djebel Kawr the W. Yerāmis (Jeramee) is the best watered. The climate is tropical and the ground very fertile; the chief product is honey. The chief town is Ghulr (Lōder) with

several hundred inhabitants (including several Jewish families) a large market and the palace of the Sultan who lives here. The largest town is Zāhir (Daher) with about a thousand inhabitants (including several hundred Jews) and a flourishing trade. The inhabitants of the 'Awdhililand are for the most part independent free tribes (Ḳabā'il) who only obey the Sultan in case of war. Cf. especially Maltzan, *Reise nach Südarabien* (Braunschweig, 1873), p. 275—282, and Landberg, *Notes préliminaires sur les tribus du pays libre de Dafīna et du Sultanat des 'Awdhilī supérieurs* etc. (in *Arabica* iv, Leiden, 1897), p. 34, note.

(J. SCHLEIFER.)

AWDJ (A.), Arabicised from the Persian *Aug. Awdj* and *Ḥaḍīḍ* denote in Astronomy the Apsides.

AWDJILA, a Tripolitan oasis situated 150 miles south-southwest of the coast of the Gulf of Gabes and 152 miles east-north-east of Murzuk and distant about 60 hours journey from Benghāzī. Ibn Ḥawḳal describes it as a small town which had just shortly before been incorporated in the province of Barka and makes particular mention of its richness in date-palms (Ibn Ḥawḳal, transl. by de Slane, *Journ. As.*, Series 3, xiii. 163). A century later it is mentioned by al-Bakrī as a thickly populated town with bazaars and several mosques and he adds that Awdjila is really the name of the district, the name of the town being Arzāḳiya (Bakrī, *Descr. de l'Afrique Septent.* transl. by de Slane, p. 32). Today as in al-Bakrī's time the name Awdjila denotes a whole group of oases, viz. Awdjila (15 miles long, 2 miles broad), Djālo (15 miles long, 8 miles broad with extensive tracts of desert and sandhills between palmgroves), Batofl or Batrīfal Wādī and lastly, a day's journey eastward, Leshkerreh. These various oases contain about 200,000 date-palms of which 40,000 are in Awdjila and 400,000 in Djālo. The thousand inhabitants, of whom 400 are settled in Awdjila and 600 in Djālo, fall into three classes: 1. the Awdjīlī, of Berber descent and language live chiefly in Awdjila and the little market town of Lebbo in the oasis of Djālo and are farmers, gardeners, saltmakers and caravan leaders; 2. the Modjabra, Arabic-speaking Berbers, dwell in the neighbourhood of al-Areg in the oasis of Djālo, are traders and have the reputation of being particularly honest; 3. the Zūiya, an Arab tribe which has settled in Leshkerreh. All these stocks however are considerably mixed with negro blood. For administrative purposes Awdjila belongs to the Pashalik of Benghāzī; in matters of religion however the oasis is under the influence of the Senūsīya and on that account is very inaccessible to Europeans. Only four explorers have as yet entered it: Hornemann (1798), Pacho (1825), I. Hamilton (1852) and Beurmann (1862).

Bibliography: Pacho, *Relation d'un voyage dans la Marmarique et la Cyrénaïque et les Oasis d'Awdjila et Maradeh* (Paris, 1827); Rohlfs, *Von Tripolis nach Alexandrien*, Bd. II; Beurmann in *Petermann's Mitteilungen, Ergänzungsheft* 8, p. 68; Reclus, *Géogr. univ.*, xi. 33 *et seq.*

(G. YVER.)

'AWFĪ, MUḤAMMAD B. MUḤAMMAD, Persian man of letters, who prided himself on being descended from 'Abd al-Raḥmān b. 'Awf [q. v.] (whence the name 'Awfī). When and where 'Awfī was born cannot be ascertained with certainty but this much is certain that he spent his early years in Bukhārā and the other towns of Khorāsān till the Mongol invasion carried him into India. Here he was received at the court of Sultan Nāṣir al-Dīn Ḳabādja and composed for his Vizier 'Ain al-Mulk Ḥusain al-Ash'arī the oldest Persian *Tezkira* (*Tadhkira*), that has been preserved to us which bears the title of *Lubāb al-Albāb*. After the death of the Sultan in 625 (1228) he addressed himself to the victorious Iltutmish [q. v.] and dedicated to him his famous collection of anecdotes, the *Djawāmi' al-Ḥikāyāt*, which he had already begun to write under instructions from Nāṣir al-Dīn. He probably died soon after in Delhi but the exact date is unknown.

Bibliography: Muḥammad 'Awfī, *Lubāb al-Albāb* (ed. Browne); Persian introduction by Mīrzā Muḥammed Ḳazwīnī; Browne, *A Literary History of Persia*, ii. 477 *et seq.*

AL-**AWḤAD** (properly al-Malik al-Awḥad), NADJM AL-DĪN AIYŪB B. AL-'ĀDIL, an Aiyūbid, received from his father the governorship of Maiyāfāriḳīn and a few adjoining towns. A first attempt to bring the town of Khilāṭ under his sway failed (603 = 1206-1207). He was successful however in the following year but it was only with great difficulty that he maintained his hold there against the Georgians. Indeed his rule did not last long, for he died soon after in 607 (1210-1211) and left his territory to his brother al-Ashraf [q. v.].

Bibliography: Ibn al-Athīr (ed. Tornberg), xii. 103 *et seq.*; Maḳrīzī, *Histoire d'Égypte* (Transl. by Blochet) p. 290, note, 296.

AWḤADĪ, RUKN AL-DĪN, a Persian poet who died in (1337) at Marāgha. He had taken the pen-name of Awḥadī in honour of his teacher Awḥad al-Dīn Kermānī who himself was a famous Ṣūfī and poet (cf. Ḳazwīnī on him, ed. Wüstenf. ii. 164 *et seq.*). Awḥadī left behind him a Dīwān of 10,000 verses but he is best known by the mystic poem *Djām-i Djam* (the goblet of Djam). He also composed a *Deh-Nāmah*.

Bibliography: Dawlatshāh (ed. Browne), p. 210 *et seq.*; Ethé in the *Grundriss der iran. Philologie*, ii. *et seq.*

AWḲĀF (A.), plur. of *Waḳf* [q. v.].

AWḲĀT (A.), plur. of *Waḳt* [q. v.].

'AWL (A.), in Muslim legal works is a certain method of reducing inheritances. It sometimes happens that the number of heirs having a claim upon the estate at the same time, according to the Ḳur'ān, is so great that the total of the legacies due to them under the statutes is greater than the whole estate; for example in the following case: if a man dies leaving a widow, both his parents and two or more daughters, their claims are as follows:

The daughters are entitled to $^2/_3$ ($^{16}/_{24}$) of the estate
The father is " " $^1/_6$ ($^4/_{24}$) " " "
The mother " " " $^1/_6$ ($^4/_{24}$) " " "
The widow " " " $^1/_8$ ($^3/_{24}$) " " "
which would make a total of $^{27}/_{24}$, however.

In such a case the legacies must be correspondingly reduced. The estate is then divided into 27 and not 24 parts. Of those the daughters receive 16, the father 4, the mother 4 and the widow 3. Such a reduction of legacies is called *'Awl*.

(Th. W. Juynboll.)

AWLĀD (A.), plur. of *Walad* [q. v.].

AWLIYĀ (A.) plur. of *Walī* [q. v.]. This plural is sometimes used improperly by the Turks and Persians for the singular.

AWLIYĀ-ATĀ (i. e. "holy father"); chief town in the Sir Daryā district in Russian Turkestan called after the tomb of Saint Ḳara-Khān. The grave of the saint is mentioned as early as the seventeenth century (*Baḥr al-Asrār* of Maḥmūd b. Walī, Cod. Ind. Off. 545, fol. 119ᵃ); the town itself arose only in the nineteenth century and was conquered by the Russians in 1864. The present tomb dates from quite modern times and is without inscriptions; the tomb of the so-called "little saint" (*kičik awliyā*) in the same town bears an inscription of the year 660 (1262) and is the grave of the prince Ulugh Bilgā Iḳbāl Khān Dāwūd Beg b. Ilyās (published in the *Zap. wost. otd. russk. arkh. obshč.*, Vol xii. p. V). The town of Ṭarāz (Talas) mentioned by the Arab geographers in the same district seems to have utterly disappeared. Old Turkish epitaphs have recently (since 1896) been found in the district of Awliyā-Atā at Talas (concerning these see *Zapiski etc.*, Vol. xi).
(W. Barthold.)

'AWN (A.). Help, helper; hence: *'Awnaka* = at thy service; also used in honorary titles, e. g. 'Awn al-Dīn [see ibn Hubaira.]

'AWNĪ, pen-name of Sultan Meḥmed II.

'AWRA (A.), 'Awrat (P., T.) pudendum; woman.

AWRANGĀBĀD, chief town of the division of the same name in Haidarabad (Deccan) situated between 19° 53' n. and 75° 20' L. and the second largest town in that state, having in 1901 36,837 inhabitants. The town founded in 1610 by Malik Ambar, minister of the ruler of Aḥmadnagar, was originally called Fatḥnagar and did not receive its present name till 1653 when Awrangzēb was Governor of the Deccan. When Āṣaf Djāh declared himself independent as first Niẓām, Awrangābād was added to his territory. The town contains several Muhammadan monuments such as a mosque which Malik Ambar built, the tomb of the wife of Awrangzēb and Awrangzēb's palace. The silver-work, embroidery, gold and silver brocade and silk-stuffs manufactured there enjoy a great reputation. About two miles north of the town are some famous caves of Buddhist origin. Of the 2,363,114 inhabitants in the division of Awrangābād in 1901 only 10 %/₀ were Muhammadans.

Bibliography: *Imperial Gazetteer of India*, vi. 140—150. (J. Horovitz.)

AWRANGĀBĀD, a small town in the Gayā district of Bengal which in 1901 had 4,685 inhabitants.

Bibliography: *Imperial Gazetteer*, vi. 150.

AWRANGĀBĀD SAIYID, a small town in the Bulandshahr district of the United Provinces, founded in 1704 by Saiyid 'Abd-al-'Azīz, a descendant of Saiyid Djalāl al-Dīn Ḥusain of Bukhārā, and still belonging to his descendants. It is called Awrangābād Saiyid (of the Saiyid) to distinguish it from another Awrangābād (A. Chandokh). Number of inhabitants (in 1901) 5916.

Bibliography: *District Gazetteer of the United Provinces*, V. Bulandshahr (Allahabad, 1903), p. 191. (J. Horovitz.)

AWRANGZĒB (1618—1707), the third son of the emperor Shāhdjahān by Ardjmand Bānū Begam Mumtāz Maḥall, daughter of the Persian immigrant Āṣaf Khān Yamīn al-Dawla, was born at Dhoḍ (usually converted into Dūhad) on the 15th Dhu 'l-Ḳa'da 1027 (Nov. 3rd 1618) in the camp of his grandfather Djahāngīr, then on his way from Aḥmadābād (Gudjarāt) to Udjdjain in Mālwā. It was his fate to be born and die in a camp, and to pass many years of his life in one.

I. From birth to accession, 1618—1658.

In his early years the prince shared the adventurous wanderings of his father Shāhdjahān from the Dakhin to Orissa, Bengal, and back again to the Dakhin. In the last year of Djahāngīr he was sent with his elder brother Dārā Shukōh to Lāhōr as a hostage for his father's good behaviour. His first public employment was in 1635 when he was made the nominal generalissimo of three armies operating in Bundelkhand. This was immediately followed by a first period (1636—1644) as governor of the Dakhin or southern provinces. During a fit of religious fervour he resigned public life, but in 1645 he was restored to his rank and sent to Gudjarāt. He was called thence in 1646 to take command in the newly acquired province of Balkh, which was still in a very disturbed condition. He acted with great vigour but secured no more than a temporary success. The emperor found that Balkh was costing him more than it could ever yield, and handing it over to a former ruler, he recalled Awrangzēb, who in March 1648 marched direct to his new government of Multān to which Tatta was afterwards added. Ḳandahār was the next scene of his labours in the field, but two attempts, in 1649 and in 1652, to retake that fortress from the Persians were unsuccessful. After his return from the second of these sieges, Awrangzēb was transferred to the Dakhin again. Here under his father's orders he attacked the Ḳuṭb Shāhī king of Gulkanda and the 'Ādil Shāhī king of Bidjāpūr, obtaining from both considerable cessions of territory and large sums in tribute. In 1657 Shāhdjahān fell ill and it was reported he was dead. His younger sons at once entered the field to contest the throne with their eldest brother, the heir apparent Dārā Shukōh.

II. War of Succession, 1658—1659.

The second son Shāh Shudjā' was the first to advance on Āgra: but he was easily repulsed. Awrangzēb joined forces with his next brother Murād Bakhsh and after defeating an imperial army near Udjdjain on the 22nd Radjab 1068 (April 25th 1658), they encountered Dārā at the head of the main army at a place east of Āgra. The great battle of the 7th Ramaḍān 1068 (June 8th 1658) resulted in the crushing defeat of Dārā, who fled to Āgra and thence to Dihlī and Lāhōr. The victors advanced on Āgra and made the emperor a captive. Resuming their march westwards, Murād Bakhsh was seized by Awrangzēb in their camp close to Mathurā (4th Shawwāl 1068 = July 5th 1658). When he reached Dihlī Awrangzēb proclaimed himself as emperor (1st Dhu 'l-Ḳa'da 1068 = July 31st 1658). After pursuing Dārā first to Lāhōr and then to Multān, he was recalled to Āgra by a renewed attempt of prince Shāh Shudjā'. Shudjā' was defeated in

a pitched battle at Khadjwah, between Allāhābād and Āgra, on the 19th Rabīʿ II 1069 (January 14th 1659). Leaving his commanders to drive this antagonist eastwards from one point to another until he fled into Arakan, Awrangzēb returned to Āgra.

Dārā had gone down the Indus as far as Bhakkar and then turned eastwards, was admitted into Aḥmadābād, and assembling a fresh army moved northwards to Adjmēr. There Awrangzēb met and finally defeated his eldest brother on the 28th Djumādā II 1069 (March 23rd 1659). Two generals were sent off in pursuit of the fugitive; he was at length captured some distance to the west of the Indus, brought to Dihlī with ignominy, and there condemned and executed, 21st Dhu 'l-ḥidjdja 1069 (Sept. 10th 1659).

III. Years one to twenty three of reign (1658—1681).

The first half of the reign was marked by an invasion of Assam, a continuation of the remarkable career of Sivadjī the Mahratta leader, and many risings of the Paṭhāns in the country between India and Kābul. Mīr Djumla's attempt to conquer Assam was a failure and he died shortly afterwards (April 10th 1663). Shāyista Khān, the emperor's uncle, and Muʿaẓẓam, his second son, were sent successively to the Dakhin but obtained little success; they were followed by Rādjā Djai Singh of Amber and he persuaded Sivadjī to submit and attend at the Dihlī court. The reception accorded him was not cordial, he soon fled, and when he reached his home country at once resumed the strife. — Awrangzēb early in his reign paid one short visit to Kashmīr, and on account of the Paṭhān troubles he passed two years, 1674—1676, at Ḥasan Abdāl (Rāwilpindi district). In 1678 he resolved on absorbing the semi-independent Rādjpūt states. He moved to Adjmēr and sent his forces to invade Udaipur territory. At first he met with some success; but his fourth son, Akbar, having broken into rebellion, his attention was diverted from the Rādjpūts. After Akbar had fled into the Dakhin, the emperor moved on after him, reaching Burhānpur on Nov. 23rd 1681.

IV. Years twenty three to fifty of the reign (1681—1707).

For four or five years the emperor was occupied in pursuing Sambhadjī, the son and successor of Sivadjī, and in attempting the capture of Akbar. Akbar finally took refuge in Persia where he died. The local dynasties of Gulkanda and Bidjāpūr were next attacked. Gulkanda was partially annexed in 1685 and its total extinction effected in 1687, when the last king was taken, October 1st 1687. Bidjāpūr had been annexed in the previous year, the king submitting on Oct. 18th 1686. Sambhadjī was captured on December 28th 1688, and executed along with his Brahman minister. A successor, Rām Rādjā, fled south and continued the struggle at Djindjī, where he stood a desultory siege for over seven years. The concluding years were taken up with the reduction of many hill forts, but without much effect on the general situation, as they were frequently recaptured after a month or two. Awrangzēb's last exploit in the field took place in 1705 when he commanded in person at the taking of a petty fort Wākinkara (now in the Niẓām's Territories). In May 1705 he had a severe illness and for 12 days did not appear in public; some thought he was dead. The end had not yet come and he resumed his marching; he arrived at Aḥmadnagar in January 1706, and died there on the 28th Dhu 'l-ḳaʿda 1118 (March 3rd 1707), having reigned fifty (lunar) years and twenty seven days. He was buried at Khuldābād (or Rawḍa) four miles west of Dawlatābād and not far from Awrangābād.

His style and titles in life were Abu 'l-Muẓaffar, Muḥammad Muḥyi 'l-Dīn, Awrangzēb, ʿĀlamgīr, Bādshāh, Ghāzī; and after his death he was referred to as "Khuld-makān". He had four wives, Raḥmat al-Nisāʾ known as Nawāb-Bāʾī, mother of Muḥammad Sulṭān, Muḥammad Muʿaẓẓam and Badr al-Nisāʾ Bēgam; Dilras Bānū Bēgam, mother of Aʿẓam Shāh and Zīnat al-Nisāʾ Bēgam; Awrangābādī Maḥall, mother of Mihr al-Nisāʾ; and Bāʾī Udaipurī, mother of Kām Bakhsh.

Awrangzēb's gold coins bore the distich:

Sikka zad dar djahān čū mihr-i munīr
Shāh Awrangzēb-i ʿĀlamgīr.

On the silver coins *mihr* was changed into *badr*. He rejected the use of the *kalima* on coins, from conscientious scruples.

AWRĀS (Auresʼ; in the sixth century Αὐράσιον in Procopius, *De bell. Vandal.*, i. 8, ii. 12—13, 19—20) a mountainmass in Algeria in the Sahara Atlas [see Algeria, Atlas]. The meaning of the word Awrās has not yet been ascertained. It is probably a word of Berber origin that appears in several mountainnames. Possibly the Djebel Awrās to the South of Khenshela has given its name to the whole system.

The Awrās forms a quadrangle which from

North to South and from East to West measures about 65 miles and in the south of the province of Constantine covers an area of about 3600 square miles. It is terminated on the West by the low hills of Zāb which were traversed in ancient times by the Roman road from Lambiridi to Vescera and at the present day are crossed by the Batna-Biskra railway; on the east side the valley of the Wād al-ʿArab separates it from the Djebel Sherḏher. In the North it rises above the plateau of Sbākh and the basin of the Ṭarf; in the South it borders on the Sahara. The northern face slopes up to plateaus whose height in the lowest parts is about 3000 feet though in some places it is above 3300 (Baṭna 3443 feet) with which the Awrās is connected by very inaccessible spurs (Djebel Zella, Bū Amrūn, Bū ʿAzīz). The south slope drops abruptly into the low plateaus of the Sahara (420 feet at Biskra — 100 feet in the Shoṭṭ Melghir) and raises its almost perpendicular walls from 4600 to 5000 feet above the desert.

Consisting chiefly of Neocomian chalk and limestone, the Awrās was once subjected to very great erosion. Whole stories have been swept away by the waters. In some places all the movable earth has completely disappeared and the mountain become a rocky skeleton. The ruins, dissolved into muddy masses, have filled the valleys or been piled up in huge heaps at the foot of the southern slopes. The erosion still continues although of course it is much slighter now than in the past; the waters roll ceaselessly through the valleys and, in various places e. g. in Tighānimīn between Banyān and Meshūneish, and elsewhere, have dug out narrow ravines, straight gullies, sometimes several miles long with perpendicular walls hundreds of feet high. In other places in the valleys solitary rocks, worn by the waters, stand as evidence of the original formation of the land.

The structure of the Awrās is, though more regular and clearly marked, similar to that of the other mountain systems of the Sahara Atlas. The Awrās consists of a series of huge parallel folds stretching from S. W. to N. E. "which run close beside one another like folds in a cloth and form long straight ridges separated by deep valleys" (Niox).

The most important peaks on the northern slopes are Keff Maḥmel (7740 feet), Shelia (7759 feet), the highest mountain in Algeria, the Djebel Farʿawn (6980 feet) and 'l-Azreg (6419 feet); on the southern slopes the long ridge of the Aḥmar Khaddu (6933 feet) the south western spur of which thrusts itself out like a headland towards the desert.

Four valleys, which are only very slightly connected with one another and which are much split up in the upper parts, lie between the parallel ridges. These are from North to South the valley of the Wād Ḳanṭara formed by the union of the Wād Fedāla with the Wād al-Aḥmar; the valley of the Wād ʿAbdī reinforced by the Wād Bozīna; the valley of the Wād al-Abyaḍ, and its tributary the Wād Shennāwra; and lastly the valley of the Wād al-ʿArab formed by the confluence of various Wāds from the country round Shelia. These four rivulets flow from northeast to southwest and disappear in the plains of the Sahara almost immediately on emerging from the mountains. On the northern slopes some less important streams rise viz. the Wād al-Maḏḏer, Wād Shemora, Wād Bū Freiss, Wād Maʿrūl and Wād Baghai which are lost in the lowlands of Sbākh and in the Gara al-Ṭarf. All these watercourses form narrow ravines, where they break through the spurs of the Awrās, which are picturesquely called *Fūm* (mouth).

Lying as it does between the plateaus and the Sahara, the Awrās combines the flora as well as the climatic conditions of these two regions and at the same time has the characteristics of various districts in the Tell Atlas owing to its height.

Its highest peaks are constantly covered with snow in winter and spring, and the plateaus of the northern slopes are under the influence of the cold north wind; even in the South in the high-lying valleys the temperature sometimes falls to 12°—14° below freezing-point. To balance this however the thermometer in these same valleys, which are exposed to the hot winds from the Sahara and the dry Shehili, often rises to 100° to 104° and this temperature is the rule in summer. The flora and agriculture offer similar contrasts. From the desert one comes gradually into woods. The transition is peculiarly striking in the valleys of the southern slopes. The arable land in the lower valleys of the Wād ʿAbdī and the Wād al-Abyaḍ with its date-palms, orange and pomegranate gardens still bears the character of the oases of the Sahara. At a height of about 1300 feet the date-palm is only an ornamental tree though it is still to be found as high as 3000 feet flourishing in the gardens among olive and evergreen-trees and the fruit trees of the temperate zone (apricots, cherry and pear trees and vines etc.). Higher still grow the trees which lose their foliage in winter such as nut-trees, the oak and at a height of 4600 feet the cedar. The last named tree seems to have once covered wide tracts of the slopes of the Awrās but for reasons which are as yet little known, it is dying out and the few cedarwoods still surviving, of which the most important is the forest of the Beni Udjana on the slopes of the Shelia, are in a very miserable condition. The Awrās possesses arable land only to a small extent; this is to be found in the depths of the valleys where the natives have made use of it for laying out gardens, and on the slopes of these valleys where it is held together by a succession of walls of dried bricks. The highest hill districts only afford pasture. Arable land, strictly speaking, is confined almost entirely to the northern sides. This irregular division of the natural resources of the Awrās has determined the habits of its natives. As they can nowhere satisfy all their requirements but on the contrary find only one necessity of life in one place and another in another, they have been compelled to adopt a nomadic life. In winter the tribes settled on the southern side of the Awrās sow their fields on the north which they have reaped in summer; in autumn they descend to the Sahara to buy dates. In the intervals they bestow great care on their gardens in the depths of the valleys. Thus the inhabitants of the Awrās combine the Tell and the desert in their way of living just as the Awrās unites these regions in its flora and climate. On their migrations they live in tents; when they are stationary they live in houses whose walls consist of clay and pebbles plastered on a framework of branches and which are covered by roofs of hardened clay. In some

of the very narrow valleys they live in caves (*Afri*) in the cliffs in order to use the ground to the greatest advantage and also to have a better protection against hostile attacks. The valley of the Wād al-Abyaḍ contains such Troglodyte dwellings in large numbers. The houses are grouped in villages which appear to hang on the slopes of the valleys or to crown steep hill-tops, difficult of access, and to be dominated by the Gelaʿa (*Ḳalʿa*; in Shāwiya *Thaḳliāth*) a large stone building of several stories. A spiral staircase in the interior of the building leads up to these stories and the rooms in them where the harvest and provisions of the various families are concealed. During the absence of the dwellers in the village the Gelaʿa is guarded by a responsible watchman. The name Thaḳliāth denotes also in a wider sense, the whole village. The relatively large population of the Awrās may be divided into 11 tribes who form 36 *Duars* with a total of 88,100 souls. The density of population varies in different places; it is greater in the valleys than in the higher districts and it also decreases from West to East. In the Aḥmar Khaddu there are 11 among the Ūlād Daʿūd 33, among the Ūlād ʿAbdī 37, among the Benī Fera 40, among the ʿAmamra 44, among the Benī Bū Slīmān 48 inhabitants to the square mile.

The population of the Awrās consists of different elements. Other constituents have been added to the Berbers who form the original stock; in the first instance descendants of the Roman and Byzantine colonists as well as the Vandal invaders and later the Arabs. The Berber element is still by far the most important, being particularly predominant in the mountainous and least accessible parts of the range. On the other hand the Arab element is conspicuous in the valleys and the neighbourhood of the Sahara. Of Arab or nominally Arab tribes — they are for the most part mixed with Berbers — there may be mentioned: the ʾl-Akhḍar Ḥalfuya, who have immigrated from the Biskra district or they are another branch of this stock; the Ūlād Fedahla who come from the Bilān district, the Ūlād Ziyān who have settled in the oases of Benī-Suik, Djemora and Branīs in the lower valley of the Wād ʿAbdī and who are said to have immigrated in the sixteenth century from Sāḳiyat al-Ḥamrā but are in reality Arabic speaking Berbers; the Ūlād ʿAbdī and the Ūlād Daʿūd who profess to be of Hilālī descent. The two last-named groups are said to have incorporated descendants of Roman colonists on which account they have received the name Rūmiya. The former settled in the upper valley of the Wād ʿAbdī, the latter in the valley of the Wād al-Abyaḍ after the Udjāna-Berbers had been driven out. Lastly the Benī Slīmān, a branch of the ʿAmamra, the Shorfa and the Serāḥna of the the Aḥmar Khaddu also claim to be of Arab descent.

The Berbers, however, are superior in numbers and they have therefore given the population of the Awrās the cast of features which is characteristic of them to this day. These Berbers call themselves *Ḳebāʾil* (Kabyls) but by the Arabs on the other hand they are called Shāwiya from شاة (sheep) perhaps in a contemptuous sense, for an Arab proverb actually credits the Shāwiya with having sheeps' brains in their skulls. Physically they present no uniform type throughout, no doubt owing to the numerous crossings between individuals of different stocks. Yet in the Awrās fair haired people with blue eyes are more numerous than in any other Berber country and make up nearly one eighth of the population. The language of the Shāwiya is a Berber dialect which they themselves call "*ḳabāʾiliya*" (Kabylian). Although belonging to the same family as the dialects of Great Kabylia it is so different from them that it is impossible, for example, for a Shāwiya to make himself understood by a Zwāwa according to G. Mercier the Shāwiya would seem to be more allied to the dialects of the Warsenis (Wānsherīsh) who belong to the Zenāta family like the Berbers of the Awrās. A number of words have passed into the Awrāsian dialects, whose Latin origin is still easily recognised e. g. *urthu* garden (hortus), *kerrush* oak (quercus) etc. The dialects of the various valleys also show marked distinctions in pronunciation and vocabulary so that two distinct groups of dialects may be distinguished: the Zenātiya in the eastern and the Tamazight in the other parts of the Awrās. Although they have been converted to Islām since the earliest days of the Arab conquest, the Shāwiya have still preserved some traces of the religions (Paganism, Judaism, Catholicism, Donatism) adopted successively by the inhabitants of the Awrās. This accounts for the survival for example of tattooing in the form of a cross or in the form of the letters ᵡ and ᵡ, sacrificing at traditionally sacred places, the taking of oaths at megalithic monuments and the festivals at certain seasons of the year. Thus processions take place among the Ūlād ʿAbdī in the spring similar to Christian processions of intercession, followed by festivities and dances lasting for two days. Similarly the threshing and bringing in of the harvest in the beginning of autumn gives occasion for great rejoicings; and lastly New Year's Day (*Bū Ini*) is celebrated with songs, dances and customary rites. Besides, the Shāwiya have preserved the Julian calendar instead of adopting the Muḥammadan. Their year contains 365 days; the names of the months (*Zhennār*-January, *Furār*-February etc.) suggest the old Latin names. The names of the days of the week alone are borrowed from the Arabic. These survivals of pre-Islamic times do not prevent the Shāwiya from following the impulse of Muḥammadan fanaticism and they enter religious brotherhoods almost as readily as the Kabylians. The brotherhood of the Raḥmāniya, whose centre is the Zāwiya of Timermāsīn at the foot of the Aḥmar Khaddu numbers 2500 members, in the Awrās that of the Shādhiliya some 2000, that of the Ḥabbāb 500 or 600. Lastly the Ḳādiriya, enthusiastic adherents of the family of Bū ʿAbbās, the owners of the Zāwiya of Menāʿa, are likewise widely spread. It is by the instigations of these brotherhoods that the revolts have been stirred up of which the Awrās has been the scene since the French conquest. On the other hand mystic love has in no way improved the morality of its adherents. The code of morals prevalent in the Awrās is a very loose one. *Fulāḳ* is frequently resorted to (in the Wād al-Abdī 500 à 600 cases yearly). Prostitutes or ʿAzria (lit. 'divorced women') are very numerous. Certain places, especially Menāʿa are notorious in the whole district as abodes of pleasure.

At the time of the Arab conquest the Awrās was populated by Berber tribes of the great Zenāta family (Awraba, Djerāwa). All these tribes

had maintained their independence in the mountains. After the Romans and the Vandals the Byzantine Emperors had been content with keeping the Berbers in check by a row of fortifications on the south slope of the Awrās (Lambaesis, Baghāi, Mascula). The advance of the Arabs seems however to have brought about a *rapprochement* between the Berbers and their old adversaries. When ʿOkba penetrated into the Maghrib the Berbers united with the Greeks and inflicted such severe losses on him before Baghāi and Lambaesis that he did not dare to penetrate further into their land. On his return to the West from his great campaign he contented himself with a reconnoitring march into the Awrās but met his death at Tehūda in the neighbourhood of the Awrās. Apparently the tribes of the Awrās on this occasion united with the other Berber tribes under command of Kusaila to act conjointly in a rebellion and chose Kusaila as their chief. After the destruction of his kingdom by Zuhair b. Kais, the Awrās served the defeated peoples as a place of refuge and became the centre of resistance to the Muslims. It was not till the beginning of the eighth century A. D. that opposition was finally crushed under the governorship of Ḥassān b. al-Nuʿmān after bloody battles alluded to in the saga of Kāhina, queen of Djerāwa. The Awraba and the Djerāwa were almost exterminated by these wars; their place was taken by the Howāra and Lowāta, Berbers from Tripolis and South Ifrīḳiya who settled in the Awrās. All these native tribes were converted to Islām whether willing or unwilling, but nevertheless they preserved a certain independence of thought which was manifested in the enthusiasm with which they adopted heterodox doctrines such as Abāḍism in the eighth and the Nekkārite system in the tenth century. It was from the Awrās also that Abu Yazīd Mukhlad b. Kaidad [q.v.] "the man with the ass", came, whose rebellion in 934—947, temporarily imperilled the Fāṭimid dynasty founded by ʿUbaid Allāh [see FATIMIDS]. The Hilālī invasion in the eleventh century altered the ethnographic aspect of the Awrās. The Duraid, a branch of the Athbedj, settled on the northern hills, then advanced southwards and arabicised part of the Howāra. Nevertheless the great mass of the invaders remained at a distance from the interior of the mountains and a certain proportion of Arabs seems even to have blended with the natives and become berberised. In the following centuries the people of the Awrās played practically no part in the history of the Maghrib, though they have been able to maintain their independence intact and to avoid falling under the suzerainty of the Ḥafṣids, the new rulers of the province of Constantine. The rule of the Turks in later times made no difference in this respect. Since the sixteenth century the Turks have had a garrison in Biskra, but it was not till the beginning of the eighteenth that they attempted to appoint chiefs in the Awrās who would support their policy. The first of these was Zadira b. Muḥammad Bū Ḍiyāf, who according to the account of the traveller Peyssonnel was recognised by all the tribes about 1725 and took the title of Shaikh of the Awrās. The authority of these chiefs, however, as well as that of the Beys of Constantine on whom they were dependent was always very doubtful. Thus for example, the Ūlād Dāʾūd constantly prevented the entrance of Turkish troops entrusted with the collection of taxes and the Ūlād ʿAbdī only allowed the troops summoned for the relief of the garrison of Biskra to pass through. The Benī Udjāna and the ʿAmamra were almost incessantly in revolt against the Beys of Constantine of whom the last, Aḥmad, was forced into a campaign against them in 1834.

Till the French conquest the tribes of the Awrās preserved with their independence, their old political institutions which on the whole resembled those of the Kabylians. They never managed to construct a great political system for they never once succeeded in combining into federations of several tribes bound to one another by oath as the Berber tribes of the Djurdjura had already done. The basis of their organisation was always the village, a genuine commonwealth governed by the council of the people (*Djamāʿa*). The institutions of this village however are more primitive than in Kabylia. For while the Kabylian Djamaʿa appoints an authorised President (*amīn*) invested with power to execute their resolutions, the Djamāʿa of the Awrās limits itself to entrusting the execution of its orders to some man (*Kebdji*) distinguished for his courage and physical strength. Legislation is also much less developed and the Ḳānūn or collected lists of punishments for different breaches of the law are much more summarily compiled. Beside these differences however, there are many points of agreement between the institutions of Kabylia and those of the Awrās; the same separatistic spirit, the same enmity between the individual villages and within the villages themselves the same division into parties (*Ṣof*), whose rivalries often result in hostilities and bloodshed. Among the Ūlād ʿAbdī and the Ūlād Dāʾūd for example, each village was divided into four hostile camps of which each had its own leader (*Amoḳrān, Amghār*). Even the topographic situation of the human settlements and the precautionary measures adopted for their defence are sufficient proof that the individual tribes looked on their nearest neighbours as their worst enemies. All that can be further learned of the domestic history of the Awrās is limited to constant tribal feuds and quarrels in the villages. Some families which have attained power by piety or their warlike spirit have moreover been able to make use of these rivalries to their own advantage e. g. the Bū Aokkaz (ʿOkkāz), the Benī Ganah (Gāna) and also the chiefs of the Great Zāwiyas of Timermāsin, of Khanga Sīdī ʾl-Nādjī and Menāʿa.

The French occupation put an end to this state of affairs. Immediately after the conquest of Constantine (1837) the necessity became apparent for subjecting a district that served as a place of refuge for the ex-Bey Aḥmad and all the malcontents. Baṭna and Biskra were occupied in 1844. In the following year the Duc d'Aumale advanced into the Awrās from the south and conquered Mechūnesh. Bedeau marched through the valleys of the Wād al-Abyaḍ, the Wād ʿAbdī and the district around Shelia and forced the chief tribes to recognise the suzerainty of the French. This conquest however was only temporary. Incited by Aḥmad Bey the natives refused to pay taxes and opposed the Ḳāʾids appointed by the French government. Under the command of Canrobert and Carbuccia new campaigns were undertaken into the Wād ʿAbdī in 1848 and 1849.

These had scarcely ended when the rising of Bū Ziyān in the Zībān brought about another rebellion in the Awrās. This was suppressed by Canrobert who captured and destroyed the village of Nara in the Valley of the Wād ʿAbdī on the 6th January 1850 and by St. Arnaud who marched through the mountains with a column of troops in May and June of the same year. Perfect peace now reigned till 1859 where a rebellion broke out under the leadership of the Marabut Si Ṣaddoḳ (Ṣādiḳ) b. al-Ḥādjdj who was overthrown by general Desvaux. When the Kabylians took up arms in 1871, the Shāwiya remained loyal, thanks to the influence of their two chiefs Si Ben Diyāf and Si Muḥammad b. ʿAbbās. In 1879 however, the Ūlād Dāʾūd revolted on the call of the Sharīf Si Aḥmad Amziyān and supported by the Lehalā, a Marabut clan of Arab origin who believed their prestige to be endangered by the increasing intercourse between the Christians and the Shāwiyas. This rebellion which began with the murder of all Ḳāʾids devoted to the French cause, was suppressed by the troops of the Constantine Division (2—20 June 1879). The forces of the Sharīf were annihilated in the battle of Rebāʿa on the 9th June. The survivors died of hunger and thirst on their flight to Southern Tunisia, and Si Amziyān who had fled into the Djerīd was handed over to the French authorities.

Since that time there has been no revolt in the Awrās and peace may be considered finally assured. Nevertheless, with the possible exception of the northern borders, the Awrās offers no future to European colonisation because of the structure of the country and its want of natural resources; just for these reasons it seems that it ought to be preserved for its natives. With regard to administration, it comprises three mixed communities (communes mixtes): ʿAin Tuta, Awrās (with Lambèse as capital) and Khenshela and in addition a military colony with Tkūt as its chief town.

AL-AWS, a tribe in Medina. The name is abbreviated by the dropping of the name of some deity in the genitive, probably Manāt for there is an Awsite clan called Aws Manāt (in the Islāmic period Aws Allāh). The genealogical scheme is: Aws b. Ḥāritha b. Thaʿlaba b. ʿAmr b. ʿĀmir b. Ḥāritha b. Imruʾ al-Ḳais b. Thaʿlaba b. Māzin b. ʿAbd Allāh b. al-Azd etc. The statement of the Arabs, that the Awsites did not call themselves sons of Ḥāritha but sons of Ḳaila their mother is confirmed by facts. They are also said to be often included under the name of their more important collateral tribe the Khazradj [q. v.]. In ancient times they were divided into five clans: ʿAmr b. ʿAwf, al-Nabīt, Djusham, Murra and Imruʾ al-Ḳais. From the weakened remnants of the three last-named was formed a new clan to which the neutral name of the chief tribe Aws Allāh or briefly al-Aws was given. The Aws Allāh were divided into four septs, the Khaṭma (the most powerful, formerly the Djusham) the Umaiya and the Wāʾil (formerly the Murra) and the Wāḳif (in reality the earlier Imruʾ al-Ḳais). Among the clan of Nabīt was a sept the Ẓafar which was also called Kaʿb b. al-Khazradj, so that there were Khazradjites among the Aws. "The Aws inhabited a wide district in the east and south around the Khazradj" (Wellhausen).

History. The Awsites originated in south Arabia and after settling peaceably with the Khazradjites among the Jewish tribes in whose possession Medina was, gradually reduced them to a state of inferiority [see MEDINA]. For the most part the Jews among the Awsites were scattered, but there were however two powerful independent Jewish families in the Awsite quarter, the Naḍīr and the Ḳuraiẓa, allied with the Awsites. They afforded effective assistance to the Awsites in the time of the wars with the Khazradjites; when however Muḥammad's war of extermination against the Jews was begun in later days, the Awsites were not in a position to do them similar services in return. The Awsites in Medina were much broken up and weakened by feuds of more or less importance among their clans and families. This resulted in many changes in their power as well as in their settlements, in wholesale exoduses from the district, in families settling in the lands of one another, in the utter extermination of certain parts, and in driving many Awsites over to the side of the Khazradjites. The most serious were the fights between the Aws and the Khazradj which lasted ten years in which sometimes a larger and sometimes a smaller part was embroiled and sometimes even the whole tribe. This war in which brother fought against brother reached its crisis shortly before the Hidjra in the battle of Buʿāth in which the Awsites although weakened by previous feuds which had ended unfavourably for them, were victorious, being supported by Arabs from outside the district and the two Jewish tribes above mentioned. They were thereby saved for a time; their existence however was only assured as a result of the Migration of Muḥammad who gradually adjusted the still very strained relations among them. The Awsites had no share in the earliest overtures between Muḥammad in Mecca and the people of Medina but they did take part in the conclusion of the treaty promising protection, which paved the way for Muḥammad's settling in Medina. When Muḥammad shortly after his arrival in Medina persuaded the greater part of his followers from Mecca to fraternise with the natives of Medina, there were but few Awsites among the latter and for a long time many Awsites held themselves aloof from Islām or were even hostile to it; at times they caused the prophet serious difficulty by their opposition in religious matters, by their indifference in the religious wars etc. Gradually however they all adopted Islām, even the Jewish families which

had been politically merged in them. When the choice of a successor after Muḥammad's death came near being decided by bloodshed, the Awsites assisted in securing the election of Abū Bakr because his opponent belonged to the tribe of Khazradj.

Religion. In pagan times they worshipped Manāt as their chief deity. Not long before the Hidjra, probably as a result of the influence of Jewish monotheism through many years, a kind of reformed paganism, introduced by the Rāhib (ascetic) Abū ʿĀmir who did not confine himself to leading the Aws Allāh in battle, had gained ground among the Aws Allāh and the ʿAmr b. ʿAwf but it could not hold its own against the competing Islām. The Aws Allāh saw Abū ʿĀmir, soured, unswervingly hostile to Muḥammad, depart to heathen Mecca with 50 adherents of his tribe. His faithful disciples in Medīna secretly maintained their relations with him in religious matters, but they did not dare go over to him, as he hoped, after the defeat of Muḥammad at Mount Oḥod, where he fought in the ranks of the victorious Meccans. They appear to have agreed in accepting Islām tinged with Abū ʿĀmir's doctrines; but Muḥammad refused them permission to keep apart and worship in a mosque of their own. It cannot be proved that Abū ʿĀmir and those sharing his views were Christians.

(RECKENDORF.)

AWS B. ḤADJAR, the greatest pre-Islāmic poet, of the tribe of Tamīm, born about 530, died about 620 A. D. We do not possess reliable, accurate dates of his life. He was a contemporary of ʿAmr b. Hind of al-Ḥīra and was always closely in touch with the court of this Lakhmid prince, although he used to lead a restless life of wandering. Aws b. Ḥadjar was the father of Shuraiḥ who is mentioned as a poet and the step-father of the famous poet Zuhair who was his Rāwī (reciter and transmitter of his works). A Dīwān of his poems has not been preserved to us, but one is said to have been collected and annotated by Ibn al-Sikkīt. Besides the usual themes of early ancient Arab poetry hunting scenes and descriptions of warfare are prominent in his poems.

Anz.*, 1895, n°. 5 and in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.*, ii. 85—144, 673—680; Fraenkel, *ibid.*, p. 297; Brockelmann, *Gesch. d. arab. Litter.*, i. 27. (A. HAFFNER.)

AWTĀD (A., sg. *Watad*), lit. "pegs" the third category in the hierarchy of the *Ridjāl al-Ghaib* containing four holy beings; they are also called *al-ʿUmad*, the pillars [see ABDAL]. Each of them is entrusted with the supervision and care of one of the four quarters of the heavens in the centres of which they have their dwelling place. (GOLDZIHER.)

AL-**ʿAWWĀ** (A.) "the howling" (dog or wolf) denotes in Astronomy not only the thirteenth position of the moon but also the constellation Bootes (also called *al-Ṣaiyāḥ*), cf. Ḳazwīnī (ed. Wüstenf.) ii. 32, 46.

AWWAL (A.), first; beginning; also one of the ninety nine names of God.

AL-**AWZĀʿĪ**, ʿABD AL-RAḤMĀN B. ʿAMR ABŪ ʿAMR, a Jurist born in Baʿalbekk 88 (757). Later he lived in Damascus and Bairūt. Nothing else is known abut his life, his good character and asceticism are emphasized; he died in his bath in the year 157 (774) and was buried in the Ḳibla of the mosque in Bairūt. — Al-Awzāʿī during his life-time was a star of the first magnitude. He is said to have been the *imām* of Syria and even the Maghrib and Spain are said to have followed his Madhhab. His influence soon declined in favour of that of Abū Ḥanīfa and of Mālik. Hardly any data about his system or about his works are known in literature. According to a contemporary "he was well versed in the law but was no authority for the transmission of sayings of the Prophet" (Goldziher, *Muh. Studien* ii. 12). According to others, on the contrary, none of his contemporaries in Syria was so conversant with the *Sunna* as he. Some traditions which he has handed down, are to be found in Ṭabarī (see Index).

According to some authorities his *Nisba* is derived from a South Arabian tribe, the Awzāʿ, according to others from the name of a quarter of Damascus.

ĀYA (A.) token, miracle (of God), a verse of the Ḳorʾān.

ĀYA ṢŌFIA, the largest mosque in Constantinople and formerly the first Christian metropolitan church of the East, which before 1453 was usually called Ἡ Μεγάλη Ἐκκλησία, about 400 A. D. Σοφία without the article, and at the present day universally by the Greeks known by the name of Ἡ Ἁγία Σοφία as, indeed, it was often called in Byzantine times.

The importance of this monumental building in the history of art lies in the fact that it is a perfect specimen of the method of constructing a dome, which had formerly been in vogue in the plains of Mesopotamia and from there had travelled to the eastern shore of the Aegean Sea. Architects from Asia Minor introduced the new principle into the Byzantine capital and also into Justinian's building the Ayā Ṣōfia, which then, being regarded as a model far and wide, displaced the Hellenic form of the Basilika for all time in the orthodox Greek East. To Syrian influence may be traced most of the decoration of the Ayā Ṣōfia; the extended use of brick which at that time was little used in important buildings is another characteristic of the cathedral; this is still more remarkable because Asia Minor may be regarded as one of the richest lands in valuable building stone. To the present day the Ayā Ṣōfia has remained unsurpassed as a model for the building of orthodox churches, especially in Russia, though many churches in western Europe have been designed from it, amongst them that of San

Marco in Venice, while the most beautiful of the mosques erected by the Turks in Roumelia are, as a rule, smaller and simplified facsimiles of the unsurpassed masterpiece in the capital, with the application of new and improved methods of construction. According to the most recent researches the Āyā Ṣōfia in its original form was not built by Constantine the Great but, according to his last instructions, by his son Constantius after he defeated Licinius his brother in law. It was built in the form of a basilika and consecrated in 360 A. D. This "Great Church" passed through many vicissitudes at short intervals. Fire and earthquake played great havoc with it. In 415 A. D. it rose again from its ashes, to remain unharmed for over a century till it was consumed by fire (as was the greater part of the town and even the state archives) in January 532 during the rioting by the factions of the circus.

The Emperor Justinian then proclaimed his resolution to re-erect the church in unheard of splendour. Even before this time Justinian had given strict orders throughout the provinces of his wide kingdom, in which so many pagan works of art had been deliberately destroyed, that the valuable material of these ancient monuments was to be sent to his residence. After the fire this material was used principally for the reconstruction of the Āyā Ṣōfia. Two of the greatest architects the world has ever seen, Anthemios of Tralles and Isidoros of Miletus were entrusted with the supervision of the building. Mindful of the imperial warning, that the new church should be proof against fire and earthquake, they recognised the safest means of avoiding its previous fate, in a system of vaulting and dome. In December 537 the consecration of the splendid building was completed with unusual pomp so that Justinian was able to exclaim in the fulness of his pride: "Solomon, I have beaten thee". Nevertheless in his reign (558) the eastern part of the dome collapsed as a result of an earthquake whereby ambon, tabernacle and the holy table were ruined. The dome, which had been planned too flat, was now heightened by more than 20 feet and the abutments of the great main pillars much strengthened so that by 563 it was possible again to have the ceremony of consecration. The church had a most enviable situation: to the South was the Augusteum, with the equestrian statue of Justinian, which was appropriated to national festivities; to the North, just within the modern Serāī walls, were the court churches, fine monasteries and the palaces of the court officials; in the East, towards the sea was the imperial palace.

On the west side the visitor entered a court, the Atrium, surrounded on the right and the left by open halls. From here several doors (perhaps four or five) led into a closed hall (Exonarthex) which was also regarded as part of the Atrium; from these five doors led in to the Narthex proper (Esonarthex) where still another door opened on the widely separated north and south ends. The passages now branched still more and nine rectangular door-ways facilitated the entrance to the interior of the church of which the central one, imposing and richly decorated, was the King's door.

The space covered by the church is almost quadrilateral while the length of the interior with the exception of the chief apse, situated in the east wing is about 250 feet and the breadth nearly 235 feet. The pendentive dome, shaped almost in the form of a hemisphere, rises 190 feet above the floor space which is cross-shaped. As the outer walls alone could not have supported its weight it had to be supported by four piers and these again by pillars smaller, though of great importance in the construction.

On the east and west sides of the dome were two wide, semi-circular spaces, each of which was crowned by three half-domes. In the construction of the interior the two-storied arrangement of the galleries adjoining the main body of the buildings, of which the upper, as was usual in Byzantine churches, was reserved for women.

The number of pillars which shared the weight of the building, was 107, 40 below and 67 above, nearly all monoliths of coloured marble (Verde antico), some however of red porphyry. The richness of the interior decoration, the marble used in a most extravagant fashion for all parts, the pictures of Christ, of the Virgin, of the prophets, of the apostles and of the saints as well as of the mighty seraphim (in the pendentive of the dome) which covered the walls with a sea of colours, the inlaying of the domes and walls with gold mosaic in unheard of splendour, made a striking impression on the spectator of the middle ages. The surrounding walls and the vaulting of the original building were built entirely of brick. The place for the clergy (βῆμα) situated on the east side, containing the altar and ciborium and leading to the chief apse was separated from the central part of the church by a screen of considerable height adorned with pictures and pierced with beautiful designs. The clergy who had also to attend to the services in three other churches consisted of 425 persons excluding 100 doorkeepers. Shortly before the break up of the Byzantine Empire the number of officials of the Āyā Ṣōfia was about 800.

The first thorough restoration of the Āyā Ṣōfia took place in the reign of the Emperor Basil Macedo (second half of the ninth century). In 989 a part of the dome fell in during an earthquake. The church suffered severe damage at the hands of the Latins in 1204 who plundered recklessly and desecrated the holy garments and vessels by using them as trappings and troughs for their horses. The extensive alterations which date from Byzantine times belong to the fourteenth century, in the first half of which the walls of the great building were strengthened on all sides and the east wing, the finest part of the building, especially was supported by high and broad buttresses on the outside.

We have no description of the interior of the Āyā Ṣōfia in Byzantine times from the pen of a Muḥammadan. The first Muslim to give full account of the Cathedral is Aḥmad b. Rosta (*Kitāb al-Aʿlāḳ al-nafīsa* in the *Bibl. Geogr. arab.*, ed. de Goeje, VII; the author lived about 290 = 902-903). Without entering into a description of the edifice which he calls *al-Kanīsa al-ʿuẓmā* (i. e. ἡ Μεγάλη Ἐκκλησία) he gives an exact and life-like picture of a procession of the Byzantine Emperor to church. On a festival in which the Muḥammadan prisoners of war were led to church (it may perhaps mean: into its Atrium) they greeted the ruler with the cry, "May God preserve the Emperor's life for many years", (*ibidem*, p. 125).

Of importance is his remark that there had been four and twenty little doors, mentioned nowhere else, at the west door besides a *Madjlis* (which probably means benches) the opening of each of which was a span square. At the end of each hour of the twenty-four one of the little doors sprang open and closed again automatically.

As a result of the decline of the caliphate, Arab writers after Ibn Rosta give less and less information about the far distant city of Constantinople till about four centuries later, after Asia Minor had been conquered by Turkoman tribes, Shams al-Dīn Muḥammad al-Dimashḳī (ed. Frähn and Mehren, St. Petersburg, 1865 p. 227) who seems however to have relied on a work of the somewhat earlier copyist Aḥmad, mentions the Āyā Ṣōfia in a few lines (*ibid*, p. viii). The only noteworthy point is his remark that an angel lived in the church and that its abode was surrounded by a screen by which no doubt is meant the place containing the altar and the ciborium beside the screen.

Muḥammad b. Baṭṭūṭa (ed. Defrémery and Sanguinetti, ii. 434) is the first, some centuries later, to ascribe the building of the Āyā Ṣōfia to Āṣaf b. Barakhyā [q. v.] said to be a cousin of King Solomon. Ibn Baṭṭūṭa's merit lies in his very exact description of the Atrium. He dared not enter the church himself however, as he narrates, because he had not obeyed the order mentioned by him to kneel down before the cross at the entrance.

When the Turks conquered Constantinople (29 May 1453) the defenceless inhabitants fled in crowds to the church in the belief that as soon as the enemy had reached the pillar of Constantine the Great an angel would appear in the heavens and scatter the victors so that they should never see their Asiatic homes again. But the Turks came, broke open the doors of the house of God and finding the terrorised people an easy prey, carried them off both men and women into slavery. Eyewitnesses make no mention of the streams of blood polluting the holy place which later writers delight in describing. The unfortunate refugees were quickly made prisoners and the tragedy was quickly over, the conqueror himself entered the church — but not on horseback as is often insisted — caused his Mu'adhdhin to recite the call to prayer including the creed and threw himself at once with all his followers on his knees before the one God. Thus was the temple of Constantius and Justinian consecrated to Islām.

The changes which the iconoclastic prescriptions of the victorious religion forced upon the new masters are very important in the interior. The mosaics which had previously decorated the walls and ceilings, works of art which seemed to have been made for all times by the cunning hand of the Greek craftsman were concealed from the eye of the spectator by monotonous whitewash. The screen between the place for the clergy and for the laity was torn down, the rich fittings of the east wing, and the Bēma were destroyed. As the old Byzantine churches were built in the direction of Jerusalem and the Ṣalāt on the other hand must be performed with the face towards Mecca, since the day of the conquest the Turks have prayed in the Āyā Ṣōfia not only towards the east wing of the mosque but turned rather towards the South in a diagonal direction. Since the time of Meḥmed II the preacher has mounted the pulpit armed with a wooden sword on Fridays and each afternoon of Ramaḍān and at the festivals of Bairām [cf. Article 'ANAZA and Juynboll, *Handbuch des islām. Gesetzes*, p. 84, 87]. There are also two flags at the sides of the pulpit. We further know of the reign of Meḥmed II that he built powerful buttresses against the south-east wall and built in the same place the first of those slender minārets which rise high into the air. Selīm II built the two buttresses on the north side and the second mināret on the north-east corner; his son Murād III was the builder of the other two.

Sultan Murād III undertook a thorough renovation of the whole mosque. This was primarily concerned with the smaller defects which had come to light in course of time but of course contributed considerably to the beautifying of the bare space. The Sultan took advantage of this occasion to place in the interior near the principal entrance two huge alabaster urns each holding 1000 gallons of water and erected the two large estrades (*Maṣṭaba*) on one of which, the right, the Ḳor'ān is recited almost all day in that cadence peculiar to the liturgy of all Oriental creeds; while the other, the left, is reserved for the Mu'adhdhin. Murād III also had the crescent measuring 150 feet in diameter, which crowns the dome having taken the place of the cross, gilded at enormous expense. Thus, from afar, even from Olympia in Bithynia the Muslim subject of the Porte sees the symbol of his faith glittering in the sun.

In the second half of the sixteenth century, they began to build the mausoleums of the Sultans in the cemetery adjoining the mosque on the south. The oldest is that of Sultan Selīm II. His son Murād III and his grandson Meḥmed III are also buried here. Sultan Meḥmed's nineteen brothers, whom he had murdered on his accession to the throne, were also laid to their eternal rest here. When some decades later, on the sudden death of the Sultan Muṣṭafā, who had been deposed a long time before, a suitable burial place could not be readily found at once, the old Baptistery (on the south side of the Narthex), which had served the Turks as an oil-store since the conquest was appropriated for this purpose. Sultan Ibrāhīm, Muṣṭafā I's nephew was also buried there some years later. The very considerable store of oil was afterwards kept in the hall and court on the north side of the Baptistery.

Sultan Murād IV (1623—1640) took considerable interest in the walls which were uninviting in their bareness. It is only since his reign, which is marked in some ways by a revival, that the gigantic quotations from the Ḳor'ān written in gold by the hand of the famous calligrapher Bitaḳdji-Zāde Muṣṭafā Čelebi, have been in existence. Letters like Alif are 30 feet long. All the artistically pointed, much interwoven verses, whose decipherment is still the delight of old Turks, were nevertheless surpassed by the clear, vigorous painting of the names of the first four caliphs which were fixed on the walls. The pulpit (*Minbar*) also a work of art which still exists, dates from this period. Of Aḥmad III we know that he built the enclosed raised seat (Maḳṣūra) on the north side of the chief apsis, for the Sultan. Maḥmūd I (1730—1754) built, besides the great loge for the Sultan in the gallery of the first

story, some institutions which in the East are inseparably connected with a mosque: the fine fountain and the school, both in the court on the south side, the large dininghall (*'imāret*) on the north and the valuable library in the mosque itself, though there are undoubted traces of the fact that the latter goes back to an older foundation situated in the mosque.

Since the time of Murād IV, the conqueror of Baghdād, the interior decorations of the mosque have been neglected in a manner indicative of the general decline of the empire. To prevent the threatened collapse of some parts and also to give the interior a more decent appearance Sultan 'Abd al-Madjīd entrusted the Italian architects Fossati Brothers in 1847 with the complete renovation of the building. The work lasted two years. The whitewash was only retained where human figures were depicted but everywhere else was cleaned off so that the walls glittering in gold and all other shades of colour resumed their old appearance. The yellow painting striped with red on the outer wall dates from the restoration. The manner in which the Sultan showed his reverence for the great deeds of his forefathers, was rather peculiar. Like all other parts of the mosque the minārets were also repaired; only that of Meḥmed II who had given the last decisive blow against the Byzantine Empire was to be excepted. The Italian architect was however finally entrusted with the task of making this minaret as high as the others.

It is fortunate for the mosque that it has suffered so little from earthquake since the tenth century. It must be recognised that it is primarily due to the buttresses built against the walls on three sides by the last Byzantine Emperor and the Turks, if this giant building situated on ground subject to earthquakes, has been able to be of service to mankind longer than any other building in the rest of Europe. On the other hand the storms from the Balkans and the sea seem to be much more dangerous to the mosque.

By order of the Minister of Education the rooms of the library, which is controlled by five Khodjas each of whom officiates in turn for one day of the week, were thoroughly renovated in the summer of 1906.

The mosque presents an interesting picture in the month of Ramaḍān. The princes and the official world are present at afternoon prayer. There is not so much display in the evening at the Tarāwīḥ-prayer offered at an hour and a half after sunset. The dome is lit by countless lamps arranged in a circle. The greatest splendour is displayed on the twenty seventh night, the *Lailat al-Ḳadr*, on which the Kor'ān descended from heaven to earth. While the earlier Sultans frequently attended the solemn celebrations, 'Abd al-Ḥamīd II, so far from coming regularly, visited the mosque only in the middle of Ramaḍān when he, coming by boat, honoured the relics of the prophet in the ancient castle of his ancestors, with only a fleeting visit (*Yewm-i Ziyāret-i Khirḳa-i Se'ādet*).

The countless legends which had been woven around the origin and features of the church in the latter days of the Byzantine Empire, were on the conquest at once adapted by the Turks who merely clad them in Muslim guise. Even soon after his victorious entry, Meḥmed II ordered Aḥmad b. Aḥmed al-Gīlānī to compile from Greek sources a Persian history of the Āyā Ṣōfīa (Library of the Āyā Ṣōfīa nº. 3025), afterwards translated into Turkish by Ni'mat Allāh (died 969 A. H. = 1561-1562). According to Kātib Čelebi (ed. Flügel, II, 116) a second Persian work, which apparently cannot now be identified, was composed for the same ruler by the astronomer and cosmographer 'Alī b. Muḥammad al-Ḳūshdjī [q. v.]. Another work by an unknown author of the year 888 (1483-1484) is in the Royal Library in Berlin (Ms. Orient. 8º 821) as a supplement to a Turkish history. Similar to this little work in tenor and origin are the more interesting *Tawārīkh-i Ḳosṭanṭīnīya* (Fleischer, *Kat. Dresden*, Nº. 153; Pertsch, *Türkische Hss. zu Berlin*, Nº. 231) composed about three years later. According to these, the fabulously wealthy Āṣafiya, the wife who died early, of Constantine b. 'Alāniya gave orders in her will for the building of a church which should surpass all other buildings of the world in height. The architect came from Frangistān. He is said to have laid the foundations to the depth of 120 feet to strike water. After he had finished the church with the exception of the dome he is said to have fled; the building stood untouched for ten years till he returned and placed the dome on it. Marble (literally Marble-metal, *Marmor Ma'deni*) which had hitherto been known only to the Dīws was brought from all countries. The "metal" for the four variegated *sümāḳī* pillars which decorate the interior — these naturally consist entirely of the very hardest marble — was brought from mount Ḳāf. The huge doors were made from the wood of Nūḥ's (Noah's) Ark, which had already been of service to Solomon for his buildings in Jerusalem and Cyzicus (Aidindjiḳ). The cost exceeded 360,000 bars of gold, (each containing 360,000 flōri). In the reign of the grandson of Constantine, Heraklius, who was a contemporary and a secret adherent of the prophet the dome fell in, but was at once rebuilt by the pious Emperor. To the time of Sulaimān the Great belong the *Tawārīkh-i Ḳosṭanṭīnīya wa-Āyā Ṣōfīa* of 'Alī al-'Arabī Ilyās who was there a tutor in the service of the grand vizier 'Alī the Stout (d. 28 June 1565; Flügel, *Kat. der Kais. Hof-bibl. zu Wien*, III, 97) which in their oldest recension go back to the year 970 (1562-1563). The work was supplied with some insignificant additions and a slightly altered title by the author two years later (*Tawārīkh-i Binā-i Āyā Ṣōfīa* in the Bibl. Nat. in Paris, *Supplém. au fonds turc*, nº. 1546; *Tawārīkh-i Ḳosṭanṭīnīya wa-Āyā Ṣōfīa wa-ba'ḍ-i Ḥikāyāt* in Pertsch, *Verz. d. türk. Hss. der Kgl. Bibl. zu Berlin*, nº. 232. Another Ms. in Fourmont, *Cat. cod. man. Bibl. Reg.*, p. 329, nº. 147, 1). According to these the Āyā Ṣōfīa was built in the reign of Ustiniānūs by the architect Ignādiūs. This author is as a rule more reliable and, since he gives several versions beside one another, more explicit than his predecessor of the fifteenth century so that he must be reckoned the best authority among the Turks on the history of their greatest mosque, though of course quite unreliable according to our ideas.

The substance of the legends which, constantly expanding, hang around the Āyā Ṣōfīa changes from period to period. They were mostly inspired in the seventeenth century, apparently, when the Turks showed a general contempt for anything worldly.

It was then that they began to point out the spot on which the Arab barriers of the first century of Islām prayed on the occasion of their siege of Constantinople and the place in the centre of the nave from which Khiḍr superintended the building.

In the southern gallery a hollow block of stone was shown as the cradle of Jesus. An anecdote, which can still at the present day be heard from young theologians, is connected with Husain-i Tabrīzī who is said to have obtained his position at the mosque because Sultan Meḥmed II the Conqueror gave him, the mystic (*Ṣūfī-yī*), the palm (*Āyā*) instead of the back of his hand to kiss and he thereupon received the position of Mudarris of the Āyā Ṣōfia. The so-called "damp pillars" (*yash direk*) and the "cold window" (*ṣo'uḳ pandjere*) near the Ḳibla enjoyed the greatest celebrity in the days of ʿAbd al-Ḥamīd II as wonderworking places of pilgrimage in these holy halls. It was here that Shaikh Aḳ Shams al-Dīn, whose words had at once the effect of firing his contemporaries and even Meḥmed the Conqueror to action, first expounded the Ḳorʾān. Everyone was till quite recently convinced that the blessed draughts of fresh air which rushed in by the "cold window" were of the greatest efficacy in the deepening of theological knowledge.

Bibliography: The most trustworthy Byzantine authorities are the authors Procopius, Agathias, Paulus Silentiarius who lived in the reign of Justinian; of modern writers the most notable are: Pierre Gilles, *De topographia Constantinopoleos libri IV* (Lyon, 1561 and often reprinted); *De Bosphoro Thracio libri tres* (Lyon, 1561 and several times later); Charles du Fresne, sieur du Cange, *Historia Byzantina* (Paris, 1680); J. von Hammer, *Constantinopolis und der Bosporus*, I (Pesth, 1822); Σκαρλάτος Δ. Βυζάντιος, Κωνσταντινούπολις, I (Athens, 1851); C. Fossati, *Aya Sophia of Constantinople as recently restored* (London, 1852); W. Salzenberg, *Altchristliche Baudenkmäler von Konstantinopel* (Berlin, 1854); Auguste Choisy, *L'art de bâtir chez les Byzantins* (Paris, 1883), J. P. Richter, *Quellen der byzantinischen Kunstgeschichte* (Reprint from Eitelberger von Edelberg's and Ilg's *Quellenschriften für Kunstgeschichte und Kunsttechnik des Mittelalters* (Wien, 1897); W. R. Lethaby and Har. Swainson, *The Church of Sancta Sophia, Constantinople; a study of Byzantine building* (London and New-York, 1894); Heinr. Holtzinger, *Die Sophienkirche und verwandte Bauten der byzantinischen Architektur* (in *Die Baukunst*, edited by R. Borrmann and R. Graul, Heft 10, Berlin and Stuttgart, 1898); the best work is still: Εὐγένιος Μιχαήλ Ἀντωνιάδης, Ἔκφρασις τῆς Ἁγίας Σοφίας (in: Βιβλιοθήκη Μαρασλῆ, 3 Vols., Athens and Leipzig, 1907—1909). Notices by Geh. Baurat Prof. Wilh. Schleyer (Hannover).

Not far from the great church in the neighbourhood of the Djundi-Place is the Little Āyā Ṣōfia (Küčük Āyā Ṣōfia). Built by Justinian it was formerly a church dedicated to the saints Bacchus and Sergius. A dome crowned the octagonal floor which extends into four apses. The church was turned into a mosque in the reign of Meḥmed II by the superintendent of his harem and since that time has contained all the establishments and institutions required by Muhammadan religion and education. The entrance hall with the five flat domes rising from it is of Turkish origin. (K. SÜSSHEIM.)

AYĀ SOLUḲ, now a Turkish village, capital of a Nāḥiya, with 2 793 inhabitants (according to Cuinet, *La Turquie d'Asie*, III, 505), in the middle ages, an important town which was called by its present name as early as the time of Ibn Baṭṭūṭa (ed. Paris, II, 308). When this traveller visited the town in 733 (1333) it had 15 gates and was an important centre of trade on the Kaystros (now called Küčük Menderes Čai) the banks of which were covered with gardens and vineyards. The ruins of a Turkish castle may still be seen and the remains of several mosques and baths amongst which may be mentioned the fairly well preserved mosque of ʿIsā Bey. By the silting up of the harbour the town gradually lost its importance and a new port, Neapolis, Scala nova, called in Turkish Ḳush Adasi, arose. In western mediaeval (Latin) authorities Aya Soluḳ is known as Altoluogo, Altologio or Lato longo. The Turkish name is really a corruption of the Greek Ἅγιος Θεολόγος the name by which a church built here in the early centuries of the Christian era was known; it was held in great reverence and dedicated to St. John.

History. Ayā Soluḳ has replaced the famous town of Ephesus whose ruins are situated in the immediate neighbourhood. This is not the place to describe these ruins nor to pursue the ancient history of Ephesus and Aya Soluḳ. It may however be noted that the Arab geographers still know the town by the old name of Ephesus (Afsūs or Ufsus) and place there the cave of the seven sleepers (see AṢḤĀB AL-KAHF). The Arabs advanced as far as Ephesus only for a brief period in 182 (782) but after the conquest of Asia Minor by the Seldjuḳs the town fell more than once into the hands of the Turkish emirs of the neighbouring country, only to be recaptured again by the Byzantine troops. After the fall of the Seldjuḳ kingdom of Konia and indeed during the time of Ibn Baṭṭūṭa's visit Khiḍr Beg the son of the Emīr Muḥammad of Aidin was ruler here. In 1391 the Emīrs of Aidin had to give up their territory to the Ottoman Sultan Bāyazīd, but there was a break in the period of Turkish rule from 1402, when Timur pitched his camp here, till 1425 when Murād II received the homage of various chiefs here and Aya Soluḳ finally became incorporated in the Ottoman Empire.

AʿYĀN (A. plur. of ʿ*Ain*), the most influential men of a society or of the state; for other meanings see dictionaries.

AYĀS, a site on the coast of Cilicia, on the west shore of the Gulf of Alexandrette to the east of the bay at the mouth of the Djaiḥān (Pyramus). In ancient times there was a town here called Aigai (see Ramsay, *Historical Geography of Asia Minor*, p. 355 f.). Since the second half of the thirteenth century the place has played a more important role. The gradual expulsion of the Franks from the eastern shore of the Mediterranean concentrated all the eastern trade in this part of the Christian kingdom of Little Armenia as it was connected by frequented trade routes with Syria as well as with the interior of Asia

Minor. The Italians called the town Lajazzo. After it had been plundered in 665 (1266), and again in 674 (1275), by Muslim troops and finally destroyed in 722 (1322), by the Mamlūk Sultan al-Nāṣir Muḥammad, but again built by the Christians, it fell in 748 definitely into the hands of the Egyptian Mamlūks. From this time dates its decline though it is mentioned as late as about 1400 as belonging to the province of Ḥalab. — To-day it is a wretched place on the coast with numerous ruins.

ĀYĀS PASHA, Turkish grand vizier (1536—1539) under Sulaimān I. Āyās Pasha, an Albanian by birth, was enrolled in the corps of Janissaries and accompanied Sultan Selīm in his campaign against Egypt. Under Sulaimān he was appointed Beylerbey of Anatolia, and later Wālī of Syria. During the siege of Rhodes he fell into disgrace, was deprived of his office, and even thrown into prison. Soon afterwards he was again restored to favour and with Khair al-Dīn Pasha Barbarossa took part in the siege of Corfu (1537). He died of plague in 1539.

Bibliography: Sāmī Bey, *Ḳāmūs al-A'lām*, I, 504; von Hammer, *Gesch. des Osman. Reiches*, s. Index.

ĀYĀT (A.), plural of Āya [q. v.].

AYĀZ, the Emīr, lord of Hamadhān played an important role in the struggles for the throne between the Seldjūḳ prince Barkiyāruḳ and Muḥammad I. After having first taken the side of the latter he went over to the side of Barkiyāruḳ in 494 (1100) and after his death (498 = 1104) he became Atabeg for his son Malikshāh who was a minor. He could not, however, hold his own against Muḥammad and was treacherously murdered by him in 449 (1105).

'AZAB (A., strictly single, unmarried) in Turkish the irregular footsoldiers who were made use of in raids, sapping operations etc. Like the Aḳindjı [q. v.] the 'Azab played an important role in the earlier wars of the Ottomans.

ĀZĀD (P.), free; in the religious sense: free from worldly desires, pious; thence a favourite personal name e. g. of Mīr Ghulām 'Alī Bilgrāmī [see GHULĀM 'ALĪ].

AZAḲ, Russian Azow, a town near the mouth of the Don; it is first mentioned in the fourteenth century (after 1316) as a Genoese, then (after 1332) as a Venetian colony under the name of Tana (from the ancient Tanaïs). The Turkish name has appeared on coins since 717 (1317). In the year 797 (1395) the town was destroyed by Tīmūr and taken possession of by the Ottomans in 880 (1475). The Russians (Cossacks) appeared before Azaḳ for the first time in 1589; in 1637 the town was captured and the whole Muhammadan population put to the sword; in 1641 the Cossacks held the town successfully against a numerous army, but by orders of the Tsar retreated in 1642 and at the same time razed the town to the ground; Azaḳ was at once rebuilt by the Turks and Tatars and again besieged in 1642, captured by Peter the Great in 1696. Azaḳ had again to be surrendered to the Turks in 1711; in 1736 it was recaptured for the third time and by the treaty of 1739 the Russians were allowed to retain it though by the terms of the treaty the fortifications had to be destroyed, and they were not rebuilt till 1769. Since that time the town has remained in the possession of the Russians, but it has lost its former importance with the rise of the neighbouring town of Rostow. The sea of Azov, the Maiōtis of the ancients, has taken its name from Azaḳ. (W. BARTHOLD.)

AZAL (A.), an eternity, which is without beginning, but not without end. [cf. ABAD].

ĀZAR, in the Ḳor'ān (vi. 74) the name of Abraham's father. There appears to be some confusion here as the name is nowhere else given to Abraham's father. That he was called Tāraḥ (Tārakh) is also related by Muslim commentators and historians; to reconcile these two statements the usual artifices are resorted to, but these have no value. According to Maracci (*Prodromi*, iv. 90) the form Āzar is due to a false reading 'Αθαρ in Eusebius' Ecclesiastical Chronicle. Neither Maracci, nor any of those who cite him later, has given a more exact reference to the passage. Eusebius regulary writes Θαρρα in other places. But in any case the chance would be very improbable.

For the life of Āzar and his son Ibrāhīm the reader is referred to the latter article where the bibliography is also given. (A. J. WENSINCK.)

'AZĀZĪL (A.), the Biblical עֲזָאזֵל (Azazel) also used as a name of the Devil. Cf. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, p. 261.

AL-**AZD**, an Arab tribe, occasionally written al-Asd, and then not to be confused with the Asad (without the article). The proper name is said to be Darā'. The genealogical table is: al-Azd b. Ghawth b. Kara b. Mālik b. Zaid b. Kahlān b. Saba'. Four principal groups were distinguished of this widely ramified family of tribes. 1. Azd 'Omān in 'Omān. The Koraishites were unwilling however to recognise the 'Omān Azdites, in particular, as Arabs. They lived for the most part by fishing, a calling on account of which they were often mocked; the nickname of Mazūn seems also to be connected with this. — 2. Azd Sarāt in the mountains of Sarāt in Jaman, famous as weavers and ridiculed on that account. — 3. Azd Shanū'a = Ka'b, rarely written Shanūwa; the Nisba is Shanā'ī. Their genealogical table is Ka'b b. al-Ḥārith b. Ka'b b. 'Abd Allāh b. Mālik b. Naṣr b. al-Azd. They likewise live in the Sarāt. The Azd Sarāt and the Azd Shanū'a seem to be really the same. — 4. Azd Ghassān = Māzin in the North and in Syria. The al-Aws and the al-Khazradj in Medina and the Khuzā'a in and around Mecca were also counted as Azdites. Al-Muhallab b. Abī Ṣafra belonged to the al-'Atīk, a clan of the 'Abd Allāh b. al-Azd. Abū Huraira was descended from the clan Daws.

Localities which are known as Azdite: Alūda (in the Sarāt), Bāriḳ (a mountain in the Sarāt), Hadīd (mount), al-Ḥāl (in Jaman), Maknūna (in Jemen), Mar'at (in Jaman), Ma'rib (in Jaman), al-Ḳufus (in Kirmān), Ḳutma, Raisūt (a strongly fortified place on the coast), al-Sarū, Taḥmuth (in the Sarāt), Tindiḥa (in the same district), Tu'ām (in the

Yamāma inhabited only in part by Azdites), al-ʿUdāf (a mountain in the Sarāt).

History. In pagan times the Azdites were amongst the chief worshippers of Manāt and of Dhu 'l-Khalaṣa. ʿĀʾim was an idol in the Sarāt. The bursting of the dam of Maʾrib seems to have compelled the Azdites to move out of Sabaʾ, and to have contributed to their dispersal. On their entry into the Sarāt mountains they had to fight with the Khathʿam, and overcame them. Ardashīr I is said to have settled Azdites in ʿOmān where they remained for a long time under Persian rule. In the ninth year of the Hidjra the demand received from Muḥammad to adopt Islām was acceded to by a section of the Azdites without demur, and they exchanged the Persian suzerainty for the Muḥammadan. The number of Muḥammadans among the Azdites was scarcely noticeable. After the death of Muḥammad the Azdites seceded, but were conquered by the Muḥammadan army sent by Abū Bakr, and found themselves again compelled to attach themselves to Islām. The Azd Shanūʾa had sent an embassy to Muḥammad in the year ten of the Hidjra, according to tradition. The victorious Azdites took no part in the campaigns of the caliphs till the time of ʿOthmān. Then we find the Azd Sarāt in Kūfa and Baṣra. When Muʿāwiya in Baṣra attempted to stir up resistance to the caliph ʿAlī, the Azdites afforded shelter to Ziyād, who was the governor of ʿAlī at that time. It was not till after the Azd ʿOmān the last of the great tribes to settle there, had come in greater numbers, about the end of the reign of Caliph Muʿāwiya and at the beginning of that of Yazīd I, that the Azdites attained to power there while they allied themselves with the Rabīʿa against the united Tamīm and Ḳais, in continuation of friendly relations dating from heathen times. Then the Azdites took the position of chief champions of the Southern Arabs (Kalbites) in the warfare between the north and south Arabs. They supported Ziyād and his sons e. g. after the death of Yazīd I and again in the wars against the Khāridjites. In Khorāsān whither they had come from Baṣra, they were the most important tribe after the Ḳaisite Tamīm. By the rise of the Azdite Muhallab and his family the importance of the Azdites also increased. They were much exasperated against the Ḳaisite Ḳotaiba, the oppressor of the Muhallabites and took an active part in the rebellion against him in Khorāsān. Ḳotaiba fell by the hand of an Azdite. Ever afterwards the thought of revenge for the Muhallabites was alive among the Azdites. At times they had to suffer severely; Yazīd II pursued them with persecution in his hatred of all that pertained to the Muhallabites. For a brief period their position in Khorāsān improved in the reign of Yazīd III.

Bibliography: concerning the Azdites in time of the Umaiyads see Wellhausen, *Das Arabische Reich und sein Sturz*, p. 248 ff., 275 ff. (RECKENDORF.)

AZEMMŪR (Fr. AZEMMOUR), a town on the Atlantic coast of Morocco, 50 miles S.W. of Casablanca and 7 miles N. E. of Mazagan, on the left bank and near the north of the Umm al-Rabīʿa. This river is navigable even by ships of small tonnage on account of a sandbank that bars its entrance. Azemmūr therefore, though it is the natural market for the sale of goods from the Dukkala district, ranks far behind Mazagan in commercial importance. The town has some 5000 inhabitants including many Jews but no Europeans. It is for this very reason that it has preserved its native character better than the other towns of the coast and that its inhabitants show themselves exceedingly hostile to Christians. In the sixteenth and seventeenth centuries the district of Azemmūr was the scene of the heroic deeds of the "Mudjāhidīn", champions of the faith. The neighbourhood is full of Ḳubbas which are dedicated to pious personages. The best known and most revered saint is Sīdī b. Shuʿaib, patron saint of the town.

Azemmūr was founded by Berbers in a district rich in wild olive trees (*azemmūr*). Its history is little known till the beginning of the sixteenth century. Then it aroused the cupidity of the Portuguese who already possessed Tangier, Arzila, and Mazagan. According to Leo Africanus (transl. by Schefer, i. 292) it was then a town of about 2000 households, and owed its prosperity chiefly to the shad-fishing in the Umm al-Rabīʿa which was farmed out for 6—700 ducats annually. In the year 914 (1508) Zaiyān, a Marinid prince, who wished to make himself independent in Azemmūr offered to hand over the town to the King of Portugal, but when the Christians appeared before the town they found it in a perfect state of defence, and they had to retire after the loss of several ships. Zaiyān really wished to pose as the defender of the faith against the unbelievers whom he had himself invited there, in order to gain the confidence of the inhabitants. By 1513 however, another expedition under Don Jayme de Braganza and Don Juan de Meneses was successful in bringing Azemmūr into the power of the Portuguese who held it for 28 years. They showed great activity in Azemmūr, built a church (which was later turned into a mosque) a fort and walls around the town which surround the Madīna to the present day. The expenses of maintaining the defence of the town, however, became more and more oppressive, so they resolved in 1541 to vacate it. The Sharīf Muḥammad al-Mahdī populated it again at the instigation of three Marabuts who guaranteed him the future impregnability of the town. This guarantee did not, it is true, prevent Luis de Loreto the Governor of Mazagan from surprising the town in 1545, and carrying off the Marabuts as prisoners who had to be ransomed for 22,000 ducats. Nevertheless Azemmūr has since then remained in the possession of the Muslims, and although the Portuguese still continued to visit that stretch of coast and even obtained permission to fish at the mouth of the river they were never allowed to leave their ships or to enter the town.

AZERBAIDJĀN. [see ADHARBAIDJĀN.]

ĀZERĪ (Āzerbaidjānian), a Turkish dialect.

Name and distribution. Āzerbaidjānian is the Turkish dialect which is spoken in Russia in the province of Transcaucasia and in Persia in the Province of Āzerbaidjān and also though isolated, in Hamadhān, Faristān, Teherān and Khorāsān.

The Āzerbaidjānis call it Turki. It belongs with the Turkoman and the dialects spoken in the Caucasus, in Anatolia and in the Crimea, to the South Turkish family, according to the classification proposed by Radloff. The Āzerbaidjānian may be divided into a northern and southern dialect. The former is spoken in Russia, the latter in Persia. Only the latter and that only in the dialect of Tabriz and Urmia has been scientifically, though not exhaustively, studied by Foy in the *Mitteilungen des Seminars für orient. Sprachen, Westasiatische Studien*, vi. 126 and vii. 197 under the title of *Azerbaidjānische Studien mit einer Charakteristik des Südtürkischen* (hereafter cited as Foy i. and ii.). Unfortunately the work is only a fragment, for the author died in the interval and it has the disadvantages of an incomplete work. In the main I follow his arrangements *).

The Language. The Āzerbaidjānian agrees as a rule with the other South Turkish dialects but has some peculiarities of its own. Foy i. (143—141) has given the general characteristics of South Turkish to which I refer the reader. The essential peculiarities of the Āzerbaidjānian are given here.

Phonology. a) Vowels. Among the vowels, which are otherwise the same as in all South Turkish dialects, special mention must be made of the double *e* viz. *e* and *ė*. The former, which in Āzerbaidjānian approaches more to *a*, conforms as a rule to the *e* of the other dialects; the latter, on the other hand, which is pronounced rather like *i* is seldom met with except in Āzerbaidjānian e.g. in East Anatolia and here and there in the dialect of Kaisari. It can be traced to an original *ï*; cf. Foy, *Türk. Vokalstudien*, i. 199—208.

a is often changed to *e* e.g. *gerdeṣ̌ = kardaṣ̌*, *jeχy = jaḳo*. Several vowels moreover are different in Osmanli and Āzerbaidjānian e.g. *udje = judje*. Among the diphthongs *ou* is found for Osmanli *ev*, *av*, *aw* in Turkish words and *av* or *ev* in Arab loan-words.

b) Consonants. The greatest changes have taken place in the *k*-sounds. *ḳ* is very seldom found (only double e.g. *diḳḳet* and in the combination *ḳg* e.g. *daḳgun*); elsewhere it has regularly become *g* at the beginning, *χ* at the end and in the centre of a word, *χ* before voiceless consonants and *γ* before voiced consonants (sometimes also to *χ*). In Turkish words *k* on the other hand has been retained at the beginning of words, medially it has remained before vowels and finally in certain monosyllabic stems, in other places it has become *χ*.

χ never becomes *h* as in Turkish.

ñ is no longer pronounced and has as a rule become *n*, only occasionally *γ* and then it has something of a *j* sound.

By the influence of an *n* a preceding *b*, separated from it by a vowel, is changed to *m* e.g. *bu* in the locative *munda*, *ben* to *men*. Among South Turkish dialects this phenomenon is found only in Turkoman. The other changes cited by Foy are shared with Anatolian by Āzerbaidjānim and indeed with the spoken dialect of Constantinople itself e.g. what Foy tells us about the disappearance of a consonant before another consonant holds for the most part also for Anatolian.

*) Foy's system of transliteration is also retained. (Ed.)

r and *l* disappear in certain verbal forms, thus *di*, *dy = dir*, *dyr* and *deji* or *dej* in place of *dejil*.

Assonance. The most striking point is that certain endings are used only in the strong forms quite contrary to assonance. Thus the infinitive termination is always *maχ* e.g. *ölmaχ*, the participial termination *dyḳ* e.g. *bildyγy* in place of Osmanli *bildiji*, the termination of the 1st pers. plur. *uχ* and *duχ* e.g. *gelduχ*, the future ending *adjaχ* e.g. *jijadjaχ*, the termination of the 1st pers. plur. of the imperfect is *aχ* e.g. *gedaχ*, the termination *lyχ* is found only in this form e.g. *erlemetlyχ*, the comparative ending *raχ*, e.g. *bizraχ*.

Accidence. a) The Noun. The accusative of vowel stems does not end in *ji* as in Osmānli but in *ni* as in Jagatai. The accusative of the pronominal suffix of the 3rd pers. sing. ends in *in*. In adjectives, the old comparative ending in *raχ* still survives.

b) Verb. There is a definite and an indefinite present. The former ends in the affirmative mood in *ir* (*yr*, *ür*, *ur*), in the negative in *mir* (*myr*, *mür*, *mur*), the latter in the affirmative in *er* (*ar*) in the negative in *mer* (*mar*). *Ir* is derived from *ier* = Osmānli *yor* (cf. Foy i. 159). The forms of this present from *almaχ* are: *alyram*, *alysan*, *aly* and *alyry*, *alyruχ*, *alyryz*, *alylla*. The form in *mez* occurs only in the 3rd person, besides *mer* there is a form *men* in the 1st sing. and plural. The preterite in *mish* occurs only in certain persons, for the others Āzerbaidjānian forms a preterite from the gerund in *ub* with the present of the verb *to be*. Besides the 1st pers. sing. of the optative there is also a 1st pers. sing. of the imperative in *im*, *ym*.

The mood of impossibility (instead of *gelememek gile bilmemek* is used) the mood of necessity (instead of *gitmeliyim* they say *gerex gidim*) and the abbreviated infinitive form in *ma* (*me*) are not found. The infinitive in *maḳ* takes the pronominal terminations. Various gerundives are also wanting. The participle in *an* is more frequently used, e.g. *gelende* = Osman. *geldikde*, *gelenden* = *geldikden*.

Bibliography: The oldest prose work is the *Darband-Nāmah* edited by Mirza A. Kasim Beg (Petersburg, 1851). The oldest and most famous Āzerbaidjānian poet is Fuzūlī of Baghdād (s. Gibb, *History of Ottoman Poetry*, iii. 70). More modern poets have been made known by Adolf Bergé, *Dichtungen transkaukasischer Sänger des XVIII. und XIX. Jahrhunderts in aserbaidjanischer Mundart* (Leipzig, 1868) and by Bodenstedt, *Beiträge zum kaukasischen Türkisch* (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, v. 245). Texts in the dialect of Tiflis including comedies by Mīrzā Feth ʿalī Ākhundzāde have been published in the *Journ. Asiat.* viz. 1. Barbier de Meynard, *L'alchimiste, comédie en dialecte turc azeri* (8th series, vii. 10, cf. also Foy i. 136); 2. Lucien Bouvat, *Histoire de Yoûsouf Châh* (10th series, i. 393, cf. also Foy ii. 197); 3. Lucien Bouvat, *L'ours* (10th series, iii. 259 and 365).

Recently the printing presses in Tiflis, Baku and Eriwān have developed great activity and several newspapers appear there. For a knowledge of the spoken Āzerbaidjānian in the dialect of Urmia and Tabriz of to-day, we must have recourse to the phonetically written texts in Foy ii. The transcription of the Āzerbaidjānian tale given by Vambéry, *Altosmanische*

Sprachstudien (Leiden, 1901) p. 114 is unreliable and incorrect. There is no really useful grammar. Mirza Kasim Beg's *Grammatik der türk.-tatarischen Sprache* contains useful notes. The "*Praktischer Leitfaden der türk.-tatarischen azerbaidjänischen Mundart*" of Lazareff Budagoff (Moskow, 1857, in Russian) must be used with caution (cf. Foy ii. 201 f.). On some grammars compiled by Āzerbaidjānians see Foy, ii. p. 203.

(F. Giese.)

AZHAR (Djāmiʿ al-Azhar, from *al-Djāmiʿ al-azhar*), mosque and College in Cairo.

1) Buildings and endowments. The mosque was built by Djawhar al-Kātib al-Ṣiḳillī (alias al-Ṣaḳlabī), general of Abū Tamīm Maʿadd a year after the occupation of Egypt by the Fāṭimids, and immediately after the foundation of the new capital (al-Ḳāhira, Djumādā I 359 — Ramaḍān 361). It was consecrated and opened for services in Ramaḍān 361 = June—July 972. It was situated not far from the "great castle" then in existence between the Dailam quarter (N.) and the Turkish quarter (S.) in the south east of the city. Djawhar placed an inscription on the dome, dated 360 A. H. the text of which has been preserved to us by al-Maḳrīzī (*Khiṭaṭ* II, 273, 24—26; van Berchem, *Corp. Inscr. Arab.* I, 43, nº. 20); it has since disappeared. Several other Fāṭimid rulers built additions to the mosque and endowed it with grants and foundations; al-ʿAzīz Nizār (365—386 = 976—996) for example made it an academy and erected an almshouse in it for 35 men. A *ṭilasm* (τέλεσμα, Talisman) is mentioned as a curiosity on the first building; figures of birds were placed on the tops of three columns which prevented birds from nesting or breeding in the mosque. Further additions were made to the building under al-Ḥākim (386—411 = 996—1020) and endowments and gifts were bestowed on the Azhar and other mosques. A document relating to these of the year 400 has been handed down to us by al-Maḳrīzī ii. 273 *et seq.* In the year 519 (1125) al-Āmir built a prayer niche (*Miḥrāb*) with carvings in wood, the inscription on which is still preserved in the Arab Museum in Cairo (Ravaisse, *Sur trois miḥrābs*, p. 10; van Berchem, *Corp. Inscr. Arab.*, i. Nº. 455). Its name also may be explained from the Fāṭimid origin of the mosque, it being rightly interpreted as an allusion to al-Zahrāʾ a title of Fāṭima; a Maḳṣūra of the mosque also took its name from her (Maḳrīzī, ii. 275, 16). Smaller additions are also due to the caliphs al-Mustanṣir and al-Ḥāfiẓ.

With the Aiyūbid rule a reaction set in, since they as ardent Sunnis sought to destroy every trace of the Shīʿa Fāṭimids. Saladin took from the mosque the right of *Khuṭba* and deprived it of several of al-Ḥākim's endowments. Nearly a century passed before the favour of the rulers and nobles was again bestowed on it. Al-Malik al-Ẓāhir Baibars made new additions to it, took an interest in the learning taught there and restored to it the privilege of *Khuṭba* (665 = 1266-1267, *Djawāz al-Djumʿa*); cf. van Berchem, *Corp. Inscr. Arab.* i. nº. 128. Several Emīrs followed his example. From this period dates the prosperity of the Azhar as a mosque and educational institute. Apart from the attention bestowed on it at home it was further benefitted by the fact that the ravages of the Mongols in the East and the decline of Islām in the West destroyed or weakened so many of the old, flourishing Madrasas. When in 702 (1302-1303) the mosque was damaged by an earthquake, the Emīr Salār (Sallār) rebuilt it. From the year 725 (1325) date the new buildings by Muḥammad b. Ḥusain al-Isʿirdī (from Seʿirt in Armenia), the Muḥtasib of Cairo; about the same time colleges, *Madāris*, were built by Emīrs near the mosque: in 709 (1309-1310) by Ṭaibars, in 740 (1339—1340) by Aḳbughā ʿAbd al-Wāḥid, (cf. van Berchem, *Corp. Inscr. Arab.* i. nº. 110, 125, 126, 127.) These were later brought under the Azhar and still belong to it. Various additions and repairs were made by the eunuch Bashīr al-Djāmdār al-Nāṣirī (about 761 = 1360). He also presented a Ḳorʾān, endowed a reader for it, refitted the kitchen for the poor and founded a chair of Ḥanafī Law. In the year 800 (1397-1398) a minaret fell in, but was at once rebuilt from Sulṭān Barḳūḳ's privy purse. This catastrophe was twice repeated (817 = 1414-1415 and 827 = 1423-1424) but the damage was always made good. About the same time a cistern was dug, a sabīl built and a basin for ablutions, *Mīḍaʾa*, erected. A school just beside the mosque was also built by the eunuch Djawhar al-Ḳanḳabāʾī (died 844 = 1440-1441). Further information regarding this (al-Djawhariya) will be found in ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda* iv. 106. The greatest benefactor of the mosque in the ninth century was Ḳāʾit Bey. His extensive additions were finished in 900 (1494-1495) just shortly before his death. Besides these, many foundations for the poor as well as for the learned were due to him. We also know of his buildings from inscriptions (van Berchem, *Corp. Inscr. Arab.* i. nº. 21—25). Ibn Iyās (ii. 167, 22 ff.) relates a remarkable habit of this ruler: he used to go to the mosque of al-Azhar disguised as a Maghribī, pray there and listen to what the people said about him. We are not told the sequel. The last great Mamlūk ruler, Ḳānṣūh al-Ghūrī (906—922 = 1500—1516) built the two towered minarets, on the inscriptions see van Berchem, *Corp. Inscrip. Arab.*, i. nº. 26, 27.

In the Ottoman period the splendour of the mosque naturally paled a little. At the same time many acts of attention have to be noted. The conqueror Selīm Shāh often visited and prayed there, ordered the Ḳorʾān to be read in it, and bestowed gifts on poor students (Ibn Iyās, *Chronicle*, iii. 116, 132, 246, 309, 313). The style of the buildings of the Ottoman period shows a marked deterioration from those of earlier periods. From the point of view of progress the place of worship for the blind is worthy of mention (*Zāwiyat al-ʿUmyān*) which was built by ʿOthmān Ketkhoda al-Ḳazdoghlī (Ḳāsid Aghlu) in 1148 (1735-1736) (cf. also J. Hirschberg, *Ägypten*, 1890, p. 101). Among the greatest benefactors of the mosque must be reckoned ʿAbd al-Raḥmān Ketkhodā or Kiḥya (died 1190 = 1776) a relative, it appears, of the above mentioned ʿOthmān al-Ḳazdoghlī. He built a large and richly furnished *Maḳṣūra* (a sanctuary screened by lattice work), a prayer niche, a pulpit, an elementary school for orphans, a cistern and a tomb for himself in which he was afterwards buried. The above-mentioned Madrasas of al-Ṭaibarsiya (Ṭaibarsiya) and Aḳbughāwiya (whose name was later corrupted to Ibtughāwiya) were connected with one another by new buildings. Beside making other smaller alterations

in the buildings he made provision for the supply of food and clothing to poor students. It is significant that al-Djabartī says that in his time, about 1220 (1805), a generation after their founder, most of these pious foundations had fallen into neglect. Soon afterwards the French expedition came, which inflicted much hardship on the Azharites though not undeservedly. The national restoration under Muḥammad ʿAlī was at first not favourable to the Azhar; it is only the later Khedives who have done their best to keep up the fame of the revered building. ʿAlī Mubārak gives an exact description of the present building, not of course from the standpoint of the archaeologist but from that of the educated Moslim (*al-Khiṭaṭ al-djadīda*, iv. 14—26), detailing the extent, doors, sanctuaries, prayer niches, closets, lavatories, courtyards, minarets, sundials, both the above-mentioned madrasas, the loggias (*Arwiḳa*), living rooms (*Ḥārāt*), cisterns, lamps, mats and carpets. Several parts of interest to the archaeologist e. g. the gateway of Ḳāʾit Beg and the prayer niche of the Madrasa al-Ṭaibarsīya are reproduced in Franz Pasha's *Kairo* (1903) p. 21 ff. with plan; cf. also Baedeker's Egypt.

II. The interior arrangements in the earlier period. Though we are very well informed about the history of the building of the Azhar, our materials on the interior arrangements of the mosque and college are very insufficient as far as early times are concerned. It is certain that in the time of the Fāṭimids it was one of the first mosques in the city and the land. The Sunni reaction under the Aiyūbids has already been mentioned. But after the Mamlūk Sultan Baibars began to devote his attention to it, in spite of all the vicissitudes which it has suffered from earthquakes and political changes, its importance has steadily increased. Even in the middle ages we hear of students and pious visitors from the most distant lands; for centuries the Azhar surpassed all other madrasas in Moslem countries as an educational institution. Among the causes which explain this position, the period of the Mongols with its devastations outside Egypt and the extinction of the Arab civilisation in Spain have already been mentioned. Other reasons can also be given: its central situation, the nearness of the Ḥidjāz, the purely Arab character and the economic importance of the country; the extensive African hinterland and — last but not least — the ancient intellectual culture of the Nile valley, where numerous influences favour the cultivation of a literature of scholarship and belles-lettres. The condition of the Azhar college at the present day will be discussed later (iii).

The sacredness of the Azhar explains the fact that even in the middle ages it is often mentioned as an asylum for refugees (Ibn Iyās ii. 262 ₁₁; iii. ₁₅). Further we often hear (e. g. Ibn Iyās ii. 177; iii. 116, 132, 167) that extracts from the Ḳorʾān or from Bukhārī were publicly read in it, usually to remove serious plagues or famines: in the year 798 (1395-1396) Sirādj al-Dīn (ʿOmar b. Raslān) al-Bulḳīnī prayed in it during the famine (Ibn Iyās, i. ₂). In the year 1172 (1758-1759) the students asked their professor to lecture on Bukhārī to avert a plague raging in Cairo (Vollers, *Kat. Leipzig*, n°. 729, ₂₁.; cf. ʿAlī Mubārak *al-Khiṭaṭ al-djadīda*, iv. 34 ₁); the stay of the great mystic ʿOmar b. al-Fāriḍ is mentioned by Ibn Iyās (i. 82, ₁). Foundations for *Fuḳarāʾ* i. e. for Ṣūfīs, ascetics, and pious enthusiastics were early instituted. But under cover of piety all sorts of disreputable people seem to have taken refuge there. Robberies, brawls and immorality are mentioned which took place especially in the nights of the great festivals. This explains why the inspector of the Azhar, the Emir Sūdūn in 818 (1415-1416) took the drastic measure of turning out of the Azhar all the occupants, students, beggars, and loafers with their goods and chattels. Soon after however, the fury of the pious was turned against him, even the Sultan (al-Muʾaiyad) was prejudiced against him, had him seized and imprisoned in Damascus. Al-Maḳrīzī (ii. 276 f.) likewise in his account takes the side of the pious rabble and recognises the hand of God in the fate of Sūdūn. On this occasion mention is also made of great gifts and endowments and it is stated that among the *Fuḳarāʾ* were Persians, people from Zailaʿ and district and from the Maghrib and that each group (*Ṭāʾifa*) had its own Riwāḳ (see below). Another detail of student-life is mentioned during the time of the Inspector and Emir Bahādur in 784 (1382-1383); he obtained a decree from Sultan Barḳūḳ that the possessions of students who died in the Azhar without legal heirs should be divided among the other students. This decree was carved in stone and placed on the "great Nile-gate" but does not appear to have been preserved (Maḳrīzī, *Khiṭaṭ*, ii, 276 ₁₂.).

Even in the middle ages the students as at the present day, seem to have lived partly in and partly outside the Azhar. The internal students were divided into territorial groups the most of which had and still have their own *Ḥāra* and their *Riwāḳ*. By the Hārāt (for the word cf. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxii. 753; xlii. 325) are to be understood the living rooms where the students kept their furniture though they frequently slept outside in the court, or in the loggias, where the libraries were kept etc. The Loggia (*Riwāḳ*, pl. *Arwiḳa*) is strictly speaking the space between two pillars: it was here that in former days instruction was given to many little groups, here the Dhikr is celebrated, discussions and conversation take place. At the present day there are 38 Riwāḳs and 15 Ḥāras. These are: 1. al-Ṣaʿāʾida, students from upper Egypt, large and important, chief residence of the Mālikīs; 2. al-Ḥaramain, Mekka and Medina; 3. al-Dakārina (Dakārna), for the Takārīr, people of Takrūr, from Sennār, Dārfūr, Wadai etc. [cf. 8]; 4. al-Shawām, Syrians; 5. al-Djāwā, Javanese and others from Further India; 6. al-Sulaimānīya, from Afghānistān and Khorāsān; 7. al-Maghāriba, from North-West Afrika, large and influential; 8. al-Sennārīya, instituted by Muḥammad ʿAlī [cf. 3]; 9. al-Atrāk, Turks; 10. al-Birnīya, from Bornu and the neighbourhood; 11. al-Djabartīya, from the Somalicoast; 12. al-Yemenīya, from South Arabia; 13. al-Akrād, Kurds; 14. al-Hunūd, Indians; 15. al-Baghdādīya (Baghdādīya), from ʿIrāḳ; 19. al-Beḥeira, from the Northwest of the Nile Delta; 17. al-Faiyūmīya (Fayama), from the Faiyūm-Oasis; 18. al-Akhughāwīya (Ibtighāwīya), belonging to the above-mentioned Madrasa; 19. al-Shanawānīya (al-Adjāhira, al-Wāṭīya), from the Southern Delta; 20. al-Hanafīya, of the Ḥanafī sect; 21. al-Feshnīya, from Central Egypt; 22. Ibn Muʿammar,

a private foundation open to all nationalities; 23. al-Barābira (Barābra), Nubians; 24. Dakārnat Ṣaliḥ, from the country round Lake Chad; 25. al-Sharkāwiya, from the North East Delta, in honour of ʿAbd Allāh al-Sharkāwī (s. p., 537ᵃ nº. 13) recently instituted; 26. al-Ḥanābila (Ḥanābla), the sect of Ibn Ḥanbal, very small.

The inter-Islāmic importance of the mosque can be seen from nothing better than from this list of names of visitors from countries outside of Egypt, which takes us from Central Africa to Russia and from Further India to Morocco. Political and economic affairs of course often regulate the attendance, hence there are great variations in the statistics; the improvement of methods of communication exercises its influence here as at the great Ḥadjdj. The division into Riwāḳs is, as can easily be seen partly according to nationality, partly according to sects and rarely according to special foundations.

The students are called from their close connection with the mosque, *Mudjāwir* (Plur. -*ūn*), as learners *Ṭālib* (Plur. *Ṭalabat*) *al-ʿIlm* "seekers after knowledge". The teachers or Professors are officially known as *Mudarris* (Plur. -*ūn*), they themselves take a pride in using the modest title *Khādim al-ʿIlm*, "servants of knowledge". The latter like the students live, as a rule, as simply as possible. The Professors are supported by voluntary contributions and the receipts of various foundations. Only a few are well-off. In the same manner very few of the students are supported by the resources of their parents or relatives; most of them gain a modest, if not miserable, livelihood. The students are dependent on their own earnings for what is not covered by the receipts, mostly in kind, derived from various bequests; they undertake small duties in houses or in the Bazar, the reading of the Ḳorʾān, education, and even handicrafts. Since the foundation of the Khedival Library many find employment there as copyists. In the matter of dwelling, clothing and food they are models of economy. Hygiene is something quite unknown to them. The chronicles of the Azhar are full of brawls and revolts among the students; sometimes the quarrels arose from differences of nationality and sect, sometimes over the grants in kind (*Djarāyāt*) and other gifts which an avaricious and unscrupulous administration kept back from them. In accounts of the brawls among the students themselves, the most frequently mentioned are the boorish Upper Egyptian, the restless Syrians and the fanatic Maghāriba and lastly the occupants of the above mentioned chapel for the blind.

The cultivation of learning and the method of instruction are carried out in a very different fashion from that which is usual in the West to day, but they remind one of the earlier periods of our culture. The dogmatic interdict, proceeding from the theological centre, which with us has been non-existent for centuries, still exists there in unmitigated harshness. The object of education is not research, proof, comparison or correction, but the true transmission of what their ancestors have left them. Each generation is supposed to be inferior to the preceding; from the Prophets there is a decline to his companions and their successors: the independent inquirers and authorities (*al-Mudjtahidūn*) lie far behind us in the dim and distant past. The history of the lands of Islām is regarded from this point of view of continued decline, in this case not unjustly.

This standpoint also explains the appreciation of the various sciences. At the top stand the "transmitted" branches of knowledge, *al-ʿUlūm al-naḳliya*: Theology, Jurisprudence, Ḥadīth, Ṣūfism, in the second rank come rational sciences, *al-ʿUlūm al-ʿaḳliya*: Philology, Metre, Rhetoric, Logic and Astronomy, the latter studied almost entirely for practical purposes (chronology and time of prayer). The other sciences also, belles-lettres, history, geography, physical sciences, mathematics etc. really belong to the second group, but since the middle ages they have receded more and more into the background and, as far as they still survive, are only pursued out of obsolete and insufficient text-books. Al-Ṭanṭāwī who taught in the Azhar about 1827, before going to St. Petersburg mentions his lectures on the *Maḳāmāt* of Ḥarīrī and on the *Muʿallaḳāt* with the commentary of Zawzanī and adds that as far as he knew no one before him had treated of this subject there (*Zeitschr. f. d. Kunde d. Morgenl.* vii. 59). The extraordinary impulse which the study of profane sciences has received in Egypt in the nineteenth century under European influence, has not benefitted the Azhar in the slightest. This point will be treated of below.

The distinction between the above mentioned two groups of sciences is strikingly brought out in the times allotted to their instruction. It is the custom to devote the hours of the morning in which the mind is freshest to the "transmitted" sciences on which religion and the religious organisation of the state rests: the later hours are devoted to subsidiary sciences which owe their origin merely to human "reason" (*ʿAḳl*). The evening is given over to repetition, conversation and meditation.

If one enquires, not for the traditional respect which each branch enjoys but for its popularity, then Jurisprudence takes first rank on account of its importance in public life and the numerous offices and emoluments connected with it. Modern times which have referred many legal cases to the international "Tribunaux mixtes" and place European as well as native jurists on the "tribunaux indigènes" (*al-Maḥākim al-ahlīya*) have also interfered with the old method of studying the *Fiḳh*. Only Muhammadan family law remains to the Ḳāḍī of the old school. The subjects of philology and rhetoric are very largely attended, especially if one includes the elementary instruction provided for the younger Arabs and for the numerous non-Arab students. Of the theological subjects, Dogmatics proper (*al-Kalām, al-Tawḥīd*) is the most studied, the exegesis of the Ḳorʾān (*Tafsīr*) and the "holy tradition" (*al-Ḥadīth al-Sharīf*) rather less. The most usual text books for all subjects are given in section V.

The relationship between teacher and pupil is patriarchal. The students show their tutors the greatest respect, kiss their hands, carry their shoes and show them little courtesies of all sorts. They are fond of calling the professor 'master' (*Ustādh*) or "our lord" (*Mawlānā*). On unpopular measures however, opposition to those in authority soon appears. The much respected al-Ḳuwaisinī (see below iv. 19), who wished to introduce decency and order into the chapel of the blind, was thrashed by the refractory inmates. On holidays, appoint-

ments and promotions and especially also on the deaths of Professors or students the intimate relationship of the community appears most strikingly. On the death of a learned Professor, the Mu'adhdhins call the *Abrār* (Sūra 76, 5) from the Minaret, the prayers and Dhikrs are endless. Robes of honour are worn as in ancient time as official distinctions by the Professors. While teaching, the tutor sits on a little stool of palmtwigs (*Djarīd*) or wood or squats leaning against a pillar on the matting (*Haṣīra*) which covers the floor of every mosque. The scholars sit around him in a semicircle, whence the phrase "the circle" (*al-Ḥalḳa*) like "Collegium". The lecture is usually based on a text; but the texts (*Matn*, plur. *Mutūn*) of the oldest authorities are only very rarely in their hands, in place of them there are commentaries (*Sharḥ*, Plur. *Shurūḥ*) which in their turn are again thrust into the background by glosses (*Ḥāshiya*, Plur. *Ḥawāshī*), superglosses and notes (*Ta'līḳāt*). The scholar seeks to understand the text and makes notes after the lecture. They are fond of using short, rhymed manuals to aid and refresh the memory. There were formerly no examinations; the *Idjāza* (*Agāza*), prized since ancient times, the "license" and the testimonial which the teacher gave the student as a certificate that he understood a certain text, served as a graduation certificate and gave him permission in his turn to give instruction. A Leipsic miscellany (D. C. 166 = Vollers nº. 729) affords us a good insight into the studies in the Azhar in the twelfth century of the Hidjra.

The relationship of the great Sunnī sects to one another has always played an important part in the Azhar, especially in regard to its managements. Since the time of the Fāṭimids the Shī'a has been banned. The Ḥanābila are (as already mentioned) so insignificant in numbers and influence that they have never attained to the Rectorship (see below iv). The Mālikīs who live chiefly in Upper Egypt and also in the Delta have always held a respected position, but have not often attained to the Rectorship, and have never quite managed to attain or retain the influence which their numbers might warrant. The competition thus almost always lay between the Shāfi'īs and Ḥanafīs, the former representatives of the national ritual, followers of the Imām, whose very holy Mausoleum is visible from Cairo, the latter representatives of the ritual of the Tatars, Caucasians and Turks who have held the ruling power for centuries. The controversy, nay, struggle, continues to our own times when the suzerainty of the Ḥanafī Sublime Porte has in this matter one of its most effective means of influence in the Nile valley. The official preferment of the Ḥanafīs has occasionally caused conversions to this sect. The opposition among the learned between the strictly dogmatic tendency and the mystic (*al-Taṣawwuf*) must be briefly indicated here. The former has always held the chief authority, though it has been occasionally threatened by the other. As far as mysticism in its numerous forms only appears as secondary, peaceable or tempered with asceticism, it is not interfered with. It is otherwise when it rejects, combats or attempts to suppress the main doctrines of its opponents. For an inexorable and consistent champion of the mystic conception like al-Sha'rāwī (died 973 = 1565) there was no room in the Azhar. The differences in the conception of Revelation and other questions constitute an impassable gulf.

In the middle ages we find an inspector (*Nāẓir*) at the head of the Azhar, who was chosen from the higher officials of the state. Each *Riwāḳ* besides and each sect had its own chief (in the latter *Shaikh*, in the former *Naḳīb* also). It is not till Ottoman times that we meet with a scholarly head of the Azhar the *Shaikh 'Umūm* who may be compared to the Rector of the German Universities (except that he is not changed every year). He has under him the Shaikhs of the various divisions and deals directly with the government. Thanks to Djabartī's Chronicle we have the list of these Rectors for more than 200 years [see below iv.].

The periods of instruction (*Dars*, Plur. *Durūs*) are usually broken by longer or shorter holidays (*Baṭāla*). The longest interval lasts from the holy month of Radjab through Sha'bān and Ramaḍān till the close of the "little festival" in the beginning of Shawwāl. After two months again comes the great sacrificial feast for several days; besides there are the many holy days (*Mawlid*, *Mūlid*, Plur. *Mawālid*) especially those of the Prophet and of Badawī in Ṭanṭā.

The domestic arrangements, the management of the library and of the supplies are in the hands of the Djindī (= Djundī) who again has numerous minor officials and servants under him.

III. The above sketch of the internal arrangements of the Azhar has dealt mainly with the earlier period and therefore requires to be supplemented by an account of the improvements which the nineteenth century has effected. When Napoleon's expedition had shattered the old Turkish constitution to fragments, Muḥammad 'Alī sought with the help of European material to erect a new building from the ruins. As a Turk, as an uneducated man in the academic sense, as a man of action and of new ideas, he could not hold the Azhar in particularly high regard. The Arab spirit felt itself repelled by the Turkish, the oppressed Egyptian had for a long time hated the Ottoman despot; the spirit of the Azhar, ignorant of the world, devoted to the past, was in striking contrast to the matter-of-fact attitude of the new ruler, who regarded only the present and the future. In the interest of the State, Muḥammad 'Alī did not hesitate to confiscate the extensive estates of the Azhar, although they were endowments with the inviolability of a religious bequest, and to do much harm to Professors and students.

By the institution of the "Mission Scolaire" in Paris (1828) many of the best brains were taken from the old traditional teaching and guided on quite new lines. Subjects which (as already mentioned) were placed in the lowest rank in the Azhar or quite neglected, Mathematics, Arithmetic, Physics, History, Geography etc. now took first rank, formed the path to office and honour, and threw no very favourable light on the educational stagnation of the Azhar. The new generation by the translation of European, mainly French works into Arabic, had, since the old scholastic terminology did not suffice, to form a new vocabulary and a new style which called forth the scorn of the Azharites. Whoever of these young people came back from Paris was regarded by the champions of the Azhar as insolent and affected. This antagonism which had developed by the time of

al-Ṭanṭāwī (about 1830; cf. *Zeitschr. f. d. Kunde d. Morgenl.*, vii. 60) has continued in spite of many changes to the present time. The Azharites continue to scoff: the Egyptians educated in Europe with their not very thorough twofold education are like certain birds which can only hop or waddle on the ground, but can neither fly nor swim properly.

Under Ibrāhīm, ʿAbbās I, and Saʿīd affairs pursued much the same course. The institution of new special schools did the Azhar still more damage. It was not till Ismāʿīl's reign that the revolution was completed. Perhaps in this matter also the Khedive was guided by the tendency to set up a purely Arab state in place of the Arab "herd" with an Ottoman "herdsman". To this purpose a reformed Azhar conforming to modern ideas would be very useful. His agent was the energetic, enlightened and experienced jurist Muḥammad al-ʿAbbāsī al-Mahdī al-Ḥanafī, then Rector of the Azhar. He perfected a new constitution (*Ḳānūn*) which had for its object the elevation of the position of Professors and students (Text in the newspaper *Wādī 'l-Nīl*, 16 Febr. 1872). Incapable and unworthy elements were to be discarded. The melancholy situation of most of the professors was to be improved by fixed salaries. That European, particularly French ideas were at the bottom of it, was shown most in the reform of the student's curriculum, the close of which had to be confirmed by examinations. An examining body of six members was formed, and the subject of the examinations to be passed were defined. Distinctions and rewards of all sorts awaited the candidates. The theological, legal, philological and rhetorical sciences were divided into eleven subjects of examination. The petty jealousies of the many groups in the Azhar were limited, and the direction was concentrated more than before in the hands of the Rector.

The zeal and good will of the reformers is not to be doubted but force of circumstances was stronger than they. From the Azhar itself arose an opponent to al-ʿAbbāsī in the person of Muḥammad ʿIlaiṣh, an important Mālikī but a fanatical zealot, around whom all the opponents of reform gathered. The events which followed, the financial and political downfall, the British occupation and other troubles were not exactly favourable to the reform of an organism which had been stagnant for centuries. How many of the proposed reforms have been carried through and how many have remained dead letters can not easily be told on account of the exclusiveness of the Azhar. The successors of Ismāʿīl, Tawfīḳ Pasha and ʿAbbās II have not been lacking in attention to it. The latter especially has done all he could to bring about another state of affairs; but the passive and latent resistance is too great. If one cares to consider analogies from European history he will easily understand that reform, that is, the steeping of the Azhar in new ideas, can only progress slowly if it be not actually impossible. There is no lack of enlightened individuals but the great mass has hitherto been impenetrable by any innovation. While almost all other departments of Egyptian institutions have been penetrated by European influences, the Azhar stands alone like an island and is proud of its impenetrability; one need be under no delusions as to the spirit in which it is steeped. Even the few reforms that have been carried out seem to the champions of the old state of affairs a desecration of the place. This may be understood from the saying of this group: *al-Azhar azʿar*, the Azhar is an institution deprived of its honour and glory. When about the year 1884 the Mahdists of the Sudān threatened the Nile valley also, they received much sympathy in the circles of the Azhar. How far their sympathy led to action can of course not be ascertained. When on the 7th June 1896, the Egyptian police commanded by Europeans attempted to enter the Azhar during the cholera epidemic to carry out most necessary sanitary measures they were bombarded with stones, beams, vessels etc. by the students and had to retreat. Those young people for whose spiritual guidance their teachers were responsible, lived in the belief that dirt was inseparable from holiness and that the inviolability of even the closets of the Azhar was a part of "holding fast to their religion" (*al-Tamassuk bi 'l-Dīn*). Incidents of this kind explain the situation better than the mere letter of the statutes, or semi- or official explanations. A great students' revolt took place in 1909.

For the statistics of the internal affairs of the Azhar in modern times we have various statements which often differ from one another considerably. ʿAlī Mubārak, who worked on the records of the Dīwān al-Awḳāf, gives for the year 1293 (1875): 325 teachers (Shaikhs) of whom 147 were Shāfiʿīs, 99 Mālikīs, 76 Ḥanafīs and 3 Ḥanbalīs. For many years no Ḥanbalī is said to have taught in the Azhar (*al-Khiṭaṭ al-Djadīda*, iv. 14 above). Further he gives 10,780 students comprising 5,651 Shāfiʿīs, 3,826 Mālikīs, 1,238 Ḥanafīs, 25 Ḥanbalīs. These figures agree very well with those given for several years of the same decade by I. Goldziher (published in Ebers' *Ägypten*, ii. 88). The Russo-Turkish war is adduced as the cause of the serious drop in the figures in 1877, but the decline in the number of Professors from 325 (1876) to 231 (1877) is not explained by it. An official report for 1892, soon after the accession of ʿAbbās II gives 178 Professors (according to sects 79, 61, 35, 3) and only 8,437 (?) students (according to sects: 3,941, 2,308, 1,774, 36). The not unimportant difference of these figures from those given above is explained by the fact that the official account gives only the regular paid teachers and the students proper, while the general statistics include the other teachers and also the scholars of the elementary and secondary schools connected with the Azhar. In 1899, 191 Shaikhs and 8,246 students were given; for 1901-1902 on the other hand 251 "Professors" and 10,403 students (Heidborn, in the *Preuss. Jahrbücher*, 1903, cxii. 1908). In 1906 there were 312 teachers and 9,069 students [cf. p. 201[a]].

All accounts of the yearly expenses of maintaining the Azhar must be taken with still more caution. In 1875 the income is said to have been 275,646 [14] Turkish piastres, the expenses 390,834 [3] piastres. ʿAlī Mubārak, who examined the matter more deeply, prefers to remain silent on this point. The official report above mentioned gives for 1892 total figures of £ 4,382 and 10,000 loaves daily. On the other hand for 1901-1902 £ 10,001 are mentioned and 13,510 loaves of bread daily. The £ 14,001 are divided as follows: the ministry of Finance contributes 6,611, the Dīwān al-Awḳāf only 5,757 and the endowments of the various

Riwāḳs total only 1632. One may assume that the official report gives only the expenses of the Awḳāf without the contribution of the state (regulated according to requirement).

IV. Thanks to the excellent Chronicle of al-Djabartī we possess a list of the Rectors (*Shaikh*, Plur. *Mashāʾikh*) of the Azhar from 1100 A. H. onwards, who are chosen from the most prominent scholars (the office of Rector is called the *Mashyakha*). We find among them important and unimportant men; some were capable as administrators but not learned, others the opposite. The favour of the Ottoman Pashas seems to have formerly played an important part in the selection. The jealousies of the various sects became evident on elections to the *Mashyakha*.

We are told that the oldest Shaikhs of the Azhar were:

1. the Mālikī Muḥammad b. ʿAbd Allāh al-Khirashī (Khirshī, died 1101), known as a commentator on various texts; 2. Muḥammad al-Nashratī (died 1120), likewise a Mālikī. Then followed a fierce contest between the adherents of 3. Aḥmad al-Nafarāwī and 4. of ʿAbd al-Bāḳī al-Ḳalīnī, who was at last victorious. The students in the mosque settled the contest with weapons and left a number of dead and wounded. After the death of Ḳalīnī followed 5. the wealthy Mālikī Muḥammad Shanan (died 1133); 6. the Mālikī Ibrāhīm b. Mūsā ʾl-Faiyūmī (born 1062, died 1137); 7. the Shāfiʿī ʿAbd Allāh al-Shabrāwī, famous as a poet and litterateur (died 1171); 8. the pious and learned Shāfiʿī Muḥammad b. Sālim al-Ḥifnī al-Khalwatī (died 1181); 9. ʿAbd al-Raʾūf al-Sadjīnī (died 1182); 10. Aḥmad b. ʿAbd al-Munʿim al-Damanhūrī (died 1190). Then arose a struggle which lasted a year between the supporters of the Ḥanafī 11. ʿAbd al-Raḥmān b. ʿOmar al-ʿArīshī (died 1193) and of the 12. Shāfiʿī Aḥmad al-ʿArūsī (died 1208). In the same year there were several disturbances among the students on other questions, partly between the Syrians and the Maghāriba, partly against the authorities and governing body on account of food etc. due to the students being withheld. The period of office of 13. the Shāfiʿī Rector ʿAbd Allāh al-Sharḳāwī (died 1227 = 1812) was one of the most important periods in the history of the Azhar because the Napoleonic expedition with all its horrors and troubles fell within it. Al-Sharḳāwī is well-known from several dogmatic, Ṣūfī and historical publications, and is looked upon as one of the most distinguished occupants of the office. After his death the students again divided into two parties, of which one wanted 14. Mahdī, the other 15. Muḥammad al-Shanawānī (died 1233). Al-Mahdī held the rectorship for a nominal period only and had to make way for his opponent. There followed 16. Aḥmad al-ʿArūsī (died 1245), then 17. Aḥmad b. ʿAlī al-Damhūdjī (died 1246), next 18. the enlightened Ḥasan b. Muḥammad al-ʿAṭṭār (died 1250), famous as a scholar, poet and stylist. He was followed by 19. the learned Ḥasan al-Ḳuwaisinī (died 1254); 20. Aḥmad al-Shāfiʿī al-Safṭī (died 1263); 21 Ibrāhīm b. Muḥammad al-Bādjūrī (Baidjurī, died 1277), very celebrated as a scholar, but weak as an administrator. When he became unfit for his task through old age a board of four guardians (*arbaʿat Wukalāʾ*) was appointed which was dissolved by 23. Muṣṭafā ʾl-ʿArūsī (till 1287) in 1281. He prepared the reforms which under his successor, the above (iii.) mentioned 24. Muḥammad al-ʿAbbāsī al-Mahdī al-Ḥanafī were carried through with the strong support of the Khedive Ismāʿīl. In the year of the rebellion (1299 = 1882) he had to give way for a brief period to Muḥammad al-Enbābī but soon recovered his office and held it till 1304 (3. Rabīʿ II.) when he was again deposed by Muḥammad al-Enbābī, a learned but pedantic man opposed to all innovations. Al-Enbābī did not execute the commission imposed on him by the government to write a history of the Azhar from the original documents. He was replaced in 1313 (1895) by 26. the Ḥanafī Ḥassūna al-Nawāwī who was deposed by 27. the Ḥanafī ʿAbd al-Raḥmān al-Nawāwī in 1317 (1899) who died immediately after. The 28. Mālikī Selīm al-Bishrī followed him in 1317 (1899) who had been chief of the Mālikīs since 1305 (1888); he was succeeded in 1323 (1905) by 29. the Shāfiʿī ʿAbd al-Raḥmān al-Sharbīnī.

V. The text-books used in the Azhar give us an insight into the scientific and literary taste of recent centuries. That the older texts were gradually more and more suppressed has already been mentioned. We notice the same phenomenon in other systems which have fallen victims to dogmatic stagnation. This explains the great difference between the tastes of the European Arabist and that of the Arabs themselves of which the spirit of the Azhar is typical. Just as strongly as we incline towards the older, fundamental and more creative literature, the Eastern mind inclines to the more recent explanatory works of hairsplitting commentators.

Since the great activity of printing-presses, and partly through the medium of the Khedival Library, even ʿUlamāʾ of the old school have begun to devote their attention to the noble works of ancient times (Adab, Poetry, Philology, History etc.). The influence of the Ḳorʾān and the importance of sacred tradition have been the means of the oldest works especially in Ḥadīth (rather less in Tafsīr), remaining in honour.

If we go through the curriculum of the Azharite and begin with grammar then the first work to be mentioned on this subject is the *Adjurrūmīya* (*Djarrūmīya*) of Muḥammad b. Dāwūd al-Ṣinhādjī (died 723). Of the numerous elucidations of this manual the commentary of Ḥasan al-Kafrāwī (died 1202) and that of Khālid al-Azharī (died 905) with the annotations of Abu ʾl-Nadjā and of ʿAṭṭār are the most popular. For the advanced courses the works of ʿAbd Allāh b. Yūsuf b. Hishām (died 761) viz. *Ḳaṭr al-Nadā*, *Shudhūr al-Dhahab* and *Mughnī ʾl-Labīb* with numerous commentaries and glosses are used; also the *Alfīya* of Ibn Mālik (died 672) with the commentaries of Ibn ʿAḳīl (died 769) and of Ashmūnī (about 900: a gloss on it by Ṣabbān died 1206) and others: more rarely the *Lāmīyat al-Afʿāl* of Ibn Mālik.

Of the numerous dictionaries of earlier times the *Ḳāmūs* of Fīrūzābādī was so commonly used that the name in modern times generally has the meaning of "dictionary". The *Ṣiḥāḥ* of Djawharī has also always had a good name. It was only European influence that brought other collections especially the *Tādj al-ʿArūs* and *Lisān al-ʿArab* to positions of honour. It required the intervention of a European diplomat to complete the printing of the *Lisān* which had come to a standstill. What we look for in such a work, namely

the explanation more especially of the ancient poetry, is quite foreign to Arab ideas. Reference to the ordinary meaning is only made to illustrate the theological meaning of a word. When the printing of the *Lisān* was completed in 1368 (1891) an official notice recommended the work in the following words: "Cet excellent ouvrage, qui entre autres choses d'une utilité incontestable, résout le sens mystérieux des versets du Coran et des traditions, dont l'interprétation a fait l'objet de controverses innumbrables, mérite à bien des titres l'admiration des savants" etc.

The rhetorical subjects which are little esteemed by us are naturally connected with the philological. The *Risāla* of Abu 'l-Ḳāsim al-Samarḳandī (about 890) on *Isti'ārāt* (Metaphors) with numerous commentaries and glosses is very popular, also the *Risāla* of Dardīr (died 1201) who was a famous Mālikī jurist; and that of Sabbān. For the advanced courses the *Talkhīṣ al-Miftāḥ* of Ḳazwīnī (died 739) is taken, of the commentaries the favourite is the *Muṭawwal* of Taftāzānī Sa'd al-Dīn (died 791). Since philosophical questions have been forgotten for centuries, logic alone of this branch is studied. This is based on the "Scala" (*al-Sullam*) of Akhḍarī (about 941) with many commentaries, the *Isagoge* of Porphyrius in the adaptation of Abharī (died 683) likewise often annotated, the *Shamsīya* of 'Alī b. 'Omar al-Ḳazwīnī (died 675) and the compendium of the theologian Muḥammad b. Yūsuf al-Sanūsī (died 892).

At the head of theological subjects stand dogmatics with its systems, compendiums and catechisms. The large and small *'Aḳīda* of Sanūsī, just mentioned are very popular; so are the *Djawhara* of Ibrāhīm b. Ibrāhīm al-Laḳānī (died 1041) and the *Kharīda* of the already mentioned Dardīr, all with numerous commentaries of ancient and modern times e. g. by Muḥammad al-Emīr, al-Hudhudī, al-Sharḳāwī, al-Bādjūrī. The literature of the "Mūlid" of the Prophet and the poetry devoted to his praise (*Madīḥ*) must also be mentioned here.

On the Ḥadīth the old, canonical collections, notably al-Bukhārī are still much read by scholars while more recent, smaller collections are used in teaching. The most important of these is the *al-Djāmi' al-ṣaghīr* of Suyūṭī (died 911) with supplement, notes, extracts and new adaptations. A special branch of this field is Prophetology, the dogmatic conception of the personality of Muḥammed. Highly valued works on this subject are the *Shamā'il* of Tirmidhī (died 279), and the *Mawāhib al-laduniya* of al-Ḳasṭellānī (died 923) the *Shifā* of Ḳāḍī Iyāḍ (died 544). Of the many works dealing with the technical language of the tradition (*Muṣṭalaḥ al-Ḥadīth*) the favourites are the *Baiḳūnīya*, whose author lived in the eleventh (seventeenth) century and the short text called after its opening words *Gharāmī ṣaḥīḥ*.

On the Tafsīr the once celebrated commentary of al-Zamakhsharī has fallen much into disuse through theological changes, and it is only through European influence that that of al-Ṭabarī has been recently deemed worthy of printing. The great commentary of Fakhr al-Dīn al-Rāzī (died 606) is very popular; further may be mentioned the work of the Djalālain, al-Maḥallī (died 864) and of al-Suyūṭī (died 911) with the gloss of Sulaimān al-Djammāl (died 1209); also the *Sirādj al-munīr* of Khaṭīb al-Sharbīnī (died 977) and the *Irshād al-'Aḳl al-salīm* of the Turk Abu 'l-Su'ūd al-'Imādī (died 982). More rarely used are al-Baiḍāwī (died 716) and his commentators al-Khafādjī, Shaikhzāde and others.

The doctrine of fundamental principles (*al-Uṣūl*) common to the great sects is readily studied from the Shāfi'ī *Djam' al-Djawāmi'* of 'Abd al-Wahhāb al-Subkī (died 771).

In other respects each sect goes its own way. Among the Shāfi'is the *Minhādj al-Ṭālibīn* of Nawawī (died 676) extracted from the *Muḥarrar* of al-Rāfi'ī (died 613) holds an unrivalled position. The most popular commentaries on the *Minhādj* are the *Nihāya* of al-Ramlī (died 1044) and the *Tuḥfat al-Muḥtādj* of Ibn Ḥadjar al-Haitamī (died 974 or 973; cf. on this commentary Snouck Hurgronje in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, LIII, 142). Two works of Zakarīyā' al-Anṣārī (died 926), the *al-Taḥrīr* and the *Manhadj al-Ṭullāb* are also popular; there are also the commentaries of Ibn Ḳāsim al-Ghazzī (died 918) called, *al-Ḳawl al-mukhtār* and the *al-Iḳnā'* of Khaṭīb al-Sharbīnī and the compendium (*Mukhtaṣar*, *Matn*) of Abū Shudjā' al-Iṣfahānī (about 500).

Among the Ḥanafīs the formerly highly celebrated *Hidāya* of 'Alī al-Marghīnānī (died 593) with its many commentaries has lost ground before more recent works. The *Kanz al-Daḳā'iḳ* of 'Abd Allāh b. Aḥmad al-Nasafī (died 710) is popular with the commentaries of al-'Ainī (died 857), of Mullā (Munlā) Miskīn (about 950), of Ibn Nudjaim (died 970), of Muṣṭafā al-Ṭā'ī (died 1192); further may be mentioned the *Nūr al-Iḍāḥ* of Ḥasan al-Shurunbulālī (died 1069) the selections from it, the *Marāḳī 'l-Falāḥ* with the gloss of al-Ṭaḥṭāwī (died 1231); also al-Ḥaṣkafī's (died 1088) commentary (*al-Durr al-Mukhtār*) with the gloss of Ibn 'Ābidīn (died 1753) on the *Tanwīr al-Abṣār* of Muḥammad b. 'Abd Allāh al-Timurtāshī (Demirdashi died 1004); likewise the *Ghurar al-Aḥkām* and the commentary *Durar al-Ḥukkām* of Mullā Khusraw (died 885). Ibn Nudjaim mentioned as a commentator devised also a favourite system (*al-Ashbāh wa'l-Naẓā'ir*) and a collection of judicial decisions.

Of the earlier literature of the Mālikīs besides the fundamental work, the *Muwaṭṭa'* of Mālik b. Anas (died 179), the chief that have survived are, the *Risāla* of 'Abd Allāh Ibn Abī Zaid al-Ḳairawānī (died 388) with many commentaries, e. g. that of Abu 'l-Ḥasan 'Alī al-Shādhilī (died 939), of al-Tatā'ī (died 942) and of al-Adjhūrī (died 1066). For the rest Khalīl b. Isḥāḳ (died 767) with his compendium holds a similar position to al-Nawawī among the Shāfi'is. Nearly all prominent Mālikīs have expounded his *Mukhtaṣar*, among them Tatā'ī, al-Adjhūrī, 'Abd al-Bāḳī b. Yūsuf al-Zurḳānī (died 1099), al-Khirshī (Khirashī; died 1101), al-Dardīr (died 1201) and Muḥammad 'Illaish (died 1299). Another important text-book is the *Muḳaddima* of 'Abd al-Bārī al-Ashmāwī with the commentary of Aḥmad b. Turkī (about 992) and the *Muḳaddima* known as *'Izzīya* which has been explained by Ibn Turkī, al-Fishī and al-Zurḳānī.

The more recent literature of the Ḥanbalīs is as small as the number of its adherents. The *Dalīl al-Ṭālib* of Mar'ī b. Yūsuf (died 1033), and the *Muntahā 'l-Irādāt* of Muḥammad b. Aḥmad al-Futūḥī are popular.

The law of inheritance (*al-Farā'iḍ*) which is

common to all the great sects is usually studied from the *Sirādjīya* and the *Raḥbīya*.

The sciences in general studied in the Azhar are treated of in: Naṣr al-Hūwaihī, *al-Mabādī al-naẓrīya fi-mashhūr al-ʿUlūm al-azharīya* (Kairo, 1320). The most popular texts, especially those in verse have been frequently reprinted recently as *Madjmūʿ Mutūn*, e.g. Cairo, 1306, 349 pp.; 1302, 239 p.p., lithogr.

VI. Like other academies, the Azhar has in course of time acquired important treasures in books which serve partly for study and partly for teaching. When the Khedival Library was founded in 1870 and the mostly abandoned madrasas had to give up their collections for this purpose, the Azhar was left untouched, much to the disadvantage of Arab studies in Europe. It would have been better to make a division and leave the text books to the Azhar and to give the scientific works to the new library. Our knowledge of the contents of these collections is therefore not only insufficient but (what is worse) one cannot be certain that the works mentioned in the old catalogues still survive. J. L. Burckhardt compiled a list based on his own examination and published it in 1816 (*A Catalogue of Books in the Mosque al-Azhar*). A selection from the contents of the Azhar and other Madrasas was published from a Vienna Codex by G. Flügel (Ḥadjdjī Khalīfa, vii. 1—22).

From an official catalogue of 1268 (1851) I take the following. The divisions, Riwāks, and endowments are distinguished as follows. 1. Turks; 2. Syrians; 3. Kurds; 4. Maghār(i)ba; 5. al-Nadjdjārī; 6. al-Saʿāʾida; 7. Riyāfa (from the Delta) or Manūʾifa (from the Manūfiya) or Shaikh al-Shanawānī; 8. Baḥār(i)wa (from the Beḥēra); 9. Shaikh al-Badjūrī; 10. al-Madrasa al-Ibtighāwīya; 11. al-Fulāta (Central-Africa); 12. al-Shaikh Teʿālib; 13. al-Danāsh(i)ra (from Danōshar and district); 14. Ibn Muʿammar; 15. al-Madrasa al-Ṭabarsīya; 16. al-Sharḳāwī; 17. al-Shubrakhītī; 18. al-Hunūd; 19. al-Baghdādīya; 20. al-Damanhūrī; 21. al-Bashābisha (from Bishbēsh and neighbourhood); 22. al-Ḍakār(i)na or Ṣelēḥīya; 23. Dārfōr; 24. Yemenites; 25. Barāb(i)ra; 26. Javanese; 27. al-Imām al-djadīda or Muḥammad al-Mughārbilī; 28. Sulaimānīya; 29. ʿĪsā Efendi; 30. Payama; 31. Djabartīya. The richest are the Turks, the Maghār(i)ba, the Syrians, the Ṣaʿāʾida and Kurds, smaller numbers belong to the al-Nadjdjārī, the Riyāfa, the Danāsh(i)ra, al-Damanhūrī and the two old madrasas (10, 15); the remaining vary from 100 to 200 volumes or less. The total number of books, entered in this catalogue may exceed 8,000 works in almost 19,000 volumes. No official numbers since that time are known to me.

Bibliography: On the building see i., end. — al-Maḳrīzī, *Khiṭaṭ*, ii, 273—277; al-Suyūṭī, *Ḥusn al-Muḥāḍara* (1299), ii, 181 *et seq.*; al-Djabartī's Chronicle and ʿAlī Mubārek's *al-Khiṭaṭ al-djadīda*, iv. 19—44, who as an enlightened individual and the reformer of the modern school-system deals with the subject in an unprejudiced manner. Muṣṭafā Bairam, *Risāla fī Taʾrīkh al-Azhar* (Cairo, Tamaddun, 1321), a short, unassuming, history (school, teachers, pupils, and management). The author who presented the pamphlet to the Hamburg Oriental Congress in 1902 is a son of the Muḥammad Bairam mentioned in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xlv. 358. More thorough is Sulaimān Rasad al-Ḥanafī al-Zaiyātī, *Kanz al-Djawhar fī Taʾrīkh al-Azhar* (which appeared in 1322). It treats in five sections of the history of the building, various important parts of the institution, the rectorship, the inner history, customs and statistics. The other small, theological schools of Egypt are included. In the beginning of 1323 (spring 1905) was published: *Aʿmāl Madjlis Idārat al-Azhar 1312—1322* (Cairo, 1323). Under the misleading title which leads one to expect an official report, a scathing attack on the faults and weaknesses of the ruling system is concealed. The obviously well-informed author spares neither the most respected scholars nor the Khedive and the camarilla of the ʿĀbdīn palace. The greed of the professors is especially criticised and next to that their ignorance. The pamphlet is an important sign of the times. Of quite another sort is Muḥammad b. Ibrāhīm al-Aḥmadī al-Ẓawāhirī, *al-ʿIlm wa ʾl-ʿUlamāʾ wa Niẓām al-Taʿlīm* (Ṭanṭā, 1904). It is part i. of a work to be called: *al-Taʿlīm al-islāmīya*. The work deals in nine chapters with scholars, theological schools, sciences, method of teaching, the education of the people, elementary instruction, paedagogics, the necessary reforms and the theological control. A moral sincerity such as is here shown, would be a rarity even amongst us, much more so is it in stagnant Islām. The combination of the purely Islāmic point of view with a great susceptibility to the good that comes from other sources is most remarkable. Islām should learn not only from Europe but also from China and Japan. Among the subjects to be studied the propagation of Islām (*Daʿwa, Risāla*) is mentioned. The author desires annual Islāmic congresses but without Panislamism. Other means of culture he seeks in learned commissions, in the production of an encyclopaedia, in the spread of university instruction among the people. Islām is to be purified of fables and other encumbrances. He warns his readers against speculative philosophy. The book is, at all events, a brilliant testimony to the author's genuine convictions and idealism. Cf. also *al-Kanz al-anwar fī Faḍāʾil Djāmiʿ al-Azhar* (*Kat.* Landberg, Leiden, N°. 263). Further I. Goldziher in G. Ebers, *Aegypten*, ii. 71—90; A. v. Kremer, *Aegypten*, ii. 50 ff.; E. Dor, *L'Instruction publique en Egypte* (1872), pp. 373—378; Jacoub Artin, *L'Instruction publique en Egypte* (1889), p. 34 ff., 205 f.; Vollers in Trübner's *Minerva* sub Cairo, especially iii, 1894; A. Mallan, in *al-Mashriḳ*, vi. 49—60; A. Heidborn, in the *Preuss. Jahrbücher*, cxii. (1903), 95—119; and in *Westermanns Monatsh.*, xciv, 819—829 (with illustrations); P. Arminjon, *Universités musulmanes d'Egypte*, in the *Revue de Paris*, 1904; and *L'enseignement, la doctrine et la vie dans les Universités musulmanes d'Egypte* (Paris, 1907); Krymski and Miller, *Wysemusulmanskii universitet pri mečeti Azhar* (cf. *Or. Bibl.*, xvii. N°. 5590), after *al-Mashriḳ*, iv. 94 ff.; M. Bobba, *La fiorita Gamʿa El-Azhar* (cf. *ibid.*, xvii. N°. 5623). (K. VOLLERS.)

AL-AZHARĪ AḤMAD B. ʿAṬĀʾ ALLĀH B. AḤMAD wrote in the year 1161 (1748) the work on Rhetoric *Nihāyat al-Ījāz fi ʾl-Ḥaḳīḳa wa ʾl-Madjāz*, which is preserved in Berlin (see Ahlwardt, *Verzeichnis der arab. Hss.*, N°. 7289) with a commentary by his son. (BROCKELMANN.)

AL-**AZHARĪ** IBRĀHĪM B. SULAIMĀN AL-ḤANAFĪ wrote about the year 1100 (1688) *al-Risāla al-mukhtāra fī Manāhī 'l-Ziyāra*, in which he shows that it is illegal on visiting graves, to touch or kiss them, or lie upon them (s. Ahlwardt, *Verzeichnis der arab. Hss. der Kgl. Bibliothek zu Berlin*, Nº. 2694) as well as a monograph on the Fiḳh precepts regarding expectoration, kissing, and embracing, entitled *Raḥīḳ al-Firdaws fī Ḥukm al-Rīḳ wal-Baws* (*ib.* 5596). (BROCKELMANN.)

AL-**AZHARĪ** KHĀLID B. ʿABD ALLĀH B. ABĪ BAKR AL-DJARDJĀWĪ, Arab philologist died on the 19. Muharram 905 = 26. Aug. 1499 in Cairo. His chief work is the *al-Muḳaddima al-Azhariya fī ʿIlm al-ʿArabiya*, printed with a commentary by the author at Būlāḳ, 1252. There are glosses on it by Ḥasan b. al-ʿAṭṭār printed at Būlāḳ, 1284 and Cairo, 1307 (in addition a *Taḳrīr* by Muḥammad al-Anbābī on the margin of his glosses to the *Ādjurrūmiya*, Cairo, 1310) and by Abu 'l-Nadjā (Cairo, 1312). Of his commentaries there are printed that on Ibn Hishām's *al-Iʿrāb ʿan Ḳawāʿid al-Iʿrāb* entitled *Muwaṣṣil al-ṭullāb ilā Ḳawāʿid al-Iʿrāb* (Stambul, 1285 and Kairo, 1292), that on the *Ādjurrūmiya* (Amsterdam, 1756, ed. Schnabel; Būlāḳ, 1259, 1290): thereon Glosses by Muḥammad Mudjāhid Abu 'l-Nadjā (Būlāḳ, 1284; Kairo, 1305, 1306, 1319, ed. Carletti, Tunis, 1290), thereon Superglosses by Muḥammad al-Anbābī (Kairo, 1319), as well as by Ibn al-Ḥādjdj (Fes); that on the part of Ibn Mālik's *Alfiya* treating of inflection, entitled *Tamrīn al-Ṭullāb fī Ṣināʿat al-Iʿrāb* (Cairo, 1280, 1305, 1308, 1310; in 4 voll., edited by al-Hūrīnī, Būlāḳ, 1294, Tunis, 1290, 1292). Besides these, there are still preserved a commentary by him on the *Muḳaddima al-Djazariya fī 'l-Tadjwīd* (Mss. see Brockelmann, *Gesch. d. arab. Litter.*) and a work entitled *al-Alghāz al-naḥwiya* (*Fihrist al-Kutub al-ʿarabiya fī 'l-Kutubkhāna al-Khedīwiya*, vii, 59, 190).

Bibliography: Sharaf al-Dīn al-Noʿmānī, *al-Rawḍ al-ẓāhir fī mā toyassara min Akhbār Ahl al-Ḳarn al-sābiʿ ilā Khitām al-Ḳarn al-ʿāshir*, cod. Berl. Wetzst., ii. 289 (Ahlwardt, *Verzeichniss*, Nº. 9886) ii. fol. 123r; ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda*, x. 53; Brockelmann, *Gesch. d. arab. Litt.*, ii, 27. (BROCKELMANN.)

ʿ**AẒĪM** (A.), great; *al-ʿAẓīm*, the Great, is one of the names of God.

ʿ**AZĪMA** (A.). From the dictionary meaning "earnest, inviolable expression of the will, firm decision" various special applications of the word have developed.

1. In Law, ʿAzīma denotes an inviolable command i. e. the divine law in itself without reference to possible serious obstacles to its being followed. Correlative to it is *Rukhṣa*, exemption given by the lawgiver for certain cases of prevention, or complete dispensation from observance of the law (e. g. the breaking of a law concerning food in cases of necessity where adherence to the law might be dangerous to health or life). Cf. Goldziher, *Ẓâhiriten*, p. 68.

2. In Theurgy ʿAzīma means magical adjuration; thence also the application of magic formulae from which certain effects are expected. Cf. *Nöldeke-Festschrift*, p. 307 ff. (GOLDZIHER.)

AZIMECH, a star of the first magnitude in the constellation of the virgin (*Spica virginis*). The name goes back to the Arab designation *al-Simāk al-aʿzal* [q. v.].

AZIMUT (from the Arabic *al-Samt*, the zenith) is the angle which the parallel of altitude through any star or earthly object makes with the meridian. In Astronomy it is reckoned from the southern point of the horizontal circle to West, North, and East from 0° to 360°, while surveyors begin at the north point and count from there to the East, South and West from 0° to 360°. In both cases therefore the counting is made in the direction of motion of the hands of a clock, only the starting point of counting, that is the zero point, is different in astronomy from in Geodesy. The Azimut of a star or object is decided by the arch read on the horizon or Almukantarat which is enclosed by the parallel of altitude and the meridian. The Altazimut, the theodolite or in simpler cases, with reference to the magnetic declination, the compass serves to determine it. (MAHLER.)

ʿ**AZĪZ** (A.), mighty, valuable; *al-ʿAzīz*, the Mighty is one of the 99 names of God and in the Ḳorʾān (12, 30) also a designation of Potiphar [see ḲIṬFĪR].

AL-ʿ**AZĪZ**, AL-MALIK AL-ʿAZĪZ ʿIMĀD AL-DĪN ABU 'L-FATḤ ʿOTHMĀN, an Aiyūbid, son of Saladin was born in Cairo on the 8 Djumādā I 567 (6 February, 1172). In 582 (1186-1189), when 15 years old, he became governor of Egypt. On the death of his father he inherited Egypt, where he reigned from 589 till his early death on the 27 Muḥarram 595 (29 November 1198). The events of his reign are dealt with in the articles AL-ʿĀDIL I and AL-AFḌAL. He was an amiable but weak prince. He did his best to be just but could not be master of the difficult political situation in which Egypt was then placed. Nevertheless his subjects loved him. In his youth he had pursued serious studies in the Ḥadīth. He was entombed near the Imām al-Shāfiʿī.

Bibliography: E. Blochet, *Histoire d'Egypte de Makrizi*, pp. 216—250 and the Bibliography to AL-AFḌAL and AL-ʿĀDIL I. (C. H. BECKER.)

AL-ʿ**AZĪZ BI'LLĀH**, ABŪ MANṢŪR, born on the 14th of Muḥarram 344 (May 11th 955) was the second son of al-Muʿizz, the Fāṭimid conqueror of Egypt. His elder brother, ʿAbdallāh, having died in 364 (974), al-ʿAzīz became his father's successor at the latter's death in Rabīʿ ii. 365 (Dec. 676). He was not formally proclaimed, however, till the 10th of Dhu'l-Ḥidjdja 365 (Aug. 9th 975), thus becoming the fifth Fāṭimid and the first of this dynasty to commence his caliphate in Egypt. Of a somewhat luxurious nature, al-ʿAzīz spent vast sums on garments of a fashion and magnificence hitherto unknown to the Egyptians; new dishes were served at his table, and his love of rarities brought many strange animals and birds to Cairo. In this city and its environs, new mosques, palaces, bridges, canals and dry docks were built. Such extravagance and even the really necessary improvements made heavy demands upon the treasury. These al-ʿAzīz met by a strict control of his exchequer; he was the first to give fixed salaries to his servants and retainers, forbidding all bribes and presents, and commanding that no payment should be made without a written order. In this he was ably seconded by his vizier, Yaʿḳūb b. Killis, a converted Jew, who served him for fifteen years. Upon Ibn Killis' death, ʿOmar al-ʿAddās, Abū Faḍl Djaʿfar b. al-Furāt, Abū ʿAbdallāh al-Ḥusain b. al-Ḥasan al-Bazyār, Abū Muḥammad Ibn ʿAmmār, al-Faḍl b. Ṣāliḥ and

ʿIsā b. Nestorius held office in rapid succession. The appointment of Ibn Nestorius, as well as that of a Jew, Manasseh, to the chief secretaryship in Syria, were in accord with the Fāṭimid policy of toleration in regard to religion and race. But in the case of al-ʿAzīz, special influence was exerted by his Christian wife, the mother of his son and heir al-Ḥākim. Her two brothers were appointed Melkite patriarchs of Alexandria and Jerusalem, by the caliph's express, though irregular, command, and the Christians never enjoyed so much toleration as under his rule. The Coptic patriarch, Ephraim, who stood in high favour with al-ʿAzīz, obtained permission to rebuild the church of Abū Saifain outside Fusṭāṭ and all opposition to this grant on the part of the Muhammadans was summarily suppressed by the caliph. Indeed, he even went so far as to encourage discussions between Christian and Muḥammadan divines [see IBN AL-NUʿMĀN] and to refuse to persecute apostacy on the part of a Muhammadan, though he was the first to institute the custom that the caliph went in state to the mosque every Friday in Ramaḍān, the month of fasting, and performed the prescribed service in the presence of the people. Such appointments and grants naturally gave offence to the Muḥammadans. To pacify them, al-ʿAzīz from time to time removed obnoxious officials, but harem influence, at least in the case of Ibn Nestorius, and the need of their advice soon restored those who had been dismissed. The discontented were forced to reconcile themselves to this policy by a firm administration backed by a powerful army, for which al-ʿAzīz was the first of his family to adopt the fateful policy of importing Turkish troops. The caliph had scarcely any cause to call upon his forces to quell insurrections at home, though, on the other hand, active service was demanded of them abroad. The Turkish general Aftakīn, who, after the intervention of the Ḳarmaṭīs which severed Syria from Egypt, had restored the name of the ʿAbbāsid caliph at Damascus, emboldened by the death of al-Muʿizz advanced upon Sidon which he conquered, and then proceeded as far as Tiberias, whence he returned to Damascus. Thither Djawhar was dispatched in 365 (976), but after besieging the city for two months retreated to Ascalon upon al-Hasan's al-Aʿṣam al-Ḳarmaṭī coming to Aftakīn's relief. The allies pursued the Egyptians and the veteran Fāṭimid general was forced to promise Aftakīn valuable presents in order to extricate himself from a precarious position and return to Egypt. Immediately upon his arrival, al-ʿAzīz in person advanced into Palestine and defeated the allied forces in the year 367 (977), capturing Aftakīn, but with characteristic generosity pardoning him and showering honours upon him. In spite of this victory, Damascus was still but nominally under the control of Egypt. Ḳassām, one of Aftakīn's counsellors straightway usurped authority over the city, and withstood all attempts to remove him on the part of the generals Abū Maḥmūd, al-Faḍl b. Ṣāliḥ, Salmān b. Djaʿfar b. Falāḥ and Djaish b. Ṣamṣāma, till he was forcibly ejected in 372 (982) by Yaltakīn, who had been sent to Ramla to discipline al-Mufarradj b. Daghfal. Owing to a revolt on the part of the Maghribī troops at Cairo in 373 (983-984) Yaltakīn was recalled and Damascus was entrusted to Badjkūr, who had quarrelled with his master the Ḥamdānid Abū Maʿālī Saʿd al-Dawla. Exceedingly ambitious, the new governor assumed command of Raḳḳa and al-Raḥba, endeavoured to strengthen his position by making treaties with neighbouring rulers, and even went so far as to treat with the Buwaihid Bahāʾ al-Dawla and Saʿd al-Dawla for Ḥimṣ. Upon their refusal, Badjkūr again turned to al-ʿAzīz and requested reinforcements to capture Ḥalab from Saʿd al-Dawla. The Caliph, not unwilling to extend his power, agreed and commanded Nazzāl, the prefect of Tripolis and other Syrian generals to support him. These, however, at the instigation of Ibn Nestorius, deserted him at the critical moment and Badjkūr betrayed by some of his own troops, suffered a crushing defeat and later, denounced by an Arab with whom he had taken refuge, was executed at the order of Saʿd al-Dawla. Five years later al-ʿAzīz persuaded by his general Abū 'l-Ḥasan al-Maghribī, once more sent an army under Manǧūtakīn against Ḥalab now in the hands of Abu'l-Faḍāʾil the son of Saʿd al-Dawla. After defeating an army of 50,000 men dispatched to the relief of this city by the Byzantine governor of Antioch, the Fāṭimid general besieged the city for thirteen months in 383-384 (993-994), whereupon the Emperor Basil II himself, abandoning a campaign against the Bulgarians, came to its relief. At his approach the Egyptians retired, and the Emperor sacked Ḥimṣ and Shaizar, and made an unsuccessful attack on Tripolis. Straightway al-ʿAzīz went to Bilbais where he collected a large force. The departure of the expedition, however, was delayed by the destruction by fire of eleven of his largest vessels. Though this misfortune was speedily repaired by the energetic Ibn Nestorius, preparations were brought to an end for a time by the death of al-ʿAzīz on the 28th of Ramaḍān 386 (October 15, 996). He was without doubt the wisest and most beneficent of all the Fāṭimid rulers of Egypt, and, though Africa under Yūsuf Bulugīn and his son al-Manṣūr was loosening its ties from Egypt and Syria was only retained by force of arms, the Fāṭimid rule extended at least nominally over the greatest amount of territory during his reign, his name being prayed for in the mosques from the Atlantic to the Red Sea, in Yaman, at Mecca and once even in the pulpit of Mosul.

(N. A. KOENIG.)

'AZĪZĪ, a Turkish poet, who was born in Constantinople, and died there in 993 (1585). His proper name was Muṣṭafā. He is the author of a kind of poem entitled *Shehr-engīz* (cf. on this style of writing: Gibb, *A History of Ottoman Poetry*, ii. 232 f.) which J. von Hammer published in volume v. of the *Mines de l'Orient* and Gibb translated, *loc. cit.* iii. 182 ff.

'AZĪZĪ, poetical name of 'Abd al-'Azīz Ḳara Čelebi-Zāde [q. v.].

'AZL (A.), deposition, dismissal. In Algeria, estates which belonged to the head of the state or to the community used to be known as *'Azel*. After the French occupation they became national property and the government disposed of them either by granting the use of them to individuals on payment of a certain duty called *Ḥukr* (Plur. *Ḥukūr*) or in certain cases by recognising their proprietary rights in them.

AL-AZRAḲĪ Abu 'l-Walīd Aḥmad b. Muḥammad and his grandson Abu 'l-Walīd Muḥammad b. 'Abd Allāh b. Aḥmad, the historians of the town of Mecca. The *Nisba* al-Azraḳī under which both are known, is taken from an ancestor of theirs, 'Othmān b. 'Amr al-Ghassānī al-Azraḳ (i. e. the blue eyed). He, a contemporary of Muḥammad, belonged to the ruling house of the Djafnids of Ghassān. Al-Azraḳī the grandfather (died 219 = 834 or 222 = 837) was the first to collect traditions relating to the history of Mecca. They were first written down by the grandson, who was already dead in 244 (858). Al-Fāsī [q. v.] edited a new edition and this recension, later augmented by his nephew Abu 'l-Ḥasan Muḥammad, has been published by Wüstenfeld in the first volume of his *Chroniken der Stadt Mekka*.

Bibliography: in Wüstenfeld, *op. cit.* Cf. also Brockelmann, *Gesch. der arab. Litter.*, i. 137.

AZRAḲĪ Zain al-Dīn Abū Bakr b. Ismā'īl al-Warrāḳ, Persian poet, who according to Ethé died in 527 (1132-1133) or 524 (1130). Mīrzā Muḥammad Ḳazwīnī has however shown (*Čahār Maḳāla*, p. 175 ff.), that the poet probably was dead before 465 (1072-1073). He composed a Dīwān which among other things contained a panegyric on Tughānshāh b. Alp Arslan the governor of Herāt (not of Nīshāpūr, as is often stated) and on Amīrānshāh b. Ḳāwurd. On the other hand it appears to be incorrect that he, as Ḥādjdjī Khalīfa amongst others has stated, is also the author of the *Sindbād-Nāma* and of an obscene work entitled *Alfiya wa-Shalfiya*.

Ḳazwīnī), p. 44, 170 ff.; *Recueil de textes relat. à l'histoire des Seldjoucides*, i. 14 ff.; Ethé, in *Grundriss der Iran. Philologie*, ii. 258; Browne, *A Literary History of Persia*, ii. 323.

AZRAḲITES (Azāriḳa), a Khāridjite sect, so-called after their leader Nāfi' b. al-Azraḳ [q. v.], who founded the doctrine that all followers of other doctrines were without exception infidels and — if they did not at once become converted — doomed to death with their wives and innocent children. After Nāfi' had met his death on the battlefield, 'Ubaid Allāh b. al-Māḥūz became leader of these fanatics till he also was slain in the battle of Sillabrā (Shawwāl 66 = May 686). A similar fate befell his successor Zubair b. al-Māḥūz, but the Azraḳites asserted themselves under the leadership of the brave Ḳaṭarī b. al-Fudjā'a [q. v.] till 77 (696) in which year he also was killed and the Azraḳites disappear from history. Al-Shahrastānī accuses this sect of eight heresies. Most of these proceed from their holding all followers of other doctrines as infidels, though special mention may be made here, that they also condemned prudent concealment of one's own belief (*Taḳiya*) and rejected institutions, which were not laid down in the Kor'ān e.g. the stoning of an adulterer on the ground of an alleged revelation hitherto customary.

'AZZA (A.; "young gazelle)", a common woman's name, two bearers of which are specially famous, 'Azzat Kuthaiyir and 'Azza al-Maila'.

'Azzat Kuthaiyir whose real name was 'Azza bint Ḥumaid b. Waḳḳāṣ (*Aghānī*; *Khizāna*: bint Ḥumail b. Ḥafṣ) and was a Bedouin of the tribe of Ḍamra. She was called 'Azzat Kuthaiyir, the 'Azza of Kuthaiyir because this poet dedicated all his Ḳaṣīdas to her (which for his part brought him the title of Kuthaiyir 'Azza). She must have been quite a child when Kuthaiyir fell in love with her. Later she married another, which did not hinder her, however from meeting the love of her youth on pilgrimage and elsewhere. Nothing farther is known of the details of her life. The story that she fell in love with the beautiful Djamīl and thereby aroused Kuthaiyir's jealousy probably springs from a love of playing on etymologies and from a desire to connect Kuthaiyir and 'Azza with another equally famous pair of lovers Djamīl and Buthaina. According to Ibn Ḳotaiba she died in Egypt at a time when Kuthaiyir still was consumed with love for her; on the other hand according to the *Kitāb al-Aghānī* she came as an old woman to the Caliph 'Abd al-Malik and related to him the story of Kuthaiyir's love for her in days gone by.

Bibliography: Ibn Ḳotaiba, *Kitāb al-Shi'r* (ed. de Goeje), p. 252 *et seq.*, 321—328; *Aghānī* (1. ed.), viii. 36—36; *Khizānat al-Adab*, ii. 381—383.

'Azza al-Mailā', i. e. "'Azza with the swinging gait", a famous singer. She was a pupil of the singer Sā'ib Khāthir and Nashīṭ (both of Persian origin) as well as of woman singer Rā'iḳa. 'Azza, a client of the Anṣār lived in Medina and was a general favourite there not only on account of her skill in singing and playing the lute, but also for her beauty and moral life. Ḥassān b. Thābit is said to have been moved to tears by her song, 'Omar b. Abī Rabī'a to have swooned with delight at her musical interpretation of his poems. The singers Ibn Muḥriz and Ibn Suraidj enjoyed the benefits of her tuition. The period of her activity can only be approximately fixed from the assertion that she sang in Medina during the reign of Mu'āwiya and his son Yazīd as well as from the persons with whom she is said to have come in contact; the Ibn Suraidj just mentioned had lessons from her while a young man and died at

B.

BĀ', the second letter of the Arabic alphabet (apart from Khalīl's arrangement of it; cf. the article ABDJAD), as a numeral = 2. Graphically it is known as *al-bā' al-muwaḥḥada*. Phonetically Sībawaihi defined it sufficiently according to our ideas as a voiced, bilabial, explosive sound (ed. Derenbourg ii. 453, 16, 18, 454, 7), our *b*. al-Bā' is also the name of the Arabic preposition *bi* (to, in, on; through [instrumental!]). For further information see grammars and dictionaries. [Cf. besides the Artt. ARABIA: SCRIPT and DIALECTS].

(A. SCHAADE.)

BĀ' (A.), also BAW', BŪ', Plur. ABWĀ', a linear measure = a fathom (Turkish *ḳulach*).

BAALBEK (BA'LABEKK; called "Heliopolis" by the Greeks) chief town of a district in the province of Damascus, seat of a Ḳā'immaḳām, situated in the Syrian plateau of Biḳā', famous for the ruins of the Temple of Jupiter erected by the Emperor Antoninus (138—161) on a broad terrace, the courts and propylaea of which Caracalla added, as well as for its Temple of Bacchus. The etymology of the name Baalbek has not been explained, according to the Greek designation "Heliopolis" it was the site of the cult of a sun-god. The name "Biḳā' al-'Azīz" points in the same direction. 'Azīz is a paredros of the sun-god who was worshipped in North and Central Syria. This plateau is called after him and not after a less important son of the famous Ṣalāḥ al-Dīn. The Arab legend relates that the temple of Baalbek was a palace of Solomon which he gave to Bilkīs the Queen of Sheba as a wedding gift. Baalbek was incorporated in the Muslim dominions by 'Omar I's general Abū 'Obaida in 637 (16) peacefully by agreement, and remained a part of the province of Damascus in the possession of the Umaiyad and 'Abbāsid Caliphs till the Fāṭimid Caliph al-Mu'izz conquered Damascus in 942 (361) and placed a governor in Baalbek. The Fāṭimid rule lasted till 1075 (468) though it was twice interrupted: once by the conquest and destruction of the town by the Byzantine Emperor John Zimisces in 974 (363) and again on its occupation by Ṣāliḥ ibn Mirdās Prince of Aleppo in the year 1025 (416). In 1075 (468) the rule of the Seldjuk prince Tutush and his sons began. It was only held for a short time in 1083 (476) by Muslim ibn Kuraish, Prince of Aleppo. After Muslim's departure the eunuch Gümüshtegin became governor and remained in his office under Tutush's sons. The successor of the Seldjuks was Toghtikin, a former Atabeg of theirs [q.v.]. When Gümüshtegin intrigued against him in 1110 (504) with his overlord the great-sultan, Toghtikin deposed him and entrusted his son Būrī with Baalbek. After the death of Toghtikin in 1128 (522) his son Būrī succeeded him in Damascus and granted Baalbek in fief to his son Muḥammad who held out against his brothers after the murder of Būrī in 1128 (522). At this time Baalbek seems to have been strongly fortified for we hear for the first time of its successful defence (cf. below). Muḥammad became Prince of Damascus in 1138 (633) after his brothers Ismā'īl and Maḥmūd had been assassinated in 1132 (526) and 1134 (529) respectively. His gifted vizier Önör received Baalbek in fief. As stepfather of the murdered Maḥmūd, Zangī, Prince of Aleppo demanded revenge from the innocent Muḥammad. As Zangī did not dare attempt the siege of Damascus, he advanced against Baalbek and in 1136 (531) the bravely defended citadel was surrendered to him on his promising a safe retreat, but he did not keep his word. His governor was Ṣalāḥ al-Dīn's father Aiyūb [see AIYŪBIDS].

Zangī strengthened the fortifications of Baalbek. Muḥammad died in 1139 (534) and the above-mentioned Önör ruled on behalf of his young son Abaḳ. After the assassination of Zangī in 1146 (541) Aiyūb had to give Baalbek back to Önör. The eunuch 'Aṭā held it in fief; after the murder of 'Aṭā, his nephew Daḥḥāk, lord of Wādī 'l-Taim (southwest of the Biḳā') obtained possession of Baalbek but had to make way in 1157 (552) for Nūr al-Dīn who had also forced Abaḳ to retire in 1154 (549). Nūr al-Dīn caused the walls of Baalbek which were destroyed by the fearful earthquake of 1170 (565) to be rebuilt. Baalbek was taken from his successor Ismā'īl in 1174 (570) after a siege of four months by Ṣalāḥ al-Dīn. The latter granted it in fief first to Muḥammad, one of his generals, then to his brother Tūrān-Shāh in 1178 (574) and a year later to his nephew Farrukh Shāh. When the latter died three years afterwards his son Bahrām Shāh (q. v.) received it and ruled from 1182—1230 (578—627). He built two towers of the fortifications. In the year 1230 (627) Prince al-Ashraf Mūsā [see MŪSĀ] obtained possession of Baalbek; after his death his brother al-Ṣāliḥ Ismā'īl received it in 1237 (635) from whom it was taken after a year's warfare in 1246 (644) by al-Ṣāliḥ Aiyūb. Aiyūb's governor Sa'd al-Dīn al-Ḥumaidī was recognised by his successor Tūrān Shāh in 1249 (647). When the latter was murdered after only a year's reign, al-Nāṣir Yūsuf Sulṭān of Aleppo conquered Damascus and called upon the governor of Baalbek to surrender it. The latter submitted to Tūrān Shāh's young son and agreed to pay tribute. Al-Nāṣir Yūsuf's rule ceased on the invasion of Syria by the Mongols in the year 1260 (658). Baalbek was captured by the Mongol general Ketbughā and its fortifications destroyed. In the same year however Sulṭān Koṭuz of Egypt inflicted a crushing defeat on the Mongols. Thereupon Baalbek passed under Egyptian sway and was placed under the rule of the governor of Damascus. Thus it

remained till 1516 (922) when the Ottoman Sulṭān Selīm conquered Syria and incorporated it in his kingdom. Since that time Baalbek subservient to the Porte has been in the hands of petty dynasts chiefly of the Ḥarfūsh family. In the continual struggles between the Syrian families the prosperity and population of Baalbek has suffered. It suffered considerable damage from the earthquake of 1459. About 1831 the town was conquered for a short time by the Egyptian Ibrāhīm Pasha. On his departure it again passed into the hands of the Ḥarfūsh family. It was not till 1850 that the Porte placed a regular administration there, when Baalbek became the seat of a Ḳā'immaḳām under the governorship of Damascus. Since then its prosperity has been continuous: at the present day its inhabitants number 5000, of whom about 2000 are Sunnī Muslims, 2000 Shī'a Mutawālīs. Excavations have been carried out by the Germans under the direction of Puchstein and Schulz and Baalbek is becoming more and more the goal of all tourists in the East.

The fortress of Baalbek (extracted from the second Annual Report of the excavations of Puchstein, Berlin, 1903 p. 41 ff.). The Arabs turned the temple into a citadel. The general form of the citadel was defined by the Arab architects by the courts and the two temples the outer walls of which afforded sufficient security. The small temple appears to have been a separate building by itself inside the fortress, a sort of Donjon. Its ditches with the walled counterscarpe on the north side are still recognisable and the great fortified tower on its south east corner was built especially for its protection. Greater expenditure was necessary to fill up the gap on the south west corner of the fortress, between the two temples and here, where the entrance and exit to the Biḳā' were situated, the Arab architects had to compete with the Roman and show their own skill. In contra-distinction to the solidity of the ancient walls manifold reconstructions have been necessary to meet changing requirements. The various periods of building are defined on the plan. The most recently fortified ground was the lowest of the whole town, a sort of lower town or suburb.

In the first period of building, a wall was built in the south west in the direction of the south front of the small and another in the direction of the west front of the large temple. The gate was placed in the middle of the west side, flanked by two towers of no great height. A second period of construction may be placed in the time of Muḥammad b. Būrī who defended Baalbek successfully or in that of Zangī who, as inscriptions discovered and literary records show, occupied himself with the fortification of Baalbek. This period is marked by the filling up of the doorway on the south side, where a road led to the interior of the outer fort through a long covered corridor and from here through another, likewise covered path, gradually rising to the niveau of the eastern part of the citadel. In place of the old gateway and its two small towers a new large tower was built and, to the right and left of it, new curtains were drawn not far from the old ones; a tower seems also to have stood in the southwest corner. Sultan Bahrām Shāh erected a new one here in 1213 (610) and the tower in the northwest corner of the citadel in 1224.

The strengthening of the front of the west tower may also be ascribed to him. Finally in a fourth period Ḳalāūn and his successors built more important and very strong new buildings after the destruction of Baalbek by the Mongols at the end of the thirteenth century. The two west curtains were taken down and moved to the front of the west tower which was also built in a new style by the use of great blocks of stone. The strong tower at the southeast corner of the small temple likewise belongs to this period. The old simple, south gate was, as required by changed conditions strengthened as if by a barbican, so that the road behind the bridge over the ditch and behind the outer gate had four turns before it led through the inner gate, where still another smaller court which could be swept from above, awaited the enemy. This barbican according to the foundation inscription on the fallen prop of the outer gate is to be dated about 1240 (689). After the end of the thirteenth century no alterations were made in the fortification of the citadel, only improvements such as those in the moat in 1394 (796) when Sulṭān Barḳūḳ [q. v.] prepared to resist Timur as is proved by inscriptions.

Bibliography: Ritter, *Erdkunde*, Vol. 17, pp. 223—228 and 244—246, where older authorities are indicated; Alouf, *Histoire de Baalbek* (Beyruth, 1896); Puchstein, *Erster und zweiter Jahresbericht über die Ausgrabungen in Baalbek* (Berlin, 1902, and 1903); Puchstein, *Führer durch die Ruinen Baalbeks*, Berlin, 1905; Sobernheim, *Zur Geschichte Baalbeks im Mittelalter*, in "*Festschrift für Amari*", (Palermo, 1910), p. 152—163. Further work of the Baalbek-Expedition, with the histories and Arabic inscriptions of Baalbek, by M. Sobernheim will be published shortly. The Arab sources given there. (M. SOBERNHEIM.)

BĀB (A.) door, gate. Unlike the open tent of the Bedouin the ancient Arab house formed a sort of stronghold which could only be entered by a door, Bāb. As is still often the case the door varied with the style of house and was small and concealed, heavy and barricaded, or high and open. The Bāb always concealed the view into the interior of a dwelling, nothing of the richness and beauty of which could be gathered from the exterior. The Bāb thus became a symbol of approach and beginning of the means of doing anything, of aim, of perception and finally as a a symbol of any goal. The symbolic application of the word is frequent and manifold in Arabic and its sphere of influence and has not been without influence in the West. The court of the Sultan appears as the "Sublime Porte" or the "Gate of Fortune"; the Milky Way is the "Gate of Heaven", the "Two Doors" are metaphorically this life and the next, the contents of a book are contained in various gates (chapters). One speaks of the gates i. e. means of livelihood, of war, of rebellion, of the gates of the right path, of wickedness, of dominion, of death, etc. The gate of the mighty appears especially frequently as the rendezvous of supplicants and the professional beggar lives "at the gate of Allāh" (*'alā bāb allāh*, cf. Italian: *alla baballa*). Cf. Lane, *Arab.-Engl. Lexicon*, I, 272; Dozy *Supplément aux Dictionn. Arab.*, I, 124, 125. (J. HELL.)

BĀB, an Arabic word signifying „gate", early

received among the Ṣūfis the meaning of "gate by which one enters, means of communication with that which is within". Among the Ismaʿīlis, this word is used symbolically for the Shaikh or spiritual leader, who initiates into the mysteries of religion, the *Aṣās* (Guyard, *Fragments*, p. 106); among the Noṣairis, Salmān al-Fārisī, entrusted with the propaganda is the Bāb (R. Dussaud, *Noṣairis*, p. 62. n. 4). The Druses call by this name the first spiritual minister, who embodies universal reason (*Mawlāya ʿaḳl* "Monseigneur l'esprit"; cf. Sacy, *Druzes*, ii, 59). The name has been made famous by the Saiyid ʿAlī Muḥammad of Shīrāz who called himself Bāb, when he declared himself to be the gateway to knowledge of divine truth (5. Djumādā II 1260 = 11. Juni 1844). Born on the 1. Muḥarram 1236 (26. March 1821), the son of a merchant, he became an orphan and was placed under the guardianship of his maternal uncle; he continued his father's business but at the same time occupied himself with religious questions. He practised austerities and exposed himself for hours to the rays of the sun so that his mind became affected. He then made the pilgrimage to Kerbelā and there received instruction from the Shaikhīs. Returning to Shīrāz he proclaimed himself a reformer and delivered a series of sermons, in the Mosque of the Smiths, interspersed with denunciations of the official clergy. A Shaikhī, Ḥusain of Bushrūye who was seeking a successor to the Saiyid Kāẓim of Resht, who had just died, chose ʿAlī Muḥammad and became his first disciple. The latter thereupon set out for Mecca via Būshir and Muscat and took advantage of the pilgrimage to write various treatises which were considered divine revelations. On his return he had a confession of faith loudly proclaimed in which he added to the Shīʿite formula the declaration that "ʿAlī before Nebīl (i. e. ʿAlī Muḥammad, the prophet being surnamed Nebīl by the Bābīs) is the mirror of the breath of God". A rising followed and the governor had the missionaries of the Bāb imprisoned. Saiyid Yaḥyā of Dārāb, who was sent to investigate the doctrine, became a convert to it. Meanwhile cholera had broken out and all who could quitted Shīrāz. At Iṣfahān ʿAlī Muḥammad enjoyed the protection of Manūčehr-Khān Moʿtamad al-Dawla, governor of the city, but on his death, his successor received orders to place the Bāb in the fortress of Mākū in Ādharbaidjān where he was detained.

Meanwhile Ḥusain of Bushrūye continued his preaching and converted two brothers in Teherān, Mīrzā Nūrī (later called Ṣubḥ-i Ezel) and Mīrzā Ḥusain ʿAlī Nūrī (who became Bahāʾ Allāh). At Kazwīn, a young woman, Zarrīn Tādj, surnamed Ḳurrat al-ʿAin, daughter of Mollā Ṣāliḥ Barakānī, of rare beauty and superior intelligence declared herself a follower of the new religion in consequence of a correspondence with the Bāb. Being forced to quit the town after the murder of her uncle Muḥammad Taḳī, a fanatical Mudjtahid, in which she was accused of being implicated, she fled by night and sought refuge in Bedesht in Khorāsān where the first assembly of the disciples of the reformer took place.

After a long stay in Mākū, ʿAlī Muḥammad in consequence of the troubles which had broken out in Shaikh Ṭabarsī and in Zendjān [see BĀBĪ] was transferred to Čehrīk and from there taken to Tabrīz. His execution, being determined upon, was entrusted to the Christian regiment of Bahādurān who shot him with his disciple Muḥammad ʿAlī of Yezd. At the first volley the bullets only severed the cords which bound him so that it was necessary to fire again (27 Shaʿbān 1266 = 8 July 1850). After the execution, his body was thrown into the town ditch but was taken up by his devoted disciples, and carried to Teherān, where it lay buried for 20 years when it was taken out of its place of concealment by order of Bahāʾ Allāh and according to an oral tradition, carried to St. Jean d'Acre (ʿAkkā).

His Doctrine. Under an apparent reform of Islām the Bāb has founded a new religion with its own beliefs, dogmas and its own conceptions of a new state of society. God is one and ʿAlī Muḥammad is the mirror in which He is reflected and in which every one can regard Him. "You ought to make mirrors of yourselves and your deeds so that you shall only see in these mirrors the sun which you love", says the *Bayān Arabe*, transl. by Nicolas, p. 133. God created the world by means of seven attributes called the Letters of Truth, which are Predestination, Predetermination, Will, Volition, Permission, Doom and Revelation (*ḳadar*, *ḳaḍāʾ*, *irāda*, *mashīya*, *idhn*, *adjal*, *kitāb*). Cabbalistic counting plays an important role: the number 19 is sacred. It is found in the numerical value of the letters composing the word *wāḥid* and *wudjūd*, existence; the year is divided into 19 months (*Bayān*, p. 146), the months in 19 days (= 361 days in a year). A council of 19 members is to regulate the affairs of the community; into its hands is paid the tax of one fifth of the value of property which is levied each year on the capital, provided the latter has not diminished meanwhile (p. 188); the believer is pledged to pay it, but neither the spiritual nor temporal authorities may employ force to make him pay it. All penalties are abolished except fines and the interdiction of cohabitation between married people for longer or shorter periods. The absolute freedom of trading and contract is recognised; payment of interest is allowed on goods sold on credit.

Marriage is compulsory after the age of eleven. Divorce is discouraged and a year is allowed the parties to come to an agreement in. Divorced parties are allowed to come together again nineteen times, after one month (p. 164). Widowers and widows are to marry again, the former after 90 days, the latter after 95, under pain of a fine (p. 207). The schoolboy may not be beaten before the age of five (p. 163) and after this age he must not receive more than five blows, some covering being interposed. Disciples are bidden to be courteous; the laws of Islām against luxury, regarding the use of articles in precious metals and of silkstuffs are repealed (p. 162).

Every year there is a fast of one month (19 days) from the rising of the sun to its setting, compulsory from the age of eleven to forty two. Ablutions are merely recommended without being formally prescribed. There should be a bath in each locality. All women may be seen unveiled and are allowed to be spoken to without restriction by any one, but not obtruded upon; it is advisable, however, to limit the number of words exchanged to 28 (p. 182).

The places of pilgrimage are the house where the prophet was born and where a mosque is to

be built (p. 140, 146), the place where he was imprisoned and the dwellings of his principal disciples. Journeys are not as a rule advisable except those for purposes of trade; sea-voyages are forbidden except to pilgrims and merchants. Prayer is no longer to be offered up in common except at funerals (p. 200), although preaching in mosques is recommended. There is no longer to be any legal impurity; new converts are purified by the act of conversion itself (p. 149), and all that they possess becomes pure immediately; water is purity itself and it purifies. 19 verses of the Bayān ought to be read every day and the name of God mentioned 361 times. The dead ought to be buried in crystal (whence arises the story that the body of the Bāb was buried in a crystal coffin) or rather in hewn and polished stone and wear a ring on the right hand with a verse inscribed on the setting "so that the dead may have no fear in the tomb" (p. 152, 182). No one should harm any one nor cause his neighbour pain (p. 168). One should answer a question or a letter and carry letters faithfully to their destination (p. 169) and not tear them up. Electuaries, fermented and intoxicating drinks are forbidden (p. 200). Once in every nineteen days one should invite nineteen persons, be it only to drink water. Begging is forbidden; it is even a sin to give to a beggar.

The division of an estate after defraying funeral expenses is as follows (p. 179): the children $^9/_{60}$, the husband $^8/_{60}$, the father $^7/_{60}$, the mother $^6/_{60}$, the brother $^5/_{60}$, the sister $^4/_{60}$, the teacher $^3/_{60}$; the right of inheritance does not extend further; representation however is allowed (p. 190). ʿAlī Muḥammad is the author of several works, all in manuscript: the two *Bayān* (Arabic and Persian), *Kitāb Bain al-Ḥaramain* and of a commentary on the Sūrat Yūsuf.

As.*, vith sér., t. vii p. 129 *et seq.*; Cl. Huart, *La Religion de Bab* (Paris, 1889); Edw. G. Browne, *A Traveller's Narrative*, p. 1—45, 226 *et seq.*; by the same author, *A Year amongst the Persians*, p. 58, 320 *et seq.*; A. L. M. Nicolas, *Seyyèd Ali Mohammed dit le Bâb* (Paris, 1905, with portrait); *Le Béyân arabe*, transl. Nicolas (Paris, 1905). Further literature is indicated in Geiger and Kuhn's *Grundr. der iran. Philol.*, ii. 602 *et seq.*, 367. (Cl. Huart.)

BĀB AL-ABWĀB, the "Iron Gate" at Derbend. [see the latter.]

BĀB AL-MANDAB, the strait, 17 miles broad, between the Red Sea and the Gulf of Aden. According to Yāḳūt, *Muʿdjam*, iv. 650 ff., Mandab which means the place of calling, or of lament for the dead, is the name of a mountain on the Arabian coast. According to the legend mentioned by him, this mountain was originally joined to the outlying mountains opposite the African coast till a certain king caused it to be cut through. Mandab or Mandam is also however, the name of a harbour, the Ὀκηλὶς ἐμπόριον of Ptolemy, which at the present day must be looked for in Shaikh Saʿīd or in a neighbouring place. In the strait lies the desert volcanic island of Perim (Maiyūn) which the English have held, temporarily in 1799—1801, and permanently since 1857.

Bibliography: besides Yāḳūt: al-Hamdānī, ed. Müller, 53, 98, 127; Ritter, *Erdkunde*, xii. 664 *et seq.*; Sprenger, *Die alte Geographie Arabiens*, 67.

BĀBĀ, (Turkish) "father" is also used as a designation of any old man of the people, in East Turkish it also denotes "grandfather" (Vámbéry, *Čagat. Sprachstudien*, p. 240; Süleimān-Efendi, *Lughāti čaghatai*, p. 66). This surname is best known from the story in the 1001 Nights of "*ʿAlī Bābā and the Forty Thieves*" (French Translation by Galland), of which the Arabic original has recently been discovered (Duncan B. Macdonald in *Journal of the Royal Asiatic Society*, April 1910). Some holy men have borne the name, like Geikli Bābā and Doghlī Bābā who accompanied Sulṭān Orkhān at the siege of Brussa; a Khān of the Crimea, Bābā Girāy, son of Muḥammad Girāy who succeeded his father as *Ḳalgha* on his death and was assassinated six months later (929 = 1522). Before the introduction of reforms the forty Doorkeepers (*Ḳapidji*) of the imperial Harem were called Bābā; their chief bore the title of *Agha Bābāsi* (Barbier de Meynard, *Supplément*, i. 257). The name of Ākhī Bābā was borne by the heads of the corporations of craftsmen who gave the apprentices the leather apron and the title of craftsman.

Bābā Dāghī, a mountain in Asia Minor (province of Aidīn, Sandjaḳ of Deñizli, in the South of the last named town). Bābā Dāgh is also the name, among others, of a mountain and town in Roumania.

Bābā burnu "Cape Bābā" (the ancient Assos) a promontory on the West of Asia Minor between Smyrna and Constantinople, 23° 44′ long. E., 39° 28′ lat. N., forms the western extremity of Mount Ida. On its flanks rise the market town and fortress of Bābā belonging to the Sandjaḳ of Bigha and the Ḳaẓā of Aiwadjiḳ with a little fortified harbour called Bābā Limānī, 4—5000 inhabitants. It was formerly famous for the manufacture of yataguns.

Bābā-i ʿatīḳ, official name of the market usually called Eski Bābā or Bābā Eski, chief town of a Ḳaẓā of the province of Adrianople, Sandjaḳ of Ḳyrḳ-kilīsā, comprising 3 Nāḥiye and 51 villages; it has a station on the railway to Adrianople.

BĀBĀ BEG, an Uzbeg chief of the family of the Keneges, was till 1870 prince of Shahrisabz and had taken part, in the summer of 1868, in the siege of the citadel of Samarḳand then held by the Russians. In the summer of 1870 Shahrisabz was conquered by the Russians under General Abromow. Bābā Beg had to flee with a small body of those faithful to him, first to the upper valley of the Zarafshān then to Farghāna where he was seized by order of Khān Khudāyār and handed over to the Russians. An annual pension of 3000 Roubles was granted him in Tashkent. After 1875 he entered the Russian service, took part in the same year in the expedition against Khoḳand, and the following year on the end of the campaign received the rank of Major. He afterwards lived in Tashkent till his death which took place shortly before 1900.

(W. Barthold.)

BĀBĀ FIGHĀNĪ. [See FIGHĀNĪ.]

BABAGHĀ (A.) "Parrot", a name of the Arab poet Abu 'l-Faradj 'Abd al-Waḥid b. Naṣr of Niṣībis, who lived at the court of the prince Saif al-Dawla and after his death in Mosul and Baghdād and died in 398 (1007).

Standing next to his famous contemporary Mutanabbī in poetic endowments, Babaghā enjoyed the reputation of being one of the best intellects and poets of his time. He tried his skill on all kinds of poetry with the greatest success in panegyrics of princes, with less in the domain of love poetry.

BĀBEK, Chief of the Khurrami-sect; the name is the arabicised form of the Iranian Pāpak. He was, it is said, the son of an itinerant oil-merchant, and was engaged in a very humble occupation when Djāwīdhān b. Sahl, chief of the Khurramīs noticed his gifts. On the death of the latter he claimed that his spirit had entered him and began to stir up the population of the district of al-Badhdh in Arrān (201 = 816-817). In 204 (819-820) Yaḥyā b. Mu'ādh attacked him without success. Afterwards in the reign of the caliph al-Mo'taṣim the advance guard of the expedition commanded by Bogha the Elder having been defeated at Heshtad-Ser in the mountains of Marāgha, Afshīn prepared to put down the revolt (221 = 836) one of the leaders of which, Turkhān, he was successful in surprising. After having received money and general of Bābek's reinforcements Afshīn attacked another leader, Adhīn. His troops were only saved from disaster by his precaution in placing mountaineers (*Kūhbāniya*) furnished with signals on the tops of the hills. The general advanced by short stages only and protected his camp by *Chevaux de Frise* (*ḥasak*). Al-Badhdh was captured and plundered on Friday 18 Ramaḍān (= 26 April 837) after an unsuccessful attack by the voluntary troops of Baṣra and an assault by the troops of Farghāna. Afshīn having had the town demolished by his corps of engineers, (*kilghāriya*) Bābek took to flight and fell into the hands of Sahl b. Sunbāṭ, the Armenian Patriarch who had him arrested while hunting. He was handed over to Afshīn and sent to Sāmarrā (Thursday 2 Ṣafar 223 = 3[rd] January 838); al-Mo'taṣim, disregarding the pardon promised him in writing, caused him to be paraded on an elephant and executed with refinements of cruelty; his body was left hanging and gave its name to a quarter of the town. His reign had lasted twenty years. In the romance of which the *Fihrist* (p. 343—344) gives an extract his enthronement at al-Badhdh is carried out with special ceremonies; the skin of a calf newly slain was spread on the ground, bread was broken and dipped in wine and a garland of basil given him as a marriage ceremony.

BĀBER, ZAHĪR AL-DĪN MUḤAMMAD, founder of the Great Mughal dynasty in India, eldest son of 'Omar Shaikh Mīrzā, great grandson of Mīrān Shāh the son of Tīmūr, through his mother Kutlūk Nigār he was descended from Čaghatai, the second son of Chingiz Khān. When only twelve years of age he succeeded his father in Farghāna (5 Ramaḍān 899 = 10 June 1494); he took Samarkand (903 = 1497) but could not hold it for more than a hundred days; he then took up a firm position at Khodjand from which he was able to recover Marghinān Andidjān (Dhu 'l-Ka'da 904 = June 1499). After the occupation of Samarkand by the Uzbeg Khān Shaibānī in 906 (= 1500) he lost all his possessions but recaptured the town by surprise, lost a great battle at Ser-i-pul against Shaibānī and fled to Tashkend beside his maternal uncle. As his hereditary principality did not give him sufficient scope for his energies he resolved to cross the Hindū-Kush, besieged and captured Kābul in 909 (= 1504), and conceived the idea of invading India from there, but his first expedition was confined to ravaging the banks of the Indus and fighting against the Afghān tribes. He intended to pass the winter in Khorāsān from which the Uzbegs had departed, but being recalled to Kābul by a revolt, he attempted to cross the snow-covered Hindu Kush and only succeeded with great difficulty (912 = winter of 1506—1507).

In 917 = 1511 Bāber, thanks to the support of Shāh Ismā'īl Safawī whose vassal he had declared himself, defeated the Uzbegs who were weakened by the death of Shaibānī and occupied Bukhārā and Samarkand; in the following year however on the departure of his Persian auxiliaries he was again attacked by the Uzbegs, defeated at Bukhārā, and again at Ghadjdewān and compelled to retire to Kābul in 920 (1514). It was then that giving up all attempts towards the north, he began to realise his project, long ripened, of establishing himself in India, after occupying Kandahār in 928 (1522). Ibrāhīm Lōdī, Sulṭān of Dihlī, had quarrelled with the Afghān chiefs; profiting by the situation, Bāber took Lahore in 930 (1524) and made himself master of the kingdom of Ibrāhīm by his victory at Pānīpat, on Friday 8[th] Radjab 932 (20 April 1526) in which his adversary was slain. He established his capital at Agra. He had again to fight against the Rajput chief Rānasanga, prince of Chitore, the Afghāns of Jaunpur and the King of Bengal. He died near Agra on the 6[th] Djumādā I. 937 (26 Dec. 1530) and left the throne to his eldest son Humāyūn.

Bāber was a leader of unparallelled bravery and audacity. On the second occasion on which he took Samarkand by escalade he had only 240 men with him. His passage of the Hindū-Kush in the middle of winter is a remarkable exploit. The description of India which he gives shows a keen interest in natural history. He was a poet and wrote a Dīwān Turkī and a collection of Mathnawīs called *Mubīn* (Berézine, *Chrestomathie turque*; Sprenger, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xvi, 1862, p. 87). He has also left an account of his adventures in his Memoirs (*Bāber-nāmeh*) the text of which is in Turkī or Čaghatāī,

From certain differences in style this latter work must have been written down from the author's dictation by three successive scribes. The text has been published by Ilminski (Kazân, 1857) from a copy made by Kehr in 1737. A manuscript which belonged to Sir Sâlar Djang of Haidarâbâd has been reproduced in facsimile by Mrs. Annette S. Beveridge (*Gibb Memorial* Vol. i. 1905 with two indices). It was translated into Persian by 'Abd al-Raḥîm Mîrzâ Khân, son of Bairân Khân (1590) and this version was translated into English by J. Leyden and W. Erskine in 1826. The French translation by Pavet de Courteille (Paris 1891) is based on the edition of Ilminski. These Memoirs show a certain number of lacunae either due to the desire of the author to be silent on certain deeds little to his credit or to the accidents of his adventurous career.

BÂBÎ, the designation of the followers of the Bâb who however prefer to call themselves *Ahl-i bayân*. The preaching of the doctrine began with the sending of missionaries into various Persian provinces [see BÂB]; their teaching, which aroused the protestations of the Shî'a population brought about persecutions which the Bâbîs resisted; in consequence the sect, at first of a purely religious character, became a political party. After a counsel held at Bedesht, Mollâ Ḥusain of Bushrûye set out for Bârfurush at the head of a little troop which could no longer defend themselves in the town and entrenched himself in the sanctuary of Shaikh Ṭabarsî which he turned into a fortress; being besieged by the Royal troops he made several successful sorties but fell in the final encounter. Under pressure of famine the Bâbîs signed a capitulation in spite of which they were all massacred in 1265 (July—August 1849). In Zendjân, the chief town of the province of Khamsah the Bâbîs barricaded the town and seized the citadel of 'Alî Merdân Khân but after various vicissitudes were dislodged from their position and overpowered (May 1849—February 1850). Saiyid Yaḥyâ Dârâbî whom the inhabitants of Nairîz, discontented with the agents of the central authority called upon to lead them, shut himself up in the ancient fortress there and held out for several days (January 1850). Nâṣir al-Dîn Shâh having been wounded by an attempt directed against him by the Bâbîs (28 Shawwâl 1268 = 16 August 1852), this was the signal for a general persecution of the Bâbîs which extended throughout the Empire. Mîrzâ Yaḥyâ Nûrî surnamed Ṣubḥ-i Azal who had declared himself the successor of the Bâb, left Persia and retired to Baghdâd from which town he was brought to Cyprus by the Turkish government and detained in Famagusta. His half-brother Mîrzâ Ḥusain 'Alî surnamed Bahâ' Allâh, arrested, then acquitted after an enquiry, obtained permission to go on pilgrimage to Kerbelâ and stopped in Baghdâd [see BAHÂ' ALLÂH]. More recently Mollâ Kâẓim was executed at Iṣpahân on the charge of belonging to this sect as was Mîrzâ Ashraf of Âbadah (October 1888). Persecutions took place at Se-dih and at Nedjefâbâd. A certain number of Bâbîs took refuge at 'Ashkâbâd in Russian territory where they were allowed to build a mosque. The schism between Ṣubḥ-i Azal and Bahâ' Allâh divided the Bâbîs into two sects, the Azalis and the Bahâ'îs; the former, who represent the pure doctrine of the master, are now but few in number; the latter who look upon the Bâb merely as the forerunner of Bahâ' Allâh are spread throughout the world and besides Persians have made some converts among Europeans and Americans.

BÂBIL, the ancient Babylon, situated on the Euphrates in 32° 41′ 30″ North and 44° 25′ 30″ East of Greenwich.

The ancient Babylon had even in early times a much greater importance for Islâm, as for us, than the town which still existed in the earlier Islâmic period. All that the Muslims know about Bâbil, comes from three sources, Jewish Persian or Christian. It is not quite clear whether the information, which can be traced to the Bible, has come through the Jews or the Christians.

Even Adam and Ḳâbîl and Hâbîl are placed in Bâbil after the expulsion from Paradise and an equal antiquity is also ascribed to the Byzantine Babylon-Bâbalyûn in Old Cairo (Yâḳût, i. 45) according to the Thora. After the Deluge Nûḥ b. Kûsh b. Ḥâm and his sons settled in Bâbil (Ibn Khurdâdhbih, p. 77; Ṭabarî, i. 217; Yâḳût, i. 442, 447). Bâbil is after Ḥarrân the second town that was built on the earth (Ibn al-Faḳîh, p. 196). The Tower of Babel is ascribed to Nimrod and the tower is called "Midjdal", Palace (Bakrî, p. 136). By the confusion of tongues God scattered the sons of Nûḥ from Bâbil; the etymology of the name Babel connected with this is also known. *Gen.* 11, 9 (Ibn Rusta, p. 108; Mas'ûdî, *Tanbîh*, p. 197; Bakrî s. v.). Nimrûd Ibn Kan'ân the first king of the earth, the first to consult astrologers and who built the first canals, had his seat in Bâbil (Ibn Khurdâdhbih, p. 77; Ibn al-Faḳîh, p. 199; Ṭabarî passim; Iṣṭakhrî, p. 101, 860; Mas'ûdî, *Tanbîh*, p. 94, after the Thora, p. 105, 106, *Murûdj* passim). His contemporary was Ibrâhîm, born in Ḥarrân and brought with his father as a child to the land of Bâbil where Lâbân lived and Ibrâhîm married and then departed (Ṭabarî, i. 252 *et seq.*). In spite of many divergences from the Old Testament account this must be regarded as of Jewish origin as well as the accounts of the later period of Babylonian history. Bukhtnaṣṣar who destroyed Jerusalem and led the Jews into captivity in Babylon, lived in Bâbil (Ibn al-Faḳîh, p. 218; Ṭabarî, i. 692; Mas'ûdî, *Tanbîh*, p. 105, 106; Yâḳût, i. 448). That Cyrus the Mede slew Balshaṣar b. Awîlmarûdakh b. Bukhtnaṣṣar may also have come from Syriac sources (Ṭabarî, i. 216). The Baby-

lonians Nimrud, Bukhtnaṣṣar and Sinaḥārib are often mentioned in books and astronomical tables (Mas'ūdī, *Tanbīh*, p. 105). The names Chaldeans, Kana'anaeans and Nabataeans seem to be used quite uncritically as the designation of the ancient Babylonians (Iṣṭakhrī, p. 101; Yāḳūt, i. 447, 4).

The Iranian legend had associated all its heroes with Bābil even before Islām. After the introduction of Islām naive comparisons were made between the Biblical and Persian stories. Djaiyūmart, the first man, extended his kingdom from Dunbāwand to Bābil (Ṭabarī, 147). Ōshhang, the first carpenter and architect built Bābil and Shūsh (Ṭabarī, i. 171), or perhaps Ṭamūrath (Ibn al-Faḳīh, p. 319; Ṭabarī, i. 175 following Hishām al-Kalbī; Ḥamza, p. 29, 30). Djamshīdh used to travel in one day from Dunbāwand to Bābil like Solomon from Jerusalem to Persepolis—Takht-i Djamshīdh (Ṭabarī, i. 180). Al-Ḍaḥḥāk, Djamshīdh's opponent ruled in Bābil. This is the account of the Avesta (Iṣṭakhrī, 860, Yāḳūt, i. 448 following Yazdadjird b. Mahbundādh). Afrīdūn also resided in Bābil. Of the Kayanids, Kai Kāūs, Luhrāsp and Vishtāsp are mentioned as rulers of Bābil (Ṭabarī, i. 596, 642—674). Kai Kāūs was according to the *Siyar al-mulūk* in Ḥamza, p. 35, the builder of the Tower of Babel. The hero Rustam appeared in Bābil.

The Arabs also know of Alexander in Babylon. This sounds historical but it all comes from the Alexander legend and without exception from the Syrian version. Ṭabarī I. 813, quotes the Christians as his source. That al-Iskandar slew Dārā b. Dārā and lived in Bābil might have also come from Sāsānian sources, for example from the Pahlavi original of the Syrian romance of Alexander, as in Ḥamza p. 40, Iṣṭakhrī p. 145. Notices of the descendants of Arsaces in Bābil and certainly those of St. Thomas as the apostle of the land of Bābil come from the Syrians e. g. Ṭabarī I. 702 ff., 738. Cases where on the other hand Bābil is called a possession of the Sāsānians (Ṭabarī I, 813; Iṣṭakhrī, p. 145; Mas'ūdī *Tanbīh* p. 145, 150; *Murūdj* Chap. VII) may be traced to the Khudāināmah. The only original historical observation is in Iṣṭakhrī p. 145, where he mentions the site on which the Sāsānians and later the Arabs had had their residences, because of its situation with respect to the Roman Empire, and in the centre of the Muslim world.

Among the Arabs Bābil is preeminently used as the name of the country. The form Bābail, i. e. Bābēl is also occasionally used as Persian and Nabataean (Mas'ūdī, *Tanbīh*, p. 35) or Bābail, Bābilūn (Yāḳūt iii. 630). As the Chaldaean name Mas'ūdī, *loc. cit.*, gives Khunirath which also appears in Bakrī s. v. and according to al-Ḥamdānī in the form Khaittrath. The Persians appear to have already used Bābil as the name of the fourth of the seven climates equivalent to Īrānshahr. According to Ibn Khurdādhbih Bābil is the heart of Īrānshahr and of the world (so also Ṭabarī i, 229; Iṣṭakhrī p. 4. 10). The climate of Bābil is the middle one and therefore the most fortunate (Ibn al-Faḳīh, p. 6; Ibn Rusta, p. 152; Mas'ūdī, *Tanbīh*, p. 6). Masudi, *Tanbīh* p. 32 describes its boundaries; its western limit is at Tha'labiya, the first station on the road to Mecca from Kūfa, the eastern the river of Balkh, the northern between Naṣībīn and Sindjār, the southern at Daibul on the coast of al-Manṣūra in Sind. The climate of Bābil and the land of Bābil are occasionally used synonymously (Ibn Ḥawḳal, p. 167). The land of Bābil however is used chiefly for 'Irāḳ. Yāḳūt I. 447 describes the land of Bābil as still more limited, lying between the Euphrates and the Tigris, on the Tigris to below Kaskar (Wāsiṭ) on the Euphrates to behind Kūfa, equivalent to the Sawād. In another passage he calls Anbār on the Euphrates the northern boundary of the land of Bābil.

Besides being the name of the climate and of the country Bābil is also the name of one of the six Tassūdj of Astān Upper Bihḳubādh in the administrative division of 'Irāḳ taken over from the Arabs (Ibn Khurdādhbih, p. 8—10; Ḳudāma, p. 236; Yakūt, I, 770). This district is watered by the Nahr Sūrā, the branch of the Euphrates which flows through the town of Bābil (Ibn Serapion, VI and after him Abu 'l-Fidā'). Till the time of Ibn Serapion about 900 Bābil was still the chief town of this district. It was in this town that the "Day of the Arabs" took place when Muthannā slew the elephant in the year 13 = 634 (Ṭabarī I. 2117, 2177, 2422).

The place called 'Aḳr Bābil at which in the year 102 = 720 Yazīd Ibn Muhallab fell after the revolt in Baṣra, is different and is situated near Karbalā on the road from Kūfa. Later writers such as Iṣṭakhrī and Ibn Ḥawḳal know Bābil only as a small village. It lies off the highway from Baghdād to Kūfa which crosses the Euphrates at the bridge of Bābil (Muḳaddasī, p. 121). Yāḳūt gives a whole series of towns as "in the land of Bābil" of which may be mentioned al-Amīriya, Burs, Barmalāḥa, al-Djāmi'ain = Ḥilla, Shāhīha, al-Ghāmiriya and the two Kūthā; only in the case of al-Ṣarḥ where a palace of Bukhtnaṣṣar is mentioned, and the district of Shīnwar (the ancient Sinear?) which he quotes from Naṣr al-Iskandarī (died 560) does he give their situation with respect to Bābil as an existing town, while discussing Khutarniya and Zāḳil he speaks of the administrative district (Nāḥiya) of Bābil which he calls a Ṭassūdj. This division did not have an independent existence for much longer. Since the days of the first 'Abbāsids after the foundation of Baghdād a new division of 'Irāḳ was in existence and Bābil was reckoned with the places belonging to the Kūra of Baghdād.

When Yāḳūt and Ḳazwīnī tell strange stories of the seven cities of which the ancient Bābil consisted with their seven talismans these are obviously local traditions connected with the ruins.

All sorts of Biblical and Koranic matter is found interwoven in local legends of this sort. The traveller is shown, as was Ḥamdallāh al-Mustawfī, Daniel's Den of Lions or the well in which the angels Hārūt and Mārūt are imprisoned till the Day of Judgment (Ḳur'ān ii, 96). 'Alī also prayed in Bābil and cursed it (Muḳaddasī, p. 116). Of the ruins the northern palace of Nebuchadnezzar still bears the name of Bābil and in this mound numerous specimens of mediaeval Muḥammadan pottery have been found. This was also the site of the early Arab town and hence the continuation of the ancient name through the ages. On this spot the other mounds are called at the present-day al-Ḳaṣr which is the palace-mound of Babylon, 'Amrān Ibn 'Alī with a small grave of a saint which is the temple-mound of the ancient town and Ḥumaira where a Hellenistic

theatre has come to light. For ages the ruins have been used, as is mentioned as early as Ḳazwīnī, as building material, Bābil especially, which for this reason is called by the natives *Mudjillibe* (*Mudjallibe*) or also *al-Maḳlūba* (according to Beauchamp) the "Overturned". Although the situation of the ancient Babylon has always been known to Orientals, it had to be rediscovered for western knowledge at the end of the eighteenth century.

Streck, *Babylonien nach den arab. Geographen*, passim; on the scientific rediscovery of Babylon: H. V. Hilprecht, *Explorations in Bible Lands during the XIXth Century* (Edinburgh, 1903): the excavations not treated of there, of the German Orient-Gesellschaft, in the *Mitteilungen der D. O. G.* since 1899. (Ernst Herzfeld.)

BABYLON (Bābalyūn), a town in Egypt. The name Babylon of the mediaeval Egyptian town in the neighbourhood of the modern Cairo is according to Casanova the Graecised form of an ancient Egyptian Pi-Hapi-n-On through assimilation to the Asiatic βαβυλών which was familiar to the Greeks. This etymology is not quite free from objections but there is no doubt that some ancient Egyptian place-name underlies it. By the name is meant the ancient town and fortification of the Greeks which — situated on the borders of Upper and Lower Egypt — commanded the interior. Even to the present day portions of the ancient fortification have survived in the Ḳaṣr al-Shamʿa. The situation and importance of this point was much more important in ancient times as the Nile then flowed further to the East. Here the decisive battles on the conquest of Egypt by ʿAmr took place. With the fall of Babylon (21 Rabīʿ II, 20 = 9 April 641) the fate of Egypt was settled. The camp of the Arab Army which developed in later times into Fosṭāṭ Miṣr was then pitched near this place, important from the military point of view, and the ancient fortifications were made use of. As far as we know from papyri, Babylon and Fosṭāṭ were still distinguished at the end of the first century. In Fosṭāṭ lived the Muhādjirūn, here their Khiṭaṭ were marked out. In Babylon were the great corn-merchants and the seat of the administration. The arsenal on the island of Rōḍa which is also mentioned in papyri, was closely connected with the fortress. The original distinction between Fosṭāṭ and Babylon was naturally soon lost, the name Babylon fell out of use among the Arabs and only survived among the Copts, its application by them being extended, for the Copts occasionally used Babylon to describe the whole of the great series of towns from Ḳaṣr al-Shamʿa through Fosṭāṭ and Cairo to Maṭariye-Heliopolis. This usage then spread to western writers. This is why Babilonia with varying orthography appears as a name for Cairo in the numerous commercial treaties between Egypt and the western states, which have been published by Amari. The name may also be found in the contemporary literature of Europe as well as in charters for example in Mandeville and Boccaccio who following historical documents calls Saladin "Soldano di Babilonia".

Becker.)

BADĀʾ (A.), appearance; in the dogmatic sense: the intervention of new circumstances which bring about the alteration of an earlier divine determination. (Dozy gives the term too wide a signification *Essai sur l'Histoire de l'Islamisme*, 223, translating it "mutabilité de Dieu"). Three sorts of Badāʾ are distinguished (Shahrastānī, ed. Cureton, p. 110) according as the word refers to the knowledge, the will, or the command of God (*fi 'l-ʿilm, fi 'l-irāda, fi 'l-amr*). The possibility of Badāʾ is, in opposition to the very divergent orthodox Sunni doctrine, always dealt with in the chapter on divine knowledge (*ʿilm*) in the textbooks of Shīʿite dogmatics, in which however it has found no uniform statement. In its widest conception, which includes the hypothesis of the mutability of the divine will, it is taught only in the ultra Shīʿite sects (*Badāʾiya*); the moderate *Imāmiya*-school are careful to exclude the mutability of divine knowledge or at least to give it very moderate expression [see below]. The former could quote the doctrine of the Shīʿite Mutakallim Hishām b. al-Ḥakam (q. v.) according to which God's knowledge only appears on the realisation of the object; that which does not yet exist (*al-Maʿdūm*) could not be an object of his knowledge, this follows on a nescience of things as soon as they become phenomena (ʿAbd al-Ḳāhir al-Baghdādī, *Kitāb al-Farḳ baina 'l-Firaḳ*, Cairo, 1328—1910, ed. Muḥammad Badr, p. 49), subtleties which are also treated of in modern times in the religious philosophy of the Shīʿite Shaikhī sect (cf. *Revue du Monde musulman*, 1910, xi. 435—438). This conception leaves room for the admission of God's knowledge being in correspondence with new experiences and of His changing a fixed resolution. The Islāmic historians of the sect agree that the doctrine of Badāʾ was first propounded by Mukhtār (q. v.) and then became the thesis of the Shīʿite faction of the Kaisāniya (ʿAbd al-Ḳāhir l. c. 36; cf. Aḥmad b. Yaḥyā b. al-Murtaḍā in M. Horten, *Die philos. Probleme der spekulat. Theologie im Islam* (Bonn, 1910), 124). ʿAbd-Allāh b. Nawf is occasionally said to be the originator of this doctrine (cf. Wellhausen, *Die religiös-politischen Oppositionsparteien im alten Islām*, p. 88, 12). When Mukhtār had to defend himself in the battle, which was to decide the fate of his enterprise, against the superior forces of Muṣʿab b. al-Zubair, he (or ʿAbd Allāh b. Nawf) announced that God had revealed to him that he was assured of victory. When the alleged oracle was proved false by his defeat, Mukhtār (or ʿAbd Allāh) said referring to Sūra 13, 39 that something had intervened (*badāʾa lahu*) which had caused God to alter his determination. After the defeat of the Shīʿite community this view had to be

accepted as a convenient explanation of the failure of the hopes and prophecies of victory for the defeated Imām. It had been God's determination that the deliverance (*faradj*) and victory of the lawful Imāmate should take place at a certain moment. He had however, meanwhile, altered his determination on grounds of expediency. This principle also serves the Shīʿites to explain the alteration which took place in the legitimate succession of the Imāms which had been appointed by God from all time, when in place of the predestined Ismāʿīl, his brother Mūsā al-Kāẓim succeeded Djaʿfar al-Ṣādiḳ as the seventh bearer of this theocratic dignity. They ascribe to Djaʿfar the saying "God has never been so led by a new consideration (to alter his determination) as in the case of my son Ismāʿīl (*mā badāʾa li-llāhi kamā badāʾa fī Ismāʿīl ibnī*)". To many Shīʿite theologians this crass application of the principle of Badāʾ might have appeared discreditable; so the speech of Djaʿfar has been made tolerable by the alteration of the word *ibnī* to *abī*. God's change of mind is by this reading referred not to the *son* but to the *ancestor* of the Imām Ismāʿīl the son of Abraham, the predetermined *dhabīḥ* whom God originally ordered Abraham to sacrifice but later freed from this obligation.

The most important arguments adduced by the Shīʿites in support of the doctrine of Badāʾ are *a*. firstly the passages in the Ḳorʾān: 13, 39; 14, 11 at the end (these are the strongest proofs); 55, 29; the assurance frequently repeated that God in consequence of the repentance of sinners will change his determination to punish them, 7, 151; particular narratives in the Ḳorʾān in support of this are especially the sparing of the people of Jūnus devoted to destruction, 10, 98; the rescinding of the command to Abraham to offer up his son, 37, 102—107; the lengthening of the period allowed Moses for his intercourse with God from 30 to 40 nights, 7, 138; *b*. Traditions according to which by the exercise of certain virtues (honouring one's parents), the span of life originally allotted may be lengthened; by doing good an appointed destiny (*al-ḳaḍāʾ al-mubram*) may be altered; the prayer of ʿOmar that "God might strike his name out of the Book of the Damned and write it in that of the Blessed" (Ibn Ḳutaiba, *Kitāb Taʾwīl Mukhtalif al-Ḥadīth*, Cairo 1326, p. 7); *c*. a series of pious legends from which it is evident that misfortunes predetermined to individuals may be averted by acts pleasing to God; *d*. the doctrine of the abrogation of divine laws (*naskh*) which is also a tenet of the Sunnī doctrine.

As Shīʿite dogmatics in general are influenced by Muʿtazilite speculation so also in the case of Badāʾ the Muʿtazilite foundation is closely connected with the principle of *aṣlaḥ* that God is determined in his operations with regard to man by the motives of expediency and the general good. According to it it comprehends Badāʾ under the point of view "that (divine) determinations on things may alter with changes in the means of well-being" (*taḳdīrāt al-umūr tatabaddal bi-tabaddul al-maṣāliḥ*). The moderate Shīʿite dogmatists had to exercise much ingenuity to reconcile the theological antinomies which this conception implies, in order to reconcile the assumptions of the appearance of new determining moments in God's knowledge as implied in the word Badāʾ with the belief in the absolute omniscience of God, in the eternity of His knowledge identical with His being as is specially required by the Muʿtazila doctrine in general; to meet the objection of the orthodox dogmatists to the assumption of the possibility of God's ignorance of the end of things (*ʿawāḳib al-umūr*) which implies the admission of Badāʾ (cf. Djordjānī, to Īdjī, *Mawāḳif*, ed. Soerensen, Leipzig 1848, 546, 6). The effort to meet the objections from this point of view had led them in spite of all protests against the Jewish and Sunnī deniers of Badāʾ to prepare formulae by which these objections might be combatted and to accuse their Sunnī opponents that they are crediting them with a false definition of Badāʾ invented by the Sunnis. Their next contention is that the term Badāʾ is not to be understood in its literal dictionary meaning but metaphorically (*madjāzan*). They reject the view that Badāʾ, according to its literal meaning implies an alteration in the divine knowledge. In fine the distinction of the Imāmite dogmatist with respect to the Sunnī Kalām ends in a profitless war of words for they also explain the fact of a Badāʾ intervening in the future as included in the eternal foresight of God which includes all particulars (*ʿalā wadjh al-tafṣīl*). A very remarkable way of reconciling Badāʾ with the idea of the *lawḥ maḥfūẓ* required by the Ḳorʾān is the assumption of two tables of fate, the *lawḥ maḥfūẓ* on which the definite unalterable decrees of fate are set out and a *lawḥ al-maḥw wa 'l-ithbāt* (according to Sūra 13, 39) which contains the decrees which may be altered in consequence of the intervention of new causes (Dildār ʿAlī, i. 114 below), a view which has also penetrated into Sunnī circles and has given rise to esoteric mystic subtleties (*Kalimāt ʿadjība wa asrār ghāmiḍa*) (Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-ghaib*, v. 310). According to this, two kinds of divine knowledge must be distinguished: *ʿilm maḳḍūm*, the unalterable knowledge the objects of which God announces to the prophets and angels, and *ʿilm makhzūn* the knowledge entrusted by God to no one, which concerns matters in suspense (*umūr mawḳūfa ʿind Allāh*) Kulīnī, 85.

While the Shīʿa lays the greatest stress on the preservation of the conception of Badāʾ for the reasons given above (they allowed one of their Imāms to say: "one can serve God by nothing better than recognising Badāʾ" since repentance, prayer and humility before God to procure forgiveness of sins or the alteration of one's fate can only have meaning if the proposition of Badāʾ is granted), this doctrine is a constant point of attack with the opponents of the Shīʿa. Even Sulaimān b. Djarīr an adherent of the Zaidite Shīʿa sect reproached the Imāmites with embracing two erroneous conceptions: the principle of *taḳīya* [q. v.] and the proposition of Badāʾ (Shahrastānī, ed. Cureton, 119 ult.). The bitterest opponents of the latter doctrine were the Jews who base their rejection of the abrogation of divine law (*naskh al-sharīʿa*) on the fact that this proposition implies the recognition of Badāʾ as was shown by the Jewish theologian Yaḥyā b. Zakariyā al-Kātib al-Ṭabarānī in Palestine in his controversy with al-Masʿūdī (*Kitāb al-tanbīh wa 'l-ishrāf*, ed. de Goeje, *Bibl. Geogr. Arab.*, viii. 113, 15 for اصبنا reading البداء).

In the third century A. H. the question of Badāʾ seems on account of difficulties connected with it which could only be explained by subtle arguments, to have belonged to these questions by

which keen intellect and originality could be tested. This may be inferred from Djāḥiẓ, *Tria Opuscula*, ed. van Vloten, 113, 7 (correcting البدا to البداء).

BADAJOZ, at the present day, the fortified capital of the province, the largest in Spain of the same name, the southern half of Spanish Estremadura, on the left shore of the Guadiana before its bend to the South on the Portuguese border (31,000 inhabitants). The identification of the town with and the derivation of the name from Pax (Julia) Augusta or Colonia Pacensis is without foundation and has arisen from an error of local patriotism as the latter certainly is Beja in Portugal (Arab. Bādja = Bēdja from Pacem). The identification with the doubtful Badia of Valerius Maximus and Plutarch is also uncertain. Its first certain historical appearance is under the Arabic form Baṭalyōs (which is the original of the modern Spanish form) as the strongly fortified base of the brave renegade Ibn Marwān (262 = 875) during his revolt against the Caliphate of Cordova (Muḥammad I). It was only regained from his valiant son by ʿAbd al-Raḥmān III in 318 (= 390) (*Bayān*, ii. 105 *et seq.*; 140, 195, 213 *et seq.*; 216). The new town founded by the Arabs at Baṭalyōs (Abu ʾl-fidāʾ, 173: *wakiya muḥdatha islāmiya*) gradually took the place of Colonia Augusta Emerita, Arab. Mārida = Mérida (40 miles to the east above B. on the north bank of the Guadiana) which was sinking into insignificance especially after it became on the decline of the Omaiyad caliphate of Cordova, the brilliant capital of the Afṭasids [q. v.] who united the greater half of Northern Lusitania into an important Kingdom 1022—1094. After the defeat at al-Zallāḳa = Sacralias, northeast of Badajoz, in 1086 so fateful to the Christians, the principality of the Northwestern part of Badajoz like the other Reyes de Taifas also fell more into dependence on the Berber al-Moravids who had hastened to their assistance from Morocco till in 1094 it was incorporated by this more powerful dynasty and became a part of the Spanish Province or dependence of the Almoravids of Northwest Africa and of the Almohads who soon succeeded them. In 1168 Alfonso I Henriquez of Portugal took Badajoz by surprise, but it was taken from him again by Ferdinand of Leon who afterwards gave it back to him. Badajoz again became an Almohad possession and it was not till 1230 that it was finally conquered by Alfonso IX of Castile and Leon. Badajoz was the birth place of many Arab scholars the most prominent of whom is ʿAbd Allāh ibn Muḥammad ibn al-Sīd al-Baṭalyōsī who died 521 (1127) cf. Brockelmann, *Gesch. der arab. Lit.* i. 427, where 444 (1052) is to be read; b. Beshkuwāl 639).

(C. F. SEYBOLD.)

BADAKHSHĀN, frequently written BADHAKHSHĀN, in the spoken language also sometimes called BADAKHSHĀNĀT, (with Arabic plural ending) a mountainous land on the upper course of the Amū-Daryā or more correctly of the Pandj, on the left bank of this stream which is the source of the great river; from it comes the adjective *Badakhshānī* or *Badakhshī*. J. Marquart (*Ērānshahr*, p. 279) explains the name as "land of Badhakhsh or Balakhsh, a kind of ruby which is said to be found only in Badhakhshān at Kokča". It is very probable however that Balakhsh (from which comes the French Balais and the English Balas) originally denoted the land as a dialectic form for Badhakhsh and was later transferred to the kind of ruby. Yāḳūt (ed. Wüstenfeld, i. 528) states that the form Balakhshān was the form for the name of land more commonly used among the people; Marco Polo also gives this form. The mines from which the rubies come are found outside of Badakhshān proper — in Shughnān on the right bank of the Āmū-Daryā as is testified by so early a traveller as Marco Polo; this district however has in historical times usually been united with Badakhshān under one ruler. The rubies (Arab. *laʿl*, Pers. also *lāl*) of Badakhshān were famous in the middle ages throughout the whole Muḥammadan world; in Persian poetry the expression "*lāl-i badakhshī*" or "*lāl-i badakhshānī*" is frequently used in a figurative sense for wine or the lips of the beloved; in Central Asia this expression is widely known even amongst the common people. The district with the mines in question belongs now to the territory of Bukhārā under Russian rule; the mines however are still exploited in the same primitive fashion as in former days and have not as yet attained any importance in the European jewel trade.

Badakhshān is watered by the Kokča, a tributary of the Āmū-Daryā, called the Khirnāb in the *Ḥudūd al-ʿĀlam* (composed in 372 = 982-983, cf. on this work J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, p. xxx.; unique manuscript in St. Petersburg) from the economic point of view; only the valley of the Kokča and its tributaries has ever been of importance — here were the towns of Badakhshān — probably not far from the modern capital Faiḍābād, first founded in the xi. (xvii.) century — Djirm and Kishm; the two latter which are already mentioned in the earliest Arab accounts have retained their names to the present day. The lapis lazulis of Badakhshān, famed in the middle ages as now, come from the mines on the upper course of the Kokča; the trade in these stones is at the present day a monopoly of the Afghān government; they are exported exclusively to India. Besides these, iron and copper mines are found in Badakhshān.

The name Badakhshān is first mentioned in Chinese annals of the sixth and eighth centuries A. D. in Hüan-čuang in the form Po-tʿo-tčoang-na, of which according to Schlegel the ancient pronunciation was Pat-tok-tsʿong-na, in the *Tʿang-shu*, Pa-tʿo-shān, in the encyclopaedia *Tse-fu-yen-kwei* Pu-tʿo-shan. The country is described by the Chinese as part of Tu-ho-lo (Tukhāristān). The Arabs likewise use the name Tukhāristān in two

meanings: Tukhāristān in the narrower sense was only the land between Balkh and Badakhshān, in its wider application it comprised all the lands east of Balkh on both banks of the Āmū-Daryā. The name seems to come from the Tokhārs who first appeared in the second century B. C., the conquerors of the Graeco-Bactrian kingdom. In the fifth century A. D. these lands were conquered by the Haiṭal (the Ephthālites of the Byzantine writers). Again in the anthology composed by ʿAwfī in the xiii (vii) century we find a story according to which a king of the Haiṭal gave his son the lands of "Djirm and Badakhshān" (Barthold, *Turkestan*, I. p. 91). The kingdom of the Haiṭal was overthrown by the Turks in the sixth century; at the time of the first Arab invasions the ruler of Tukhāristān in the wider sense according to Arab and Chinese notices, bore the Turkish title Yabghu (arab. Djabghūya); the princes of various lands, amongst them the prince of Badakhshān, were his vassals. We have no more accurate information as to when and how Badakhshān was conquered by the Arabs and Islām introduced: the name of the country is not *once* mentioned by Ṭabarī; amongst the events of the year 118 (736) mention is made of a campaign against "Kishm in the land of Djabghūya" and other places (Ṭabarī, ii. 1230 *et seq.*). According to Yaʿḳūbī (ed. de Goeje, p. 288) Djirm in Badakhshān was the frontier town of Islām on the trade route (via Wakhān) to Tibet. The same author also mentions an otherwise unknown Turkish prince Khumār-Beg (this is the correct reading) "King of Shiḳinān and Badhakhshān". Iṣṭakhrī (ed. de Goeje p. 278) describes Badakhshān as the "the territory of Abu 'l-Fatḥ"; probably the prince Abu 'l-Fatḥ al-Yaftalī is here meant whose son Abū Naṣr is said according to Samʿānī (W. Barthold, *Turkestan*, i. p. 69) and Yāḳūt (iv. 1023) to have fought with Ḳarā-Tegin, the Sāmānid Governor, (died 340 = 951-952; cf. Ibn al-Athīr, ed. Tornberg, viii, p. 157 and 370) in the neighbourhood of Balkh. Nothing else is known about the political affairs of Badakhshān in this period. In the v (xi) century the doctrine of the Ismāʿīlites was brought to Badakhshān by the poet Nāṣir-i-Khusraw and disseminated there with success; his tomb is still pointed out on the upper valley of the Kokča; his teaching has survived to the present day in Badakhshān and the adjoining lands. In the second half of the vi (xii) century Tukhāristān in the wider sense (with Badakhshān) was under the sway of a branch of the Ghūrid house which had its capital in Bāmiyān and like the other branches of this dynasty was conquered by Muḥammad Shāh of Khwārizm in the beginning of the vii (xiii) century.

Badakhshān was not affected by the invasion of the Mongols and remained till the ix (xv) century under the rule of its native dynasty. The tradition of the descent of this ruling family from Alexander the Great is first mentioned by Marco Polo and is often mentioned later by Muḥammadan writers. The daughter of the last ruler is credited by Muḥammad Ḥaidar (*Taʾrīkh-i Rashīdī*, p. 203) with the statement that her ancestors had ruled Badakhshān for 3000 years. Even Tīmūr and his successors only succeeded in obtaining an acknowledgment of their suzerainty after severe fighting. The land was not incorporated in the kingdom of the Tīmūrids till the time of Tīmūr's great-grandson Abū Saʿīd. The last prince Shāh Sulṭān Muḥammad Badakhshī had before this abandoned the observance of the prescriptions of Alexander the Great (*Dastūr al-ʿAmal*) and composed a Persian Dīwān under the pen-name of Laʿlī (*Taʾrīkh-i Rashīdī*, p. 147). He submitted without resistance to the army sent by Abū Saʿīd and betook himself to Herāt; his son had to flee to Kāshghar; Mīrzā Abū Bakr a son of Abū Saʿīd was appointed Prince of Badakhshān. Soon afterwards the prince returned from Kāshghar; Abū Bakr was expelled; Badakhshān had to be conquered again for which reason Abū Saʿīd had Shāh Sulṭān Muḥammed executed in 871 (1466-1467) (*Dawlatshāh*, ed. Browne, p. 453). The date must therefore have been read wrongly in the inscription discovered by the English in 1885 according to which this prince built a stone bridge as late as 884 (1479-1480) (cf. *Taʾrīkh-i Rashīdī*, p. 221). Abū Bakr was afterwards driven out of Badakhshān by his brother Sulṭān Maḥmūd, Prince of Ḥiṣār. Till the conquest of Ḥiṣār by the Uzbegs (in the beginning of the sixteenth century) Badakhshān remained united with Ḥiṣār. A national movement led by Mubārak Shāh and Zubair Rāghī arose in Badakhshān against the Uzbeg conquerors; a fortress on the left bank of the Kokča which still bears the name Ḳalʿa-i Ẓafar (fortress of victory) given it by Mubārak Shāh is mentioned as the centre of the movement. The Uzbegs were driven back; the Tīmūrid Nāṣir Mīrzā (brother of Bābar) who had been called upon by the rebels was recognised in Badakhshān as ruler about the end of 910 (= spring 1505) but could not come to an agreement with the leaders of the movement and was driven out after two years. In the year 913 (1507-1508) Sulṭān Wais Mīrzā, usually called Mīrzā Khān or Khān-Mīrzā, son of Sulṭān Maḥmūd Mīrzā, came to Badakhshān with the consent of Bābar and was received in Ḳalʿa-i Ẓafar. Mubārak Shāh had been slain shortly before by his companion Zubair; Zubair who wished to retain the power in his hands even after the arrival of the new ruler was treacherously put out of the way by assassination. A short time afterwards Shāh Raḍī al-Dīn the chief of the Ismāʿīlites of Kūhistān appeared in Badakhshān, gathered the followers of this doctrine around him and brought a part of the land under his sway; he was killed soon afterwards in the spring of 1509 and his head brought to Mīrzā-Khān at Ḳalʿa-i Ẓafar. Mīrzā-Khān died in 926 (1520) being still ruler of Badakhshān, whereupon Bābar adopted Sulaimān the son of the deceased ruler, who was left without a guardian and in place of him sent his own son Humāyūn to Badakhshān. In 935 (1528-1529) Humāyūn was called to India by his father; after an unsuccessful attempt on the part of Saʿīd Khān the ruler of Kāshghar, to bring the land under his sway, Sulaimān was recognised as Prince of Badakhshān by Bābar as well as by Saʿīd Khān in 1530. Sulaimān reigned till 983 (1575), was driven out in the first half of that year by his grandson Shāhrukh, went to India and thence to Mecca but later returned to his native land. In 1585 Badakhshān was conquered by the Uzbegs under ʿAbd Allāh Khān; Sulaimān and Shāhrukh had to take refuge in India but returned afterwards and made several attempts to dislodge the conquerors. Even as late as the beginning of the xvii century a revolt,

led by Badīʿ al-Zamān, the son of Shāhrukh, is mentioned. In 1645 Balkh and Badakhshān were again conquered by the Tīmūrids though the Uzbegs did not finally withdraw till the autumn of 1647.

In the seventeenth century the kingdom of the Uzbegs broke up into several independent states: in Badakhshān also a dynasty, founded by Yār Beg, the builder of the town of Faiḍhābād arose, whose descendents in the nineteenth century still claimed to be descended from Alexander the Great. Like the other Uzbeg chiefs in the modern Afghānistān these princes bore the title of Mīr (abbreviated from Amīr). In 1822 Mīr Muḥammad Shāh was dethroned by Murād Beg, ruler of Kunduz. Mīrzā Kalān a vassal of Murād Beg was sent to Badakhshān as chief, made himself independent later, on the death of his overlord, and in a short time conquered Kunduz itself. His son and successor Mīr Shāh Niẓām al-Dīn died in 1862; his son Djahāndār Shāh had to fight for his throne with Maḥmūd Shāh, another prince of the same dynasty from 1867, and being finally overthrown in 1869 and after a last attempt in 1872 retired to Russian territory where Uč-kurgan in Farghāna was allotted him as a residence and a yearly allowance of 1500 roubles granted him; he was murdered there in 1878 by some individuals unknown. Maḥmūd Shāh was deposed by the Afghān government in 1873 and taken to Kābul where he remained till his death; his lands were incorporated with Afghānistān as part of the province of Turkestān.

The fame of the rubies and lapis-lazuli of Badakhshān and also of supposed gold and silver mines had reached Russia as early as 1725; about 1735 the "acquisition of the rich land of Badakhshān" was introduced to further the ends of Russian policy in Central Asia. Nevertheless at the last regulation of the frontier in 1895, the Pandj was fixed as the boundary river between Afghānistān and Bukhārā which is subject to Russia; the lands of Badakhshān in the West (Kulāb) as well as in the East (Shughnān and Roshān) are thereby united with Bukhārā, Badakhshān itself remaining in the possession of the ruler of Afghānistān although the road from Kulāb (the ancient Khuttal) to Shughnān has always gone via Badakhshān, never by Darwāz, which is difficult of access. The interests of the countries concerned have been seriously harmed by these unnatural frontiers especially by the existing official embargo on trade across the frontier, which should not be too strictly enforced, at any rate by the Russian authorities in Shughnān. Labourers from Badakhshān are always to be found in summer in Samarkand.

Bibliography: Cf. especially *Taʾrīkh-i Rashīdī*, transl. by E. D. Ross, edited by N. Elias (London, 1895) and the *Bābar Nāmah*, ed. Beveridge (*Gibb Memorial Series* i., Leiden a. London, 1905); the passages concerned may be found from the indices. Of works in manuscript the *Maṭlaʿ al-Saʿdain* of ʿAbd al-Razzāḳ al-Samarkandī (cf. this article) has been chiefly used on the Kingdom of the Ghūrids, cf. *The Tabaḳāt-i Nāṣiri of Aboo-Omar ... al-Jawzjani* (Calcutta, 1864); Raverty, *The Ṭabaḳāt-i Nāṣirī* (London, 1881). The notices of the lands on the upper course of the Oxus in the xix. century have been collected from the accounts of English travellers in an excellent fashion by J. Minajew (*Swjedjenija o stranach po werchowjam Amu-Darji*; St. Petersburg, 1879). In addition I have been able to use two further accounts by Russian travellers in 1878 (not generally accessible). On the present condition of these lands see especially Count A. Bobrinskoj, *Gortzy werchowjew Pjandža* (Moskau, 1908) partly following K. Leitner, *Dardistan in 1866, 1886 and 1893*, and the same author, *Dardistan in 1895*. (W. BARTHOLD.)

BADAL (A.), properly "interchange" as a grammatical term "permutative". The Badal is one of the five kinds of apposition (*Tābiʿ*). By it is understood in the first place a substantive which follows another substantive in the same case in asyndeton but not as an explanation of it like the *ʿAṭf al-Bayān* [see ʿAṬF] but independent. Thus for example in the phrase *djāʾanī akhūka Zaidun*, *Zaidun* is a *Badal* of *akhūka* if the person addressed had only the one brother, on the other hand it is an *ʿAṭf* if several brothers might have to be considered (Ibn Yaʿīsh, ed. Jahn, ii. 392, 15). — The different kinds of Badal as well as the extension of the idea to pronouns and even verbs can be found in the grammars, more especially in al-Zamakhsharī, *al-Mufaṣṣal* (2. ed.), p. 48—51, Ibn Mālik, *al-Alfiyya* (ed. Dieterici), p. 261—263, Wright, *Arabic Grammar* (3. ed.), p. 284—286. (A. SCHAADE.)

BĀDARĀYĀ, a town and district in ʿIrāḳ, east of the Tigris, near the outlying hills of the Zagros Range. The place still exists under the name of Badrē (somewhat above the 33° n. Br. and under 46° E. L. Greenw.). The Arab geographers usually mention Bādarāyā with Bākusāyā and give Bandanīdjīn as the common capital of both districts. Among the articles exported they mention particularly the local highly prized dried reeds. Khosraw I Anūsharwān settled some of the inhabitants of Anṭākiya when it was destroyed by him (see above p. 359a) in this district. Bādarāyā is also often mentioned in Syriac literature (as Bēth-Darāyē) and also in the Talmud (בי דריי, if this is not = Bādūrayā q. v.). Bardarāyā in Yāḳūt, i. 555 (cf. also the *Marāṣid*, i. 141) is merely a corruption for Bādarāyā. Darāyā in Bādarāyā is perhaps like Kusāyā in Bākusāyā [q. v.], originally the name of a tribe; cf. also the name Mād(dh)arāyā of a place above Wāsiṭ; on the latter see Streck, *Babylonien nach den arab. Geographen*, ii. 310.

Gesellsch.*, xxviii. 101; by the same author, *Geschichte der Perser u. Araber zur Zeit der Sasaniden* (1879), p. 239; G. le Strange, *The Lands of the Eastern Caliphate* (1905), p. 63—64, 80; E. Herzfeld in *Memnon*, i. (1907), p. 126, 140. (STRECK.)

BADĀʾŪN, BUDAUN or BADĀYŪN, a town and district of India, in Rohilkhand, United Provinces. Area of the district: 1,987 sq. m.; population (1901): 1,025,753 of whom 16% are Muhammadans, mostly Paṭhāns, Shaikhs, and Djulāhās. The town has a population (1901) of 39,031, including 21,995 Muhammadans. It was of importance in early Muhammadan history, as an outpost among turbulent Rādjpūt tribes. Two of its gover-

nors in the first half of the 13th cent., Shams al-Dīn Iltutmish and his son Rukn al-Dīn Fīrūz, became emperors of Delhi; and 'Alā' al-Dīn, the last of the Saiyid dynasty, retired to end his days here about 1451. Badā'ūn consequently contains many mosques and tombs of this period. Conspicuous among them are the Djāmi' Masdjid, built by Shams al-Dīn in 1223, largely from the materials of Hindu temples; and the tomb of 'Alā' al-Dīn. Badā'ūn is also famous as the birthplace of 'Abd al-Ḳādir Badā'ūnī (q.v.), the chronicler of Akbar's reign and the enemy of Abu 'l-Faḍl.

Bibliography: *Badaun Gazetteer* (Allahabad, 1907). (J. S. Cotton.)

BADA'ŪNĪ, 'Abd al-Ḳādir, son of Mulūk Shāh, born at Basāwar in the *sarkār* of Sambhal in A. H. 947 or 949 (A. D. 1540-41 or 1542-43). After a studious life as a youth, one of his teachers being Shaikh Mubārak, father of Faiḍī and Abu 'l-Faḍl, he entered the service of Ḥusain Khān Tukriya ("the Patcher"), but was transferred, as an *imām*, in April 1574 to the service of Akbar. Abu 'l-Faḍl entered the emperor's service in the same year. The restraints of the court were irksome to Badā'ūnī and before 1579 he absented himself without leave. In that year he was restored to the service as a *munshī* or secretary, with a fief of 1000 *bīghas*. He remarks, somewhat bitterly, that he was of no account, and was nicknamed Hazārī from the extent of his fief. He was employed, owing to his learning, in translating Sanskrit texts and in compilation. His attempt to translate the *Atharva Veda* was a failure, and his successors in the undertaking failed to surpass him, but his success in the more congenial task of editing forty of the traditional sayings of Muḥammad on the merits of warfare for the faith led to his being appointed one of the seven compilers of the *Ta'rīkh-i Alfī*. In 1581 he compiled the *Nadjāt al-Rashīd* and by Akbar's order translated the *Mahābhārata* and the *Rāmāyana* into Persian, presenting his version of the latter in 1589. He then translated a Sanskrit work into Persian, styling his translation *Baḥr al-Asmār*, and produced, in simple and easy Persian, a version of the History of Kashmir by Mullā Shāh Muḥammad Shāhābādī. He was now appointed one of the translators of the *Mu'djam al-Buldān* and performed his task so well and so rapidly that he was allowed to return for a time to Badā'ūn. He overstayed his leave and was reinstated only by the earnest solicitation of Faiḍī.

In 1590-91 Badā'ūnī began, for his own amusement, the work by which he is best known, his *Muntakhab al-Tawārīkh*, in three volumes, the first containing a history of Muḥammadan rulers of India from Sabuktagīn to Humāyūn, the second a history of the reign of Akbar to the year 1595, and the third biographies of the saints, learned men, physicians and poets of Akbar's reign, the work being completed on Feb. 23, 1596. The second volume is most valuable as an account by a rigidly orthodox *Sunnī* observer of Akbar's religious speculations and ventures. His oriental respect for the personality of a monarch withholds him from attacking Akbar himself, but he pours vituperation on the freethinkers and their leaders, Mubārak, Faiḍī, and Abu 'l-Faḍl, to whose patronage he admits his indebtedness, for their encouragement of Akbar's latitudinarianism.

This history, the publication of which was obviously impossible, was kept secret by Badā'ūnī until his death, which occurred in A. D. 1604 or 1605, but its existence became known in the reign of Djahāngīr, who sent for the historian's sons and questioned them. They professed ignorance of the matter, saying that if the history existed they must have been mere children at the time when it was written. They were released on giving a bond admitting their liability to punishment, should any copy of the work be found with them.

Badā'ūnī was skilled in chronograms and wrote, as a poet, under the *takhalluṣ* Ḳādirī, but his bigoted views led him latterly to relinquish poetical composition, as partaking of the nature of sin. (T. W. Haig.)

BADAWĪ, Beduin. [See arabia, p. 372—377.]

al-**BADAWĪYA**. [See aḥmad al-badawī.]

BADAWLAT, a title of the chief Ya'ḳūb-Beg of Kāshghar [q. v.].

BĀDGHĪS or Bādhghīs, a district in the north-western part of the modern Afghānistān; the name is explained as being derived from the Persian *bādkhīz* ("a place where wind rises") on account of the strong winds prevailing there. By the geographers of the iv. (x.) century only the district in the north-west of Herat between this town and Sarakhs is called Bādghīs. Later the name was extended to the whole country between the Herirūd and the Murghāb; at any rate it is used in this sense as early as the vii. (xiii.) century by Yāḳūt. The small towns and fortresses situated in Bādghīs have never been of great importance. At the present day Ḳal'a-i Naw is regarded as the chief town. The rivers, including the tributaries of the Murghāb contain, at the present day, as a thousand years ago, only small streams of brackish water; for the irrigation of the cultivated fields the people are dependent on wells and the rain fall. The pistachio-woods mentioned by the Arabs have survived to a certain extent to the present day. Besides these the excellent pastures of the country are famous; Ferrier (1845-1846) describes the pastures at Ḳal'a-i Naw as the best in all Asia. This circumstance has been rather detrimental to the progress of the country, for the neighbouring nomadic tribes have always been attracted by these pastures. The wars between the Persians and the Mongols of Central Asia in 1270 arose out of a dispute for the possession of the pasture grounds of Bādghīs. At the present day Bādghīs is inhabited for the most part by nomadic tribes, the Hazāra and the Djamshīd.

Bibliography: W. Barthold, *Istoriko-geografičeskij obzor Irana* (St.-Petersburg, 1903), p. 33 *et seq.*; G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), p. 412 (with list of authorities). (W. Barthold.)

BADĪ' (a.), "Discoverer", "Creator", one of the 99 names of God. — In the passive sense *badī'* means 'discovered' and is a technical term in Rhetoric for rhetorical figures, metaphors etc. Hence the *'ilm al-badī'* (science of metaphors) forms a branch of Rhetoric. The first Arab writer on this subject is the poet Ibn al-Mu'tazz [q. v.]. Later poets delighted in using all sorts of figures of speech in one and the same poem. Such poems, called *Badī'īya* were composed by Ṣafī al-Dīn al-Ḥillī [q. v.] and Ibn Ḥidjdja [q. v.] amongst others. Cf. Ḥādjdjī Khalīfa s. v.; v. Mehren, *Rhetorik der Araber*, 97.

AL-BADĪʿ AL-ASṬURLĀBĪ, HIBATALLĀH B. AL-ḤUSAIN B. AḤMAD (also YŪSUF) ABU 'L-ḲĀSIM, a distinguished Arab scholar, physician, philosopher, astronomer and poet, but especially eminent in the knowledge and construction of the astrolabe and other astronomical instruments. The date of his birth is unknown; in the year 510 (1116-1117) we find him in Iṣfahān on friendly terms with the Christian physician Amīn al-Dawla b. al-Tilmīdh. Later he lived in Baghdād and is said to have made a considerable fortune by his profession under the Caliph al-Mustarshid. According to Abu 'l-Fidā' astronomical observations were made under his direction in 524 (1130) in the palace of the Seldjūḳ Sulṭān in Baghdād; probably the "Tables of Maḥmūd", compiled by him and dedicated to Sulṭān Abu 'l-Ḳāsim Maḥmūd b. Muḥammad (1118—1131), were a result of these observations. He died in Baghdād in the year 534 (1139-1140) and according to Abu 'l-Faradj, our only authority for the statement, was buried while only apparently dead. As to his efforts in the domain of poetry, according to Ibn al-Ḳifṭī they were noble and beautiful, according to Ibn Khallikān they bordered on the obscene and indecent: the latter and Ibn Abī Uṣaibi'a give some specimens of the better of them. Besides a *Dīwān* of his own poems he published a selection of the poems of Ibn Ḥadjdjādj in one volume divided into 141 sections entitled *Durrat al-Tādj min shiʿr Ibn Ḥadjdjādj*.

We must not be led astray by the praise bestowed by the Arab biographers, notably Ibn al-Ḳifṭī, on al-Badīʿ al-Asṭurlābī and appreciate him too highly. The historians and biographers of the thirteenth century had too little knowledge of mathematics and astronomy to be able to value at their proper worth the really remarkable achievements of the scholars of the ninth to eleventh centuries, in these sciences; they therefore easily fell into the error of exalting the labours of scholars who were nearer them in point of time, unduly and at the expense of those of the golden age of Arab science: neither al-Battānī, nor Abu 'l-Wafā' nor al-Bīrūnī have reaped such praise from any side as al-Badīʿ al-Asṭurlābī although they have earned it in a much higher degree.

BADĪʿ AL-ZAMĀN "wonder of the age", a title of honour given to the Arab writer al-Hamadhānī [q. v.].

BADĪL (A.), "Equivalent", "Substitute". [See ABDĀL.]

BĀDĪS B. ḤABBŪS B. MĀKSIN AL-ṢINHĀDJĪ, called AL-MUẒAFFAR (the victorious"), a Berber Zīrid, cousin of Bādīs Abū Mennād [q. v.], King of Granada (429—465 = 1038—1073), a bloodthirsty tyrant and drunkard, obtained the sovereignty of Granada by the help of his clever Jewish vizier Samuel Ha-Nagīd (Samuel Ha-Lewi b. Joseph b. Nagdīla, arab. Ismā'īl b. Naghdīla) after the death of his father Ḥabbūs and the voluntary withdrawal of his younger brother Boluggīn who was preferred by a powerful party in the Kingdom. He at once sought to secure his position by murdering various opponents such as the Slav Zuhair, Emīr of Almeria and his vizier Ibn 'Abbās. A war lasting many years, which he waged with the 'Abbādids of Seville over the sovereignty of Andalusia, ended indecisively. Allied with the Berber prince Muḥammad of Carmona and Idrīs I of Malaga he defeated the 'Abbādid Ismā'īl, the son of Ḳāḍī Abu 'l-Ḳāsim Muḥammad I, who was besieging Carmona, at Ecija (431 = 1039) but he could not prevent the successor of Ḳāḍī, the 'Abbādid al-Mu'taḍid [q. v.] obtaining possession of several small Andalusian Berber states such as Mértola, Huelva, Niebla, Ronda, Moron and in the end Carmona also (459—1067) though he soon recovered Malaga, which he had seized after the fall of the Ḥammūdids in 449 (1057), after its capture by al-Mu'tamid the son of al-Mu'taḍid. To avenge the murder of a number of Berber nobles by al-Mu'taḍid, Bādīs resolved to massacre all the Arabs of Granada while in the mosque at the Friday sermon, a plan which Samuel thwarted only with the greatest difficulty. The abilities of this vizier brought the Kingdom of Granada to great prosperity; the capital fortified and adorned with splendid buildings by Bādīs was the great bulwark of the Berber power in Spain but after Samuel's death in 459 (1066) the kingdom soon fell to pieces. After the death of Bādīs in 465 (1075) his grandson 'Abd Allāh inherited Granada and his brother Tamīm, Malaga.

(M. SCHMITZ.)

BĀDĪS, ABŪ MANNAD NĀṢIR AL-DAWLA, son and successor of al-Manṣūr, a prince of the Zīrid dynasty, succeeded his father on the 3 Rabīʿ I. 386 (26 March 996), as governor of Ifriḳiya and Central Maghrib. His accession was confirmed by his suzerain al-Ḥākim bi-amri'llāh the Fāṭimid Caliph of Egypt. He continued the war against the Zanāta and after entrusting the government of Tāhert (Tagdemt) to his uncle Iṭṭūwaft he sent against Zīrī b. 'Aṭiya, sovereign of Fās, his other uncle Ḥammād who was defeated at Amṣār. Bādīs then advanced in person and his adversary retired before him but while the former was occupied in the West, Falfūl b. Sa'īd, governor of Ṭobna, rebelled against him and with him Māksin and Zāwī the grand-uncles of Bādīs, whom Bādīs had offended by his preferment of younger relatives in filling the offices of state. Māksin and Zāwī were defeated by Ḥammād in 391 (1001), Zāwī fled to Spain where he founded the Zīrid dynasty of Granada. Meanwhile Bādīs had overtaken Falfūl, who, after besieging Bāghāi (Bāghaya) in vain, had turned his attention to Ḳairawān, and defeated him at Wādī Aghlān (10 Dhu 'l-Ḳa'da 389 = 22 Oct. 999). Falfūl fled through the desert and found refuge in Tripoli where he died in 400

(1009-1010). Bādīs then marched against this town and received the submission of Warrū, brother and successor of Falfūl. While these events were taking place, Ḥammād founder of the Ḳal'a of the Banū Ḥammād, had rebelled in anger at being deprived of the governorships of Tīdjis and Constantine. Bādīs put himself at the head of an expedition against him and defeated him on the borders of the Shalif, whereupon Ḥammād having lost army and treasure, succeeded in fleeing to the fortress (al-Ḳal'a) which he had built. He was saved by the death of Bādīs which took place in the night of the 29th or 30th of Dhu 'l-Ḳa'da 406 (9th or 10th May 1016.

(René Basset.)

BĀDIYA, country residence of the Omaiyads. The conquering Arabs, accustomed to the free life and open air of the desert, required some time to become used to the confinement of towns, frequently ravaged by epidemics; whence their saying "Health dwells in the desert". Some of the Sāsānids even had their heirs brought up in the desert by the Lakhmids of Ḥīra who resided there periodically. This repugnance to the town explains also why the caliphs, especially Mo'āwiya I and 'Abd al-Malik, usually lived outside Damascus. In the desert survived purity of language and of national customs threatened by contact with conquered peoples. The desert was therefore called "the school for princes" and Mo'āwiya readily allowed his son Yazīd to sojourn in it. 'Abd al-Malik regretted not having sent Walīd I there to improve his faults. We also know that the Omaiyads passed a part of the year, preferably the spring, in the desert. Their residence there they called their *Bādiya*, from which comes *tabaddā* "to dwell in the desert." Each caliph — and following his example the members of the ruling house — chose for their *bādiya* a corner in the Syrian desert where they enjoyed the pleasures of spring, the most beautiful season for a nomadic life. The Annalists note the departure of the caliphs to their *bādiya* and their return. Mo'āwiya who used to pass the winter at Sinnabra on the shores of the Lake of Tiberias seems to have done without a *bādiya*. The *bādiya* of Yazīd I was in the neighbourhood of Ḥowwārīn; 'Abd al-Malik passed the spring at Djābiya. His successors, especially Walīd II continued the tradition. Their bādiyas are to be sought for preferably in the solitudes adjoining Balḳā'. Living in tents they there exercised the splendid hospitality of the ancient saiyids and entertained poets and *wufūd*. Sometimes the bādiya presented the scene of gay picturesque confusion, that seems to have reigned in the Ḥīra of the Ghassānids and the Lakhmids; tents for the military escort, more substantial buildings for the ruler and his ḥarem. Some caliphs preferred the forts erected along the Roman frontier; others, indefatigable builders, erected palaces (*Ḳaṣr* or *Dār*) in the midst of the desert; others again only a simple shelter for hunting from, one of the favourite recreations of this sojourn in spring. In these bādiyas they lived with their families and their guards (*'Arīfs*). Some of these buildings were adorned with precious marbles, sometimes even with frescoes. The ruins visited by Dr. A. Musil enable us to fix the site of several badiyas and to reconstruct the whole appearance of these singular spring residences, peculiar to the Omayyad period.

BĀDJ (P.), a gift, tax, toll etc.

BĀDJADDĀ, in the Arab middle ages, a small strongly fortified town in Mesopotamia, south of Ḥarrān, some distance east of Balīkh situated, on the road to Ra's al-'Ain, with famous gardens. It appears at the present day to be no longer in existence. The Aramaic name (בֵי גַדָא) denotes "house of fortune"; cf. perhaps, an 'Ain-gaddā = "source of fortune" in the Damascene and the Gadda of the Tabula Peutingeriana in Syria. See thereon Nöldeke in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxix, 441.

Bibliography: Yāḳūt, *Mu'djam* (ed. Wüstenfeld), i. 453; Balādhorī (ed. de Goeje), p. 174, ₁₀, where Bādjaddā, not Bādjaddā is to be read; G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), p. 105.

(Streck.)

AL-**BADJALĪ**, AL-ḤASAN B. 'ALĪ B. WARSAND, founder of a sect among the Berbers of Morocco, whose adherents are called Badjaliya. Al-Bakrī states that he appeared there before Abū 'Abd Allāh al-Shī'ī [q. v.] came to Ifrīḳiya (before 280 = 893). Al-Badjalī came from Nafṭa (Nefta) and found many adherents among the Banū Lamās. His teaching agreed with that of the Rawāfiḍ but he asserted that the Imāmate belonged only to the descendants of al-Ḥasan. So al-Bakrī and Ibn Ḥazm state in opposition to Ibn Ḥawḳal (ed. de Goeje, 65), who says that he was a Mūsawī i. e. he recognised the Imāmate of Mūsā b. Dja'far, a descendant of Ḥusain. The Badjaliya were afterwards conquered and exterminated by 'Abd Allāh b. Yāsīn.

Bibliography: Ibn Ḥazm, *Milal wa Niḥal*, iv. 183; Bekrī, *Description de l'Afrique Septentrionale* (ed. de Slane), 161; Friedländer in *Journal of the American Orient. Soc.*, xxix, 75.

BĀDJARMĀ, or BĀDJARMAḲ, name of a district east of the Tigris between the lower Zāb in the North and the Djabal Ḥamrīn in the South whose chief town in the middle ages was Kerkūk (Syr. Karkhā de Bēth Slōkh). During the caliphate it formed a district of the province of Mosul (cf. Ibn Khordādhbeh, 97, ₇). Bādjarmā is an Arabic rendering of the Aramaic Bēth (Be)-Garmai while Bādjarmaḳ goes back to some Middle Persian form of the name of the

district, like Garmakān. The latter word comes from the Garamu, a nomadic people mentioned in cuneiform inscriptions, the Γαραμαῖοι of Ptolemy.

BADJĀWA. [See BEDJA.]

BADJAWR, a tract of hilly country on the N.W. frontier of India (estimated area: 5,000 sq. m., estimated population 100,000). It is occupied by several Paṭhān or Afghān tribes, who recognise the nominal supremacy of the Khān of Nawagai.

Bibliography: *Imperial Gazetteer of India.*

(J. S. COTTON.)

BADJĪLA, an Arabian tribe of Bedouins, which occupied the central part of the Sarāt mountains — at Ṭā'if — stretching northwards from South Arabia after they had displaced the tribe originally dwelling there, the Banū Thā'ir. The tribe was gradually broken up through feuds with the neighbouring tribes and the quarrels of the individual clans with one another and even in pre-Muḥammadan times had been for the most part merged in other Arab tribes. A part however survived under the old name and was celebrated in the Umaiyad period by the poet Farazdaḳ.

BĀDJISRĀ, a township in 'Irāḳ (Babylonia) according to Yāḳūt east (to be more accurate north-east) of Baghdād, 6 parasangs = about 21 miles distant from Ḥulwān. According to Ibn Khordādhbeh and Ibn Serapion's more exact description it was situated on the bank of the great Ḳāṭūl-Nahrawān canal which was led from the Tigris and in the central section of it, the so-called Nahr Tāmarrā, probably very near where a cross-canal called al-Khāliṣ left the Tāmarrā to join the Tigris at Baradān (q. v.) above Baghdād. In Yāḳūt's time it was still a flourishing populous place with many date-groves but by the first half of the viii. (xiv.) century Bādjisrā was quite deserted according to the author of the *Marāṣid* and at the present day it has quite disappeared. The Arab name means "place at the bridge" (בֵּי גִשְׂרָא).

Bibliography: Ibn Serapion (ed. G. le Strange) in the *Journ. of the Roy. Asiat. Society*, 1895, p. 19, l. 11; *Bibl. Geogr. Arab.* (ed. de Goeje), iii. 55, 115; vi. 175; Yāḳūt, *Mu'djam* (ed. BĀDJŪRĀN. The Bādjūrān live on the Perso-Turkish frontier (Wilāyet Mosul) in the villages of 'Omar Ḳān, Topraḳlı Ziyāret, Tell Ya'ḳūb, Bashpitū amongst others. According to P. Anastase, they speak a mixed dialect and have peculiar religious observances and customs like the Shabak and the Ṣārliya [q. v.].

Bibliography: P. Anastase in *Mashriḳ*, v. 580.

BĀDJŪRĪ (or BAIDJŪRĪ, IBRĀHĪM IBN MUḤAMMAD), born in the year 1198 (1783) in Bādjūr, a village 12 hours journey from Cairo, devoted himself after 1212 (1797) to study at the Azhar-mosque. After retiring to al-Djīza during the French occupation he resumed his studies in Cairo in 1216 (1801). Soon afterwards he began to give lectures in the Azhar and the fame of his learning became so great that hundreds of students used to attend his lectures. He "was undoubtedly the most learned of all the teachers then in the Azhar" says one of his pupils (the Shaikh al-Ṭanṭāwī in his autobiography: *Zeitschr. für die Kunde des Morgenl.*, vii. (1850), 52, 58). In the month Sha'bān of the year 1263 (1847) he became rector which office he held till his death in Dhu 'l-Ḳa'da 1277 (June 1861). When he was no longer able in his latter years (after 1275) from old age to carry out the business of his office thoroughly the authorities gave him 4 deputies to discharge the duties.

His many works in the field of the scholastic learning of his day consist almost exclusively of commentaries and glosses whose contents are mainly borrowed from the writings of famous older scholars. The best known are the following: *a.* on Fiḳh: 1. Glosses to Ibn Ḳāsim's commentary on Abū Shudjā' which form the basis of Sachau's *Muhamm. Recht nach schafiitischer Lehre*, Berlin, 1897; 2. Glosses to al-Shinshawrī's commentary on the *Urdjūza al-Raḥbīya* (ed. J. D. Luciani, *Traité des successions musulmanes; extrait du commentaire de la Rahbia par Chenchouri, de la glose d'el-Badjouri et d'autres auteurs arabes*, Paris, 1890); — *b.* on Kalām: 3. Gl. to al-Sanūsī's comm. on his *Umm al-Barāhīn*; 4. Gl. to Ibrāhīm al-Laḳānī's comm. on his *Djawharat al-Tawḥīd*; 5. Comm. to the work entitled *Kifāyat al-'Awāmm fīmā yadjibu 'alaihim min 'Ilm al-Kalām* by his teacher Fuḍālī; — *c.* on the biography of the Prophet: 9. Gl. to al-Tirmidhī's *Shamā'il*; Gl. to Ibn Ḥadjar al-Haitamī's *Mawlid*; 8. Gl. to Ibn Hishām's comm. to *Bānat Su'ād*; 9. Gl. to Khālid al-Azharī's comm. on the *Burda*; — *d.* on Grammar, Rhetoric and Logic; 10. Gl. to 'Amrīṭī's edition of al-Ṣanhādjī's *Adjrūmīya*; 11. Gl. to Samarḳandī's *Risāla fi 'l-Bayān*; 12. Gl. to al-Sanūsī's *Mukhtaṣar fi 'l-Manṭiḳ*; 13. Gl. to al-Akhḍarī's commentary on his *Sullam fi 'l-Manṭiḳ*. — A complete chronological list of the works of Bādjūrī (which have almost all been printed in Egypt) is to be found at the end of his above mentioned commentary on Ibn Ḳāsim.

BADR (A.). **Full moon.** As the full moon is the very essence of beauty among Orientals, beautiful young slaves are often called Badr, and Badr is thus a common name not however limited to slaves. The word is frequently combined with *Dawla* or *Dîn*, see below.

BADR, also called BADR ḤUNAIN, a small town southwest of Medina, a short night's journey distant from the coast situated at the union of the road from Medina and the caravan route from Syria to Mecca. The houses were, when Burckhardt visited it, built partly of clay and partly of stone and surrounded by a wretched mud wall. The inhabitants were, for the most part, Beduins of whom many however had only their booths in the town while they spent the night in their tents on the hills. In the time of Muḥammad, Badr was merely a watering-place where an annual market was held. This small place first attained historical importance by the battle between Muḥammad's followers and the people of Mecca, which took place here on the 17th or 19th Ramaḍân of the second year of the Hidjra. For, however unimportant this battle brought about by a series of accidents, was in itself, it laid the foundations for the Prophet's power and likewise for the further propagation of Islâm and rarely did the superior ability of the Prophet show itself so clearly as on this occasion when he was able so to inspire his followers, terrified by the unexpected meeting with the Meccans, that they utterly routed their opponents who were superior in numbers — according to Ḥamza's poem there were 1000 Meccans to 300 Muslims.

It is not very easy to picture to one's self the progress of the battle with the aid of Burckhardt's account; at any rate the description of the battle which was given him on the spot throws no light on the ancient accounts. According to Burckhardt, Badr lies in a plain which is bounded on the North and East by steep mountains and in the South by rocky hills and in the West by dunes of shifting sand. In the eastern mountains rises a stream with a good flow of water which, confined in a stone canal, waters extensive date-palm groves, gardens and fields on the Southwest of the town. The very deep sand makes it difficult to cross the western hills behind which the desert plain on which only saltworts grow, stretches to the coast. About a mile south of the town the 13 grave mounds of the Muslims who fell at Badr were pointed out to him. According to Ibn Isḥâḳ Muḥammad stood with his warriors at the well on the slope nearest Medina, the Meccans on the opposite slope; cf. Sura 8, 43: "When you were encamped on the nearer side of the valley and they on the farther side while al-Rukb (the escaping caravan not the hostile cavalry or even as Burckhardt thought a reserve led by ʿAlî) was below at some distance" (on the sea-shore). A sand-hill al-ʿAḳanḳal between which and Badr was the valley of Yalyal concealed the Meccans from the eyes of the Muslims. According to Wâḳidî Muḥammad's supporters had their faces to the West while the Meccans facing the East had the sun in their eyes. The battle was begun in the morning by the Meccans climbing over al-ʿAḳanḳal into the valley while Muḥammad had forbidden his people to attack till he gave the signal. According to this the site of the battle ought to be sought at the foot of the hills on the eastern border. Here the wells must have been which the Muslims destroyed except the one nearest the enemy, beside which they dug a reservoir and erected a bower of leaves for the prophet. Their dead enemies were thrown into one of the destroyed wells.

Muḳaddasî mentions Badr as a small town situated towards the seashore growing excellent dates; there are the well of the Prophet, the battlefield and some mosques built by the kings of Egypt. Al-Bakrî says it is merely a watering place with two springs at which bananas, vines and palms grow. The distance between Badr and Medina he gives as 28 parasangs, Masʿûdî as 8 barîds and 2 miles: the distance between Badr and the harbour of al-Djâr was 16 miles according to al-Bakrî, a night's journey according to Yâḳût.

(FR. BUHL.)

BADR (PÎR). Besides Khwâdja Khiḍr, Bengal believes in a greater animistic power in the person of Pîr Badr who shares with the former the dominion of the waters. His spirit is invoked by every sailor and fisherman, when starting on a cruise or while overtaken by a squall or a storm. All Muḥammadans agree that he resided for some time at Čittagong, but his history does not disclose the reason why the attributes of a water-god were conferred on him. The guardians of his shrine, however, say that about five hundred years ago, Pîr Badr arrived at Čittagong "floating on a rock", and informed the inhabitants that he had come all the way from Akyâb on that novel craft in order to restore human sway over the neighbourhood of Čittagong which was haunted and molested at that time by Djinns or evil spirits. The modern Dargâh or shrine of Pîr Badr stands in the centre of Čittagong, and is regarded as the palladium of the city. Faḳîrs (mendicants) are its custodians, and the shrine with its rooms for pilgrims, is kept scrupulously clean. In its walls are niches for ten oil-lamps, one for each, which are lighted every evening and burn all night. Pilgrims from all parts of Bengal visit the shrine in fulfilment of vows, or to obtain the blessing and intercession of the saint, while Hindu fishermen regard him with as much veneration as the Muḥammadans. His *ʿUrs* (the anniversary of his death) is celebrated annually on the 29th of Ramaḍân. There can, however, be little doubt that Pîr Badr was no other than Badr al-Dîn Badr al-ʿÂlam, for many years a resident of Čittagong, who died 844 (1440), and was buried in Čhoṭî Dargâh (shrine) at Behâr.

The usual cry with which they invoke the saint's help when their boats happen to fall in danger is "Allāh, Nabī, Pānč Pīr, Badr, Badr, Badr" (God, the Prophet, the Five Saints, Badr, Badr, Badr). It seems very probable that the Muḥammadans have borrowed the idea of "peopling the waters with deathless spirits", holding sway over them, from the ancient Hindus.

(M. HIDAYET HOSAIN.)

BADR B. ḤASANWAIH ABŪ NADJM NĀṢIR AL-DĪN, a Kurdish chief, who was recognised after the death of his father in 369 (679-980) by the Būyid ʿAḍud al-Dawla as ruler of Kurdistān. After the latter's death in 372 (983) Badr inclined towards Fakhr-al-Dawla and thereby came into conflict with Sharaf al-Dawla the son of ʿAḍud al-Dawla. In the struggle he was victorious over the troops sent against him under Ḳarategin in 377 (987) and brought the province of al-Djibāl under his sway. He thereby became one of the most powerful Emirs of the time and in 388 (998) received from the Caliph the title Nāṣir al-Dīn wa 'l-Dawla. In his old age about the year (400 (1009) he quarrelled with his son Hilāl who made him prisoner. On being set free again he was able to gain power once more with the help of the Būyid Bahāʾ al-Dawla, after the troops sent to his assistance under Fakhr al-Mulk had taken his son prisoner. Five years later in 405 (1014) Badr was murdered by his own people.

BADR AL-**DAWLA**, SULAIMĀN B. ʿABD AL-DJABBĀR the Urtuḳid governed the town of Ḥalab for his uncle Ilghāzī and remained master of it after the latter's death in 516 (1122) but had to retire soon after, when in the following year he ceded Ḥiṣn al-Athārib to the Crusaders and his valiant nephew Balak b. Bahrām advanced against Ḥaleb in consequence. When in course of time Zangī became lord of Ḥaleb his governor Ḳutlugh Abā made himself so hated by the inhabitants that they again called on Sulaimān in 522 (1126). Sulaimān thereupon laid siege to Ḳutlugh Abā who was able to hold out in the citadel of the town till Zangī sent troops to his aid. An attempt by the Crusaders to take the town during these troubles was unsuccessful. Zangī summoned both Ḳutlugh Abā and Sulaimān to al-Mawṣil (Mosul) and reconciled them with one another but he allowed neither of them to return to Ḥaleb.

Bibliography: Ibn al-Athīr (ed. Tornberg), x. 418 *et seq.*

BADR AL-**DĪN**, a title of honour of Luʾluʾ [q.v.].

BADR AL-**DJAMĀLĪ**, a Fāṭimid commander-in-chief and vizier. The once so brilliant Fāṭimid kingdom was on the verge of its downfall under the incapable Caliph Mustanṣir (427—487 = 1036—1094). The Seldjuḳs were pressing forward into Syria, in Egypt the Turkish slave-guards were fighting with the negro-corps, a seven years' famine was exhausting the resources of the country, all state authority had disappeared in the general struggle, hunger and disease carried off the people, license and violence destroyed all prosperity and it appeared as if the Fāṭimid kingdom must disappear in a chaos of anarchism. Then on the call of the Caliph, the Syrian general Badr al-Djamālī took command of the government as well as of the army and with great though brutal vigour brought order into affairs again and indeed a second period of splendour to the Fāṭimid kingdom.

Badr was an Armenian slave of the Syrian Emir Djamāl al-Dawla Ibn ʿAmmār, whence his name al-Djamālī. He must have been born about the beginning of the fifth century A. H. for at his death in 487 (1094) he was over 80 years old. Even before he became vizier he had made a great name for himself in Syria. He was twice appointed Governor of Damascus but fell into difficulties each time on account of his stringent measures with the pampered troops. He then became commander-in-chief of ʿAkkā and in this capacity had to fight against the troops of Malik-shāh. He had an Armenian bodyguard for himself and the soldiers he commanded were also to be relied on. He took them with him on being summoned by the Caliph in 466 (1073) to deliver him out of the hands of the despotic Turkish officials. The latter never suspected the reason of Badr's coming to Egypt, fell into the trap prepared for them and were all murdered in one night. Badr thereby became master of the situation. Now followed his appointment as commander-in-chief or *Amīr al-Djuyūsh* (in the popular language *Mirgūsh*), as chief justice, chief preacher and vizier. The most popular of these titles was the first; the Djabal al-Djuyūshī is still a common appellation of the Muḳaṭṭam commanding Cairo on the spur of which Badr built a mosque, a Mashhad in which according to popular belief at the present day the Sīdī Djuyūshī lies buried. After quieting the capital he brought about order to the east then to the west of the Delta. Alexandria also had to be taken at once. The task of conquering Upper Egypt was also difficult as the Arab tribes had set themselves up as independent there. In Syria he was not so fortunate. Affairs were mismanaged here, and Damascus fell into the hands of the Seldjuḳs about the end of the year 468 (1076). The Fāṭimids were never to regain it. In the following year the victorious Seldjuḳ general Atsiz appeared before Cairo itself but Badr had time to collect his troops and drive back the Seldjuḳs. In spite of repeated attempts in the years 471 (1078-1079), 478 (1085-1086), 482 (1089-1090) he was not successful in regaining Damascus and Syria and at his death only a few towns in the South of Syria were still in the possession of the Fāṭimids. His strength in Syria was weakened by unrest constantly breaking out in Egypt, inspired by one of his sons.

Of his activity as a governor we know little but it is praised on all sides. Under his rule the annual revenue of Egypt from taxation was increased from about 2 to about 3 million dīnārs. These large receipts enabled him to put into practice the lessons learned from the Seldjuḳ invasion. Cairo was invested by him with its second wall and the three strong city gates which are admired to this day, the Bāb Zawīla (Zuwaila), the Bāb al-Naṣr and the Bāb al-Futūḥ, were built. In Rabīʿ I 487 (March—April 1094) Badr's active and successful career came to its close after he had arranged that his son al-Afḍal Shāhānshāh [q. v.] should succeed him in all his offices. The Caliph Mustanṣir who had then been reigning for

full 60 years was to follow him in death a few months later.

BĀDŪRAYĀ, a district southwest of Baghdād, the land south of the Nahr Ṣarāt, a branch of the Euphrates canal Nahr 'Īsā [q. v.]. The Ṣarāt separates it from the Ḳaṭrabbul district: the southern part of the western half of Baghdād (the so-called town of al-Manṣūr) as well as the suburb of Karkh were situated within the bounds of the district of Bādūrayā; the latter formed, like the district of Ḳaṭrabbul, a subdivision of the circle of Astān al-'Āl.

BĀDŪSEPĀN (PĀDHOSPĀN), founder of a dynasty in Ruyān, Rostemdār, Nūr and Kudjūr, cf. the art. DĀBŪYA.

BAGGĀRA, Arab tribes in the Eastern Sūdān. By the Baggāra (i. e. *Baḳḳāra*, cattle-herds) are meant the cattle-rearing Arab or Arabicised nomad or semi-nomad tribes of the Eastern Sūdān, who have received their name in contradistinction to the Abbāla i. e. the camel-breeding Arab tribes of these lands. The distinction is not absolute for the Baḳḳāra also have camels to a certain extent. The keeping of cattle seems to begin south of the sub-tropical border. Various Baḳḳāra tribes, e. g. the Rizēḳāt, have northern relatives of the same name who rear camels exclusively. The breeding of cattle is also connected with climatic conditions. The Arabs in their slow advance southward took up cattle-breeding gradually; they did not import the cattle, although they all claim to originate from Yemen, and cattle-breeding was in vogue there. The cattle of these tribes are the humped cattle found throughout Central Africa. The name Baḳḳāra is limited to the cattle-rearing Arab tribes of Wadā'i, Dārfūr and Kordofān; the Arab Schoa of Bornu who also keep cattle are not so-named.

The most reliable accounts of the numerous Baḳḳāra tribes are due to Nachtigal. He mentions the following chief groups in Wadā'ī: Salāmāt, Missirīja, Aulād Rāschīd, Dachn'ādina, Chozzām, Schurafā, Heimāt, Deqena, Schiggērāt, Tordschem, Kōlōmāt, Beni Hasan, Zabalat, Mahādi, Zanātīt, Medschānīn, Korōbāt, and the Isirre. Nachtigal has collected valuable material on their relationships, their settlements, their organisation in the kingdom of Wadā'ī and their customs. We also owe to the same traveller almost all our knowledge of the Baḳḳāra between Wadā'ī and the Nile. The most important tribe in this district is the Rizēḳāt to whom belong the Mahārīja, the Mahāmīd and the Nawā'ibe, also two important subdivisions of the Heimāt, the Ta'āīsha and the Habanīja and the Tordschem and Beni Holba, the Ta'ālība and the Bedrīja; the low caste tribe of the Hamr — generally called Baḳḳāra al-Homr on maps — also belongs to them.

Almost all the above-mentioned tribes can be shown to be of common origin and that of the others may be presumed. Kampffmeyer has set out their genealogical table which converges in the Djuhaina; each stage of the gradual immigration of the Djuhaina into the Sūdān from Egypt can be shown. From the beginning of the viii. (xiv.) century they can be traced in Nubia. Later they were engaged in founding petty states in the Sūdān and in more modern times have been allied with the slave-traders. On the foundation of the Mahdī's kingdom in Khartūm they were settled in many places. Even under the Mahdī a bulwark of his power, under the Caliph 'Abd Allāh who as a Ta'āīshī was himself descended from the Baḳḳāra, they became the preponderating factor in the Sūdān but finally by the many wars and the Anglo-Egyptian conquest they were much reduced in numbers.

Schweinfurth thus describes their physical features. "Fine, light brown bronze figures of slim, sinewy build and countenances of faultless regularity. The profile in all showed the full right angle, the form of the nose not at all aquiline, but more rounded and elegant, gave the more youthful faces a goodhumoured almost feminine character, an expression which was farther increased by the symmetrical rounding of the high brow. They all wore their long hair in thin pleats running close together along the crown of the head and falling down to the neck". It is the Rizēḳāt whom Schweinfurth here describes. All these tribes according to their mixture with negro blood show sometimes a more Hamito-Semitic, sometimes more Nigritic type.

BĀGH (P.), "garden". *Bāgh-i zāghān*, "crow-garden" is a district in Herāt; we know a *bāgh-i lālezār* ("Tulipgarden") at Teherān and at Shīrāz the gardens *bāgh-i naw*, *bāgh-i shaikh*, *bāgh-i takht*. A garden divided into four by two alleys crossing one another is called *čahār-bāgh*. *Bāgh-i siyāwushān*, *bāgh-i shīrīn*, *bāgh-i shahryār*, *bāgh-i ardashīr* are musical melodies. In Turkish the word has taken the meaning of vineyard.

AL-**BAGHAWĪ**, ABŪ MUḤAMMAD AL-ḤUSAIN B. MAS'ŪD B. MUḤAMMAD AL-FARRĀ', Arab author, Shāfi'ite Faḳīh, an authority on tradition and inter-

preter of the Kor'ān, also called Muḥyi 'l-Sunna and Rukn al-Dīn, a native of Bagh or Baghshūr in Khorāsān (Yāḳūt, i. 695). In Marw al-Rūdh he studied with the Ḳāḍī Abū 'Alī al-Ḥusain b. Muḥammad b. Aḥmad al-Marwarrūdhī and did not leave this his second home again and died there over eighty years of age, in the month of Shawwāl 516 = Dec. 1122, according to others in Shawwāl 510 = Febr. 1117. Besides a collection of *Fatwās*, which has not been preserved to us, in which he also noted the opinions of his teacher he wrote the legal compendium *al-Tahdhīb fi 'l-Furū'* (v. *Fihrist al-Kutubkhāne al-Khidīwiye*, iii. 212). His commentary on the Kor'ān *Ma'ālim al-Tanzīl*, lith. in Persia (place and date not stated), 4 vols; printed Bombay, 1309 (1891), 2 vols. fol., enjoyed a greater popularity. He compiled a very complete collection of traditions entitled *Sharḥ al-Sunna* (cf. Ahlwardt, *Verzeichnis der arab. Hss. der Kgl. Bibliothek zu Berlin*, N°. 1295-1296). His fame in the Muḥammadan world however rests chiefly on his collection of traditions compiled from the seven fundamental works, the *Maṣābīḥ al-Sunna* in which the traditions are divided in each chapter after a regular plan into sound (*ṣaḥīḥ*) from Bokhārī and Muslim, excellent (*ḥasan*) from the Sunan and quite unsound (*gharīb* and *ḍa'īf*; printed Cairo 1294 (1877), 2 vols. 1318 (1900). A new edition of this work, the *Mishkāt al-Maṣābīḥ* of Muḥammad b. 'Abdallāh al-Khaṭīb al-Tibrīzī completed in the year 737 (1336) is still very popular on account of its fullness and practical arrangement; it provides the Muslim, particularly the half-educated with all the other older collections, avoids all the wearisome pomp of the Isnād and is written with a view to edification rather than learned pedantry (cf. I. Goldziher, *Muhammed. Studien*, ii. 270, 271). The work has been several times printed in Delhi, Bombay, Calcutta and in Kazan in 1909, lithographed St. Petersburg, 1898-1899, 2 vol. transl. into English by A. N. Matthews, Calcutta, 1809. The author himself wrote a *Kitāb Asmā' al-Mishkāt* on it which he completed on the Radjab 20, 740 = 22 Jan. 1340, v. Nicholson in the *Journal of the Roy. As. Soc.*, 1899, p. 910. A commentary thereon was written, amongst others, by Ibn Ḥadjar al-Haithamī, died 974 (1566), printed Cairo 1309 (1891), in 5 vols.; a Pers. commentary by 'Abd al-Ḥaḳḳ al-Dihlawī, died 1052 (1642), has been printed in Calcutta and Chinsura 1251—1259 (1835—1843).

Bibliography: Ibn Khallikān (Būlāḳ, 1299), N°. 177 = Wüstenfeld, 184; Subkī, *Ṭabaḳāt al-Shāfi'iya* (Cairo, 1324), iv. 214—217; Suyūṭī, *Ṭabaḳāt al-Ḥuffāẓ*, xv, 30; id., *Ṭabaḳāt al-Mufassirīn* (ed. Meursinge), p. 12, N°. 35; Brockelmann, *Gesch. der arab. Lit.* i, 363.

BAGHBŪR. [See faghfūr.]

BĀGHČE SARĀI (Turkish "Garden palace") Russian Bachčisirai, a Tatar town on the Crimean peninsula in the district of Taurus 20 miles from Simferopol, the capital of the district and about the same distance from the sea shore. The town lies in the narrow valley of the Čürük-Ṣu, according to Pallas "Dschuruk Su" = stinking water; the ravine of Salačik runs in an easterly direction to the mountain fortress now called Čufut-Ḳal'e ("the fort of the Jews"), the oldest settlement in the neighbourhood of Bāghče Sarāi. This was the chief settlement of the Jews (Karaeans) in the Crimea during the Tatar rule. Among the Karaeans themselves the old name Ḳirḳ-yer survived into the xix[th] century. The fortress is first mentioned by Abu 'l-Fidā', *Géographie* (ed. Reinaud p. 214) as an abode of the Alans (Ās); the name is vocalised "Ḳirḳri" by Abu 'l-Fidā' but the meaning (forty men) which he himself gives implies the pronunciation Ḳirḳ-er. The name is explained by others as Ḳirḳ-or (forty graves) but on the coins only the reading Ḳirḳ-yer (forty places) is found. As Smirnow surmises, the name is a Turkish popular etymology from the Greek Καλλιάκρα. Ḥādjdjī-Girāy, the founder of the dynasty of the Girāy placed his capital at Ḳirḳyer about the year 858 = 1454 (the first coins struck at Ḳirḳyer are of this year): his grave is in the Salačik ravine. The oldest settlement (now called Eski-Yurt) was in the valley of the Čürük-Ṣu about 2/3 mile west of the modern town; there are the graves of most of the Khāns of the x (xvi) century. Later the palace from which Bāghče Sarāi has taken its name gradually became the centre of the town and Ḳirḳ-yer as well as Eski-yurt became depopulated. The palace according to an Arabic inscription on the principal gateway was built by Mangli Girāy in the year 909 (1503-1504). In opposition to Ḳirḳ-yer, Bāghče Sarāi has always been an open town; even the palace was not surrounded by fortifications. The Polish ambassador Broniewski (1578) describes Bāghče Sarāi as a small town with the stone palace of the Khāns and a stone mosque said to have been built from the ruins of Christian buildings. Another small town Salačik (apparently in the ravine of this name) adjoined Bāghče Sarāi; a Muḥammadan monastery (apparently a Khānegāh of Derwishes) was likewise built out of the ruins of Greek buildings. In the x (xvi) century the town is called Ḳirḳ-yer only on coins, the name Bāghče-Sarāi appears first in the xi (xvii); after the time of Islām Girāy III (1644—1654) Bāghče Sarāi was the only mint in the Crimea.

On the 28[th] (17[th]) June 1736 Bāghče Sarāi was taken by the Russians under Münnich, plundered and partly burned; a quarter of the town including the palace, the principal mosque and the library founded by Selīm Girāy I (reigned four times 1671—1678, 1684—1691, 1692—1699 and 1702—1704) as well as the Jesuit mission and its library were destroyed. The town then consisted of about 2000 houses of which about a third belonged to Greek Christians, who had their own church there. Under Salāmat-Girāy II (1740—1743) the destroyed part was rebuilt again in part; in the year 1153 (1740-1741) a mosque was built opposite the palace; books were sent by Sulṭān Maḥmūd I from Constantinople for its library; in the palace itself the Khān had a new hall of audience built in the year 1156 (1743). N. E. Klemann, who visited Bāghče-Sarāi in 1769, mentions, besides the palace and the mosque, the mint of the Khān, (to the right of the palace) and the residence of the French Consul which was the best in town after the palace. The houses did not form continous streets but stood at some distance from one another on which account the town occupied a greater area than was necessary, considering the population.

After the Crimea had been incorporated in Russia in 1783 Potemkin had the palace restored in

1784 for the visit of the Empress Catherine II. According to Pallas the town then contained 31 stone mosques, 1 Greek and 1 Armenian Church, 2 synagogues, 2 baths, 16 Khāns, 1566 dwelling-houses, 3166 male and 2610 female inhabitants. The Russian Government afterwards had the palace restored in its ancient splendour as a monument of Oriental architecture. As none of the buildings of the Khāns of the Golden Horde have been preserved to us, the palace of Bāghče Sarāi is the only memorial of this art in South Russia, and is famed as the "Tatar Alhambra". In Russian poetry the palace is well known from Pushkin's poem "The Fountain of Bāghče Sarāi". The archives of Bāghče-Sarāi, discovered by Prof. Smirnow in Simferopol and now included in the Imperial Library in St. Petersburg, (124 bound volumes — all that escaped destruction in 1736) contain many important records; this material has not yet been used to the best advantage by historians.

At the present day Bāghče Sarāi is an important centre of Tatar industry and Tatar literary activity. The influential journal "Turdjumān" (Tatar and Russian) is there published by Ismāʿīl Mīrzā Gasprinski; a large number of Tatar books are printed annually at the printing establishment founded by him.

Bibliography: Books of Travel: 1. Broniewski (Bronlovius), *Russia seu Moscovia itemque Tartaria* (Cologne, 1595; Leiden, 1630), Russian translation in the *Zapiski Odesskago Obščestwa Istorii i Drewnostei*, vi. 333 *et seq.*; 2. Nikolaus Ernst Kleemann's *Reisen* (Leipzig, 1773); French translation, (Neuchatel, 1780); 3. Pallas, *Bemerkungen aus einer Reise in die südlichen Statthalterschaften des Russischen Reiches in den Jahren 1793 und 1794*, Vol. ii. (Leipzig, 1801), p. 26—37. The Arabic and Turkish inscriptions of Bāghče Sarāi and the neighbourhood were collected in the years 1836—1847 by A. Borzenko and F. Dombrowski by orders of the Russian government and afterwards published in the *Zapiski Obščestwa Istorii i Drewnostei*, ii. 489 *et seq.* Dombrowski also published a description of Bāghče Sarāi (*Očerki Bachčisaraja*, Odessa, 1848). On the invasion of the Russians in the year 1736 we have the account of an eye-witness, Captain Mannstein in the *Mémoires historiques, politiques et militaires sur la Russie*, Nouv. ed., Paris, 1860, i. 183 *et seq.* The most complete work on the history of the Girāy is W. Smirnow, *Krimskoje chanstwo* (St. Petersburg, 1887: till the xviii[th] century, and Odessa, 1889: the xviii[th] century). The coins have been most fully described by O. Retowski, *Die Münzen der Girei* (Moscow, 1905). Cf. also W. H. Valentine, *Modern Coins of the Muhammedans* (Lond., 1911), p. 96—99. On the Archives cf. the short notice by K. Inostrantzew in the *Zapiski Vost. otd. Arch. obščestwa*, Vol. xviii. p. xviii. (W. BARTHOLD.)

BAGHDĀD, the name of the largest town in the modern ʿIrāḳ (Babylonia); once the brilliant residence of the ʿAbbāsids and the metropolis of the Muḥammadan world and now the chief town of a wilāyet of the same name (formerly a pashalik); situated on both banks of the Tigris in 39° 19 N. Lat. and 44° 44 E. L.

a. HISTORY.

The name Baghdād, usually now pronounced Baghdād, is undoubtedly Iranian and means "given by God, the gift of God". In the middle ages a number of variations of this name were in use of which the most frequent was Baghdān; cf. M. Streck, *Babylonien*, i. 49 and de Goeje, *Journ. Asiat.*, Ser. x. Vol. 3 (1904), p. 159. This pre-Muḥammadan name was always the one preferred by the people, while the name Madīnat al-Salām, also Dār al-Salām, i. e. "Town of peace (or welfare)" whence the Greek Εἰρηνόπολις, given by the Caliph al-Manṣūr to his new creation, appears to be limited as a rule to the official style (therefore it appears on the coins also). The views of Arab scholars on the origin and meaning of this second name are very much at variance. Al-Manṣūr probably chose it as a good omen for his new residence.

At the same time a reference to Paradise was no doubt intended (cf. the article DĀR AL-SALĀM), since Baghdād thus becomes one of the four places (the other three are Ubulla, the Ghūṭa at Damascus and the valley of Bawwān in Persia), which the Muslims describe as "paradise of the world" (*djannat al-arḍ*). The Persians at any rate have taken Madīnat or Dār al-Salām in this meaning, as their rendering of it by Bihisht-ābādh = "place (lit. foundation) of paradise" shows. This appellation is chiefly used by them in poetic language, as it also is by the Turks who have copied it from them. Baghdād was also occasionally called al-Manṣūrīya after its founder. A further, not quite clear designation of the town was al-Zawrāʾ, "the winding, or deviation", probably an Arabicised form of an old Iranian word to which a popular etymology has given a new meaning; on the various explanations of this name see Le Strange, *Baghdad*, p. 11; Streck, *Babylonien*, i. 50; Salmon, *Hist. d'al-Khaṭīb al-Baghdādī*, p. 94[2]; P. Schwarz, *Die ʿAbbâsiden-Residenz Sâmarrâ* (Leipsig, 1909), p. 38 *et seq.*

Baghdād is very often confounded with Babylon by European travellers in the middle ages and sometimes also with Seleucia and Ctesiphon and appears in their accounts as Babel, Babellonia etc. The erroneous application of the latter name to Baghdād is likewise common in the Talmudic-exegetic literature of the Babylonian Geonim (in the ʿAbbāsid period) as well as in the later Jewish authors. Pietro della Valle, who was in Baghdād from 1616 to 1617, was the first to refute this error, widely spread in his time. Down to the seventeenth century the name Baghdād was generally known in the West in the corrupted form Baldach (Baldacco).

It is certain that there was a settlement, on what was later to become the seat of the caliphate, quite early in antiquity. H. Rawlinson in 1848, J. Oppert in 1853 and Pognon and Harper in 1889 found bricks inscribed with the name of Nebucchadnezzar II, which came from a quay on the west bank of the Tigris, still partly visible at the present day; cf. H. Rawlinson in the *Encycl. Britannica* (s. v. Baghdad), vol. ii. 234 a and in G. Rawlinson, *Herodotus* (London, 1852), i. 513; J. Oppert, *Expéd. scientif.*, i. 92; Harper in *The Academy*, 1880, N°. 877, p. 139. There are the remains of a building, similar to this quay, somewhat below the present town near the Ḥirr Canal. That the name Baghdād appears on cuneiform inscriptions (under the form Bagdadu) must still be regarded as improbable, as the doubtful place-name which first appears on a

boundary-stone (*kudurru*) of the Babylonian King Merodachbaladan I (1194—1182 B. C.) (see Scheil, *Dilég. en Perse*, vi. 1905, p. 31 *et seq.*) may also be read Ḫudadu (on this point see Streck, *Mitt. der Vorderas. Ges.*, xi. 227); besides, it is unlikely that a name which is certainly Iranian goes back to so great an antiquity. Its mention in the Thamudan inscription, Euting n°. 565, suggested by Littmann (*Mitt. der Vorderas. Ges.*, iv. 28) appears doubtful also. On the other hand there can be no doubt that we have two references in the Talmud to pre-Muḥammadan Baghdād (as nom. relat. בגדדאה). Cf. A. Berliner, *Beitr. z. Geogr. u. Ethnogr. Babyloniens im Talmud u. Midrasch* (Berlin, 1883), p. 25. On its probable mention in a Pahlavi text (as Bakdāt) see Blochet in *Recueil de Travaux*, xvii. p. 170.

According to the Ptolemaic chart, Θέλδη (Ptol. vi. 1) is on the site of Baghdād. The Σιττάκη of Xenophon (*Anabasis*, 4. 13) must have been just adjoining the latter town; cf. R. Kiepert in H. and R. Kiepert, *Formae orbis antiqui*, Heft v. (1910) p. 6.

It would be a mistake to recognise in the modern Eski (= Turk. "Old")-Baghdād [q. v.] above Sāmarrā a predecessor of the modern Baghdād, of the same name; this name which has only arisen in quite modern times, owes its origin to the custom, of which other examples e. g. Eski-Mosul may be quoted, of naming ruins after important places in the neighbourhood. The name Baghdād is borne by only one other place in the East, Tell-Baghdād south-east of Urfa-Edessa (somewhat below the 37° n. lat.); see Sachau, *Reise in Syr. u. Mesop.*, p. 216.

The Arab authors are also quite explicit that al-Manṣūr's foundation must not be considered as the entirely new settlement of a hitherto uninhabited district. They mention a whole list of pre-Muḥammadan places which had gradually arisen in the area afterwards filled by the ʿAbbāsid capital. The most important of these was Baghdād, a village of Christians on the west bank of the Tigris, belonging to the district of Bādūrayā [q. v.], which, probably including the site of the socalled 'Round Town' of al-Manṣūr, the nucleus of the new capital, gave the latter its popular name. The majority of the more ancient settlements, chiefly occupied by Aramaic Christians, are to be sought for on the southern half of the later west side (of the town on the western bank of the Tigris) within the great market quarter, the Karkh and its eastern and western vicinity. The following are mentioned as villages of Sāsānian origin here: Bayāwarī (or Banawarī), Sāl, Sharwāniya, Sūnāyā (the later "Old Town", *al-ʿatīḳa*), Wardāniya, Warthāl or Warthālā. The Karkh itself (= Aram. *karkhā* = "town") takes its name from an earlier village here which the Sāsānian King Shāpūr II (309—379 A. D.) is said to have built. In pre-ʿAbbāsid times, the small town of Barāthā some distance north-west of Karkh was independent but in course of time it was practically swallowed up by the expansion of the western side of Baghdād. In the northern half of the latter, later the al-Ḥarbiya quarter, were before the time of al-Manṣūr, the villages of Khaṭṭābiya and Sharafāniya.

According to Xenophon the Achaemenids possessed vast parks in the district of Baghdād (at Sittake). This is also true of the later Persian Kings. Two such Sāsānian gardens were afterwards built over (the quarters Dār ʿUmāra b. Hamza and Bustān al-Ḳuss). Near the mouth of the Nahr ʿĪsā, the Sāsānians had built a palace, later called Ḳaṣr ʿĪsā. In their time also a bridge rendered communication with the east bank of the Tigris possible at this spot, where in later times a bridge of boats led from Ḳaṣr ʿĪsā to the palace of the Caliph. Another bridge, distinctly stated to be pre-Muḥammadan (*al-ḳanṭara al-ʿatīḳa*) spanned the Ṣarāt canal southwest of the Kūfa gate; on the eastern Tigris, pre-Muḥammadan origin is only ascribed to that of Sūḳ al-thalāthā' on the Nahr al-Muʿallā, as well as to the *Mukharrim*, the first to be settled (under ʿOmar). This name, however, has no connection with the Θάλαθα of Ptolemy (v. 19) as not Θάλαδα but Θέλδη agrees with the location of Baghdād on Ptolemy's chart [see above]. Our Arab authorities also emphasise the fact that what, was subsequently the Muslim cemetery of Khaizurāniya, before the time of al-Manṣūr, served the fire-worshippers as a burial-ground. The greater number of the Christian monasteries of Baghdād which flourished in Sāsānian times must date back to pre-Muḥammadan times. We have direct testimony that the palace al-Khuld of the Caliphs on the western bank of Tigris included the site of an ancient monastery, and that a district at the junction of the Ṣarāt and the Tigris showed in later times, by its name *al-Dair al-ʿatīḳ* (= "the old monastery") to what use it had originally been put.

None of these ancient settlements on the site of the later Baghdād attained any political or commercial importance, so that the town built by the second ʿAbbāsid Caliph may justly be regarded as a new foundation.

In the East a change of dynasty is very frequently followed by a displacement of the previous centre of affairs. It was absolutely necessary for the ʿAbbāsids in particular to give up Damascus, the capital of their predecessors with its Umaiyad associations. For it lay, for one thing, too near the Byzantine frontier and it was too far to the West for a kingdom which stretched from the Mediterranean to the Indus. We can easily understand that the new ruling dynasty would move the centre of gravity of their kingdom from Syria, poor and unimportant, to ʿIrāḳ, so richly endowed with natural resources, which seemed pre-eminently destined to serve as a connecting link between the Semitic and Iranian worlds, and to undertake the rôle of intermediary between the two great divisions of the Muslim world. For, apart from the fact that the chief strength of the ʿAbbāsids lay in Persia for the troops of Khurāsān formed their chief support, it was surely to their own personal interest to shift their capital more to the East, which by its foundation was again becoming of preponderating importance in politics and culture.

Even the first Caliph of the new dynasty, al-Saffāḥ, had taken up his residence on the Euphrates. He deliberately chose neither of the two great Arab towns, Baṣra and Kūfa which had been in existence since the first Muḥammadan conquest of Babylonia, both of which, especially the latter, were inhabited by a turbulent populace, devoted to the cause of ʿAlids; Baṣra, besides on account of its southern situation was clearly little suited to be the centre of the kingdom; he preferred

to hold court in al-Hāshimiya [q. v.] near al-Anbār. His successor al-Manṣūr built himself a similarly named residence at some distance from Kūfa, but soon forsook it, for the proximity of the fanatical Shī'a Kūfa was distasteful to him. On his search for a new place, suitable for his camp and for the centre of government, he finally settled on the district on the Tigris above the mouth of the great Euphrates canal Nahr 'Īsā, where, as has already been mentioned, there was already a village called Baghdād as well as various other small settlements.

It must be confessed that the horoscope which recommended this site to the Caliph as a peculiarly auspicious one for his new capital has entirely fulfilled its promise. The choice could not have been better. The exceedingly fertile stretch of land between the Euphrates and the Tigris, where they approach one another, and, united by partly navigable canals, form a hydrographic system and, where the Diyālā, falling into the Tigris, forms a natural gateway for the easiest ascent to the Iranian highlands, had always been a home of civilisation, indeed, the cradle of ancient Oriental culture as well as an emporium of trade and commerce, of international importance. Great capitals had succeeded one another here, Babylon, Seleucia, Ctesiphon, and their heir was the new city of the Caliphs, a day's journey (7 parasangs = 30 miles) from its immediate predecessor, Ctesiphon.

The gradual advance of the marshes on the lower course of the Euphrates below Babylon, and the thereby increased difficulty of communicating by sea with the Persian Gulf explains the fact, that since the Seleucid period the site for the capital for the time being has always been chosen on the Tigris.

Al-Manṣūr laid the foundation-stone of his new capital in the year 145 (762). In the course of four years, a town designed on a central plan was completed by a wholesale levy on Babylonian and extraneous resources (100,000 men are said to have been employed); in its midst the palace of the Caliph (called Bāb al-Dhahab or al-Ḳubbat al-Khaḍrā) and the principal mosque came to be erected. The adjacent ruins of Ctesiphon furnished in the main the quarry for the necessary building material. Around the circular nucleus the town proper was grouped, falling into separate quarters, which soon attained great compass. Apparently because al-Manṣūr soon felt himself somewhat confined in his abode by the rapidly increasing population, and perhaps also did not feel quite secure, he built for himself a second palace, al-Khuld, some years after the completion of the Round Town, to the east of it outside the city walls on the Tigris. Al-Manṣūr is not only the founder of the so-called west side of Baghdād, the town on the right bank of the Tigris; he must also be regarded as the founder of the later, eastern half of the town. In 151 (768) he began various buildings to the north of it for his son, the Crown-Prince al-Mahdī, of which the chief was the palace al-Ruṣāfa.

Al-Manṣūr in no way intended to found an imperial city in Baghdād, his primary intention was rather merely to lay out a camp for his Khurāsān troops at some distance from Kūfa. For this reason he divided the ground around his town among his relatives, clients and generals in fief, and did the same on laying out al-Ruṣāfa. A list of these fiefs is to be found in al-Ya'ḳūbī and in al-Khaṭīb al-Baghdādī.

The history of Baghdād which begins with al-Manṣūr falls into two great periods: 1. The 'Abbāsid period which lasted 500 years, in which Baghdād, with the exception of an interval of 55 years, was always the centre of a great Muhammadan kingdom of occasionally universal extent, and rose to be the centre of the intellectual life and the great commercial centre of the nearer East; not only throwing all provincial towns into the shade in this respect, but taking the most prominent place in the civilised world of the time on account of its size, splendour and riches; 2. the period to the present day, from the fall of the 'Abbāsid kingdom. Throughout this latter period, apart from the temporary choice of it as a winter residence of a few Ilkhāns, it has always been merely the chief town of a province. As such it was at any rate under Turkish rule long in the fortunate position of being the chief town of the largest and most important Pashalik, equal or next to Egypt. Since the extent of the Pashalik however and therewith its authority was much reduced, the importance of Baghdād has been more and more limited to the sphere of commerce, in which it has retained much of its earlier pre-eminence to the present day. A complete history of Baghdād in its first period as the capital of the Caliphs would practically be a history of the 'Abbāsids; here we must limit ourselves to a concise sketch of its development from the narrower point of view of local history.

Baghdād's period of greatest prosperity falls in the century immediately after the death of al-Manṣūr, to be more exact in the reigns of his five successors from al-Mahdī to the death of al-Ma'mūn (159—218 = 775—833). When al-Mahdī ascended the throne the capital already covered an area of 5 or 6 miles square. As this Caliph moved his court to al-Ruṣāfa, the quarter of the town on the east bank of the Tigris, it soon attained great importance. The aristocratic rich families of the time now settled there at the same time with their retinues of slaves, clients and dependants, numbering thousands, and built themselves huge palaces. The most splendid of these buildings was the pleasure-seat of the very influential and famous family of the Barmecides, which, on their sudden fall in the reign of Hārūn al-Rashīd, became the property of the ruling house, and subsequently formed the basis of the great complex of buildings of the palace of the Caliphs on the east side. At the beginning of the reign of Hārūn, which perhaps marks the zenith in the history of Baghdād, the east side was already challenging comparison in size with the west. In the war of succession which broke out, two years after Hārūn's death, between his sons Amīn and Ma'mūn, Baghdād had to suffer a siege for the first 14 months. Amīn was completely hemmed in, in the capital towards the end of the year 196 (812) by the troops of Harthama and Ṭāhir, the two generals of Ma'mūn; while the former cut off the east town which was only protected by a barricade hastily put up, Ṭāhir, encamped before the Anbār gate, kept the west side in check. Skirmishes between the armies of the hostile brothers, brawls between the soldiers of the garrison and the desperate inhabitants, intri-

gues and treachery of all sorts filled the long period of the siege. The west town especially, suffered from the effects of the artillery. The greater part of its northern half (the so called Ḥarbīya) was destroyed. The Caliph at length found himself confined to the palace of al-Khuld on the Tigris. Soon afterwards he was captured while attempting to escape and put to death (in the beginning of 198 = 813) when the siege came to an end. The flourishing capital was reduced for the first time to ashes and ruins; a great fire raged over whole sections of the town and all the government archives were lost; in particular the west side, which had suffered most damage from this catastrophe never completely recovered, nor did it ever again attain its former extent. On this first siege cf. above all the exhaustive account of Ṭabarī (iii. 864—925) which is of great value on account of his accurate topographic details, as our oldest authority on such questions; see also Weil, *Gesch. der Chalifen* ii. 190 *et seq.*; Müller, *Der Islam* i. 501 *et seq.*; Le Strange, *Baghdād* p. 303, 306 *et seq.*

The death of Amīn aroused great discontent in Baghdād. The dissensions of the populace which found expression in riots enabled the ʿAbbāsid prince Ibrāhīm b. Mahdī to gain possession of Baghdād and to hold out there for nearly two years. It was not till he found himself betrayed by his generals, that he was forced to hand over both town and government to the Caliph al-Maʾmūn.

As the two palaces of the Caliph on the west side, the so called "Golden Gates" in the heart of the central town of al-Manṣūr and al-Khuld on the Tigris, had suffered great damage by the siege under al-Amīn, al-Maʾmūn moved the official seat of the Government to the east side. He took possession of the above mentioned palace of the Barmecides and extended it very considerably. Under Maʾmūn's successor, al-Muʿtaṣim (218—227 = 833—842), Baghdād had to cede its predominant position as centre of the kingdom, for a period of 55 years, to the small, hitherto unimportant provincial town of Sāmarrā, 3 days' journey up the river, which had, in a fabulously short time, been transformed into a splendid royal residence. The immediate cause of the transference of the court to Sāmarrā (in 221 = 836) was the resentment of the people of Baghdād to the brutal soldiery of the Turkish-Berber militia, whose numbers under Muʿtaṣim had risen to a standing army of about 70,000 men, so that the permanent retention of so large a garrison in what had hitherto been the capital appeared to be attended with difficulties. The loss of the court and the government officials does not appear to have done much injury to the development of Baghdād, as it fortunately promised to be only a temporary measure, of not too long duration. Baghdād was ruled in this period by governors mostly of the influential family of the Ṭāhirids.

In this interval, the Sāmarrā epoch in the history of the Caliphs, falls the second siege of Baghdād which occupied almost the whole year 251 (865). When the tyrany of the praetorians in Sāmarrā became more and more unbearable and the Turks there were fighting among themselves, al-Mustaʿīn fled to Baghdād with the smaller portion of his troops whereupon the larger portion, which had been left in Sāmarrā, of the Turkish guards appointed Muʿtazz, cousin of Mustaʿīn, Caliph. Mustaʿīn had scarcely time to complete a girdle of walls running round the whole east- and west-side of Baghdād when Muʿtazz appeared at the head of his troops and began to encompass the ancient capital. In spite of the efforts of the besieged who defended themselves, from fear of a new Turkish regime of force, with the courage of despair, Mustaʿīn on account of his weak and vacillating attitude was finally forced to capitulate on easy terms and to give up all claim to the throne. While the first siege under Amīn shattered for ever the prosperity of the west side of Baghdād, the second under Mustaʿīn was accompanied by disastrous consequences to the east side, the most important quarters of which (Ruṣāfa, Shammāsīya and Mukharrim) were then destroyed and only in part afterwards rebuilt. Cf. on this second siege Ṭabarī, iii. 1553—1578; Weil *op. cit.* ii. 385 *et seq.*; Müller *op. cit.* i. 528; Le Strange *op. cit.* p. 311 *et seq.* Affairs continued to be unsettled, after, as well as before this siege; riots and disorders are recorded for the years 249 (863), 253 (867) and 255 (869); cf. Weil *op. cit.* ii. 381 ff., 402 *et seq.*, 412 f.

In Sāmarrā meanwhile the situation became more and more unpleasant for the Caliph as he was practically at the mercy of the leaders of the mercenaries. Muʿtamid, the seventh successor of Muʿtaṣim, therefore in 279 (892) finally turned his back on the royal residence chosen by the latter and again made Baghdād the capital of the kingdom, unmolested by the Turks and Berbers who were kept well in hand by his brother Muwaffaḳ; Baghdād remained the capital without interruption till the decline of the ʿAbbāsid dynasty. The fifty years between the return of the Caliphs to the ancient capital and the entry of the Būyid princes are marked by the enlargement on a huge scale of the Caliph's palace on the east side; Muʿtaḍid, Muktafī and Muḳtadir, the three immediate successors of Muʿtamid, displayed the greatest activity in this undertaking. A whole collection of palaces and gardens thus arose which, covering a third of the whole area of the east side, was separated from the rest of the town by walls. A circle of new, thickly populated quarters soon grew up around the extensive quarter occupied by the court.

Under the active rule of Muʿtaḍid and Muktafī Baghdād again had peace to develope in. Under these two the Turkish troops did not dare raise their heads. But on the death of Muktafī the rapid, irresistible decline of the temporal power of the caliphate set in. Disturbances, especially mutinies of the soldiers, often accompanied by conflagrations, rapine, and rioting increased more and more in the capital and caused its prosperity quickly to decline. (M. Streck.)

Affairs improved to some extent when in 334 (945) the Dailamite Aḥmad Muʿizz al-Dawla of the family of Būyids took possession of the capital and succeeded to the temporal power of the Caliphs which was to devolve on his dynasty for over a century. The Būyid prince at first occupied the palace of the former Emir, Mūnis, in the northern part of the eastside. In course of time he and his artistic successors built several splendid palaces, which were comprehended under the collective name Dār al-Mamlaka, in that part of the town which had been lying desolate since the

siege of 251. It may be specially noted that ʿAḍud al-Dawla rebuilt al-Khuld, the former palace of al-Manṣūr, as an hospital. The Shīʿa tendencies of the Būyids often gave rise to riotous outbreaks, for, while the active populace of the suburb of al-Karkh on the west side as a rule were in sympathy with them, other quarters of the town were inhabited largely by Sunnis. The Būyids therefore were never able to raise the town to the level it had reached in its palmiest days though the main reason why their efforts failed, was that after the death of ʿAḍud al-Dawla in 372 (983), the power of the family was divided and the various members fought with another, and Baghdād was more than once involved in the struggle. Anarchy often reigned in the capital, sanguinary brawls between Sunnis and Shīʿas, between Turks and Dailamites were the order of the day and the mob took advantage of the unrest to rob and plunder to their heart's content. This state of affairs did not cease till Ibn al-Muslima, the vizier of the Caliph al-Ḳāʾim bi-Amr Allāh called in the aid of the Seldjūḳ Toghrulbeg who entered Baghdād in 447 (1055). Some years later in 450 (1059) the revolt of al-Basāsīrī broke out. He ordered prayers to be read for the Fāṭimid Caliph so that the ʿAbbāsid had to leave the town; this was only an interlude however for, when Toghrulbeg returned a year later, the usurper had to quit the town and the authority of the Caliph al-Ḳāʾim was again restored; henceforth the Caliphate was under the powerful protection of the Seldjūḳs. The latter did not reside in Baghdād; Alp Arslān never once visited the capital, but they appointed a military governor who had to see that order was maintained in the town. Malikshāh was the first to visit it, which he did on several occasions and in the last years of his life, he intended to make Baghdād his winter residence. For this purpose he had the palace of the Būyids in which he was staying restored and transformed, and laid the foundations for a great mosque (Djāmiʿ al-Sulṭān) which on account of his premature death was not finished till some years later in 524. In this period there arose in Baghdād as in other towns many madrasas among which the Niẓāmiya founded by the famous vizier Niẓām al-Mulk in 457 (1065) soon attained a great reputation. The building stood in East Baghdād in its southern part not far from the bank of the Tigris.

The Caliphs al-Muḳtadī 467—487 (1075—1094) and al-Mustaẓhir 487—512 (1094—1118) were also distinguished for their love of building. In the beginning of his reign the latter caused the quarter of East Baghdād in which the Caliphs lived, the so called Ḥarīm and the adjoining parts of the town to be surrounded by a wall which on the whole is identical with the city wall of Baghdād as it survived to the time of Midḥat Pasha in the last century. According to Ibn Ḥawḳal, ed. de Goeje, 164 Note *c* (cf. Ibn al-Athīr ed. Tornberg, xi. 260) it was rather the Caliph al-Mustaḍī who built this wall in 568 (1173) though it had certainly been begun by al-Mustaẓhir. Ibn Djubair who describes this wall some years later in 581 (1185) (ed. de Goeje, 229), says that it had 4 gates, viz. beginning on the side next the Tigris on the north: 1. Bāb al-Sulṭān (now Bāb al-Muʿaẓẓam; 2. Bāb al-Ẓafariya (now Bāb al-Wusṭānī); 3. Bāb al-Ḥalba (now walled up, see below) and 4. Bāb al-Baṣaliya (now Bāb al-Sharḳī, (Ḳaraliḳ Ḳapu (Karanlik Ḳapu) in Niebuhr).

The last two centuries of the ʿAbbāsid caliphate were on the whole peaceful ones for Baghdād. Of course there were often fires, and now and then as in 466 (1074), 554 (1159) and 614 (1217), disastrous inundations; there were also riots and popular risings and from time to time desperadoes and highwaymen brought about a reign of terror, but only once had Baghdād to suffer a serious siege, in 551 (1157) from the Seldjūḳ Sulṭān Muḥammad II. The various incidents of this siege have been related to us by an eyewitness, the famous stylist and historian ʿImād al-Dīn [q. v.] (cf. *Recueil de textes relatifs à l'hist. des Seldjouc.*, ii. 246—255). The Sulṭān had finally to retire without having effected anything.

Two of the last Caliphs erected buildings which still survive. The first of these was the Caliph al-Nāṣir lidīn Allāh, who restored the Bāb al-Ḥalba in 618 (1221) and embellished it with an inscription which was first made known by Niebuhr and has recently been discussed by Mittwoch in the *Jahrbuch der Kön. preuss. Kunstsammlungen*, Vol. xxvi. p. 19 and by M. van Berchem in *Archäologische Reise im Euphrat- und Tigris-Gebiet. Arabische Inschriften*, p. 35. The last-named scholar has discussed in great detail a remarkable relief which ornaments both spandrils of the archway above the now walled up entrance into the tower, which is now called Bāb al-Ṭalism (the Gate of the Talisman). The second last Caliph, al-Mustanṣir billāh, was the builder of a Madrasa which according to an inscription published by Niebuhr was erected in 630 (1232-1233). (Cf. thereon van Berchem, *op. cit.* 43.) The building still stands close to the bank of the Tigris at the bridge of boats and is now used as a custom-house. The inscription has almost entirely disappeared and been replaced by a modern one. Another inscription dated 633 (1235-1236) of the same Caliph was on the Djāmiʿ al-Khulafāʾ, which has now disappeared, to which the famous Minaret Sūḳ al-Ghazl, still in existence, probably belonged (reproduced in von Oppenheim, *Vom Mittelmeer zum Pers. Golf*, ii. 240). This building was not erected by this Caliph but only restored. It stands in the centre of the town, to the east of the Mustanṣiriya and is identical with the Djāmiʿ al-Ḳaṣr, one of the principal mosques of the city, founded by the Caliph al-Muktafī 289—295 (902—907). Cf. Le Strange, *op. cit.* 252 *et seq.*

In Muḥarram 656 (January 1258) Hulagu with his Mongols and Turks arrived before the walls of the town and by the 4th Ṣafar (10 Febr.) the last Caliph al-Mustaʿṣim found himself forced to make an unconditional surrender. Ten days later he was put to death with several members of his family while the town itself was plundered and set on fire. As Hulagu however wished to retain the town for himself, it was not utterly devastated like other towns; on the contrary Hulagu afterwards ordered some of the buildings which had suffered most, such as the above mentioned mosque Djāmiʿ al-Ḳaṣr, to be rebuilt.

The history of Baghdād since the Mongol conquest can only be sketched here in its main outlines. Till 740 (1339-1340) it belonged to the kingdom of the Ilkhāns or Hulagids as the capital of the province of ʿIrāḳ ʿArabī. It was during this

period that the famous traveller Ibn Baṭṭūṭa visited the town in 727 (1327); his description (*Voyages*, ed. Paris, ii. 100 *et seq.*) unfortunately is for the most part copied from that of Ibn Djubair. Ḥamd Allāh Mustawfī's description also belongs to this period (740 (1339)). In 740 Ḥasan Buzurg [q. v.] appeared as an independent ruler in Baghdād and founded the Djalā'irid dynasty. He built a Madrasa there which was not completed till the reign of his son Uwais, probably about 758 (1357) and was called the Mirdjānīya after a certain Emīr Mirdjān. The building still exists and the inscriptions on it have been published, in part by Niebuhr, in full by van Berchem, *op. cit.* 45 *et seq.*

The rule of the Djalā'irids lasted till 1410 and during this period Baghdād was twice taken by Timur; the first time in 795 (1392-1393) the town escaped with little damage but the second time in 803 (1401) the population was well nigh exterminated, and many public buildings and private houses destroyed. After the death of Timur in 807 (1405) the Djalā'irid Sulṭān Aḥmad returned to Baghdād, restored as far as possible the walls destroyed by Timur, but not long after in 813 (1410) he was slain by Ḳara Yūsuf, Emīr of the Ḳara Ḳuyunli (Turkomans of the Black Sheep). The Ḳara Ḳuyunli thereupon entered into possession of the city and held it till 872 (1467-1468) when the Aḳ Ḳuyunli under Uzun Ḥasan replaced them. In the year 914 (1507-1508) Baghdād was conquered by the Ṣafawī Shāh Ismā'īl and remained under the sway of his successors till 941 (1534). After the Kurdish chief Dhu 'l-Faḳār had had the Khuṭba read there for a brief space in the name of the Osmanli Sulṭān Sulaimān I, Shāh Ṭahmāsp seized the town from him for the Ṣafawīs again in 936 (1530). In 941 (1534) Sulaimān I entered the town, and Baghdād was governed by a Turkish Pasha till the rebel Bekir Ṣubashi called in the help of the Ṣafawī 'Abbās I who took possession of the town in 1033 (1623). The Turks were by no means willing to give up their claim to Baghdād, and in 1048 (1638) it was regained under the personal direction of Sulṭān Murād IV. On this occasion Murād walled up the Bāb al-Ṭalism (see above) and restored some famous tombs such as that of Abū Ḥanīfa, at the modern village of al-Mu'aẓẓam, on the east bank of the Tigris north of the town, and that of 'Abd al-Ḳādir al-Gīlānī within the town. At this time the fortunes of the town had sunk to their lowest ebb and according to the estimate of Tavernier in 1652 it had only 14,000 inhabitants.

Baghdād thus again became the capital of a Pashalik which has sometimes been governed jointly with that of Baṣra by the same governor. A list of the names of these Pashas is given by Niebuhr and by Huart, *Histoire de Bagdād dans les temps modernes*. The latter brings it down to the year 1247 (1831). During this period the prosperity of the town increased and the number of inhabitants had risen to 150,000 in the beginning of the nineteenth century; after the terrible plague in 1831 only 30,000 however were left.

In recent years the period of the governorship of Midhat Pasha 1869—1872, was a remarkable one in the development of Baghdād on account of the laying of the telegraph line, of a horse-tramway to Kāẓimēn, by the erection of schools and other useful institutions. He also had the old city wall taken down so that at the present day all that is left of the old fortifications is a wall-like ridge with a few ruins. He introduced a Turkish steamboat line between Baghdād and Baṣra after the concession for this route (and the Persian Gulf) had already been given to an English Company, the Lynch Steam Navigation Company. Great expectations are centred in the making of a railway to Asia Minor and Constantinople, whereby Baghdād will be linked up with the world's commerce. Baghdād is already the emporium for trade with all the adjoining countries and also with Persia.

The number of inhabitants in the town and its suburbs is put by von Oppenheim at 200,000, (Cuinet: 145,000) of whom about 150,000 Muḥammadans, mostly Shī'as. There are also about 40,000 Jews and 10,000 Christians, the latter mostly Catholic and Gregorian Armenians.

b. The Topography of the ancient City.

From the preceding historical sketch it is clear that the modern Baghdād on the east side of the Tigris still occupies the same area as in the later centuries of the 'Abbāsid caliphate. In those days, however, additional quarters of the town separated from one another by ruined areas stretched out as far as the modern al-Mu'aẓẓam with the tomb of Abū Ḥanīfa and of many others of the Saints of Islām. Here was situated one of the most ancient cemeteries of Baghdād, which took its name from Khaizurān, the mother of the Caliph Hārūn al Rashīd, and where at a later period the tombs of the Caliphs also were. To the south of it lay the old East Town of al-Ruṣāfa or 'Askar al-Mahdī with al-Mahdī's palace, and the mosque of al-Ruṣāfa, one of the principal mosques (*djāmi'*) of the city during the caliphate. The quarters of al-Shammāsīya, Dār al-Rūm (the Christian quarter) and al-Mukharrim adjoined it on the east and south. In the last-named the Būyids took up their residence (Dār al-Mamlaka) and the Seldjūḳ Sulṭāns also resided there, whenever they held court in Baghdād. It was here that Malikshāh built the chief mosque Djāmi' al-Sulṭān, which has been mentioned above, though not a trace is left at the present day either of this building or of the mosque of al-Ruṣāfa, although they both survived the Mongol invasion. These districts covered the area between the village of al-Mu'aẓẓam and the modern Bāb al-Mu'aẓẓam, which are about half an-hour's journey apart. In the modern East Town there were formerly the palaces of the Caliphs (Dār al-Khilāfa) originally a pleasure house of the Barmecide Dja'far [q. v.] and afterwards of the Caliph al-Ma'mūn before he ascended the throne. It was only after their return from Sāmarrā that the 'Abbāsid caliphs shifted their court here and built various palaces of which the (Ḳaṣr) al-Tādj was the most prominent. The foundations were laid by al-Mu'taḍid but the buildings were not finished till the reign of his son and successor al-Muktafī who was also the builder of the third (in chronological order: the second) great mosque of East Baghdād, the Djāmi' al-Ḳaṣr (cf. above). The Tādj stood on the banks of the Tigris and was protected from inundation by an embankment; beside it al-Muktafī built the Ḳubbat al-Ḥimār, (the Ass's Tower) so-called because one could reach the top by going on the back of an ass up a circular, slowly ascending path. This style of building reminds one of the

ancient Ziggurats, other examples of which are found in the ruins of Sāmarrā and in Baghdād itself, the still extant tomb of Shaikh 'Omar al-Suhrawardī (died 632 (1234); cf. the illustration in von Oppenheim *op. cit.* p. 246. All these buildings — there are said to have been 23 of them in the time of al-Muḳtadir — with zoological gardens, racecourses etc., connected with them, formed a town by itself, the so-called Ḥarīm. Al-Khaṭīb al-Baghdādī (ed. Salmon, p. 49 *et seq.*, 132 of the translations) has incidentally preserved a very full account of it for us when describing the reception of a Byzantine embassy by al-Muḳtadir in 305 (917-918). Cf. Guy le Strange in the *Journal of the Royal Asiatic Soc.* 1897, p. 35 *et seq.* The whole Ḥarīm was surrounded by a wall in which were seven gates and comprised about a third of East-Baghdād. For a more complete account we must refer the reader to the pertinent chapters in Le Strange's *Baghdad*. Naturally great changes have taken place here in course of centuries; the Tādj, for example, and the Ḳubbat al-Ḥimār were destroyed by fire in 549 (1154).

Almost nothing is left of the more ancient west-Baghdad except a few mausoleums, and though even they have not come down to us in their original state, they are still important for the ancient topography as they have been rebuilt on their original sites. These are the tomb of Ma'rūf Karkhī and the great Shī'a sanctuary of Kāẓimēn (Kāẓimain i. e. of the seventh Imām, Mūsā al-Kāẓim, died 183 = 799 and of the ninth, Muḥammad al-Djawād, died 220 = 835). The so-called grave of Zubaida, the wife of Hārūn al-Rashīd, died 206 (831) need not be noticed, as Ibn al-Athīr (ed. Tornberg 9, 305) distinctly states that this princess was not buried where her grave is now pointed out. The inscription on it described by Niebuhr, which supports this erroneous tradition, only dates from the year 1131 (1718). Some other tombs as well as the dervish monastery built by Ḳilidj Arslān, bearing an inscription of the year 584 (1188), may be omitted.

The mausoleum of Kāẓimēn, now a fairly important place with 7,000—8,000 inhabitants, connected by tramway with Baghdād, lies on the right bank of the Tigris opposite al-Mu'aẓẓam (see above). Here in ancient times was the cemetery of the Ḳuraish at the Strawgate (Bāb al-Tibn). The Shī'a Mausoleum has often in course of time been destroyed and restored again; there is now a mosque there with four minarets and a clock-tower built at the beginning of the nineteenth century. The dome and the minarets are covered with gold leaf and the high gateway is decorated with the finest faïence. The sanctuary is annually visited by large numbers of Shī'as. The Sunnis also had in the northern part of West-Baghdād a very popular place of pilgrimage, during the 'Abbāsid caliphate, namely the tomb of the Imām Aḥmad Ibn Ḥanbal at the Bāb Ḥarb. According to Le Strange this mausoleum disappeared when the quarter of the town, in which it was, fell into ruins and from that time the grave of his son 'Abd Allāh on the bank of the Tigris was erroneously regarded as that of his father till it also was carried away by an inundation of the Tigris. The area between the northern extremity of West-Baghdad and the original town of al-Manṣūr was chiefly occupied by the district of al-Ḥarbiya which lay opposite the district of al-Ruṣāfa in East-Baghdād. There were also various other districts of the town here, the names of which varied at different periods; they cannot be detailed here. It is sufficient to say that this part of Baghdād soon fell into such a state that the inhabited parts were merely isolated suburbs separated from one another by great areas of ruins.

Of the town of al-Manṣūr (Madīnat al-Salām, al-Zawrā') with its walls and gates not a trace remains. Its peculiar and highly remarkable situation, which is known to us to the smallest detail from the accounts of Arab writers such as al-Ya'ḳūbī, al-Khaṭīb al-Baghdādī, would justify a detailed description but we must pass it by here and refer the reader to the opening chapters of Le Strange's book. We need not be surprised that it has completely disappeared, because on the return of the 'Abbāsids from Sāmarrā, the court was transferred to the East side and no trouble was taken to maintain the walls or public buildings with the exception of the chief mosque. What was destroyed by floods, fire, siege and riots was never rebuilt, and the town became partly depopulated. That part of the town lying near the Bāb al-Baṣra survived the longest so that in the last centuries before 656 people no longer talked of the town of al-Manṣūr but of the district of Bāb al-Baṣra.

The various parts of the town which stretched west and south around the town of al-Manṣūr, formed the commercial and industrial centre under the early 'Abbāsids. The situation here was specially favourable on account of the many canals which, like the Ṣarāt and the Nahr 'Īsā, formed a direct means of communication with the Euphrates, and soon attracted an energetic and industrious population. Here was the suburb of al-Karkh, so often mentioned in the history of Baghdād and whose Shī'a inhabitants so often had sanguinary dealings with those of the neighbouring quarters, especially with those of Bāb al-Baṣra. This part of the town has survived to the present day. The usual Turkish designation for the modern West-Baghdād is *Karshi-yaka* (the opposite bank, Arabic: *ḳadāk al-djānib*).

In earlier times as now, boat-bridges facilitated the passage of the Tigris, though their positions were often changed.

Huart, *Histoire de Bagdad dans les temps modernes* and the sources mentioned by him in his introduction.

AL-BAGHDĀDĪ, ʿAbd al-Ḳādir b. ʿOmar. [See ʿAbd al-Ḳādir, p. 45.]

AL-BAGHDĀDĪ, Abū Manṣūr ʿAbd al-Ḳāhir b. Ṭāhir, Muḥammadan theologian, came with his father to Nīsāpūr and studied various sciences there. Later in life he made himself famous by his skill in arithmetic, on which he wrote a work, but it was theological studies that attracted him most; Abū Isḥāk al-Isfarāʾinī was his teacher in these subjects. After the latter's death in 418 (1027) he succeeded him until the revolt of the Turkomans forced him to leave the town in 429 (1037). He then betook himself to Isfarāʾin where he died soon after. A work composed by him on the Muḥammadan sects entitled *Kitāb al-farḳ baina 'l-Firaḳ wa bayān al-Firḳat al-nādjiya minhum* has lately been published by Muḥammad Badr, Cairo, 1328 (1910).

BAGHLĪ, a Persian dirhem [q. v.]. Cf. on the origin of this denomination Vullers, *Lex. Pers. Lat.*, i. 251ᵃ, 840ᵇ.

BAGHRĀS, the ancient Pagrae, was an important station on the road from Iskandarūna to Anṭākiya at the south-east end of the Bailān pass the exit from which it commands. Even in the wars of the ʿAbbāsids against the Byzantine Emperors Baghrās played a part, sometimes a possession of the Emperors and sometimes of the Caliphs. It was included in the Djund al-ʿAwāṣim [q. v.] which was separated from the province of Ḳinnasrīn by Hārūn and protected the road to the Thughūr. It became still more important, however, when after the battle of Ḥiṭṭīn in 584 (1188) it passed from the power of the Templars into the hands of Ṣalāḥ al-Dīn. Baghrās served as a bulwark on the Muḥammadan frontier against the kingdom of Little Armenia until under Sulṭān al-Nāṣir Muḥammad b. Ḳalāʾūn the lands around the Nahr Djāhān (Djaiḥān), the Futūḥāt al-Djāhāniya, were incorporated in the Mamlūk kingdom. In the wars between the Osmanli and the Mamlūks the possession of the Pass of Baghrās was again contested. For administrative purposes in the Mamlūk period Baghrās was the seat of an official of the Mamlaka of Ḥalab. The castle is now in ruins; the place is an unimportant village (Bekrās).

(R. Hartmann.)

BAGIRMI (Baḳirmi or Bakirmi), a country in the Central Sudan, to the south of Lake Chad. Bagirmi was for a long time unknown to Europeans. Denham visited the northern part in 1824, being the first European to do so. Barth, setting out from Bornū, reached Massenya and gathered important historical information on his journey (5 March—22 August 1852). Nachtigal, in 1872, ascended the Shāri as far as Bainghanne, but could not penetrate into the interior on account of the troubled state of the country. To the accounts furnished by these travellers have been added those of explorers coming from the region of the Congo, such as Maistre and especially Gentil who visited Massenya in 1897. All these accounts have been supplemented and rectified since 1900 by the French officers and officials charged with the administration of the territories of the Chad.

The native state designated by the name of Bagirmi comprises, besides Bagirmi properly so-called a certain number of tributary states, such as the country of the Bona and of the Kirdi, on the right bank of the Chari as far as the tenth degree of north latitude: Dagana, near the Baḥr al-Ghazāl; Dekākire, a mountainous region in the east; Khozzām and Debaba near Wadai. The total area of Bagirmi and its dependencies is about 30,000 square miles according to the calculation made in 1903, about 40,000 according to the latest statistics, those of Colonel Largeau (*L'occupation du Wadai, Rev. de Paris*, 1ᵗʰ Jan. 1910, p. 29).

Bagirmi proper consists of a plain measuring 250 miles from North to South, 150 from East to West and occupying an area of about 8,000 square miles. This plain, the altitude of which averages 1,000 feet, slopes very gradually towards the North-West in the direction of Lake Chad except in the North-East part which descends towards the Baḥr al-Ghazāl. In many places, however, the ground is so flat that water cannot flow but stagnates in swamps. Some isolated heights rise above the surrounded country; on the north the hills of Ngourra, which separate Bagirmi from the basin of the Fitri, and more to the East the mountainous mass of Ghērē which is little known. The greater part of the water is drained towards Lake Chad by the Chari which bounds Bagirmi for a distance of about 170 miles and by the Baḥr-Ergig (the Batschikam or 'river of leaves' of Barth) which is merely a branch of the Chari leaving the main stream at Miltu to rejoin it near Bugoman. Of these two water-courses the first alone is a permanent navigable water-way from 300 to 500 yards broad, the second on the contrary, being narrow and choked with plants, is of little use. Both undergo great variations in volume

according to the seasons. There are two of these; the rainy season which usually lasts four months and the dry season which lasts eight months and sometimes more, to the great detriment of vegetation.

Bagirmi is, except in cases of abnormal drought, a relatively fertile country. In it are cultivated sorgho and millet which form the staple food of the natives, rice, grown in the marshes which are formed during the rainy season, beans, and lastly a plant called 'djojo' by Barth which is much appreciated by the natives. Corn is rare and reserved, according to Barth, for the use of the Sultan. Pasturage is sufficiently abundant to allow the rearing of cattle. The trees and shrubs are the tamarind, the almond, the cotton, and indigo plants and butter-tree. The forests become more and more dense as one approaches the equatorial zone. The fauna is very rich. Large animals, elephants, giraffes, panthers, antilopes, hippopotamuses, rhinoceroses and crocodiles, swarm on the banks or in the vicinity of the rivers; insects abound, in particular ants and termites of which certain species are a terrible scourge to the crops and even to human beings.

The population of Bagirmi, estimated by Barth at one and a half millions and by Nachtigal at a million is still decreasing on account of the continual wars which devastate these countries. A census in 1904 gave 420,000 as the number of inhabitants of Bagirmi. According to Lt.-Colonel Largeau this figure ought to be reduced to 80,000 of which 16,000 are in Bagirmi proper, the density varying from 0,3 to 0,9 of an inhabitant per square mile according to the district. This population consists of very diverse elements: 1. The Bagirmians, a people sprung from the mixture of the aborigines with foreign invaders. 2. Kanūris settled in colonies in various parts. 3. Arabs (Assela, Salamat, Khozzām, Ulād Mūsā, Shōa) scattered throughout the country but in villages which are almost exclusively inhabited by them. 4. The Fulbe, almost all shepherds, very numerous in the south; 5. negro tribes (the Gāberi on the right bank of the Logon, Sāra on the middle basin of Dar Kūti, Tummok, Nyellem etc.), more or less related to the Bagirmians, but speaking a different language and still fetish-worshippers.

From the point of view of physique the Bagirmians hold a high place among the peoples of Africa. Travellers note their tall stature, the regularity of their features and the suppleness of their limbs. The beauty of their women is famous. They speak a language, the Bagrimma, which, according to Barth, is related to the dialect spoken at Kūka. At first fetish-worshippers, about three hundred years ago, they adopted Islām which was brought into these regions by the Fulbe but have retained numerous pagan practices. Through their intermediary, however, Islām has gradually gained ground towards the south and brought the beginnings of civilisation to the primitive inhabitants of those regions. The culture of the Bagirmians is, nevertheless, still very rudimentary. Barth remarks that none of them knew how to write and that only those individuals who have made the pilgrimage to Mecca have any knowledge of Arabic. They are, on the other hand, more industrious than the majority of their neighbours. Amongst them are clever artisans, especially dyers and weavers. It was the Bagirmian captives brought to Wadai by Sulṭan Sabūn that introduced the art of weaving into that country. Slave-trading was till the end of the nineteenth century the principal occupation of the Bagirmians. Slavery, with the continual wars of which Bagirmi has been the theatre and the difficulty of communicating with Northern Africa, have certainly retarded the progress of civilisation.

In the time of Barth, the chief town of Bagirmi was Massenya, the capital. Built some miles to the north of Baḥr Ergig it was surrounded by a girdle of walls seven miles in circumference. The houses which it comprised were, it is true, only mud-huts with the exception of the sultan's palace and a mosque of stone. Partly destroyed by the Wadaians in 1870, then abandoned after the invasion of Rabah, Massenya, at the present-day, stands second to Bugoman, situated 60 miles to the west on the left bank of the Shāri. 150 miles to the east of Massenya, at the foot of the Gērē mountains is Kanga, which local tradition regards as the cradle of the reigning dynasty.

The government of Bagirmi is a despotic monarchy. The sultan or *m'bang* exercises absolute authority; he is the object of servile manifestations of respect; his subjects have to stand with head bare in his presence and spread dust on their foreheads. Only a few great dignitaries are allowed to sit on carpets in his presence. Among the relatives of the sultan the queen-mother and the eldest son enjoy some influence; the brothers of the reigning *m'bang* are blinded in one eye to disqualify them from ruling. The principal officers of the state are some freeborn, others chosen from among the slaves. The most powerful is the *fatschā* or head of the army. Special functionaries are charged with the supervision of the forests and pasturages and the government of the more important districts. The revenues of the sultan are obtained from taxes paid by the Muḥammadan subjects and tribute levied on the pagan tribes. The former supply grain, cattle and cotton-staffs, the latter give slaves which still constitute, as they did to a greater extent in the time of Barth and Nachtigal, the real wealth of the sultan.

The state of Bagirmi was founded in the sixteenth century of our era (the tenth of the Hidjra). It owes its origin to adventurers who came from the east, probably from Fitri. After defeating the Bulāla, the newcomers united with them and with their help imposed their authority on the Fulbe and on the Arab communities settled in this region. The conquered peoples were forced to pay tribute but caused the invaders to adopt their religion. The latter, like most of the founders of Sudanese empires, claim to be of Arab origin and say they come from Yaman. Their chief, Dokkenge, was, according to the legend, the founder of Massenya and conquered the four small kingdoms into which the land watered by the Batschikam was divided. His successors increased their dominions on the east and south. One of them, a contemporary of ʿAbd al-Karīm, the founder of the Kingdom of Wadai, embraced Islām and took the name of ʿAbd-Allāh. From that time to the reign of ʿAbd al-Ḳādir who received Barth on his journey to Massenya, forty princes have occupied the throne of Bagirmi. During the seventeenth and eighteenth centuries they gained much power at the expense of the native fetish-worshippers and enriched themselves by the slave trade.

A period of decline succeeded this period of of prosperity. The struggle against Sabūn, Sulṭān of Wadāī (died 1815) ruined Bagirmi. Sulṭān ʿAbd al-Raḥmān, betrayed by his "fatscha" was killed and many Bagirmians led into slavery. The dissensions which arose in consequence among the sons of ʿAbd al-Raḥmān as well as the intrigues of the "fatscha" Rueli provoked renewed interventions by the Wadaians. Finally ʿOthmān Burgomanda, the eldest son of ʿAbd al-Raḥmān was left as lord of Bagirmi but had to recognise the suzerainty of the Sulṭāns of Wadāī and to pay tribute to him. After being interrupted for several years, hostilities recommenced on the death of Sabūn. Bagirmi was ravaged with great cruelty by the Sulṭān of Wadāī and his ally the Shaikh of Bornū. ʿOthmān succeeded however in maintaining himself against all his adversaries. He was an energetic ruler but without faith or law, plundering indiscriminately his friends and enemies and not hesitating to marry his own sister. His son ʿAbd al-Ḳādir managed to live at peace with these neighbours and devoted himself to raiding the pagan tribes. But in the reign of Abū Sakkin the Wadaians invaded Bagirmi again (1860—1877). Massenya was taken, Abū Sakkin expelled and replaced by one of his cousins. He regained power, however, in 1882 and retained it till his death in 1894. His successor Gawrang had to resist the attacks of a new adversary Rabah, the establishing of whose power in Bornū was a perpetual menace to the security of Bagirmi. [See BORNŪ.]

The Franco-German convention of the 4th February 1894, having placed Bagirmi in the zone of French influence, Gawrang agreed without demur to recognise the French protectorate and signed a treaty to this effect with the explorer Gentil in 1897. His agreement brought on him the wrath of Rabah. Being incapable of resisting his enemy, Gawrang himself set fire to Massenya; the governor Bretonnet who was sent to his assistance was defeated and killed at Togbao on the 17th July 1899. But in the following year the death of Rabah, who was defeated and slain at Kossuri by the forces of commandant Lamy (22 April 1900), brought peace at length to those regions so long harassed. Bagirmi at the present day is included in the military district of Chad; it retains its native administration under the control of the French authorities.

BAHĀʾ ALLĀH ("splendour of God"), surname of MĪRZĀ ḤUSAIN ʿALĪ NŪRĪ, born at Nūr in Māzandarān on the 12th November 1817, half-brother of Mīrzā Yaḥyā surnamed Ṣubḥ-i Azal, was almost thirty years of age when he became a convert to the new doctrine preached by the Bāb (see BĀBĪ). Without having ever seen him he became one of the Bāb's chief disciples and was recognised as his successor by the greater part of the Bābīs. After the attempt on the life of the Shāh he was imprisoned in Teherān; he was then exiled and settled in Baghdād in 1852. It was there that he declared himself to be the person announced by the Bāb in the mysterious words: *Man yuẓhiruhu 'llāh*: "He whom God will manifest". He lived the life of a hermit outside Sulaimāniya, where he drew up the main scheme of his work, which was to make the religion of the Bāb somewhat modified a universal religion; he was interned in Adrianople (1864), then at Acre (August 1868) where he died on the 29th May 1892, leaving his spiritual authority to his eldest son, ʿAbbās Effendi, surnamed ʿAbd al-Bahāʾ.

His Doctrine. Right living consists in doing harm to no one, in loving one another, in bearing injustice without rebellion, only regarding the good, being humble and devoting one self to healing the sick; such are the principles adopted by Bahāʾ, an obvious echo of Christianity. The ultimate aim is universal peace which is to be brought about by the adoption of this religion, which possesses neither clergy nor ceremonial. Every town is to institute a place of assembly for a managing committee, consisting of nine members which is called *Bait al-ʿAdl*, their chief resources are to consist of bequests to the treasury, receipts from fines and a tax of one nineteenth on capital to be paid once and for all. Austerities are forbidden; man was created for happiness.

The principal works of Bahāʾ are the *Kitāb al-Aḳdas* (ed. Bombay and St. Petersburg), the *Kitāb al-Īḳān* (transl. by H. Dreyfus and Habib Ullāh Shīrāzī, Paris, 1904), *Tarāzāt*, *Kalimāt-i Firdawsiya*, *Ishrāḳāt*, *Tajalliyāt* (transl. in the *Préceptes du Bèhaïsme*, Paris, 1906), *Kalimāt-i Maknūna* (Hidden words, Paris, 1905). The lessons of Acre have been collected by Mrs. Clifford Barney (*An-Nūru 'l-Abhā*, London, 1908) and transl. from the Persian text by H. Dreyfus (Paris, 1908); his last words have been edited by Toumanski (St. Petersburg, 1892).

Bibliography: H. Dreyfus, *Essai sur le Béhaïsme, son histoire, sa portée sociale*, Paris, 1909; Edw. G. Browne, *A Year Amongst the Persians*, p. 60, 300 *et seq.* (CL. HUART.)

BAHĀʾ AL-DAWLA, ABŪ NAṢR FĪRŪZ, a Būyid. After the death of ʿAḍud al-Dawla in Shawwāl 372 (March 983) his son Ṣamṣām al-Dawla was appointed Amīr al-Umarāʾ. The latter's brother Sharaf al-Dawla, however, refused to recognise him and a war broke out in which the third brother, the fifteen-year old Bahāʾ al-Dawla, was also embroiled. In the end Ṣamṣām al-Dawla had to submit and was thrown into prison in Ramaḍān 376 (January 987). The Caliph then appointed Sharaf al-Dawla Amīr al-Umarāʾ; the latter died soon after in 379 (989) and Bahāʾ al-Dawla succeeded him as senior Amīr. The new Amīr restored his freedom to Ṣamṣām al-Dawla and now began a fierce struggle between the latter and his nephew Abū ʿAlī, the son of Sharaf al-Dawla. In the following year Bahāʾ al-Dawla had Abū ʿAlī murdered and then a quarrel

arose between him and his brother. After some time a treaty of peace was arranged according to which Ṣamṣām al-Dawla retained possession of Fārs and Arradjān while Bahāʾ al-Dawla received Khūzistān and Arabian ʿIrāk. At the same time the turbulent population of Baghdād was giving Bahāʾ al-Dawla much trouble and he had also to fight with his uncle Fakhr al-Dawla. The latter allied himself with a Kurdish prince, Badr b. Ḥasanwaih and conquered al-Ahwāz, whereupon Bahāʾ al-Dawla sent an army against him. As the Tigris flooded the camp of Fakhr al-Dawla, he had to take to flight and vacate al-Ahwāz. In the year 381 (991) the Caliph al-Ṭāʾiʿ was deposed at the instigation of Bahāʾ al-Dawla, as the latter had designs on his wealth. Under his successor al-Ḳādir also Bahāʾ al-Dawla remained the real ruler though he again was only a tool in the hands of his soldiers. In the year 383 (993-994) the old feud between him and his brother Ṣamṣām al-Dawla blazed up again. The latter defeated the troops of Bahāʾ al-Dawla and occupied Khūzistān. The Turkish prince Ṭoghān regained this province for Bahāʾ al-Dawla but in 386 (996) Baṣra fell into the hands of Ṣamṣām and the Turks were soon driven out of Khūzistān. The situation was soon suddenly reversed. In 388 (998) Ṣamṣām al-Dawla was murdered; his general Abū ʿAlī b. Ustādh Hormuz went over to Bahāʾ al-Dawla, Khūzistān was occupied and Fārs and Kermān also conquered. After two years the governor of Kermān was driven out but his successor succeeded in again securing the province for Bahāʾ al-Dawla. The latter had also to go through much hard fighting with the ʿUḳailids. To limit the independence of Abu ʾl-Dhawwād, Emīr of Mosul, who belonged to the Banū ʿUḳail, Bahāʾ al-Dawla sent an army under Abū Djaʿfar al-Ḥadjdjādj against the town. Abu ʾl-Dhawwād was defeated in several battles but his power was not thereby broken. After his death in 386 (996) a quarrel arose between his brothers ʿAlī and al-Muḳallad each of whom wished to seize the chief power for himself. In 391 (1000-1001) the latter was murdered; his son Ḳirwāsh succeeded him and was for some years successful in his war with Bahāʾ al-Dawla. Another revolt broke out in al-Baṭīḥa on the lower Euphrates. The Amīr there, ʿAlī b. Naṣr Muhadhdhib al-Dawla, was expelled in 394 (1004) by a prefect named Abu ʾl-ʿAbbās b. Wāṣil and had to seek help from Bahāʾ al-Dawla. The rebels occupied al-Ahwāz but could not hold it for long and in the following year Muhadhdhib al-Dawla returned to al-Baṭīḥa. Meanwhile they continued their plots in Khūzistān and the capital itself was besieged by the princes Badr b. Ḥasanwaih and Abū Djaʿfar al-Ḥadjdjādj allied with Ibn Wāṣil, the latter of whom had seceded from Bahāʾ al-Dawla. Finally, however, Ibn Wāṣil was taken prisoner whereupon his allies raised the siege of Baghdād and made peace with Bahāʾ al-Dawla. The latter died in 403 (102). Under his father the Būyids had reached the zenith of their power. Through the unfortunate wars between his sons on his death, their influence declined and in the end affairs became worse and worse.

BAHĀʾ AL-DĪN, "Ornament of Religion", a title of honour. [See the articles IBN SHADDĀD, MUKTANĀ and NAḲSHBANDĪ.]

BAHĀʾ AL-DĪN ZAKARIYĀ, commonly known as BAHĀʾ AL-ḤAḲḲ, a saint of the Suhrawardī order, was born near Multān in 565 (1169—1170); he was one of the greatest pupils of Shaikh Shihāb al-Dīn Suhrawardī [q. v.] in Baghdād and became his *khalīfa* (or spiritual successor). He settled in Multān, where he is said to have built his own tomb and died at the age of 100. He has a great reputation in the South-West Pandjāb and in Sind, and is invoked as their patron saint by the boatmen on the rivers Indus and Čināb. His imposing tomb, surmounted by a hemispherical dome and decorated with fine enamelled tiles, stands in the ancient citadel.

BAHĀʾ AL-ḤAḲḲ (BAHĀWAL ḤAḲḲ), see BAHĀʾ AL-DĪN ZAKARIYĀ.

BAHĀDUR, a Turkish word of Mongol origin (*baghatur*, Eastern Turkish *bātūr*, *bātir*) signified originally "brave", "courageous" and became a title of honour at the court of the Great Mughals (cf. *bātūr-bāshī*, a title in Turkestan: Sulaimān-Efendi, *Lughāti ghaghatāī*, p. 66). The word is met with as early as 927 of our era in the name of the Bulgarian chief Alobogotur, which is explained as *Alp bagatūr*, "the brave hero" (J. Marquart, *Osteur. u. ostasiat. Streifzüge*, p. 156). — In the middle of the nineteenth century there was in Persia a regiment, composed of Christians called *bahāduran* "the braves"; it was this regiment which was entrusted with the execution of the Bāb [q. v.]. The name of this regiment, whose composition is no longer the same, was again borne by the first regiment of the first division of infantry in 1301 (1884). There are other regiments bearing this name at Khoi, Farāhān, Nahāwand, Ḳafʾa-Zandjīrī and other places.

Bibliography: Muḥammad Ḥasan-Khān, *Maṭlaʿ al-Shams*, Part ii. p. 25. (CL. HUART.)

BAHĀDUR KHĀN, last king of the Fārūḳī (q. v.) dynasty of Khāndesh; he came to the throne in 1597, after having spent 30 years in prison; he reversed the policy of his father Rādjā ʿAlī, who had been a loyal supporter of the Mughal Emperor Akbar (q. v.) and had assisted him in his conquest of the Dakhan and died fighting on his side. Bahādur rejected the friendly advances of Akbar and shut himself up in the fort of Āsīrgarh, but after standing a siege of eleven months, he was obliged to surrender and his territory became part of Akbar's dominions.

Bibliography: Elliot-Dowson, *History of India*, vi. 133—146.

BAHĀDUR SHĀH, (1595—1600), tenth king of the Niẓām Shāhī (q. v.) dynasty of Aḥmadnagar. In 1595 Sulṭān Murād, son of the Emperor Akbar besieged Aḥmadnagar, but raised the siege on receiving the formal cession of Berār; but on a second attempt being made in 1600, the king was taken prisoner and sent as a captive to the fortress of Gwalior.

Bibliography: ʿAlī ibn ʿAzīz Allāh Ṭabāṭabā, *Burhān-i Maʾāthir* ad fin.; Abu'l Faḍl, *Akbar-Nāmah*, iii. 700, 774 *sqq.* (*Bibl. Ind.*); Firishta, *Gulshan-i Ibrāhīmī*, Maḳālah III.

BAHĀDUR SHĀH I (1643—1712) MUḤAMMAD MUʿAẒẒAM was the second son of the Emperor Awrangzīb ʿĀlamgīr by Raḥmat al-Nisāʾ Nawāb-Bāʾī, the daughter of Rādjā Rādjū of Radjauri in Kashmir. He was born at Burhānpur in the Dakhin on the 30 Radjab 1053 (14 Oct. 1643). From Shaʿbān 1086 (Oct. 1675) he was generally known by the title of Shāh ʿĀlam, then conferred upon him.

In 1657 when his father left the Dakhin to contest the throne with Dārā Shakōh, Muḥammad Muʿaẓẓam was left in charge at Awrangābād. He served twice as governor of the Dakhin (1663, 1667), and was sent there a third time in 1678. He was recalled to take a part in the Rādjpūt campaign, and helped in the suppression of his brother Akbar's rebellion near Adjmer. In 1683—4 he held command of an army operating against Shambā Djī, Mahratta, in the Konkan. Shortly after his return to the emperor's head-quarters, he was detached against the kingdom of Gulkanda (1685) and took part in the Bidjāpūr (1686) and the second Gulkanda campaign (1687). Falling under suspicion of treason he was thrown into prison in March 1687 and was not released until April 1694, when he was sent to govern Kābul, the province of Lāhōr being subsequently added.

Shāh ʿĀlam heard of his father Awrangzīb's death on the 18th Dhu 'l-ḥidjdja 1118 (March 22nd 1707), when he was at Djamrūd, west of Peshāwar. He marched at once for Hindustān and it was a race between him and his brother Aʿẓam Shāh, who had already started from Aḥmadnagar, as to which of them should first occupy Dihlī and Āgra. This first move was won by Shāh ʿĀlam. Finally, the contending claimants met at Djādjau between Āgra and Dholpūr. The battle was fought on the 18th Rabīʿ I, 1119 (June 18th 1707). Shāh ʿĀlam won the day, Aʿẓam Shāh and one son were killed, while the other sons were taken prisoners. While still in the Pandjāb, Shāh ʿĀlam had celebrated his accession, and had taken the title of Bahādur Shāh (24th Muḥarram 1119 = April 26th 1707), but he dated his reign from the 18th Dhu 'l-ḥidjdja 1118 (March 22nd 1707), subsequent years being counted, as usual, from the first day of that month.

Bahādur Shāh now proposed a campaign against the Rādjpūt states, but before much progress had been made he was called away to the Dakhin, to dispose of his brother Kām Bakhsh's claims to independent sovereignty. Kām Bakhsh was defeated outside Ḥaidarābād on the 3d Dhu 'l-kaʿda 1120 (January 13th 1709), and he died of his wounds the next day. The interrupted Rādjpūt campaign was now resumed, but before any real progress was made, the Sikhs rose in the north of the Cis-Satladj country. A hasty peace was patched up with the Rādjpūts, and Bahādur Shāh hastened northwards to meet the new danger. The fort of Lohgarh into which Banda the Sikh leader had thrown himself, was stormed and taken on the 19th Shawwāl 1122 (Dec. 10th 1710), but Banda escaped. The court then moved to outside Lāhōr where Bahādur Shāh died on the 20th Muḥarram 1124 (February 27th 1712). He claimed Saiyid descent through his mother, and insisted on inserting the word *waṣī* into the Friday prayer. He was also suspected of a leaning to Ṣūfism. These questions led to two serious riots at Lāhōr and Aḥmadābād, headed by the learned bigots of those two places.

(WILLIAM IRVINE.)

BAHĀDUR SHĀH II., the last king of the Mughal (Moghul) dynasty. He was the lineal descendant of Tīmūr, as may be seen from the genealogical table in Blochmann's translation of the *Āʾīn-i Akbar*. But there had been no king of Delhi who was possessed of real power since the death of Muḥammad Shāh in 1748. Bahādur Shāh's full name was Abu 'l-Muẓaffar Sirādj al-Dīn Muḥammad Bahādur Shāh, and he was the second son of Akbar Shāh II. He was born in October 1775 and succeeded to the title of King in September 1837.

Bahādur Shāh, who was then over seventy years of age, joined the Mutineers in 1857 and struck coins as a sovereign. When Delhi fell, he took refuge in the tomb of his ancestor Humāyūn, but surrendered to Hodson. Two of his sons and a grandson surrendered on the following day but were shot by Hodson to prevent a rescue. Bahādur Shāh was tried and found guilty of abetment of murder. He was deposed, and in December 1858 was sent to Rangoon, where he died on 7 November 1862. He was a scholar, a poet, and a calligrapher. His *Dīwān* or book of odes has been printed, and also his commentary on Saʿdī's *Gulistān*. Garcin de Tassy has a notice of Bahādur Shāh, under his poetical name of Ẓafar in his *History of Hindustani literature* III. 317, and has given a translation of one of the *rekhta* odes.

(H. BEVERIDGE.)

BAHĀDUR SHĀH GUDJARĀTĪ, second son of Muẓaffar Shāh II. Having had a disagreement with his father he went to the court of Ibrāhīm Sulṭān the last king of the Lōdī dynasty. He was present at the battle of Pānīpat, but did not take

part in it. On hearing of the death of his father and of the succession of his elder brother Sikandar Shāh, he proceeded towards Gudjarāt, and on the way heard of his brother's assassination. He became king of Gudjarāt in August 1526 and avenged his brother in a cruel manner so that he is described by Bābur (ed. Erskine, p. 343) as a bloodthirsty and ungovernable young man. He was an energetic ruler and famed for the celerity of his movements. He conquered Mālwa and Chitor, but was defeated by Humāyūn, son of Bābur. In his distress he applied to the Portuguese for aid, but when Humāyūn left Gudjarāt and Bahādur recovered his kingdom, he repented of his invitation and sought to get rid of the Portuguese. The Portuguese Viceroy arrived with his fleet at Diu, but declined, on the plea of sickness, to come ashore and visit Bahadur. The latter took the rash and singular resolution of visiting the Viceroy and came on board his ship. It was the third day of Ramaḍān and Bahādur was probably sober at the time, but as he was a great drunkard, he may have been suffering from a debauch of the previous night. When he found that the Viceroy was not really ill, he wanted to return, but the Portuguese had made up their minds to seize him and would not let him depart. An altercation and a struggle took place, and the result was that Bahādur was killed, and that his body fell into the sea. Immediately afterwards, the Portuguese took possession of Diu, which had been deserted by the inhabitants. Bahādur's death took place on 14 February 1537. One of the chronograms made on the occasion was: Sulṭān al-barr Shahīd al-baḥr "Monarch ashore, Martyr asea" (943 A. H.). Bahadur was a cruel and worthless prince but the Gudjarātīs cherished an affection for him on account of his vigour and of his tragic death. He reigned for eleven years, and was the last of his line.

AL-BAHĀʾĪ. [See AL-ʿĀMILĪ, p. 327.]

BAHĀR, Arabic, more accurately BUHĀR, a word supposed to be of Indian origin meaning "load" which had spread through all the lands of Islām from the Indian Archipelago to Africa as a dry-measure and weight. As a measure it is equal to 2 *ardabb*. The Arab authorities give very different values to the weight. It is most often reckoned equal to 3 *ḳinṭār* to 100 *riṭl*. Cf. Sauvaire in *Journ. Asiat.*, 8 Series, iii. (1884), p. 401—404. In modern Indian commerce the value of the Bahār varies in the different towns from 220 to 850 Lbs.

BAHĀR-I DĀNISH, a Persian collection of tales and fables by Shaikh ʿInāyat Allāh Ḳanbū, written in 1061 (1651) based on the Indian stories of a young Brahman and supplied with an introduction by the young brother of the author Muḥammad Ṣāliḥ Ḳanbū. The love-story of Djahāndār-Sulṭān and Bharawar-Bānū forms the greater part of the work. It was put into verse by Ḥasan ʿAlī ʿIzzat during the reign of Tīpū-Ṣāḥib, Sulṭān of Mysore (1197—1213 = 1783—1799) and dedicated to him (Ms. India Office 153). It was translated into English by A. Dow (London, 1768) and by J. Scott (Shrewsbury, 1799); on these are based the German translation by A. T. Hartmann (Leipzig, 1802) and the French by Lescallier (Paris, 1804).

Bibliography: Ethé, *Grundr. der iran. Philologie*, ii. 325. (CL. HUART.)

BAHĀRISTĀN, a Persian work by Nūr al-Dīn ʿAbd al-Raḥmān Djāmī in poetry and prose modelled on Saʿdī's *Gulistān*, which also bears the title of *Rawḍat al-akhyār u tuḥfat al-abrār*; it was composed in 892 (1487). It is divided into eight chapters called *rawḍa* and contains anecdotes of the life of Shaikh Djunaid and other mystics, philosophers and poets as well as fables and parables. It has been supplied with Turkish commentaries by Shamʿī (between 982 and 987 = 1574 and 1579), by Khōdja Shākir (ed. Constantinople, 1252 = 1836) and translated into German by Baron von Schlechta-Wssehrd (Vienna, 1846).

BAHĀWALPUR, a native state of India, within the Province of the Pandjāb (area: 15,918 sq. m.; population (1901): 720,877; revenue: Rs. 27,00,000). It stretches for about 300 m. along the l. bank of the Sutledj Pandjnad and Indus, extending into the desert a mean distance of about 40 m. The chief crops are wheat, rice, and millets, which are entirely dependent on irrigation from the boundary rivers. Of the population, 83%, are Muḥammadans, chiefly Djats, Rādjpūts, and Balōčs. The ruling family of Dāʾūdpūtras has an interesting history, as claiming descent from the ʿAbbāsid Khalīfas of Egypt. Their ancestor is said to have come from Egypt to Sind about 1370. But the town of Bahāwalpur was not founded till 1748, and the independence of the state dates from the grant of a mint by Shāh Maḥmūd of Kābul in 1802. British relations are governed by a treaty made in 1838.

Bibliography: General C. Minchin, a former resident, wrote a history of the country from the earliest times, which is still in MS. Several histories of the ruling family, written in the 19th cent., also remain in MS. — *Bahawalpur Gazetteer* (Lahore, 1908); C. U. Aitchison, *Collection of Treaties, Engagements and Sanads relating to India* (Calcutta, 1892), ix. 187 *et seq.* (J. S. COTTON.)

BAḤDAL B. UNAIF B. WALḤJA B. ḲUNĀFA, belonged to the clan of the Banū Ḥāritha b. Djanāb, which was also called *al-Bait* or the aristocracy of Kalb. A Christian like the great majority of his tribe, his chief claim to fame is that he was the father of Maisūn, mother of Yazīd I. His nomad clan dwelled in the south of the ancient Palmyra, whither Maisūn afterwards brought the young Yazīd, and where the Umaiyads reunited after the congress of Djābiya and the battle of Mardj Rāhiṭ. Baḥdal was thus the founder of the great prosperity of the Kalbites while the Umaiyad dynasty lasted though he did not himself take an active part in politics. As one of his sons was accused of being a Christian under the caliphate of Yazīd I, Baḥdal must have died a

a Christian probably before the battle of Ṣiffīn, in which one of his sons commanded the Ḳoḍā'a of Damascus, and at an advanced age. His sons succeeded him and became the first persons in the state; in consequence the partisans of the Umaiyads were called Baḥdaliya. His grandson Ḥassān, guardian of the sons of Yazīd I, after the death of Mo'āwiya II even dared to cherish the project of succeeding him. The undue preponderance of the Baḥdalites and the Kalbites contributed largely to the division of the Arab race into two parties, that of Ḳais and that of Yemen, after the battle of Mardj Rāhiṭ.

BĀHILA. The members of the Beduin tribe of Ma'n in North Arabia were usually called Banū Bāhila after Bāhila, the daughter of Ṣa'b who had married her stepson Ma'n. Their grazing-grounds in ancient times lay in southern Yemāma and are known to have been there as late as the fourth and fifth centuries. In later times we find them in the neighbourhood of Baṣra in possession of the well al-Ḥufair four miles from Baṣra, which is of importance to the caravans of pilgrims. The reputation of the tribe was a very bad one and the name Bāhilī (Bahilite) was a term of reproach.

al-**BĀHILĪ**, Abū Naṣr Aḥmad b. Ḥātim al-Bāhilī, Arab philologist and author, a pupil of Aṣma'ī, Abū 'Ubaida and Abū Zaid, belonging to the school of Baṣra, lived first in Baghdād, then in Iṣfahān and finally settled in Baghdād again where he died in 231 (855). As a rule he followed in his works the footsteps of his predecessors and like them wrote a book on trees and plants, camels, cereals and palm-trees, horses, birds and locusts, of which latter he was the first to treat. In his works on proverbs, on proper names, and on the errors in the language of the common people, many valuable notes must also have been contained for us, but unfortunately like all his other writings they have perished.

Bibliography: G. Flügel, *Die grammatischen Schulen der Araber* (Leipzig, 1862), p. 81; *Kitāb al-Fihrist* (ed. G. Flügel), Vol i. p. 56; *Zeitschr. der Deutschen Morgenl. Gesellsch.* Vol. xii. p. 595. (J. Hell.)

al-**BĀHILĪ**, al-Ḥusain b. al-Ḍaḥḥāk al-Ashḳar, a client (*Mawlā*) of Bāhila, an Arab poet often called al-Ḥusain al-Khalī' (the libertine) on account of his dissolute habits. According to al-Khaṭīb al-Baghdādī, al-Bāhilī, who came from Khorāsān, was born in the year 162 (778-779). He afterwards went to Baghdād and became one of the most confidential friends of the frivolous Caliph al-Amīn. When the latter perished soon afterwards, al-Bāhilī composed an elegy on the tragic event; he remained at the court of his successor however and was held in great esteem till his death at a great age in 250 (864). The biographers give further information about his relationship to Abū Nuwās. Cf. p. 102 above.

BAḤĪRA, a she-camel or a sheep with slit ears. The Ḳor'ān and the ancient poetry (cf. Ibn Hishām, 58) show that the ancient Arabs used to carry out certain religious ceremonies with respect to their cattle, which consisted firstly in letting the animal go about loose without making any use of it whatever, and secondly in limiting to males permission to eat its flesh (after it had died). In the various cases the animals bore special names (*Baḥīra*, *Sā'iba*, *Waṣīla*, *Ḥāmī*; on these names cf. Wellhausen as cited below). The lexicographers are not quite agreed on the point in which cases a camel or sheep had its ear slit. According to some, it was after it had borne ten young ones, according to others when its fifth young one was female etc. — Muḥammad abolished these customs and stigmatised them as arbitrary inventions, Sūra 5, 102: "Allāh has made neither *baḥīra* nor *sā'iba*, nor *waṣīla*, nor *ḥāmī*; but the unbelievers have invented lies against God, and the greater part of them do not understand"; Sūra 6, 139: "and they say: these cattle and fruits of the earth are sacred; none shall eat thereof but whom we wish (so they say); and [there are] cattle on whose backs it is forbidden [to ride] etc."; verse 140: "and they say: That which is in the bellies of these animals, is only for our men and forbidden to our wives; but if it be born dead then both partake of it. He will reward them for their attributing [these things to him] for he is wise and knowing".

Heidentums*[2], 112 *et seq.*, Rasmussen, *Additamenta*, p. 66 of the Arab. text, p. 60 transl. (A. J. Wensinck.)

BAḤĪRĀ, the name of a Christian monk. It is related that in his twelfth year Muḥammad was taken by his uncle Abū Ṭālib on a caravan journey to Syria. When the travellers were near or in Boṣrā, a monk who lived there in his cell noticed that one of them was accompanied by a cloud and that the branches of the tree, under which he sat, sprouted to give him shade. The monk whose name was Baḥīrā thereupon invited the whole company to eat with him. They went, but left Muḥammad behind to guard the caravan. Baḥīrā missed among his guests him, whose features were described in his books as those of the last prophet, and asked if they were really all. On learning that one had been left he insisted on the boy's coming too. When the latter was sent for and entered, he gazed fixedly at him and asked him by Allāt and al-'Uzzā to answer his questions. After Muḥammad had taken the opportunity to show his aversion to heathen deities, he convinced him by his answers that he was the promised one. The monk thereupon warned Abū Ṭālib to protect the youth from the Jews.

This is the version of the legend given by Ibn

Hishām (115 *et seq.*); according to others Abū Bakr was present at this meeting and was even then prepared for future events. Mas'ūdī (ed. Barbier de Meynard, i. 146) tells us that the name of the monk was Sergius and that he belonged to the 'Abd al-Ḳais; according to Ḥalabī (i., 157) his name was Georgius or Sergius.

Besides this story there is an account of a similar meeting, which happened 12 years later. Muḥammad was then travelling to Syria in the service of Khadīdja in the company of her servant Maisara. In Boṣrā he met a monk named Nestor who recognised the future prophet by certain signs. We are also told of some men of Rūm who arrived at one of these meetings to seek the future prophet.

In the oldest versions the name of the monk is lacking (Ibn Hishām, 119 *et seq.*). In the later Muslim and Christian sources he is called Sergius; Baḥīrā (the Aramaic *beḥīrā* "chosen") is interpreted as an epithet.

On the authenticity of such legends little can be said when, as here, all clues are lacking. In the cycle of legends which have gathered round Muḥammad, they form a class of which numerous examples appear which all show the same type, namely the tendency to prove by an apparent accident that possessors of books had learned beforehand from their books that Muḥammad was to be a prophet (cf. my *Mohammed en de Joden te Medina*, p. 54—60).

The figure of Baḥīrā is, under the name Sergius, mentioned quite early in Byzantine literature in a connection which agrees with isolated Muslim traditions (cf. Sprenger, *Das Leben u. d. Lehre des Mohammad*, ii. 384 *et seq.*).

Thus Theophanes (ed. Classen, i. 573) and Georgius Phrantzes (ed. Bekker, 295 *et seq.*), relate that after the first appearance of Gabriel and Muḥammad's epileptic fit, Khadīdja betook herself in great anxiety to Sergius, a heretical banished monk; he comforted her with the assurance that the angel was sent to all prophets.

The Muslim Baḥīrā-traditions have been preserved in a much expanded form in the Baḥīrā-Apocalypse, a Christian production, which in its present form perhaps dates from the xith or xiith century and has been preserved to us in several recensions in Syriac and Arabic (cf. Gottheil, *A Christian Bahira Legend* in the *Zeitschr. f. Assyriologie*, vol. xiii *et seq.*).

This book which is said to have been composed by one Ishō'yab falls into three parts: 1) the stories referring to the Muḥammadan dynasties which Sergius Beḥīrā saw on Mount Sinai; 2) his conversations with the young Muḥammad in the desert of Yathrib; 3) the prophecies of Sergius, partly a repetition of 1. In the second part it is told how Sergius communicated to Muḥammad his doctrine and laws and parts of the Ḳor'ān with a view to making the Arabs acquainted with the one God. The object of this part of the work is clearly to expose Muḥammad as an impostor who received his pretended revelations from a heretical monk.

Sergius is also mentioned in the literature of the middle ages.

BAHISHT (Avestan *vahishta*), the name of Paradise among Persian Muslims. Even in the Avesta the expression *ahhu vahishta* "the best world" for the abode of the chosen in the future life is found. (William Jackson in *Grundriss der iran. Phil.*, ii, 685). (CL. HUART.)

BAHLŌL LŌDĪ, founder of the Lōdī Dynasty in Dihlī, (reigned A. H. 855—894, = A. D. 1451—1488); he came of an Afghān family settled in the Pandjāb and succeeded his uncle as governor of Sarhind; the weakness of the central power enabled him successfully to revolt against 'Ālam Shāh, the last representative of the Saiyid Dynasty, and to seat himself upon the throne of Dihlī (A. H. 855). He was an energetic ruler and restored to Dihlī much of the prestige that it had lost under preceding reigns; he reconquered the province of Djawnpūr [q. v.], which had been ruled by an independent dynasty for more than 80 years. He is said to have been extremely temperate in diet, fond of the society of learned men, and zealous in the execution of justice.

BAHMAN, BEHMAN, Avest. *Vohu Manah*, phl. *Vohūman*, one of the Amesha Spentas of the ancient Persians, according to Plutarch = *εὔνοια*; it is also a frequent Persian proper name. In Persian chronology, Bahman denotes the eleventh month and the second day of each month.

BAHMANĪ DYNASTY, a line of Muḥammadan kings, eighteen in number, who ruled in the Dakhin from 748 (1347) to 932 (1525); in the period of its greatest power, this kingdom extended from Berār in the north to the borders of Vidjayanagar in the south, and from sea to sea on the east and west. This dynasty was founded by Ḥasan Gāngū (or Kānkū) [q. v.], a military officer in the service of Muḥammad ibn Taghlaḳ, Sulṭān of Dehlī (725—752 = 1324—1351); he took advantage of the troubles of his master, to found an independent kingdom in the Dakhin and assumed the title of 'Alā' al-Dīn Bahman Shāh. Firishta explains this title by a story that Ḥasan was, in his youth, a servant of a Brahman astrologer, and that while ploughing the field of his master, he found a box full of gold, which he at once took to the Brahman; pleased with Ḥasan's honesty, the Brahman recommended him to Muḥammad ibn Taghlaḳ and predicted his future greatness, at the same time making him promise that he would take the name of his former master as part of his title; but there is no historical foundation for this legend, and Colonel Haig has shown that the title Bahman Shāh points to Ḥasan's claim to be descended from Bahman, one of the mythical ancestors of the Sāsānid kings (*Journal of the Asiatic Soc. of Bengal*, lxxiii, 3-4).

Ḥasan made Gulbarga [q. v.] his capital, but the ninth king of the dynasty, Aḥmad Shāh I, 825—838 (1422—1435) transferred the seat of government to Bīdar [q. v.], which remained the capital of the Bahmanīs as long as the dynasty lasted. The Bahmanī kings were constantly at war with Vidjayanagar, the powerful Hindu kingdom on their southern border. The prestige of the dynasty began to decline after the death of Muḥammad Shāh III (867—887 = 1463—1482) and his able minister, Maḥmūd Gāwān [q. v.]. The governors of the various provinces made themselves independent and the kingdom was divided among the ʿImād Shāhs of Berār, Niẓām Shāhs of Aḥmadnagar, Barīd Shāhs of Bīdar, ʿĀdil Shāhs of Bīdjāpūr and Ḳuṭb Shāhs of Golkonda.

The following list gives the dates of accession of the Bahmanī kings:

I.	Ḥasan Gāngū	748 (1347).
II.	Muḥammad Shāh I	759 (1358).
III.	Mudjāhid Shāh	776 (1375).
IV.	Dāʾūd Shāh	780 (1378).
V.	Muḥammad Shāh II	780 (1378).
VI.	Ghiyāth al-Dīn	799 (1397).
VII.	Shams al-Dīn	799 (1397).
VIII.	Fīrūz Shāh	800 (1397).
IX.	Aḥmad Shāh I	825 (1422).
X.	Aḥmad Shāh II	838 (1435).
XI.	Humāyūn Shāh	862 (1457).
XII.	Niẓām Shāh	865 (1461).
XIII.	Muḥammad Shāh III	867 (1463).
XIV.	Maḥmūd Shāh	887 (1482).
XV.	Aḥmad Shāh III	924 (1518).
XVI.	ʿAlā al-Dīn	927 (1520).
XVII.	Walī Allāh Shāh	929 (1522).
XVIII.	Kalīm Allāh Shāh	932 (1525).

al-**BAHNASĀ**, a town in Egypt. Now an unimportant village of 150 (with two dependent villages 300) inhabitants in the district of Benī Mazār, in the Province of Minya, al-Bahnasā (the Egyptian Permeret, Coptic Pemdje and the Greek Πέμπτη or Ὀξύρυγχος) was in antiquity a famous town and even in the early Muḥammadan period it was one of the most important towns in Central Egypt. It lies somewhat north of 28° 30′ n. between the Baḥr Yūsuf and the edge of the Lybian desert and at the present day is almost buried in sand. As one of the chief towns of Christian Egypt — it is said to have once had 360 churches and was the seat of a Bishop — and held by a Byzantine garrison, it played a certain part during the Arab conquest which is reflected in an apocryphal romance of war, the *Futūḥ al-Bahnasā*. Under Arab rule also it remained the seat of government of a district (Kūra). When the division into provinces was carried out under the Fāṭimid al-Mustanṣir, it gave its name to the province of al-Bahnasāwīya. Under the Turks it appears to have gradually declined, no doubt on account of the encroachment of the desert. During the period of the French occupation it was being used by the inhabitants of the neighbouring villages as a quarry. — It owed its importance in the middle ages chiefly to its industry. Idrīsī gives the following account of it. "In this town there were and are to the present day looms on which the so-called Bahnasā veils and Sulṭan cloths (*Maḳāṭiʿ Sulṭānīya*) are woven for the government, and large tents and Mutakhaiyara cloths. There are also many private looms there. Next to the special fabrics of the place, merchants appreciate most highly the veils. — These veils, carpets and garments are famed throughout the land." Wool and cotton-wool were the chief raw materials used. The great forests of Bahnasā, controlled by the treasury were also famous; numerous notices of them have been preserved under the name of al-Hirādj (not al-Khurādj as it is often misprinted). Jesus and Mary are said to have lived for seven years near Bahnasā during their stay in Egypt. The names of many villages in Egypt begin with the *nisba* Bahnasāwī.

BAḤR (A.), Sea. The word is also used of large rivers e. g. *Baḥr al-Abyaḍ*, the White Nile, *Baḥr al-Azraḳ*, the Blue Nile, *Baḥr al-Ghazāl* (see below). — In prosody *Baḥr* denotes a metre, see above p. 464.

al-**BAḤR** al-**ABYAḌ**, "the White Sea", an Arab name of the Mediterranean. [See baḥr al-maghrib.]

al-**BAḤR** al-**ASWAD**, "the Black Sea". [See ḳara deñiz.]

BAḤR al-**BANĀT** i. e. "the Maidens' Sea", as the Arabs call the islands of the Archipelago on the west coast of the Persian Gulf. Idrīsī calls it Baḥr al-Kithr.

Bibliography: Ritter, *Erdkunde* xii, 390, 589 *et seq.*

BAḤR FĀRIS, the sea of Fārs, the name given by Iṣṭakhrī (p. 6) and Ibn Ḥawḳal (p. 35—41) to the Indian Ocean by an erroneous extension of the term. In Muḳaddasī (p. 17) and Masʿūdī (*Prairies d'or*, vol. i. p. 207) the name merely designates the Persian Gulf proper from ʿAbbādān at the mouth of the Tigris (Shaṭṭ al-ʿArab), to ʿOmān including the Gulf of that name. There are dangerous shallows in the estuary of the Shaṭṭ

called *al-Khashabāt*, "the piles", i. e. a lighthouse built on piles, where a watchman lights a fire to point out the entrance to ships; there are pearl-fisheries at the island of Khārak opposite Djannāba. The principal harbours on the coast of the Persian Gulf are ʿAbbādān, Mehrubān, Sīnīz, Djannāba, Sīrāf, Ḥiṣn Ibn ʿOmāra, Hormūz, Tīz (Mekrān), a list to which one must add Bū-Shahr, Bandar ʿAbbās (Gumrūn), and Linga which have recently become important. The Persian Gulf is separated from the Indian Ocean by the Durdūr (Kusair and ʿOwair) — in which many ships are wrecked. In it are the islands of Awāl, Khārak, Kīsh (Ḳais, Kishm), al-Lār (Lārak). The most important ports on the Arabian coast are: Kowait, al-Ḳaṭīf, Masḳaṭ (now called Muscat).

BAḤR AL-GHAZĀL, a tributary of the White Nile and the name of a province in the Egyptian Sūdān. The Baḥr al-Ghazāl, "the river of gazelles", arises from the union of numerous small streams which flow north and north-east from the watershed between the Congo and the Nile and receives its most important tributary the Baḥr al-Arab, from Dārfūr. After its junction with the Baḥr al-Djabal which flows from the Central African lakes, the name of Baḥr al-Abyaḍ i. e. White Nile is given to the river they form. The Baḥr al-Ghazāl is not simply a river but a complicated, lakelike, extended system of water-courses with a slight drop; in the rainy season it is a sheet of water in breadth stretching farther than the eye can reach; on the fall of the waters it is an impenetrable swamp on which the floating barriers of plants (*sudd*) render navigation very difficult and in places quite impossible. The "Gazelle river" was first explored by a Kharṭūm merchant, Ḥabashī in 1854 and in 1856 by Consul Petherick. Schweinfurth afterwards described it thoroughly. Before the clearing of the *sudd* from the riverbed, undertaken by the English, navigation ended at the so-called Meshera (i. e. *Mashraʿ*) the starting point for all expeditions into the adjacent lands, also called Port Reck or Meshra al-Rek on maps. According to Schweinfurth the Rekk are a Dinka tribe in the neighbourhood.

All the district around between 5 and 10° north and 25 and 30° east and thence also the province of the Egyptian Sudan is called Baḥr al-Ghazāl. The country is inhabited by heathen negritoes, the Shilluk and the Dinka who are divided up into numerous small tribes. These peoples must have lived here for many centuries for they have become quite acclimatised to life in these swampy regions. Their chief occupation is cattle-rearing (humped-cattle) and they can work in iron which is imported. As tribes, which have been scattered and driven out of the neighbouring territories, have settled in Baḥr al-Ghazāl, the population is very varied. Slatin (trans. Wingate, p. 194) mentions the following names: Kara, Kunga, Fertit, Kreisch, Baya, Tiga, Banda, Niam Niam, Bongo, Monbuttu and others of which each group has its own chief and fights vigorously against the others. All these tribes are heathen. The geographical nomenclature is mostly Arabic however but this is due to the constant expeditions (trading caravans or slave-raids) which the Arabicised nomads of Kordofān and Dārfūr or the Dongolans of the Nile have undertaken from ancient times to the Baḥr al-Ghazāl. The history of the Baḥr al-Ghazāl is really only the history of these robber raids which are further complicated by the bitter feud between the semi-Arabs and the Dongolans.

We can only begin to speak of a history in the narrower sense of the word when Egypt, following in the track of the slave-hunters, laid her hand on Baḥr al-Ghazāl. At the time of the first occupation of the Sūdān by the Khedive in the middle of the xixth century, Baḥr al-Ghazāl was a dependency of Dārfūr. In 1860 a semi-Arab named Zibēr (Zubair) won for himself princely power and undertook long expeditions from a strong position after the manner of all slave-hunters. His head quarters were called Dēm Zibēr and became the chief town of the Baḥr al-Ghazāl and the seat of a governor (*mudīr*). The first governor was Zibēr himself, whose *de facto* authority was confirmed by the Khedive in 1843. Zibēr then conquered Dārfūr for the Egyptians but was summoned to Egypt in 1876 when he threatened to become too powerful, and not allowed to return to the Sūdān for several decades. Zibēr had left his son Sulaimān (Soliman, Sliman) as his successor in Baḥr al-Ghazāl. The latter came into conflict with the Egyptian authorities, rebelled, and after a fierce struggle was overthrown by the Italian Romolo Gessi and executed. This Gessi Pasha was the first European governor of the Baḥr al-Ghazāl. He was replaced in 1881 by Lupton Bey, who had to capitulate in 1884 to the Mahdists. Even before this a certain Ḥasab Allāh had been appointed governor of Baḥr al-Ghazāl by the Mahdī Muḥammad Aḥmad. Lupton had to capitulate not because the natives, who were of course pagans, forced him to, but because his own soldiers and officers did. For over ten years Baḥr al-Ghazāl formed part of the kingdom of the Mahdī or rather of his Caliph ʿAbdullāhi. It was not till its reconquest by the English that order was restored in the Sūdān and from the annual *Reports on Egypt and the Soudan* we can learn the progress made under Anglo-Egyptian rule. Baḥr al-Ghazāl like the whole of the Eastern Sūdān is under the united rule of England and Egypt (Treaty of January 19, 1899).

The Baḥr al-Ghazāl was for a long time the subject of serious diplomatic complications; for it is the frontier province of the Egyptian Sūdān and borders on the French and the Belgian Congo. In 1898 a crisis arose between England and France over the Fashoda episode which might have ended in war had not France yielded the point in dispute. On the Belgian frontier there have also been occasional difficulties but according to the latest blue-books these have been finally settled.

(C. H. BECKER.)

BAḤR AL-HIND is the usual name amongst the Arabs for the Indian Ocean which is also called *baḥr al-Zandj* from its western shores or — the part for the whole — *al-baḥr al-Ḥabashī*; the expression *baḥr Fāris* also, sometimes, includes the whole ocean.

According to Ibn Rustah its eastern shores begin at Tīz Makrān, its western at ʿAdan. Abu 'l-Fidāʾ gives the Baḥr al-Ṣīn as its eastern boundary, al-Hind as the northern, and al-Yaman as the western, while the southern is unknown.

The various parts of the ocean bear special names derived from various lands and islands. If we neglect the northern arms, the Baḥr al-Ḳulzum and the Baḥr Fāris in the narrower sense, which are dealt with in separate articles, we have first the Baḥr al-Yaman stretching along the south coast of Arabia with the Khuryān Muryān (Kuria Muria) islands and Soḳoṭrā.

On the African coast we have, beginning at the Strait of Bāb al-Mandab, first the land of Barbarā, i. e. Somaliland to the harbour of Manka, then the land of the Zandj [see BAḤR AL-ZANDJ] with the towns of Barawa, Malinda, Manbasa and the Island of Zanzibar i. e. roughly British and German East Africa as far as the island of Ḳanbalū (undoubtedly Madagascar). Sofāla is joined to Ḳanbalū and finally at an uncertain distance is al-Wāḳwāḳ.

If one sets out from the Baḥr Fāris at Tīz Makrān he comes to the coast of al-Sind with the delta of the Indus and the commercial town of al-Daibul. On the shores of the Baḥr Lārawī lie the towns of Kanbāya (Cambay), Sūbāra, Ṣaimūr and Ṣindābūra (Goa). The archipelago of al-Dībadjāt, the Laccadives and the Maldives, separates the Baḥr Lārawī from the Baḥr Harkand. The last port on the Malabar coast is Kūlam Malī (Quilon) the outermost of its islands is Sarandīb (Ceylon). The route to the East Indies appears to have lain straight across the Baḥr Harkand to the island of al-Rāmnī which is washed by the waters of the Baḥr Harkand and the Baḥr Shalāhiṭ; apparently al-Rāmnī (al-Rāmī, al-Ramin = al-Lāmurī, whence the sea is there called Baḥr Lāmurī) is Sumatra, to be more accurate North Sumatra while Shalāhiṭ is South Malacca. Voyagers sailing to China must have kept somewhat further north for they touched at the islands of Lanḳabālūs or Landjabālūs, the Nicobars, to the north of which are placed the Andamān Islands, and from there reached Kalāh Bār (Kedah) on the Malay Peninsula; the Strait of Malacca is therefore called Baḥr Kalāh (Kalāh Bār) while the Baḥr Shalāhiṭ, when it is distinguished from it, appears to be the sea adjoining it on the south. We have now reached the land of the Mahrādj, the centre of which is the land of al-Zābadj. This name originally denoted Central and South Sumatra, where Sarbuza = Palembang is to be sought for, then its use was extended to include Java (Djāba) and in its political application it includes a series of smaller islands and the coast of Malacca. Beyond these islands is the Baḥr Kardandj, the Gulf of Siam which is continued on the coast of Ḳimār (Khmēr = Cambodja) in the Baḥr Ṣanf, the sea of Annam and the waters adjoining it on the South. Passing the Island of Ṣandarfūlāt (Hai-nan?) we reach the al-Baḥr al-Ṣandjī, the Chinese Sea where Khanfū (Hang-Chu) is the great emporium for the trade with the west. The knowledge of the Arabs concerning Sīlā (Corea) and the Wāḳwāḳ Islands (Japan) was vague and limited.

The notions of the Arabs of the tenth century concerning the Baḥr al-Hind become more and more vague as one goes to the East and South and the interpretation of their statements more uncertain. In many cases they have merely followed their Greek predecessors; they have, in addition, utilised the accounts of their own voyages. Details from different sources were never properly assimilated to form a uniform picture. Sometimes the Baḥr al-Hind appears to pass into the "Sea of Darkness", in which mariners driven out of their course are said to be tossed about for ever; sometimes, it is believed that it joins "the Black Sea" on the North of Asia, sometimes again, East Asia and South Africa appear to be connected, as the use of the name al-Wāḳwāḳ [q. v.] for Japan as well as for a land in the South of Africa, sometimes for Madagascar, shows. This idea is supported by Idrīsī according to whom the Zābadj islands are opposite the land of Zandj.

The voyages of the Arabs and Persians, who availed themselves of the monsoons, had as their starting place the Persian Gulf; Sīrāf and Ṣoḥār are important harbours there. The most important commercial centres appear to have been the land of Zandj, to which merchants sailed even from al-Zābadj — Madagascar itself was ultimately colonised from the Malay Islands, — and al-Zābadj itself, which had relations with China. The commerce of the Muslims with China came to a standstill in 264 (878) because of political changes. The Arab authors usually do nothing but hand on the old material. It was not till much later — under the Mongols — that intercourse again became active as Ibn Baṭṭūṭa's account of his voyage shows.

(R. HARTMANN.)

BAḤR AL-KHAZAR, "Sea of the Khazars", (Pers. *daryā-i Khazarān*), the Caspian Sea is so-called by most Arab geographers, after the Khazars, to whom the land on the north shore of this sea, with the important commercial town of Itil (not far from the mouth of the Volga), belonged, in the best period of Arab geographic literature, in the ivth (xth) century. More rarely (by Ibn Khurdādhbih, following him Ḳudāma and Masʿūdī) the Black Sea (with the Sea of Azov) is denoted by the same name, probably because the dominion of the Khazars included a part of the Peninsula of the Crimea. This name does not appear to have been used outside the Muḥammadan world; the Old Russian name **Khwalimskoje* (variants: *Khwalisskoje*,

Khwalinskoje) more" is certainly to be connected with the name of the land of Kh^w^ārizm, although the Arabs and Persians have always applied the name of Lake (or Sea) of Kh^w^ārizm only to the Sea of Aral. The Caspian sea is also called in Muḥammadan literature after various adjoining lands, "Sea of Djurdjān" (the "Hyrcanian Sea" of the ancients), "Sea of Abaskūn" (from the harbour at the mouth of the Gurgen), "Sea of Ṭabaristān" (or Māzandarān), "Sea of Dailam", "Sea of Gīlān", and in later times (since the Mongol period), also "Sea of Shirwān" or "Sea of Bākū" (the latter name appears in the middle ages in European works also in addition to the name "Sea of Sarāi"); the name "*Baḥr al-Ḳulzum*" which is properly the name of the Red Sea is frequently also transferred to the Caspian Sea. In Turkish literature, the expressions *Baḥr-i Ghuzz* (after the famous nomadic people, the predecessors of the Turcomans and Osmanlis) and *Aḳ-Deñiz* (more frequently applied to the Mediterranean) are also used.

BAḤR KH^w^ĀRIZM or BUḤAIRAT KH^w^ĀRIZM = Sea of ARAL [q. v.].

BAḤR AL-ḲULZUM, the Red Sea. The ancient names for the Red Sea were not adopted by the Arabs although the Hebrew name for the "Sea of Reeds" was known to them and they erroneously applied it to the whole Red Sea. They much preferred to call it after the town of Ḳulzum, the ancient Clysma, at its northern end, near Suez. The name Baḥr al-Ḥidjāz is very popular and even appears in the Turkish *Muḥīṭ* and in modern maps, while Baḥr Suez only denotes the Gulf of Suez. The Gulf of 'Aḳaba was called Khalīdj Aila, now Baḥr 'Aḳaba. Aila and Ḳulzum have shared the fate of all harbours built on land undergoing secular upheaval and are silted up. According to the Muḥammadan conception a great East and West Sea flows from the Ocean, al-Baḥr al-Muḥīṭ, which surrounds the earth and these approach nearest one another at Ḳulzum and al-Faramā (Isthmus of Suez). The western arm of the East Sea, also called the Indian or Chinese Ocean is the Baḥr al-Ḳulzum. Its northern limit has been given; the natural termination at the Bāb al-Mandab is usually taken as its southern end but some include the Gulf of Aden, the Khalīdj al-Barbarī (also Barbarā) as an entrance to it. In almost all the geographers the description of the towns on its coast begins at Bāb al-Mandab, the narrow strait of which has given rise to the story that the Red Sea was once a fertile land. It was only when a certain king removed a mountain at Bāb al-Mandab to make a small canal, through which the Indian Ocean could rush in and flood the country of an enemy of his, that the whole Ocean burst in and thus a new arm of the sea took the place of a flourishing country. The following measurements are given: length, 30 voyages, and greatest breadth 3 days' journey; according to others from 1500 to 400 miles in length with a breadth of 90 miles (the actual length from Suez to Bāb al-Mandab is 1400 miles and the greatest breadth 200 miles).

The Baḥr al-Ḳulzum had a bad name among the Arabs on account of its storms and sunken rocks (coral-reefs), especially the northern parts, which on this account were for a time avoided by traffic [see article 'AIDHĀB]. The southern end of the Peninsula of Sinai was especially feared, where the winds from the two northern arms met one another, particularly near the islands of Tīrān (in Arabic usually Tārān), at the entrance to the Gulf of 'Aḳaba and Djubāl (undoubtedly to be identified with Djubailāt or Djubailān) at the entrance to the Gulf of Suez. The scene of the destruction of Pharaoh and his army, so often mentioned in the Ḳor'ān was somewhat vaguely located in this region. According to Ḳalḳashandī, *Ḍaw' al-Ṣubḥ*, 225, [1] and 'Omarī, *Ta'rīf* 123 the "Sea of Reeds", was called Birkat al-Gharandal which may be compared with the Surandala, Arandara of Christian pilgrims. On account of the storms it was, and is the custom of the local mariners to hug the coast, sailing only by day and anchoring at night in the shelter of the coral reefs. Nevertheless the commerce on the Red Sea has always been considerable. In early Muḥammadan times a canal united the Nile with Ḳulzum, and corn-ships plied between Fosṭāṭ and al-Djār, the port of Medina. The route of the Indo-European traffic, which was in the hands of the Jews, was over the Isthmus of Suez and thence by sea again, without touching Egypt, to al-Djār and Djidda and thence on to India and China. In the most flourishing period of the 'Abbāsid caliphate the chief trade in spices naturally followed the route by Baghdād, but with the increasing importance of Egypt it was gradually diverted to the Nile valley. Aden was the great commercial centre; from there ships went forth to the harbours of the sacred towns, to al-Ḳuṣair, the port for the Egyptian Ḳūṣ, then for several centuries to 'Aidhāb; it was not till the end of the viii^th^ (xiv^th^) century that al-Ṭūr in the north at the foot of Sinai won greater importance. From Ḳuṣair, 'Aidhāb and al-Ṭūr there was great traffic to Djidda on account of the pilgrimages and also from the southern coast towns. Navigation seems to have always been more flourishing in the southern half of the Red Sea than in the north, owing to the ancient civilisation of the adjoining lands and the more favourable winds. In ancient times, for example, intercourse had been established between Yaman and Abyssinia. The Bāb al-Mandab and lands adjoining it have from the earliest times formed a sort of bridge for migrations. Life and commerce on the Red Sea, the kinds of ships and the management of harbours are discussed in Klunzinger's *Oberägypten*. Here we find many terms which also appear on the coast of East Africa and reflect the terms in use in the Indian Ocean. The horrors of a sea voyage so often described by Arab travellers, they sought to avert by all sorts of magical practices of which some have been collected in the *Archiv für Religionswissenschaft*, ix. (1908) p. 157 *et seq.*

The following places located in the Baḥr al-Ḳulzum have a fabulous character. The magnetic mountain, south of Ḳulzum, on account of whose attraction for iron the ships of the district were

made without any parts of iron, and the islands of al-Djassāsa or al-Djāssa (the "spy", fem.) an animal that ascertains information and bears it to the Anti-Christ (al-Dadjdjāl). We are also told of fishes 200 ells long, of some with the heads of owls, and other wonderful marine animals. All these features arise, partly from inaccurate observation, and partly from the material of Oriental romances such as the Romance of Alexander.

BAḤR LŪṬ, "Lot's Sea", is the modern Arab name for the Dead Sea which is usually called by the Arab Geographers *al-buḥaira al-maiyita* "the Dead Sea", *al-buḥaira al-muntina* "the stinking Sea", *al-buḥaira al-maḳlūba* "the overturned Sea" (because at *al-arḍ al-maḳlūba*, "the land that has been overturned", the *arḍ ḳawm Lūṭ* is placed), *buḥairat Ṣoghar* (*Zoghar*) "the Sea of Zoghar", also "the Sea of Sodom and Gomorra". The Persian Nāṣir-i Khosrau (v. = xi. century) appears to be the first geographer to know the name *buḥairat Lūṭ*.

The name Baḥr Lūṭ refers to the story in Genesis xix which is often referred to in the Ḳor'ān though the sea itself is not named.

To the present day, names in the neighbourhood of the Dead Sea — e.g. Djebel Sudum (Usdum) — and legends current among the natives, recall the catastrophe related in Genesis xix. These are certainly founded less on popular than on learned tradition.

Geography. Between the steep and barren slopes of the "desert of Judah" and the mountainous land of Moab lies the Dead Sea, like a blue mirror 1150 feet below sea-level from north to south. Its length is about 50 miles, its mid-breadth 8 miles and it has no exit.

The deepest part of its bottom is 2600 feet below sealevel. An isthmus (*lisān* "tongue") running out from its east shore separates the southern, quite shallow part from the northern basin. While on the East and West shores the mountains rise up from the shore to a height of over 3000 feet, the land is low-lying in the north, at the mouth of the Jordan and in the south, where on the east shore of the *sebkha*, Pentapolis (Genesis xiv and xix) is to be sought for, it only rises slowly into *al-Ghawr* and *al-'Araba*. The composition of its water, so extraordinarily rich in salt is unsuited to organic life and is even an impediment to navigation. On only a few places on the shore, inhabited oases of almost tropical character have survived.

Geology. The Dead Sea fills the deepest part of the Great Syrian system of depressions which was formed at the close of the Tertiary period. In the periods of alternate drought and rain of the diluvial epoch, the great floods filled the greater part of the Jordan valley and a part of the 'Araba with an inland sea; this was never connected with the Red Sea. There being no exit to this basin the water, which, to begin with, flowed partly from springs rich in minerals, came in course of time, by evaporation to contain a high percentage of salt of peculiar composition. In the dry period of historic times the sea has shrunk to the bed it, at present, occupied. In the last century a gradual rising of the level of the sea has been definitely ascertained. Tectonic disturbances have affected the surrounding district down to the present day. It is to one of the most recent of these that the origin of the southern basin is due.

The procuring of asphalt from the Dead Sea, as in antiquity (cf. the name *lacus Asphaltitis*) seems to have been an important business in the middle ages, also. The asphalt was used as a protection against insects in vineyards. It was also used for many medicinal purposes. To the waters of the sea itself, healing powers were also ascribed.

The rich products of the oasis of Zoghar (near the modern *ghawr al-Ṣāfiya*) were borne across the Dead Sea. The Frankish Crusaders also sailed on it. Since the Crusades the political importance of the Sea and the surrounding country has almost completely disappeared.

BAḤR AL-MAGHRIB. Among the Arabs the Mediterranean has a great many names (in many of these the name of the part is applied to the whole e.g. *Baḥr Ṭandja*, *b. Ifriḳiya*). The most frequent are 1. *Baḥr al-Maghrib*, West Sea, or *al-Baḥr al-Maghribī* or *al-Gharbī* (Western Sea), rarely *al-Dabūrī*; 2. *Baḥr al-Rūm*, Sea of the Romans and Greeks, or *al-Baḥr al-Rūmī*, Graeco-Roman Sea (more rarely *Baḥr al-Ifrandj*, sea of the Franks or Europeans, applied rather to the European parts); 3. *Baḥr al-Shām* or *al-Baḥr al-Shāmī*, Syrian Sea. *Al-Baḥr al-Mutawassiṭ* = Mare Mediterraneum, Central Sea, or the "Sea in the midst of Lands" is an early name, while *al-Baḥr al-Dākhilī* = Mare Internum, Inner Sea, appears to be modern. The names *Baḥr al-Iskandariya* or *Baḥr Miṣr* are rare and in the first instance apply only to the South East part. It is often called *al-Baḥr al-Milḥ*, the Salt Sea in contra-distinction to the Nile (*al-Baḥr*) with its fresh water, while it is called *al-Baḥr al-Abyaḍ* = the White Sea (Turkish: *Aḳ Deñiz*, see this article)

and *al-Baḥr al-Akhḍar* = Green Sea in opposition to the Atlantic Ocean, which is called *al-Baḥr al-Muḥīṭ al-Maghribī* = the Western Sea which surrounds the world or *Baḥr al-Ẓulma* or *al-Ẓulumāt*, Sea of Darkness or Darknesses, or *al-Baḥr al-Muẓlim*, Dark Sea (Mare Tenebrosum), for the name *al-Baḥr al-Aswad*, Black Sea also appears, as well as *al-Baḥr al-Aʿẓam* and *al-Akbar*, Largest Sea (by wich *al-Muḥīṭ* is meant). Indeed the Mediterranean is sometimes so called.

According to most Arab geographers, the Mediterranean Sea does not begin at the Strait of Gibraltar, which is called *al-Zuḳāḳ*, the lane, but includes also the Gulf of Cadiz to the northwest of the strait and to the southwest, the sea along the Morocco coast as far as Salé-Rabāṭ. The *Madjmaʿ al-Baḥrain* also is imagined to be west of the Pillars of Hercules, where the two seas, the White or Green (Mediterranean) and the Dark or Black (Atlantic Ocean, also called *Ḳāmūs* from *Oḳyānūs* = Ὠκεανός) meet, whose rising and falling cause the ebb and flow of the tides, *madd* and *djazr*. The formation of the Mediterranean is regarded by the Arabs, according to the tradition, as having been brought about by a great inrush of the Atlantic Ocean into the lower lying lands of what is now a sea; or the Mediterranean was regarded as an ancient inland sea and the piercing of the Strait of Gibraltar is said to have been effected by fabulous Egyptian Kings or by Alexander the Great (cf. the story of the pillars of Hercules; as a matter of fact geology shows that Spain and Morocco were once connected). The Adriatic Sea is usually called *Baḥr* or *Djūn al-Bunduḳīya* or *al-Banādiḳa*, Sea or Gulf of Venice or of the Venetians; the Aegean Sea, *Baḥr* or *Khalīdj Ḳosṭanṭīnīya*, Sea or Gulf of Constantinople (often also = the Hellespont, Sea of Marmora and the Bosporus). The Black Sea is called *Baḥr Bonṭos* (Pontus Euxinus) which often appears in the corrupt form *Nīṭas(sh)*, or *Baḥr Aṭrābizonda* (Sea of Trebizond), *Baḥr al-Rūs wa 'l-Bulghār*, Sea of the Russians and Bulgarians, or *Baḥr al-Ḳirim*, Crimean Sea and in later times also *al-Baḥr al-Aswad* = Black Sea, like the Turkish *Ḳara Deñiz*, Russ. *Tšcherno͡e more*; the Sea of Azov is called *Baḥr Māniṭis(sh)* and also *Māniṭis(sh)* or *Māyiṭis(sh)* = Palus Maeotis, corrupted from Μαιῶτις.

Various calculations of the extent of the Mediterranean from East to West (its length) were given by the Arabs following Ptolemy's estimate, which is too high; on these cf. Reinaud, *Introduction* to Abu'lfidā's *Géographie*, p. cclxxvi.

While in antiquity the Mediterranean facilitated the commerce of the Phoenicians, Carthaginians and Greeks and in the Roman Empire bound together its European, African and Asiatic provinces, after the Arab conquest of the Syrian and North African coast, and the temporary conquest of Spain and the principal islands, in the middle of the seventh century, it separated Muhammadan culture from the Christian civilisation of Central Europe; even the expulsion of Islām from Sicily and Spain was counteracted by the great eastern advance of the Turks over Asia Minor and the Balkan Peninsula in the xvth—xviith centuries, since the mediaeval crusades were a failure. It was not till the political and military decline of the Muhammadan states and provinces (except Morocco) dependent on Turkey in the Mediterranean in the xviiith and xixth centuries, and the occupation of the most important stations by Albion, the mistress of the seas, and the conquest of Algeria (1830) and the occupation of Tunisia by the French and of Egypt by the English that the permanent ascendancy of Christian-European civilisation and policy was assured in all the lands adjoining the Mediterranean.

(C. F. Seybold.)

BAḤR MUḤĪṬ. Following the tradition of the Greek geographers the Arabs have conceived of the Ocean as a kind of vast river, circular in its general form, surrounding the whole habitable earth. They have for this reason called it *Baḥr Muḥīṭ*, the surrounding sea. They also give it the names of Outer Sea, Sea of Darkness, or Green Sea. Idrīsī compares the earth placed in the midst of the ocean to an egg immersed in water contained in a cup. As the water surrounds the earth, the air surrounds the water and fire envelops the air under the concavity of the sphere of the Moon.

In the opinion of some oriental scientists, all seas must communicate with the ocean; they are only gulfs or prolongations of it. The ocean is as it were "the Source" of all other seas; this is an opinion widely spread, Masʿūdī tells us (*Prairies d'Or*, i. 258). Even the seas apparently shut in are thought to communicate with one another, either underground or by some unknown channel. Thus it has been thought that the sea of the Khazars was connected with the Russian Sea or Sea of Trebizond, the sea of Khwārizm with that of the Khazars, that of Zoghar with that of al-Ḳulzum and that of Hadjar with the Sea of Persia. But this is not the opinion of all geographers (vide *Dimishḳī*, ed. Mehren, p. 127). — Masʿūdī tells us that certain scholars believe in an Ocean of fresh water distinct from the Outer Sea which would be the source of all rivers (*Prairies d'Or*, i. 203).

The Ocean contains 27,000 islands, says the author of the *Compendium of Wonders* (p. 45) and refers this figure to Ptolemy. In the North-east at the extreme limit of the habitable world is the legendary island of Thule, mentioned by Pytheas and Ptolemy, situated in 63° of North latitude. In its eastern part the Ocean washes the coast of Britain, numerous towns in France and Andalusia (Spain), several towns on the coast of the Maghrib and the country of the Berbers "the people who live in the reed huts". It also encloses the Isles of the Blessed (vide Masʿūdī, *Kitāb al-tanbīh*, p. 98). It is in these Isles of the Blessed that Idrīsī places the statues erected by Hercules, statues whose attitude and inscriptions indicated to voyagers that they could go no farther. Masʿūdī places these statues sometimes at Cadiz, sometimes in the Straits of Gibraltar. They served also as

lighthouses. The Mediterranean has been formed, according to the Arabs, by the Ocean, which burst a natural wall connecting Andalusia to the Maghrib and poured over the land. Africa was thought to terminate at no great distance to the south of Egypt; the Ocean was found there again washing the shores of the land of the Negroes.

To the south of Asia, the Ocean took the names of Sea of Hind, of Serendib, of Harkand, of Ḳomar, of Maharādj, of Zandj. Its eastern part was called the Sea of Ṣanf or Sea of China. [See BAḤR AL-HIND.]

Arab scientists have discussed the cause of tides and of the saltness of the sea. As a rule, they attributed tides to the action of the moon, regarding the earth as a sort of animal and the seas as its humours; when the moon waxes it provokes a more active circulation of the humours in the animal. As to the saltness of the sea, Mas'ūdī remarks that it cannot be due to the effect of the heat on fresh water as many of the ancients believed, for nothing similar is produced by distillation (*loc. cit.*, p. 279).

The Arab geographers have also given measurements of the length of the habitable earth which is that of the diameter of the ocean.

(CARRA DE VAUX.)

BAḤR AL-'ULŪM, whose real name is ABU 'L-'AIYĀSH MUḤAMMAD 'ABD AL-'ALĪ B. NIẒĀM AL-DĪN B. ḲUṬB AL-DĪN SAHĀLĪ, was born 1144 (1731) in the Firangī Maḥall, Lucknow, which had been given to his father by Awrangzēb. The family had come originally from Herāt and had received grants of land from Akbar. His great-grandfather settled in the village of Sahāl, near Lucknow. Both his grandfather and father were renowned as scholars and religious teachers. Baḥr al-'Ulūm was taught by his father and his father's successor, Mullā Kamāl al-Dīn, and eventually succeeded to his father's chair. But a controversial treatise written by him having stirred up bad blood between the Shī'as and Sunnīs, he was expelled by Shudjā' al-Dawla, king of Oudh, and lived for some time in Shāhdjahānpur under the protection of its Nawāb, 'Abd Allāh Khān. After the murder of the Nawāb in 1173 (1759), he taught in Rāmpur and Bihār and finally settled in Madras, where he died on the 12th Radjab, 1225 (1810). In South India he is known as Malik al-'Ulamā' (king of the learned), in North India as Baḥr al-'Ulūm (ocean of learning). He was a very successful teacher and a voluminous writer, his chief works being commentaries on Arabic text-books of jurisprudence, logic and scholastic theology.

Bibliography: Al-Nadwa (*Journal of the Nadwat al-'Ulamā'*, April-June 1907); Muḥammad Ṣiddīḳ Ḥasan Khān, *Abdjad al-'ulūm*, p. 927; Ḥasan b. 'Abd Allāh al-'Abbāsī, *Athār al-uwal*, p. 24. (M. HIDAYET HOSAIN.)

BAḤR AL-ZANDJ. By the Baḥr al-Zandj the Arabs mean the western part of the Indian Ocean, Baḥr al-Hind [q. v.] which washes the East coast of Africa from the Gulf of Aden i. e. the Khalīdj al-Barbarī to Sofāla and Madagascar which was as far as the scanty knowledge of the Arabs extended. The name is derived from the adjoining coast which is called the Bilād al-Zandj or Zanguebar, Land of the Zandj. The name Zandj is applied by the Arabs to the black Bantu negroes who are sharply distinguished from the Berbers and Abyssinians. The name Zandj is very old, even Ptolemy knows Ζέγγισα ἄκρα, and Kosmas Indicopleustes of τὸ λεγόμενον Ζίγγιον. The name itself has not been explained. Nowadays it is applied to the Island of Zanzibar and to a tributary of the Zambesi which bears the name of Zangue. The Arab notices of the coast and sea of the Zandj are more than scanty and partly contradictory. The sea was feared and avoided. Only the Arab travellers Mas'ūdī and Ibn Baṭṭūṭa sailed across it, but they tell us more about the land and its people than about the sea itself. It is clear that the Arabs imagined the coast to run in quite another direction to what it actually does. W. Tomaschek has given interesting reconstructions of their cartographical notions in his *Die topographischen Capitel des indischen Seespiegels Moḥīṭ* (Vienna, 1899), while all notices by the Arab geographers on the sea and land of the Zandj have been collected in a masterly fashion by L. Marcel Devic (*Le Pays des Zendjs ou la Côte Orientale d'Afrique au Moyen Age*, Paris, 1883). Navigation on this part of the Indian Ocean is regulated by the periodic monsoons whence the ancient relations between South Arabia and North-West India and the East African coast. — For further information see the articles: BAḤR AL-HIND and ZANDJ. (C. H. BECKER.)

BAHRĀ', an Arabian tribe. Genealogical table: Bahrā' b. 'Amr b. al-Ḥāfī b. Ḳoḍā'a. The tribe had its settlement in the plain of Ḥimṣ (Hamdānī, p. 132); Suwa and Muṣaiyakh Bahrā', mentioned in the Syrian campaign of the years 13 (635) were among its watering-places. Cf. Ṭabarī (ed. de Goeje), i. 2114, 2122, 2124; Belādhorī (ed. de Goeje), 110; Yāḳūt, *Mu'djam*, iii. 172; iv. 557; de Goeje, *Mémoire sur la conquête de la Syrie*², 39—43.

Ibn Khallikān (ed. Wüstenfeld, n°. 46) asserts that the Bahrā, like their neighbours, the Tanūkh and the Taghlib, professed Christianity, though according to al-Wāḳidī in Wellhausen, *Skizzen und Vorarbeiten*, iv. 170, thirteen delegates appeared in Medina to pay honour to Muḥammad in the year 9 (631). Cf. also Ṭabarī, i. 1720.

Bibliography: besides the above-mentioned, Sprenger, *Das Leben und die Lehre des Muhammad*, iii. 433.

AL-BAḤRAIN, a group of islands not far from the west coast of the Persian Gulf, in 26° n. L. The largest of the islands is Baḥrain, called Owāl or Samak (Fish), about 30 miles long and 12 broad. The chief town and port is called Manāma; the smaller islands are Muḥarraḳ, Arad, Sitra, Nabī Ṣāliḥ, Ṣāya and Khaṣīfa. The islands are famed for the pearl-fishing carried on here from ancient times; the Arab geographer Idrīsī gives an accurate description of the operations. The name Baḥrain (two seas) seems to be derived from the peninsula which stretches from al-Ḥaṣā and by which the sea is divided. The islands have been inhabited since the beginnings of history on account of the pearl-fisheries; it is said that the elder Sargon conquered them. The name of the island Tilwūn has come down from the Assyrian period and corresponds to the form Tylus transmitted by Theophrastus and Pliny; the name Aradus is also mentioned by the above named classical author. In the middle ages Baḥrain belonged to the dominions of the caliphate. The Portuguese had a settlement here from 1507—1622

which they had to give up on the loss of Hurmuz; from 1735—1784 the Persians ruled it; Baḥrain then gained a certain independence under native princes but since 1801 it has been under English protection and the English resident appointed by the Indian government, is the real ruler of the islands, being the Shaikh's rule only nominal.

Besides the pearl-fisheries the islands derive considerable revenue from the beautiful datepalm groves which cover the well-watered land. The inhabitants who speak Arabic, and as a rule also understand Persian, are of mixed race; on account of the situation of the islands remote from the world, their customs have preserved their ancient character; for example falconry is still pursued here quite in the mediaeval fashion.

On the largest of the islands are a large number of carefully built stone tombs now empty, divided into larger and smaller groups; the largest group is at the village of Abū ʿĀlī about 6 miles from the port of the island. It is only quite recently that these graves have attracted the attention of archaeologists. The graves, as yet investigated, most of which were opened by the English resident Mr. Prideaux, all show exactly the same plan. The entrance faces the west; the building is two storied, of carefully hewn square blocks of stone, the under story being higher than the upper. On both sides of a corridor leading to the east are niches which were designed to hold cists stacked one above the other. There are small holes beside the niches in which apparently wooden bars could be placed right across the corridor, on which offerings to the dead, and votive gifts were to be hung.

Unfortunately nothing found on the spot gives a clue to the historical origin of these tombs. Bones of men and animals have been found there, including two skulls in a striking degree dolichocephalic, and a large number of bones of fieldmice (Arab. *yarbūʿ*) which appear to have crept in here to die, after their custom; in addition there has been found a small portion of an ivory ox, a golden armlet and and enormous quantities of whole and broken earthenware vessels ornamented in a peculiar fashion with black stripes. These finds do not give a secure foundation for any archaeological hypothesis; no trace of any inscriptions has as yet come to light.

The plan on which these graves are built agrees in a striking fashion with those known of the Phoenicians; this was even noticed by Strabo who says that the tombs in Baḥrain are similar to those of the Phoenicians (xvi. 3). Herodotos says in the beginning of his history that the Phoenicians came from the Erythraean Sea, i.e. the Persian Gulf. The similarity of the place-names Aradus and Tylus-Tyrus points in the same direction. The English traveller Theodore Bent who was the first to rescue those tombs from oblivion has, relying on these facts, called these tombs "Phoenician" without further consideration. Other investigators have taken objection to this supposition and say the tombs date from a much later period and that Baḥrain served as a burial-ground for the population of the opposite coast between Linga and Būshehr. The express testimony of Herodotos and Strabo can scarcely be set aside by this supposition; it may be that the tombs were again used by later generations but it cannot be denied that the civilisation, which first made them, was closely allied to the Phoenician; the final solution of this difficult question will only be settled by the systematic investigation of a much larger number of tombs than have hitherto been opened.

AL-**BAḤRAIN**, the ancient Arab name of a province of Arabia on the west coast of the Persian Gulf, opposite the Baḥrain islands, now called al-Ḥasā [q. v.].

BAHRĀM (Avestan *verethraghna*, name of a genius of victory, Pahlavi *varahrān*) is in Persian the name of the planet Mars and of the twentieth day of each month.

Bahrām is the name of five kings of the Sāsānian dynasty. Bahrām I (273—276 A. D.), son of Sapor I and brother of Ormuzd I, succeeded the latter on the throne. After three years he was succeeded by his son Bahrām II (276—293). During his reign the Roman Emperor Carus appeared before Ctesiphon which was only saved by his sudden death in 283. Bahrām conquered Sīstān from the Sakas and appointed his son Bahrām III as governor of it on which account he received the epithet Sagān Shāh "King of the Sakas"; a bas-relief in Shāpūr testifies to this conquest (see Dieulafoy, *Art Antique de la Perse*, Vol. v., Pl. xxi.). Bahrām III reigned only four mounths. — Bahrām IV was the brother and successor of Sapor III (388—399); he bore the name of Kermān Shāh or "King of Kermān"; he died a violent death. — Bahrām V (430—438), son of Yezdigerd I was brought up by the Arabs at al-Ḥīra [cf. article BĀDIYA]; al-Mundhir I b. al-Nuʿmān was entrusted with his education (Ṭabarī, i. 855); his strength and skill in bodily exercises earned him the name of Gōr "wild ass" not given, as the legend has it, because he transfixed a lion and a wild ass with one arrow. He conquered the king of the Ephthalite Huns in Bactriana, slaying him with his own hand in the battle of Kushmēhan at Merw and dedicated the crown of the vanquished king to the fire-temple Ādhargushnasp (Shīz in Ādharbaidjān). He persecuted the Christians and declared a war against the Romans, which in spite of the efforts of his general Mihr-Narsē was not a successful one; although the Persians had seized the town of Nisībīn they were glad to make peace in 421. Bahrām died after a fall while hunting. The Būyids claim to be descended from him.

Bahrām Čōbīn, a usurper of the family of the Mihrān had defeated the Turks in Svanethia and been himself defeated by the Romans in Armenia when in 589 he rebelled during the reign of Ormuzd IV; he reckoned on the support of the aristocracy and of the Mobeds and seized the capital, where he struck coins. The army which was in Mesopotamia in the field against the Romans, declared first for Khusraw II who was proclaimed king but soon had to flee to the Emperor Maurice. An army composed of Persians under Bindoē and Romans under Narses besieged Bahrām Čōbīn in Balaroth in Ādharbaidjān and forced him to flee to the Turks who afterwards put him to death.

BAHRĀM SHĀH (Sulṭān-i Ghāzī Yamīn al-Dawla Bahrām Shāh b. Mas'ūd b. Ibrāhīm), Ghaznavī sulṭān (511—552 = 1118—1157). The greater portion of his long reign was quiet and uneventful, but in the year 1148 Ghazna was attacked by the Ghūrī chief Saif al-Dīn Sūrī whose brother Ḳuṭb al-Dīn Muḥammad had been put to death by the Ghaznavī king. Bahrām Shāh was forced to retire to India and Ghazna fell into the hands of Saif al-Dīn. He did not however hold his conquest long, for Bahrām Shāh returned with fresh forces in the following year, regained his kingdom and put Saif al-Dīn to death. This drew upon him the vengeance of a third Ghūrī brother, 'Alā al-Dīn Ḥasan who marched against Ghazna with a large army, drove Bahrām Shāh to India and sacked his capital with ruthless cruelty that gained him the name of Djahān-sūz ("the world-consumer") (A. H. 545 or 546). The contemporary authority of the *Ṭabaḳāt-i Nāṣirī* states that Bahrām Shāh once more regained his throne after 'Alā al-Dīn had been defeated by the Saldjūḳ Sandjar, and that he died at Ghazna. The *Ta'rīkh-i Guzīda* and Mīr Khwānd are therefore wrong in placing the death of Bahrām Shāh before the sack of Ghazna.

Bahrām Shāh was a prominent patron of Persian literature. The poets Mas'ūd-i Sa'd-i Salmān and Sanā'ī lived at his court, and the latter's *Ḥadīḳa* as well as Naṣr Allāh's Persian version of Kalila and Dimna were dedicated to him.

Bibliography: *Ṭabaḳāt-i Nāṣirī* (Calcutta ed.), p. 47 *sqq.*; Mīr Khwānd, *Historia Gasnevidarum* (ed. F. Wilken, Berlin 1832), p. 131; Mīrzā Muḥammad B. 'Abd al-Wahhāb in the notes to his edition of the *Čahār Maḳāla* of Niẓāmī-i 'Arūḍī (Leyden, 1910), p. 156 sqq.; id., in the *Journ. of the Royal As. Soc.*, 1906, p. 26. (S. Hillelson.)

BAHRĀM SHĀH b. Tughrul Shāh, the Saldjūḳ, was raised to the throne of Kirmān by the Atabeg Mu'aiyad al-Dīn Raiḥān in succession to his father on the latter's death in 565 (1170) but soon afterwards had to make way for his elder brother Arslān Shāh [q. v.]. The two brothers thereupon fought with one another with varying success till the death of Bahrām Shāh in 570 (1174-1175).

BAHRĀM SHĀH, al-Malik al-Amdjad, son of Farrukh Shāh, son of Shāhānshāh, son of Aiyūb, great-nephew of Saladin, received Baalbek [q. v.] from the latter on the death of his father in 1182 (578) and retained it on the division of the inheritance on the death of Saladin in 1193 (589). In 1226 (626) the ruthless Ashraf Mūsā, lord of Damascus, demanded Baalbek back from him. Bahrām declined to give up his property but after a year's siege was forced to exchange it for the small town of Zebdānī (between Damascus and Baalbek) and several other places. The prince returned to Damascus and was shortly afterwards murdered in 1229 (627), while playing draughts, in revenge by a Mamlūk whom he had punished for some offence. He is said to have been the best poet of the Aiyūbids.

Bibliography: *Recueil des historiens orientaux*, i. 52, 70, 106; iii. 313; Ibn Shākir, *Fawāt al-wafayāt* (Būlāḳ, 1299 = 1882), p. 81, 82) where specimens of his poems are given. [See also the Bibliography under Baalbek].

(M. Sobernheim.)

BAḤRĪ was the name given to the Mamlūks purchased by the Aiyūbid Sulṭan Ṣāliḥ Aiyūb [q. v.], whom he kept in barracks on Rōḍa, an island in the Nile (Baḥr). His widow Shadjar al-durr married the Mamlūk Aibak, who ascended the throne as the first of the Baḥrīs in the year 1250 (648). Among the Baḥrīs the family of Ḳalāūn took the premier position; they ruled with short intervals from 1279—1382 (678—784) and were deposed by the Burdjī Mamlūk Barḳūḳ.

(M. Sobernheim.)

BAḤRĪYA, a group of oases in the Lybian desert. The Baḥrīya is the most northerly of the Lybian desert. The Wāḥāt Baḥrīya (also singular) i. e. the northern oases are distinguished from the Wāḥāt Ḳiblīya, the southern oases i. e. the Dākhla [q. v.] and Khārga [q. v.]. Between these two groups lie the little oases of Farafra (included in the Dākhla by some), called al-Farāfira by al-Bakrī and al-Farfarūn by al-Ya'ḳūbī. The three large oases are also distinguished as inner, middle and outer, the inner is the Baḥrīya which is also called the small. It is sometimes also called the Bahnasīya as it used to be visited by the people of Bahnasā. Bahnasā al-Ṣa'īd and Bahnasā al-Wāḥāt are distinguished as early as al-Bakrī, *Mughrib*, 14. At the present day the post goes thrice a month from Maghāgha to the Baḥrīya. According to Boinet Bey's *Dictionnaire Géographique*, it is a district of the Province of Minia. It consists of four townships with over 6000 inhabitants in all. The outlying town of al-Bāwīṭ(i) has 1714, al-Ḳaṣr 1712, Mandīsha 1683 (with its dependency al-'Adjūz 1798) and al-Zabū 858 inhabitants.

The Baḥrīya like the other oases has the reputation of being exceedingly fertile and in the middle ages its dates and raisins were famous. Cereals, rice, sugar-cane and especially indigo were also cultivated there, and alum and green vitriol found, though the latter is not specially mentioned as being found in the Baḥrīya, for all the notices of this sort refer to all the oases together. The fertility of the oasis is due to hot springs containing various chemicals.

Only scanty notices are available for the history of the Baḥrīya. In the year 332 (943-944) the oases are said to have been under the rule of a Berber prince 'Abd al-Malik b. Merwān and to have been independent. Under the Fāṭimids we hear of an Egyptian governor Abū Ṣāliḥ. In the time of Maḳrīzī and Ḳalḳashandī, that is, under the Mamlūks they were not governed directly by the state but by feudal tenants. At all periods the oases have suffered from the predatory raids of Arab and Berber Bedouins while the more southern ones (perhaps also the Baḥrīya?) were sometimes the object of forays by the Kings of Nubia. It is only in quite recent times that they have been placed in closer relationship to the Egyptian government. In the seventies they were visited by Schweinfurth and since then European travellers have often gone there.

In earlier times the oases must have been very much more important than they are now. The sand has evidently encroached upon them and caused their decline. Reliable reports and echoes in traditions tell us of ruined buildings and ancient splendour. The Coptic Church appears to have been in a flourishing condition till a late period. We hear of solemn processions with the body of one of the disciples which was carried through the streets in a shrine (*Tābūt*) by a team of oxen. No doubt St. Bartholomew is meant (so al-Bakrī, p. 14 ought to be amended) perhaps also St. George or both.

BAḤTH. "*Baḥth* is thorough investigation and examination. In a technical sense the word denotes the process of proving whether two things mutually imply or exclude one another. *Al-mabḥath* is the object of the positive or negative judgment". These are the definitions of the *Taʿrīfāt*. In practise *al-baḥth* means discussion, the art of controversy and disputation. It is connected in meaning with the word *naẓar* which means speculation. A good example of the application of these expressions may be found in Masʿūdī, *Prairies d'or* (vi. 368). There it is said that Yaḥyā, the Barmecide had a keen intellect and judgment, *wa baḥth wa naẓar* i.e. a certain gift for discussion and speculation; he gathered around him in conferences, learned men, *Mutakallim* and others who were themselves *min ahl al-baḥth wa 'l-naẓar* i.e. specialists in the art of philosophical disputation.

Many oriental scholars and princes were fond of controversy. Masʿūdī speaks of discussions which he had with Jews (*Tanbīh*, p. 160 *et seq.*). Avicenna disputed in the presence of ʿAlāʾ al-Dawla. At various times controversies took place between Muslims and Christians of which we possess several accounts. (CARRA DE VAUX.)

BAHURASĪR. [See AL-MADĀʾIN.]

AL-**BAḤŪTH**, one of the titles of the Sūra ix.

BAI, a Turkish word, properly an adjective meaning "rich" (in this sense it appears in the earliest monuments of the Turkish language, the inscriptions of Orchon); as a substantive it means also "landlord, householder". In Central Asia the word "Bai" is frequently appended to proper names, whereby the bearers of these names are shown to be prosperous, independent people in contrast to the masses. The oldest text, in which the word "Bai" appears with this meaning is the story of Maḥmūd Bai, Vizier of the prince (Gūr-khān) of the Ḳara Khiṭai in the *Taʾrīkh-i Djihān Kushāi* of Djuwainī (vii. = xiii. century). Cf. d'Ohsson, *Histoire des Mongols*, i. 168; W. Barthold, *Turkestan*, Part i., (Text), p. 113, Part ii., p. 384 *et seq.* (W. BARTHOLD.)

BAIʿ, i. e. contract of sale, the sale of goods for money. Some other legal transactions however which have in view the mutual exchange of goods, are described in the Muslim legal works as different "Kinds of Baiʿ" (*Anwāʿ al-Baiʿ*) (cf. e.g. *Diction. of Technic. Terms*, i., 137, l. 14—16; al-Nawawī, *Minhādj al-Ṭālibīn*, ed. v. d. Berg, i., 369). Such legal transactions are, amongst others: the exchange of wares for wares (*Muḳāyaḍa*) or of money for money (*Ṣarf*) and the so-called *Salaf-* or *Salam*-contract (by this the buyer purchases a thing which he has not seen himself but which is exactly described, and pays for it in advance), further the agreement by which one who has a legal claim on a certain thing takes another instead of it (*Ṣulḥ al-Muʿāwaḍa*).

Baiʿ may also consist in any one's stipulating for an easement; such an agreement is legally regarded as a purchase of the right of use. The buyer thereby becomes the owner of the right, e.g. to go over the property of an another (*Ḥaḳḳ al-Murūr*), or to build on it (*Ḥaḳḳ al-Bināʾ*), to use his neighbour's walls to support his own etc. On the other hand loans and leases are not regarded as Baiʿ by most Faḳīhs because the tenant on the one hand only stipulates for his right to use for a certain time and on the other the return of a sum lent is not to be regarded as identical with the equivalent given at a proper mercantile transaction (cf. Bādjūrī at the beginning of his chapter on Baiʿ; Sachau, *Muhamm. Recht*, p. 275).

Muslim scholars are further accustomed to distinguish three sorts of Baiʿ (*Murābaḥa*, *Muwāḍaʿa* and *Tawliya*), according to which the buyer agrees to pay either more or less or as much as the seller himself originally paid for the object to be sold. (Cf. a formula of the *Tawliya*-contract: Dozy, *Supplém. aux diction. arabes*, ii., 843, Sp. 1).

Baiʿ is permitted by the Ḳorʾān ii. 276 in opposition to Ribā i. e. usury in general and more particularly the sale of bonds (see Ribā). The sale of a thing is only valid however, if it is ritually pure and can give the Muslim a legal profit. Therefore, dogs, pigs, dung, forbidden musical instruments, grapes, from which wine may be made, etc. cannot be legally "sold"; of course one can transfer his special rights in such articles to another. But such a transaction is not called Baiʿ in legal works; it is usually devoted by other terms e. g.: "withdrawing the hand" from some thing, "letting fall" one's right to a thing, "getting rid of" a thing; acquisition in such cases is called "acquisition of the actual control" (*Istīlāʾ*) and the handing over *Tamkīn* i. e. to put any one in a position to acquire anything.

The mere delivery of the thing sold and of the purchase money is not sufficient legally. A purchase to be binding at law, requires a formal declaration binding the seller (the tender: *Īdjāb*) and a declaration of agreement by the buyer (the acceptance: *Ḳabūl*). Only with things of very little value do the Muhammadan lawyers regard an exchange without further formalities as valid. The closing of a contract by *Mulāmasa* or *Munābadha* (i. e. with a sufficient examination of the wares to be sold, either when the purchaser has only "handled" them or immediately after they have been "thrown" to him by the seller), was according to tradition expressly forbidden by the Prophet (cf. *inter al.* Bukhārī's *Ṣaḥīḥ*, *Buyūʿ*, Bāb 62, 63).

Both parties have the right to withdraw from the baiʿ by merely saying so while they are still on the spot where the bargain was agreed to. The contract is thereby terminated (cf. on this so-called *Khiyār al-Madjlis*: Sachau, *Muhamm. Recht*, p. 286 *et seq.*).

Bibliography: Besides the chapter on Baiʿ in the various collections on Tradition and books on Fikh: L. W. C. van den Berg, *De contractu "do ut des" jure mohammedano* (Leiden Doctoral Dissert., 1868); *Over het contract al-Baiʿ in het Mohamm. recht* in *Bijdragen tot de Taal-, land- en volkenk. v. N.-Indië*, 3. Volgr. iv. 109—204 (cf. Veth's review in *Tijdschr. v. N.-Indië* 1869, i. 371—386); *De beginselen van het Mohamm. recht*, 3. ed. 1883, p. 88—110 (cf. C. Snouck Hurgronje's review in *Ind. Gids*, 1884, i. 748—755); E. Sachau, *Muhamm. Recht nach schafiitischer Lehre* (Berlin, 1897), p. 265—315; Th. W. Juynboll, *Handbuch des islāmischen Gesetzes* (Leiden, 1910), p. 264—266; A. Sprenger, *A Dictionary of the Technical Terms used in the Sciences of the Musalmans* (Calcutta, 1862), i. 136—138.

(TH. W. JUYNBOLL.)

BAIʿA, properly means the sealing the contract of sale by clasping the hands (*Lisān*, ix. 374), whence it comes to mean the oath of allegiance taken on the hand of the caliph on his ascending the throne. This ceremony consists in placing the hand in the open hand of the prince as a sign of homage. The formula for it was given by ʿOmar on the day of the Saḳīfa (Ibn Hishām, p. 1015) "I said: Open thy hand, o Abū Bakr; he opened his hand and I paid him homage". This act symbolises the handing over of authority (Ibn Khaldūn, *Prolegomena*, Vol. I., p. 171). Among the Druzes it denotes the oath or pledge taken by all those who embrace their beliefs; this word has been confused by their opponents, with *bīʿa* which signifies the Christian Church and they have drawn erroneous conclusions therefrom.

(CL. HUART.)

BAIBARS I, AL-MALIK AL-ẒĀHIR RUKN AL-DĪN AL-ṢĀLIḤĪ, the fourth Sulṭān of the Baḥrī Mamlūks [see BAḤRĪ], was born in Kipčak in 620 (1223), later sold into Damascus, and in 644 (1246) was taken to Egypt by Sulṭān al-Ṣāliḥ Aiyūb and appointed commander of a section of his bodyguard. He distinguished himself, even in the lifetime of Ṣāliḥ. After the death of the latter in 647 (1249) his son Tūrān Shāh aroused such discontent among the Mamlūks that they murdered him. Baibars took part in this conspiracy and was taken over by the new Sulṭān Aibeg. When the Sulṭān had one of his accomplices hung however he was forced to flee to Syria and stayed with the Aiyūbid princes sometimes at Damascus and sometimes at Karak till the assassination of Aibeg, when he returned to Cairo and was soon entrusted by the new Sulṭān Ḳoṭuz with the important duty of leading the vanguard in the campaign against the Mongols, who had conquered Syria. Ḳoṭuz became master of Syria by the battle of ʿAin Djālūt, in which Baibars distinguished himself by his unflinching courage. The Aiyūbid princes were granted the tenure of the lands they had possessed before the appearance of the Mongols, Baibars, on the other hand, who had been expecting Aleppo as the reward of his bravery, had to go empty-handed and resolved to be revenged for this slight. Conspiring with other Emirs he found an opportunity to slay the Sulṭān while hunting on the way back to Egypt. The commanders of the army and the other Emirs thereupon elected Sulṭān Baibars who had been the murderer of two rulers.

Baibars entered Cairo without opposition towards the end of 658 (1260). He divided the great offices of state among his dependents and for the rest confirmed the governors of provinces in their positions, as well as the Aiyūbid vassals. The governor of Damascus set himself up in opposition as Sulṭān but Baibars was able by bribing his dependents so to weaken him that he was finally able to take him prisoner. Many important tasks awaited the Sulṭān and only a highly gifted, unfeeling, determined, untiring ruler could carry them out. The Egypto-Syrian Kingdom was surrounded by enemies on all sides; in the north, the Christian king of Armenia, in the west along the coast of Syria, the Crusaders, in the interior the murderous Assassins, in the east the Mongols thirsting for booty and revenge, in the south of Egypt the warlike Nubians, and in the west the unconquered Berbers. In addition there was always the danger of another crusade from Europe. At home he feared on the one hand that an ambitious Aiyūbid prince might lay claim to the throne as the last legitimate successor of the Aiyūbid Sulṭān and readily find adherents, while on the other the Shīʿīs, who had been repressed since the time of Ṣalāḥ al-Dīn, were attempting to put an Alid on the throne. Baibars soon found an excellent way of giving himself and his successors the appearance of legitimacy. A scion of the ʿAbbāsids, a son of the Caliph al-Ẓāhir who had escaped the Mongol holocaust (see Baghdād) suddenly appeared in Damascus and came to Cairo on the invitation of the Sulṭān; after the genuineness of his descent had been tested and confirmed, homage was paid to him as Caliph with great pomp and ceremony; he then granted the Sulṭān, as a partner in the government (Ḳasīm al-Dawla), dominion over Egypt, Syria and the lands still to be conquered. The Sulṭān had originally intended to restore the Caliph to the throne of Baghdād and was going to place a well-equipped army at his disposal to enable him to conquer Baghdād, his capital, when on the advice of the prince of Mosul he thought it better to keep him in Cairo under his eye; he therefore gave him a force insufficient for his campaign against the Mongols and in the first battle the Caliph lost his life. Not a shadow of real power remained to his successor and even his speech on his accession breathes a spirit of complete subservience to the Sulṭān. This remained the case till Sulṭān Selim took the last of the Caliphs with him to Constantinople. It was of importance in the Muḥammadan kingdom to the Egyptian Sulṭāns to pose as the pious protectors of the caliphate as they could thereby lay claim to a certain supremacy in the Muḥammadan world. Baibars thus gained a certain influence over the control of Mecca and Medina and was the first to send, as a faithful "servant of the two sanctuaries" a carpet on a *Maḥmal*, (a litter) as is

done to the present day and gifts of gold annually to the holy places. He was able to get on good terms with most Frankish and Oriental rulers. He made treaties with the Hohenstaufen King Manfred and later with Charles of Anjou as well as with James of Aragon and Alphonso of Castile. He made a friendly alliance with the Byzantine Emperor Michael Palaeologos who had driven out the Crusaders; he was also on friendly terms with the Seldjuḳ princes in Asia Minor and the chiefs of Yaman. Not too particular as to his methods, he succeeded in enticing the Aiyūbid prince of Karak to Egypt by promising him on oath that he would be safe and then made away with him and his son. By means of unscrupulous intrigues he managed to throw suspicion on the Mamlūks in the Mongol service at the court of Hūlāgū, so that some were executed and some imprisoned, if they were not sharp enough to escape in time. In this way he was able to deprive Hūlāgū of his best advisers. He often came into contact with the Mongols in the Euphrates district but they were so occupied with their enemies in Central Asia that they could not bring their full force against him. The power of the kings of Armenia next attracted Baibars' attention; he raided their land with barbarous cruelty and wrought unspeakable havoc by his devastation and plundering.

The Crusaders appeared to Baibars to be his most dangerous and hateful opponents; but as they were quarrelling with one another they could not unite on one great common policy. Some exasperated the Sulṭān by petty intrigues and breaches of faith, while others allied themselves with him to revenge themselves on their brothers in the faith.

The reinforcements sent from Europe were insufficient, and the death of Louis IX freed him from his most dangerous Frankish opponent. Baibars was able to break the power of Prince Boemund of Tripolis by depriving him of Antioch, after seven campaigns. He weakened the Templars by taking Ṣafed and Burdj Ṣāfīthā and annihilated the Knights of St. John by capturing their strongest fortress Ḥiṣn al-Akrād. The once so dangerous Ismā'īlīs, also called the Assassins, had also to submit to the all-powerful lord of Syria. Their fortresses, Maṣyāf, Ḳadmūs, Kahf, Khawābī, Manīka, 'Ullaiḳa surrendered one after the other. They became the vassals of the Sulṭān who used their daggers against the lord of Maraḳiya and Prince Edward, afterwards Edward I of England. He was the first of the Sulṭāns of Egypt to extend his dominion to the south with any permanent result; his generals conquered Nubia and king Meshked became his vassal. The Berbers in the West were also subdued.

Baibars thus remained victorious over his enemies. He shrank from nothing to gain his ends. He was sometimes guilty of breaking his word and forging letters to persuade the commanders of hostile fortresses to surrender.

Nevertheless his success was chiefly due to his power of organisation, his quickness and his reckless daring. His whole kingdom was penetrated by a network of post routes, which brought news from the seats of the governors to Cairo with almost incredible swiftness, e. g. from Damascus to Cairo in three days. The Sulṭān with his cavalry moved equally quickly. He often appeared before a town in Syria whose inhabitants believed him to be still in Cairo. His boldest feat was a reconnoitring raid with 40 men against the powerful fortress of Ḥiṣn al-Akrād, and the story seems to us almost incredible that Baibars, disguised as a Shaikh, took part in an embassy to Boemund of Tripolis, to get an idea of the strength of this town. He was always endeavouring to fortify his dominions; he began to rebuild the walls and buildings destroyed by the Mongols and placed garrisons in the more important places. It was he who instituted the custom still in existence of each of the four orthodox sects having its own chief Ḳāḍī. In spite of his moral failings he was the most successful and capable of the Mamlūk Sulṭāns. He died in 676 (1277). He had previously appointed his eldest son Baraka Khān successor in 667 (1269) and had homage paid to him.

(Abu 'l-Fidā'), p. 129, 139, 143 *et seq.*; 149 *et seq.*; Maḳrīzī, *Histoire des Sultans Mamlouks*, trad. par Quatremère; Weil, *Geschichte der Chalifen*, iv. 20—103; Muir, *The Mameluke or Slave Dynasty of Egypt*, pp. 13—42; Ibn Shākir, *Fawāt al-Wafayāt*, Būlāḳ, 1299 (1882), p. 87 *et seq.*, where a full account is given of all his buildings.

(M. Sobernheim.)

BAIBARS, The **ROMANCE** of, is unique among Arabic romances of chivalry as a combination of historic fact, the freest pseudo-historical reconstructions and combinations, purely fantastic imaginations and picaresque adventures. An outline cannot be attempted here, but references will suffice to the descriptions with considerable extracts by Lane in his *Modern Egyptians* (chap. xxii) and to Ahlwardt's further details in the Berlin Catalogue (vol. xx. pp. 114—144). It is evident that the life and exploits of Baibars as the great restorer of Islām, a gallant and suggestive personality moving in brilliant scenes, had powerfully affected the succeeding generations, and that he narrowly missed — principally through the lack of writers of real creative genius and simplicity of imagination — being surrounded by such a garland of stories as the older parts of the *Arabian Nights* have thrown about Hārūn al-Rashīd. In the *Nights* he found only a subordinate and chronologically late place, and the second form of the "Story of Judar" (Weil, iv. 253—312 from a Gotha MS.; see, too, Berlin Cat. xx. p. 146), in which he figures, and the stories told him by his chiefs of police (Breslau text, xi. 321—392 from Habicht's final vol. of Egyptian origin; see my study of his recension in the *Journ. of the Roy. Asiat. Soc.* for July 1909, pp. 688 and 696) show how greatly the story-telling gift had declined. Yet there are good stories in the long romance, but they proved hard to disentangle and tell separately. Until the recent appearance of the whole, only two such stories seem to have been printed, one telling how the Muḳaddam Ibrāhīm al-Ḥawrānī journeyed to Rome (Cairo, 1319) and the other, how Usṭā 'Utmān served Baibars (Cairo, 1321). The whole appeared in fifty parts (Cairo, 1908-1909), the last two of which, however, are given to a supplementary history of Egypt down to the present time, with a sharply Nationalist conclusion. Date and authorship of the cycle are naturally obscure. The great majority of MSS belong apparently to the xviii. century, although the origin

of the whole is ascribed to a certain Ibn al-Dīnārī, and to such officials as the *Kātim al-sirr*, the *Nāẓir al-Djaish*, the *Ṣāḥib*, the *Duwaidārī* (see on these titles, Quatremère in his translation of Maḳrīzī, *Sultans Mamlouks*, vol. i. part i. pp. 115, 119; vol. ii. part ii. pp. 317 *et seq.*), each being said to have contributed a *baḥr* of the whole (printed text, part i. p. 3, Ahlwardt, p. 133). Thus the separate story of the Muḳaddam Ibrāhīm is said to be taken from the second *baḥr* due to the Duwaidārī. Of the same kind is the assertion in another MS. (*Cat. of Arabic MSS in Brit. Mus.* p. 698ᵇ; cf., too, Berlin Cat. p. 143, Nº. 9163) that the narrator is Muḥammad b. Daḳīḳ al-ʿĪd (d. 702), although in his biography given by ʿAlī Mubārak, *al-Khiṭaṭ al-Djadīda*, xiv. p. 135, foot, he is said to have been fond of popular songs (*muwashshaḥ*, *zadjal*, *mawāliyā*). Apparently more historical, though shading off into the fabulous, is a notice in a Berlin MS (Ahlwardt, p. 133) of about 1100 A. H. It gives what it calls the Ḥāzimī Faḳīkī *Sīra* because it was written in Radjab 945 by a certain Ḥāzim al-Maḳdisī who had it from his shaikh the Ḳaiyim of Damascus, Masʿūd b. al-Mudjāwir, and he from the Ḳaiyim Muḥammad b. al-Ṣārim, and he from the Ḥādjdj ʿAbd al-Ghanī al-Ḳarāfī, and he from the Ḳaiyim Abu'l-Fatḥ al-Faḳīḳ, and he from ʿAlī al-Ṭailūnī, and he from Burhān al-Dīn al-Azharī. None of these names can I trace, but something seems to lie behind them. It is plain, however, from the different recensions, that the cycle soon lost any unity it may once have possessed, and was freely recast by collectors and editors. Even the publisher of the printed edition calls himself, quite simply, its *Djāmiʿ* and claims copyright in it.

Bibliography: Rieu, *Supplement to Cat. of Arabic MSS in Brit. Mus.* Or. 4644—4654 (all from Lane's collection); Pertsch, *Arab. Handschr. d. H. Bibl. z. Gotha*, iv. 387—393; Paris Cat., Nos. 3908—3920).

(D. B. Macdonald.)

BAIBARS II, Rukn al-Dīn, the Čāshnegīr, Sulṭān of Egypt and Syria, was one of Ḳalāūn's Mamlūks. During the second reign of Sulṭān al-Nāṣir Muḥammad b. Ḳalāūn (698—708 = 1298—1309) Baibars supported by the Burdjī [q. v.] Mamlūks, shared the actual power with Sallār. When the Sulṭān escaped from the oppressive tutelage of the two Emīrs in 708 (1309) by fleeing to al-Karak, Baibars was elected Sulṭān and took the name of al-Malik al-Muẓaffar. As al-Nāṣir again gained the chief power in 709 (1310) Baibars was soon forced to beg for mercy from al-Nāṣir. He was pardoned and promised the governorship of Ṣahyūn; on his way to Syria, however, he was seized and ignominiously put to death in Cairo.

Bibliography: Maḳrīzī, *Sultans Mamlouks* (trad. Quatremère), ii. 2 passim; Ibn Iyās, i. 149—153; Weil, *Geschichte der Chalifen*, iv. 280—302; Muir, *Mameluke or Slave Dynasty of Egypt*, pp. 63—75. (R. Hartmann.)

BAIBARS, al-Manṣūrī al-Khaṭāʾī, (about 645—725), Mamlūk minister and historian. Ḳalāūn, who purchased and manumitted him, promoted him to the governorship of Kerak, whence he was dismissed by the Sulṭān Khalīl; on the accession of Nāṣir in 693 he was made chief of the *dīwān al-inshā* with the title *dawādār kabīr*, which he retained till 704. In 703 he was employed to repair the ravages caused by the earthquake in Alexandria. He was cashiered in 704 by the viceroy Sallār in consequence of a charge of insolence brought by one of the latter's secretaries; but on the second return of Nāṣir in 709 he was restored to his office, to which were added inspection of the *aḥbās* and the *dār al-ʿadl*. In 711 he was made viceroy (*nāʾib al-salṭana*), but in the following year he was sent to Alexandria and imprisoned there, in which condition he remained till 717, when by the intercession of the viceroy Arghūn he was released; in the following year he made the pilgrimage to Mecca. He was a Ḥanafite jurist, qualified to instruct and give opinions, and founded a Ḥanafite *madrasa* in Cairo. He died in Ramaḍān 725. Further notices of his political activity are to be found in his history, a work in 11 volumes, called *Zubdat al-Fikra fī taʾrīkh al-Hidjra*, from the creation to the year 724; of this the following volumes are at present known to be in existence: iv. (131—252) in Upsala; v. (252—322) in Paris, Bibl. Nat.; vi. (323—399) in Oxford, Bibl. Bodl.; ix. (655—709) in London, Brit. Mus. (A work in the Bodleian collection called *Zubad al-Fikra*, ending at 744, is by a different author). Of another work called *al-Tuḥfa al-Mulūkiya*, extending from 647—721 there is a copy in Vienna, k. k. Bibliothek.

Bibliography: Ibn Ḳāḍī Shuhba (Bodl. MS. Marsh 143); Ibn Iyās; Brockelmann, *Gesch. der arab. Lit.*, ii. 44.

(D. S. Margoliouth.)

BĀIBURT, a town in Asia Minor, the capital of a Ḳaza in the province and Sandjaḳ of Erzerūm, 60 miles from this town, divided into two parts by the Čoruk-Ṣū; it has about 8000 inhabitants; ancient ruins; manufactures of silver vessels and carpets. — The district of Bāiburt comprises 4 nāḥiyas and 169 villages; total population (including the capital) 58,213 souls. It is a fertile country and has numerous bee-farms and trade in wax with France. — The town was besieged and taken by the Kurd chief Muṣṭafā by order of Sulṭān Selīm I during the Persian campaign in the autumn of 920 (1574). In the Russo-Turkish war of 1829 Bāiburt was occupied by the Russians and there was much fierce fighting for its possession. The beauty of the daughters of Bāiburt has become proverbial.

Bibliography: ʿAlī Djawād, *Djoghrāfiyā Lughāti*, p. 153; *Sālnāme* 1325, p. 856; Hammer-Purgstall, *Gesch. des Osman. Reiches*, iv. 191, 205, 210. (Cl. Huart.)

BAIDAR, a Tatar village on the Crimean peninsula, 18 miles south east of Sebastopol (district of Taurus, province of Yalta), the chief town of the Baidar valley (Baidarskaya dolina), famed for its beauty and fertility and often celebrated by Russian poets. (W. Barthold.)

al-**BAIḌĀWĪ**, ʿAbdallāh b. ʿOmar, commentator on the Ḳorʾān, was a son of the chief justice of Fārs under the Atabeg Abū Bakr b. Saʿd (613—658 = 1226—1260), was a judge in Shīrāz and finally settled in Tabrīz where he died according to Ṣafadī in 685 = 1282, according to Subkī in 691 = 1291 (see Suyūṭī, *loc. cit.*) but perhaps not till 216 (1316) (cf. Rieu, *Suppl.* to the *Cat. of Arab. MSS. in the British Museum* p. 116). His chief work, the *Anwār al-Tanzīl wa Asrār al-Taʾwīl*, a commentary on the Ḳurʾan, based on

the *Kashshāf* of Zamakhsharī but considerably amplified from other sources. "His commentary is regarded by the Sunnis as the best and almost as a holy book. He is specially noted for the fact that his works contain much material in small compass; but he is too inaccurate and not complete on any one of the branches with which he occupies himself: historical Exegesis, Lexicography, Grammar, Dialectic, various readings etc.". (Th. Nöldeke, *Gesch. d. Qorâns*, p. 29 (1. ed.): Beidhawii *Commentarius in Coranum* ex codd. Paris., Dresd. et Lips., ed. H. O. Fleischer, Lipsiae 1846—1848, 2 voll.; *Indices ad Beidhawii commentarium in Coranum* confecit Winand Fell, Lipsiae, 1878; D. S. Margoliouth, *Chrestomathia Baidawiana*, London, 1894. The work has also been often printed in the east: Būlāḳ, 1282-1283; Stambul, 1285, 1305 (lith.), 1314; Cairo, 1313 (lith.), 1320-1321; lith. Persia s. l. 1283; Lucknow, 1869, 1873; Bombay, 1869. Of the numerous supercommentaries there have been printed that of Ibn al-Tamdjīd (about 880 = 1475), Stambul 1827, 7 Vols.; that of Muḥammad b. Muṣṭafā al-Ḳūdjawī Shaikhzāde (died 950 = 1543), Stambul 1283, 4 Vols.; that of ʿAbd al-Ḥakīm al-Siyālkūtī (died soon after 1060 = 1626), Stambul, 1271; that of al-Khafādjī (died 1069 = 1658), Būlāḳ 1283, 8 Vols. and that of Ismāʿīl b. Muḥammad al-Ḳōnawī (died 1195 = 1781) on the margin of Ibn al-Tamdjīd. Besides some smaller grammatical and juristic works Baiḍāwī wrote the *Minhādj al-Wuṣūl ilā ʿIlm al-Uṣūl*, on which a commentary by ʿAbd al-Raḥmān b. Ḥasan al-Isnawī (died 772 = 1370), Būlāḳ, 1316 has been printed on the margin of Ibn Amīr al-Ḥādjdj, *al-Taḳrīr wa 'l-Taḥbīr*. His account of Metaphysics was also much used: *Tawāliʿ al-Anwār min Maṭāliʿ al-Anẓār*; Maḥmūd b. ʿAbd al-Raḥmān al-Iṣfahānī (died 749 = 1348) wrote a commentary on it, printed Cairo, 1323 with glosses by al-Djurdjānī (died 816 = 1413) which have appeared independently Stambul, 1305. Finally he wrote in Persian a history of the world from the time of Adam to 674 (1275), called *Niẓām al-Tawārīkh*, cf. de Sacy, *Notices et Extraits*, iv. p. 671—673, Rieu, *Brit. Mus.* ii., 873. As in the Hamburger MS. Orient. 187 — cf. *Katalog der orient. HSS. der Stadt-Bibliothek zu Hamburg mit ausschluss der Hebr.*, Pt. i. The Arabic etc. MSS. by C. Brockelmann, nº. 231 — after the beginning of this work comes the history of China from Rashīd al-Dīn's History of the world, this has been printed under the erroneous title of Abdallae Beidavaei *Historia Sinensis* persice e gemino manuscripto ed. lat. quoque reddita ab Andrea Mullero Greiffenhagio, Jenae 1689.

Bibliography: Subkī, *Ṭabaḳāt al-Shāfiʿīya* (Cairo, 1324), v., 19; Suyūṭī, *Bughyat al-Wuʿāt* (Cairo, 1320), p. 286; Khwāndamīr, *Ḥabīb 'l-Siyar* (Bombay, 1857), iii., 77; Elliot, *History of India*, ii., 252 *et seq.*; Brockelmann, *Gesch. der Arab. Litt.*, i., 416. (C. BROCKELMANN.)

BĀIDŪ, a Mongol prince (Īlkhān) of Persia, grandson of Hūlāgū, the founder of this dynasty; he reigned only a few months. Gaikhātū whom he dethroned was strangled on Thursday the 6th Djumādā II. 694, (21 April 1295) and he himself was killed on Wednesday the 23rd Dhu 'l-Ḳaʿda of the same year (5th October) after the victory of his opponent by Ghāzān. The young and apparently unimportant prince Bāidū, who had been insulted by his cousin Gaikhātū, was recalled by the nobles of the kingdom and raised to the throne. In justification of the deposition and murder of his predecessor it was alleged that Gaikhātū by his vicious life unworthy of the occupant of a throne and his many transgressions of the law (Yāsā) laid down by Čingis Khān, had forfeited his rights. Bāidū gave the same reasons for his rebellion afterwards, when Prince Ghāzān advanced from Khorāsān and demanded that the murderers of his uncle should be handed over. The two rivals came to an agreement; when the struggle was again renewed Ghāzān succeeded in deciding the issue in his favour without bloodshed by the skill of his general Nawrūz. Bāidū was deserted by his adherents and seized at Nakhichewān in Armenia, while trying to escape. During his brief reign he is said by both Christian and Muḥammadan writers to have shown special favour to Christians and their priests and to have thereby given offence to Muḥammadans; cf. the chapter on Bāidū in d'Ohsson, *Histoire des Mongols*, iv. 115 *et seq.* (W. BARTHOLD.)

BAIHAḲ, a district of the province of Nīsābūr in Khorāsān, had at first as its capital, Khusrawdjird, a farsakh (4 miles) from Sabzewār, then Sabzewār itself. One of the villages attached to it is Bāshtīn, the native place of the Emīr ʿAbd al-Razzāḳ, founder of the Sarbadār dynasty. Its inhabitants have always been fanatical Shīʿites. Formerly marble quarries were worked there. Bāshtīn was the birthplace of the Shāfiʿite traditionist Abū Bakr Aḥmad b. al-Ḥusain b. ʿAlī.

al-**BAIHAḲĪ**, AḤMAD B. ʿALĪ BU-DJAʿFARAK, Arab philologist, born in 740 (1077), a pupil of al-Maidānī, lived in strict seclusion in his house and in the old mosque at Nīsābūr, of which he was Imām and died on the 30 Ramaḍān 544 = 31 Jan. 1150. Of his works there has been preserved his dictionary of Arabic infinitives with Persian explanations, the *Tādj al-Maṣādir*, cf. Loth, *A Catalogue of the Arab. Mss. in the Library of the India Office*, Nº. 994—996; *Bibliothecae Bodleianae cod. mss. or. cat.*, i. Nº. 1089.

Bibliography: Yāḳūt, *The Irshād al-Arīb ilā Maʿrifat al-Adīb* (ed. D. S. Margoliouth), i. 414—416; Suyūṭī, *Bughyat al-Wuʿāt* (Kairo, 1326), p. 150; Brockelmann, *Gesch. der arab. Lit.*, i., 293. (C. BROCKELMANN.)

al-**BAIHAḲĪ**, ABŪ BAKR AḤMAD B. AL-ḤUSAIN B. ʿALĪ B. MŪSĀ AL-KHOSRŪDJIRDĪ, Arab author, authority on Tradition and Shāfiʿī Faḳīh born in Shaʿbān 384 (Sept. 994) at Khosrūdjird in the district of Baihaḳ, 20 parasangs from Nīsābūr, obtained on his wide travels, a thorough knowledge of Tradition and of Dogmatics after the doctrine of al-Ashʿarī. Returning home he was soon summoned to Nīsābūr, to expound Shāfiʿī Fiḳh according to his own great Compendium of the legal opinions of the master (*Kitāb Nuṣūṣ al-Imām al-Shāfiʿī* in 10 Vols. cf. *Bibliothecae Bodleianae codd. mss. or. cat.*, i., 828). He died there on the 10th Djumādā I. 458 = 9th April 1066. An autograph copy of his great compendium on Tradition *Kitāb al-Sunan wa 'l-Āthār* or *Kitāb al-Sunan al-Kabīr* is preserved in Cairo (cf. *Fihrist al-*

Kutubkhāne al-Khidīwīye, i., 352). A criticism of this work, entitled *al-Djawhar al-Naḳī fi 'l-Radd 'alā 'l-Baihaḳī* by 'Alī b. 'Othmān b. al-Turkomānī (died 747 = 1346) was printed in two volumes, Haidarābād, 1316 (1898). On his conception of prophecy cf. K. Nylander, *Über die Upsalaer Hs. der Dalā'il al-Nubuwwa des Abū Bakr Aḥmed al-Baihaḳī*, Upsala, 1891. Of his chief work on Ethics, the *al-Djāmi' al-Muṣannaf fī Shu'ab al-Imān* (on the title cf. Goldziher in the *Revue de l'Histoire des Religions*, xxvi, 133 *et seq.*) there are Mss. in Cairo (*Fihrist*, i. 324), in the Escurial (H. Derenbourg, *Les mss. arab. de l'Escurial*, ii. 743, 1) and in Leipzig (Vollers, *Katalog. der isl. u. s. w. Hss. der Universitätsbibliothek zu Leipzig*, N°. 319). Letters to 'Amīd al-Mulk and al-Djuwainī, father of the Imām al-Ḥaramain are given by al-Subkī, *Ṭabaḳāt*, i. 272 *et seq.*; iii. 210 *et seq.*

Bibliography: Ibn Khallikān, N°. 27; Yāḳūt, *Mu'djam*, 804; Subkī, *Ṭabaḳāt al-Shāfi'iya*, iii. 3; Suyūṭī, *Ṭabaḳāt al-Ḥuffāẓ*, xiv., 13; Wüstenfeld, *Geschichtschreiber*, 203; do. *Shafi'iten*, 407; Brockelmann, *Gesch. der arab. Lit.*, i., 363. (C. BROCKELMANN.)

BAIHAḲĪ, ABU 'L-ḤASAN 'ALĪ B. ZAID, also called IBN FUNDUḲ, historian. Of his works there has only survived his *Ta'rīkh-i Baihaḳ* (Persian), a history of his native district of Baihaḳ in Khorāsān which was completed on the 4th (according to Rieu the 5th) Shawwāl 563 (12th July 1168); cf. Pertsch, *Verzeichnis* (Berlin), p. 516 (N°. 535); Rieu, *Supplement* (London), p. 60 *et seq.*; E. Kahl, *Persidskiya, arabskiya i tureckiya rukopisi Turkestanskoi publičnoi biblioteki*, N°. 9a, p. 8 *et seq.* No manuscripts have as yet been discovered of his work in Arabic on universal history mentioned by Ḥādjdjī Khalīfa (v., 544), entitled *Mashārib al-tadjārib wa ghawārib al-gharā'ib*; quotations from it are given by Ibn al-Athīr (ed. Tornberg, xi. 249) and in the *Ta'rīkh-i Djihān-kushāy* of Djuwainī (cf. Barthold, *Turkestan* etc., ii. p. 32). According to Djuwainī the work was a continuation (*dhail*) of the *Tadjārib al-umam* of Ibn Miskawaih; it is fairly certain that its title contains an allusion to this work; nevertheless the author himself (in his *Ta'rīkh-i Baihaḳ*) describes his work as a continuation of the *Ta'rīkh-i Yamīnī* of 'Utbī.

Nothing is known either from his own works or from other sources of the career of this author. As to his family, he tells us that his grandfather Abū Sulaimān Funduḳ was summoned as Ḳāḍī and Muftī (*bakadā wa fatwā dādan*) from Siwār near Bust to Nīshābūr by Sulṭān Maḥmūd of Ghazni and his vizier Abu 'l-Ḥasan Maimandī, and afterwards on giving up his office acquired an estate in the district of Baihaḳ. We further learn that the author's father was born on 1th Shawwāl 447 (24th Dec. 1055), died on 27th Djumādā II 517 (23th August 1173) and spent 20 years in Bukhārā. The author himself was at the court of Sulṭān Sandjar in Ṣafar 543 (21th June—19th July 1148), when the latter received a query (apparently on religious matters) in Arabic and Syrian from the Georgian king Demetrius. Baihaḳī was commissioned to answer this question in the same two languages and performed his task very successfully (Cod. Mus. Brit Or. 3587, fol. 94a—b *et seq.*).

The *Ta'rīkh-i Baihaḳ* contains a full account of the geography of the Baihaḳ district, of its taxation, of various princes and governors, of men born in Baihaḳ, who had distinguished themselves by religious or political activity etc. This small work which is preserved in good manuscripts is really worth editing; as a source for information on the history of culture it has been almost entirely neglected and is not even mentioned in the *Grundriss der Iranischen Philologie*. Some notices from it have been given by W. Barthold in his *Turkestan v epochu mongolskago našestvija* as well as in his essay *Zur Geschichte der Ṣaffāriden* (*Orientalische Studien, Festschrift zu Ehren von Th. Nöldeke*, Vol. i. p. 175). (W. BARTHOLD.)

AL-**BAIHAḲĪ**, IBRĀHĪM B. MUḤAMMAD, Arab author, of whose life nothing is known beyond that he belonged to the circle of Ibn al-Mu'tazz and wrote the adab book *Kitāb al-Maḥāsin wa 'l-Masāwī*, (ed. by F. Schwally, Giessen, 1902; reprinted Cairo, 1906) during the reign of the Caliph al-Muḳtadir (295—320 = 908—932).

(C. BROCKELMANN.)

BAIHAḲĪ, ABU 'L-FAḌL MUḤAMMED B. ḤUSAIN, Persian historian, author of a history of the Ghaznawids in more than 30 volumes. Of this work only a small part (end of Vols. v.—ix., and the beginning of Vol. x.) containing the history of the Sulṭān Mas'ūd i. (421—432 = 1030—1041) has been preserved. The work is usually quoted as the *Ta'rīkh-i Baihaḳī* and was first edited by Morley under this title in Calcutta (1862) in the *Bibliotheca Indica* and again in Teheran more recently (lith., 1307 = 1889-1890). Whether the author himself had given a title to the whole work is not known; in the surviving volumes the preceding part, devoted to the reign of Sulṭān Maḥmūd is referred to as the *Ta'rīkh-i Yamīnī* (e. g. ed. Morley, p. 158) or as the *Maḳāmāt-i Maḥmūdī* (p. 176). There are notices (which have not as yet been made known) of the author and his work in the *Ta'rīkh-i Baihaḳ* of his countryman Abu 'l-Ḥasan Baihaḳī (vi. = xii. century) [cf. the article on this historian]. Even Abu 'l-Ḥasan had only seen various parts of the great work, and not a complete copy. Quotations from the earlier volumes (on Sulṭān Maḥmūd) are found as late as the ixth (xvth) century in Ḥāfiẓ Abrū (Barthold, *Turkestān*, i. p. 157 *et seq.*); no quotations are known as yet from the later volumes (on Mas'ūd's successors).

Baihaḳī himself tells that he was 16 years of age in 402 (1011-1012) and 65 (p. 246) in Dhu 'l-Ḥidjdja 450, so that he must have been born about 386 = 996. Abu 'l-Ḥasan gives his birthplace as the village of Ḥārithābād in the district of Baihaḳ. For 19 years he was in the diplomatic chancellory (*dīwān-i risālat*) of the Ghaznawids under his teacher Abū Naṣr Mishkān (p. 759) who died in the beginning of the year 431 (autumn 1039) so that he must have been in the service of the state from about 412 (1021-1022). Baihaḳī was considered too young to be the successor of Abū Naṣr; Abū Sahl Zūzanī who was appointed in preference to him, was not well disposed to him and is said to have afterwards done him much harm. Baihaḳī sent in his resignation but Sulṭān Mas'ūd gracefully declined to accept it. The succeeding rulers were not so well disposed to him; Baihaḳī speaks of a misfortune which befell him at this time the consequences of which he still suffered from 20 years later (in reality a little less) while writing his work; he

confesses that he was not entirely innocent in the matter but says he was dismissed on account of his youth (p. 754; he was then about 45 years of age!). He was at a later period again active in the service of the state; under ʿAbd al-Rashīd (1044—1053) he was at the head of the *dīwān-i risālat* (p. 122). Towards the end of this reign he was, as Abu ʾl-Ḥasan tells us, condemned by the Ḳāḍī to imprisonment for illegal engraving of seals (*muhrzanī*). When the dynasty, a little later, was displaced by Toghrul, the usurper had the officials of his predecessor ʿAbd al-Rashīd imprisoned; Baihaḳī also had to exchange imprisonment by the Ḳāḍī (*zindān*) for detention in a fortress (*ḳabr-i ḳalʿa*). Toghrul's reign lasted only 57 days; on the fall of the usurper and the restoration of the previous dynasty, all the officials, including Baihaḳī were released. According to Abu ʾl-Ḥasan, Baihaḳī did not leave the civil service till after the death of Sulṭān Farrukhzād in 451 (1059) and then devoted himself to his literary works; the greater part (to p. 466) of the history that has survived to us was however written under Farrukhzād; the author was then in the "corner of unemployment" (p. 121) having resigned some time previously. According to Abu ʾl-Ḥasan he died in Ṣafar 470 (24 Aug.—21 Sept. 1077).

The *Taʾrīkh-i Baihaḳī* is not a history in the strict sense of the word, of a Kingdom or district, but contains the memoirs of a Persian official on the life of his rulers and their court and on the home and foreign affairs transacted or neglected at this court. The author says (p. 438) that his work is not a "*taʾrīkh*" in the usual sense of the word in which we only read that "some one killed this one or some one killed that one"; all that he had seen and experienced, is described "in length and breadth" (p. 10 *ṭūl wa ʿarḍ*). We therefore have a detailed, first-hand account of life at the court of the Ghaznawids under Masʿūd as well as of the methods of government in the Kingdom founded by Sabuktegin and Maḥmūd such as we possess perhaps for no other Oriental Kingdom of the middle ages. The work is also an important source for the history of earlier dynasties, especially of the Sāmānids, on account of its numerous excursus on the history of earlier times; its utility is somewhat decreased by the absence of an index in Morley's edition. Numerous excerpts are given by Elliot, *History of India*, ii. 53—134, and by A. Biberstein-Kazimirski in the introduction to his edition of the *Dīwān* of Manučahrī (Paris, 1887, p. 17—131).

The portion of the work which still survives was composed during the years 450 and 451 (1058-1059). It is often said (even by Abu ʾl-Ḥasan Baihaḳī) that the work began with the beginning of the dynasty; but Baihaḳī himself expressly gives 409 (1018-1019, p. 316) as the year with which he began his narrative; it was on this account that his friend Maḥmūd Warrāḳ closed his history (about which we know nothing else) with this year. From the whole plan of the work it is incredible that the long period between the beginning of the dynasty and the death of Sulṭān Maḥmūd could have been treated of in 4½ volumes. Abu ʾl-Ḥasan says that besides his historical work, Baihaḳī also composed a handbook for officials (under the title of *Zīnat al-Kuttāb*) and gives some interesting extracts from this work, which is otherwise quite unknown. (W. BARTHOLD).

BAIḤĀN AL-**ḲAṢĀB**, a district in South Arabia to the north of the country of the Raṣṣāṣ and Upper ʿAwāliḳ (q. v.), the most important of the lands lying between Yaman and Ḥaḍramawt. It was a centre of early Arab culture and has many ruins and numerous inscriptions. The population, the most prominent in all South Arabia, is capable and enterprising, and the ground very fertile because of the numerous springs. Baiḥān al-Ḳaṣāb is inhabited by a tribe, the Muṣʿabain i. e. the two (sons of) Muṣʿab, Aḥmad and ʿArif from whom the two branches of the tribe, the Āl Aḥmad and the Āl ʿArif, who live at enmity with one another, take their names. They are allies of the Ḥarīb and hostile to the Raṣṣāṣ and the Emīr of Maʾrib.

The most important town in Baiḥān al-Ḳaṣāb is al-Ḳaṣāb, also called Ḥiṣn ʿAbd Allāh (after a son of Aḥmad b. Muṣʿab), the residence of the ʿĀḳils of all the Muṣʿabain, with 400 houses, 12 *ḥiṣn* and 5 mosques. A noble family of great antiquity which is mentioned as early as Hamdānī in his *Djazīra*, still lives in al-Ḳaṣāb. The Jews who are here craftsmen (goldsmiths and weavers) have a quarter of their own called Shiḳḳha al-Yahūd, with 50 houses. The trade of al-Ḳaṣāb is very important and a market is held every day at which the products of the country, especially cotton, are offered for sale. Of the other towns in Baiḥān al-Ḳaṣāb we must also mention al-Fārīʿ (with 30 houses and 3 *ḥiṣn* on the left bank of the Wādī Baiḥān, near which are the famous ruins of Mariama with many inscriptions, and al-Haradja (with 200 houses and 5 *ḥiṣn*) where the ʿĀḳil of all the ʿArif lives.

Of mountains in Baiḥān al-Ḳaṣāb there must be mentioned, besides the two isolated al-Ḳarnain which command the Wādī Baiḥān, the Dhirʿ Raidān (2200 feet high in the form of a long ridge), which is mentioned in Sabaean inscriptions, on the Wādī Khirr and the Kalʿa Raidān. This mountain which was famous even in antiquity, is still held in great reverence and is a place of pilgrimage for the people of Baiḥān, who ascend the Kalʿa Raidān on the fifth day of the ʿArafa festival with their families (except their women) and sacrifice to the local deities; on the fourth day they descend and are received by those they have left at the foot of the mountain amid shouts of exultation and cries of joy from the women.

Baiḥān al-Asfal (also called Bilād al-Sāda and al-Ashrāf) is a continuation of Baiḥān al-Ḳaṣāb; it consists of the four quite small territories of Ḥīmā, al-Shaṭṭ, al-Hakba with the town of al-Ḥīma (with 250 houses and 3 *ḥiṣn*) and ʿAsailān (a town of 200 families and 4 *ḥiṣn*).

Bibliography: Hamdānī, *Djazīra* (ed. D. H. Müller), p. 94, 98 and Index s. v. Baiḥān; H. C. Kay, *Yaman, its Early Mediaeval History* (London, 1892), p. 105, 126; C. Landberg, *Arabica*, v. (Leiden, 1898), i. Beyḥān el-Ḳaṣāb, p. 3—63, ii. Beyḥān el-Asfal, p. 67—77; H. Maltzan, *Reise in Südarabien* (Braunschweig, 1873), p. 310—313. (J. SCHLEIFER.)

AL-**BAIHASĪYA**, name of a branch of the Khāridjites, called after their founder Abū Baihas (q. v., p. 80).

BAIKAL, a large lake in Siberia; it belongs to the watershed of the Yenisei. The lake itself seems to have remained unknown to the Muḥammadan geographers in the Mongol period.

The lands around Baikal are called Barkūdjin or Barkūdjin-Tūkūm and the people who live there, the Barkūt (the *t* at the end of this word is the Mongol plural ending) by Rashīd al-Dīn (cf. the Persian text in Berezin's edition, *Trudi Vostočnago Otdělenija Archeologičeskago Obščestva*, Part xiii. p. 180). The first name is apparently still preserved in the name of a river, the Barguzin, which flows into the Baikal from the east. In the Turkish inscriptions of Orkhon (viii[th] century A. D.) the people of this district are called Bayırku; whether, as Hirth supposes (*Nachworte zur Inschrift des Tonjukuk*, p. 7) Lake Baikal has taken its name from them is more than questionable. Among the Yakuts at the present day the word Baikal means "sea". The name is also explained as the Turkish *bai kul* (rich lake); this explanation also cannot be supported by any original authorities. In Europe, Lake Baikal first became known by the discovery and conquest of the land by the Russian Cossacks (in the xvii[th] century). (W. BARTHOLD.)

BĀIĶARĀ, a prince of the house of TĪMŪR, grandson of its founder. He was 12 years old at the death of his grandfather (Sha'bān 807 = February 1405) so he must have been born about 795 (1392-1393). His father 'Omar Shaikh had predeceased Tīmūr. Bāiķarā is celebrated by Dawlat-Shāh (ed. Browne, p. 374) for his beauty as a second Joseph and for his courage as a second Rustam; he was prince of Balkh for a long period. In the year 817 (1414) he was granted Lūristān, Hamadān, Nihāwand and Burūdjird by Shāh Rukh; in the following year he rebelled against his brother Iskandar and seized Shīrāz but was afterwards overcome by Shāh Rukh. Pardoned and allowed to go to Prince Ķaidū at Kandahār and Garmsīr, he stirred up a rebellion there too however and was seized by Ķaidū in 819 (1416-1417). Shāh Rukh pardoned him again and sent him to India; nothing further is known of him. This account which is based on Ḥāfiẓ-i Abrū does not agree with what Dawlat-Shāh tells us; according to the latter (*loc. cit.*) he went of his own accord from Makrān to Shāh Rukh, was sent by him to Samarķand and there put to death at the instigation of Ulugh-Beg; according to other accounts he was put to death at the court of Shāh Rukh himself (in Herāt). The year 819 is given by other authorities also as the year of Bāiķarā's death. According to Bābur (ed. Beveridge, f. 163 b.) the name Bāiķarā was also borne by a grandson of this prince, the elder brother of Sulṭān Ḥusain; this second Bāiķarā was for many years Governor of Balkh.

Bibliography: The history of the events of the first decades of the ix[th] (xv[th]) century is well-known to us from the *Maṭla' al-Sa'dain* of 'Abd al-Razzāķ Samarķandī [q. v.], following Ḥāfiẓ-i Abrū; cf. the extracts (for the years 807—820) in Quatremère, *Notices et Extraits*, Vol. xiv. part 1. On the original text of Ḥāfiẓ-i Abrū preserved in a MS. in the Bodleian Library (Elliot 422) cf. W. Barthold in *al-Muẓaffarīya* (*Sbornik statei učenikov bar. Rozena*, St. Petersburg, 1897), p. 25 *et seq.* (W. BARTHOLD.)

AL-**BAILAMĀN**, the original place of manufacture of the swords known as *al-bailamānīya*, is sometimes located in India and sometimes in Yaman; cf. Schwarzlose, *Die Waffen der alten Araber* (Leipzig, 1886), p. 133.

BAILO. [See BALYOS.]

BAINA (A.), Strictly Acc. constr. of the substantive *Bain*[un], interval, then a preposition meaning "between". — *Baina baina* is an adverbial expression, which means "of middle quality, of middle worth"; *al-Hamza 'llati baina baina* is "a sound between Hamza and the semi-vowel (i. e. Alif) which corresponds to the vowel following the Hamza" (*Lisān*, xvi. 214). According to our method of expression this means: when Hamza is between two vowels, the glottal stop is omitted in certain dialects — among the Ķoraish and particularly among most of the Ḥidjāz (Ibn Ya'īsh, p. 1303, 1) — but neither in vowel-sequences containing *u* and *i* did any transitional vowel sound arise, nor was *a-a* contracted. In other words, this kind of Hamza is not a sound but what we, following Sievers' *Phonetik* (5 Ed., § 408) might call the "imperceptible" or "direct" transition from vowel to vowel (but without forming a diphthong). The Arab alphabet, which could not represent two vowels in direct succession, was to blame for this awkward conception. This sort of transition was not employed only in the sound sequences *ia*, *ua* (Sībawaihi, ed. Derenbourg, ii. 169, ...; al-Zamakhsharī, *Mufaṣṣal*, 2. ed. p. 166, ...); in these cases the transitional sound appeared (*iya*, *uwa*) especially when there was a *Takhfīf*.

Bibliography: Sībawaihi (ed. Derenbourg), ii. 168—176; al-Zamakhsharī, *Mufaṣṣal* (2. ed.), p. 166—167; Ibn Ya'īsh, p. 1302—1310; cf. also the Art. ALIF. (A. SCHAADE.)

BAIRAĶ (T.) Banner = Arab. *Rāya*. — Bairakdār = standard-bearer. For Muṣṭafā Bairakdār, see the Article MUṢṬAFĀ.

BAIRAM, an Osmanli-Turkish word which denotes the two great Musulman festivals: *Küčük-bairam* "the little festival", also called *Sheker-bairam* "feast of sweets" on account of the custom of making presents of sweetmeats then, is the festival on the breaking of the fast (*'īd al-fiṭr*) which lasts three days. The *büyük-bairam*, "the great festival", usually called *ķurbān-bairam*, "feast of the sacrifice", is the *'īd al-aḍḥā* which lasts four days. A *rikāb-i humāyūn*, "official reception", is held at the Imperial Palace on each of these two festivals. (CL. HUART.)

BAIRAM 'ALĪ-KHĀN, Prince of Merw (1197—1200 = 1782-1783—1785-1786). His father was descended from the 'Izzaldinlu branch of the family of Kadjār which had ruled in Merw from the time of 'Abbās I; his mother was of the Turkoman tribe the Salor; he himself enjoyed among the Turkomans the reputation of being a warrior of unparallelled bravery. In the war against Murād-Bī (Shāh Ma'ṣūm) of Bukhārā he was led by his fearlessness into an ambush and fell fighting; his head was taken to Bukhārā and exhibited on the place of execution. His second son Muḥammad Karīm succeeded him in Merw; his eldest son Muḥammad Ḥusain who had devoted himself to learning and obtained the name of being the "Plato of his age" (*Aflāṭūn-i Waķt*) remained in Mashhad. Cf. Mīr 'Abd al-Kerīm Bukhārī, *Histoire de l'Asie Centrale* (ed. Schefer), p. 58 *et seq.*; V. Žukowski, *Razvaliny Starago Merva* (St. Petersburg, 1894), p. 83 *et seq.*

A small fortress (about 900 yards long and 600 wide) in the southern part of the ruins of the ancient Merw, bears the name of Ķal'a-i Bairam 'Alī Khān and has been recognised by V. Žukowski

(*Russalini Starage Merwa*) as the latest foundation on this site. In a wider sense the name "Bairam 'Alī" is applied to the ruins of the ancient Merw generally so that the name has also been given to the railway-station near the ruins as well as to the Imperial estates (*Gosudarstvo imjenija*) lying there. (W. BARTHOLD.)

BAIRAM KHĀN, KHĀN-KHĀNĀN, whose name is also spelt Bairām, was the son of Saif 'Alī Beg, and the fourth or fifth in descent from 'Alī Shukr Turkaman. 'Alī Shukr (cf. Bābur's *Memoirs*, ed. Erskine, p. 30), belonged to the Bahārlū tribe, and held large possessions in Hamadān etc. His son or grandson Shīr 'Alī, who seems also to be known as Pīr 'Alī, was an officer of Djahān Shāh Barānī of the Black Sheep. When the dynasty of the Black Sheep was overthrown by Uzun Ḥasan, Shīr 'Alī entered into the service of Abū Sa'īd, and when that prince was put to death in 1469, he became an officer of his son Sulṭān Maḥmūd Mīrzā. He stayed with him at Ḥiṣār Shādmān, and there his daughter Pasha Begam became Sulṭān Maḥmūd's wife.

From Ḥiṣār Shīr 'Alī went to Kābul and then to Shīrāz, where he was defeated by the king of that country. During his flight, he was seized and put to death by the servants of Sulṭān Ḥusain of Herāt. Shīr 'Alī's son Djān 'Alī Beg settled in Badakhshān, which included Kundus, and became a servant of Bābur, as also did his son Saif 'Alī, who, according to Ferishta, died as governor of Ghaznī. It is Djān 'Alī who is referred to in Bābur's *Memoirs* (ed. Erskine, 350) under the years 903, 905, 910, and also under the year 933 A. H. Bairām was born in Badakhshān, and is said to have also been in Bābur's service, but if so, this could only be in his early youth. He was educated at Balkh and appears to have been an assiduous student. Afterwards he came to Kābul, and accompanied Humāyūn to India, and was present at the disastrous battle of Kanawdj. After that he took refuge with a Hindu Zamīndār in Sambhal, which had been Humāyūn's appanage. He was not allowed, however, to remain there, for Shīr Shāh sent for him and endeavoured to induce him to enter his service. Bairām refused, saying in reply to a remark of Shīr Shāh, that no one who was loyal to his master would ever come to disgrace. He and a companion then made their escape, but they were recaptured, and Bairām was only saved by the devotion of his companion, who persuaded the captors that he was Bairām. Bairām fled to Gudjarāt where Sulṭān Maḥmūd offered him service. But he pretended a desire to go on pilgrimage, and was allowed to go to Surat. There he turned back and eventually joined Humāyūn in Scinde. He accompanied his master in his flight to Persia, and distinguished himself at the court of Shāh Ṭahmāsp by his address in sports. He was Humāyūn's general in Afghānistān and India, and was no doubt the real cause of Humāyūn restoration. He won the battle of Māchīvāra (in the Ludhāna district) in 1555, and it was probably due to him, as much as to Humāyūn, that the humane order was passed which exempted the women and children of the vanquished Afghāns from being enslaved. At the time of Humāyūn's sudden death, Bairām was with Akbar in the Pandjāb. As soon as he received the news, he, at Kalānūr, proclaimed Akbar as emperor, and caused him to be enthroned (February 1556). When Tardī Beg was disgracefully defeated at Delhi by Hīmū, Bairām caused him to be put to death, and this severity is justified by Ferishta. Bairām was with Akbar at the battle of Pānīpat in November 1556, and it was he, we regret to say, who killed with his own hand the wounded captive, Hīmū of Rewārī. Bairām's conduct in Tardī Beg's case, and his minute regulations about Akbar's pleasures (see Khāfī Khān, I, 134) show that he would not have brooked his ward's interference. In fact, he looked upon himself as being in the place of Akbar's father and he had the title of Khān Bābā i. e. the Khān-Father.

In 1557 Akbar, in fulfilment of a promise made by his father, gave his cousin Salīma Begam in marriage to Bairām, and the wedding was celebrated with great pomp al-Djālandur. Previous to his marriage with Salīma, Bairām had been married to the daughter of an Indian Musalman, Djamāl Khān of Mewāt, and she was the mother of Bairām's famous son 'Abd al-Raḥīm. Neither he nor Akbar had any children by Salīma. Bairām's overbearing manners, and the influence of Akbar's nurse, Māham Anaga, led to a breach between guardian and ward. Bairām was at first disposed to submit and to renounce his authority, but the conduct of his enemies stung him into resistance. He failed and was magnanimously forgiven by Akbar. He set off on pilgrimage to Mecca but was assassinated at Pattan in Gudjarāt by an Afghān in consequence of a bloodfeud (31 January 1561). His body was afterwards removed by his nephew to Mashhad.

Bairām was a Shī'ī and it is an evidence of his greatness and a credit to Badā'ūnī, that this bigoted Sunnī has said so much in his favour. He had a literary turn and his *Dīwān* is still in existence. Badā'ūnī and Ferishta have given several extracts from his verses. There are accounts of him in the *Akbarnāma*, and in Ferishta (when chronicling his death), and in the *Ma'āṯir al-Umarā'* by Shāh Nawāz Khān (I, 381). It is chiefly from this last that Blochmann's notice in his translation of the *Ā'īn-i Akbarī*, p. 315 is taken. There is also a long and interesting account of Bairām in the Hindustānī work called the *Darbār-i Akbarī*, pp. 157—196, by Shams al-'Ulamā' Muḥammad Ḥusain. (H. BEVERIDGE.)

BAIRAMĪYA, an order of Dervishes, founded by Ḥādjdjī Bairam of Angora. The founder died there in 833 (1429-1430). His grave adjoins the ruins of the temple of Roma and Augustus, the walls of which bear the famous inscription, the Monumentum Ancyranum. The Bairamī Order is a branch of the Nakshbandis, which is represented in Turkey in Europe. In Constantinople it has settlements in Stambul, Eyyūb, Skutari and Kāsim-Pasha.

BAIRŪT (also written BEIRUT, BEYROUTH and pronounced BERŪT), a town on the Syrian coast, 23° 54′ n. l., lying on the Bay of St. George at the foot of Mount Lebanon of which the town is the natural commercial centre; it does not, however, belong to the autonomous district of Lebanon but is the headquarters of an independent Wilāyet.

Bairūt is an ancient Phoenician town which is mentioned as early as the Tell al-ʿAmarna tablets (cf. *Zeitschr. d. Deutschen Palästina-Ver.* xxx., 1907, p. 13 *et seq.*). An independent kingdom about 1400 B. C., next belonging to Gebal (Byblos), the town fell into the hands of the Egyptians in the time of the Diadochi from whom it was regained by Antiochus III, the great. The town was destroyed by the Syrian Diodotos Tryphon in 140 B. C., rebuilt in the time of Augustus by Agrippa, and made a Roman Colony (Colonia Julia Augusta Felix Berytus). In the following centuries Bairūt was famous for its academy of Rhetoric, Politics and Law; even the earthquake which did much damage to the town in 349 A. D., did not affect the prosperity of its schools. When in 529 another earthquake destroyed the town, it recovered only with difficulty and so fell at once before the advancing Arab hosts under the command of Abū ʿUbaida.

A period of renewed prosperity for Bairūt began with Muḥammadan rule. Muʿāwiya the first of the Umaiyads brought colonists from Persia to people the town and the whole district; he also had the ships built here with which the first naval expeditions were undertaken. Bairūt thus became — as it now again is — the harbour of Damascus. Intellectual activity was again quickened and a series of scholars and traditionists worked in Bairūt; the geographer Yāḳūt calls it a famous city.

The Crusades brought new vicissitudes. Balduin I of Jerusalem captured Bairūt after a siege of two months on the 27th April 1110; in 1187 it was regained by Ṣalāḥ al-Dīn, in 1197 regained by the Crusaders and held till 1291. In the Turkish period we find the town in possession of Emirs of the house of Maʿn of whom the famous Druse prince Fakhr al-Dīn (1595—1634) was pre-eminent in his endeavours to revive culture in the town. The Direct Turkish rule — since 1763 — its being involved in the wars of Ibrāhīm Pasha against Turkey, and the bombardment by the allied English, Turkish and Austrian fleet on the 10—14th Sept. 1840 again reduced the town to a state of desolation.

Bairūt since 1860 has experienced a last, great development, which however has already passed its zenith. The massacre of the Christians in Damascus and Lebanon in that year caused a great influx of Christians to Bairūt; the town became quite Christian in character and the Muhammadans now form only a third of the population, which is about 120,000. Bairūt thereby became not only the largest town in Syria, next to Damascus, but became the intellectual and commercial centre of the whole Syrian-Arabian population. European schools disseminated European education, printing received a great impetus, the union with Damascus by railway (since 1895) and the making of a new harbour (since 1893) facilitated the traffic which consists in the export of products of sericulture and silk weaving, of gold and silver work and in the importation of articles of clothing, foodstuffs, wood tobacco and luxuries. Of recent years Ḥaifā has begun to offer serious competition to Bairūt.

Oppenheim, *Vom Mittelmeer zum Persischen Golf* (1899), i. 1 *et seq.* (J. Hell.)

BAISĀN (Hebrew Bēt Sheʾān, Greek Scythopolis), one of the first towns conquered by the Arabs, in Western Palestine. A system of dams and canals, collecting the waters of several large streams, irrigated and drained the neighbourhood. To defend the town against the invaders, the Byzantine garrison broke through the dams so that vast marshes were formed, which still exist, in which the Arab cavalry were almost engulfed. This obstacle was overcome and Baisān opened its gates. It formed part of the *djund* of Jordan, created by the new masters of Syria. It was the native town of the Faḳīh Radjāʾ b. Ḥaiwa (died about 112 A. H.) famous for his connection with the Omaiyads and his influence over ʿOmar II. It was a flourishing town under the Arabs; it lies on the verge of a large, fertile plain which connects the plain of Esdrelon with the Ghawr; the valley of Jordan was, as it were, a hothouse in which were cultivated the most valuable products, indigo and sugar-cane. To these Baisān owed its prosperity. Some authors place here the tomb of the celebrated Abū ʿObaida ibn al-Djarrāḥ, one of the conquerors of Syria. Its palm-trees were famous — the Ḥadīth mentions them — and its wine also which was exported as far as Ḥidjāz. Situated on the route of armies setting out from Damascus or from the Mediterranean coast it suffered much during the Crusades; several battles were fought on the neighbouring plains. Taken by Godfrey de Bouillon, abandoned during the wars with Saladin, the Crusaders destroyed it in the reign of Baibars. It recovered with difficulty from this blow. Its state in the time of Yāḳūt was similar to that at the present day for he only counted two palm-trees there. In the fifteenth century Maḳrīzī describes it as a little town. After falling to the level of a miserable village it recovered under the Egyptian occupation (nineteenth century). At the present day the property of the Sulṭān with its beautiful gardens, abundantly supplied with water, the seat of a *mudīr*, it has about 3000 inhabitants and is in a fair way to increase in spite of the torrid heat and the unhealthiness of its climate. Baisān has benefitted by the making of the railway from Ḥaifā to Darʿa.

BĀISONGHOR, Ghiyāth al-Dīn, son of Shāh Rukh and grandson of Tīmūr was appointed by his father in 820 (1417) to the office of chief judge at the court; in 823 (1420) on the death of Ḳara-Yūsuf, he took possession of Tabrīz and was appointed governor of Astarābād in Ṣafar 835 (October 1431), but he never ascended the throne; the astrologers having predicted to him that he would not live more than forty years, he gave himself up to dissipation and died at Herāt on Saturday, 7th Djumāda I 837 (19th Decem-

ber 1433) at the age of thirty six. He was buried in the Mausoleum of Princess Gawhar-Shād. An artist and patron of the arts, he was a designer and an illuminator; in the library, which he had founded, forty copyists, pupils of Mīr-ʿAlī, inventor of the *Nastaʿlīk* script, were occupied copying manuscripts. His example had a considerable influence on the development of the art of painting in Persia in the period of the Timurids. In 829 (1425-1426) he caused a critical edition of the Shāhnāmah of Firdausī to be undertaken and a preface to be written to this work, the longer of the two which we possess. The great history of the world by Ḥāfiẓ-i Abrū, begun in 826 (1422-1423) is frequently called after him: *Zubdat al-Tawārīkh-i Bāisonghorī*.

BĀISONGHOR, second son of Sulṭān Maḥmūd of Samarḳand, grandson of Sulṭān Abū Saʿīd (*q. v.*), born in the year 882 (1477-1478), killed on 10th Muḥarram 905 (17th Aug. 1493). In the lifetime of his father he was prince of Bukhārā; on the death of the latter in Rabīʿ II 900 (30th Dec. 1494—27th Jan. 1495) he was summoned to Samarḳand. In 901 (1495-1496) he was deposed for a brief period by his brother Sulṭān ʿAlī and in 903 towards the end of Rabīʿ I (November 1497) finally overthrown by his cousin Bābar. Bāisonghor then betook himself to Ḥiṣār where he was successful in defeating his brother Masʿūd and taking the country with the help of the Beg Khusraw Shāh, who came over to his side; he was soon afterwards betrayed by this same Beg and put to death. Bāisonghor is described by his rival Bābar as a brave and just prince. He was also famous as a Persian poet under the name ʿĀdilī; his Ghazal were so popular in Samarḳand that they were to be found in almost every house (*Bābarnāma*, ed. Beveridge, f. 68 b.)

(W. Barthold.)

BĀISONGHOR, was also the name of a prince of the Aḳ-Ḳuyūnlī in Persia, son and successor of Sulṭān Yaʿḳūb; he only reigned for a short period from 896-897 (= 1490—1492) and was overthrown by his cousin Rustam.

(W. Barthold.)

BAIT (A.), House, with the Arabic article: *al-Bait* the House, i. e. the House of Allāh = the sanctuary at Mecca, also called *al-Bait al-ʿatīḳ* (the ancient house) or *al-Bait al-ḥarām* (the holy house). Geographical names compounded with Bait are frequent, some are given below. — In poetry *Bait* means verse, see Art. ʿARŪḌ.

BAIT AL-DĪN. [See BETEDDIN.]

BAIT DJABRĪN (DJIBRĪN) or, after a popular etymology: BAIT DJIBRĪL (Gabriel's house), a town in southwestern Judea. It was the successor of the neighbouring town of Maresha, destroyed by the Parthians (again discovered in Sandaḥanna) and is first mentioned by Josephus (*Bell. Jud.* iv. 8, 1, where Βηταρὶς is undoubtedly a corruption of the name) and by Ptolemy v. 15, 5 as Βαιτογάβρα and in the Tabula Peutingeriana as Betogabri. In the Talmudic writings the name appears as Beth Gubrin. In Roman Imperial times the town received the name of Eleutheropolis, but this was soon, as was often the case elsewhere, superseded by the older name. The Roman name appears again among the Christians towards the end of the viiith century but Arab writers know only the name Bait Djabrīn and the Crusaders Bethgebrim which was corrupted to Gibelim. The town then fairly important, the seat of a Bishop, was conquered in the time of Abū Bakr by ʿAmr ibn al-ʿĀṣī, who acquired an estate there, called ʿAdjlān after one of his freemen. In the following period it suffered much from repeated attacks and devastations. According to the account of Stephen, a monk of Mār Sābā, Eleutheropolis was completely destroyed in 796 during a war between Arab tribes. It recovered again, however, for Yaʿḳūbī mentions it in 891 as an ancient town inhabited by Djudhāmids and a century later it is described by Muḳaddasī as an important emporium though it had lost much of its former greatness. The Crusaders found it in ruins but built a strong fortress there in 1134. Idrīsī (1155) knows it as a station for travellers; but in the year 1187 it was conquered with many other towns in Palestine by Ṣalāḥ al-Dīn and again destroyed. It was afterwards again rebuilt, for it was one of the towns conquered by the Mamlūk general Baibars in 1244. An inscription over the principal gateway tells us that the fortress was restored in 1551. Bait Djabrīn is now only a village, containing some relics of earlier times.

BAIT AL-FAḲĪH, properly BAIT AL-FAḲĪH IBN ʿUDJAIL i. e. the house of the lawyer Ibn ʿUdjail, the name of a town in the Tihāma of Yaman, south-east of Hudaida, which first rose to prosperity in the xviith century when the harbour of Ghalefka (Ghalāfiḳa) gradually became silted up and was for some time of importance as the centre of the coffee trade. At the present day the town has about 8000 inhabitants. The lawyer, from whom it takes its name, is the famous saint Aḥmad b. Mūsā b. ʿAlī b. ʿOmar, usually called Ibn ʿUdjail who died in 690 (1291). There was at that time a village here called Ghasāna (al-Ghassāna) where the saint was buried; his grave was a popular place of pilgrimage (cf. Ibn Baṭūṭa, ed. Paris, ii. 171) and near it arose the later town of Bait al-Faḳīh. Sometimes the adjective *al-ṣaghīr* (the small) is added to this name to distinguish it from Bait al-Faḳīh al-Kabīr (great Bait al-Faḳīh) which lies further to the north in the modern

district of Bâdjîl and is properly called Zaidiya. Niebuhr mentions this town only casually under the name of Sadie (sic) in the district of Loheia, near the old town, now in ruins, of al-Mahdjam. The old geographers know neither the name Bait al-Faķîh nor Zaidiya so that this town appears to have changed its name in course of time. It is perhaps identical with the al-Maḥâlib mentioned by them.

Bibliography: Niebuhr, *Beschreibung von Arabien*, 226; do., (transl. Heron) *Travels through Arabia*, i. 25 *et seq.*; K. Ritter, *Erdkunde*, xii. 872 *et seq.*

BAIT LAḤM, the ancient Bethlehem. The Arab geographers describe the town as the birth-place of Jesus, where there are an incomparably beautiful church (the Basilika built by Constantine), the grotto where Jesus was born, the graves of David and Solomon (which Christian tradition had previously located here, cf. R. Hartmann in *Zeitschr. des deutschen Palästina-Vereins*, xxxiii. 180 *et seq.*) and the palm mentioned in the Kor'ân (Sûra 19, 25) — a most wonderful tree for there are no other palms in the district. — The description given by Bishop Arculfus of Bethlehem dates from the earliest period of Arab rule, about 670; the town had then a low wall without towers. On the approach of the Crusaders in 1099 the Saracens laid everthing waste except the convent of St. Mary. The Franks rebuilt the town, but in 1187 it was regained with many others by Saladin. In 1244 Bethlehem was devastated by wild hordes from Khwârizm, hostile to the Christians; and in 1489, the strong fortress was razed to the ground, the town-wall torn down and the buildings, including the convent, destroyed. After this blow the town had a chequered existence for a long period and it is only in recent centuries that it has somewhat recovered. Bethlehem, where no Jew dared live in Christian times, has always preserved a marked Christian character even in the Muhammadan period. The number of Muhammadans has always been insignificant. In 1831 the Christian population, which has a reputation for being quarrelsome, drove out the Muhammadans and refused to pay a new tax and after another rising in 1834, Ibrâhîm Pasha had the Muhammadan quarter pulled down.

BAIT AL-MAĶDIS. [See AL-ĶUDS.]

BAIT AL-MÂL, means treasury, especially that of the state and is applied not only to the actual building in which the financial business of the state is transacted but also in a figurative sense to the national exchequer or *Fiscus*. The beginnings of the institution of a Bait al-Mâl may be traced to the time of Muḥammad; for by his time there had arisen the conception of property common to the Muḥammadan community. The Caliph 'Omar is traditionally regarded as the official founder. It was he who first drew up Dîwâns i. e. lists of payments and instituted a system of accountanting; he also recognised that on the gradual transition from the policy of plundering to permanent occupation of the conquered lands it would be impossible for the land to be divided up like portable booty (*ghanîma*). There thus arose an immense common property (*fai'*) the rent from which went to the state treasury. The importance of the Fiscus, which had hitherto been an unknown conception to the Arabs, thereby increased to an enormous extent. Wellhausen (*Arab. Reich*, p. 28 *et seq*) has shown how the opposition to this new conception of the state led to revolts and finally to the murder of the Caliph 'Othmân. The Mâl al-Muslimîn was instituted in contrast to the Mâl Allâh. When political conditions became more stable and the Persian and Byzantine machinery of government was taken over, it naturally followed that the political conception that was in existence before the time of 'Omar and was adopted by him, triumphed and with it the idea of the Bait al-Mâl was carried out, in theory and practice. In practice in place of the Bait al-Mâl of primitive times there was instituted the *Dawâwîn al-Amwâl* i. e. the complicated machinery which was concerned with the income and expenditure of the various Muḥammadan lands. To describe the history of the Bait al-Mâl in practice would mean writing the history of the financial policy of all Muḥammadan countries. This is impossible here. Like all institutions of the early Muḥammadan period however, the theory of the Bait al-Mâl gained importance with the development of Muḥammadan Law. Only those receipts of the Fiscus recognised by theory were regarded as legal while all other sources of the state's revenue were considered *mukûs* i. e. illegal receipts. This distinction survived into the Turkish period and indeed still exists at the present day.

The Bait al-Mâl is controlled by the Imâm or his representative. The following are the main legal sources of revenue of the state.

1. *Kharâdj* (land-tax) and *djizya* or *djâliya* (poll-tax); in each of these the idea of income from the *fai'* is apparent; 2. *Zakât* (alms-tax) also called *'ushr* (tithe) when it is derived from agricultural land; since a merchant's wares are also liable to *zakât* according to definite rules, the tax has been legalised as *'ushr*; 3. *Khums* i. e. the fifth of the booty and receipts that were regarded as similar (e. g. those from mines or Treasure Trove); 4. *Mawârîth ḥashrîya* i. e. the falling of an estate to the Fiscus in the absence of other heirs (*'aṣabât*). This assumes the legal administration of the Bait al-Mâl.

These receipts could not, however, be used for any purpose of the state that the authorities wished; the income from no. 2 was ear-marked for the poor and needy, the collectors of this tax, the *mu'allafa ḳulûbuhum*, the purchase and liberation of slaves, for debtors, those fighting in the holy war and for travellers (Kor'ân, ix, 60). There were also strict rules regarding the application of no. 3, with reference to Kor'ân, viii, 42. Only 1 and 4 are allotted unreservedly to all purposes of the treasury. In practice no one has ever troubled

about these demands of theory and indeed the legal names have sometimes been applied to very illegal exactions. At any rate Muḥammadan rulers have never been so strict and scrupulous with the public monies as countless anecdotes on this point from the early period of Islām would have us believe. It was not till the introduction of European control or of a constitution that this state of affairs improved.

For Bibliography and farther information see the above mentioned technical terms.

(C. H. BECKER.)

AL-**BAIT AL-MUḲADDAS**. [See AL-ḲUDS.]

BAIT RĀS (the original form found in poetry; locally it is also pronounced Bait al-Rās with the emphasis more or less on the article; this spelling is also found in the histories of the Crusades), probably the ancient Capitolias, a ruined site of the Byzantine period, an hour's journey to the northwest of which lies an insignificant village, of the Ḳaimaḳāmat of Irbid (ʿAdjlūn), of the same name. Fortified under the Byzantine Emperors, it is mentioned among the towns conquered in the Djund of Jordan, of which it afterwards formed part.

Its wine was praised by the pre-Islāmic poets, such as Nābigha Dhobyānī and Ḥassān b. Thābit and retained its fame in later times. All trace of cultivation of the vine has now vanished from the village though it is very favourably situated for this enterprise. The Omaiyad Caliph Yazīd I is said to have been born there. One of his successors Yazīd II, a famous drinker came to settle here with his favourite Ḥabāba. Of the Ḳaṣr built by him, we think the remains may be found in the ruins which have been taken for those of an ancient church. Ḥabāba died and was buried here. Yazīd followed her soon afterwards; his tomb is believed to be at Irbid.

Bait Rās is also the name of a village famed for its wine, near Ḥalab.

(H. LAMMENS.)

BAIṬĀR (also BAIṬAR, BIAṬR from the Greek ἱππιατρός), smith, veterinary surgeon. Although the nomad Arabs were fairly advanced in veterinary science from their own experience and practice as herdsmen and cattle breeders, foreign wandering veterinary surgeons, who as the etymology of the name shows came to them from the Byzantine Empire and from Syria, enjoyed a special reputation. Like the wandering wine-merchants these surgeons set up their booths at the great fairs of ʿUkāẓ, Dhu 'l-Madjāz etc. and exercised their art which consisted chiefly in blood-letting and attending to wounds. The Baiṭār appears to have often also applied his skill to human beings, for the ancient Arab poets use the word in the sense of physician.

The oldest work of the Arabs on horses is by Yaʿḳūb Ibn Akhī Ḥizām (died 289 = 902) preserved in manuscripts viz. the *Kitāb al-furūsiya wa shiyāt al-khail*, Brit. Mus. 1305, and the *Kitāb al-baiṭara*, Brit. Mus. 813, Paris, Bibl. Nat., Nº. 2815, 2823. (J. HELL.)

AL-**BĀʿITH** (A.), the "Awakener" (on the day of the Resurrection) one of the 99 names of Allāh.

BAIYINA (A.), Proof. Name of Sūra xcviii.

BAIYŪMĪYA, a religious order, founded by Sīdī ʿAlī b. al-Ḥidjāzī b. Muḥammad, born at Baiyūm in Egypt in 1108 (1696). The order belongs to the Ḳādiriya. Its founder, *muḳaddam* of the Khalwatiya, renewed the ritual of the Badawiya, to which he gave a more stimulating character and made stricter by more stringent exercises. There are settlements of this order in Arabia (Djidda and Mecca) in the Euphrates and Indus valleys; the mother-Zāwiya is in a village near Cairo. The *dhikr* of the order consists in calling out *yā Allāh!* with an inclination of the head and crossing of the hands on the breast, followed by raising the head and clapping the hands.

BAḲʿA. [See BUḲʿA.]

BĀḲALAMŪN. [See ABŪ ḲALAMŪN, p. 94.]

BAḲAR ʿĪD (vulg. BAḲRA ʿĪD, i. e. cattle-festival), the name commonly employed in India for the festival of ʿĪD AL-AḌḤĀ [q. v.]

AL-**BAḲARA**, "the Cow", Title of Sūra II, socalled from the story related in verses 63—68 of the purificatory offering of the Israelites, *Num.* xix and *Deuteronomy* xxi, —.

BĀKARGANDJ, or BACKERGUNGE, a district of India, in Eastern Bengal and Assam, situated in the joint delta of the Ganges and Brahmaputra. Area: 4, 542 sq. m.; population (1901): 2, 291, 752; of whom 68% are Muhammadans. Their predominance may be inferred from the fact that the local dialect is commonly known as Musalmānī. The name is derived from Āghā Bāḳar, a servant of the Nawāb of Murshidābād early in the 18th cent. The headquarters are at Barisāl, an important centre of river traffic through the Sundarbans.

Bibliography: *Imperial Gazetteer of India.* (J. S. COTTON.)

BĀKHAMRĀ, a place in ʿIrāḳ the exact situation of which cannot now be fixed. According to Masʿūdī it belonged to the Ṭaff [q. v.], the frontier district between Babylonia and Arabia and was 16 parasangs (about 60 miles) from Kūfa. Yāḳūt says it was nearer Kūfa than Wāsiṭ. Bākhamrā is famous in the history of the ʿAbbāsids from the decisive battle which took place there between the army of the Caliph al-Manṣūr commanded by ʿĪsā b. Mūsā and the troops of the ʿAlid Ibrāhīm b. ʿAbd Allāh, in which the latter fell in 145 (762). The Aramaic place-name means "wine-vaults"; cf. the analogous appellation Ḳaryat al-ʿInab = "Grape-town", of a place in Palestine (northwest of Jerusalem).

Bibliography: Yāḳūt, *Muʿdjam* (ed. Wüstenfeld), i. 458; Masʿūdī *Murūdj al-dhahab* (ed. Barb. de Meynard et P. de Courteille) vi.

194; Weil, *Gesch. der Chalifen*, ii. 55 (wrongly vocalised Bachmara). (M. STRECK.)

BĀKHARZ, a district in Khorāsān between Nīsābūr and Herāt with the market place of Mālin as its chief town; it was the home of ʿAlī b. Ḥasan b. Abī Ṭaiyib, author of the *Dumyat al-Ḳaṣr* (see below) and of the poets Tādj al-Dīn Ismāʿīl and Saif al-Dīn b. Muẓaffar (died 658 = 1260).

Bibliography: Barbier de Meynard, *Dictionnaire de la Perse*, p. 74; Muḥammad Ḥasan-Khān, *Mirʾāt al-buldān*, i. 150; Edw. G. Browne, *Literary History of Persia*, ii. 355; Muḥammad ʿAwfī, *Lubāb al-Albāb*, i. 68; ii. 156; Riḍā Ḳulī-Khān, *Madjmaʿ al-Fuṣaḥāʾ*, i. 244. (CL. HUART.)

BĀKHARZĪ, ʿALĪ B. AL-ḤASAN B. ʿALĪ B. ABI'L-ṬAIYIB AL-SANAKHĪ ABU'L-ḲĀSIM or ABU'L-ḤASAN, died 467, author of a continuation to the *Yatīmat al-dahr* (and sometimes covering the same ground as the *Tatimmat al-Yatīma*) called *Dumyat al-Ḳaṣr wa-ʿUṣrat ahl al-ʿAṣr*, of which a copy in the Library of Tādj al-Mulk in Iṣfahān suggested the composition of the *Kharīda* to ʿImād al-Dīn. The author states in the preface to the *Dumya* that after having received a good education at home, he wandered from 434 to 464 visiting first Nīsābūr and Herāt, in the neighbourhood of his home, then Marw, Balkh, Raiy, Iṣfahān, Hamadhān, Baghdād, Baṣra and Wāsiṭ: he gives a list of the famous men whose acquaintance he made at each of these places, e. g. Thaʿālibī at Nīsābūr; since this author's death-date is given as 429, this implies an earlier visit. He devoted himself to *fiḳh* according to Shāfiʿī's system before studying *adab*, and at the lectures of Abū Muḥammad ʿAbd Allāh b. Yūsuf al-Djuwainī (died 438 according to Samʿānī) in Nīsābūr he made the acquaintance of Muḥammad b. Manṣūr al-Kundurī, afterwards vizier to Ṭoghril-Beg. A satire by Bākharzī on this person, beginning with the auspicious word *aḳbala*, is said to have won him the favour of the latter, who, when the Seldjūḳ Sulṭān entered Baghdād in 447, took Bākharzī in his suite; or, according to another account accepted a eulogy from him when in Baghdād, rewarded him handsomely for it, and extolled his performance. After spending some time in Baṣra, Bākharzī entered the service of the Vizier as scribe and was advanced in the "bureau of correspondence". In 455 Bākharzī was permitted to recite a eulogy before the caliph Ḳāʾim; the people of Baghdād had not at first admired his poetry, but by going to reside in Karkh, and mixing with the learned and unlearned there he was able to get rid of "the chilliness of the Persians", and win the approval of the metropolis. At some time after this date he retired to his native place where he died in Dhu'l-Ḳaʿda 467, of a blow inflicted at an entertainment by a Turk, who was never punished for the murder.

The most famous lines of Bākharzī are those in which he consoles his patron Kundurī for his self-inflicted emasculation. After this vizier's fall B. seems to have been on friendly terms with Niẓām al-Mulk, whose library supplied to a great extent the material for the *Dumya*.

This work, of which MSS are common, is in seven §§:

1. Beduin and Ḥidjāzene poets.
2. Poets of Syria, Diyārbakr, Ādharbaidjān, the Djazīra and the Maghrib.
3. Poets of ʿIrāḳ.
4. Poets of Raiy and the Djibāl.
5. Poets of Djurdjān, Astrābād, Dihistān, Ḳūmis, Khwārizm, Māwarāʾ al-nahr.
6. Poets of Khurāsān, Kuhistān, Sidjistān, Ghazna.
7. Adab-writers.

In some MSS it is followed by a selection from the author's poems, of which a bulky dīwān once existed.

Bibliography: Preface to the *Dumya*; Yāḳūt, *Dictionary of Learned Men*, v. 121—128. (D. S. MARGOLIOUTH.)

BAKHRĀʾ, a place-name often corrupted in books and manuscripts. In place of Bahr, Bahrāʾ or Nadjrāʾ, Bakhrāʾ ought to be read, as the etymological conjectures of the Chroniclers, who derive the name from *bakhara*, "to have an evil smell", show. An ancient fortress on the *limes* protecting the southern frontier of Palmyra, afterwards in possession of the family of Noʿmān b. Bashīr. It was there that the Caliph Walīd II met his death while fleeing from the rebels who were pursuing him. The erroneous statements of Yāḳūt would lead one to look for Bakhrāʾ on the borders of ʿIrāḳ, Ḥidjāz and Syria but this does not agree with the topographical information in various accounts of the route of Walīd II on his flight. The other authorities wrongly place Bakhrāʾ in the neighbourhood of Damascus, Ḥims or oftener still that of Tadmur, some miles distant from it. More recent explorers have rediscovered Bakhrāʾ in the ruins of an old fort, four hours' journey south of Tadmur, disproving the above locations.

BAKHSHĪ, a word (probably from the Sanskrit, *bhikshu*) which appears in East Turkī and Persian during the Mongol period; it denotes in the first place the Buddhist priesthood and in this meaning is equated to the Chinese Hoshang, Tibetan Lama and the Uighur Toin. Writers of Turkish origin also, who had to write documents destined for the Mongol and Turkish population, in Uighur script, were called Bakhshī; according to Bābur (ed. Beveridge, p. 108ᵛ) it was also the name of the surgeon (*djarrāḥ*) among the Mongols. In the Empire of the Indian Moghuls, the Bakhshī was an official of high rank who had charge of the registration of a body of troops and had to pay them. At the present day, among the Calmucks, Mongols and Manchus, the word denotes a high spiritual rank; among the Kirghiz (in the dialect forms Baḳsi and Baḳsa) it is applied to the diviners and magicians who heal the sick by exorcisms, among the Turkomans to the bards (among the Kirghiz also the Baḳsi accompanies his conjurations with the notes of his musical instrument, the Kobuz).

ciams of the Baksy); A. Diwajew, *Iz oblasti kirgizskich vjerowanij, Baksy, kak lekar i koldun* (Kazan, 1899, with illustrations). On the Turkoman bards cf. A. Samojlović in the journal "*Shivaja Starina*" 1907, p. 4. (W. BARTHOLD.)

BAKHSHISH (P., verbal substantive from *bakhshīdan* "to give"), means in Persia properly a present given by a superior to an inferior, while the present given to a superior by an inferior is called *pīshkash* (first fruits) and presents exchanged between equals are called *ta'āruf* ("mutual acquaintance"). Hence the word comes to denote gratuities given by strangers and travellers and is further wrongly applied to anything thrown into a bargain, court-fees as well as to a sum given to bribe a judge or official (properly *rishwat*). These illicit gains are euphemistically called *Madākhil* (income) by the Persians.

BAKHTĀWAR KHĀN, a favourite eunuch of the Emperor Awrangzēb, who gave him the rank of 3000 horse and made him his head-steward (*mīr-sāmān*). The universal history, written in Persian, entitled *Mir'āt al-'Ālam*, is usually ascribed to him, and he indeed claimed for himself the authorship of it, but it was undoubtedly composed by his friend, Muḥammad Baḳā [q. v.], whom he had induced to come to the court of Awrangzēb, and for whom he obtained a high official rank. He died in 1096 A. H. (1685 A. D.)

BAKHTIGĀN or PĪCAGĀN, now usually called DARYĀ-I NĪRĪZ, the largest salt lake in the province of Fārs in Īrān.

The existence of lakes in the Koile Persis became known to the Greeks after the time of Alexander, cf. Strabo, xv. 3, 1. — The Arab geographers as a rule enumerate five lakes; their identification is not absolutely certain and the readings of the names very divergent. Before Iṣṭakhrī there is only one reference, viz. in Ibn Khordādhbah, 53, to the Lake of Bakhtigān or Lake of Djūbānān, though its name is not mentioned. Iṣṭakhrī mentions: 1) the Lake of Bakhtigān, often written Badjakān in the manuscripts, belonging to the circle (*Kūra*) of Iṣṭakhr; 2. the Lake of Dasht Arzan, in the circle of Sābūr; 3. the Lake of Tawwaz, with many variants, in Sābūr at Kāzarūn; 4. the Lake Djankān at Shīrāz; 5. Lake Bāsafahūya in the circle of Iṣṭakhr. He also gives the name Buḥairat Badjfās to Lake Bakhtigān. Muḳaddasī gives: 1. Bakhtigān, also called Badjakān; 2. Dasht Arzan; 3. Kāzarūn; 4. Djankān; 5. Bāshfūya. Lastly Yāḳūt gives: 1. Badjakān; 2. Dasht'arzan; 3. Tawwaz; 4. Djawdhān; 5. Djankān. Our modern maps give: 1. Lake Bakhtigān under the name of Nīrīz; 2. the very small Lake of Dasht-i Arjān under the same name; 3. the Lake of Kāzarūn as Daryāča-i Shīrīn or Famūr; 4. the Lake of Shīrāz as Daryāča-i Mahārlū. A fifth larger lake, further to the north, in the district of Sarḥadd-i Cahār Dānga, called Daryāča-i Kāftar, is not mentioned by the older geographers. The name Bāsfūya, Bāshfūya, — in Ḥamd Allāh al-Mustawfī Bāsafūya, — is only the name of part of Lake Bakhtigān and perhaps identical with Badjfās. As the lake consists of several sections, which are only connected by narrow arms, it has always borne several names. As its extent has undergone great variations, individual parts of it may have sometimes formed separate seas. Thus the name Badjfās, Bāsafūya or Djūbānān is applied to the northern end, while Bakhtigān and Nīrīz belong properly to the south end. The northeast corner is also called Lake Nargis at the present day.

The lake is the basin of a district from which there is no outflow, into which flows the Kurr or Rūdkhāna-i Band-i Amīr, which is formed by the confluence of the Rūdkhāna-i Kām Fīrūz and the Farawāb, now the Pulwār. The lake is exceedingly shallow. A quarter of a mile from the shore it is only knee-deep. In consequence the evaporation is very great and the water very salt. In the dry season the lake is surrounded by a girdle of salt incrustations. Hydrologically it is not a mountain lake but intermediary between this and the great salt deserts frequent in central Persia, called *Kawīr*. The Lake has been surveyed by Capt. H. L. Wells.

BAKHTĪ, Penname of Sulṭān Aḥmad I; cf. Gibb, *A History of Ott. Poetry*, iii. 208.

BAKHTĪSHŪ', a family of physicians of Syrian origin, which was originally settled in Djundai Sābūr. Djūrdjīs b. Bakhtīshū', who was chief of the hospital there and had already made a name for himself as a writer on medical subjects, was summoned thence to Baghdād in 148 (765) to attend the Caliph al-Manṣūr who was suffering from a disorder of the stomach. He so won the latter's confidence by a successful cure that he was prevailed upon to stay in the capital. In 152 (769) however, Djūrdjīs himself fell ill, and, as he wished to die in his native place was allowed by the Caliph to depart in great honour. He had left his son Bakhtīshū' as his deputy in charge of the hospital on being summoned to Baghdād. When, during the reign of the Caliph al-Mahdī, his son al-Hādī fell very ill, Bakhtīshū' was summoned to Baghdād and succeeded in curing the Crown Prince. The latter's mother al-Khaizurān, however, took the side of her own physician Abū Ḳuraish against him and to avoid further jealousies, the Caliph allowed him to return to Djundai Sābūr. In 171 (787) Hārūn suffered from severe headaches

and had Bakhtīshūʿ summoned again to Baghdād and appointed him chief physician. He died about 185 (801). When he attended Djaʿfar b. Yaḥyā al-Barmakī in 175 (791) he recommended him his son Djibrāʾīl as medical attendant. By successfully curing a favourite slave of Hārūn's, whom he healed of a hysterical paralysis, he won the confidence of the Caliph and was appointed his private physician in 190 (805). But, during the last illness of Hārūn at Ṭūs in Persia, he was too candid in the exercise of his duty as medical adviser and fell into disgrace.

A bishop, whom the Caliph consulted in place of him, incited Hārūn still further against him and he was finally condemned to death. The Vizier al-Faḍl managed to prevent the execution of the decree and Hārūn's son al-Amīn again appointed him Court physician. When the latter was overthrown by his brother al-Maʾmūn, Djibrāʾīl was imprisoned and did not receive his freedom till 202 (817) when the vizier al-Ḥasan b. Sahl required his services. Three years later he again fell into disgrace and was superseded by his son-in-law Mīkhāʾīl. In 212 (827) al-Maʾmūn had again to send for him, as Mīkhāʾīl was unable to give advice regarding an illness of the Caliph. He did not live long to enjoy the favour of his master, who in gratitude for his rapid recovery, replaced him in his office and in the enjoyment of his property which had been confiscated, for he died the following year. He was buried in the Sergius cloister at al-Madāʾin. His son Bakhtīshūʿ succeeded him and accompanied Maʾmūn on his campaigns in Asia Minor. In the reign of al-Wāthiḳ, the second successor of al-Maʾmūn, his rivals succeeded in having him banished to Djundai Sābūr. In the last illness of this Caliph, he was again summoned to attend him but only reached the capital after his death. Under al-Mutawakkil he practised for twelve years in great esteem but was then banished to al-Baḥrain. He died in 256 (870). His son ʿUbaid Allāh was a financial official of the Caliph al-Muḳtadir, who confiscated his property on his death. His widow then married a physician who instructed her son Djibrāʾīl in the art of his forefathers. The latter however, received his real education in Baghdād whither he had gone almost immediately after the death of his mother as his stepfather would not give him his inheritance. His fame reached Persia after he had cured an ambassador from Kermān so that the Buwayhid ʿAḍud al-Dawla summoned him to Shīrāz. He afterwards returned to Baghdād however and never left it except for short periods on being summoned to consultations at various courts. He declined an invitation from the Fāṭimid al-ʿAzīz to settle in Cairo. He went to Maiyāfāriḳīn in answer to a summons from the Marwānid Mumahhid al-Dawla Abū Manṣūr and the latter refused to allow him to return. He died in this town on the 8th Radjab 396 (12th April 1005). Here lived also his son Abū Saʿīd ʿUbaidallāh, a friend of Ibn Buṭlān, who died in the sixth decade of the fifth century A. H. Of him alone, literary works have survived to us, it appears, while the works of his ancestors are lost. His chief work was the *Tadhkirat al-Ḥāḍir wa Zād al-Musāfir* of which an extract under the title of *al-Rawḍa al-Ṭibbiya fi 'l-Funūn al-Adabiya* is preserved in Gotha (see Pertsch, *Die arab. Hss. der herzogl. Bibliothek*, Nº. 2024), Paris (de Slane, *Catalogue des mss. ar.*, Nº. 3028, 2), London (*Catalogus codd. or. qui in Mus. Brit. ass.*, ii. codd. ar., Nº. 984, 4) and in the Escurial (Casiri, *Bibliotheca Arabico-Hispana*, Nº. 884, 1). He treats in 50 chapters of as many philosophical terms which are used in medical works. Of his *Kitāb al-Khawāṣṣ mudjarrab al-Manāfiʿ* there has only been preserved an extract on the Manāfiʿ al-Ḥayawān in Paris (see de Slane, *op. cit.*, Nº. 2782) and London (see Rieu, *Supplement to the Catalogue of the Arabic Mss. in the Brit. Museum*, Nº. 778). Finally we also possess from his pen a treatise on love as a disease (*Kitāb al-ʿIshḳ Maraḍan*, see *Catalogus codd. orient. Bibliothecae Academiae Lugduno-Batavae*, Nº. 1352).

(C. BROCKELMANN.)

BAKHTIYĀR, ABŪ MANṢŪR ʿIZZ AL-DAWLA, son of Muʿizz al-Dawla, the Būyid, born 331 (942-943), succeeded on the death of his father 356 (967) to the dominion which he had conquered. His reign was not a brilliant one as he lived solely for sensual pleasures and was distinguished only for his great physical strength. He soon came into conflict with the Turk Sebuktigin and was only victorious by the aid of his ambitious cousin ʿAḍud al-Dawla; when the latter seized Baghdād, the capital, in 364 (975), he had Bakhtiyār imprisoned but was ordered to return to Fārs by his father Rukn al-Dawla and left Bakhtiyār the dominion over al-ʿIrāḳ. On the death of Rukn al-Dawla in 366 (976) ʿAḍud al-Dawla again advanced against Bakhtiyār and defeated him at Ahwāz. Bakhtiyār had thereupon to evacuate al-ʿIrāḳ and to hand over his vizier Ibn Baḳiya [q. v.] who was particularly obnoxious to ʿAḍud al-Dawla; in return he received from ʿAḍud al-Dawla the means of retiring to Syria. On the way he was persuaded by Ḥamdān to go to al-Mawṣil, but at once had the latter seized; his brother Taghlib, Lord of al-Mawṣil asked him to give him up, promising in return to replace him in Baghdād. As soon as ʿAḍud al-Dawla heard of this, he advanced against him, and put his troops to flight near Takrīt; Bakhtiyār himself was captured and put to death by order of the victor in 367 (978).

BAKHTIYĀR KHALDJĪ. [See MUḤAMMAD BAKHTIYĀR KHALDJĪ.]

BAKHTIYĀR NĀMAH, also known as the History of the Ten Viziers, a Muḥammadan imitation of the originally Indian story of Sindbad or the Seven Viziers. Like its prototype it consists of a single narrative which forms a framework into which a number of other stories, which in this case are closely connected with the main story, are inserted. The story may be briefly told: the son of king Āzādbakht is abandoned by his parents on their flight, soon after his birth, found and brought up by robbers and with them ultimately taken prisoner by the king.

The latter, being pleased with him, takes him, under the name of Bakhtiyār, into his service. When he has attained a high position, the jealousy of the viziers is aroused, who, taking advantage of an accident, cause him to lose the king's favour and he and the queen are thrown into prison. To save herself the queen declares that Bakhtiyār has tried to seduce her. For ten days, the ten viziers, one after the other, try to persuade the king to condemn Bakhtiyār to death; the latter however always manages to have the execution put off by telling a story suiting his predicament. When finally on the eleventh day the execution is definitely to take place, the robber captain, who brought him up, appears and proves to the king that Bakhtiyār is his son. The viziers are thereupon executed while Bakhtiyār becomes king in place of his father, who abdicates in his favour. — The book is extant in Persian, Uigur, Arabic and Malay versions (there is also a modern version in Fellihi). The story was originally written in Persian and the oldest Persian version, which we possess, appears to have been composed about 600 A. H. The Uigur (preserved in a manuscript written in 838 A. H.) as well as the Arabic versions, of which one is found in the Thousand and one Nights, are closely connected with this Persian version. A much later Persian adaptation (ed. Ouseley) comes from India, where the story was also put into verse in a Mathnawī in 1210 A. H. The Malay version is also derived from the later Persian.

HOROVITZ.)

BAKHTIYĀRĪ, the chief tribe of Luristān, of Iranian origin, partly nomads and partly sedentary, inhabit the mountains of Southern Persia between Burūdjird and Čahār-Mahall in the East, the mountain spurs above Dizful, Shustar and Rām-Hormuz in the west, the river of Dizful in the north and a line drawn from Deh-Yar to Ḳumisha in the south (Layard in the *Journ. of of the Geogr. Society*, London, xv. 6 *et seq.*). They fall into two great groups, the Haft-Lang and the Čahār-Lang. The tribe of the Bindānī seems to be autochthonous. The Bakhtiyārīs are of middle size and strong physique, and have brown complexions with long black hair and aquiline noses (see Khanikoff, *Mémoire sur l'Ethnographie de la Perse*, p. 108). The Mamasenī (contracted from Muḥammad Ḥusainī) in the district of Ḳal'a-i Sefīd claim a great antiquity and say they are descended from Rustam; one of their tribes even bears the name Rustam. By their advance on Teherān, the Bakhtiyārīs gave the Persian revolution powerful support in 1909 [cf. ANDJUMAN, p. 358a].

Bibliography: Fr. Spiegel, *Eranische Alterthumskunde*, i. 353; *Revue du Monde Musulman*, viii. 1909, p. 480; E. G. Browne: *The Persian Revolution* (Cambridge, 1910), p. 266, pp. 298—306. (CL. HUART.)

AL-**BĀḲĪ**, the "Enduring One", one of the names of God [see ALLĀH, p. 303a].

BĀḲĪ, the greatest of Ottoman lyrical poets, properly called Maḥmūd ʿAbd al-Bāḳī, born in Constantinople in 933 (1526-1527) the son of a Muʾadhdhin of the Muḥammadiya; learned at first the saddler's trade and afterwards studied law to prepare himself for a judicial career. In 962 (1555) Sulṭān Sulaimān to whom he had dedicated a congratulatory Ḳaṣīda on his return from Persia, attached him to the court, where he also enjoyed the Imperial favour of Selīm II and Murād III. After being successively Ḳāḍī of Mecca and Constantinople and three times filling the office of Ḳāḍī-ʿAskar of Anatolia and Roumelia, he died on the 23 Ramaḍān 1008 (7 Nov. 1600). Remarkable for the purity of his style, Bāḳī is the most enthusiastic, but not the most exaggerated of the Persianising school which has dominated Turkish poetry down to the xixth century.

Bibliography: J. von Hammer, *Bāḳī's, des grössten türkischen Lyrikers, Diwan*, Vienna, 1825 (contains less than half the complete Dīwān); do., *Geschichte der osmanischen Dichtkunst*, ii., p. 360; E. J. W. Gibb, *A History of Ottoman Poetry*, iii. 133; Bāḳī's *Dīwān, Ghazaliyāt*, ed. by R. Dvořák (vol. i. appeared in 1908); do., *Bāḳī als Dichter*, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xlii. 1888, p. 560 *et seq.* (CL. HUART.)

BAḲĪʿ AL-**GHARḲAD** (also briefly called AL-BAḲĪʿ), the cemetery of Medina. The name denotes a field, which was originally covered with a kind of high growing black berry; there were several such Baḳīʿ's in Medina. The place was and is situated at the south-east end of the town, outside the modern town-wall through which a gateway, Bāb al-Baḳīʿ, gives admittance to the cemetery (see the map of Medina in Caetani, *Annali*, ii. 1, p. 73). The first to be buried in al-Baḳīʿ was ʿOthmān b. Maẓʿūn, the ascetic companion of the Prophet; the latter's daughters, the little Ibrāhīm, and his wives were also buried here. It gradually became an honour to be granted a last resting-place here among the relatives of Muḥammad, the Imāms and Saints. The graves of the famous dead had memorials and domes built over them by their descendants; the dome of Ḥasan b. ʿAlī for example, rose to a considerable height as Ibn Djubair informs us. When Burckhardt visited the place after the invasion of the Wahhābīs, he found it the most wretched of all the cemeteries of the East. Like the grave of Ḥamza at Oḥod and Ḳubāʾ, al-Baḳīʿ is one of the Ziyāra places of Medina where the pilgrims are accustomed to pray.

Bibliography: Ibn Djubair (ed. de Goeje), p. 195 *et seq.*; Burckhardt, *Travels* (London, 1829), ii. 222—226; Burton, *Pilgrimage to al-Medinah and Meccah* (London, 1857), ii. 31 *et seq.*; Wüstenfeld, *Geschichte der Stadt Medina* (Göttingen, 1860), p. 140 *et seq.* (A. J. WENSINCK.)

AL-**BĀḲILLĀNĪ**, ABŪ BAKR B. ʿALĪ B. AL-ṬAIYIB, Arab author and dogmatist, a pupil of Abu ʾl-ʿAbbās b. Mudjāhid al-Ṭāʾī al-Baṣrī, who was a pupil of Abu ʾl-Ḥasan al-Ashʿarī, died on the 23 Dhu ʾl-Ḳaʿda 403 = 6 June 1013 at Baghdād. He was famous for his polemical writings. He introduced new ideas into the Kalām from Greek philosophy or perhaps from the dogmatics of the Eastern Church, such as the conception of atoms,

of empty space and the view that an accident can not be the bearer of another accident and that an accident cannot last through two units of time. Of his works there has only survived the *Kitāb fī I'djāz al-Ḳor'ān* (pr. Cairo, 1315 = 1897), according to Ibn al-'Arabī in Suyūṭī, *Itḳān* (Cairo, 1278, Vol. ii. p. 134) the best work on this subject. Ibn Ḥazm mentions also in his *Fiṣal* his *Kitāb al-Istibṣār fī 'l-Ḳor'ān* and his *Kitāb fī Madhāhib al-Ḳarāmiṭa*.

Bibliography: Ibn Khallikān (Būlāḳ, 1299), Nº. 580; A. F. Mehren in *Travaux de la IIIème session du congrès internat. des orient.*, St. Petersburg, 1876, Vol. ii. (Leiden, 1879), p. 228; M. Schreiner in *Actes du VIIIème congrès internat. des orient. tenu en 1889 à Stockholm et à Christiania*, Sect. i. (Leiden, 1891), p. 108.

(C. BROCKELMANN.)

AL-**BĀḲIR** (A.) the Splitter i. e. the Investigator, a name of the Imām Muḥammad b. 'Alī [q. v.].

BAḲḲAM (A.), Brazilwood, an Indian dye-wood, obtained from the *Caesalpinia sappan* which, when decocted, gives a red dye, and is also used in therapeutics as a styptic and desiccant for cancer. The root yields a poison which works quickly; it is mentioned in a verse by al-A'shā. The dictionaries erroneously give it as a synonym of *'andam* which rather means "Dragon's blood", a kind of resin. Baḳḳam appears to be an arabicised word of foreign origin (*Lisān al-'Arab*, xiv. 318; *Tādj al-'Arūs*, viii. 204). (CL. HUART.)

BAKKAR, a fortified island in the river Indus, situated in 27° 43' N. and 68° 56' E.; it is a limestone rock, 800 yards long by 300 wide, and about 25 feet in height. As early as 1327 it was considered a stronghold of some importance, and different States contended for the possession of it. It changed hands several times before it was delivered up to an officer of the Emperor Akbar in 1574; the Kalhora princes obtained possession of it in 1736, and it was subsequently occupied by the Afghans until it was captured by Mīr Rustam Khān of Khairpūr. The Mīrs of Khairpūr ceded it to the British in 1839.

Bibliography: A. W. Hughes, *Gazetteer of the Province of Sind*, (2nd ed., 1876) s. v. Bukkur; *Imperial Gazetteer of India*, id.

BAḲLĪYA, a Ḳarmaṭian sect, which arose in the Sawād of Wāsiṭ in 295 (908) under the leadership of a certain Abū Ḥātim. He is said to have forbidden his people to eat garlic, leeks and turnips, but otherwise to be vegetarians for he forbade the slaying of animals. This is probably the explanation of the name Baḳlīya. He abolished religious observances, and gave other prescriptions, which we do not exactly know. When the Baḳlīya, allied with the Beduins of the neighbourhood under Mas'ūd b. Ḥuraith and others began to plunder, the Caliph sent Hārūn b. Gharīb with troops against them; he scattered them and slew numbers of them in 316 (928).

Bibliography: Mas'ūdī, *Tanbīh* (ed. de Goeje), 391; 'Arīb (ed. de Goeje), 137; Ibn al-Athīr (ed. Tornberg), viii. 136; de Sacy, *Exposé de la religion des Druzes*, *Introduction*, 210; Friedlaender in the *Journal of the American Orient. Soc.*, xxix, 110 *et seq.*

BAKR b. WĀ'IL, a great Arab tribe, belonging to the Ma'addic (Ismā'īlit) group. Their genealogy (omitting one or two unimportant links) is: Bakr b. Wā'il b. Ḳāsiṭ b. Hinb b. Asad b. Rabī'a b. Nizār b. Ma'add. Allied tribes were amongst others the Taghlib and 'Anz, subordinate tribes the Jashkur, Badan, al-Ḥārith, Djoshm and 'Alī. Other important subordinate tribes were the Dhuhl, 'Idjl, Ḥanīfa, Ḳais and Shaibān.

They lived in the Tihāma of Yaman, the Yamāma and Baḥrain as far as the borders of Mesopotamia. We find them here in the time of the Caliphs Abū Bakr and 'Omar. In later times they gradually pressed into northern Mesopotamia, where they inhabited the district still called after them Diyār Bakr [q. v.] as neighbours of the Taghlib who had been settling in Mesopotamia since the Basūs war [q. v.]. After the break-up of the Ḥimyaritic kingdom under Dhū Nuwās they were able to send larger divisions to Mesopotamia. In the time of the Caliph Mu'āwiya they advanced thither in large bodies. By Diyār Bakr, however, the Arab geographers and historians understand not only the district in Mesopotamia but also their earlier settlements in Yamāma and Baḥrain. Diyār Bakr formed a part of Diyār Rabī'a which also comprised the land of the Taghlib, so that we often find one and the same place (e. g. the town of Naṣībīn (Nisibis) and the valleys of Aḥaṣṣ (Aḥadd) and Shubaith) sometimes said by the geographers to belong to Diyār Rabī'a and sometimes to Diyār Bakr or the Taghlib. There were also settlements of the Bakr in Persia (especially in the province of Khorāsān).

The following districts in Mesopotamia belonged to them: Āmid (the ancient Amada) the capital, now usually called Diyār Bakr (but officially known also as Ḳara Āmid, "black Āmid", from its dark basalt walls), Is'ird or Si'irt (a small town), Ḥaut or Ḥānī (with iron mines, a medium sized town), Dunaisir (a fairly large town with a large market), Ḥiṣn Kaifā (with fortifications), Ḥizān, Mārdīn (Mardin, a fairly large town on the summit of a hill), Maiyāfāriḳīn (Mifarḳīn, said to have been the finest town in Diyār Bakr) and Ra's 'Ain. Besides these the following settlements of the Bakr are mentioned among others: al-Afākil, Khuwailḥ, Djafr Ba'īth, Dhāt Kidjl, Dhāt al-'Uṣhus, Khuṣāf, Fuṭaima, Shāhib, al-Mis, Muthaḳḳab, Kalha, Firād.

The following were watering places of the Bakr: Dhū Ḳār (near Kūfa, see below), al-Ḥinw, Salmān, Shaiyiṭān (or Shaiṭān?) and Kalāwtan (in the Bādiya of Baṣra); Wādis: Ashāfī (belonging to the Shaibān), Dhariḥār (afterwards belonging to the Taghlib); Mountains: Aswad al-'Udhriyāt and al-Ṭūr al-Barrī (?, belonging to the Shaibān).

The following belonged jointly to the Bakr and the Taghlib: Dhū 'l-Ḥamāyir, Dhu 'l-Kaṭb, al-Hamāṭa, al-Fairaḍ, also called al-Malāhī ("place of amusement" given as two different places in Hamdānī, *Djazīra*, p. 105, 22 and Wüstenfeld, *Register*, p. 110), the Wādī al-Mathāwī, and mount Abān.

Hamdānī further mentions a number of settlements (mostly in the Tihāma of Yaman, the reading of the names of which is partly uncertain (cf. *Djazīra*, p. 123, 11—124, 3).

In the time of the Djāhilīya they worshipped idols. As such are mentioned: Uwāl (in ancient times Baḥrain bore this name) whom the Taghlib also worshipped, Dhū 'l-Ka'bain (in earlier times the tribal god of the Iyād), al-Muḥarriḳ in Salmān (specially revered by the 'Idjl). The latter, like the idols Manāt and 'Uzzā mentioned in the Ḳor'ān (cf. Sūra liii. 19, 20) we also meet with in proper

names of the Bakr. A portion of the Bakr (the Taimallāt, Ḍubai'a and a part of the Idjl) professed Christianity.

History. We first meet with the Bakr b. Wā'il in the fourth century. At this period they were making raids from Baḥrain and Yamāma into the adjoining kingdom of Persia, in alliance with the Tamīm and the 'Abd al-Ḳais. Shāpūr II advanced into Baḥrain against them (about 350) and wrought great carnage amongst them and the two other tribes mentioned, took many of them prisoner and settled them in Persia (Ahwāz, Tawwadj, and Kirmān). In the fifth century we find them under the sway of Yaman. About the middle of this century al-Ḥudjr Ākil al-Murār, a prince of the house of the Kinda, succeeded in uniting the Central Arabian tribes, among them the Bakr and the Taghlib, into an alliance. Under his successor 'Amr al-Maḳṣūr this alliance seems to have broken up; and the chief of the Taghlib, Kulaib Wā'il whose haughtiness has become proverbial ("haughtier than Kulaib W.") undertook the leadership of the Bakr and Taghlib for a time (about the beginning of the tenth decade of the fifth century). When the latter was murdered by his brother-in-law because he, so the story goes, had wounded Sarāb, the camel of the latter's aunt Basūs, there broke out the so-called "Basūs War" between the Bakr and the Taghlib (under the leadership of Muhalhal, the brother of Kulaib) which lasted for forty years with longer or shorter intervals. Five great battles are mentioned of the first period of this war: 'Unaiza near Faldja (the victory remained undecided), Wāridāt (Taghlib victorious and Hammām was wounded), Ḥinw (Bakr victorious) Ḳuṣaibāt (Taghlib victorious) and Ḳiḍḍa also called Taḥlāḳ al-Limam (in this battle the Bakr inflicted a decisive defeat on the Taghlib). Tired of this mutual decimation and fearing their decline, the Bakr and the Taghlib applied to al-Ḥārith b. 'Amr al-Maḳṣūr, chief of the Kinda. He was successful in making peace between them for some time, and placed one of his sons, Shuraḥbīl, over the Bakr and another, Salama, over the Taghlib. In order to guard himself from their raids into Syria, the Emperor Anastasius made a treaty with al-Ḥārith, whereupon the latter with his warlike hordes turned his attention to the Lakhmid kingdom of Ḥīra. He defeated the army of king al-Nu'mān III and seized almost all his possessions (with the exception of Ḥīra itself) in the year 503. Thereupon Ḳubādh king of Persia, also made a treaty with al-Ḥārith and handed over to him the revenues of a district of Ḥīra on condition that the Bakr and the tribes allied to them should refrain from incursions into Persia. Under Ḳubādh's successor, Khusraw I (Kisrā) Anūshirwān, al-Mundhir III succeeded in inflicting a decisive defeat on al-Ḥārith whom Ḳubādh in the last years of his reign had appointed king of Ḥīra in place of al-Mundhir and he was scarcely able to save himself and a handful of faithful followers by flight. Al-Mundhir thereupon had more than forty members of the princely house of the Kinda executed, then seized Ḥārith himself whom he likewise beheaded (about 529). The struggle between the Bakr and the Taghlib had meanwhile broken out again on the flight of Ḥārith, and when Shuraḥbīl, the leader of the Bakr fell in a battle with the Taghlib under Salama at Kulāb, a watering-place of the Tamīm (the so-called "first day of Kulāb"), and the Ḥimyaritic kingdom under Dhū Nuwās broke up about the same time and had to yield to the superior Abyssinian power, the Bakr applied to al-Mundhir III. The latter finally succeeded in appeasing both tribes of the Wā'il and had 80 goats given to him by each as a pledge of peace. This was the end of the Basūs War (about 525).

The Taghlib then went into Mesopotamia while the Bakr remained under the Lakhmid rule of Ḥīra. We next find them following al-Mundhir III to Syria in his campaign against the Ghassānid chief, al-Ḥārith al-A'radj (in 554). They showed the same adherence to 'Amr b. Hind, the successor of al-Mundhir, who owed his great success against the Ghassānids in Syria to them and to the last Lakhmid chief al-Nu'mān Abū Ḳabūs. When 'Adī b. Zaid intrigued with the Persian king Khusraw Parwīz against the latter and aroused his enmity towards him, because he had imprisoned and executed the poet Zaid, father of 'Adī, he took refuge with his family among the Shaibān. He left his treasure and armoury (about 1000 shields) with the Shaibān chief and surrendered to Khusraw, who threw him into prison and put him to a violent death (according to another account he died of plague). Iyās b. Ḳabīṣa, chief of the tribe of Ṭaiy who was made king in Ḥīra in place of al-Nu'mān by Khusraw, then demanded that Hāni should give up the treasure and armoury of al-Nu'mān. When he refused to do so and the Bakr at the same time began to make raids into 'Irāḳ, Khusraw sent an army against them under Iyās. In this army were the Taghlib and Namir under al-Nu'mān b. Zur'a, the Iyād and the Ḳuḍā'a tribes of Mesopotamia under Khālid b. Yazīd al-Bahrānī and two detachments of Persian cavalry, each of 1000 men, under Hāmarz and Khanābarīn. The Bakr under Hāni were encamped at Dhū Ḳār. After Hāni on the advice of Ḥanẓala b. Tha'laba of the subordinate tribe of 'Idjl had divided al-Nu'mān's arms among the Bakr, a battle took place here, one of the most famous in Arab history, which has often been celebrated by poets (*cf. inter alia Aghānī*, xx. 139-140). The Bakr inflicted a severe defeat on the Persians: Khālid, Khanābarīn and Hāmarz were slain, the latter by al-Ḥārith b. Sharīk, called Ḥawfazān, and the whole army was scattered. According to one account the battle of Dhū Ḳār was not fought till some months after the battle of Badr, according to another and more reliable story it was fought soon after Muḥammad's appearance as a prophet in Mecca. It may however have taken place some time earlier, somewhere between 604 and 610. According to one legend the Prophet himself is said to have prayed for the Bakr during the battle, and on hearing of their success to have said that they owed the victory to him. After the battle of Dhū Ḳār the Bakr appear to have remained independent till their adoption of Islām.

Their chief battles with the Tamīm must have taken place in this period. During the dry season the Bakr used to let their cattle graze on the lands of their neighbours, the Tamīm, and were thereby tempted to make inroads into their territory which naturally gave rise to strife between the two tribes. Of battles between the Bakr and the Tamīm, there are mentioned amongst others, the battles of Zuwairain (Bakr victors), al-Ḥasīs (Bakr victors), Safh, Ṣulaib, al-Sitār (Tamīm victors), Safār

(at Dhū Kār, Tamīm victors), Djabala (fortress near W. Sitāra), Khuwaly (Bakr victors), Ra's 'Ain (Tamīm victors), Djifār (Bakr victors), Salmān (Bakr victors), al-Kā' and al-Ghaṭāṭ (this was the last battle between them in the Djāhiliya).

In the so-called year of the deputations, (9 = 630) a portion of the Bakr also sent a deputation to Muḥammad and adopted Islām, whereupon Muḥammad placed al-Mundhir b. Sāwī over them and the 'Abd al-Kais. On the death of the prophet a section of the Bakr including the Kais b. Tha'laba, under al-Ḥuṭam b. Ḍubai'a made a raid into Kaṭīf, seized a large part of Baḥrain and installed al-Gharūr, a scion of the Lakhmids (a son or brother of the last Lakhmid chief al-Nu'mān Abū Kabūs) as king. Abū Bakr sent an army from Medina against them under al-'Alā b. al-Ḥaḍramī and the latter defeated them at the fortress of Djuwāthā, supported by the Tamīm and those of the Bakr who had remained faithful to him, of whom may be mentioned the Shaibān under al-Muthanna b. Ḥāritha; their leader al-Ḥuṭam fell, al-Gharūr was taken prisoner and became a convert to Islām. The Bakr likewise supported Khālid b. Walīd when he advanced from Yamāma to Ubulla (on the Persian Gulf in the S. E. of 'Irāk) against the Persians. On his arrival in Nibādj, his army of about 10,000 warriors, was reinforced by 8000 Bakr, who lived in tents in Khaffān (in northern 'Irāk), under the above-mentioned al-Muthanna; with their help he defeated the Persians and the Christian Arab tribes allied with them, including some of the Bakr amongst others, at Kāẓima (two days journey from the later Baṣra, the so-called "Battle of Chains"), Waladja (near the great arm of water connecting the Euphrates and the Tigris) and Ullais in the year 12 (633). Khālid, on being summoned to Syria by Abū Bakr in 13 (634), gave Muthanna command of the troops in Ḥīra. He defeated the Persians near the ruins of Babylon and saved the Muslim troops under Abū 'Ubaid, who had been defeated by the Persians at the "Battle of the Bridge", from utter annihilation. In the second year of the reign of the Caliph 'Omar, al-Muthanna died at Dhū Kār, after inflicting another decisive defeat on the Persians at Buwaib (a canal on the Euphrates, east of the later Kūfa). After his death the Persians sought in vain to win over the Shaibān and others of the Bakr under al-Mu'anna, brother of al-Muthanna.

As in the earlier wars (against the Persians) we also find Bakr fighting against Bakr in the "Battle of the Camel" at Khuraiba before Baṣra (36 = 656). When 'Alī came to Dhū Kār in this year, a section of the Bakr sent him a deputation and made an alliance with him; another section fought on the side of 'Alī's opponents. They are said to have lost 500 in this battle. During the civil war in Khorāsān in 64 (683) which had arisen through the insubordination of the Muḍarī 'Abdallāh b. Khāzim, the Bakr of Khorāsān and Marw retreated to Herāt, where many of them dwelled and Aws b. Tha'laba, a man of their tribe, was governor. 'Abdallāh inflicted a severe defeat on them here (8000 of them are said to have fallen) and seized Herāt. In the year 67 (686) Khālid b. 'Abdallāh won over the Bakr of Baṣra under Mālik b. Misma' to the side of the Caliph 'Abd al-Malik. When on the death of the Caliph al-Walīd in 96 (715) Kutaiba b. Muslim, the governor of Khorāsān arose against his successor Sulaimān, we find about 7000 Bakr under Ḥuḍain b. al-Mundhir on the side of Sulaimān. They also remained on the side of the government during the rebellion which Yazīd b. al-Muhallab, the governor of 'Irāk, stirred up in Baṣra on the death of the Caliph 'Omar II (101 = 720) but they were overcome by him. On the other hand we find them during the reign of the second Caliph of the 'Abbāsids, Abū Dja'far al-Manṣūr, fighting against Abū Muslim, the partisan of this dynasty and they were likewise conquered by him. Their further history is connected with that of Mesopotamia (Diyār Bakr).

(J. Schleifer.)

AL-BAKRĪ, 'Abd Allāh b. 'Abd al-'Azīz b. Muḥammad b. Aiyūb b. 'Amr Abū 'Ubaid, the oldest Hispano-Arab geographer, whose works have survived to us, flourished in the second

half of the vth = xi^{th} century. His family, belonging to the great tribe of Bakr, took a prominent place among the Arab families of the West of Muslim Spain. Muḥammad b. Aiyūb, Ḳāḍī of Niebla, the grandfather of our al-Bakrī, was governor of Saltes and Huelva in the Caliphate of the Omaiyad Hishām al-Mu'aiyid. On the fall of this dynasty and during the socalled *Ṭawā'if* period of anarchy which followed, he tried like so many others to turn his governorship into an independent principality and was successful. On his death his son 'Abd al-'Azīz however, was unable to make effective resistance to the efforts of al-Mu'taḍid the Emir of Seville, who was attempting to bring all Muslim Spain under his sway. Forced to surrender his territory, 'Abd al-'Azīz fled secretly from Saltes with his treasures and his son, our author. He went to Cordova. This town, at that time independent, which was ruled as an oligarchy under the family of the Banū Djahwar, was the place of refuge for all the princes who had to escape the dangerous proximity of the mighty lord of Seville.

In Cordova al-Bakrī completed his education tion under the most learned men of his time. On the death of his father in the year 456 (1064), he entered the service of Muḥammad b. Ma'n, Emir of Almeria, who received him kindly and afterwards made him one of his intimate friends. Here al-Bakrī again attended the lectures of celebrated men like Abū Marwān b. Ḥaiyān. In 478 (1085-1086) al-Bakrī as the ambassador of the Emir of Almeria attended the embarkation of al-Mu'tamid b. al-Mu'taḍid, who was going to Morocco to seek the help of the Almoravid Yūsuf b. Tāshfīn against the Christians in Castile.

After the Almoravid conquest al-Bakrī seems to have returned to Cordova; at any rate he died there at an advanced age in Shawwāl 487 (October-November 1094) and was buried in the cemetery of Umm Salama. Al-Bakrī had the reputation of a man who was not ashamed to combine the love of the juice of the grape with that of poetry and letters.

His poems were appreciated but it was his works in the domain of philology and *belles lettres* which were especially prized; and it is to these that he owes his reputation.
